For Russell, some logical atoms are things with which we are directly acquainted, such as "little patches of colour or sounds, momentary things", and others are "predicates or relations and so on". These logical atoms constitute atomic facts, which are expressed by propositions without logical connectives.

For Wittgenstein at this stage, the basic items of atomism are mutually independent propositions which have meaning by logically picturing possible states of affairs. The basic enterprise of logical atomism is inherited by logical positivism, although both Russell and Wittgenstein themselves depart from it.

"The reason that I call my doctrine logical atomism is because the atoms that I wish to arrive at as the sort of last residue in analysis are logical atoms and not physical atoms... The point is that the atom I wish to arrive at is the atom of logical analysis, not the atom of physical analysis." - Russell, *Logic and Knowledge*, 1956, p. 170.

Logical calculus

Also called formal language, or by Leibniz *calculus ratiocinator* (Latin: a calculus of reasoning). Distinguished from mathematical calculus, which is used for calculation, logical calculus is a syntax of logic or a system used to construct valid arguments. Its basic idea originated with Leibniz, but was developed as a branch of mathematics by Frege and Russell. Any logical calculus must have a list of symbols, a set of axioms and a set of rules of inference. It can determine the construction of a logical formula and

"确实,在逻辑分析始于考察某些表达式的使用方式这种意义上说,它是语言上的。"——帕普:《分析哲学原理》,1949年,第467页。

逻辑原子主义

罗素在1905—1919年间所持有的一种观点,以其论文《逻辑原子主义的哲学》为代表,这种哲学也体现在维特根斯坦的《逻辑哲学论》一书中。它的基本立场是,语言要有意义,就必须在逻辑上分析为或还原为意义的原子成分。意义的其他成分由这些原子成分通过严格的逻辑程序建构出来。这样的逻辑分析程序可能揭示由日常语言遮蔽的、隐藏着的现实结构。明晰说明逻辑形式将清除各式各样传统的形而上学问题。

对罗素而言,有些逻辑原子是我们直接熟知的东西,例如“颜色或声音的片段,稍纵即逝的事物”,另外一些则是“属性和关系等等”。这些逻辑原子构成原子事实,它们由不带逻辑联结词的命题表示。

对于这一阶段的维特根斯坦而言,原子主义的基本项是相互独立的命题,它们由于在逻辑上描绘了可能的事态而具有意义。逻辑原子主义的基业由逻辑实证主义继承,虽然罗素和维特根斯坦自己都脱离了此项事业。

“我把自己的学说叫做逻辑原子主义,是因为我希望得到的、作为分析的最终产物的原子是逻辑原子而不是物理的原子……要点在于,我希望达到的原子是逻辑分析的原子,而不是物理分析的原子。”——罗素:《逻辑和知识》,1956年,第179页。

逻辑演算

亦称形式语言,莱布尼茨则称之为“理性演算”(拉丁语:推理演算)。与用于计算的数学演算不同,逻辑演算是用于构造有效论证的逻辑句法或系统。它的基本观念源自于莱布尼茨,但它作为数学的一支是由弗雷格和罗素所发展的。任何逻辑演算必定有一个符号表,一组公理和一组推理规则。它能够决定逻辑公式的构造以及一串逻辑公式是否构成一个证明。不同的演算关注不同类型的有效论证形式。现代逻辑

whether a sequence of logical formulae forms a proof. Different calculi are concerned with different kinds of valid forms of argument. The most influential logical calculi in modern logic are the propositional calculus and the predicate calculus.

"The logical calculus, therefore, is, in all other parts of mathematics, of quite fundamental importance. It supplies, together with arithmetic, the type of all possible judgements concerning manifolds as such." —Russell, *The Collected Papers of Bertrand Russell*, II, p. 191.

Logical consequence

If a statement B can be validly inferred or deduced from the premises A_1, A_2, \dots, A_n , in such a way that it is impossible that all the premises A_1, A_2, \dots, A_n can be true while B is false, then B is a logical consequence of these premises. Every consequence of true propositions must be true. The deductive relation which holds between premises and the conclusion is independent of the subject-matter of the words contained in premises and conclusion. Logical consequence is generally symbolised by a double turnstile \models . That B is the logical consequence of A_1, A_2, \dots, A_n , can be written " $A_1, A_2, \dots, A_n \models B$ ". Logical consequence is a synonym of logical implication. It indicates that there is a necessary relationship between premises and conclusion. The inference is necessary, leading invariably to true conclusions from true premises.

"We can define the concept of logical consequence as follows: The sentence X follows logically from the sentences of the class K if and only if every model of the class K is also a model of the sentence X ." —Tarski, *Logic, Semantics and Metamathematics*, 1983, p. 117.

Logical constant

The structural components of a sentence that indicate its logical form. Their significance does not depend upon their subject matter, rather they serve as operators of inference. Any word in a formula can be a constant, but not necessarily a logical constant; for example bachelor is a constant, but not a logical constant. The choice of expressions that can count as logical constants varies among logicians. We can follow Quine by enumerating logical constants as basic particles, such as the truth functions not, and, or and implies; the identity relation, equivalence, and the quantifiers some and all. We can also include necessarily and possibly for modal logic, past, present and future for tensed logic and similarly basic terms for other kinds of logic. It is not clear whether we can go beyond enumeration to provide a principle justifying a choice of terms as logical constants. Each logical constant has a symbolic counterpart in symbolic logic. A formula which contains logical constants as its only constants is called a logical formula.

中最有影响的逻辑演算是命题演算和谓词演算。

“所以,在数学的所有其他部分中逻辑演算具有相当基本的重要性。它与算术一起,提供了有关多重性本身的所有可能的判断类型。”——罗素:《罗素文集》,第二卷,第191页。

逻辑后承

如果陈述 B 能够以这样一种方式从前提 A_1, A_2, \dots, A_n 有效地推出或演绎得到,使得所有前提 A_1, A_2, \dots, A_n 为真而 B 为假,这种情形不可能,那么, B 就是这些前提的逻辑后承。真命题的每一个后承必定真。在前提和结论之间成立的演绎关系是独立于包含在前提和结论中的词语内容的。它通常被符号化为(旋转门上的)双绕杆 (\models)。 B 是 A_1, A_2, \dots, A_n 的逻辑后承,可以写成 " $A_1, A_2, \dots, A_n \models B$ ". 逻辑后承是逻辑蕴涵的同义语。它表明在前提和结论之间存在必然关系。推理是必然的,从真的前提不可更易地导致真的结论。

“我们可以把逻辑后承概念定义如下:语句 X 从 K 类的语句中逻辑地推出,当且仅当 K 类的每一模型也是语句 X 的模型。”——塔斯基:《逻辑、语义学与元数学》,1983年,第117页。

逻辑常项

语句内表示其逻辑形式的结构要素。它们的意义并不取决于它们的题材,相反是用作推理的算子。一公式内的任何词都可以是一常项,但不必然是一逻辑常项。例如,单身汉是一常项,但不是一逻辑常项。哪些表达式可以用作逻辑常项,不同的逻辑学家有不同的选择。我们可以追随奎因,把逻辑常项枚举为下述基本的小品词,如真值函项“并非”、“并且”、“或者”以及蕴涵;同一关系、等价以及量词“有些”和“所有的”。对模态逻辑,我们还可以包括“必然”和“可能”;对时态逻辑,包括“过去”、“现在”和“未来”;对其他类型逻辑,包括类似的基本词项。我们是否可以不用枚举法,而提出一条证明把某些词项选为逻辑词项是合理的原则,这一点并不清楚。每一个逻辑常项在符号逻辑中都有其符号对应物。只含有逻辑常项作为其常项的公式叫做逻辑公式。

“形式逻辑学家选择一些表达式作为它们

"Expressions dignified by selection by formal logicians to figure as constants in their representative verbal patterns or formulae are sometimes called 'logical (formal) constants'." —P. F. Strawson, *Introduction to Logical Theory*, 1952, p. 47.

Logical construction

A reductive analytical procedure seeking to show that a symbol purporting to refer to an inferred entity can be replaced by a symbol whose denotation is given in sense-experience. On this view, any sentence containing a term denoting an inferred entity can be analysed or translated into some sentence which does not contain such terms, but consists only of terms for items which are available to experience. In this sense, logical constructions provide analyses of sentences containing terms such as Russellian incomplete symbols, but are not identical with the sentences that they analyse. Russell extends this method from mathematics to the physical world, and reconstructs physical objects in terms of sets of sense-data or sensations. Epistemologically he brings physical objects closer in their nature to the experiential foundations of our knowledge, and metaphysically he eliminates inferred entities such as matter, the self and other minds. Logical construction as a method has been widely adopted in many areas of analytical philosophy.

In another sense Russell also applies the term "logical construction" to symbols or entities constructed out of other entities, and thus makes logical constructions identical with incomplete symbols and logical fictions.

"The supreme maxim in scientific philosophising is this, wherever possible, logical constructions are to be substituted for inferred entities." —Russell, *Collected Papers of Bertrand Russell*, VIII, p. 11.

Logical construction theory, Broad's term for the bundle theory of mind

Logical determinism

Since ancient Greece, some philosophers have believed that logic supports the thesis that a person's fate is predetermined and that there is nothing we can do to alter it or to avoid what will happen. Any statement about the future must be either true or false now. Correspondingly, the future event it represents may either happen or not happen. Hence a statement about the future is either true before the event takes place or false before the event fails to occur. There is nothing that anyone can do to alter the truth or falsity of the statement or the occurrence or non-occurrence of the event. Stoics and scholastics advocated this doctrine to prove fatalism or God's omniscience. The issue was first discussed by Aristotle in *De Interpretatione*, with

所置身的言语模式或公式中的常项, 这些表达式有时叫做 '逻辑 (形式) 常项'。" ——斯特劳森:《逻辑理论导论》, 1952 年, 第 47 页。

逻辑构造

一种还原性的分析程序, 它力求表明, 意指指称被推论实体的符号可以替换为在感觉经验中被所予指示对象的符号。根据这种观点, 含有指示推论实体的语词的语句可以分析为或翻译为某个这样的语句, 它不包含这样的语词, 而仅由代表了可在经验中获得的東西的语词组成。在这种意义上, 逻辑构造提供了对包含诸如罗素的不完全符号这种语句的分析, 但并不等同于它们所分析的语句。罗素把这种方法从数学扩展到物理世界, 并用一些感觉予料或感官知觉来重构物理对象。从认识论上说, 他使物理对象在其本性上与我们知识的经验基础更接近了, 而从形而上学方面说, 他清除了诸如物质、自我和他人心灵这些被推论实体。逻辑构造作为一种方法在分析哲学的许多领域被广泛采用。

在另一种意义上, 罗素也把“逻辑构造”一词应用于从其他实体中构造出来的符号或实体, 这就使得逻辑构造等同于不完全符号和逻辑虚构。

“科学哲学活动的最高准则是: 只要可能, 就用逻辑构造来代替被推论实体。” ——罗素:《罗素文集》, 第八卷, 第 11 页。

逻辑建构理论

布劳德对“心的捆束理论”的称呼。

逻辑决定论

自从古希腊时期起, 有些哲学家就相信逻辑可以支持这一论题, 即一个人的命运是预先决定的, 我们无法改变它, 或避免其发生。任何关于未来的陈述现在必然或真或假。相应地, 它所表征的未来事件可能发生或不发生, 因此一个有关未来的陈述要么在事件实际发生之前就为真, 要么在事件将来不发生之前就为假。人们不能够做什么去改变一陈述的真假或一事件的发生与不发生。斯多亚学派和经院哲学都倡导这种学说, 以分别证明“宿命论”和“上帝全能”。这一问题首先为亚里士多德在他的《解释》中以明日海战为例加以探讨。他的隐含解答是, 我们应否认二值原理的普遍有效性。关于未

the example of the sea-battle tomorrow. Aristotle's implicit solution is that we should deny the universal validity of the principle of bivalence. The future statement is neither true nor false before the event actually occurs. This is developed in contemporary logic into three-valued or many-valued logic. Others suggest that we can deal with the problem by distinguishing different modal conceptions. Only a necessary statement entails that the event will necessarily happen. The issue is still a matter of controversy.

"Logical determinism maintains that the future is already fixed as unalterably as the past." —Lucas, *The Freedom of the Will*, 1970, p. 65.

Logical empiricism

Another term for the philosophy of the Vienna Circle and broadly equivalent to logical positivism. Some members of the circle, including Schlick, preferred to call their philosophy "logical empiricism". This title indicates their affinity with the British empiricist tradition and their development of that tradition through the methodology of empirical science and, more important, the logical analysis of language. This analysis sought to characterise elementary propositions and to test them against experience (according to the verification principle), as empiricism requires. For the main philosophical content of logical empiricism, see logical positivism.

"The positivist theory of meaning has found its most precise formulation in contemporary logical positivism (or 'logical empiricism') ...: it is postulated that concepts be formed in such a way that it is empirically decidable whether the concept does or does not apply in a given sense." —Pap, *Elements of Analytical Philosophy*, 1949, p. 97.

Logical equivalence

The relationship of logical equivalence between two propositions is one of mutual inference. If p is logically equivalent to q , then we can derive p from q and q from p in accordance with logical rules. The denial of such a deduction is self-contradictory. We may also define p in terms of q , or q in terms of p . If two sentences are logical equivalent, they denote the same proposition. Logical equivalence should be distinguished from material equivalence, according to which two propositions have the same truth-value (either both true or both false), without necessarily being mutually deducible.

" 'p' and 'q' ... are logically equivalent if they are mutually deducible such that it would be self-contradictory to affirm p and to deny q , or to affirm q and to deny p ." —Pap, *Elements of Analytical Philosophy*, 1949, p. 318.

Logical falsity, see logical truth

来的陈述在事件实际发生之前是既非真也非假的。这在当代逻辑中发展成为“三值逻辑”或“多值逻辑”。其他人建议我们能通过区分不同的模态观念来处理这问题。只有必然陈述蕴涵着事件将必然发生。这一问题仍然是一个争论的话题。

“逻辑决定论主张未来是已经确定的,像过去一样不可改变。”——鲁卡斯:《意志的自由》,1970年,第65页。

逻辑经验主义

维也纳小组哲学的另一说法,大致等同于逻辑实证主义。小组的某些成员,包括石里克在内,宁愿把他们的哲学叫做“逻辑经验主义”。这一名称指明他们与英国经验主义传统的亲缘关系,以及他们通过经验科学的方法论,以及更重要的是通过对语言的逻辑分析发展了那个传统。这种分析寻求对基本命题的刻画,并(按照证实原则)依经验对它们作检验,就像经验主义所要求的那样。关于逻辑经验主义的主要哲学内容,见“逻辑实证主义”条。

“实证主义的意义理论在当代逻辑实证主义(或‘逻辑经验主义’)那里找到了自己最精确的阐释……:它设定概念是以这种方式形成的,即可以在经验上决定概念是否应用于一已知经验。”——帕普:《分析哲学原理》,1949年,第97页。

逻辑等价

两个命题之间的逻辑等价关系是相互推导关系。如果 p 在逻辑上等价于 q ,那么我们可以根据逻辑规则从 q 得到 p ,从 p 得到 q 。否定这种演绎就是自相矛盾。我们还可以用 q 定义 p 或用 p 定义 q 。如果两个语句是逻辑等价的,他们就指相同的命题。逻辑等价应区别于实质等价,后者指的是两个命题有相同的真值(或同真或同假),而并不必然是相互可推演的。

“‘p’与‘q’……逻辑等价,如果它们可相互推演,使得肯定 p 而否定 q 或肯定 q 而否定 p 会造成自相矛盾。”——帕普:《分析哲学原理》,1949年,第318页。

逻辑假

见“逻辑真”条。

Logical fiction

Also called pseudo object. A type of logical construction according to which symbols are constructed from the characteristics of entities they do not denote. They are fictions because these symbols at first glance appear to denote some entities, but upon analysis this turns out to be false. Symbols which are logical fictions are symbolic devices only and do not denote any constituent of the world. The objects they appear to denote do not have their own being and are not constituents of reality. In logic and mathematics, Russell considered such crucial conceptions as classes, the class of classes and numbers as logical fictions. As non-referring descriptions they are all incomplete symbols, that is, they do not have meaning in themselves but have meaning only as used in the context of a proposition.

"...There may be no entity named by the eliminable symbol at all; if this is the case, the object seemingly referred to by the symbol under analysis may be called a 'logical fiction' (Russell) or a 'pseudo-object' (Carnap)." — Pap, *Elements of Analytic Philosophy*, 1949, p. 384.

Logical form

The pattern or structure of a statement or proposition which is shared with other propositions of the same type. To discover the hidden logical form from natural language is precisely the task of logic starting from Aristotle, from whom the term "formal logic" derives. Logical form is topic-neutral, for it is independent of the content of the proposition. An inference is valid or invalid in virtue of the logical form of argument. Arguments which share the same logical form have the same validity. The logical form of a proposition is determined by its constituents. A fully general proposition is a logical form closed by universal quantification. According to the doctrine of logical atomism, philosophy as logical analysis is a matter purely concerned with logical form. On this view, logical form corresponds to the basic structure of reality, for which it provides a logical picture.

Some analytical philosophers tend to distinguish logical form from grammatical form, which is the surface grammatical structure of a sentence. The fact two sentences share the same grammatical form does not entail that they share the same logical form. On the contrary, grammatical form can cover a difference of logical form and give rise to philosophical trouble. In Ayer's illustration, "Martyre exists" and "Martyre suffers" have the same grammatical form, for each sentence consists of a noun following an intransitive verb. From this people infer that "to exist" is an attributive verb like "to suffer", but the logical form of existential sentences is very different from the logical form of sentences ascribing a feature to a subject.

"What any picture, of whatever form, must have in

逻辑虚构

也叫“假对象”,是指一种逻辑构造,根据这种构造,符号是从它们并未指称的实体特征中构造出来的。它们之所以为虚构,是因为这些符号初看起来好像指称了某些东西,但在分析之下表明并不是这样。作为逻辑虚构的符号只是符号工具,并没有指示世界的任何内容。它们似乎指示的对象并无自身的存在,不是实在的构成部分。在逻辑和数学中,罗素认为诸如类、类的类、数这些至关重要的概念是逻辑虚构。作为非指称的摹状词,它们都是不完全符号,就是说,它们自身本无意义,而只有在用于命题的语境中才有意义。

“……可能根本就没有由可消除符号命名的实体;如果情况如此,此符号看上去所指称的对象在分析之后可称为‘逻辑虚构’(罗素语)或‘假对象’(卡尔纳普语)。”——帕普:《分析哲学原理》,1949年,第384页。

逻辑形式

陈述或命题的模式或结构,与其他同类命题所共有。从自然语言中发现隐藏的逻辑形式恰恰是始于亚里士多德的逻辑的任务。“形式逻辑”这个词就是从 he 那里得来的。逻辑形式对于论题是中立的,因为它独立于命题的内容。一个推理的有效或无效在于论证的逻辑形式。具有相同逻辑形式的论证有着同样的有效性。命题的逻辑形式由它的组成部分决定。最一般的命题是冠有全称量词的逻辑形式。根据“逻辑原子主义”学说,作为“逻辑分析”的哲学仅与逻辑形式有关。按这种看法,逻辑形式对应实在的基本结构,它对实在提供了一幅逻辑图画。

有些分析哲学家倾向于区分逻辑形式和语法形式,后者是语句表面的语法结构。两个语句具有相同的语法形式,并不蕴涵着它们具有相同的逻辑形式。恰恰相反,语法形式可能掩盖逻辑形式的差别并引起哲学上的麻烦。用艾耶尔的例子,“烈士存在”和“烈士受难”有相同的语法形式,因为每个句子都是由一个名词接一个不及物动词组成的。人们由此推论出,“存在”像“受难”一样是属性动词,但是,存在语句的逻辑形式完全不同于将一特征赋予主词的语句的逻辑形式。

“任何图像,不论具有什么形式,为了能够描画实在——不论描画得正确还是错误——必须以某种方式与实在有共同的东西,这就是逻辑形式,也即实在的形式。”——维特根斯坦:《逻辑哲学论》,2.18。

common with reality, in order to be able to depict it—correctly or incorrectly—in any way at all, is logical form, i. e. the form of reality.”—Wittgenstein, *Tractatus*, 2.18.

Logical formula, see logical constant

Logical grammar, another term for logical syntax

Logical implication, another term for logical consequence

Logical modality, see modality

Logical necessity

The necessity of what is logically true and guaranteed by the laws of logic. The nature and standard of logically necessary propositions has been a major concern from Leibniz to Wittgenstein, Carnap, C. I. Lewis, Kripke and Hintikka. Logical necessity has a set of different but connected senses. It is a property attributable to a proposition *P*, which according to Kripke's modal semantics means that *P* is true in all possible worlds. Denying such truths would conflict with the laws of logic and render all thinking chaotic. Logical necessity is equivalent to conceptual necessity or being non-contingent. It is ascribed to analytical truths, originally understood as subject-predicate sentences in which the predicate term is contained in the subject, but now understood as sentences which are true in virtue of their logical form alone. In another sense, all consequences deduced from the laws of logic are truths having logical necessity. It is a matter of debate whether logical necessity is the sole valid form of necessity and whether necessity is confined to the sphere of ideas rather than the sphere of facts. Logical truths and, according to standard account, mathematical truths are logically necessary, and there are different views whether we can specify acceptable independent notions of metaphysical, transcendental, physical, nomic or theoretical necessity. There is also debate about whether logical necessity is conventional and varies according to different logical systems. If so, there are questions about what gives the “hardness” to logical necessity and whether logical necessity is a matter of convention, discovery, construction or choice.

“A logical necessity ... is nothing but the necessity of holding-to-be-true according to logical laws of the understanding and of reason.”—Kant, *Lectures On Logic* (ed. by Young), 1992, p. 116.

逻辑公式

见“逻辑常项”条

逻辑语法

“逻辑句法”的另一说法。

逻辑蕴涵

“逻辑后承”的另一个名称。

逻辑模态

见“模态”条。

逻辑必然性

逻辑上为真的及为逻辑规律所保证的必然性。逻辑上的必然命题的性质和标准一直是从莱布尼茨到维特根斯坦、卡尔纳普、C. I. 刘易斯、克里普克和辛提卡所关注的主题。逻辑必然性有一组不同但却相关的含意。它是一种可归属于命题 *P* 的性质,按照克里普克的模态语义学,它意指 *P* 在所有可能世界中为真。否认这样的真理就会与逻辑规律相冲突,并使全部思维混乱。逻辑必然性等于“概念必然性”,或是“非偶然的”。它也被归结为分析真理,最初被看做是谓项包含在主项中的主谓语句,现在指仅就其逻辑形式即为真的语句。在另一种意义上,所有由逻辑规律演绎出的推论都是具有逻辑必然性的真理。逻辑必然性是否为必然性的唯一有效形式,以及必然性是否只限于观念的领域而不涉及事实的领域,这都是争论的话题。逻辑真理,以及按照标准的观点、数学真理、都是逻辑必然的。关于我们能否说明形而上学必然性、超验必然性、物理必然性、规范必然性及理论必然性这些相互独立的观念,人们有不同的观点。人们也争论逻辑必然性是否是约定性的,是否随不同逻辑系统而不同。如果是如此,则提出了下列问题,即是什么赋予了逻辑必然性的“坚实性”,逻辑必然性究竟是否是约定的、发现的、构造的、选择的。

“逻辑必然性不是别的,而是按照理解和推理的逻辑规律保持为真的必然性。”——康德:《逻辑学讲义》(杨编辑),1992年,第116页。

Logical oddness

Newell Smith's term, referring to the denial of contextual implications. If P contextually implies Q, then to assert P we would naturally assert Q. But if one asserts P, but denies Q, or asks whether Q, one acts in a way that is logically odd. In the former case, the person denying Q is in a self-contradiction. In the latter case, the answer to the person's question has already been implied, and no further or better answer can be expected to be given.

"I shall say that a question is 'logically odd' if there appears to be no further room for it in its context because it has already been answered." Nowell-Smith, *Ethics*, 1954, p. 83.

Logical paradox

Russell believed that his ramified set theory provides a unified solution for all paradoxes. But Ramsey claims that there are two kinds of paradoxes: logical or set-theoretical paradoxes and semantic paradoxes. Logical paradoxes occur in a logical or mathematical system and are synonymous with antinomies. They are represented by Russell's paradox, Burali-Forti's paradox, and Cantor's paradox. They arise because of the peculiar nature of some set-theoretical concepts or due to faulty logic and mathematics. Semantic paradoxes such as the liar paradox arise, on the other hand, because of ambiguities with respect to certain of the terms or notions employed. The general solution to logical paradoxes is to restrict the principles governing the existence of sets.

"A number of paradoxes known variously as the Antinomies or the logical paradoxes are often said to share the common feature of self-reference."—Champlin, *Reflective Paradoxes*, 1988, p. 120.

Logical picture, another term for logical form

Logical positivism

A general philosophical position, also called logical empiricism, developed from the 1920s by members of the Vienna Circle, such as Schlick, Neurath and Carnap, on the basis of traditional empirical thought and the development of modern logic. Logical positivism confines knowledge to science. It divides all meaningful propositions into two categories: analytic propositions which are necessarily true and can be known *a priori*; and synthetic propositions, which are contingent and can be known empirically or *a posteriori*. On the one hand, logical positivism pays special attention to mathematics and logic and develops logical syntax and semantics in order to reveal the logical structure of the world. On the other hand, it insists on verificationism, that is, that the meaning of a proposition consists in its method of verification. A purportedly empirical

逻辑奇异

诺威尔·史密斯的术语,是指对情境蕴含的否定。如果P在情景意义上蕴含着Q,那么肯定P,自然就肯定了Q。但假如一个人断言P,但否定Q,或问是否Q,他的行为在逻辑上就是奇异的。在前一种情形里,否定Q的人是自我矛盾,在后一种情形里,对他的问题的回答已经被隐含了,因而没有更进一步或更好的回答能够给予。

“如果一个问题在它的情景中已经给了回答,而不再有进一步的回旋空间,那它是逻辑奇异的。”——诺威尔·史密斯:《伦理学》,1954年,第83页。

逻辑悖论

罗素相信,他的分支集合论提供了对所有悖论的统一解答。但是拉姆塞认为有两种悖论:逻辑悖论(也称“集合论悖论”)和语义学悖论。逻辑悖论出现在逻辑或数学系统中,与“二律背反”同义,其代表有罗素悖论,布拉里-福蒂悖论和康托尔悖论。它们的出现是由于某些集合论概念的特殊性质或是逻辑和数学的不完善。另一方面,语义学悖论,如说谎者悖论的出现,是由于所采用的某些词语或概念的含糊性。对逻辑悖论的一般解决是限制支配集合存在的原则。

“一些被不同地称作二律背反或逻辑悖论的悖论,经常被认为具有自我指称的共同特征。”——钱普林:《自反悖论》,1988年,第120页。

逻辑图像

“逻辑形式”的另一说法。

逻辑实证主义

一种普遍的哲学立场,亦称“逻辑经验主义”,由诸如石里克、纽拉特和卡尔纳普等维也纳小组成员基于传统的经验论思想和现代逻辑的发展,于20世纪20年代提出。逻辑实证主义把知识局限于科学。它把所有有意义的命题划分为两类:分析命题,它们必然为真,可以先天地知道;综合命题,它们是偶然的,可以从经验上或后天地知道。一方面,逻辑实证主义特别关注数学和逻辑,提出逻辑句法和语义学,以揭示世界的逻辑结构。另一方面,它坚持证实主义,即主张命题的意义在于其证实方法。一个所谓的经验命题或事实命题是没有意义的,如果它被证明为不能够在经验中得到证实。一切被证明为合理的信念最终可以还原为记录陈述,它们可能直接显示为真,而无需从其他陈述中推

or factual proposition is meaningless if it proves incapable of being verified in experience. All justified beliefs can be reduced ultimately to protocol statements, which can be shown to be true directly without inference from other statements. On this basis, logical positivism claims that traditional metaphysical problems are not false but meaningless, for they cannot be shown to be true by *a priori* analysis and cannot be verified in experience. With these two approaches exhausted, they have no truth-value and are meaningless. Logical positivism greatly promoted the development of analytical philosophy in the first half of twentieth century, but after World War II, all of its major tenets were criticised respectively by Quine and Oxford ordinary language philosophy.

“‘Logical positivism’ is a name for a method, not for a certain kind of result. A philosopher is a logical positivist if he holds that there is no special way of knowing that is peculiar to philosophy, but that questions of fact can only be decided by the empirical methods of science, while questions that can be decided without appeal to experience are either mathematical or linguistic.”—Russell, *Logic and Knowledge*, 1956, p. 367.

Logical product, see logical sum

Logical proposition, see fully generalised proposition

Logical / real opposition

A dichotomy that Kant introduced in his *Attempt to Introduce the Concept of Negative Quantities into Philosophy*. A logical opposition is an abstract relation between a proposition and its negation, namely logical contradiction, which can be discerned through conceptual analysis. A real opposition involves opposing forces or tendencies which exist in the qualities of external things and can be discovered through empirical methods rather than through logical analysis. The distinction undermines the claim of rationalism that reason alone is the guarantee of knowledge, because we cannot understand real oppositions through reason alone. This distinction developed into the distinction between reason and sensibility in Kant's *Critique of Pure Reason*.

“Two things are opposed to each other if one thing cancels that which is posited by the other. This opposition is two-fold: it is either logical through contradiction, or it is real, that is to say, without contradiction.”—Kant, *Theoretical Philosophy 1755-1770* (Walford and Meerbote, eds), 1992, p. 211.

论。逻辑实证主义基于此宣称,传统形而上学问题不是错了,而是没有意义,因为它们不能以先天分析表明为真,又不能在经验中得到证实。因为在这两条路之外别无它径,所以它们没有真值,是无意义的。在20世纪上半叶,逻辑实证主义极大地促进了分析哲学的发展,但在第二次世界大战之后,它的主要信条分别受到了奎因和牛津日常语言哲学的批评。

“‘逻辑实证主义’是一种方法的名称,而不是某种结果的名称。如果一个哲学家认为,没有哲学所专有的特殊的认知方式,事实问题只能由科学的经验方法决定,而不诉诸于经验即可决定的问题要么是数学问题,要么是语言问题,那么他就是逻辑实证主义者。”——罗素:《逻辑和知识》,1956年,第367页。

逻辑积

逻辑命题

见“充分普遍化命题”条。

逻辑的/实在的对立

康德在他的《把否定量概念引进哲学的尝试》一文中介绍的一种二分对立。逻辑的对立是指一个命题和它的否定之间的抽象区别,即逻辑矛盾;它可通过概念分析而辨别。实在的对立是指外部事物的性质中所存在的对立的力量或趋向;它们不是通过逻辑分析,而是通过经验方法来发现。这种区别对理性主义关于只有理性才是知识的保证的根本立场提出挑战,因为理性本身不能使我们理解实在的对立。这个区分最终在《纯粹理性批判》中发展为理性和感性的区分。

“如果一个事物取消由另一事物所设定的东西,那么这两个事物是相互对立的。这种对立是双重的:它既由于矛盾而是逻辑的,又是实在的,那就是说,没有矛盾。”——康德:《理论哲学(1755—1770年)》(瓦尔福德和米尔波特编),1992年,第211页。

Logical sentence

A sentence which consists solely of logical symbols. It is either analytical and, hence, a logical truth or contradictory and, hence, a logical falsehood. Such a sentence is the same as a logical formula.

"A logical sentence is one that contains only logical signs." Bergman, *Meaning and Existence*, 1960, p. 74.

Logical space

The possible ways in which objects can combine into states of affairs. The term is used by analogy to physical space, which presents us with a set of locations, positions or places which can be occupied by objects in relation to other objects. Logical space is thus the ensemble of logical possibilities, a universe composed of all possible-and-existing states of affairs and all possible-and-non-existing states of affairs. For Russell, it is a system of proper logical relations. Wittgenstein makes use of this conception to show that facts do not compose the world as a heap and that there is a structure of logical relations amongst them. The world is the totality of facts in logical space.

"The logician is led to give the name 'space' to any system of relations having the same or similar logical properties."—Russell, *Collected Papers of Bertrand Russell*, VI, p. 82.

Logical sum

A logical sum results from the disjunction of two propositions ($p \vee q$), or from the union of two sets. It is the inclusive sense of the connective "or", that is "p or q or both" (rather than the exclusive sense of "or", that is "p or q, but not both"). The logical sum is contrasted to the logical product, which results from the conjunction of two propositions ($p \wedge q$), or from the intersection of two sets. The logical product is the truth-functional compound of p and q, that is its truth value is determined by the truth value of p, the truth value of q, and the logical connective 'and'.

"Frege and Russell introduced generality in association with logical product or logical sum."—Wittgenstein, *Tractatus*, 5.521.

Logical syntax

Also called logical grammar. A system of rules governing the use of signs, which determines whether a combination of signs can be a proposition, that is, whether it can represent a logically possible state of affairs. Logical syntax belongs to the purely formal part of a logical system and is discovered through logical analysis. It aims to display the hidden logical forms of propositions. In contrast to the surface syntax or grammar of ordinary language, it is the syntax of logical or ideal language. Aside from avoiding the

逻辑句子

只是由逻辑符号组成的句子。它要么是分析的, 所以是逻辑真理, 要么是矛盾的, 所以是逻辑错误。这样一个句子与一个逻辑公式是一样的。

"一个逻辑句子是那只包括逻辑符号的句子。"—柏格曼:《意义与存在》, 1960年, 第74页。

逻辑空间

对象能够在其中结合为事态的可能方式。此词的用法是类比于物理空间。它向我们展现了一系列的居所、位置或地方, 它们可能被与其他对象有关的对象占据。因此, 逻辑空间是逻辑可能性的集合, 由所有可能的和现存的事态以及所有可能的与非现存事态构成的宇宙。对罗素而言, 这是一个恰当的逻辑关系的体系。维特根斯坦利用这一概念来说明, 事实并不构成积累式的世界, 在它们之中有一个逻辑关系的结构。世界是逻辑空间中事实的总体。

"逻辑学家被引导到对于具有相同或相似逻辑性质的任何关系体系给以'空间'的名称"。——罗素:《罗素文集》, 第六卷, 第82页。

逻辑和

逻辑和出自两个命题的析取($p \vee q$), 或两个集合的相并。这是联结词"或"的可兼的意义, 即是"p或q或二者"(而不是"或"的不可兼的意义, 即"p或q, 但并非二者")。逻辑和不同于逻辑积, 它出自于两个命题的合取($p \wedge q$), 或两个集合相交。逻辑积是p和q的真值函数的复合, 就是说, 它的真值由p的真值、q的真值和逻辑联结词"和"决定。

"弗雷格和罗素引入了与逻辑积或逻辑和相联系的概括性。"—维特根斯坦:《逻辑哲学论》, 5.521。

逻辑句法

也叫逻辑语法, 支配符号使用的规则系统。它决定符号的一种结合是否可能是命题, 也就是说, 它是否能表示一种逻辑上可能的事态。逻辑句法属于逻辑系统的纯形式部分, 通过逻辑分析而被发现。它的目的是要显示隐藏着的命题逻辑形式。与日常语言的表面句法和语法不同, 它是逻辑语言或理想语言的句法。除了要避免使用同一符号表示不同的意义, 它并不关心符号的意义。它把符号的某些结合当做胡说而

use of the same sign for different significations, it is not concerned with the meaning of the signs. It excludes some combinations of signs as nonsense. To say that traditional metaphysical problems are nonsensical means that they violate logical syntax. The term was used in Wittgenstein's *Tractatus*, but is abandoned in his later works. Carnap attempts to establish such a system in his *Logical Syntax of Language* (1934).

"In order to avoid such errors we must make use of a sign-language that excludes them by not using the same sign for different symbols and by not using in a superficially similar way signs that have different modes of signification; that is to say, a sign-language that is governed by logical grammar -by logical syntax." — Wittgenstein, *Tractatus*, 3.325.

Logical truth

A logical symbol or logical formula can be a logical truth because it is true under all interpretations. A statement or proposition is logically true if it is validly deduced in a logical system. In this sense, a logical truth is generally a theorem of a logical system. More often, we say that a statement is a logical truth because it is an instance of a valid logical form. For example "A house cannot be both warm and not warm". The logical form of this sentence is "not both p and non-p", and it is thus in accord with the principle of non-contradiction. If a statement is logically true, then it is analytic and is necessarily true. On the contrary, if a statement violates a logically valid form, that is if its logical form conflicts with some logical principle, it is logically false or a logical falsity. If a statement is logically false, it is necessarily false. Accounts of the kind of logical truth that depends upon the meaning of the expressions contained in a proposition have come under pressure from Quine's rejection of the analytic-synthetic distinction and the notions of synonymy and meaning. Without reliance on meaning, a logical truth becomes any truth which can be obtained from a valid logical scheme.

"A logical schema is valid if every sentences obtainable from it by substituting sentences for simple sentence is true. A logical truth, finally, is a truth obtainable from a valid logical schema." — Quine, *Philosophy of Logic*, 1970, p. 51.

Logical type

Words or expressions can be classified into a hierarchy of classes, such as individuals, classes, classes of classes, and so on. The logical type of a word or an expression is the class it is in. When two words a and b are of the same logical type, for any sentential function Fx, Fa and Fb are either both meaningful or both meaningless. In "Socrates is a philosopher" and "Aristotle is a philosopher", "Socrates"

加以排斥。说传统的形而上学问题是胡说,意思是说它们违反了逻辑句法。维特根斯坦在《逻辑哲学论》中使用了这一术语,但在后期著作中又将其抛弃。卡尔纳普在《语言的逻辑句法》(1934)中企图建立起这样的系统。

“为了避免这些错误,我们必须使用排除了这些错误的符号语言,即不对不同的记号使用相同的符号,不以表面相似的方式使用具有不同意义样式的符号:这就是说,我们必须使用由逻辑语法即逻辑句法支配的符号语言。”——维特根斯坦:《逻辑哲学论》,3.325。

逻辑真

逻辑符号或逻辑公式能够是一逻辑真理,因为它在所有解释下都真。一陈述或命题是逻辑真的,如果它在一逻辑系统内演绎有效。在这种意义上,逻辑真理一般而言是一逻辑系统内的定理。更为经常地,我们说一陈述是逻辑真的,因为它是一有效的逻辑形式的例证。例如,“一座房子不能既是温暖的又不是温暖的”。这一句子的逻辑形式是“并非既p又非p”,因此它是与不矛盾原理相一致的。如果一陈述是逻辑真的,那么它是分析的并且是必然真的。相反,如果一个陈述违反了逻辑有效形式,即是说它的逻辑形式违背了某些逻辑原理,则它是逻辑假的,或者说它是一逻辑假。如果一陈述是逻辑假的,则它是必然假的。奎因拒斥分析—综合的区别以及拒斥同义和意义概念,这已经给依赖于包含在命题中的表达式的意义的那类逻辑真理的说明带来了压力。假如不依赖于意义,逻辑真理就成为能够从有效的逻辑模式得到的任何真理。

“一逻辑模式是有效的,如果通过用句子替换简单句由它得到的每一个句子都是真的。逻辑真理最终就是由一有效逻辑模式得到的真理。”——奎因:《逻辑哲学》,1970年,第51页。

逻辑类型

语词或词组可以分成类的等级系统,例如个体、类、类的类,等等。语词或词组的逻辑类型就是它所在的类。当两个语词a和b属于同一逻辑类型时,对于任意语句函项Fx, Fa和Fb要么同为有意义,要么同为无意义。在“苏格拉底是哲学家”和“亚里士多德是哲学家”中,“苏格拉底”和“亚里士多德”属于同一逻辑类

and "Aristotle" are of the same logical type, for both of them are individuals. Yet this does not extend to "A man is a philosopher". For "man" is a class, and hence is of a different type.

"The definition of a logical type is as follows: A and B are of the same logical type if, and only if, given any fact of which A is a constituent, there is a corresponding fact which has B as a constituent, which either results by substituting B for A, or is the negation of what so results." —Russell, *Collected Papers of Bertrand Russell*. IX, p. 169.

Logical words

Russell divides words into two kinds: factual words which contribute to indicating facts and logical words which contribute to indicating the structures of sentences and inferences. He further divides logical words into two kinds: general words such as "all" and "some", and conjunction such as "not", "or" "and" and "if-then", by means of which we combine atomic sentences into a molecular sentences and make various inferences. Logical words are also called logical constants. Although there is broad agreement in the enumeration of the logical constants, it is much more difficult to determine why certain words have this status.

"There are logical words such as 'or', 'not', 'some', and 'all'." —Russell, *Human Knowledge*, 1948, p. 275.

Logically impossible

A purported state of affairs or fact which violates the laws of logic, and is therefore inconsistent or self-contradictory, is logically impossible. For instance, "God is a sceptic" is logically impossible because it would be self-contradictory to ascribe scepticism to a being defined as having perfect knowledge. The logically impossible should be distinguished at least from metaphysical, epistemic and scientific impossibility, each with its own grounds. A proposition is scientifically impossible, for example, if it violates the laws of nature. Propositions are logically possible if they do not violate the laws of logic. We do not necessarily know of every proposition whether it is logically possible or logically impossible. Nor do we have a clear understanding of how different kinds of impossibility and different kinds of possibility are related.

"When we hold a proposition to be logically impossible, we are claiming that it is incompatible with some general proposition which is itself logically true." —Ayer, *Probability and Evidence*, 1972, p. 17.

Logically perfect language

Also called an artificial language or ideal language. Because they were dissatisfied with the ambiguities and bewildering syntax of ordinary language and because they believed that these difficulties formed the main obstacles to

型,因为它们都是个体。但这不能扩展到“有个人是哲学家”,因为“人”是类,因此属于另一类型。

“逻辑类型的定义如下: A 和 B 属于同一逻辑类型,当且仅当,已知任意事实(A 是其构成部分),有一相应事实(有 B 作为其构成部分),它要么是以 B 替换 A 的结果,要么是此结果的否定。”——罗素:《罗素文集》,第九卷,第 169 页。

逻辑词

罗素把词分为两类:事实词(其作用是指明事实)和逻辑词(其作用是指明语句和推理的结构)。他进一步把逻辑词分为两类:像“所有”、“有些”这样的全称词,以及像“并非”、“或者”、“并且”、“如果……那么”这样的联结词,我们可借助于它们把原子语句连结为分子语句,并进行各种各样的推理。逻辑词也叫逻辑常项。虽然在列举逻辑常项时人们有广泛的一致意见,但要决定为什么某些词有这种性质则要困难得多。

“有诸如‘或’、‘并非’、‘有些’及‘所有’这样的逻辑词。”——罗素:《人类的知识》,1948 年,第 275 页。

逻辑上不可能

一种设想的事态或事实,它违反了逻辑定律,因而是不一致的,或自相矛盾的,所以在逻辑上是不可能的。例如,“上帝是怀疑论者”在逻辑上不可能,因为要把怀疑论赋予被定义为具有完美知识的存在者,是自相矛盾的。逻辑上不可能至少应区别于形而上学的、认识论的和科学上的不可能性,每一种都有自身的理由。例如,如果一个命题违反了自然定律,它就是在科学上不可能的。没有违反逻辑定律的命题是在逻辑上可能的。我们并不必然知道每个命题在逻辑上可能或不可能。不同种类的不可能性和可能性是如何相关的,对此我们没有清晰的了解。

“当我们认为一命题在逻辑上不可能时,我们是在认为它与某些自身在逻辑上为真的普遍命题不相容。”——艾耶尔:《或然性和证据》,1972 年,第 17 页。

逻辑上完善的语言

也叫“人工语言”或“理想语言”。弗雷格、罗素、维特根斯坦不满于日常语言的含混和令人困惑的句法,并认为这些困难构成了哲学进步的主要障碍,因此他们步莱布尼茨的后尘,提

progress in philosophy, Frege, Russell and Wittgenstein followed Leibniz in advancing the project of an ideal or logically perfect language. Such a language would have both perfect syntax and perfect vocabulary. Perfect syntax would be provided by classical predicate calculus with identity, and the perfect vocabulary would include only unanalysable words holding of simple objects. A perfect language would immediately show the logical structure of its propositions and the logical structure of the facts asserted or denied, and in a perfect language the logical form and the grammatical form would entirely coincide, so conforming to the logical requirement that language should avoid contradiction. A sample of perfect language is the language of mathematical logic. Russell sometimes thinks that such a language will afford insight into the nature of language in general and that in this way its significance is to make graphic some metaphysical and epistemological doctrines. Because this language would be entirely free from the philosophical defects of ordinary language which Russell and Wittgenstein claim to discover, such as ambiguity, vagueness and singular terms without reference, it is also called an ideal language. A logically perfect language is supposed to represent our thought perfectly, but having a language which expresses any one thought in only one way is generally regarded as an unattainable ideal. Furthermore, many philosophers follow the later Wittgenstein in rejecting a logically perfect language as a proper ideal to guide philosophical work. Nevertheless, a narrow notion of a logically perfect language, incorporating only the logical symbolism of Frege and Russell (predicate calculus and propositional calculus) supplemented by later logical developments, is regarded as providing a reliable instrument for carrying out deductive inferences without the risk of fallacy. This goal has been achieved to a great extent, but without fulfilling earlier promises of fundamental consequences for the whole of philosophy.

"In a logically perfect language, there will be one word and no more for every simple object, and everything that is not simple will be expressed by a combination of words, by a combination derived, of course, from the words for the simple things that enter in, one word for each simple component." — Russell, *Logic and Knowledge*, 1956, pp. 197-8.

Logically possible, see logically impossible

Logically proper name

A proper name is a simple symbol designating a particular. Russell distinguishes ordinary proper names from logically proper names. An ordinary proper name, such as "Socrates" or "The Golden Mountain" has a sense, but it has its sense because it is, in fact, a description in disguise. It is

出了理想语言或逻辑上完善的语言的计划。这样一种语言会有完善的句法和完善的词汇。完善的句法由经典的、带等同的谓词演算提供,完善的词汇只包括表示简单对象的不可分析的语词。完善的语言会直接显示其命题的逻辑结构以及所肯定或否定的事实的逻辑结构;在完善的语言中,逻辑形式和语法形式会完全重合,以符合这样一个逻辑要求,即语言应避免矛盾。完善语言的一个样本是数理逻辑语言。罗素有时认为,这种语言将为洞察一般语言的本性提供卓见。这样,它的意义就是使某些形而上学和认识论学说变得清晰明白。因为这种语言完全没有罗素和维特根斯坦声称发现的日常语言中的哲学缺陷,诸如含混、模糊、无指称的单称词等,它有时又叫作理想语言。逻辑上完善的语言被认为完善地表达了我们的思想,但拥有只用一种方式表达思想的语言一般被认为是达不到的理想。此外,许多哲学家赞同后期维特根斯坦,否认逻辑上完善的语言是恰当的指导哲学工作的理想。不过狭义的逻辑上完善的语言仅仅包括弗雷格和罗素的逻辑符号体系,即谓词演算和命题演算,并由后来的逻辑发展所补充,这通常被看作是提供了可靠的工具来进行演绎推理,而没有出现谬误的危险。这一目标已在极大的范围内达到,但未能实现先前的许诺,即对整个哲学有根本性意义。

"在逻辑上完善的语言中,对于每一简单对象都有一个并且只有一个词,而所有并非简单的东西将由语词的结合来表示,这种结合当然来自于表示构成复杂事物的简单事物的语词,一个词代表一个简单成分。"——罗素:《逻辑和知识》,1956年,第197—198页。

逻辑上可能

见“逻辑上不可能”条。

逻辑专名

专名是命名殊相的简单符号。罗素区分了普通专名与逻辑专名。像“苏格拉底”或“金山”这样的普通专名有涵义,但它有涵义是因为它实际上是伪装了的摹状词。可是,能满足摹状词的承受者并不总是存在。逻辑专名是自我中

not always the case that there is a bearer which satisfies the description. Logically proper names are egocentric words or indexical words, such as "I", "this", "that" and "here". They are names for items available in current experiences, and have their meaning solely in terms of the objects they stand for. If such an object does not exist, a logically proper name is meaningless. Its meaning changes if the object it designates changes. Hence, a logically proper name refers to an object, and it refers directly without any implicit description. It denotes, but it does not connote anything. This distinction between ordinary proper names and logically proper names is crucial to Russell's theory of definite descriptions. Whether any term can function as a logically proper name is discussed within the general context of the theory of names.

"The mark of a logically proper name being that its significant use entailed the existence of the object which it was supposed to denote." —Ayer, *Metaphysics and Common Sense*, 1973, p. 36.

Logicism

An approach to philosophy of mathematics developed by Frege, Russell and Carnap, which claims that logic provides the foundations of mathematics, such that the two are continuous and even identical. According to Russell, logic has two parts: one is philosophical and deals with forms of reality and formal analysis; the other is mathematical and deals with the foundations of mathematics and the theorems deduced from these foundations. This mathematical part, which justifies the term "logicism", is also called symbolic logic, logistic or mathematical logic. In contrast to two other major forms of philosophy of mathematics, namely intuitionism and formalism, logicism believes that every mathematical truth — or at least the most significant ones — can be expressed as a true logical proposition which is a logical truth, and that all such truths can be deduced from a small number of logical axioms and rules. Logicism is thus a programme to translate the basic mathematical ideas and theorems into logic in order to ensure that mathematical truth has the same epistemological status as logical truth. The classical presentations of logicism can be found in Frege's *Foundation of Arithmetic* and Russell and Whitehead's *Principia Mathematica*. However, to avoid paradoxes Russell introduced set theory into his programme and extended the basis of logicism beyond the purely logical. Quine argues that logicism succeeds in reducing mathematics not to logic but to logic plus set theory. However, the current close relationship between the study of mathematics and the study of logic is inspired by logicism.

"Logicism, represented by Frege, Russell, Whitehead, Church, and Carnap, condones the use of bound variables to refer to abstract entities known or unknown, specifiable and

心词或索引词, 例如“我”、“这”、“那”、“这里”。它们是可在当下经验中得到的东西的名称, 它们有意义仅仅是由于它们所代表的对象。如果这样的对象不存在, 那么逻辑专名就没有意义。如果它所命名的对象变了, 它的意义也就变了。因此, 逻辑专名指称一对象, 它直接指称, 没有含蓄的描述。它指称, 但无内涵。对于罗素的限定摹状词理论, 普通专名和逻辑专名的这种区分是至关重要的。某一语词是否能作逻辑专名用, 这在名称理论的一般语境中讨论。

“逻辑专名的标志是, 它的有意义的使用蕴涵着存在被视为它所指称的对象。”——艾耶尔:《形而上学和常识》, 1973年, 第36页。

逻辑主义

由弗雷格、罗素、卡尔纳普提出的研究数学哲学的方法, 认为逻辑为数学提供了基础, 以至于使两者连续甚至等同起来。根据罗素的看法, 逻辑有两个部分, 一为哲学性的, 处理实在的形式和形式分析问题; 另一为数学性的, 处理数学的基础和从这些基础中演绎出定理的问题。这一数学部分恰当地表明了“逻辑主义”一词, 也叫做“符号逻辑”、“逻辑斯蒂”或“数理逻辑”。与数学哲学的其他两种主要形式, 即直觉主义和形式主义不同, 逻辑主义认为每一数学真理——或至少大部分有意义的数学真理——可以表达为真的逻辑命题, 即逻辑真理, 而所有这些真理可以从很少的逻辑公理和规则中演绎出来。因此, 逻辑主义主张这样的计划, 它要把基本的数学观念和定理翻译成逻辑, 以保证数学真理与逻辑真理有相同的认识论地位。逻辑主义的经典代表作是弗雷格的《算术的基础》和罗素与怀特海的《数学原理》。但是, 为了避免悖论, 罗素把集合论引入他的计划之中, 把逻辑主义的基础扩大得超出了纯逻辑。奎因认为, 逻辑主义的成功之处不是将数学还原为逻辑, 而是还原为逻辑加集合论。不过, 当今在数学研究和逻辑研究之间的密切关系是得之于逻辑主义的促进。

“由弗雷格、罗素、怀特海、丘奇和卡尔纳普所代表的逻辑主义, 允许人们不加区别地使用约束变项来指称已知的或未知的、可指明的和不可指明的抽象实体。”——奎因:《从逻辑的观点看》, 1953年, 第14页。

unspecifiable, indiscriminately.”——Quine, *From a Logical Point of View*, 1953, p. 14.

Logistic, another term for logicism

Logistic method

The method of constructing a formal deduction system. It starts with a specification of the primitive symbols. A sequence of symbols acceptable in a system is called a sentence or a well-formed formula. Certain well-formed formulae are singled out as axioms, and a set of rules of inference are laid down, according to which some well-formed formulae can be inferred from other well-formed formulae which serve as premises. The method establishes a decision procedure which determines in accordance with rules of inference whether an arbitrary formula is a theorem of the system. The aim of this method is to make deductive reasoning mathematically precise and to deal with the major features of a theory, such as implication, compatibility and interdependence, in a formal way. The formalised system of logic built by this method is called a logistic system.

“By the logistic method, the principles of logic are not antecedently presumed as rules of demonstration.”——Lewis and Langford, *Symbolic Logic*, 1932, p. 118.

Logistic system, see logistic method

Logocentrism

A postmodernist characterisation of the Western metaphysical tradition as taking *logos* (reason) as the locus of truth and meaning and believing that truth can be known by the subject via the inner light of reason. This tradition takes being as subject-matter and is excessively concerned to establish a hierarchical ordering of various conceptual oppositions and to maintain the stability of meaning and the validity of reason. According to this criticism, Western metaphysics neglects the complexity of reason in the life-world and restricts it to its cognitive-instrumental dimension. The dominant concern of traditional metaphysics with the articulation of the source of order and structure of things is based on its cosmological and ontological assumption that the world has an ordered ground. Logocentrism is the target of Derrida's deconstruction. In his view, philosophy should be concerned with the condition of the possibility of *logos*, rather than viewing *logos* as the condition of the possibility of truth. For Derrida, logocentrism presents itself chiefly in history as phonologism, or the emphasis of speech over writing. “Phonologism” is always used by Derrida as a synonym for “logocentrism”.

“Logocentrism would thus support the determination of

逻辑斯蒂

“逻辑主义”的另一说法。

逻辑斯蒂方法

构造形式演绎系统的方法。它从明确给出初始符号开始。在一系统内可接受的符号串叫做语句或“合式公式”。然后它挑选出某些合式公式作为公理,并且规定一组推理规则,根据这些规则,某些合式公式可以从用作前提的另外的合式公式推演出来。这种方法确定了一“判定程序”,后者决定着是否任意公式根据推理规则都是该系统的一个定理。这一方法的目标是使演绎推理在数学上是精确的,并且以一种形式的方式处理一理论的那些主要特征,例如蕴涵、相容性和相互依赖性。用这种方法建构的形式化的逻辑系统叫做“逻辑斯蒂系统”。

“根据逻辑斯蒂方法,逻辑原理并不是预先作为论证规则而被假定的。”——刘易斯和兰根福特:《符号逻辑》,1932年,第118页。

逻辑斯蒂系统

见“逻辑斯蒂方法”条。

逻各斯中心论

对于西方形而上学传统特征的一种后现代表述;这种特征就是将逻各斯(理性)当做真理和意义的中心,并相信真理能为主体经过理性的内在之光而知晓。这个传统将存在当做主题,并且极想建立一个关于各种对立概念的等级次序,维持意义的稳定和理性的有效。按照这种批判,西方形而上学忽略了生活世界中的理性复杂性,将自己限于认知的一工具的维度。传统形而上学对于秩序之源和事物结构的首要关切基于这样一个宇宙论的和存在论的假定,即这个世界有一个有序的基础。逻各斯中心论是德里达要去解构的对象。在他看来,哲学应该关心逻各斯之所以可能的条件,而不是将逻各斯视为真理可能的条件。对于德里达而言,逻各斯中心论在历史上首先表现为语音主义,或对于言语而非书写的强调。“语音主义”在德里达那里总是被用作“逻各斯中心论”的同义词。

“因此,逻各斯中心论支持将存在者之存在确定为在场的做法。此逻各斯中心论在海德格尔的思想中也并非完全没有,或许它在存在论—神性论时代、在在场哲学或哲学自身中仍然把持着那种思想。”——德里达:《论书写学》

the being of the entity as presence. To the extent that such a logocentrism is not totally absent from Heidegger's thought, perhaps it still holds of that thought within the epoch of onto-theology, within the philosophy of presence, that is to say, within philosophy itself." — Derrida, *Of Grammatology* (trans. by Spivak), 1974, p. 12.

Logos

[Greek, from the verb *legein*, to say, to speak] From its basic meaning of anything said, a term with a wide range of derivative meanings, including speech, reputation, thought, cause, reason, argument, measure, structure, proportion, ratio, relation, principle, formula and definition. Its exact meaning must be decided in context, but three meanings had greatest prominence in Greek philosophy: (1) in the philosophy of Heraclitus who first uses *logos* as a technical term, an objective universal principle which is equally true and equally accessible for all; Stoicism also took *logos* to be a cosmic force, the principle both of knowledge and of causation; (2) the rational part of the soul; (3) an account or, more precisely, an account expressing the essential nature of anything, that is a definition. The second and third meanings played a great role in the philosophy of Plato and Aristotle.

"Listen not to me but to the Logos." — Heraclitus, in Diels and Kranz, *Die Fragmente Der Vorsokratiker*, Fr. 50.

Lottery paradox

A paradox formulated by Henry Kyburg in *Probability of the Logic of Rational Belief* (1961). I believe rationally that of a million lottery tickets there is one which will win. But I do not believe rationally that Ticket 1 will win, nor do I believe that Ticket 2 will win, and so on through all the tickets. Eventually there is no reason to believe that any single ticket will win. A paradox then arises, for I certainly believe that there is one ticket that will win. The paradox involves the relation between partial belief and full belief.

"All the lottery paradox shows in any case is that in some circumstances a claim to knowledge is not adequately supported by the reasonableness of any particular partial belief however strong." — Mellor, *The Matter of Chance*, 1971, p. 163.

Love

As commonly understood, love is closely related to sexual affection. Some philosophers, such as Schopenhauer and Nietzsche, regard it as a natural impulse. But in the history of Western philosophy, love has been treated in various ways under different names, such as *eros*, *philia*, *agape* (universal benevolence), Romantic love, Sacred love (the love of God), comradeship, sympathy, care and concern. Plato in his *Symposium* and *Phaedrus* argued that

(斯庇瓦克英译), 1974 年, 第 12 页。

逻各斯

[希腊语, 源自动词 *legein* (言、说)] 该词的基本意思是所言之事, 由此引申出广泛的意义域, 例如言说、名声、思想、原因、理性、论证、尺度、结构、比率、比例、关系、原理、公式、定义等等。它的精确含义只能由上下文的关系来确定, 但在希腊哲学中, 有三种含义最为突出: (1) 在作为专业术语第一次使用 *logos* 的赫拉克利特哲学中, 它指对所有东西同等真实也同等可近的客观普遍原则; 斯多亚学派也把 *logos* 当做宇宙力量, 当做知识原则和因果原则。(2) 灵魂的理性部分。(3) 一种说明, 更恰当地说, 一种表述事物本质特性的说明, 即定义。在柏拉图和亚里士多德哲学中, 后两种含义起了很大作用。

“不要听从我, 而要听从逻各斯。”——赫拉克利特, 见第尔斯和克兰兹: 《前苏格拉底残篇》, 残篇 50。

抽彩悖论

由 H. 凯伯格在他的《合理信念逻辑的概率》(1961) 一书中所表述的悖论。我合理地相信在一百万张彩票中有一张将中彩。但我并不合理地相信 1 号票将中彩, 也没有理由相信 2 号票将中彩。这一过程可以继续下去, 以至最终也没有理由相信任何单独一张票将中彩。于是悖论出现了, 因为我确实相信有一张票将中彩。这一悖论涉及到部分信念和完整信念之间的关系。

“无论如何, 抽彩悖论所表明的是, 在某些场合, 任何特殊的部分信念, 无论它是多么合理, 都不足以支持关于知识的断言。”——梅洛: 《机遇问题》, 1971 年, 第 163 页。

爱

按照通常的理解, 爱与性爱密切相关。一些哲学家, 如叔本华和尼采, 认为它是一种自然的冲动。但在西方哲学史上, 爱一直是在不同的名称下以各种不同的方式加以论述的, 例如 *eros* (两性间的爱)、*philia* (对朋友和同胞的爱)、*agape* (普遍的仁慈)、浪漫的爱、神圣的爱 (对上帝的爱)、同志友谊、同情、关怀和关心。柏拉图在他的《会饮篇》和《斐多篇》中论证说,

love (*eros*) begins with a desire for personal beauty, but its spiritual ascent culminates in a desire for beauty in itself, that is the love of wisdom, which is philosophy in its original sense. Spiritual and divine love, which has been a major philosophical theme from the Neoplatonists to Augustine and Dante, still inspires many writers. Aristotle held that true love (*philia*, friendship) between virtuous people enables one look after another for the other person's sake. In the final analysis, however, he considered true love to be a form of self-love which is obedient to one's rational voice. Aristotle is highly praised in contemporary virtue ethics for taking love or personal attachment into the sphere of ethical consideration. Feminism tends to develop a related ethics of care. However, since love involves partiality in personal relationships and emotions, an issue has arisen about the possibility of reconciling love with the impartial requirements of morality.

"In spite of all the misuses to which the word love is subjected, in literature and daily life, it has not lost its emotional power. It elicits a feeling of warmth, of passion, of happiness, or fulfilment, whenever it is used." —Paul Tillich, *Love, Power and Justice*, 1975, p. 3.

Löwenheim-Skolem theorem, see Skolem's paradox

Loyalty

A trait of character marked by faithfulness and devotion to a person, a group, a country, a cause or a principle. Such a feeling is not easily altered either by external forces or by the discovery that the object of loyalty lacks its supposed merits. Loyalty is related to compassion and gratitude. It is classed as a virtue because it involves selfless commitment. The stability of any political society requires at least some loyalty on the part of its citizens. In contrast to measured loyalty, loyalty can be blind and unreflective, even to the extent of taking the object of loyalty to be sacred. Because loyalty is always partial and emotional, it is difficult to reconcile with the impartial requirements of morality.

"The feeling of allegiance, or loyalty... may vary in its objects... but whether in a democracy or in a monarchy, its essence is always the same; viz. that there be in the constitution of state something which is settled, something permanent, and not to be called in question; something which, by general agreement, has a right to be what it is, and to be secure against disturbance, whatever else may change." —*The Collected Works of John Stuart Mill*, X, p. 132.

Lying

Deliberately saying what one knows or believes to be false in order to deceive one or more other persons. Liars has

爱 (*eros*) 始于对人的美貌的期望, 但其精神会最终升华到对自身中的美的期望, 这就是爱智慧, 即最初意义的哲学。从新柏拉图主义者到奥古斯丁和但丁, 宗教的和神性的爱一直是一个主要的哲学题目, 它至今仍激励着许多作家。亚里士多德认为, 道德人上之间的真正的爱 (*philia*, 友谊) 能使人们为了其他人而照顾别人。可是, 归根到底, 他又认为真正的爱是服从人的理性愿望的自爱的一种形式。由于亚里士多德把爱或人的感情纳入伦理学考虑的范围, 因而受到当代美德伦理学的高度赞扬。女权主义倾向发展一种相关的关怀伦理学。然而, 由于爱包括人际关系和感情中的偏见, 因而出现了关于能否将爱与无偏见的道德要求一致起来的争论。

“尽管爱这个词受到种种滥用, 但在文学和日常生活中, 它没有失去它的感情上的力量。无论何时用到它时, 它都会引出温暖、热望、幸福或满足的情感。” —蒂利希: 《爱、权力和正义》, 1975 年, 第 3 页。

勒文海姆 司寇伦定理

见“司寇伦悖论”条。

忠诚

以忠实和献身于一个人、一个集团、一个国家、一个事业或一个原则为标志的性格特征。无论是外部的力量, 还是发现了其忠诚的对象缺乏它假定的那些美德, 都很难改变这样一种情感。忠诚是与同情和感激相联的。它被归为一种美德是因为它包含着无私的奉献。任何政治社会的稳定都需要至少是它的公民的某种忠诚。忠诚不是加以权衡的, 而是盲目的和不顾一切的, 甚至到把忠诚的对象视为神圣不可侵犯的程度。由于忠诚总会带有偏见并具有感情色彩, 它很难与公正的道德要求协调一致。

“效忠或忠诚的情感其对象可能是不同的, ……但无论是在民主制度还是在专制制度下, 它的本质总是相同的; 这也就是说, 在国家宪法中, 存在某种固定的东西, 某种永恒的和不容质疑的东西; 某种经过普遍同意有权成为现在这种样子, 并且是不管其他情况有什么变化都神圣不可侵犯的东西。”——《J. S. 密尔著作集》, 第十卷, 第 133 页。

说谎

故意说自己知道或相信是虚假的东西以欺骗他人或更多的人。说谎者自己心里想的是一

one thing in their mind and state another conflicting claim with the intention to deceive or at least with a lack of care about the possibility of deceiving. There is disagreement whether there should be a universal moral prohibition against lying. Both Aquinas and Kant denounced lying as a moral vice. For Kant, truthfulness constitutes a basic moral relationship between rational beings. Because it violates this relationship, lying is wrong in itself, whether or not it produces good consequences. J. S. Mill, on the other hand, argued that lying to avoid a greater evil could be justified. This is also the position implied by Plato's concept of the noble lie. According to the utilitarian principle that an act is morally permissible if it maximises the good, lying is not simply an evil, but must be judged according to its good or bad consequences. Accordingly, the treatment of lying is an area in which the difference between deontology and utilitarianism is clearly indicated.

"I shall define as a lie any intentionally deceptive message which is stated." Bok, *Lying*, 1978, p. 13.

回事,但却故意欺骗别人说是另一回事,或至少是没考虑欺骗人的可能而这样做。是否应当有一普遍的道德禁令反对说谎,在这一问题上存在不同的意见。阿奎那和康德谴责说谎是一种不道德的行为。在康德看来,诚实构成有理性的人之间基本的道德关系。因为说谎损害这一关系,说谎本身就是错误的,无论它是否产生好的结果。J. S. 密尔则持相反的意见,他论证说,说谎如可避免更大的灾难就可以是正当的。这也是柏拉图崇高的谎言这一观念所意指的观点。根据功利主义的原则,一个行为如果最大限度地扩大了好的结果,就是道德上所允许的,说谎并不简单地等于坏事,它是否是坏事必须根据它的好的或坏的结果来判断。因此,在对待说谎这一问题上,道义论和功利主义之间的差别是明显的。

“我把谎言定义为表述出的故意骗人的消息。”——博克:《说谎》,1978年,第13页。

M

Machine functionalism

A type of functionalism proposed by Putnam, also called Turing-machine functionalism, which understands the mind's function as the operation of the computational states of a Turing machine. It claims that each mental state is identical to a machine-table state and can be defined simply in terms of the latter. A difficulty facing this version of functionalism is that while a Turing machine can only be in one computational state at a time, a mind can have several psychological states at the same time.

"Putnam envisioned a theory of mind whose explications of individual mental state-types would take the form 'to be in a mental state M is to realize or instantiate machine program P and be in functional state S relative to P'. Let us call the view that some such set of explications is correct machine functionalism." — Lycan, *Consciousness*, 1987, p. 8.

Macrocosm

Macrocosm means large world-system, in contrast to microcosm, which means little world-system; the former refers to the universe which was, in the mind of the ancient Greeks, an organic living being, and the latter refers to man. Thus, the universe is a large creature and man is the small universe. It is said that Democritus was the first to use the term microcosm to refer to man. This analogy reflects the intimate relationship between the universe and the human body, the natural bounty and human goodness. This analogy pervades almost all Greek philosophy. In Leibniz, monads are microcosms of the world, since each in itself mirrors the entire universe.

"If it can occur in microcosm it can also occur in macrocosm." — Aristotle, *Physics*, 252b.

Magnanimity, another expression for great-soulness

Maieutic method, another term for midwifery

Major premise

In a standard categorical syllogism which consists of two premises and one conclusion, the predicate of the conclusion is called the major term, and its subject, the minor term.

机器功能主义

由普特南所提出的一种功能主义, 又称“图灵机功能主义”, 它将心的功能理解为图灵机的计算状态的操作。它声称, 每个心的状态都同一于一个机器桌面状态并可以简单地用后者来定义。这种功能主义所面临的主要困难在于, 一个图灵机在同一时刻只能处于一种计算状态, 而一个心则可以同时具有几个心理状态。

“普特南设想这样一个心的理论, 它用这样的形式来解释单个的心的状态类型: ‘处于一个心的状态 M 就是实现或例示机器程序 P 并处于与 P 相关的功能状态 S’。我们不妨称认可这些解释的观点为机器功能主义。” — 里库:《意识》, 1987 年, 第 8 页。

宏观世界

宏观世界意指“大的世界体系”, 与意指“小的世界体系”的“微观世界”形成对比。前者表示古希腊人心目中的作为有机生物体的宇宙, 后者则表示人类。因此, 宇宙是一个大的生物, 而人则是小的宇宙。据说德谟克利特首先使用“微观世界”这个词指人类。这一比喻反映出宇宙与人体之间、自然界的慷慨大度与人类的善行之间所存在的密切关系。这一比喻几乎贯穿了整个希腊哲学思想。在莱布尼茨那里, 单子是构成世界的微观世界, 因为每个单子自身反映出整个宇宙。

“假如它可以发生在微观世界里, 那也会发生在宏观世界里。” — 亚里士多德:《物理学》, 252b.

大度

“伟大的心灵”的另一种表达。

助产术

“助产术 (midwifery)”的另一称谓。

大前提

在一个包含两个前提和一个结论的标准的直言三段论中, 结论的谓项称作大项, 其主项称作小项。在前提中出现两次而在结论中不出现

The term which appears twice in the premises but not in the conclusion is called the middle term. The premise which contains the major term is called the major premise, while the premise which contains the minor term is called the minor premise.

"The major premise, by definition, is the one that contains the major term." --Hurley, *Logic*, 1982, p. 173.

Make-believe

A state of mind that is close to pretending and to the exercise of aesthetic imagination. A person knows that an object is not genuine or does not even exist, but ignores the distinction between the real and the not real and accepts being affected by the object as if it were real or had a different character. In a well-lit room a child plays that the fur rug is a bear. He knows that it is not really a bear. When the light is off, however, the child might lose a sense of safety because of the make-believe and fear that there really is a bear in the room. In some cases, make-believe carries the possibility of taking the imagined as real; in other cases, this possibility does not arise or exists only at the margins of awareness and interpretation.

"It will be noticed that in some varieties of make-believe, the pretender is deliberately simulating and dissimulating, in some varieties he may not be quite sure to what extent, if any, he is simulating or dissimulating, and in other varieties he is completely taken by his own acting." Ryle, *The Concept of Mind*, 1949, p. 244.

Malicious demon

[Latin: *malignus genius*] Descartes' fiction that there might be some omnipotent evil demon who deliberately, constantly, and systematically deceives me. Consequently, the universe and its parts may be such that they never can be clearly understood, and we can never be certain of our knowledge. The argument is introduced after Descartes' other three main arguments for subjecting our beliefs to doubt (that is unreliability, the possibility of dreaming and the possible error in the reasoning of mathematics) and pushes methodological doubt to its limit. It expresses in all its rigour the radical decision "to doubt whatever can be doubted". For Descartes, the only belief which can survive the challenge of the malicious demon argument is my awareness of my present existence, that is *cogito ergo sum*, which is therefore the starting-point for establishing the certainty of knowledge.

"I shall then suppose, not that God who is supremely good and the fountain of truth, but some malicious demon not less powerful than deceitful, has employed his energies in deceiving me." Descartes, *Meditations on First Philosophy*, I.

的项称作中项,包含有大项的前提称作大前提,而含有小项的前提称作小前提。

"按照定义,大前提就是含有大项的前提。"——赫尔利:《逻辑》,1982年,第173页。

虚拟情景

近似于“假装”和“审美想像”活动的心态。某人明明知道某物不是真的或者不存在,但却不辨真假,反而受到似乎真实或者似乎具有不同特征之物的影响。譬如,在灯火辉煌的房间,一个小孩在玩一只毛皮熊。他知道那不是一只真熊。可是,当房间熄灯后,虚拟情景的心理倾向与害怕屋里真有一只熊的念头会使这位小孩失去安全感。在有些情况下,虚拟情景的心理倾向会有可能将想像的东西当做真实的东西;而在另外一些情况下,这种可能性不会出现,或者仅仅存在于意识和解释的边际处。

"人们将会注意到,在某些虚拟情景的不同心理倾向中,假扮者是在有目的地假装和掩饰;在另外某些情况下,装扮者或许不能肯定要假装和掩饰到什么程度;而在其他某些情况下,假扮者完全被自己的行为欺骗了。"——赖尔:《心的概念》,1949年,第244页。

恶意的神灵

[拉丁文 *malignus genius*] 笛卡尔的虚构,认为可能有某个全能的恶神存在,它故意地、不断地、系统地欺骗我。这样一来,宇宙及其部分就可能成为无法清楚理解的,而且我们无法确信我们的知识。这个证明是笛卡尔已经提出对我们的信念的怀疑的其他三个主要证明(即不可靠性证明,梦的可能性证明,数学推理的可能错误证明)之后提出的,它在方法论上将怀疑方法推到极端。它十分严肃地表达了一个彻底的决心:"怀疑一切能够怀疑的东西。"在笛卡尔看来,只有一个信念可以幸免于这个"恶意的神灵"证明的挑战,那就是我对我的当下存在的意识,即"我思故我在",因此,这个信念就是确立知识确定性的起点。

"于是我将假定,并非那个至善的、作为真理之源的上帝,而是某个既强大又骗人的恶意的神灵,在竭尽全力的欺骗我。"——笛卡尔:《第一哲学沉思》,1。

Manichaeism

A religion founded by the Persian Mani (c. 216-277 AD), which claimed that there is no single supreme being. Instead the world is governed by two balanced and antagonistic cosmic forces: Light and Darkness. They dwell in different realms and are co-eternal but independent. Their strife is the cosmic background of the moral conflict in human history and in every human life. Light is associated with God, goodness and spirit, and Darkness with Satan, evil and matter. Humanity is also a mixture of these two forces, with the soul representing Light, and the body representing Darkness. They are in a constant struggle, although eventually victory is assured for the Good. Manichaeism advocated the pursuit of an ascetic life in order to free the soul by releasing the Light that is trapped in the body. Augustine was briefly an adherent of this religion before he became a Christian. Manichaeism was derived from Zoroastrianism and flourished between the third and fifth centuries A. D. It was condemned by orthodox Christianity, but many philosophers such as Bayle, Hume and Voltaire, believed that it provides a better account of the origin of the evil than orthodox Christian doctrine.

"Positively, Manichaeism offered a comprehensive system of truth, a cosmology, a soteriology and an Eschatology. Its cosmology was based on the old Zoroastrian dualism of Good and Evil, Light and Darkness." —Burleigh, *The City of God*, 1944, p. 53.

Manifest image

A term introduced by the American philosopher Wilfrid Sellars for a conception or framework in terms of which we understand that we are in the world, with beliefs, desires and intentions. This contrasts with what he calls the scientific image, which postulates theoretical entities to explain the relations of perceptible things. Sellars held that the contrast between these two images is not between pre-scientific and scientific images, or between uncritical and critical images, for one's manifest image also employs correlational techniques to explain one's behaviour. However, he did believe that the scientific image is the only real image and that theoretical sciences determine what really is and what really is not. Traditional philosophy has tried to understand the structure of the manifest image, but Sellars claims that the aim of philosophy is the unification of these images of man-in-the-world.

"Our contrast then, is between two ideal constructs: (a) the correlational and categorical refinement of the 'original image', which refinement I am calling the manifest image; (b) the image derived from the fruits of postulational theory construction which I am calling the scientific image." — W. Sellars, *Science, Perception and Reality*, 1963, p. 19.

摩尼教

由波斯人摩尼(约公元216—277年)创立的一个宗教。它主张,没有任何单一至上的存在者。相反,世界是由两种均衡而又相反的宇宙力量,即光明和黑暗统治的。它们居住在不同的领地,共享永恒但彼此独立。它们的冲突是人类历史上及每个人生活中道德冲突的宏观背景。光明与上帝、善和精神相联系,黑暗则与撒旦、邪恶和物质相联系。人性也是这两组力量的混合,灵魂方面代表光明,肉体方面代表黑暗。它们处于不停的斗争中,虽然最终的胜利属于善。摩尼教提倡追求禁欲生活,以便释放出被诱陷在肉体中的灵魂或光明。奥古斯丁在成为基督徒之前,曾短期地成为这个宗教的信徒。摩尼教源出于“祆教”,其鼎盛期在公元3至5世纪之间。它被正统基督教定罪,但许多哲学家,譬如贝尔、休谟和伏尔泰等相信,它对邪恶的起源提供了比正统基督教学说较好的说明。

“肯定地讲,摩尼教提出了广泛的真理体系、宇宙论、救世论和末世论。它的宇宙论是以善与恶、光与暗的老祆教二元论为基础的。”——布尔列:《上帝之城》,1944年,第53页。

明显的影像

由美国哲学家 W. 塞拉斯引入的术语,指一种观念或框架,人们据以理解他在世界中,并带有信念、愿望和意向。这与他称为“科学的”影像形成对比,后者假设理论实体以说明可知觉事物的关系。塞拉斯认为,这两种影像之间的对比并非前科学与科学的影像之间、或不加批判的与批判性的影像之间的对比,因为人们的明显的影像也采用了相关关系的方法来说明人们的行为。然而,他确实相信科学的影像是惟一真实的影像,理论科学决定着何为真实和何为不真实。传统哲学已试图理解明显影像的结构,但是塞拉斯主张哲学的目标,是统一这两种人在世界中的影像。

“我们对比的是两种理想构造物:(a)‘原初影像’的相关性、范畴性的精炼,这种精炼我称之为明显的影像;(b)由公设化理论构造的成果中推出的影像,我称之为科学的影像。”——塞拉斯:《科学、知觉和实在》,1963年,第19页。

Manifold

Kant's term for the material of experience acquired through sensation. Its elements are given either empirically or through pure *a priori* intuition in space and time, and it is unified or held together pre-cognitively by the synthetic activity of the imagination. The synthesis of the manifold is the first step towards knowledge. According to Kant, the manifold is indispensable, because without it the concepts of pure understanding are without content and are entirely empty.

"Synthesis of a manifold (be it given empirically or *a priori*) is what first gives rise to knowledge." — Kant, *Critique of Pure Reason*, B103.

Many-valued logic

A part of logic for which truth-values other than true and false are conceivable for propositions. It thus abandons certain theorems of inferences in traditional two-valued logic, such as the law of the excluded middle (the principle of bivalence) and the law of non-contradiction. Although it may be traced to Hugh MacColl and Peirce, it was inaugurated by the Polish logician Lukasiewicz's development of three-valued logic and independently by the American philosopher Post's elaboration of an *n*-valued calculus. Three-valued logic is one of the chief forms of many-valued logic and is the model for higher-valued logics. There are various ways to designate and interpret the truth value or truth values other than true or false, usually in terms of the degrees of truth or the degrees of falsity. In three-valued logic developed by Lukasiewicz, truth is represented by "1", false by "0", and the third value, interpreted as half-true, is represented by "1/2". An infinite-valued logic means that for propositions an infinite degree ranging from completely true to completely false can be designated. Unlike modal logic, the truth value of a complex proposition in many-valued logic is still determined by the truth values of its constituents. Lukasiewicz was motivated by the problem of future contingents, and others have applied many-valued logics to deal with vagueness, logical paradoxes, and quantum mechanics.

"The mainstream of the development of many-valued logic proceeded on the basis of elaborations of Lukasiewicz's ideas—especially in their formulation in his widely read paper of 1930, where the 3-valued logic was generalised to the many-valued logic, indeed even infinite-valued logic." — Rescher, *Topics in Philosophical Logic*, 1968, p. 56.

Marxism

A term for ideas developed in the works of Karl Marx and Friedrich Engels and later developments based on their thinking. The attempt to work out a coherent Marxist

杂多

康德术语,指通过感觉而获得的经验材料。它的成分或者是经验地给予,或通过空间和时间的纯粹先天直观而给予,并且它通过想像力的综合活动而先验地联结或结合。杂多之综合是达到知识的第一步。按康德的观点,杂多是必不可少的,因为没有杂多,纯粹知性概念就没有内容,就是完全空的东西。

“杂多之综合(不管它是经验地给予或是先天地给予)乃是产生知识的首要因素。”——康德:《纯粹理性批判》,B103。

多值逻辑

这一部分逻辑认为,对命题而言除“真”和“假”之外,其他真值也是可设想的。因此它抛弃了传统二值逻辑中的某些推理定理,例如排中律(二值原则)和不矛盾律。尽管可以将其起源追溯到 H. 麦柯尔和皮尔士,它的实际奠基开始于波兰逻辑学家卢卡西维茨所创立的三值逻辑和美国哲学家波斯特所(独立)详细阐述的 *n*-值演算。三值逻辑是多值逻辑的主要形式并且是更高值逻辑的模型。有不同的方式去指涉和解释“真”、“假”之外的那个或那些真值,通常是根据真的程度或假的程度。在卢卡西维茨所发展的三值逻辑中,“真”由“1”表示,“假”由“0”表示,第三值被解释为“半真”,由 $\frac{1}{2}$ 表示。无穷值逻辑意味着:对命题而言,可以指派从完全真到完全假的无穷多个真值。与模态逻辑不同,多值逻辑中复合命题的真值仍由它的支命题的真值所决定。卢卡西维茨创立多值逻辑是由未来偶然问题所触发,其他人则把多值逻辑用于处理模糊性、逻辑悖论和量子力学。

“在卢卡西维茨 1930 年广为传诵的论文中,三值逻辑被推广为多值逻辑甚至是无穷值逻辑。在对卢卡西维茨的观念——特别是表述在那篇论文中的观念的精确阐释的基础上,形成了多值逻辑发展的主流。”——雷谢尔:《哲学逻辑论集》,1968 年,第 56 页。

马克思主义

这一术语指的是在卡尔·马克思和弗里德里希·恩格斯的著作中提出,后来又在他们的见解的基础上得到发展的思想。试图建立一个有内在

system starts with Engels himself. Later Marxists have different versions, and each believes his own to be orthodox and condemns the others versions as revisionist. In the communist countries, orthodox Marxism has been developed by Lenin and Stalin in the Soviet Union and by Mao Zedong in China. The central doctrines of Marxist philosophy are called dialectical materialism and historical materialism.

The essential claims of Marxism are that society consists of an economic base containing forces and relations of production, a political and legal superstructure determined by the economic base, and ideology which corresponds to the superstructure. The superstructure has partial autonomy, but the development of the forces of production are the ultimate ground for historical progress through stages from primitive society to slavery society, feudalism, capitalism and eventually socialism and communism. Persons are members of different classes according to their respective positions in the social economy. However it is seen by members of a society, history is a history of class-struggle. All existing institutions and agencies represent, consciously and unconsciously, the interest of one or another class. Even morality, which most theorists regard as an historical and cultural matter that allows room to criticise authority, is said to reflect the interests of the ruling class. In Marxist thought, class-divisions will not disappear until the ultimate stage of social development: communism. Engels held that Marxism is the science of the general laws of motion and development of nature, human society and thought. Marxism is not merely a theory, but a social project as well, as expressed in Marx's claim: "The philosophers have only interpreted the world... the point, however, is to change it". The publication of Marx's early *Economic and Philosophical Manuscripts* around 1930 and the end of the Second World War led Marxism to become an area of flourishing academic research in the West, especially in Europe. Various interpretations of Marxism emerged to form different schools under the general title of Western Marxism. Major schools were initiated by Gyorgy Lukács, Antonio Gramsci, the Frankfurt School's critical theory, represented by Max Horkheimer, Theodor Adorno, Herbert Marcuse, and Jürgen Habermas, existential Marxism, represented by Maurice Merleau-Ponty and Jean-Paul Sartre, and Althusser's structuralist Marxism. Analytic Marxism, which uses the methods of analytical philosophy to examine Marxist thought, is represented by G. A. Cohen, John Elster, John Roemer and Alan Wood.

"We have today a galaxy of different Marxisms, within which the place of Marx's own thought is ambiguous." - Thomas, in Carver (ed.), *The Cambridge Companion to Marx*, 1991, p. 26.

联系的马克思主义体系始于恩格斯本人。后来的马克思主义者有各种不同的看法，每一看法的持有者都认为自己的看法是正统的，并把其他看法斥为修正主义的。在共产主义国家，正统的马克思主义在苏联为列宁和斯大林所发展，在中国为毛泽东所发展。马克思主义哲学的主要学说被称为辩证唯物主义和历史唯物主义。

马克思主义的基本主张是：社会由包括生产力和生产关系在内的经济基础，由经济基础决定的政治、法律的上层建筑和与上层建筑相适应的意识形态构成。上层建筑有部分的独立性，但生产力的发展是历史进程的根本原因，这一进程是通过由原始社会、奴隶社会、封建社会、资本主义社会，最后到社会主义和共产主义社会这些阶段实现的。人们依据他们各自在社会经济中所处的地位而分属于不同阶级。历史是阶级斗争的历史，而不管一个社会的成员如何看待它。所有现存的制度和机构都自觉和不自觉地代表着这一阶级或那一阶级的利益。甚至被绝大多数理论家视为属于历史和文化问题，并留有批判权威余地的道德，也被说成是统治阶级利益的反映。在马克思主义理论中，到了社会发展的最后阶段共产主义，阶级划分将会消失。恩格斯认为，马克思主义是关于自然、人类社会和思维的运动和发展的一般规律的科学。马克思主义不仅是一种理论，而且也是一种社会方案，正如马克思所言：“哲学家只是解释世界，……而问题在于改造世界。”马克思早期的《1844年哲学经济学手稿》在1930年前后的出版和第二次世界大战的结束，使马克思主义在西方，特别是在欧洲，成为一个繁荣的学术研究领域。对马克思主义的各种解释的出现形成了通常称为西方马克思主义的不同流派。主要的流派有：由G. 卢卡奇创立的学派；A. 葛兰西创立的学派；以M. 霍克海默、T. 阿多尔诺、H. 马尔库塞和J. 哈贝马斯为代表的法兰克福学派的批判理论；以M. 梅洛-庞蒂和J.-P. 萨特为代表的存在主义的马克思主义；阿尔杜塞的结构主义的马克思主义。分析的马克思主义运用分析哲学的方法检验马克思主义的理论，其代表人物是G. A. 柯亨、J. 爱尔斯特、J. 罗默和A. 伍德。

“今天我們有一群光彩夺目的不同的马克思主义，在它们之中，对马克思本人思想的地位是有多种解释的。”——托马斯，载于卡弗编辑的《剑桥马克思指南》，1991年，第26页。

Masculinism

From a feminist point of view, masculinism is an attitude which ignores the existence of women and is concerned exclusively with male opinions and interests. It tries to justify the claim that only male views have value and the further claim that anything that cannot be reduced or translated into men's experience should be excluded from the subject-matter of philosophy. In another sense, masculinism advocates the elimination of all discrimination against men because they are male. The goal of this sort of masculinism is the equality between men and women, and it is a reaction against extreme feminist claims for the superiority of women over men.

"By masculinism in general I mean the assertion of masculine dominance over the feminine and also the practice of taking this first 'superiority' as a point of reference to assert other forms of supremacy which apparently have nothing to do with the duality of the sexes." —Le Doeuff, *Hipparchia's Choice*, 1989, p. 78.

Masked man fallacy

A fallacious argument of the following form: you say that you know your father, but that you do not know this masked man and conclude that this masked man is not your father; however, this masked man is indeed your father. The recognition of this fallacy can be traced to Eubulides of Megara (3rd century B. C.) and was discussed by the Stoics. However formulated, this fallacy occurs because it treats a referentially opaque context as if it were referentially transparent. It is sometimes argued that Descartes committed this fallacy when he said that he knows certain things about his mind, but does not know anything about the nature of his body, so mind and body are really distinct. Descartes argument, however, is more sophisticated than this fallacy.

"[A] fallacy recognized by Stoic logicians, which came to be known as the *larvatus* or 'masked man' fallacy; I do not know the identity of this masked man; I do know the identity of my father; therefore this masked man is not my father." —Williams, *Descartes*, 1978, p. 112.

Masochism

Generally, the practice of obtaining sexual pleasure by means of one's own pain and humiliation. In Sartre's use, a person is a masochist by becoming a mere object for a loved person in a state of complete dependence. This kind of human relation leads to frustration and to a failure of love. For Sartre, a person cannot be a mere object and must make free choices. A person cannot be lost completely in being-for-the-other.

"Masochism is thus in principle a failure. There is nothing surprising in this when we think that masochism is a

男权主义

从女性主义的观点来看,男权主义是一种忽视妇女的存在、只关心男性的主张和利益的态度。它试图为这样一种看法作论证,即认为只有男人的观点有价值,并进而认为凡不能转化或转变为男人经验的东西都应排除在哲学的主题之外。另一种意义的男权主义提倡消除所有因他们是男性而造成的对他们的不公平的对待。这种男权主义的目的是男女之间的平等,它是对极端女性主义主张的妇女比男人优越的观点所做出的反应。

"通常意义的男权主义我指的是男性统治女性的主张,也指把这首要的'优越性'作为参考的要点去断言其他优越的形式的实践,而那些形式显然是与性别的二元性无关的。"——L. 多尤夫:《喜帕恰亚的选择》,1989年,第78页。

戴面具者谬误

一种荒谬的论证,其形式如下:你说你认识你父亲,但是你不认识那个带面具的人;而那个带面具的人是你父亲;因此你不认识你父亲。这种谬误的识别可以追溯到麦加拉的欧布里德(公元前3世纪),并为斯多亚学派所讨论。这一谬误无论如何表述,其发生是由于它把一种"指称晦涩"的语境看做是指称清晰的。有时人们认为笛卡尔也陷入这种谬误,即他说他知道关于他的心的某些事,但却对他身体的性质一无所知,因此心与身体的确截然不同。不过,笛卡尔的论证远比这一谬误精致。

"一种为斯多亚学派逻辑学家所认识,被称作 *larvatus* 或'戴面具者'的谬误:我不知道这个戴面具者是谁;但我知道我父亲是谁;因此这个戴面具者不是我父亲。"——威廉姆斯:《笛卡尔》,1978年,第112页。

受虐狂

一般指通过本人自己的痛苦和羞辱而得到性快感的实践。在萨特的用法中,一个人之所以是一位受虐狂,是因为此人在彻底的依赖状态中为其所爱的人变成了一个完全的对象。这种人际关系导致挫折感和爱情的失败。对于萨特说来,一个人不可能仅仅是个对象,而是必须做出自由选择。他或她不可能完全丧失于为他人的存在(*being-for-the-other*)之中。

"因此,受虐狂从原则上说来是一种失败。毫不奇怪,我们将受虐狂视为一种'恶'

'vice' and that vice is, in principle, love of failure." — Sartre, *Being and Nothingness* (tr. Barnes), 1957, p. 447.

Mass term

In contrast to count nouns or sortals, mass terms or nouns cannot occur with a definite or indefinite article. They do not refer distributively and provide no principle of countability. While a count noun is associated with quantifiers such as many and few, a mass noun is associated with quantifiers such as much and little. Examples of mass nouns are water, gold, music, intelligence and information. Many abstract mass nouns are closely related to adjectives, for instance intelligence—intelligent or virtue—virtuous. There are various alternative terms for mass nouns. Strawson calls them characterising terms; Goodman refers them as collective predicates, and Quine calls them partitive terms or bulk terms.

"So-called mass terms like 'water', 'footwear', and 'red' have the semantical property of referring cumulatively: any sum of parts which are water is water." — Quine, *Word and Object*, 1960, p. 91.

Master argument

An argument about possibility introduced by Diodorus Cronus (c. 284 BC), a member of the Greek Megarian School. The argument turns on three propositions: (1) Everything that is past is necessary. (2) Nothing impossible follows from the possible; (3) What neither is nor will be is possible. According to Diodorus, (1) and (2) are evidently true, but (3) cannot be supported by (1) and (2) and must be wrong. On his account, therefore, the possible is what is true or will be true. This is also his response to Aristotle's discussion of future contingents. But the Stoics argued that (3) is correct, and either (1) or (2) might be wrong.

"According to Alexander, Diodorus constructed the Master Argument in order to establish his own definition of possibility, but a modern scholar has suggested that the title refers to the overmastering power of fate." — W. and M. Kneale, *The Development of Logic*, 1962, pp. 118-9.

Master morality

Nietzsche held that two fundamental types of morality, arising out of different traditions, have engaged in struggle throughout history. The first, master morality, is rooted in the self-affirmation by the strong man and the ruling group and calls good everything that is noble and powerful and calls bad everything that is mediocre, undistinguished, ugly and weak. According to Nietzsche, master morality is vigorous and desires to train man for heights. In contrast, slave morality is associated with the resentment of the weak man

(vice), 它从原则上说来就是失败的爱。”——萨特：《存在与虚无》（巴奈斯英译），1957年，第447页。

总量词

与“可数名词”或“类词”相反，总量词或总量名词不能使用定冠词或不定冠词。它并不指称个别的东西，也没有提供可数性原则。可数名词使用的是“许多”、“很少”等等这样的量词，而总量名词则使用“大量的”、“少量的”等等这样的量词。总量名词的例子有“水”、“金子”、“音乐”、“理智”、“信息”。许多抽象的总量名词都与形容词有着密切的关系。譬如，“理智—有理智的”、“德行—有德行的”。“总量名词”有各种不同的说法。斯特劳森把它们称作“描述词”；古德曼用“集合谓词”来指它们，而奎因则把它们称为“部分词”或“堆词”。

“所谓的总量词，像‘水’、‘鞋类’、‘红’等，都有一种累计指称的语义属性：水的总和就是水。”——奎因：《词与物》，1960年，第91页。

主论证

由古希腊麦加拉学派的成员第欧多鲁·克罗纳（死于公元前284年）提出的一个关于可能性的论证。该论证依赖于三个命题：（1）凡是过去的事情都是必然的；（2）没有不可能的东西从可能的东西推出；（3）既不（现在）真也不（将来）真的东西是可能的。在第欧多鲁看来，（1）和（2）是明显为真的，但它们不可能支持（3），因此（3）必定是错误的。所以，按照他的说明，可能的东西就是现在真或将来真的东西。这也是他对亚里士多德所讨论的未来偶然事件的答复。但斯多亚学派争辩说，（3）是正确的，而（1）或者（2）则可能是错误的。

“在亚历山大看来，第欧多鲁构造主论证是为了确立他自己的可能性定义，但一现代学者已经指出，该名称涉及到命运支配一切的力量。”——W. 涅尔和M. 涅尔：《逻辑学的发展》，1962年，第118—119页。

主人的道德

尼采认为，有两种基本的道德类型，它们出自不同的传统，在整个历史中相互争斗。第一种是主人的道德，它存在于强人和统治者圈子中，植根于自我肯定。它将一切高贵的和强有力的东西称为好的，将一切平庸的、不杰出的、丑陋的和弱的东西称为坏的。按照尼采的主张，主人的道德是精力充沛的，渴望将人训练为高等者。相反，奴隶的道德与弱者和被统治者的怨恨相关。奴隶的道德谈论善与恶（good and evil），而

and the ruled group. Slave morality talks of good and evil rather than good and bad. It calls evil whatever is threatening and harmful and calls good whatever is benefiting and advantageous. Slave morality is shaped in direct and insidious reaction to master morality and emphasises preservation from destruction. Each morality develops into a kind of value-schema rather than into a morality of a segment of the population. Nietzsche claimed that any higher complex culture, including the bourgeois, is a mixture of these two types of morality and attempts to find a reconciliation between them. The two moralities even exist within the soul of the same person. Nietzsche himself preferred master morality, but did not accept it as a whole, for he admitted that this type of morality contains aspect of inhumanity. His master corresponds to Aristotle's great-souled man. Master morality, for Nietzsche, was also called noble morality, and slave morality was also called herd morality.

"According to slave morality, therefore, the 'evil person' arouses fear; according to master morality, it is precisely the 'good person' who arouses and wishes to arouse fear, whilst the 'bad man' is felt to be contemptible." — Nietzsche, *On the Genealogy of Morals* (tr. by Diethe), 1994, p. 167.

Master/slave

Hegel's metaphor to describe the evolution of moral and political consciousness. Initially, each man is a particular individual who strives to impose himself upon others and to achieve external recognition. On this basis, one man enslaves another. The master, through his command over things, orders the slave to work for the sake of satisfying the master's own desire. The slave, in order to survive and to retain his life, must repress his own instinct and his essence by negating himself. In a second stage, the slave transcends himself by working and becomes the master of nature. Because work raises him from slavery to freedom, the slave changes himself by changing the world. The future belongs to the working slave rather than the consuming master. History is simply the progressive negation of his own slavery by the slave. Eventually, consciousness reaches a third stage in which men recognise themselves as universal and respect each other as ends. This mutual recognition achieves the integrity of life and essence. The thesis of mastery and the antithesis of slavery are dialectically overcome. The opposition between master and slave becomes the motive principle of the historical process. Hegel's rich metaphor has been borrowed by a wide range of later moral and social theorists and philosophers.

"While the one combatant prefers life, retains his single self-consciousness, but surrenders his claim for recognition, the other holds fast to his self-assertion and is recognised by the former as his superior. Thus arises the status of master

不是好与坏 (good and bad)。它将一切有威胁性的和有伤害性的东西称为邪恶的, 将一切有利可图的和有好处可占的东西称为善。奴隶的道德形成于对主人的道德的直接和阴险的反应中; 它强调保护而不是摧毁。这两种道德都发展成了一种价值框架, 而不是某一部分人的道德。尼采声称任何较高级的复杂文化, 包括资产阶级文化, 都是这两种道德类型的混合, 而且都力图在两者之间找到一种妥协。这两种道德甚至存在于同一个人的灵魂之中。尼采本人倾向于主人的道德, 但并不百分之百地接受它, 因为他也承认这种道德类型包含了非人性的一面。他讲的主人相应于亚里士多德讲的具有伟大灵魂的人。主人道德在尼采那里也被称为贵族的道德, 而奴隶的道德也被称为民众的道德。

"所以, 按照奴隶的道德, '恶人' 引起恐惧; 按照主人的道德, 正是 '好人' 唤起或希望去唤起恐惧, 而 '坏人' 则被视为可藐视的。" ——尼采: 《论道德的谱系》(狄特英译), 1994 年, 第 167 页。

主人/奴隶

黑格尔描述道德和政治意识进化的比喻。最初, 每个人都是特殊的个体, 他努力对他人施加作用, 并获得外界认可。在此基础上, 某个人奴役另一个人。主人通过他对物的控制, 命令奴隶为满足主人自己的欲望而劳动。奴隶为苟延残喘和保住性命, 必须通过否定自身而抑制他自己的本能和本质。在第二阶段, 奴隶通过劳动而超越自身, 并成为自然的主人。因为劳动使他从奴役上升到自由, 奴隶通过改变世界而改变自身。未来属于劳动的奴隶而不是享受的主人。历史不过就是奴隶对他自己的奴役状态的不断否定。最后, 意识达到了第三阶段, 人们认识到自身是普遍的, 并相互视为目的。共同的认识达到了生活和本质的整体。统治的正题和被奴役的反题得到了辩证的克服。主人和奴隶的对立成为历史过程的驱动原理。黑格尔富有寓意的比喻一直被一大批以后的道德和社会理论家和哲学家所引用。

"一个斗士宁可选择生命, 保住他单纯的自我意识, 但放弃他得以认可的主张, 同时, 另一斗士则坚持他的自我肯定, 并被前者承认为他的优越者。这就产生了主人和奴隶的状况。" ——黑格尔: 《精神现象学》, 第 433 节。

and slave.” —Hegel, *Phenomenology of Mind*, Sect. 433.

Material adequacy

According to Tarski, any acceptable definition of truth should meet two conditions; materially adequacy and formal correctness. The condition of material adequacy sets limits on possible contents, requiring that any acceptable definition of truth has as consequences all instances of the (T) schema ('p' is true if and only if p). This determines what the extension of the truth-predicate should be. The condition of formal correctness sets limits on the possible structural form of a language of any acceptable definition, requiring that a definition of truth should not be semantically closed. A definition which meets these two conditions will be able to answer our pre-theoretical intuitions about what it means for a sentence to be true.

“The present article is almost wholly devoted to a single problem—the definition of truth. Its task is to construct—with reference to any given language—a materially adequate and formally correct definition of the term ‘true predicate’.” —Tarski, “The concept of truth in formalised languages”, in his, *Logic, Semantics, Metamathematics*, 1983, p. 153.

Material analysis, see analysis

Material conditional, another term for material implication

Material equivalence, see logical equivalence

Material implication

A term used by Russell and Whitehead, representing the truth-function of two propositions p and q in the form of the statement “If p then q”. The relation is symbolised by a horseshoe \supset , written as “ $p \supset q$ ”, or alternatively by an arrow \rightarrow , written as “ $p \rightarrow q$ ”. It is true that p materially implies q in each of the following three cases: (1) both p and q are true; (2) p is false, and q is true; (3) both p and q are false. It is false only if p is true and q is false. This is called material implication because what is expressed by the sign ‘ \supset ’ is different from our ordinary notion of implication. A statement such as “If Rome is in Italy, then London is beautiful.” is true by material implication, but does not seem to be an implication at all in the ordinary sense, for there is no relation between antecedent and consequent. It is due to this difference that material implication leads to many paradoxes. Some philosophers claim therefore that we should say that it is a material conditional relation instead of a relation of material implication.

“The relation in virtue of which it is possible for us

实质充分性

根据塔斯基的观点,任何可接受的真定义都应该满足两个条件:实质充分性和形式正确性。实质充分性条件设定了可能内容的限度,它要求:任何可接受的真定义都把(T)模式(‘p’是真的当且仅当p)的所有例证作为后承。这确定了真谓词应当具有的外延。形式正确性条件设定了具有任何可接受定义的那个语言可能的结构形式之限度,它要求真定义不应该是语义上封闭的。满足这两个条件的定义将能够符合我们关于一语句为真意味着什么的前理论直觉。

“本论文几乎是完全致力于一个单独的问题——对真的定义。它的任务是:相对于任意给定的语言,构造一个实质上充分和形式上正确的关于‘真谓词’这一术语的定义。”——塔斯基:《形式化语言中的真概念》,见他的《逻辑、语义学与元数学》,1983年,第153页。

实质分析

见“分析”条。

实质条件句

表示“实质蕴涵”的另一术语。

实质等价

见“逻辑等价”条。

实质蕴涵

由罗素和怀特海所使用的术语,表示在形如“如果p则q”的陈述中两个命题p和q的真值函项。此关系被符号化为马蹄号 \supset ,写作“ $p \supset q$ ”,或者另外用箭头 \rightarrow 表示,写作“ $p \rightarrow q$ ”。在下述三种情形的每一种之下,p实质蕴涵q为真:(1)p和q都真;(2)p假而q真;(3)p和q都假。仅当p真而q假时,p实质蕴涵q才为假。这称之为“实质蕴涵”,是因为记号“ \supset ”所表达的意思与我们日常的蕴涵观念不同。像“如果罗马在意大利,那么伦敦是美丽的”这样的陈述根据实质蕴涵为真,但在日常涵义上似乎根本就不是一个蕴涵,因为其前件和后件之间没有任何关系。正是由于这一差异,实质蕴涵才导致了許多悖论。某些哲学家因此断言,这是实质条件句关系,而不是实质蕴涵关系。

“我们据此可进行有效推理的那种关系就是所谓的实质蕴涵……事实上当实质蕴涵成立时,那种关系也成立,而与相关命题的真或假无关。”——罗素:《数学原则》,1903年,第33

validly to infer is what I call material implication... The relation holds, in fact, when it does hold, without any reference to the truth or falsehood of the proposition involved." —Russell, *The Principles of Mathematics*, 1903, p. 33.

Material implication, paradoxes of

The unpalatable consequences arising from the definition of material implication: a false proposition, merely because it is false, implies every proposition; and a true proposition, merely because it is true, is implied by every proposition. Put it in another way, whenever p is false, $p \supset q$ is true; whenever q is true, $p \supset q$ is true. The problem arises because implication is ordinarily used for a relation between two propositions, while a statement of material implication can be true even if there is no relation at all between its component propositions. Material implication does not concern the subject-matter or content of its components. To avoid these consequences, it is suggested that we speak of the material conditional instead of material implication.

"Russell's definition of ' p implies q ' as synonymous with 'either not p or q ' solicited the justified objection that according to it a true proposition is implied by any proposition and a false proposition implies any proposition (paradoxes of material implication)." —Pap, *Elements of Analytic Philosophy*, 1949, p. 463.

Material mode of speech

Carnap draws a distinction between the material mode of speech and the formal mode of speech. The material mode of speech uses propositions in an object language which describe facts, objects or phenomena. The formal mode of speech uses propositions in a metalanguage to talk about words or linguistic forms (syntactical sentences). An example of the material mode of speech is "Red is a quality", and an example of the formal mode of speech is " 'Red' is a quality-word". For Carnap, many traditional problems arise because we treat claims about words as claims as objects. On this basis, we then speak in the material mode, producing many pseudo-object sentences. Philosophy should translate these sentences into the formal mode, that is replacing talk about meaning by the talk about the formal relations of words.

"The true situation is revealed by the translation of the sentence of the material mode of speech, which are quasi-syntactical sentences, into the correlated syntactical sentences and thus into the formal mode." —Carnap, *The Logical Syntax of Language*, p. 288.

Material objects

Also called physical objects, the objects which possess physical characteristics such as position, size, shape and solidity. Such objects include physical entities such as rocks,

页。

实质蕴涵悖论

由实质蕴涵定义中产生的令人麻烦的结果：假命题仅仅因为它是假的，就蕴涵每一命题；真命题仅仅因为它是真的，就被每一命题所蕴涵。用另一种方式来表述，只要 p 为假， $p \supset q$ 就为真；只要 q 为真， $p \supset q$ 亦为真。上述情形发生，是因为日常语言中的“蕴涵”表示两个命题之间的关系，而一个陈述按实质蕴涵能够为真，即使在它的支命题之间根本不存在任何关系。实质蕴涵与其支命题的题材或内容无关。为了避免这些后果，有人建议我们谈论“实质条件句”而不是“实质蕴涵”。

“罗素把 ' p 蕴涵 q ' 定义为 '或者非 p 或者 q ' 的同义语，这导致了下述有根据的反对意见：根据上述定义，真命题被任意命题所蕴涵，并且假命题蕴涵任意命题(实质蕴涵悖论)。”——帕普：《分析哲学原理》，1949年，第463页。

实质的说话方式

卡尔纳普区分了实质的说话方式和形式的说话方式。实质的说话方式是在描述事实、对象或现象的对象语言中使用命题。形式的说话方式是在谈论语词和语言形式(即句法语句)的元语言中使用命题。实质说话方式之一例是“红是一种性质”，形式的说话方式之一例是“‘红’是一性质词”。在卡尔纳普看来，许多传统问题的出现是因为把关于语词的断语当成了关于对象的断语。基于此，我们因而以实质的方式说话，制造了许多假对象语句。哲学应该把这些语句翻译成形式的方式，它们用关于语词形式关系的谈论代替关于意义的谈论。

“真实情况由此得到揭示，即把实质说话方式的语句(它们是类似句法语句)翻译成相关的句法语句因而翻译为形式的方式。”——卡尔纳普：《语言的逻辑句法》，第288页。

物质对象

亦称物理对象，即具有诸如位置、大小、形状和坚实性等性质的对象。这些对象包括像岩石、树木、房屋这样的物理性的东西，也包括像

trees, houses, and living organisms such as plants, animal and human beings. The existence of material objects is independent of our perception, but they are the objects of perception. In this sense material objects stand in contrast to another kind of alleged object of perception, sense-data. The perception of material objects is public and durable, but it is indirect because it involves inference and interpretation, and it is therefore also less certain than perception of sense-data seems to be. This contrast leads to major disputes about the nature of material objects. How can we prove the existence of material objects and combat scepticism and idealism? What is the relation between material objects and sense-data?

"Nothing can be a material object except what has position in space." —Moore, *Some Main Problems in Philosophy*, p. 128.

Materialism

The doctrine that all items in the world are composed of matter and that the properties of matter determine all other things, including mental phenomena. Every explicable thing can be explained on the grounds of natural laws. Materialism has a long history starting from the Ionian natural philosophers and ancient atomists. It was developed by Gassendi and Hobbes in the seventeenth century, the French materialists in the eighteenth century, and Marx's dialectical materialism and historical materialism in the nineteenth century. There has been some dispute about the nature of matter. Physicalism, which claims that all items in the world are physical entities, is a popular contemporary version of materialism. All forms of materialism reject abstract entities and embrace the reality of particulars. Materialism claims to be an ally of common sense and it is generally deterministic. Contemporary materialism has become less ontological and is not so much concerned with the composition of things. Accordingly, the traditional contrast between materialism and idealism does not always apply. The physicalism of logical positivism was essentially epistemic and logical, claiming that all predicates can be reduced to physical predicates. Central-state materialism in the philosophy of mind proposes that all mental phenomena can be explained by appeal to neuro-physical items with which they are identical. Eliminative materialism seeks to get rid of what it claims to be scientifically inadequate folk psychological terms, like belief and desire, in favour of neuro-scientific notions.

"Materialism was taken to be a logical analysis of statements about the mind and not a very general contingent or empirical theory about the nature of mental entities." —Quinton, *The Nature of Things*, 1973, p. 332.

Materialist theory of mind

A theory developed as a result of the criticisms of dualist theory of the relationship between body and mind. While

植物、动物、人类这样的活的有机体。物质对象的存在独立于我们的知觉，但它们是知觉的对象。在这种意义上，物质对象与另一类所谓的知觉对象即感觉材料不同。对物质对象的知觉是公共的、持续的，但它是间接的，因为它涉及到推理和解释，因此它的确定性比对于感觉材料的知觉看上去要小。这个区别导致了关于物质对象性质的主要争论。我们如何能证明物质对象的存在，以及如何与怀疑论和唯心论战斗？物质对象与感觉材料的关系是什么？

“除了具有空间位置的东西，别的都不能是物质对象。”——摩尔：《哲学的一些主要问题》，第128页。

唯物论

这种学说认为，世界上的所有东西都是由物质组成的，物质的性质决定所有其他的东西，包括心的现象。所有可解释的东西都可以在自然规律的基础上加以解释。唯物论有一个漫长的历史，它起自爱奥尼亚的自然哲学家和古代原子论者，由17世纪的伽桑狄和霍布斯、18世纪的法国唯物论者和马克思的辩证唯物论和历史唯物论所发展。但关于物质的本质曾有一些争论。声称世界上所有的东西都是物理存在的“物理主义”是一种流行的当代唯物论。所有形式的唯物论都拒斥抽象的存在而支持具体现实。唯物论一向是常识的同盟者并通常是决定论的。当代唯物论变得不那么本体论了，也变得不那么关心事物的组成了。因此，唯物论与唯心论的传统对立并不总是适用的。逻辑实证主义的物理主义实质上是认识和逻辑上的。它声称所有的谓项都可以还原为物理谓项。心的哲学中的“中心状态唯物论”认为所有的心现象都可以用神经物理的东西来解释。“取消唯物论”则试图摆脱它认为是在科学上不合适的常识心理学语汇如信念、欲望，以支持神经科学的概念。

“唯物论被认为是关于心的陈述的逻辑分析，而不是关于精神存在物的本质的十分普遍的偶然的或经验的理论。”——奎因顿：《事物之本性》，1973年，第332页。

唯物主义的心的理论

唯物主义的心的理论产生于对关于心身关系的二元论的批评。二元论声称心与身是两个

dualism claims that mind and body are two independent entities, varieties of materialism claim that mental phenomena are determined by, identical with or supervenient on physical phenomena. Materialism holds that human beings are distinguished from other physical objects only because of the special complexity of their physical organisations. This theory has many different versions; Behaviourism claims that to have a mind is to have tendencies to behave physically in a certain way. Central-state materialism or identity theory claims that mental events are identical with certain physical events in the brain. Supervenience can allow a person to have mental states in virtue of having certain brain states without the mental states being reduced to the brain states.

"In sharp opposition to any form of dualism we have materialist or physicalist theory of mind. For a materialist, man is nothing but a physical object, and so he is committed to giving a purely physical theory of mind." —Armstrong, *A Materialist Theory of Mind*, 1967, p. 10.

Mathematical cyclist

A paradox devised by Quine to criticise the division between essence and accidents that is fundamental to essentialism. For Quine there is no absolute way to distinguish between the necessary or essential attributes and the contingent or accidental attributes of an object X, for our decisions in this regard are always related to our interests. In relation to some interests, some properties are essential; and in relation to others, they are accidental. Thus, essentialism is faced with a paradox that a given individual will be both essentially and accidentally so and so. A mathematician is necessarily rational and not necessarily two-legged; a cyclist is necessarily two-legged and not necessarily rational; then what of an individual who is both a mathematician and a cyclist?

"Mathematicians are conceivably said to be necessarily rational, and not necessarily two-legged; and cyclists necessarily two-legged and not necessarily rational. But what of an individual who counts among his eccentricities both mathematics and cycling?" —Quine, *Word and Object*, 1960, p. 199.

Mathematical logic

Also called symbolic logic or modern logic. The modern embodiment of formal logic, mainly consisting of propositional and predicate logic, with quantifiers, variables and functions as its central notions. It can be traced to Leibniz, Boole and Peano, but in its modern form began in 1879, with the publication of Gottlob Frege's *Begriffsschrift*. It was further developed by Russell and Whitehead in their *Principia Mathematica*. Frege, Russell and Whitehead sought to deduce mathematics from logic.

彼此独立的存在物，而各种唯物论则声称心的现象是由物理现象决定并同一于或伴随于物理现象的。唯物论主张人与其他物理对象之不同仅在于其物理组织的极其复杂。这一理论有多种不同形式。行为主义声称具有一个心就是具有以某种方式进行身体行为的倾向。中心状态唯物论或同一论则声称心的事件同一于大脑中的某些物理事件。伴随性容许一个人由于具有某些大脑状态而具有心的状态，而又不将心的状态还原为大脑状态。

“与任何形式的二元论完全对立，我们有唯物主义的或物理主义的心的理论。对于一个唯物主义者来说，人只是一个物理对象，因此他必须给出一个关于心的纯粹物理的理论。”——阿姆斯特朗：《唯物主义的心的理论》，1967年，第16页。

数学家骑车人

一个由奎因设计出的悖论，以批评本质主义对本质与偶然所作的根本区分。奎因认为，不存在绝对的方式去区分一个对象X的必然的或本质的属性和偶然的或可能的属性，因为我们关于这一点的决定总是与我们的旨趣有关的。相对于某些旨趣而言，有些性质是本质的；而在与其他旨趣的关系中，它们又可能是偶然的。这样，本质主义就面临着一个悖论，一个确定的个体将既是本质的又是偶然的，如此等等。一个数学家必然是理性的，而并不必然是有两条腿的；一个骑自行车的必然是两条腿的，但并不必然是理性的；那么当一个人既是数学家又是骑自行车的人时当如何呢？

“数学家总是被设想为必然是理性的，而并不必然是两条腿的；骑自行车的人必然是两条腿的而不必是理性的。但是当一个人的爱好中既有数学又有骑车时又当如何呢？”——奎因：《词与物》，1960年，第199页。

数理逻辑

亦称符号逻辑或现代逻辑。形式逻辑的现代体现，主要包括命题逻辑和谓词逻辑，以量词、变元、函项作为它的中心概念。它可以追溯到莱布尼茨、布尔和皮亚诺，但就其现代形式而言，可以说它创始于1879年，这一年弗雷格发表了《概念文字》。罗素和怀特海在其所著的《数学原理》一书中进一步发展了它。弗雷格、罗素和怀特海试图从逻辑中推演出数学。数理逻辑本身是数学研究的一支，极大地依赖于符号

Mathematical logic is a branch of mathematical study and relies heavily on symbolic techniques and mathematical methods. It is also a logical theory of mathematical analysis and is applicable to other more traditional branches of mathematics. Many philosophical problems have arisen from the development of modern logic, but advanced modern logic has become a technical field for mathematicians and the philosophy of mathematics.

"By the name 'mathematical logic', then, I will denote any logical theory whose object is the analysis and deduction of arithmetic and geometry by means of concepts which belongs evidently to logic." — Russell, *Collected Papers of Bertrand Russell*, VI, p. 33.

Matrix method, another name for truth-table method

Matter

[from Greek; *hule*, wood] Aristotle considered matter and form to be relative terms, with matter as the material of a thing (the basic stuff) as opposed to form as its structure. Matter is a factor within the category of substance, but is not primary substance. Matter and form together are the two major components of reality. Matter, as the subject or substratum of change, can accept contraries and so make change possible. At the beginning of change, there are remote matter-like elements, which would be prime matter in a general discussion of change. At the end of generation there is proximate matter, which is the matter appropriate to the product. A material substance is a composite of matter and form. Matter is usually, but not always, associated with potentiality. Aristotle also occasionally mentioned spatial extension as intelligible matter. The characteristics of Aristotle's notion of matter were retained in the later development of metaphysics.

In the seventeenth and eighteenth centuries, matter was thought to be something in a spatio-temporal location and to have the properties of extension and movability. Descartes called it extended substance in contrast to mind or soul as thinking substance. This led to the problems raised by matter-mind dualism. In modern science, matter is characterised in terms of mass and extension, and is distinguished from energy on the grounds that each has its own law of conservation. This distinction no longer holds in contemporary physics. Matter is now mainly a subject for the philosophy of physics.

"For my definition of matter is just this—the primary substratum of each thing, from which it comes to be without qualification, and which persists in the result." —Aristotle, *Physics*, 192a30-31.

技巧和数学方法。它也是数学分析的逻辑理论，特别适用于其他更为传统的数学分支。从现代逻辑的发展中已经产生了许多哲学问题，不过高等现代逻辑已经成为数学家和数学哲学的专门领域。

“于是，我将用‘数理逻辑’这一名称去指称任何这样的逻辑理论，其对象是算术和几何的分析和演绎，所凭借的是明显属于逻辑的概念。”——罗素：《罗素文集》，第六卷，第33页。

矩阵方法

“真值表方法”的另一个名称。

质料〔或译“物质”〕。

〔源自希腊语 *hule* (木材)〕亚里士多德把质料和形式看做相关术语，质料作为一物的原料（基础材料）而与作为其结构的形式相对。质料是实体范畴的一个要素，但不是第一实体。质料和形式共同是实在的两个主要成分，质料作为变化的主体或基质，能够接受相反物，所以，才使变化成为可能。在变化之初，有像质料的不同元素，在对变化的一般讨论中，它就是原初质料。在生成之末，有最近似的质料，即适于生产的质料。物质实体是质料和形式的合成物。质料通常但不总是与潜能相关联。亚里士多德也偶然提到作为理智质料的空间广延。亚里士多德质料学说的特征，被保持在形而上学的后来发展中。

在17至18世纪，物质〔质料〕被认为是处于时空位置中的某种东西，具有广延性和可移动性。笛卡尔称它为“广延实体”，对应于作为思维实体的心灵或灵魂。这导致了心物二元论问题。在现代科学中，质料的特性用质量和广延来形容，并与能量相区别，其根据是，每物都有它自己的守恒律。但是，在当代物理学中，不再保持这种区别。现在，质料主要是物理哲学的一个主题。

“我所谓的质料定义正是：每一事物的原始基质，事物绝对地由它产生，并且继续存在下去。”——亚里士多德：《物理学》，192a30-31。

Matter of fact, see knowledge of relation of ideas

Maxim

Generally, any simple rule or guide in our life, but in Kant's moral theory a practical proposition which connects one's subjective conditions, that is one's reason or motive, to one's decision to act. Such maxims have the form "I will do A if that will make me happy". Hence a maxim is a principle upon which one acts. For Kant, there are maxims of action, which express a determination to act in a certain way when a certain condition is met, and maxims of ends, which express a determination to form an intention when a certain condition is met. A maxim is distinguished from the practical law. For a maxim, the conditions (the reason or motives) are subjective and differ among persons because each person has different desires or purposes. For a practical law the conditions are objective, that is universally valid. Therefore, Kant called a maxim the subjective principle of volition and the practical law the objective principle of volition, that is the categorical imperative. All maxims have form or universality, matter or plurality, and totality in the complete determination. Maxims must be tested by the categorical imperative. Accordingly, a morally commendable action requires a person to act on a maxim which can at the same time make itself a universal law so that the subjective principle of volition coincides with the objective principle of volition.

"A maxim contains the practical rule which reason determines in accordance with the conditions of the subject (often his ignorance or his inclinations) and is thus the principle according to which the subject does act. But the law is the objective principle valid for every rational being, and it is the principle according to which he ought to act, i. e. an imperative." —Kant, *Groundwork for the Metaphysics of Morals*, 421 n.

Maximin rule

A strategy for choosing under uncertainty, according to which we should consider the worst possible outcome for each choice and adopt the one which has the least bad consequences. According to Rawls, because the rational agents in the original position are ignorant of their own initial positions in the society they are devising, they will reasonably employ the maximin rule for choosing principles of justice. The rationality of this strategy under conditions of ignorance is the basis for Rawls' difference principle, according to which a just society would make the situation of its worst-off group as good as possible. While the maximin rule seeks to maximise the minimum gain, a related strategy governed by the minimax rule enjoins rational agents to minimise their maximum loss. The two rules are generally

事实问题

见“有关观念关系的知识”条。

准则

通常是指我们生活中的任何简单规则或指导,但在康德的道德理论中则指一种实践的命题,它把人们的主观条件(即人们的理性或动机)与人们去行为的决定联系起来。这种准则的形式为:“如果A会使我幸福我就会做它”。因此,准则是人们按照它来行动的原则。康德把准则划分为行为准则和目的准则,前者表示当某种条件得到满足时,便以某种方式去行动的决定;后者表示当某种条件得到满足时,形成某种意图的决定。准则不同于“实践法则”,它们的区别在于,前者中的条件(理性或动机)是主观的,随着不同的个人而不同,因为每个人都有不同的欲望或意图,而在后者中的条件是客观的,即普遍有效的。因此康德把准则称为“意志的主观原则”,而把实践的法则称为“意志的客观原则”,即绝对命令。所有的准则都有形式或普遍性,质料或复多性,和完满规定的总体性。准则必须由绝对命令来检验。因此,一种道德上值得称赞的行为,要求一个人按照同时能使自身成为普遍规律的准则来行动,这样,意志的主观原则就与意志的客观原则达到协调。

“准则包含理性按照主体的条件(常常是他的无知或他的爱好)而规定的实践规则,因此是主体采取行动时所依照的原则。但法则是对每一个理性存在者都有效的客观原则,并且是他应该依照它而行动的原则,即一种命令。”——康德:《道德形而上学基础》,421注。

最大最小值规则

一种在不确定情况下的选择策略。按照这一策略,我们应考虑到每种选择的最坏可能,并采取那种带来最少坏的结果的选择。根据罗尔斯的见解,由于处在原初状态中理性的人不知道他们自己在他们设想的社会中的最初立场,他们将会合理地采用最大最小值规则以选择正义的原则。在无知情况下的这一策略的合理性是罗尔斯的差别原则的基础,按照差别原则,一个公正的社会将会尽可能地使它的最贫困的阶层的处境好转。当最大最小值原则试图最大限度地增加最少受惠者的利益时,受最小最大值规则支配的有关的策略就会责成理性的人使他们的最大损失减少到最少。这两条规则一般被认为是相等的。

taken to be equivalent.

"The maximin rule tells us to rank alternatives by their worst possible outcomes; we are to adopt the alternatives the worst outcome of which is superior to the worst outcome of the others." —Rawls, *A Theory of Justice*, 1971, pp. 152-3.

Mean

[Greek; *mesotes*, a noun derived from *mesos*, middle, intermediate] Aristotle claimed that virtue of character is a mean. Unlike an arithmetic mean, virtue as a mean is not a middle point between two extremes, which is one and the same for all. Instead, it is in relation to passions and actions and is a state in which passions are neither indulged without restraint (excess) nor suppressed entirely (defect). The right amount of passion is relative to us, and is different in different situations. However, that does not entail that different persons measure it in different ways. Rather, virtue is determined by practical reason.

Aristotle employs the mean to analyse not only virtue in general, but also particular virtues. The doctrine of the mean in Aristotle's ethics is famous, although it is not clear how much it tells us about virtue and vice. In addition, he uses it in his theory of perception, saying that a sense organ must be in a mean state (e.g. less hot and less cold) if it is to perceive the extreme qualities (e.g. hot or cold).

"Virtue is a mean between two vices, one of excess and one of deficiency." —Aristotle, *Nicomachean Ethics*, 1107a4.

Meaning

Generally, what is expressed, said or referred to in an expression. Literal meaning is what one can directly tell or draw from the words used in an expression themselves. If two or more expressions have the same meaning, they are said to be synonymous. Meaning is used in the same way as sense, connotation and intension in contrast to reference, denotation and extension. Determining the way the meaning of an expression is generated involves determining the way language relates to reality, the relation between meaning and psychological states, and the relation between meaning and other key semantic notions such as truth and reference. All these make the notion of meaning a central and difficult concept, not only in the philosophy of language, but also in the philosophy of mind, epistemology and metaphysics. Various theories about meaning have been developed in the twentieth century. This dictionary has a single entry for each of the major influential theories. They include the behavioural theory of meaning, the ideational theory of meaning, the image theory of meaning, the picture theory of meaning, the referential theory of meaning, the truth-conditional theory of meaning, the use theory of meaning and

"最大最小值规则告诉我们,我们要按选择对象可能产生的最坏结果来排列选择对象的次序,然后我们要采用这样一个选择对象,它的最坏结果优于其他对象的最坏结果。"——罗尔斯:《正义论》,1971年,第152-153页。

适度

[希腊名词 *mesotes*, 源自动词 *mesos*, "中间"、"居间"] 亚里士多德认为,人格的美德在于一种适度。与算术的平均值不同,作为适度的美德并非是两极的中间点,因为后者对所有东西来说都是同样的,相反,适度与激情和行为有关,它是一种激情既不过度也不欠缺的状态。适量的激情对我们来说是相对的,在不同情景中是不同的。然而,这并非是说不同的人会以不同的方式来衡量它。相反,美德取决于实践理性。

亚里士多德不仅用适度来分析一般的美德,而且用来分析具体的美德。亚里士多德伦理学中的"中庸之道"著称于世,尽管它并未清楚地告诉我们有关美德与恶习之别。另外,亚里士多德在其感性学说中也使用它,他说,假如要感知极端性质(譬如热或冷)的话,感官务必处于适度状态(譬如不热不冷)。

"美德是介于两种恶习即过度与欠缺之间的适度。"——亚里士多德:《尼各马可伦理学》,1107a4。

意义

一般是指在一个表达式中所表达、说到或提及的东西。"字面意义"是人们能够在某一表达式所使用的那些词语本身中直接告诉或得出的东西。如果两个或多个表达式有同样的意义,则说它们是同义的。"意义"总是与"涵义"、"内包"、"内涵"以同样的方式被使用的,而与"指称"、"所指"和"外延"形成对照。确定表达式意义的生成方式,涉及到确定语言和实在之间的关联方式,意义和心理状态之间的关系,以及意义与其他关键性语义学概念如真和指称之间的关系。所有这些使意义概念不仅成为语言哲学中,而且成为心的哲学、认识论和形而上学中最关键且最难对付的概念。20世纪已经发展出各种有关意义的理论。本辞典对每一种主要的有影响的理论都列有单独的条目,它们包括意义的行为论,意义的观念论,意义的心象论,意义的图画论,意义的指称论,意义的真值条件论,意义的用法论,意义的证实论等等。

"一个单独的指称表达式要具有意义,满足下述条件就足够了:应该有可能在适当的场合用它去指称某个事物,人,位置等等。"——斯

the verificationist theory of meaning.

"For a single referring expression to have a meaning, it suffices that it should be possible in suitable circumstances to use it to refer to some one thing, person, place, etc." - P. F. Strawson, *An Introduction to Logic Theory*, 1952, p. 188.

Meaning of a sentence

In contrast to the meaning of a word, which is a potential meaning that is realised when the word is used in a sentence, the meaning of a sentence is claimed to be a certain extra-linguistic fact. Even philosophers who reject an ontology of facts can retain the priority of sentence meaning over word meaning. Philosophers who accept the notion of a propositional attitude see the meaning of a sentence as the object of propositional attitudes.

"The meaning of a sentence is something in the outside world at a given time and in relationship to given persons, qualities, and objects." - Bolinger and Sears, *Aspects of Languages*, 1981, p. 109.

Meaning of life

An ancient and central philosophical question asks what is the meaning of life. Some philosophers argue that nothing outside of life could give it meaning. For others, there is nothing but life, and it is meaningless. Another view is that an overall plan or ultimate goal, preferably chosen by us, gives life its meaning. In some versions, the plan and goal must be part of a larger project or derived from a source, where the project or source extends beyond the life and gives place to the commitments of the life. There are different views about the projects or sources which could give meaning to life, with candidates including God, immortality, tradition and rationality. There are also debates over the objectivity or subjectivity of the meaning of life. If the meaning of life is an objective matter, a life can seem to have a meaning through passionate intensity, coherence and satisfaction, without really having meaning. Accepting that there is a meaning in life leads to consideration of how one should live.

"[the] meaning of life: A person's shaping his life in accordance with some overall plan is his way of giving meaning to his life; only a being with the capacity to so shape his life can have or strive for meaningful life." - Nozick, *Anarchy, State and Utopia*, 1974, p. 50.

Meaning postulate

A term introduced by Carnap in 1953 and originally intended to explicate but not strictly define an analytical statement which is not logically true. It was later extended to any statement or rule which specifies or clarifies the meaning of a predicate and hence determines the entailments that derive from that predicate in the nonlogical vocabulary of

特劳森:《逻辑理论导论》, 1952年, 第188页。

句子的意义

词的意义是潜在的, 只有当它被用于句子中时才会被意识到; 与此相反, 句子的意义则被认为是某个语言之外的事实。即使是拒斥事实本体论的哲学家也能接受句子的意义先于词的意义。接受命题态度概念的哲学家把句子的意义看作是命题态度的对象。

"句子的意义是外在世界中在某个时间和与某些个人、属性和对象有关的某个东西。" ——博林格和西尔斯:《语言的诸方面》, 1981年, 第109页。

生活的意义

探求生活的意义是一个古老的哲学问题, 也是一个核心的哲学问题。一些哲学家论证说, 生活之外的任何东西都不能赋予生活以意义。在另一些人看来, 除了生活别无他物, 而生活是没有意义可言的。还有一种观点认为, 那种由我们倾向于选择的总体计划或最终目标, 赋予了生活以意义。在一些看法中, 计划和目标必定是更大方案的一个部分, 或是由一个根源派生的, 在那里, 这种方案或根源伸展到生活以外, 并让位于对生活的信奉。对可以赋予生活以意义的方案或根源是什么, 是上帝、不朽、传统还是理性, 人们有不同的看法。对生活意义的主观性或客观性问题也有争论。如果生活的意义是一种客观的事物, 那生活似乎可以通过热情的程度、协调和满足而获得意义, 而不是真正具有意义。承认生活有意义, 会导致对一个人应如何生活的思考。

"生活的意义: 一个人根据某种总体计划来设计他的生活, 就是他赋予其生活的意义的方式; 只有有能力这样设计他的生活的人, 才能具有或力求有意义的人生。" ——诺齐克:《无政府状态、国家与乌托邦》, 1974年, 第50页。

意义公设

由卡尔纳普于1953年引入的术语, 起初意在阐释(而不是严格意义上的定义)分析的而非逻辑上真的陈述。后来扩展到指任何陈述或规则, 它们限定或澄清谓词意义, 因而确定了派生于一种自然语言的非逻辑词汇中的谓词的蕴涵。这种意义公设的范例包括递归定义、使用定

a natural language. Examples of this kind of meaning postulate include recursive definitions and definitions in use. The advantage of this device is that it avoids a sharp distinction between the logical and nonlogical vocabulary of the object language.

"We draw an analytic-synthetic distinction formally only in connection with formalised languages whose inventors list some statements and rules as 'meaning postulates'. That is, it is stipulated that to qualify as correctly using the language one must accept those statements and rules." —Putnam, in *Minnesota Studies in the Philosophy of Science*, vol. iii, 1963, p. 381.

Meaningless

Loosely, what is obviously false, absurd or pointless. In a stricter sense, questions and answers which are devoid of meaning or sense. In logical positivism, metaphysical statements are examined by logical analysis and claimed to be meaningless. One cannot say that metaphysical statements are true or false, because we lack any criterion to determine whether they are true or false. Only statements allowing such a criterion are meaningful. According to logical positivism, there are two kinds of meaningful statements; first, the formulae of logic and mathematics and second, empirical or factual statements. Any other statements which do not fall in these categories are rejected from serious philosophy as meaningless, metaphysical statements or pseudo-statements.

"In the strict sense, however, a sequence of word is meaningless if it does not, within a specified language, constitute a statement." —Carnap, "The Elimination of Metaphysics through Logical Analysis of Language", in Aye (ed.), *Logical Positivism*, 1959, p. 61.

Means/end

Some things are done to achieve a further goal or purpose and are means to ends. If a thing is done not for some purpose outside itself but for its own sake, it is an end in itself, but an end can also be a means to a higher end. In line with this reasoning, many philosophers infer that there is an ultimate or final end, which is an end in an absolute sense. Such means-end reasoning, called a teleological approach or analysis [from Greek; *telos*, end], is applied in both theology and ethics. Some philosophers hold that rationality is restricted to selecting means as instruments to achieve ends that are given non-rationally, while others hold that the selection of ends is also a matter for reason. Modern teleological ethics, represented by utilitarianism, claims that acts should be judged by their consequences, including the ends they realise. Deontology, which holds that acts should be judged according to their motive or duty rather than by their consequences, also uses the distinction between means

义等等。这种方法的长处在于避免了对象语言的逻辑词汇和非逻辑词汇之间的截然区分。

"我们仅关于那些其发明者列出了一些作为'意义公设'的陈述和规则的形式化语言,才做出形式上的分析—综合的区分。就是说,它规定了人们要正确使用这种语言,必须接受这些陈述和规则,"——普特南,见《明尼苏达科学哲学研究》,1963年,第3卷,第381页。

无意义的

宽泛地说,指明显为假、荒谬和不得要领的东西。从较严格的意义上说,是没有意义的问题和答案。逻辑实证主义用逻辑分析来检查各种形而上学陈述并宣布它们是无意义的。人们不能说形而上学陈述是真的还是假的,因为我们缺少确定它们为真还是为假的标准。只有可用这种标准的陈述才是有意义的。根据逻辑实证主义的看法,有两类有意义的陈述:第一,逻辑或数学公式,第二,经验或事实性陈述。任何其他不在这两类之中的陈述被排除于严肃的哲学之外,说成是没有意义的、形而上学的陈述或伪陈述。

"在严格的意义上说,如果一串词在一特定的语言中不构成一陈述,就是无意义的。"——卡尔纳普:《通过语言的逻辑分析清除形而上学》,载于艾耶尔编:《逻辑实证主义》,1959年,第61页。

手段/目的

某些事之被做是为了实现进一步的目标或意图,因而它们是实现目的的手段,如果一件事之被做不是为了这件事本身之外的某一目的,而是为了其本身,那它本身就是目的,不过,一个目的也可以是一个更高目的的手段。与这一推理相一致,很多哲学家推断存在一个终极的或最终的目的,即一个绝对意义上的目的。这种手段—目的的推理被称做目的论的方法或目的论的分析[源自希腊文 *telos*, 目的],它既被用于目的论,也被用于伦理学。一些哲学家认为,合理性是被限于选择作为工具的手段去实现特定的不合理的目的。而其他哲学家则认为,对目的选择也是合理性的问题。以功利主义为代表的现代目的论伦理学认为,行为应以它们的后果来评判,这些后果包括它们实现的目的。道义论则认为,对行为的评价应根据它们的动机或责任,而不是它们的后果。它根据康德的绝对

and ends, with Kant's Categorical Imperative requiring that we treat rational beings as ends rather than merely as means. Aristotle had another conception of the means-ends relation. Rather than being merely instrumental, a means can be constitutive of an end or be a major component of the end. This later conception is important for understanding Aristotle's notion of happiness. There has been much controversy whether good ends can justify evil means.

"A means is the object of an interest which is asymmetrically dependable on an ulterior interest whose object is the end." Perry, *Realms of Value*, 1954, p. 79.

Means of production, see productive force

Mechanism

A paradigm of explanation modelled on mechanics and holding that everything can be explained by the mechanistic principles, that is by the interaction and combination of material particles. On this view, both animals and human beings are machines, and mental phenomena are nothing more than the sophisticated arrangement of different minute parts. In general, mechanism reduces all differences of quality into the differences of quantity. The world as a whole is an aggregate rather than an organic unity. All relations among particles are external relations. This paradigm was developed by Descartes and Hobbes and was supported by Newton's mechanics. It denies both action at distance and Aristotelian final cause or teleology. It therefore opposes vitalism and organicism.

"Mechanism represents the tendency opposed to teleology because its adherents think that the course of all phenomena in the world occurs as if in a mechanism and is not directed by purpose in the way that human conduct is." Ajdukiewicz, *Problem and Theories of Philosophy*, 1973, p. 138.

Mechanistic materialism

The type of materialism prevalent in the seventeenth and eighteenth centuries, represented by Hobbes, Gassendi and French materialists such as La Mettrie, Diderot, Holbach, Helvetius and Condillac. The theory was influenced by mechanics, which was the most highly developed natural science at that time. On this view, all phenomena, including those involving life and the mind, can be explained in terms of the interactions of forces and the simple or complex arrangement of material particles. Both universe and man are viewed as machines, with La Mettrie calling his major work *L'Homme Machine*. Things can affect one another only by direct mechanical contact. Because the mind lacks an independent status and is explained in mechanical terms, this theory has difficulty in accounting for free will. Marx and

命令即要求我们把理性的人看做目的而不仅仅是手段,也运用了对手段和目的的区分。亚里士多德对手段一目的关系有另一种看法。手段不仅仅是工具性的,它可构成目的,或是目的的一个主要组成部分。这后一个看法对理解亚里士多德的幸福概念很重要。关于善的目的能否为恶的手段辩护的问题,人们一直存有争议。

"一种手段是一种利益的对象,这种利益不对称地依赖于一个终极的利益,后者的对象乃是目的,"——佩里:《价值王国》,1954年,第79页。

生产资料

见“生产力”条。

机械论

以力学为模式的说明范式,认为一切事物都可按照机械原理,即按照物质粒子的结合和相互作用来加以说明。按此观点,动物和人类都是机器,心智现象无非就是各种不同微粒的复杂的排列。一般说来,机械论把一切千差万别的质都还原为各种各样的量。世界作为整体是一个集合体而不是有机的统一体。粒子之间的一切关系都是外在的关系。这种范式由笛卡尔和霍布斯所发展,并得到牛顿力学的支持。它既否认超距作用,也否认亚里士多德的目的因或目的论,因此,它与活力论和有机性相对立。

“机械论代表了与目的论相对立的趋向,因为它的信奉者认为,世界上一切现象的过程似乎都是按机械原理发生的,而不是像人类行为那样由目的所指导,”——阿吉图库威茨:《哲学问题和哲学理论》,1973年,第138页。

机械唯物论

流行于17世纪和18世纪的一种唯物论,以霍布斯、伽森狄和法国唯物论者如拉美特利、狄德罗、霍尔巴赫、爱尔维修和孔迪亚克为代表人物。这个理论受到机械论的影响,而机械论是那个时代最高度发达的自然科学。按照机械唯物论的观点,一切现象,包括生命和心灵,都可解释为力的相互作用和物质微粒的简单或复杂的排列。宇宙和人都被视为机器,拉美特利的主要著作就叫做《人是机器》。事物只有通过直接的机械接触才能相互作用。由于心灵缺乏独立的地位并被作出机械的解释,因而这个理论很难说明自由意志。马克思和恩格斯认为这种唯物论代表陈旧的形而上学思想,并主张它必须被辩证唯物论所超越。

Engels took this kind of materialism to represent outmoded metaphysical thought and claimed that it must be superseded by dialectical materialism.

"Mechanical materialism not only denies that spiritual substance exist, it also considers even mental phenomena (thought, feelings, etc) to be physical processes." -- Ajdukiewicz, *Problem and Theories of Philosophy*, 1973, p. 105.

Medieval philosophy

The central theme of medieval philosophy was the attempt to join faith and reason. Philosophers sought to make Christian faith intelligible and to prove the compatibility of Christianity and reason. Historical accounts of medieval philosophy normally start with Augustine, who applied Plato's thinking to Christianity. The translation and commentary of Aristotle's logical works by Boethius shaped much Latin technical philosophical vocabulary. Anselm of Canterbury, in virtue of his ontological argument, is known as the father of Scholasticism, a tradition which debated questions such as the ontological status of universals, free will and determinism and the problem of evil. In the twelfth and thirteenth centuries, the whole body of Aristotle's work became available to Europe through transmission from the Islamic world, together with the commentaries of Arabic scholars such as al-Farabi, Avicenna (ibn-Sina) and Averroës (ibn-Rushd). The greatest medieval thinker, Thomas Aquinas, attempted to reconcile Christianity with an Aristotelian framework. Later major thinkers included Duns Scotus, William of Ockham and Francisco Suárez. The divorce of philosophy and theology and the influence of modern science in the work of later philosophers, such as F. Bacon, Hobbes and Descartes, marked the end of medieval philosophy. Many issues of medieval logic, ethics and philosophy of language still excite interest among contemporary philosophers.

"The assertion that the most important philosophical event in medieval philosophy was the discovery by the Christian West of the more or less complete works of Aristotle is an assertion which could, I think, be defended." -- Copleston, *A History of Philosophy*, III, 1953, p. 3.

"机械唯物论不仅否认精神实体的存在,它甚至也把心的现象(思想,感情等)看作是物理过程。"——阿吉图库威茨:《哲学问题和哲学理论》,1973年,第105页。

中世纪哲学

中世纪哲学的核心论题是企图结合信仰和理性。哲学家们力求使基督教信仰可以理喻,并证明基督教和理性的相容性。中世纪哲学的历史正规地讲是从奥古斯丁开始的,他把柏拉图的思想用于基督教。波埃修斯对亚里士多德逻辑学著作的翻译和评注,形成了许多拉丁语的专门哲学词汇。坎特伯雷的安瑟尔谟因其本体论论证而以经院哲学之父著称,他开创了经院哲学辩论诸如共相的本体论地位、自由意志与决定论、邪恶问题的传统。在12至13世纪,亚里士多德的全部著作,通过穆斯林地区的传播,与阿尔-法拉比、阿维森纳(伊本-西那)、阿维罗伊(伊本-路西德)等阿拉伯学者的评注一起,流传到欧洲,逐渐通行起来。最伟大的中世纪思想家T. 阿奎那企图使基督教与亚里士多德的框架协调一致。后期的主要思想家包括D. 司各脱、奥康的威廉和F. 苏亚雷斯。在诸如F. 培根、霍布斯和笛卡尔等后来哲学家的作品中,哲学和神学的分离以及近代科学的影响,标志着中世纪哲学的终结。中世纪逻辑学、伦理学和语言哲学的许多问题至今仍激发着当代哲学家们的兴趣。

"在中世纪哲学中,最重要的哲学事件是被西方基督徒发现的亚里士多德的几乎全部著作,这个断定我认为是能够得到辩护的。"——柯普莱斯顿:《哲学史》,第三卷,1953年,第3页。

Meditation

Usually used in religion as a synonym for contemplation, by which one beholds some spiritual object or obtains spiritual insight. Descartes chose this word for the title of his metaphysical masterpiece: *Meditations on First Philosophy* (1664). Meditation here is the reflection of a solitary thinker or meditator who retreats from the sensible world and frees himself from the influence of preconceived opinions. The purpose of meditation is to discover the indubitable first principles which can serve as the secure foundation of the system of knowledge. The *Meditations on First Philosophy* purports to describe the soul's solitary quest for truth and its discovery.

"I shall first of all set forth in these *Meditations* the very considerations by which I persuade myself that I have reached a certain and evident knowledge of the truth, in order to see if, by the same reasons which persuaded me, I can also persuade others." —Descartes, *Meditations on First Philosophy*, Preface.

Memory

The capacity to recall past experience and to retain in the present the knowledge acquired in the past. Although some sceptics reject belief based on memory as knowledge on the grounds that there is always a gap between the present remembering and the past, many philosophers consider memory to be a source of knowledge. In most cases memory gives us knowledge of the past. There has been some debate as to what counts as memory, how it is possible to have knowledge of that which is no longer present, and how past knowledge can be retained in the present. Because it is generally taken that there is an analogy between memory and perception, all theories of perception have their counterparts in theories of memory. While indirect realism, or the representative theory of memory developed by Aristotle and Hume, claims that what we remember is an image which represents the past, direct realism argues that our awareness of the past is direct without an intermediary image. For phenomenism the existence of the past is nothing more than the availability of memory experience.

"Memory demands (a) an image, (b) a belief in past existence. The belief may be expressed in the words 'This existed'." —Russell, *The Analysis of Mind*, 1921, p. 186.

Mens rea

[Latin: guilty mind or guilty mental state] The mental state that a defendant has when he commits a crime. In order to secure a conviction, the prosecution must prove that the defendant has a guilty mind. The malice aforethought of such a mind and the defendant's *actus reus* (Latin: guilty activity) constitute sufficient grounds for the defendant to be liable to punishment. Accordingly, a person is punishable if and only

沉思

通常用在宗教中,作为 contemplation 的同义词,指观照某个精神对象,或获得了精神上的洞见。笛卡尔选用这个词作为他的形而上学名著《第一哲学沉思》(1664)的标题。这里的沉思是指一位躲开了可感的世界,摆脱了先人之见影响的孤独思想家(沉思者)的反思。沉思的目的是发现可以作为知识体系可靠基础的不容置疑的第一原理。《第一哲学沉思》打算描述灵魂对真理以及对真理的发现的孤独追求。

"在这些沉思中我将首先提出我的思考,这些思考使我相信我已经达到了关于真理的确实明白的知识,以便看一看根据使我信服的同样理由是否也能说服其他人。"——笛卡尔:《第一哲学沉思》,序言。

记忆

唤起过去的经验并将过去获得的知识保存至今的官能。尽管有些怀疑论者根据现在的记忆与过去之间所存在的鸿沟而反对将基于记忆之上的信念视为知识,但许多哲学家仍然将记忆视为知识的一个来源。在大多数情况下,记忆给予我们关于过去的知识。关于什么算作记忆、如何能够具有关于不再呈现的东西的知识、过去的知识如何得以保存至今等问题一直存在争论。由于通常认为记忆与知觉之间有相似之处,因此所有的知觉理论都有一个对应的记忆理论。由亚里士多德和休谟所提出的间接实在论或记忆的表征理论声称我们所记住的东西就是表征了过去的映象,而直接实在论则论辩说我们对过去的意识是直接的,并没有一个中介的映象。对于现象论来说,过去的存在只是记忆经验的可得性。

"记忆要求 (a) 一个映象, (b) 关于过去存在的信念。这个信念可以表达为 '这曾经存在过'。"——罗素:《心的分析》,1921年,第186页。

犯罪心态

[拉丁文, "犯罪心态"或"有罪的心态"]被告在犯罪时具有的那种心态。为了保证定罪准确,原告及其律师必须证明被告具有犯罪之心。这种心态的预谋和被告的 *actus reus* (拉丁文,犯罪行为),构成被告应受惩罚的充足根据。因此,只要他或她做出抉择,无论这一抉择是犯法还是不犯法,并且实现了那种导致犯法的抉择,

if he or she had a choice whether or not to break the law and exercised that choice in favour of breaking it. *Mens rea* varies from crime to crime, and the common feature is that the defendant has knowledge of the bad consequence of the action but still recklessly intends to bring it about. The *mens rea* requirement is contained in the definition of almost all crimes, with the exception of strict liability which does not depend upon mental state. If *mens rea* can be negated for example by insanity or negligence, the same act will be treated rather differently. The *mens rea* point is viewed as a restraint upon the utilitarian theory of punishment according to which a punishment is justified if it promotes generally good consequences.

"In order to prove murder, the state has the burden of proving, among other things, that the accused acted with the appropriate mental states. Such mental states requirements are usually called *mens rea* (very loosely, 'guilty mind') requirements." —Murphy and Coleman, *The Philosophy of Law*, 1984, p. 132.

Mental act

Activities or processes such as seeing, hearing, smelling, feeling pains, calculating or deliberating in one's own mind. Starting with Brentano, there has been a tradition which separates the occurrence of a mental act from its content. All mental acts are mental events, but not *vice versa*. Mental events such as suddenly noticing something are not regarded as mental acts. But how precisely to distinguish between mental acts and other mental events has been an intensively debated problem. Other philosophers such as Russell claim that is unnecessary to establish a special category of mental acts.

"To begin with, then, I see, I hear, I smell, I taste, etc. ... And because, in a wide sense, they are all of them things which I do, I propose to call them all 'mental acts'. By calling them 'acts' I do not wish to imply that I am always particularly active when I do them." —G. E. Moore, "The subjectivity of psychology", in Vesey (ed.) *Body and Mind*, 1964, p. 237.

Mental causation

A term for the phenomenon of a mental event causing another event, whether physical or mental. As causation involving mental phenomena, it contrasts with physical causation. It is, however, uncertain whether there can be an intelligible notion of non-physical causation. Some believe that mental causation can be understood in purely mental terms. Some argue that mental events have both physical and mental properties. Mental properties are not epiphenomenal and have a significant causal role. A satisfactory explanation of behaviour or mental events is implausible without referring to the mental properties of other mental events.

这个人就该受到惩罚。犯罪心态随罪行的不同而有所不同。其共同的特征是,被告明知其行为的恶果但仍不顾一切地想要去实现它。除了严格的不取决于心态的责任以外,犯罪心态要求包含于几乎所有犯罪的界定之中。如果犯罪心态能为(例如)精神病或疏忽所否定,那同样的行为将会受到相当不同的对待。犯罪心态这一条被视为对功利主义的惩罚理论的限制,根据后者,一种惩罚只要它一般说来有助于好的结果就是正当的。

“为了证明谋杀,国家有责任除了其他情况外,提供被告的行为具有相应的心态。这种心态要求通常被称为 *mens rea* (非常宽泛地,‘犯罪之心’) 要求。”——墨菲和科耳曼:《法哲学》,1984年,第132页。

心的活动

像看、听、闻、感觉疼痛、计算或盘算等等这样的心的活动或过程。自布伦塔诺以来,就有试图将心的活动的发生与其内容分离开的传统。所有心的活动都是心的事件,但反之不然。像突然注意到某事这样的心事件并不被认为是心的活动。但究竟如何严格区分心的活动与心的事件曾是一个大有争议的问题。另外一些像罗素这样的哲学家则声称,将心的活动作为一个特别的范畴是不必要的。

“那么从我看、我听、我闻、我尝等开始……由于在广义上,它们都是我所做的事情,所以我提议将它们都称作‘心的活动’。我把它叫作‘活动’并不意味着我在做这些事情时总是特别地主动积极。”——摩尔:《心理学的主观性》,见韦西(编)《身与心》,1964年,第237页。

心的因果性

这一术语指心的事件导致另一物理的或心的事件的现象。作为涉及心的现象的因果作用,它与物理的因果性相对。然而,很难说能否有一个说得清的非物理的因果性概念。有人相信心的因果性可以以纯粹的心的语汇来理解。有人论辩说心的事件既有物理特性也有心的特性。心的特性并非附随现象,它们具有重要的因果作用。不借助于其他的心事件的心特性就不可能令人满意地解释行为或心的事件。这一说法有时被叫作“心的不可替代性”。戴维森的“变异一元论”声称不存在心物定律。按照这一

Such a claim is sometimes called mental indispensability. Davidson's anomalous monism claims that there are no psycho physical laws. Following this line, many philosophers believe that mental events, if they can produce any physical effects, must be themselves physical and that mental causation is due to the physical properties of mental events. They claim that mental causation is intelligible only when mental events or states are related to physical phenomena and to physical causality by being determined by physical causality or supervenient upon it.

"The mental causation must be realized or constituted by the physical process." — Child, *Causality, Interpretation and the Mind*, 1994, p. 116.

Mental event

An event that has mental properties, such as thinking, feeling or willing. Either mental events exist independently or they have more fundamental physical properties. If a mental event causes some effect, must this causation be explained in terms of its physical properties, or is it because its mental properties themselves are causally potent? This question is related to the problem about the relationship between mental events and physical events which is one of the central issues in the current debate of philosophy of mind. Davidson's anomalous monism claims that while every mental event is a physical event, there are no strict psychophysical laws that connect the mental and physical realms.

"Mental events (by which I mean events described in the mental vocabulary, whatever exactly that may be) are like many other sorts of events, and like material objects, in that we give their locations with no more accuracy than easy individuation (within the relevant vocabulary) demands." — Davidson, *Essays on Actions and Events*, 1980, p. 176.

Mental indispensability, see mental causation

Mental phenomenon

Brentano's term, also called a psychical phenomenon, in contrast to a physical phenomenon. He argued that mental phenomena are characterised by their reference to something as an object, but that their objects, using the scholastic term, have intentional inexistence and need not exist. Mental phenomena have immanent contents of consciousness and intentional objects, in contrast to physical phenomena which contain external objects which transcend the mind. Brentano's distinction between mental and physical phenomena in terms of intentionality has had great influence. He classified mental phenomena into presentation (I see, I hear), judgement (I affirm, I reject) and emotional acts (I feel, I wish). Mental phenomena are not merely static, but

思路,许多哲学家认为,心的事件如果能够产生任何物理效应,那么它们本身一定是物理的,而心的因果性则源于心的事件的物理特性。他们认为,只有当心的事件或状态因由物理因果性所决定或伴随于物理因果性而与物理现象和物理因果性相关联时,心的因果性才是可以理解的。

“心的因果性一定由物理过程来实现或组成。”——恰尔德:《因果力、解释与心》,1994年,第116页。

心的事件

具有思维、感觉、意愿等等这样的心的特性的事件。心的事件或者独立存在,或者具有更为基本的物理特性。如果一个心的事件产生某种效应,这应当用其物理特性来解释呢,还是因为心的特性本身具有因果力?这一问题与心的事件与物理事件的关系问题相关联,后者是当代心的哲学中的中心议题。戴维森的变异一元论声称,每一心的事件都是一个物理事件,但并不存在严格的心物定律来连接心的领域和物的领域。

“心的事件(我是指那些用心的词汇来描述的事件,不管那到底是什么)像许多其他种类的事件一样,也像物质对象一样,我们对它们的定位并不比简单的(用相关词汇所做的)区分更为精确。”——戴维森:《关于行为与事件的论文集》,1980年,第176页。

心的不可替代性

见“心的因果性”条。

心的现象

布伦塔诺所使用的一个与物理现象相对的词,也被称作心理现象。他认为,心的现象的特点在于它们总是将某物作为一个对象来指谓;而且,这些对象具有意向性的内存在(intentional inexistence,这是取自经院主义的一个词),它们不必实际地存在(exist)。心的现象有内在的意识内容和意向对象,这完全不同于物理现象;物理现象包含超出了心的外在对象。布伦塔诺通过意向性来区分心的现象和物理现象的做法产生了重大影响。他将心的现象分为表象(我看,我听)、判断(我断定,我拒绝)和情感行为(我感到,我希望)。心的现象不是纯静态的,而是以积极主动为特征的,直接

are characteristically active and directed upon some object. A mental phenomenon is the object of inner perception and the subject-matter of psychology. The terms "mental phenomenon" and "intentional inexistence" have been closely examined by R. Chisholm and have been the subject of vigorous debate.

"Every mental phenomenon is characterized by what the Scholastics of the Middle Ages called the intentional (or mental) inexistence of an object and what we might call, though not wholly unambiguously, reference to a content, direction toward an object (which is not to be understood here as meaning a thing), or immanent objectivity." — Brentano, *Psychology from an Empirical Standpoint* (tr. McAlister), 1973, p. 88.

Mental representation

Representation in the mind. It is commonly believed that to think about something is to have that thing represented in one's mind. Etymologically, "meaning" is associated with the "mind". To mean something is to have it in one's mind. To think about the White House is to have an image of the White House in one's mind. A word or a concept is associated with a certain image in the mind of the language-user. If two concepts are synonymous, they are associated with the same mental representation. But the problem of clarifying the nature of mental representation is a vexed issue. Some believe that to represent the world is to have a model of it in your mind; some believe that a representation is an image which represents things in virtue of resembling them; some suggest that a mental representation is a language-like symbol that does not have to be similar to what is symbolised; and still others think that mental representation is simply a neurophysiological state. According to Fodor, mental representations are linguistic expressions within the language of thought, and mental representations have syntactic and semantic properties comparable to those of a natural or an artificial language. There are various types of representation. Which kind counts precisely as a mental representation? Does mental representation constitute the content of thought? Does mental representation serve merely as an image or have a causal role in the brain? How can representations get to be about things in the world? These and other problems have been matters of dispute.

"The central question about mental representation is this: what is it for a mental state to have a semantic property? Equivalently what makes a state (or an object) in a cognitive system a representation?" — Cummins, *Meaning and Mental Representation*, 1989, p. 11.

Mental state

Mental phenomena such as beliefs, desires, intentions,

作用于某个对象。心的现象是内在知觉的对象，因而是心理学的题材。齐硕姆仔细地研讨了“心的现象”和“意向性的内存在”这两个词，它们是被人们激烈争论的主题。

“每个心的现象的特征在于中世纪经院哲学家所说的某个对象的意向性的(或心的)内存在，以及我们可以不那么精确地称为对某个内容的指谓、对某个对象(这里不是指一个事物)的指向，或内在的客观性那样的东西。”——布伦塔诺：《从经验立场看的心理学》(麦克阿里斯特英译)，1973年，第88页。

心的表征

存在于心中的表征，人们通常认为，思考某事就是将此事表征于心中。在词源学上，“意义”与“心”相关联，意味某事即是心中有此事。想到白宫即是在心中有一个关于白宫的映象。一个词汇或一个概念与语言使用者心中的某个映象相联系。如果两个概念是同义的，它们就与同一个心的表征相联系。但澄清心的表征的本质这一问题十分令人烦恼。有人认为，表征世界就是在心中有一个世界的模型；有人则认为，一个表征是一个借助于相似于事物来表征事物的映象；另有人认为，一个心的表征是一个类似于语言的符号，无须相似于所代表的东西；还有人认为，心的表征只是一个神经生理状态。根据福多的观点，心的表征是在“思维语言”中的语言表达。心的表征具有可比于自然语言或人工语言的句法特征和语义特性。有各种不同的表征。究竟哪一种恰可看做是心的表征呢？心的表征构成思维的内容吗？心的表征只是一个映象，还是在大脑中具有因果作用？表征如何得以关涉世界中的事物？这一系列问题都曾引起争论。

“心的表征的中心问题是：心的状态具有语义特性是怎么回事？同样地，什么使得认知系统中的一个状态(或对象)成为表征？”——库敏斯：《意义与心的表征》，1989年，第11页。

心的状态

像信念、需求、意向和感觉这样的心的现

and sensations. The nature of these phenomena has been a central question in the philosophy of mind. Different theories of mind are distinguished largely according to their respective answers to this problem. According to Cartesian dualism, mental states are inner, non-material states of a mental substance. According to Hume, the self or mind is a succession of mental states. According to behaviourism, mental states consist simply in dispositions to behave in various ways. According to the identity theory, mental states are identical with states of the brain. According to functionalism, mental states are defined in terms of their causal relations to input stimuli, other mental states and external behaviour. All mental events are mental states, but not all mental states are mental events.

"Let's us describe a mental state as a state which can be directly observed only through introspection and cannot be directly observed by more than one individual, viz. the individual who is in that mental state." —Pap, *Elements of Analytic Philosophy*, 1949, p. 267.

Mentalese, another term for language of thought

Mentalism

Synonymous with idealism and panpsychism. The position that physical or bodily things can be explained in terms of mental things, and that the latter exist in a real sense. On this view, everything is mental in character. Mentalism is thus opposed to materialist claim that all mental things are explained in terms of physical things and that the latter exist in a real sense. Berkeley and other mentalists claim that physical objects are nothing but sensations or perceptions. Leibniz said that the monads which compose the world are ultimately spiritual. Hegel and other absolute idealists consider the whole material world to be mental in nature. These philosophers hold different versions of mentalism.

"Some theories of mind and body try to reduce body to mind or some property of mind. Such theories may be called mentalist theories." —Armstrong, *A Materialist Theory of Mind*, 1968, p. 5.

Mentalistic linguistics

Chomsky's characterisation for his own approach to linguistics. On the basis of the distinction between competence and performance, he claims that linguistics should study competence, that is the speaker's internalised transformational-generative rules of language. Introspection is one excellent source of data for the study of language. Linguistics is a branch of cognitive psychology which deals with structure and process in human minds and can be connected with observed behaviour only in an indirect way.

象。这些现象的本质一直是心的哲学的中心议题。不同的心的理论在很大程度上依其对这一问题的不同回答来区分。根据笛卡尔的二元论,心的状态是心的实体的内部的、非物质的状态。根据休谟的观点,自我或心是一系列心的状态。根据行为主义的观点,心的状态只是由以各种方式进行行为的倾向所组成。根据“同一论”,心的状态同一于大脑状态。根据“功能主义”,心的状态由其与输入刺激、其他的心的状态和外部行为之间的因果关系来定义。所有的心的事件都是心的状态,但并非所有的心的状态都是心的事件。

“让我们将心的状态描述为这样一个状态:它只能通过内省而被直接观察到,而无法由某个人,亦即处于那个心的状态的那个人之外的其他人直接观察到。”——帕普:《分析哲学原理》,1949年,第267页。

心的语言

“思维语言”的别名。

心灵主义

“观念论”和“泛心论”的同义语。这种观点认为,物理的或身体的东西可以用心的东西来解释,并且后者在真正的意义上存在。根据这种观点,所有的东西在本质上都是心的。因此它与唯物论是对立的,后者主张所有的心的东西都用物理的东西来解释并且后者在真正的意义上存在。巴克莱和其他的心灵主义者声称,物理对象只是感觉或知觉。莱布尼茨说道,构成世界的单子最终是精神的。黑格尔及其他绝对观念论者认为整个物质世界归根结蒂都是心的。所有这些哲学家主张不同形式的心灵主义。

“有些关于心与身的理论试图将身还原为心或心的某种特性。这样的理论可以叫作心灵主义理论。”——阿姆斯特朗:《唯物主义的心的理论》,1968年,第5页。

心灵主义语言学

乔姆斯基对自己语言学方法的描述。根据能力和运用的区分,他认为语言学应该研究能力,即内在于说者的语言转换生成规则。内省对语言研究来说是最好的论据来源。语言学是研究人类心的结构和过程的认知心理学分支,它只能以间接的方式与观察行为相联系。这样一种心灵主义的方法是与行为主义方法相对立的。行为主义方法为了解释行为抛弃了内省、意识以及其他心灵主义术语。心灵主义与行为主

Such a mentalistic approach is opposed to behaviourist approaches which reject introspection, consciousness and other mentalistic terms for the purpose of explaining behaviour. The contrast between mentalism and behaviourism in the philosophy of language is essentially a contrast between rationalism and empiricism.

"Mentalistic linguistics is simply theoretical linguistics that uses performance as data (along with other data, for example the data provided by introspection) for the determination of competence, the latter being taken as the primary object of its investigation." —Chomsky, *Aspects of the Theory of Syntax*, 1965, p. 93.

Mentality

The possession of a mind. The features which enable a human being to think, feel, imagine, and act. Different philosophies have different explanations of mentality. According to Cartesian dualism, mentality consists of inner states independent of physical states. According to some versions of physicalism, all facts about mentality can be reduced to facts about the states of central nervous systems. Mentality in this sense becomes the subject-matter of brain science. Non-reductive physicalism identifies mental states with brain states, but retains the mental for discussion at an autonomous level of theory. Mentality can also refer to what is going on in an individual's mind which makes him a distinct person. In this broad sense, mentality is synonymous with style of thought or way of thinking and is formed partly as a result of one's social and cultural setting.

"[H] is own mentality, ... is his own assumptions, values, expectations, and perceptions of what is possible." — Tiles and Tiles, *An Introduction to Historical Epistemology*, 1993, p. 46.

Mercy

Also called nonmaleficence, an ethical demand that one should do one's best to relieve the pain or suffering of another person where this is possible and to the extent that the relief is in the suffering person's interest. In contemporary ethics, this moral demand is closely linked with the issue of euthanasia or mercy killing, that is whether it is morally justified to end the life of a terminally ill and gravely suffering patient who is of sound mind and wants to die. Mercy is a major reason for supporting the permissibility of voluntary euthanasia, but some consider such deaths as murder. There are also problems about patients who make choices under the influence of others, about the presentation of cases of involuntary euthanasia as voluntary cases, and about euthanasia for those who are not of sound mind or who cannot express a view. In all of these cases, considerations of mercy might support euthanasia, but respect for life and free consent might oppose it.

义在语言哲学中的对立,基本上就是理性主义与经验主义的对立。

"心灵主义语言学只是理论语言学,它把运用作为确定能力的论据(当然还有其他的论据,例如由内省提供的论据),而能力则被看作是它研究的主要对象。"——乔姆斯基:《句法理论的若干方面》,1965年,第93页。

心性

拥有一个心,是指能使一个人去思维、感觉、想像和行为的那些特征。不同的哲学家对心性具有不同的解释。根据笛卡尔的二元论,心性由独立于物理状态的内部状态所组成。根据某些形式的物理主义,关于心性的所有事实都可以被还原为关于神经中枢系统的状态事实。心性在这个意义上是脑科学的课题。非还原的物理主义将心的状态同一于大脑状态,但仍在理论的自主水平上讨论心的东西。心性亦可指一个人的心中所发生的那些使其成为一个独特的人的东西。在这一宽泛的意义上,心性是“思维风格”或“思维方式”的同义语并且部分地由其社会文化背景所形成。

“他自己的心性……是他自己的假定、价值、期望和对可能的东西的知觉。”——泰尔斯和泰尔斯:《历史认识论引论》,1993年,第46页。

怜悯

也叫不做恶,一种道德上的要求;一个人在可能的情况下应尽其最大可能去解除另一个人的痛苦或苦难,这种解除要限于符合受苦难人利益的范围内。在当代伦理学中,这一道德要求与有关安乐死或慈杀的争论有密切关系,即在一个神智正常的身患绝症并极度痛苦的病人要求死的情况下,结束这个人的生命在道德上是否是正当的。怜悯是支持容许自愿安乐死的一个重要理由,但有些人认为这样致死是谋杀。与此相关的问题还有:病人是在他人影响下做出的选择;把不自愿的情况说成是自愿的;对那些神智不正常或不能表达自己意见的人实行安乐死。在所有这些情况中,对怜悯的考虑会支持安乐死,但对生命和自由同意的重视会反对它。

“这种怜悯原则确立了两种组合起来的义务:1. 不造成进一步痛苦或苦难的义务;2. 去结束已发生的痛苦或苦难的义务。”——巴廷:

"This principle of mercy establishes two component duties: 1. the duty not to cause further pain or suffering, and 2. the duty to act to end pain or suffering already occurring." —Battin, *The Least Worst Death*, 1994, p. 102.

Mercy killing, another term for euthanasia

Mereological essentialism

A theory developed by Roderick Chisholm which claims that if anything is ever a part of a whole, then it is a part of that whole as long as the whole exists. The whole possesses that part in every possible world in which the whole exists. The theory is mereological because it deals with the relationship between wholes and parts, and it is essentialist because it holds that the parts of an object are essential to that object. At first glance, this claim conflicts with common sense, for we usually deny that having a part is essential for an ordinary thing to persist. But Chisholm argues that we must distinguish between a proper part in a strict philosophical sense and an improper part in a looser ordinary sense. The loss of a proper part will cause an object to change its identity, whilst the identity of an object will be maintained with the loss of an improper part. Chisholm's theory deals with parts which a whole has necessarily and which are essential to that whole. This theory is useful in dealing with puzzles such as that of the ship of Theseus, in which we ask whether an object maintains its identity after each of its parts is successively replaced.

"The principle of mereological essentialism that I have advocated may be put this way: For every X and Y, if X is ever part of Y, then Y is necessarily such that X is part of Y at any time that Y exists." —Chisholm, *Person and Object*, 1976, p. 149.

Mereology

[from Greek: *meros*, part] The formal theory of logical relationships between wholes and parts, derived from Aristotle and developed in the twentieth century by figures such as Lesniewski, Tarski and Nelson Goodman. It claims that any individual whole is a mereological sum, that is the least inclusive thing that includes all of its parts. It is composed of these parts and of nothing else. Consequently, two individuals, X and Y, if identical, must have the same proper parts. David Lewis claims that a world is the mereological sum of all the possible individuals that are parts of it. Mereology was intended to provide an alternative foundation of mathematics, but its claims are controversial. Many counterexamples exist to its theorems, especially with regard to organic wholes. Nevertheless, the applications of this important formalism are still being explored. Because mereology applies to individuals, it is called the calculus of

《最佳死亡》，1994年，第102页。

慈杀

“安乐死”的另一个名称。

部分学的本质主义

齐硕姆提出的一种理论，它断言：如果任何事物是一整体的一部分，那么，只要该整体存在，它就是该整体的一部分。该整体在它存在的每一个可能世界中都具有该部分。此理论是部分学的，因为它处理整体和部分之间的关系；它是本质主义的，因为它主张一对象的部分对于该对象是本质性的。初看起来，这一断言是与常识相冲突的，因为我们通常否认有一部分对于一持续存在的普通事物是本质性的。但齐硕姆论证说，我们必须区分严格的哲学意义上的真部分和松散的日常意义的非真部分。失去真部分将使得一对象改变它的身份，若失去一非真部分，一对象的身份却仍将保持住。齐硕姆的理论处理一整体必然具有且对于该整体是本质性的部分。这一理论在处理忒修斯(Theseus)之船疑难这样的问题时是有用的，在后者中我们问：在一对象的每一部分都相继被替换后，该对象是否仍保持它的身份。

“我所提倡的部分学本质主义的原则可以这样表述：对于每一个X和Y，如果X曾是Y的部分，则Y必然使得在Y存在的任何时间内X都是Y的部分。”——齐硕姆：《人与物》，1976年，第149页。

部分论

[源自希腊文 *meros*，部分] 部分论是关于部分与整体的逻辑关系的形式理论，来自亚里士多德，20世纪由莱斯涅夫斯基、塔斯基和N. 古德曼等人所发展。它声称任何单个整体都是部分的总和，亦即包含其所有部分的范围最小的东西。它只由这些部分所组成。结果，如果两个个体X和Y是同一的，就一定具有相同的真部分。D. 刘易斯声称，世界是作为其部分的所有可能个体的部分总和。有人试图以部分论作为数学的另一基础，但这种主张颇有争议，其定理存在许多反例，特别是对有机整体而言。然而，对这种重要的形式主义的应用仍在探索之中。因为部分论应用于个体，所以被称为个体演算，与被称类别演算的集合论相对立。

“部分论是关于部分与整体的关系的理论，是关于隶属关系的概念。这些隶属关系之一就

individuals, in contrast to set theory, which is called the calculus of classes.

"Mereology is the theory of the relation of parts to wholes, and kindred notions. One of these kindred relations is that of a mereological fusion, or sum; the whole composed of some given parts." —David Lewis, *Parts of Classes*, 1991, p. 1.

Merit

Excellence or worth which deserves reward. We can distinguish between moral merits, such as virtues, and non-moral merits, such as skills and abilities. All merits are qualities that are or should be respected and admired in society. Whether or not a quality is a merit is determined in relation to the social purpose it serves. In contrast to egalitarianism and utilitarianism, a meritarian political philosophy would distribute benefits and responsibilities in proportion to the merit of those who receive them, and a society would be just if it conformed to this distribution. Since merit is not allotted equally, distribution according to merit demands that unlike cases should be treated unequally. On this view, those possessing special merit deserve special and discriminatory treatment. Merit is closely related to the idea of desert, equity, fairness and justice. A distribution based on merit is not an equal one, but it aims to promote fairness and justice. A difficulty facing this position is the ease with which power, influence and the pretence of merit can displace real merit as a basis for enhanced reward.

"I distinguish desert, which is concerned with what an agent has done, from merit, which is concerned with what he is." —Lucas, *Responsibility*, 1993, p. 3.

Meritocracy

A society in which all institutional positions are filled according to selection procedures based on relevant qualifications, skills, abilities, achievements and promise. It judges and promotes people on the grounds of the quality of their existing service. Meritocracy is a type of aristocracy, for it creates an elite group of people with special powers, but it is also democratic, for it is based on the equality of opportunities, according to which the distribution of opportunities is in accordance with capacities and achievements. However, meritocracy might lead to many types of inequalities, and it is controversial whether talent is a suitable fundamental ground for justifying these inequalities. In contrast to traditional inegalitarian meritocracy, two new forms of meritocracies have recently been proposed. In egalitarian meritocracy, inequalities would not be based on the social functions of the job but on the needs or other deserts of the job holders. In maximum meritocracy, inequalities would be allowed, but under certain conditions that are favourable to those whose abilities are

是部分融合或总和：整体由某些给定的部分所组成。”——刘易斯：《类的部分》，1991年，第1页。

才能

值得奖励的优点或价值。我们可以区分道德才能（例如美德）和非道德才能（例如技巧和能力），所有的才能都是在社会中受到或应当受到尊重和羡慕的品质。对一种品质是否是才能的确定与它所服务的社会目的有关。相对于平等主义和功利主义而言，才能主义的政治哲学要按人们具有才能的多少来分配利益与责任，如果一个社会遵从这样的分配，它就是公正的。由于才能不是平均分摊的，所以按才能分配就要求不同情况予以不同对待。根据这一观点，那些拥有特殊才能的人应受到特殊的、有差别的对待。才能与功过、平等、公平和正义等观念密切相联。以才能为基础的分配不是一种平等的分配，但它的目标是促进公平和正义。这种观点面临的困难是容易出现权力、影响和假才能取代作为增强奖励基础的真才能的情况。

“我把功过与才能加以区分，前者涉及一个人做了什么，后者涉及他是什么样的人。”——鲁卡斯：《责任》，1993年，第3页。

能人统治

指的是一个社会中所有机构的职务都是根据基于相应的资格、技能、能力、成绩和前途的选举程序来任命的。它对人们的评价和提升依据的是他们现在的办事质量。能人统治是一种贵族统治，因为它造就了一个握有特殊权力的精英集团；但它又是民主的，因为它以机会平等为基础，即机会的分配是与能力和贡献相一致的。可是，能人统治也会导致很多不平等，在天资是否是证明这些不平等的适宜的基本论据这一问题上存在争论。最近提出了两种与传统的不平等的能人统治不同的新的能人统治形式。在平等的能人统治中，不平等不是基于工作的社会功能，而是基于对工作持有者来讲是必要的东西或其他方面的美德。在最大限度的能人统治中，不平等的存在是允许的，但只是在一定的条件下，即要利于那些其能力不可能使他们得到高薪工作的人。在一个正义的社会中，能人统治中用作分配职务的基础的天资应否视为直接属于个人，罗尔斯对此提出了质疑。

unlikely to gain high-reward jobs. Rawls raises the question of whether the talents which are used in a meritocracy as a basis of assigning positions should be seen as straightforwardly belonging to the individual in a just society.

"Meritocracy; a social order built around a particular notion of merit." —Daniels, *Justice and Justification*, 1996, p. 302.

Meshing problem

According to classical utilitarianism, we should choose a society containing the maximum total good over societies containing less good. We also believe that we should choose a society with the most nearly equal distribution of good over other societies in which the good is distributed more unequally. The ideal, of course, is to combine the greatest possible total good with the most nearly equal distribution. But the world is not perfect, and we cannot necessarily realise this ideal. The meshing problem asks how we can mesh or harmonise the desire to maximise good and the desire to distribute good relatively equally. If one society possesses more good but distributes it less equally and another society possesses less good but distributes it more equally, which one should we choose? How can we assess the merits of each society, and how can we strike a balance between them? The meshing problem indicates that the principle of utility has the severe limitation of ignoring distributive justice.

"This 'meshing problem' of balancing the total amount of good at issue in a given putative distribution against the fairness of the distribution in cases where these two desiderata cut against one another is one which utilitarians (and non-utilitarians, for that matter) has never been resolved satisfactorily." —Rescher, *Distributive Justice*, 1966, p. 40.

Meta-epistemology

Meta-epistemology is the epistemology of epistemology. Normal epistemology can be called "substantive epistemology" which concerns the relation between knowledge and belief, between knowledge and truth and between knowledge and justification, and deals with inquires about the origin of knowledge, while meta-epistemology compares and evaluates all kinds of epistemology. It analyses basic epistemic concepts, determining their limits and the conditions of their application.

"Meta-epistemology is concerned with the basic concepts we employ in epistemology, concepts of knowledge, truth, belief, justification, rationality, and so on, and with the methods, procedures, and criteria to be employed in determining how to apply these concepts." —Alston, *Epistemic Justification*, 1989, p. 2.

"能人统治：一种围绕才能这一特定概念建立的社会秩序。"——丹尼尔森：《正义与辩护》，1996年，第302页。

协调上的问题

根据经典的功利主义，我们应选择包含最大的总体利益的社会，而不是包含较少利益的社会。我们还相信，我们应选择利益分配最为平等的社会，而不是利益分配更为不平等的社会。当然，理想的东西是将最大可能的总体利益与最为平等的分配结合起来。但世界是不完美的，我们必然无法实现这一理想。协调上的问题要我们回答，如何才能把要求最大利益与要求相对平等地分配利益协调或一致起来。如果一个社会拥有较多的利益而分配利益较少公平，另一个社会拥有较少的利益但分配利益更为公平，我们应选择哪一个呢？我们怎样才能确定每一社会的长处？我们怎样才能在他们之间取得平衡？这一协调上的问题表明功利原则有严重的忽视分配公正的局限性。

"争论中的‘协调上的问题’，即在两个迫切需要的东西相互排斥的情况下，在一既定的、公认是不公正的分配中平衡全部利益的问题，是功利主义者（及非功利主义者，就这一问题而言）从未做出令人满意的解决的问题。”——雷谢尔：《分配上的公正》，1966年，第40页。

元认识论

元认识论是关于认识论的认识论。规范的认识论可以称作“实质的认识论”，它关心的是知识与信念、真理、辨明的关系，研究知识的起源，而元认识论则是比较和评价所有的认识论。它分析基本的认识概念，确定它们的基本范围以及适用的条件。

"元认识论关心的是我们在认识论中运用的基本概念，如知识、真理、信念、阐明、合理性等等概念，以及用于确定如何运用这些概念的方法、步骤和标准。"——阿尔斯通：《认知辩明》，1989年，第2页。

Meta-ethics

Meta-ethics is usually said to deal with ethics itself, in contrast to normative ethics which deals with substantive ethical questions. The major components of meta-ethics include the study of the nature of ethics, the conceptual analysis of key moral terms and inquiry into the method for answering moral questions. The purpose of the study of the nature of ethics is to discuss what ethics is and does and to discuss the objectivity and validity of ethical claims themselves. The purpose of conceptual analysis is to state the necessary and sufficient conditions of the application of major moral concepts. The purpose of the inquiry into method is to specify the ways to answer moral questions from a moral point of view. Meta-ethics is, then, a logical and epistemological inquiry concerning the nature of normative ethical statements.

The distinction between meta-ethics and normative ethics appeared with the development of linguistic philosophy in this century and was deeply influenced by Moore's distinction between saying what goodness is and saying what things are good. Ayer and Stevenson explicitly drew upon this distinction. Many analytical philosophers believed that meta-ethics should be the main concern of ethics, and this claim became one of the main characteristics of the development of ethics in English-speaking countries in this century. However, this distinction itself has become more and more problematic. Recent moral philosophers view meta-ethical judgements and normative judgements as interdependent and many judgements are hard to classify according to this distinction.

"Twenty or thirty years ago, it was standard practice to distinguish 'ethical' from 'meta-ethical' theories. The first made substantive claims about what one should do, how one should live, what was worthwhile, and so on. The second concerned itself with the status of those claims; whether they could be knowledge, how they could be validated, whether they were (and in what sense) objective, and so on." — Williams, *Ethics and the Limits of Philosophy*, 1985, p. 72.

Metalanguage

Tarski drew a distinction between object language and metalanguage. The object language is that with which we talk about extra-linguistic things and objects (the language in which we speak), while the metalanguage is the language in which we talk about the object language (the language about which we speak). An example of an object language statement is "New York is a large city" and an example of the latter is " 'That New York is a large city' is true". Tarski argued that the definition of truth must be relative to a language, for the one and the same sentence may be true in

元伦理学

与研究实质性伦理问题的规范伦理学不同,元伦理学一般被认为是研究伦理学本身的。元伦理学主要成分包括对伦理学性质的研究,对于关键性的道德词汇进行概念分析,以及对于回答道德问题的方法的研究。对于伦理学性质的研究在于讨论伦理学是什么和做什么,讨论伦理主张本身的客观性和正当性。概念分析的目的在于说明运用主要的道德概念的有效性和充分条件。关于方法探求的目的在于说明以何种方式从道德观念上回答道德问题。因此,元伦理学是一种对于规范伦理学陈述性质的一种逻辑的和认识论的研究。

元伦理学和规范伦理学区分的出现是 20 世纪语言哲学发展的结果。这一区分深受摩尔对于说善是什么和说什么是善的区分的影响。艾耶尔和 C. L. 斯蒂文森明确地划分了元伦理学与规范伦理学。长期以来,许多分析哲学家相信,元伦理学应是伦理学的主要内容,这种主张成为 20 世纪英语国家伦理学发展的主要特征之一。不过,这种区分本身越来越成问题。最近以来的哲学家把元伦理的判断和规范伦理的判断看成是相互依赖的,许多判断很难以此类分。

"20 或 30 年前,将 '伦理的' 从 '元伦理理论' 中区分出来是一般的做法。伦理学对一个人应做什么,应该怎样生活,什么是值得的等提出实质性的主张;元伦理则涉及到这些主张本身的地位,即它们是否能是知识,它们何以能是有效的,它们是否是(和在什么意义上是)客观的等。"——威廉姆斯:《伦理学与哲学的限度》,1985 年,第 72 页。

元语言

塔斯基在“对象语言”和“元语言”之间作出了区分。对象语言是我们用以谈论语言之外的事物和对象的语言(我们在其中说的那个语言),而元语言则是我们在其中谈论对象语言(我们所谈说的那个语言)的语言。前者的例子是“纽约是一座大城市”,后者的例子是“‘纽约是一座大城市’是真的”。塔斯基论证说,真定义必须是相对于某个语言而言的,因为同一个句子可以在一语言内为真,但在另一语言内为假。对象语言是相对于它而定义真的语言,元

one language but false in another. The object language is the language for which truth is defined, and the metalanguage is the language in which we construct the definition of truth in the object language. Truth is in this way viewed as a semantic property of object language sentences and a predicate of a metalanguage applicable to sentences of its object language. A metalanguage contains either the object sentence itself or a translation of it. The appeal to metalanguage can avoid the danger of semantic paradoxes, for in a metalanguage the object sentences are not used but only mentioned and discussed. This distinction is significant for formal semantics.

"The names of the expressions of the first language, and of the relations between them, belong to the second language, called metalanguage." —Tarski, *Logic, Semantics, Metamathematics*, 1983, 2nd ed., p. 167.

Metalogic

Motivated by Hilbert's distinction in mathematics between meaningful inference and formalised calculus, metalogic takes the systems of formal logic as its subject matter. It is therefore the theory of logic. It is the result of the combination of Boole's formalism and Frege's theory of proof. The first system of metalogic was developed by Tarski. It differs from formal logic in that it is not concerned with meaningful inference, but only with purely formal questions arising from formal logical systems, that is formal properties of formal logic systems such as consistency, consequence, completeness, decision procedure, deduction, categorialness and satisfaction. It differs from the philosophy of logic because it deals with the conditions under which various formal theories possess these properties, rather than with the philosophical issues raised by logic systems.

"Metalogic is the study of formal properties of formal logical systems." S. Haack, *Philosophy of Logics*, 1978, p. 1.

Metaphilosophy

A term introduced by Lazerowitz for the philosophical discussion of philosophy itself, including, for example, its nature, method, goals, autonomy and objectivity. Hence it is second-order philosophy. According to the first-order branch of philosophy under discussion, such as metaphysics, epistemology or ethics, we can also divide metaphilosophy into metametaphysics (meta-ontology), meta-epistemology, and meta-ethics. The division between first-order and second-order studies has lost some of its popularity, and philosophers now find it more difficult to draw a sharp distinction between metaphilosophy and philosophy. For those who believe that philosophy comes to an end, metaphilosophy refers to the theoretical activities after the

语言则是我们在其中用对象语言构造真定义的那个语言。这样一来,真被视为对象语言句子的语义性质,并且是一个适用于其对象语言句子的元语言谓词。元语言或者包含对象句子本身,或者包含该句子的译文。诉诸元语言可以避免语义悖论的危险,因为在元语言中对象句子不被使用,仅被提及和讨论。这一区分对于形式语义学是意义重大的。

"第一语言的表达式的名称,以及这些表达式之间关系的名称,都属于第二语言,后者叫做元语言。"——塔斯基:《逻辑、语义学与元数学》,1983年,第2版,第167页。

元逻辑

受希尔伯特在数学中区分有意义的推理和形式化演算的启发,元逻辑以形式逻辑系统作为它的研究对象,所以它是关于逻辑的理论。它是布尔的形式主义和弗雷格的证明理论相结合的产物,第一个元逻辑系统是由塔斯基提出的。它区别于形式逻辑之处在于:它并不关注有意义的推理,而只关注从形式逻辑系统中产生的纯形式问题,即形式逻辑系统的形式性质,如相容性,后承,完全性,判定程序,演绎,范畴性,满足等等,它区别于逻辑哲学之处在于:它讨论各种形式理论具有上述性质的条件,而不是处理由逻辑系统所提出的哲学问题。

"元逻辑是对于形式逻辑系统的形式性质的研究。"——哈克:《逻辑哲学》,1978年,第1页。

元哲学

拉泽诺维茨引入的哲学术语,旨在对哲学自身作哲学讨论,包括(例如)哲学的性质、方法、目标、自主性和客观性。因此它是二阶哲学。根据所讨论的哲学的一阶分支,诸如形而上学、认识论或伦理学,我们也可以把元哲学划分为元形而上学(元本体论)、元认识论和元伦理学。一阶和二阶研究之间的划分已经不再流行,哲学家们现在发现要在元哲学和哲学之间作出明晰区分是更为困难了。对于那些认为哲学已告终结的人来说,元哲学指在哲学消亡之后的理论活动。

"我们必须承认在哲学和元哲学方面的区分:发挥和捍卫哲学见解的人与批判性地考察

death of philosophy.

"We must recognize the distinction between the philosophic and meta-philosophic perspectives: there is a difference between the one who develops and defends a philosophical position and the one who examines that position critically." —Yolton, *Metaphysical Analysis*, 1968, p. 19.

Metaphor

[from Greek: *metaphora*, a transfer, a change] A figure of speech or a verbal composition in which an expression is used to denote a thing to which its literal sense does not apply. For example, "a baby is a flower" is a metaphor because "flower", taken literally, does not describe a baby. If there were only literal meaning, all metaphors would be false. The best metaphors evoke a complex and productive mental response through indicating certain likenesses between what an expression literally denotes and the thing it metaphorically describes. The power of metaphors can also involve dissimilarities as well as likenesses. Starting from Aristotle, the nature and scope of metaphor has been of interest to philosophers. This interest has intensified in contemporary philosophy of mind and philosophy of language. Major issues concerning metaphor include: can a metaphor itself be literally paraphrased? How clear-cut is the distinction between literal meaning and metaphorical meaning? Traditionally metaphor is regarded as a decoration of speech which does not contribute to the cognitive meaning of discourse. Others argue that metaphor contributes indispensably to the cognitive meaning of discourse, but there is no agreement over the kind of contribution it makes. Davidson claims that what is crucial to a metaphor is not a matter of meaning, but of use. In his view, a metaphor lacks meaning peculiar to itself other than literal meaning. But Nietzsche claimed that the nature of language itself is metaphorical, for it works by means of transference from one kind of reality to another. This view that has been widely adopted by continental philosophers, who regard metaphor not merely as a rhetorical device or an aspect of the expressive function of language, but as one of the essential conditions of speech. They claim that as the way in which many kinds of discourse are structured, metaphor powerfully influences how we conceive things.

"The study of metaphor is becoming important as it is being realised that language does not simply reflect reality but helps to constitute it." —Sarup, *A Guide to Post-Structuralism and Post-Modernism*, 1993, p. 47.

Metaphysica generalis

General metaphysics, in contrast to *metaphysica specialis*, special or particular metaphysics. The distinction

那种见解的人之间是有区别的。”——尤尔顿：*《形而上学分析》*，1968年，第19页。

隐喻

[源自希腊词 *metaphora*，意指“转换”、“变化”] 一种修辞格或文字组合法，用于指某种与其字面意思不符的表达式。譬如，“婴儿是朵花”是个隐喻，因为“花”从字面意思上看并非是描写婴儿的。如果只有字面意思，那么所有隐喻就成为虚假的了。最上乘的隐喻是通过表明某一词汇的字面意思与其所暗示的事物之间的相似性，来唤起一种复合词意的和构成新词意的内心反应。隐喻的作用也能涉及到相异和相像。从亚里士多德开始，隐喻的本质与范围一直倍受哲学家们的关注。当代心的哲学和语言哲学强化了对隐喻的关注。关于隐喻的主要问题包括：隐喻本身能从字面上得到意释吗？字面含义与隐喻含义的区别到底会有多么明确呢？在传统意义上，隐喻被视为一种言语修饰，它对话语的认知意义并不起什么作用。其他一些人则争辩说，隐喻以不可或缺的方式有助于话语的认知意义，但是对隐喻的这种作用没有达成一致的看法。戴维森认为，对隐喻来讲，至关重要的并非是意义问题，而是使用问题。在他看来，隐喻并不具有不同于字面意义上的独特意义。可是，尼采则认为，语言自身的性质就是隐喻性的，因为语言是通过将一种现实转换为另一种现实而发挥作用的。这一观点得到欧洲大陆哲学家的广泛认同，他们把隐喻不仅看作一种修辞手段或语言表达功能的一个方面，而且将其看作言语的基本条件之一。他们还认为隐喻作为各种话语构成的一种方式，对人们如何感知或理解事物具有重大的影响。

“隐喻研究日益重要，因为人们正在认识到语言不仅反映而且有助于构成隐喻。”——萨罗波：*《后结构主义与后现代主义导论》*，1993年，第47页。

一般形而上学

一般形而上学，相比较于特殊形而上学而言。这一区分可溯至亚里士多德的形而上学。亚

can be traced back to Aristotle's metaphysics. Aristotle himself referred to metaphysics as first philosophy or *sophia* (wisdom), that is the science of ultimate causes and principles. Sometimes he said that metaphysics is the science of being *qua* being and that such an enquiry provides a starting point for all other sciences. Elsewhere he held that metaphysics is concerned with a special kind of being which is beyond the sensible substances, namely God, and that it is therefore theology. The medieval philosophers called these two accounts of metaphysics respectively *metaphysica generalis* and *metaphysica specialis*. Aristotle believed that these two accounts of metaphysics are reconcilable, but did not offer any convincing argument for that conclusion. The problem of dealing with these two accounts has given rise to major debate in Aristotelian scholarship and greatly affects our understanding of his metaphysics. The distinction was retained in the later development of metaphysics, but the meaning varied. In the seventeenth and eighteenth centuries, general metaphysics was identified with ontology, which was concerned with general concepts, while special metaphysics was identified with natural theology. For Wolff, general metaphysics concerned *ens qua ens* (being *qua* being), and special metaphysics concerned substance and its attributes. Brentano distinguished between broad ontology and narrow ontology. The former amounts to general metaphysics, discussing the general nature of things, and the latter amounts to special metaphysics, with theology as its subject-matter.

"What is important... is the conception of an inquiry into being in general—general ontology, or what medieval philosophers called *metaphysica generalis*, as opposed to *metaphysica specialis*." —Hamlyn, *Metaphysics*, 1984, p. 2.

Metaphysica specialis, see *metaphysica generalis*

Metaphysical deduction

Part of the transcendental analytic in Kant's *Critique of Pure Reason*, although its official title is "the clue to the discovery of all pure concepts of the understanding". The metaphysical deduction is concerned with uncovering the origin of the categories and identifying them systematically, in contrast to the transcendental deduction which is concerned with establishing the legitimacy of these categories. Knowledge must be derived from what is given in sensible intuition and the judgements we make on that basis. Taken together, these two determinations indicate that our intuition of things must conform to the logical functions of judgement. The categories are or stem from these logical functions of judgement. Kant therefore derived twelve categories or pure concepts of the understanding from what he regarded as the complete classification of the kinds of

里士多德自己把形而上学称作“第一哲学”或“智慧”，即关于终极原因与原则的科学。有时他把这一形而上学称作关于“作为是的是”的科学，并认为这一研究为其他科学提供了出发点。有时他又说形而上学探讨一类超越可感本体的特殊存在（即神），所以是神学。中世纪哲学家们把这两种形而上学分别叫做“一般形而上学”和“特殊形而上学”。亚里士多德相信它们是可以调和的，可却未能对此提供令人信服的论证。这在亚里士多德研究中引起了重大争论，极大地影响了我们对他的形而上学的理解。这一区分在形而上学的后来发展中得到了保存，但意义却有了变化。在17和18世纪，一般形而上学等同于本体论，关注一般概念；而特殊形而上学却等同于自然神学。在沃尔夫哲学中，一般形而上学研究“作为是的是”，而特殊形而上学则研究本体及其属性。布伦塔诺区分了广义本体论和狭义本体论。前者相当于一般形而上学，讨论事物的一般性质，而后者相当于特殊形而上学，以神学作为其主题。

“真正重要的是对一般存在的探究这一概念，即一般本体论；也即是中世纪哲学家们所称为的与特殊形而上学相对的一般形而上学。”——哈姆林：《形而上学》，1984年，第2页。

特殊形而上学

见“一般形而上学”条。

形而上学演绎

康德《纯粹理性批判》中先验分析论中的一部分，尽管其正式题目为：“发现一切纯粹知性概念之思路。”它论及对范畴本源的揭示和对它们的系统辨明。形而上学演绎相对于论及确立这些范畴的合法性的先验演绎。知识必须来源于感性直观中所给予的东西和我们以此为基础而作出的判断。这两个规定一起表明：我们对事物的直观必须遵照判断的逻辑功能。范畴来源于或简直就是判断的这种逻辑功能。因此康德把十二个范畴或纯粹知性概念从他视为各种判断的完满分类体系中推导出来。只有将某一范畴应用于经验，我们才能作出判断。这种推导就是他对范畴的形而上学演绎。它表明，在判断中存在着思维的基本结构，它对直观杂多的综合给予统一。批评家们可以接受范畴与判断的逻

judgements. Only by applying one of these categories to experience can we make a judgement. This derivation is his metaphysical deduction of the categories. It shows that there is a fundamental structure of thought in judgement which gives unity to the synthesis of the manifold of intuition. Critics might accept the relation of categories to the logical functions of judgement, but seek to revise his classification of kinds of judgement in line with modern developments of logic.

"In the metaphysical deduction the a priori origin of the categories has been proved through their complete agreement with the general logical functions of thought." — Kant, *Critique of Pure Reason*, B159.

Metaphysical entities

Also called *inferred entities*. The term that Russell uses to refer to such items as material objects, space and time, which are initially postulated as the ultimate constituents of reality, but which cannot be directly experienced and are instead known by inference. He also calls them unknown entities or inferred entities. In Russell's logical atomism, these entities can be eliminated and replaced by logical constructions, and we therefore need not include them among the real constituents of the world. In contrast, the class of entities which comprise the logical constructions are called known entities.

"By metaphysical entities I mean those things which are supposed to be part of the ultimate constituents of the world, but not to be the kind of thing that is ever empirically given." — Russell, *Collected Papers of Bertrand Russell*, VIII, p. 238.

Metaphysical exposition

Part of the transcendental aesthetic in Kant's *Critique of Pure Reason*. The metaphysical exposition of the concept of space contains four arguments: (1) "space is not an empirical concept which has been derived from outer experiences"; (2) "space is a necessary a priori representation, which underlies all outer intuitions"; (3) "space is not a discursive, ... but a pure intuition"; and (4) "space is represented as an infinite given magnitude". The first two argue claim that space is a priori, and the latter two claim that space is an intuition. The metaphysical exposition of the concept of time makes similar points about time.

"The exposition is metaphysical when it contains that which exhibits the concept as given a priori." — Kant, *Critique of Pure Reason*, B38.

Metaphysical subject

The Cartesian self and related versions of the "philosophical 'I'", classically a separate, simple thinking substance, tracing a subjective path through the world and

辑功能的联系,但力图依据现代逻辑的发展来修订他对判断的分类。

"在形而上学演绎中,通过范畴与思维的一般逻辑功能的完全一致,已证明了范畴的先天起源。"——康德:《纯粹理性批判》,B159。

形而上学实体

也叫“推论出的实体”。罗素用这个词来指称诸如物质对象、空间和时间这样的东西,这些东西本来被规定为实在的最终组成部分,但不能被直接经验到,而是由推论而为人所知。他也将它们称为未知实体或推论出来的实体。在罗素的逻辑原子论中,这些实体可以被消除,并由逻辑构造来取代。因此我们无需将其纳入世界的真正组成部分之中。相反,由逻辑构造组成的那类实体称为“已知实体”。

"所谓形而上学实体,我指的是这样的东西,它们被认为是世界的最终成分的一部分,但不是经验中所予的东西。"——罗素:《罗素文集》,第八卷,第238页。

形而上学阐明

康德的《纯粹理性批判》中先验感性论的一部分。空间概念的形而上学阐明由四个论证组成:(1)“空间不是从外部经验得来的经验概念”; (2)“空间是作为一切外部直观根基的必然的先天表象”; (3)“空间不是论证性的,而是纯直观”; (4)“空间被表象为一种无限给予的量”。前两个论证说明这个主张:空间是先天的,后两个论证说明:空间是一种直观。时间概念的形而上学阐明与空间概念的形而上学阐明相类似。

"当阐明包含把概念展示为先天给予的东西,它就是形而上学阐明。"——康德:《纯粹理性批判》,B38。

形而上学主体

笛卡尔的自我,与“哲学上的‘我’”相关的说法,按经典的表达就是一种分离的、简单的思维主体,它通过世界回溯到主观道路,可以在

capable of surviving bodily death. Hume's discussion of personal identity and Kant's rejection of the main aspects of the rational theory of the soul does much to undermine such positions. Kant's transcendental unity of apperception, the "I think" which accompanies all of my representations, provides a more austere grounds for an account of the metaphysical subject. Contemporary philosophers have also raised questions about the metaphysical self. Heidegger's *Being and Time* is an attempt to replace the traditional notion of the self as part of his rejection of metaphysics. Wittgenstein, like Kant, rejects the view that the metaphysical subject is one object among others in the world and links his discussion of the self to his assessment of solipsism and the claim that the world is my world.

"The philosophical I is not the human being, not the human body or the human soul with the psychological properties, but the metaphysical subject, the boundary (not a part) of the world." —Wittgenstein, *Notebooks 1914–1916*, 2 September 1916.

Metaphysics

A term originally used as the title of a compilation of Aristotle's writings, according to tradition by Andronicus of Rhodes in the first century AD. The title *Ta meta ta phusika* was used because the compilation came after (*meta*) the physical writings in the classification of Aristotle's works. This position, however, had a philosophical basis in its subject-matter, because Aristotle intended it to be an inquiry into objects which are prior to or higher than physical objects, giving reasons for what we instinctively believe. Hence this title can be applied to a whole branch of philosophy. Metaphysics now generally refers to the study of the most basic items or features of reality (ontology) or to the study of the most basic concepts used in an account of reality. (On some accounts, metaphysics deals primarily with non-sensible entities or with things outside the scope of scientific method, but other metaphysical views reject these claims.

Aristotle himself referred to this kind of investigation as first philosophy or *sophia* (wisdom), that is the science of ultimate causes and principles. He sometimes said that it is the science of being *qua* being, or what it is simply to be. Sometimes, he identified it with theology because it is concerned with a special kind of being, namely God, which is beyond the sensible substances. Medieval philosophers called these aspects of metaphysics respectively *metaphysica generalis* (general metaphysics) and *metaphysica specialis* (special or particular metaphysics).

In the rationalist tradition, metaphysics was seen to be an inquiry conducted by pure reason into the nature of an underlying reality which is beyond sense-perception, although major metaphysicians, such as Plato, Descartes,

身体死亡后继续存在。休谟对个人同一性的讨论以及康德对灵魂唯理论的主要方面的否认,都极大地打击了这些见解。康德的统觉的先验统一性,即伴随着我的全部表象的“我思”,提供了更可靠的理由来对形而上学主体加以说明。当代哲学家也对形而上学的自我提出质疑。海德格尔的“此在”是一种努力,作为他拒斥形而上学的一部分,要取代传统的自我概念。维特根斯坦像康德一样,拒绝形而上学主体是世上各种对象之一一种的看法,并把他对自我的讨论与他对唯我论的评价相联系,主张世界就是我的世界。

“哲学上的我不是人类,不是人的身体或具有心理学性质的人的灵魂,而是形而上学的主体,世界的分界线(而不是一部分)。”——维特根斯坦:《笔记本 1914—1916》,1916年9月2日。

形而上学

传统认为,“形而上学”这一词最初是罗德岛的安德罗尼科在公元1世纪用来作亚里士多德一集作品的标题的。他之所以用 *ta meta ta phusika* (直译是“在物理学之后”)这一标题,是因为在他对亚里士多德作品的分类中,这集作品摆在关于物理学作品之后(*meta*)。不过,这样一个位置在其主题上有他的哲学基础,因为亚里士多德在这些作品中研究的乃是那先于或高于物理对象的事物,从而对我们在直观上相信的一切给出理由。因此,这一标题便能应用于整个哲学分支。现在,形而上学一般是指对实在的最基本的成分或特征的研究(本体论),或者对我们在叙述实在时所用的最基本概念的研究。按照某些用法,形而上学主要讨论不可感的事物,或者科学方法范围之外的事物,但其他的形而上学观点则反对这些说法。

亚里士多德自己把这类研究称作“第一哲学”或 *sophia* (智慧),即关于终极原因和原则的科学。有时他称之为“作为是的是”的科学(即什么是“是”的科学),有时他又将之等同于神学,因为它讨论一类特殊的是(存在),即超越可感本体的神。中世纪哲学家把形而上学的这些不同方面分别叫做“一般形而上学”和“特殊形而上学”(或具体形而上学)。

在理性主义传统中,形而上学被看做是由纯理性所操作的对超越感官知觉的内在实在性质的研究,虽然主要的形而上学家,如柏拉图、笛卡尔、斯宾诺莎、莱布尼茨和黑格尔,对内在实在是什么具有完全不同的见解。C. 沃尔夫把形而上学分成四部分:本体论(关于是或存在的一般理论)、理性神学(关于上帝)、理性心理学

Spinoza, Leibniz and Hegel disagreed sharply over what the underlying reality might be. Christian Wolff divided metaphysics into four parts: ontology (a general theory of being or existence), rational theology (about God), rational psychology (about the soul) and rational cosmology (about the world).

Kant labelled all attempts to use pure reason to account for a transcendent reality beyond human understanding as speculative metaphysics. Kant thought that metaphysics is a necessary propensity of the human mind towards total explanation and that its transcendent subject-matter (God, Freedom of the Will and Immortality) can be the grounds for the right way to act (metaphysics of morals), even though speculative metaphysics cannot yield knowledge. Kant's critical philosophy is a metaphysics in another sense, which deals with the conditions for the possibility of experience and the presuppositions of science.

Carnap and other logical positivists defined metaphysics as the field of alleged knowledge of the essence of things which transcends the realm of empirical sciences and believed that this field should be eliminated as nonsensical. On the other hand, they considered that their own work was restricted to logic and experience and should be called scientific philosophy.

For different motives, Heidegger and Derrida also sought to exclude metaphysics from their thought although they did not satisfy themselves that they succeeded.

Strawson drew a famous distinction between revisionary metaphysics and descriptive metaphysics. He called speculative metaphysicians revisionary, in contrast to descriptive metaphysics, which is concerned with the conceptual scheme according to which we think and talk about the world. Accordingly, logical positivism and other anti-metaphysical philosophies are themselves a kind of metaphysics insofar as they deal with the conceptual structure of human language and thought.

In a special use associated with Marxism, metaphysics is considered to be a partial, stationary and isolated way of thinking opposed to Hegelian dialectics.

"Metaphysics is for us the name of a science, and has been for many centuries, because for many centuries it has been found necessary, and still is found necessary, to think in a systematic or orderly fashion about the subjects that Aristotle discussed in the group of treatises collectively known by that science." —Collingwood, *An Essay on Metaphysics*, 1940, p. 4.

Metaphysics (Kant)

In a positive sense, metaphysics for Kant is the system of knowledge arising out of pure reason, that is knowledge which is attained *a priori* and involves only *a priori* concepts. It is divided into a speculative part, the

(关于灵魂) 以及理性宇宙论 (关于世界)。

康德把一切力图以纯理性来叙述超越人类理智的超验实在的努力都归作思辨的形而上学。他认为,形而上学乃是人类心灵寻求整体解释的一种必然倾向。虽然思辨的形而上学不能产生知识,它的超验主题(上帝,自由意志和灵魂不朽)可以作为正当行为的根据("道德形而上学")。康德的批判哲学是另一意义上的形而上学,它研究经验可能性及科学设定的条件。

卡尔纳普及其他逻辑实证主义者把形而上学看做是声称对超越经验科学领域的事物的本质具有知识的领域。他们认为,这一领域应作为无意义的东西而加以清除。另一方面,他们又主张他们自己的工作限制在逻辑和经验之内,应称作科学哲学。

出于不同的目的,海德格尔和德里达也试图从他们的思想中排除形而上学,尽管他们对自己的工作并不感到满意。

斯特劳森提出了"修正的形而上学"和"描述的形而上学"这一著名区分。他把思辨的形而上学称作是修正性的,而与之相对立的描述的形而上学则讨论我们据以思考和谈论世界的概念构架。据此,逻辑实证主义和其他反形而上学的哲学也都是一形而上学,因为它们讨论人类语言和思想的概念结构。

在一种与马克思主义有关的专门的意义上,形而上学被看做是一种片面的、静止的和孤立的思维方式,与黑格尔的辩证法相对立。

"形而上学对我们来说是一门科学,已经存在许多世纪了。因为许多世纪以来人们一直觉得有必要,现在仍觉得有必要,以系统的或有序的方式来思考亚里士多德在以那门科学命名的一组论著中所讨论的主题。"——柯林伍德:《论形而上学》,1940年,第4页。

形而上学 (康德)

在其正面意义中,对康德来说,形而上学是产生于纯粹理性的知识体系,即先天地获得的和只涉及先天概念的知识。它划分为思辨的部分(即自然形而上学)和实践的部分(即道德形

metaphysics of nature, and a practical part, the metaphysics of morals. In a strict sense, metaphysics is confined to the metaphysics of nature, but in a wider sense, metaphysics also includes the metaphysics of morals and criticism, that is the investigation of the faculty of reason in respect of all its pure *a priori* knowledge and is propaedeutic. Metaphysics in this wide sense is the same as the philosophy of pure reason.

The metaphysics of nature discusses the principles of pure reason that are derived from mere concepts and employed in the theoretical knowledge of all things. It is further divided into transcendental philosophy, which deals with understanding and reason without taking into account the objects given, and the physiology of pure reason, that is the rational physiology of objects that can be given in experience. The latter is divided into transcendent and immanent parts. The metaphysics of morals, also called morals proper, deals with the *a priori* principles of morality, that is the principles that determine and make necessary all of our actions.

In both the metaphysics of nature and the metaphysics of morals, there is a transcendental analytic, which concerns the legitimate application of their *a priori* principles within the limits of experience, and a transcendental dialectic, which exposes the fallacies in traditional metaphysics arising when pure reason applies these principles to things in themselves beyond experience. The *Critique of Pure Reason* reveals in detail the illusions or errors of traditional metaphysics, especially of rational cosmology, rational psychology and rational theology. This represents both sides of Kant's attitude toward metaphysics. He scorns the claim of traditional metaphysics to be the queen of the sciences, but believes that the metaphysics of his critical philosophy can inquire into the properties of things and show the limits of human reason. Hence, rather than being totally demolished, metaphysics needed redefinition or reconstruction.

"The title 'metaphysics' may also, however, be given to the whole of pure philosophy, inclusive of criticism, and so as comprehending the investigation of all that can ever be known *a priori* as well as the exposition of that which constitutes a system of the pure philosophical modes of knowledge of this type—in distinction, therefore, from all empirical and from all mathematical employment of reason."
— Kant, *Critique of Pure Reason*, A841/B869.

Metaphysics of morals, see metaphysics (Kant)

Metaphysics of nature, see metaphysics (Kant)

而上学)。在其严格意义上,形而上学只是指自然形而上学。但在广义上,形而上学也包括道德形而上学和“批判”的东西,即对与一切纯粹先天知识有关的理性官能的研究,并且是预备性的研究。广义的形而上学就是关于纯粹理性哲学。

自然形而上学探究那种从纯概念推导的、并且应用于一切事物的理论知识的纯粹理性原理。它进一步划分为先验哲学和纯粹理性自然学,前者只论及知性和理性而不考虑给予的对象,后者是能在经验中给予对象的理性自然学。理性自然学又进而分为超验的和内在的部分。道德形而上学也称为“严格意义的道德”;它论及道德的先天原理,即决定我们的一切行为并使它们成为必然的原理。

在自然形而上学和道德形而上学中,有先验分析论,它涉及把这些先天的原理合法地应用到经验的界限内;还有先验辩证论,它揭示由于纯粹理性超越经验而把这些原理应用于物自身所产生的传统形而上学的谬误。《纯粹理性批判》详细地揭露了传统形而上学,特别是理性宇宙学、理性心理学和理性神学的幻象和谬误。这表现了康德对待形而上学的两方面态度。一方面,他槟斥把形而上学作为科学之王后的主张。另一方面,他相信他的批判哲学的形而上学能探究事物的性质,并能表明人类理性的界限。因此形而上学不能全部推翻,但需要重新规定或重构。

“然而,‘形而上学’之名称,也可加于纯粹哲学之全体,包括批判在内,因此也包括一切能先天认识的东西之探究,以及构成此类知识的纯粹哲学方式体系之阐明——这样与理性的一切经验的和数学的应用相区别。”——康德:《纯粹理性批判》,A841/B869。

Metaphysics of presence. see presence

Metempsychosis. see transmigration of soul; reincarnation

Methexis. Greek term for participation

Method

A combination of rules, assumptions, procedures and examples determining the scope and limits of a subject and establishing acceptable ways of working within those limits to achieve truth. The question of philosophical method is itself a matter for philosophy and constitutes a major example of the reflective nature of the subject. Philosophers disagree about the appropriate philosophical method. The identifying mark of a philosophical school or movement lies mainly in the method it adopts. Ancient philosophy was developed according to various interpretations of dialectic method, and modern philosophy was initiated by Descartes' method of doubt. Analytic philosophy is characterised by linguistic method, while non-analytic European philosophy is characterised by phenomenological, historical and textual methods. Historically, philosophers have tried to model their work on the methods of successful sciences, such as mathematics, physics, biology, psychology and computer science, but the appropriate relationship between philosophical and scientific method is a matter of dispute. Some philosophers draw methodological implications from the claim that philosophy is a part of science or ancillary to science, while others derive their account of philosophical method from the claim that philosophy is prior to science and other disciplines and presupposed by them.

"By a 'method' I mean reliable rules which are easy to apply, and such that if one follows them exactly, one will never take what is false to be true or fruitlessly expend one's mental efforts, but will gradually and constantly increase one's knowledge till one arrives at a true understanding of everything within one's capacity."—Descartes, *Philosophical Writings* (tr. Cottingham, et al.), 1985, I, p. 16.

Method of agreement

The first of Mill's five inductive canons. Take two instances, A and B, of a given phenomenon. If we observe that the possible causes of A include c, d and e, and the possible causes for B include f, g and e, we eliminate c and d, which are peculiar to A, and f and g which are peculiar to B. There remains a common factor e for both A and B, and we may conclude that e is the cause or part of the cause of the phenomenon. The principle underlying this method is that whatever can be excluded without doing injustice to the

分有

“分有 (participation)” 的希腊词。

方法

方法是决定一个主题的范围和界限,并确定在这些界限内可接受的获取真理的工作方式的准则、假定、程序和范例的组合。哲学方法问题本身也是一个哲学问题,并成为哲学的反思性质的一个主要特征。哲学家们对什么是合适的哲学方法并无一致意见。鉴别一个哲学学派或运动的标志,主要在于它所采用的方法。古代哲学的发展充满了对辩证法的不同解释。近代哲学始于笛卡尔的怀疑方法。分析哲学为其语言方法所表征,而非分析的欧洲哲学为其现象学方法、历史方法和本文方法所刻画。在历史上,哲学家曾尝试模仿成功科学的方法,例如数学、物理学、生物学、心理学和如今的计算机科学的方法,然而哲学方法与科学方法之间的适当关系是一个争论的话题。有些哲学家从哲学是科学的一部分或科学的辅助这一观点得出其方法论含义,而其他人则从哲学先于科学并为科学及其他学科所预设这一立场来发展其对哲学方法的叙述。

“我所说的‘方法’意思指可靠的规则,它们是易于应用的,并且如果人们严格地遵循它们,就绝不会把假的当做真的,或是无效地耗费人们的精神上的努力,而将逐步和不断地增加人们的知识,直至达到对人们能力范围内每一事物的真实理解。”——笛卡尔:《哲学著作集》(科庭汉姆等人译),1985年,第一卷,第16页。

契合法

密尔五条归纳规则的第一条。假定有一既定现象的两个事例A和B,如果观察到A的可能原因包括c、d、e,B的可能原因包括f、g、e,然后我们排除A特有的c、d,排除B特有的f、g,剩下了A和B的共同因子e,于是,我们可以得出结论:e是该现象的原因或部分原因。这个方法所根据的原理是:凡是对一现象可以并无不当加以排除的因素,就与该现象没有因果关系。我们通过这个方法所揭示的是被考

phenomenon has no causation with it. What we uncover through this method is a sufficient condition for the phenomenon under investigation.

"As this method proceeds by comparing different instances to ascertain in what they agree, I have termed it the method of agreement." — *The Collected Works of John Stuart Mill*, VII, p. 390.

Method of concomitant variations

The fifth of Mill's five inductive canons states that if it is the case that when the phenomenon P changes, another phenomenon Q changes concomitantly, this sort of functional dependence between these two phenomena suggests that P must be a cause of Q, or Q of P, or both of them are the effect of the same cause. However, we need further methods to determine the exact relationship between P and Q.

"Method of concomitant variations... is regulated by the following canon: whatever phenomenon varies in any manner whenever another phenomenon varies in some particular manner, is either a cause or an effect of that phenomenon, or is connected with it through some fact of causation." — *The Collected Works of John Stuart Mill*, VII, p. 401.

Method of difference

The second of Mill's five canons or inductive methods. Suppose a phenomenon P happens in circumstances A, but not in the circumstances B. A contains conditions c, d, e and f, and B contains conditions c, d and e. Since A and B differ only in condition f, and P occurs in A but not B, we may conclude that f is the cause of the phenomenon P. The principle underlying this method is that whatever cannot be excluded without preventing the phenomenon is the cause of the phenomenon. What we uncover through the method of difference is a necessary condition for a phenomenon.

"The canon which is the regulating principle of the method of difference may be expressed as follows: If an instance in which the phenomenon under investigation occurs, and an instance in which it does not occur, have every circumstance in common save one, that one occurring only in the former; the circumstance in which alone the two instances differ is the effect, or the cause or an indispensable part of the cause, of the phenomenon." — *The Collected Works of John Stuart Mill*, VII, p. 392.

Method of elimination, another expression for induction by elimination

Method of residues

The fourth of Mill's five canons applies to cases in which a phenomenon P can be caused by any one of the conditions e, f, or g, and we wish to determine which condition is the cause. We already know through previous induction that

察现象的充足条件。

"这个方法是通过比较不同事例,确定它们在什么方面相同,所以我把它称作契合法。"——《J.S. 密尔著作集》,第七卷,第390页。

共变法

密尔五条归纳规则的第五条,表述为:现象P发生变化,另一现象Q伴随着变化,如果情况是这样,那么,这两个现象的这种相互作用就表明,P必定是Q的原因,或Q是P的原因,或两者都是同一个原因的结果。不过,我们需要进一步的方法来确定P和Q的确切关系。

"共变法……依据如下规则:凡是一现象以任何方式变化,这时都有另一现象以某种特定方式变化,那么,这个现象要么是另一个现象的原因,要么是另一个现象的结果,要么与另一个现象通过某个因果事实联系着。"——《J.S. 密尔著作集》,第七卷,第401页。

差异法

密尔的五规则或五条归纳规则的第二条。假定现象P在情形A下发生,但未在情形B下发生。A包含条件c、d、e、f, B包含条件c、d、e。因为A和B只在条件f上不同,而P发生于A而不是B,于是我们可以得出结论:f是现象P的原因。这个方法所根据的原理是,凡是不排除就不能制止现象发生的因素,就是该现象的原因。我们通过差异法所揭示的是现象的必要条件。

"作为差异法规范原理的规则,可以表述如下:如果一个被考察现象出现的事例,和一个被考察现象未出现的事例,除了只发生在前者的一个情况外,一切情况都相同,那么,两个事例惟一不一致的这个情况是该现象的结果,或原因,或原因的不可缺少的部分。"——《J.S. 密尔著作集》,第七卷,第392页。

淘汰法

"淘汰归纳法"的另一种表述。

剩余法

密尔五条归纳规则的第四条,适用于如下情况:如果一现象P可以被条件e、f、g中的任何一个所引起,而我们希望确定是哪一个。我们通过前面的归纳已知e、f都不是P的原因。那

neither *e* nor *f* is the cause of *P*. Then, the remaining condition *g*, which is the residue, might be the sufficient condition of *P*. Such a conclusion is inferred and needs to be proved by further observations.

"The canon of the method of residues is as follows; subtract from any phenomenon such part as is known by previous induction to be the effect of certain antecedents, and the residue of the phenomenon is the effect of the remaining antecedent." —*The Collected Works of John Stuart Mill*, VII, p. 398.

Methodological collectivism

Also called methodological holism, a collective or holistic approach to social phenomena. In contrast to the assertion of methodological individualism that all explanations of social phenomena must be reduced to facts about individuals, methodological collectivism holds that collective phenomena are explanatorily prior to facts about individuals. Social wholes are much better known and more immediately accessible than the individuals that constitute them. Whilst we can learn much from the study of aspects of individual humans and their actions, the social whole has its own sophisticated and complex laws that cannot be defined by appeal to the features of its component individuals. Facts about society cannot be reduced to the decisions, attitudes and dispositions of the individuals. The social whole is a real entity and is the basis for making sense of the description of individuals, for in most of their activities individuals behave in culturally sanctioned ways. Methodological collectivism was developed by Comte and Durkheim. Hegelians and Marxists are also generally regarded as methodological collectivists.

"[M]ethodological collectivism[is the]tendency to treat 'wholes' like 'society' or the 'economy', 'capitalism' (as a given historical 'phase') or a particular 'industry' or 'class' or 'country', as definitely given objects about which we can discover laws by observing their behaviours as wholes." —Hayek, in O' Neill, *Modes of Individualism and Collectivism*, 1973, p. 44.

Methodological holism, another expression for methodological collectivism

Methodological individualism

A kind of reductionism which believes that a social whole or structure is merely a logical construction out of its individual components or parts, and hence that statements about the social whole can be explained in terms of statements about the features or properties of the individuals. An explanation is sound only if it is couched wholly in terms of facts about individuals. No explanations that appeal to social structures, institutional factors and so

么剩下的条件 *g*, 即剩余者, 也许是 *P* 的充足条件。这样的结论是推断出来的, 需要进一步观察的证明。

"剩余法的规则如下: 从任何现象中去掉由以前归纳所知是某些前例的结果的部分, 该现象的剩余部分是剩下的前例的结果。" ——《J. S. 密尔著作集》, 第七卷, 第 398 页。

方法论的集体主义

也被称为方法论的整体主义, 一种研究社会现象的集体的或整体的方法。方法论的集体主义与方法论的个人主义不同, 后者断言, 所有对社会现象的解释都必须归结为关于个人的事实, 前者则认为, 社会的集体现象在解释上比有关个人的事实更重要。人们对社会整体的了解比对构成它们的个人的了解更多, 也更直接。虽然我们可以从对个人及他们行为方面的研究中了解到很多东西, 但社会整体有它自己的高级复杂的规律, 这些规律是不能通过求助其组成者的个人特征来解释的。有关社会的事实不能还原为个人的决定、态度和性情。社会整体是一个真实的整体, 是使个体的描述具有意义的基础, 因为在其绝大多数活动中, 个人是按文化上认可的方式行事的。方法论的集体主义是由孔德和杜克海姆提出的。黑格尔主义者和马克思主义者一般也被视为方法论的集体主义者。

"方法论的集体主义是这样一种倾向, 即把'社会', 或'经济', '资本主义' (作为既定的历史'阶段'), 或一特定的'工业', 或'阶级', 或'国家' 这些'整体' 作为明确的既定的对象来对待, 通过观察它们的作为整体的行为, 我们可以发现有关它们的规律。" ——海尼克, 载《个人主义的模式和集体主义的模式》(奥尼尔编辑), 1973 年, 第 44 页。

方法论的整体主义

"方法论的集体主义" 的另一种表述。

方法论的个人主义

一种还原论, 相信社会整体或社会结构仅仅是来自于它的个体成分或部分的逻辑构造, 因此关于社会整体的陈述能够依据对个体特性的陈述来解释。只有完全依据个人事实的解释才是正确的解释。那诉诸于社会结构、制度因素及诸如此类的任何解释都不具有合法性。这种观点可以追溯至霍布斯。他宣称, 在我们能够适当地理解一个组合物之前, 必须了解一个组合

on are legitimate. The position can be traced back to Hobbes who claimed that it is necessary to understand the constitutive parts out of which a compound is built before we can properly understand the compound itself. This methodology was further maintained by Comte, J. S. Mill, Max Weber and Karl Popper. All of them held that the basic elements in the explanation of historical and social progress are individual human beings. The beliefs, dispositions, and situations of the individuals are essential for understanding social phenomena. The theory is opposed to methodological holism, which holds that a social whole has its own sophisticated and complex laws that cannot be reduced to laws about its component individuals. On the contrary, a social whole is a real entity and is the basis for making sense of statements about its constituent individuals. The debate between methodological individualism and holism is prominent in sociology and the philosophy of social sciences.

"The doctrine of methodological individualism may therefore be viewed as implying the reducibility of the specific concepts and laws of the social sciences (in a broad sense, including group psychology, the theory of economic behaviour, and the like) to those of individual psychology, biology, chemistry, and physics." - Hempel, *Philosophy of Natural Science*, 1966, p. 110.

Methodological solipsism

A term introduced by Putnam in 1975 in relation to his claim that there are two types of mental state, wide and narrow. Narrow mental states, such as pain, do not presuppose the existence of any individual other than the subject to whom that state is ascribed. Wide mental states, such as being jealous of somebody, carry reference to the world outside the subject. Narrow mental content is intrinsic, while wide content refers to one's physical or social environment. Methodological solipsism is the doctrine that psychology ought to be concerned exclusively with narrow mental or psychological states and that mental states should be individuated by reference to items internal to the individual whose mental states they are. We should explain the content of a propositional attitude solely by identifying it with events occurring inside the mind. There is no need to investigate the environmental causes or behavioural effects of the mental states or processes. The doctrine likens a mental process to the computing of a machine which is not fully determined by the physical elements. In a sense, both physicalism and functionalism carry the restriction of methodological solipsism forward to their physical account of the mental. Fodor takes it as a research strategy in cognitive psychology that psychological states are individuated without respect to their semantic evaluation. And he contrasts this strategy with his rendering of methodological individualism which tries to individuate psychological states by reference to

物得以构成的结构性部分。这个方法论得到孔德、J. S. 密尔、M. 韦伯和 K. 波普的进一步肯定。他们都相信,对于历史和社会进步的解释的基本要素,是个体的人类。个人的信念、气质和处境是理解社会现象的实质所在。相反的理论被称为“方法论的整体主义”。这种理论相信,社会整体有它自己成熟的和复杂的法则,这是不能还原为有关它的组成个体的法则的。相反,社会整体是一种真实的整体,是使个体的描述具有意义的基础。方法论的个人主义和整体主义的争论主要是在社会学和社会科学哲学中。

“因此,方法论个人主义的学说可以说隐含着把社会科学(更广义地说,包括群体心理学、经济行为理论以及类似的理论)的法则和专门的概念还原为个人心理学、生物学、化学和物理学的理论。” - 亨佩尔:《自然科学的哲学》,1966年,第110页。

方法论的唯我论

这一术语由普特南于1975年引进。他声称有两种心的状态:广义的和狭义的。“狭义的”心的状态,像疼痛,不预设任何具有这一心的状态的主体以外的个体的存在。“广义的”心的状态,像忌妒某人,对主体以外的世界有所指。狭义的心的内容是内在的,而广义的内容则指称一个人的物理或社会环境。方法论的唯我论是这样一学说,它认为心理学只应当关心狭义的心的状态或心理状态,而心的状态应当由具有这一心的状态的个体的内部东西来区分。我们只应当通过将命题态度同一为心的内部所发生的事件来解释命题态度的内容,无须探究这一心的状态或过程的环境原因或行为效应。这一学说将心的过程比作不完全由物理因素所决定的机器的计算。在某种意义上,物理主义和功能主义对心的东西的物理解释都受到方法论的唯我论的局限。福多把不借助于语义评价来区分心理状态作为认知心理学的一个研究策略。他将之与他对“方法论的个人主义”的反应相对立,后者试图借助于因果力来区分心理状态。但普特南反对方法论的唯我论这一限制性的纲领,其根据是,它与像信念、忌妒和后悔这样的通常的心的状态的存在不相容。

“当传统的哲学家谈论心理状态(或‘心的状态’)时,他们作了一个我们称为方法论的唯我论假定这样一个假定。这个假定认为,严格地

their causal powers. But Putnam objects to the restrictive programme of methodological solipsism on the grounds that it is incompatible with the existence of ordinary mental states such as belief, jealousy and regret.

“When traditional philosophers talked about psychological states (or ‘mental states’), they made an assumption which we may call the assumption of methodological solipsism. This assumption is the assumption that no psychological state, properly so called, presupposes the existence of any individual other than the subject to whom that state is ascribed.” —Putnam, *Mind, Language and Reality*, 1975, p. 220.

Middle knowledge

[Latin: *scientia media*] A kind of knowledge that was first ascribed to God by the Spanish Theologian Luis de Molina, with the aim of reconciling the tension between God’s foreknowledge and human free will. According to this doctrine, God knows what free action a person would perform were a counterfactual condition actualised. He knows that P would freely do A were he in condition F. It is true that it is up to God to decide whether to instantiate the condition F, but before he makes his decision, the statement of what P would do in condition F has a true-value. Since this kind of knowledge falls between God’s knowledge of what is actual (*scientia visionis*, knowledge by intuition) and his knowledge of what is possible (*scientia simplicis intelligentia*, knowledge of simple understanding), it is called middle knowledge. This term was recently revived in this century by A. Plantinga in his approach to solving the problem of evil. It is also called counterfactuals of freedom.

“What they call middle knowledge is nothing but the knowledge of contingent possibles.” —Leibniz, *Philosophical Essays* (eds. and trans. Ariew and Garber), 1989, p. 98.

Midwifery

In the Platonic dialogues, Socrates’ art of eliciting from others what was in their minds. In *Theaetetus*, Socrates said that his mother was a midwife, a job that was normally taken by women who were too old to conceive or bear children themselves. He then claimed that he himself virtually practised the art of midwifery in philosophy. He did not produce philosophical wisdom himself, but could elicit ideas from others and test these ideas for correctness. The characteristic of his midwifery was to be concerned with the soul rather the body, and the offspring were not real children but ideas which could be checked for truth and falsehood. The description of this method fits with Socrates’ practice in the earlier Platonic dialogues and has deeply influenced Western philosophy of education. Because the Greek term for midwifery is *maieutikos*, this method is also called the *maieutic method*.

说,任何心理状态都不预设具有该状态的主体以外的任何个体的存在。”——普特南:《心智、语言与实在》,1975年,第220页。

中间知识

[拉丁语是 *scientia media*] 这类知识首先被西班牙神学家L. 德·摩尼纳归于上帝,其目的是缓和上帝的预知和人的自由意志之间的紧张状态。按照这种学说,上帝知道如若实现一个反事实条件,人会采取什么自由行动。这就是说,他知道“P会自由地做A,如若他处于条件F中”。的确,决定是否例示条件F的权利在上帝,但在他作出决定前,“P在条件F中会做什么”的陈述就有真价值,既然这类知识处于上帝的现实东西知识(*scientia visionis*, 靠直觉的知识)和可能东西知识(*scientia simplicis intelligentia*, 单纯理解的知识)之间,就被称作“中间知识”。在本世纪,这个术语近来被A. 普兰汀格复活,用于解决恶的问题。它也被叫做“反事实自由”。

“他们所谓的中间知识,其实不过是偶然可能的知识。”——莱布尼茨:《哲学文集》(阿瑞和加伯编译),1989年,第98页。

助产术

在柏拉图的对话中,苏格拉底用于把他人头脑中的想法诱导出来的技艺。在《泰阿泰德篇》中,苏格拉底说他的母亲是一个助产妇。这种工作通常是由年龄过大已不能自己生育孩子的妇女做的。他然后声称自己在哲学中也基本上在实施助产术。他自己并不产生哲学智慧,却能引导出他人的观点,并测试这些观点的正确性。他的助产术的特点是关涉灵魂而不是身体;所生出的不是真正的孩子,而是可检验其真假的观念。对这种方法的描绘与苏格拉底在早期柏拉图对话中的实践相符,对西方的教育哲学有重大影响。由于在希腊文中,助产术为 *maieutikos*, 故这方法也写作 *maieutic method*。

“上天制约我做一产妇,但又禁止我生育。”——柏拉图:《泰阿泰德篇》,150d。

"Heaven constrains me to serve as a midwife, but has debarred me from giving birth." —Plato, *Theaetetus*, 150d.

Mill's Canons

Also called Mill's methods, the five inductive laws formulated and generalised by Mill for discovering the causal relations among phenomena. (1) The Canon or Method of Agreement: "If two or more instances of the phenomenon under investigation have only one circumstance in common, the circumstance in which alone all the instances appear is the cause (or effect) of the given phenomenon" (2) The Canon or Method of Difference: "If an instance in which the phenomenon under investigation occurs, and an instance in which it does not occur, have every circumstance in common save one, that one occurring in the former; the circumstance in which alone the two instances differ, is the effect, or the cause, or an indispensable part of the cause, of the phenomenon". (3) The Joint Canon or Method of Agreement and Difference: "If two or more instances in which the phenomenon occurs have only one circumstance in common, while two or more instances in which it does not occur have nothing in common save the absence of that circumstance, the circumstance in which alone the two sets of instances differ, is the effect, or the cause, or an indispensable part of the cause". (4) The Canon or Method of Concomitant Variations: "Whatever phenomenon varies in any manner whenever another phenomenon varies in some particular manner, is either a cause or an effect of that phenomenon, or is connected with it through some fact of causation" (5) The Canon or Method of Residues: "Subduct from any phenomenon such part as is known by previous induction to be the effect of certain antecedents, and the residue of the phenomenon is the effect of the remaining antecedents".

"The classical exposition of the inductive method is as Mill's Canons." —Harré, *The Philosophy of Science*, 1972, p. 58.

Mill's methods, another expression for Mill's canons

Mimesis, Greek term for imitation

Mimetic theory, another expression for imitation theory

Mind

Descartes used the terms mind and soul interchangeably. For him, the mind is identical to self, person, the substance that thinks, believes, doubts, desires and acts. For others, like Hume, the mind is a set of

密尔规则

也称作“密尔方法”，由密尔系统提出并使之一般化的五条归纳法则，用以发现现象中的因果关系。(1) 求同规则（或契合法）：“如果所研究现象的两个或两个以上的事例只有一个共同的情况，这个所有事例仅在它中出现的情况就是给定现象的原因（或者结果）。”(2) 差异规则（或差异法）：“如果在一个事例中所研究的现象发生，而另一事例中它不发生，二者所有情况都相同，只有一点不同，这一点发生于前者中；这两个事例惟一不同之处，就是这个现象的结果或原因，或是原因中不可缺少的一部分。”(3) 同异并用规则（或契合差异并用法）：“如果两个或两个以上的事例中现象的发生仅有一个共同的情况，而在其他两个或两个以上现象不发生的事例中除缺少上述共同情况外没有共同情况，则两组事例相差异的这个惟一情况是这现象的结果或原因，或原因中不可缺少的一部分。”(4) 共变规则（或共变法）：“凡是一种现象，当别的现象发生某种特殊变化时，它也以任何方式变化，则它或者是那种现象的原因或结果，或者经由某种因果关系的事实与之相连接。”(5) 剩余规则（或剩余法）：“从任意现象中消去由先前的归纳已知为某些前项之结果的部分，现象中的剩余部分就是所余前项的结果。”

“归纳法的经典说明即如密尔规则。”——哈雷：《科学哲学》，1972年，第58页。

密尔方法

“密尔规则”的另一种表述。

模仿

“模仿 (imitation)” 的希腊词。

模仿说

“模仿说 (imitation theory)” 的另一种表述。

心

笛卡尔所使用的“灵魂”和“心”这两个术语是可以互换的。对于他来说，心同一于“自我”、“个人”以及思维、相信、怀疑、欲求和行为着的实体。对于像休谟等其他的人而言，“心”指

psychological states, and in this sense it is close to consciousness but contrasts to physical states. Different understandings of mind lead to different understandings of the mind-body problem. If one believes in a Cartesian mental substance, the mind-body problem involves the relationship between one's mind as a mental substance and one's body as a physical substance. If, on the other hand, one holds that minds are collections of psychological states, the problem is to explain the relation between one's psychological properties and one's physical properties. There has been renewed interest in the Aristotelian account of the mind that Descartes displaced. On this view, the mind or soul is the form of the body, although this position might have theoretical presuppositions that cannot be revived.

"The substance in which thought immediately resides is called mind. I use the term 'mind' rather than 'soul', since the word 'soul' is ambiguous and is often applied to something corporeal." — Descartes, *Philosophical Writings* (tr. Cottingham, etc.), vol. II, p. 114.

Mind-body problem

Problems concerning the relationship between soul and body can be traced to Plato and Aristotle, but it is Descartes who gave the issue a central position in modern philosophy. He believed that mind has thinking as its essence and is an entity totally distinct from body or extended substance. This view is an expression of mind-body dualism. How, then, can a spatial body interact with a non-spatial mind? How can mental phenomena be both irreducibly psychological and somehow dependent on a mechanistic causal base, such as the brain or nervous system? Descartes' failure to provide a satisfactory account to the problem has led to many objections to his dualism and various alternative accounts of the relationship between mind and body or between mental phenomena and physical phenomena. This has become the central topic of the philosophy of mind. Of various theories developed, the most influential ones include: occasionalism, epiphenomenalism, psychophysical parallelism, idealism, dual aspect theory, panpsychism, behaviourism, identity-theory or central-state materialism, functionalism, and anomalous monism, all of which are discussed in separate dictionary entries. The mind-body problem continues to provoke important debate in current philosophy. Until recently, the discussion of this problem has been from the standpoint of mind, but some philosophers are taking our new scientific understanding of the workings of the brain and nervous system as a starting point for dealing with the question. If there is an adequate solution to the mind-body problem, it could lead to an integrated science of human nature. Other philosophers argue that there cannot be an adequate solution because raising the problem is a mistake based on misleading Cartesian assumptions. In some, they

一系列心理状态,在这个意义上,它与意识相近并与物理状态相对。对心的不同理解导致对“心身问题”的不同理解。如果一个人相信笛卡尔的心的实体,心身问题就包含着一个人作为心的实体的心和一个人作为物理实体的身之间的关系。另一方面,如果一个人相信心是心理状态的集合,问题就变成对一个人的心理特性和一个人的物理特性之间的关系的解释。现在人们恢复了对笛卡尔所取代的亚里士多德关于心的描述的兴趣。根据亚里士多德的观点,心或灵魂是身体的形式,尽管这种立场可能立足于一些不可能得到复兴的前提。

“思维所直接归属的实体叫做心。我使用‘心’而不是‘灵魂’这一术语是因为‘灵魂’一词意义含混且常被应用于身体的东西。”——笛卡尔:《哲学著作集》(科庭汉姆等译),第二卷,第114页。

心身问题

关于灵魂与身体的关系问题可以追溯到柏拉图和亚里士多德,但将这一问题置于现代哲学之中心地位的是笛卡尔。他认为心的实质是思维,是与身或广延实体完全不同的存在物。这是心身二元论的一个表达。那么,一个广延的身体如何与一个非广延的心相互作用呢?心的现象如何可能既是不可还原的心理的东西又在某种意义上完全依赖于一个像大脑或神经系统这样的机械的因果基础?笛卡尔未能对这个问题给出令人满意的说明,这导致对其二元论的许多反驳以及关于心与身或心的现象与物理现象之关系的许多不同的描述。这成为心的哲学的中心议题。在所提出的各种理论中,最有影响的包括:“偶因论”、“附随现象论”、“心身平行论”、“唯心论”、“双面理论”、“泛心论”、“行为主义”、“同一论”或“中心状态唯物论”、“功能主义”、“变异一元论”,所有这些都在不同条目中分别讨论。心身问题依然在当今哲学中引起重要争论。迄今为止,对这一问题的讨论一直是从心的观点出发,而有的哲学家则以对脑及神经系统活动的新的科学理解为出发点来处理这一问题。如能彻底解决心身问题,就有可能导致关于人性的整体科学。而其他哲学家认为这一问题得不到彻底解决,因为问题的提出本身是一个错误,它建立在笛卡尔的错误假设上。有人也力图回到亚里士多德把心解释为身之形式这一观点上。

“关于心的现象世界与身的物理状态的关系问题通常被称为‘心身问题’。”——麦金:《心的特性》,1982年,第19页。

seek to return to an Aristotelian account of the mind or soul as the form of the body.

"The question as to the relation between mental phenomenal world and physical states of the body, specifically the brain, is generally referred to as 'the mind-body problem'." - McGinn, *The Character of Mind*, 1982, p. 19.

Minimal theory of truth

One form of the deflationary theory of truth, proposed by Horwich. It holds that truth like existence is a logical property rather than a natural property. The truth predicate does not invoke meaning-like entities. Instead, it provides a device that enables us to formulate propositions that can be the objects of belief, desire and so on, in cases where the proposition of primary concern is inaccessible. The simplest way of introducing this device is to introduce a new predicate of being true.

"Because it contains no more than what is expressed by uncontroversial instances of the equivalence schema ' (E) It is true that "p" if and only if p', I shall call my theory of truth 'the minimal theory'." - Horwich, *Truth*, 1990, pp. 6-7.

Minimax rule, see maximin rule

Minimum sensible

A term introduced by Berkeley for the least number of our sense-impressions of extension required in order to reject the idea that extension is infinitely divisible. This is similar to what Locke calls the sensible point, that is the smallest particle of matter or space we can discern. Berkeley's argument is that all the objects of immediate perceptions are sense-impressions. There is nothing in a sense-impression but what is actually perceived in it, and I cannot be mistaken about my immediate sensations. The capacities of our senses are finite. Hence, sense-impressions are not infinitely divisible, but must be composed of a finite number of minimum sensibilia. There must be a minimum tangible or a minimum visible, beyond which sense cannot perceive. A minimum visible should be the same for all beings endowed with the faculty of vision. It does not include any parts and the ultimate component of any sensation is extension. Furthermore, since to be is to be perceived, the immediate objects of perceptions must also be composed of minimum sensibilia. Hence, the idea of the minimum sensible is closely related to Berkeley's immaterialism. For Berkeley, a minimum visible has no existence without the mind of the perceiver. The position encounters difficulties in meeting Zeno's paradoxes. It is also difficult to determine what we actually perceive.

真理最小理论

真理紧缩论的一种形式,由霍维奇提出。它认为,真像存在一样是逻辑性质而不是自然性质。真谓词并不引发意义之类的实体。相反,在至关重要的命题[概念]难以理喻之处,它提供了使我们能够把命题表述成为信念、意愿等等的对象的手段。引入这一手段的最简单的途径,就是引入“是真的”这一新谓词。

“因为它所包含的仅仅是由等值模式‘(E)“p”是真的当且仅当p’的无争议例证所表达的东西,我将把我的真理论称之为‘最小理论’。”——霍维奇:《真理》,1990年,第6-7页。

最小最大值规则

见“最大最小值规则”条。

最小可感体

巴克莱采用的术语,指我们最少的广延感觉印象,用来反驳广延无限可分的思想。这个术语类似于洛克所说的“可感觉的点”,即我们可察觉到的最小的物质颗粒或空间。巴克莱的论证如下:当下知觉的全部对象是感觉印象。在感觉印象中没有别的,只有在它之中实际感知到的东西,而且我对我的当下感觉不可能弄错。我们的感觉能力是有限的。因此,感觉印象不是无限可分的,必定是由有限数目的最小可感体组成的。最小的可触体或最小的可见体必定是存在的,感官无法感知超出它们之外的东西。最小的可见体对于一切具有视觉能力的存在物都是同样的。它不包含任何部分,任何感觉的最基本组成部分是广延。而且,既然存在就是被感知,知觉的当下对象必定也是由最小的可感体组成的。因此,最小可感体的思想与巴克莱的非物质论有密切关系。在巴克莱看来,最小的可见体没有感知者的心灵就不存在。这个观点在处理芝诺悖论时遇到不少困难。要确定“我们实际感知到了什么”也是困难的。

“经过彻底考察将发现,在任何情况下利用或设想有限线段的无限部分,或设想甚至比最小可感体更小的量,都是不必要的;不,显然我们决不那样做,因为那是不可能的。”——巴克

"Upon a thorough examination it will not be found, that in any instance it is necessary to make use of or conceive infinitesimal parts of finite lines, or even quantities less than the minimum sensible; nay, it will be evident that this is never done, it being impossible." —Berkeley, *The Principles of Human Knowledge*, I, p. 132.

Minimum vocabulary

For Russell, the words contained in a minimum vocabulary allow us to express every proposition in a given body of knowledge. No word in this vocabulary can be defined in terms of other words in it, but can only be mastered by acquaintance with the things. These words represent the hard core of experience by which our sentences are connected to the extra-linguistic world. For Russell such a vocabulary will reduce the number of entities one's language forces us to assume and so lessen the possibility of an unwarranted metaphysics of substance. The minimum vocabulary required for a given subject-matter diminishes with the development of the inquiry into that subject matter.

"I call a vocabulary a 'minimum' one if it contains no word which is capable of a verbal definition in terms of the other words of the vocabulary." —Russell, *Human Knowledge*, 1948, p. 94.

Miracle

[from Latin: *miror*, wonder at] An extraordinary event whose occurrence does not conform with natural law, and which is deemed to have a supernatural cause, such as God. The Bible records many miracles, such as the waters of the Red Sea dividing for Moses and Jesus raising Lazarus from the dead. The miracles are used as sign of God's omnipotence. However, the nature and possibility of miracle has been a topic of debate. It is difficult to ascertain whether events of this kind occur. Even if extraordinary events do occur, we may provide a scientific explanation for them. Even if science cannot explain such events, we still do not need to posit a supernatural cause for them, for the explanatory gap might be due to the limitation of our present knowledge. Since the view that miracles are possible is sharply in conflict with science, it has been rejected by many religious thinkers.

"A miracle may be accurately defined, a transgression of a law of nature by a particular volition of the Deity, or by the interposition of some invisible agent." —Hume, *An Enquiry Concerning Human Understanding*, Sect. X, Part 1.

Mitigating circumstance, see excuse

Mitigation

The procedure of administering a less severe penalty for

罪:《人类知识原理》,第一章,第132页。

最低量词汇

对罗素而言,包含在最低量词汇中的语词可以使我们表达已知知识体系中的每个命题。这套词汇中的任何语词都无法用其中的其他语词来定义,而只能通过熟知事物来把握。这些语词代表了经验的硬核,由此,我们的语句与语言之外的世界相关联。对罗素来说,这套词汇将减少某人的语言强迫我们假设的实体数量,从而减低无保证的关于本体的形而上学的可能性。某一特定主题所要求的最低量词汇将随着对该主题研究的发展而减少。

"我把这样的词汇称为'最低量'词汇,如果它不包含可以由该词汇中其他语词来作字面定义的语词。"——罗素:《人类的知识》,1948年,第94页。

奇迹

[源自拉丁语 *miror* (惊异)] 指其发生不合自然规律,且被认为有一超自然原因即上帝的非常事件。《圣经》记载着许多奇迹,譬如,为摩西和耶稣分开的红海之水使拉撒路重新复活。奇迹被当做上帝全能的标记。但是,奇迹的本性和可能性一直是争论的题目。很难确定这类事件是否发生。即使非常事件真的发生,我们也可以对它们提供一种科学的解释。即使科学不能解释这样的事件,我们也依然不需要为它们假定超自然的原因,因为解释的缺陷可能是由于我们现行知识的限制所致。由于奇迹可能的观点与科学尖锐冲突,所以,它已经被许多宗教思想家抛弃。

"奇迹可以被准确地界定为是神的特殊意志对自然规律的违背,或由于某个不可见的行为者的干预。"——休谟:《人类理智研究》,第十部,第一部分。

减责环境

见“藉口”条。

减刑

对已证明有罪的被告实施较轻惩罚的程

a convicted accused. In a criminal trial, before sentence is passed on someone convicted of a crime, a plea in mitigation can normally be presented by or on behalf of the accused, suggesting why the penalty should be moderated. This is usually done by citing evidence such as the abnormality of his mentality when he conducted the crime or by debating the effect of minimising the importance of other evidence or facts. Mitigation is different from justification, which proves that an action is in accordance with law, and excuse, which seeks to acquit the accused of responsibility for the action.

"Mitigation... presupposes that someone is convicted and liable to be punished and the question of the severity of his punishment is to be decided." — Hart, *Punishment and Responsibility*, 1968, p. 15.

Mixed hypothetical syllogism

A syllogism which has a conditional proposition as one premise, and a categorical proposition as another. Its conclusion is a categorical proposition. It has two correct forms of inference; the constructive hypothetical syllogism (also called *modus ponens*): "If p then q; p; therefore q", and the destructive hypothetical syllogism (also called *modus tollens*): "If p then q; not q, therefore, not p". It also has two incorrect forms of inference. In contrast to the constructive hypothetical syllogism is the fallacy of affirming the consequent: "If p then q; q; then p". In contrast to the destructive hypothetical syllogism is the fallacy of denying the antecedent: "If p then q; not p; therefore not q". A mixed hypothetical syllogism contrasts with a pure hypothetical syllogism which has conditional propositions as both of its premises and also has a conditional proposition as its conclusion.

"A syllogism having one conditional premise and one categorical premise is called a mixed hypothetical syllogism." — Copi, *Introduction to Logic*, 1986, 7th ed., p. 252.

Mixed modes, see mode (Locke)

Mnemic causation

[from Greek, *mneme*, memory] A term employed by Russell, inspired by the psychologist Richard Semon, to express the relationship between a past event and the subsequent remembering of it. An animal's response to present impulse is determined not only by the present value of a stimulus but also by memories of past rewards and frustration. It is a kind of action at a distance by which experience produces subsequent memory-images, but it is argued that such a relation does not have to be causal.

"We find sometimes that, in mnemic causation, an image or word, as stimulus, has the same effect (or very nearly the same effect) as belongs to some object." —

序。在刑事审判中,在对某人确定有罪的判决宣布之前,通常可由被告或被告的代表提出减刑的请求,提出为什么对被告的惩罚应当减轻。这通常是通过引用诸如他在犯罪时精神反常这类证据,或通过使其他证据或事实的重要性降至最低的辩论进行的。减刑与无罪辩护不同,后者证明一种行为是依据法律的,而赦免则是试图宣判对这行为负有责任的被告无罪。

"减刑的前提条件是,某人被证明是有罪的并且应受到惩罚,但对他惩罚的严厉程度的问题还有待解决。"——哈特:《惩罚与责任》,1968年,第15页。

混合的假言三段论

一种以一条件命题作为一个前提,以一直言命题作为另一前提的三段论,其结论是一直言命题。它有两种正确的推理形式:构成式假言三段论(亦称肯定前件式):"如果p则q; p; 所以q。" 破坏式假言三段论(亦称否定后件式):"如果p则q; 非q; 所以非p。" 它也有两种不正确的推理形式。与构成式假言三段论相对的是肯定后件的谬误:"如果p则q; q; 所以p"; 与破坏式假言三段论相对的是否定前件式:"如果p则q; 非p; 所以非q"。混合的假言二段论与纯假言三段论形成对照,后者以条件命题作为它的两个前提,并且还以一条件命题作为它的结论。

"有一个条件前提和一个直言前提的三段论叫做混合的假言三段论。"——柯比:《逻辑导论》,1986年,第7版,第252页。

混合样式

见“样式(洛克)”条。

记忆因果关系

[源自希腊文: *mneme*, 指“记忆”] 罗素采用的术语,得自于心理学家R. 西蒙的启发,用以表示一个过去事件与随后关于它的记忆之间的关系。动物对于当下刺激的反应,不仅取决于当下的刺激值,也取决于对以往酬劳和挫折的记忆。它是经验借以产生随后的记忆映象的一种远距行为。但有人认为这样的关系并非必须是因果的。

"我们发现有时(在记忆因果关系中)一个映象或语词作为刺激,有着与属于某个对象的相同效果(或非常近于相同的效果)。"——罗素:《心的分析》,1921年,第209页。

Russell, *An Inquiry into Meaning and Truth*, 1918, p. 209.

Modal epistemic logic, see epistemic modalities

Modal logic

A branch of logic which deals with the logical relationships between propositions containing modal terms such as necessarily or possibly. Its study originated with Aristotle and flourished in the medieval period. In this century it was revived by C. I. Lewis out of dissatisfaction with the account of material implication given by Frege and Russell. Lewis introduced two new operators to propositional and predicate calculus and used them to construct modal axiom systems. The operator *L* is symbolised as \Box and read as "It is necessary that...", and the operator *M* is symbolised as \Diamond and read as "It is possible that...". Important additional modal systems have been constructed, but the validity of the principles of inference in modal logic has been a matter of debate. Quine has been especially critical of modality. However, through the work of Kripke, D. Lewis and others, modal logic has been closely associated with possible world semantics and has become a central focus of work in contemporary logic.

"Modal logic is intended to represent arguments involving essentially the concepts of necessity and possibility." —Haack, *Philosophy of Logic*, 1978, p. 170.

Modal realism

A theory associated with the American philosopher David Lewis, claiming that different possible worlds exist and are as real as the actual world. These other worlds are unactualised possibilities. The inhabitants of possible worlds have their respective counterparts in our world. The only significant difference between the actual world and other possible worlds is that the actual world is the world that we inhabit and that is spatially and temporally related to us. Hence, to think in terms of logical possibilities is to think of different real worlds. Every way that a world could be is a way that some world is. Whenever such-and-such might be the case, there is some world in which such-and-such is the case.

This theory has been under attack. One criticism is that if possible worlds and the actual world have the same ontological status, then a possible world would be actual rather than possible. If this were true, we could not account for the difference between an event happening in our world and merely being a logical possibility. But Lewis argues that his theory can provide the most satisfactory interpretation of modal propositions. On his account, "it is possible that *p*" is true if and only if in some possible worlds, *p*; and "it is necessary that *p*" is true if and only if in every possible

模态认知逻辑

见“认知模态”条。

模态逻辑

一个逻辑分支,处理含模态词如“必然”或“可能”的命题之间的逻辑关系。模态逻辑研究起源于亚里士多德,在中世纪曾繁盛一时。在本世纪, C. I. 刘易斯由于不满意弗雷格和罗素给出的对实质蕴涵的说明,而使模态逻辑得到复兴。刘易斯把两个新的算子引入命题演算和谓词演算,并使用它们构造模态公理系统。算子“*L*”被符号化为 \Box ,读作“……是必然的”;算子“*M*”被符号化为 \Diamond ,读作“……是可能的”。已经构造出各种另外的模态系统,但关于模态逻辑中推理原则的有效性一直存在争论。奎因对模态提出了特殊的批评意见。不过,由于克里普克、D. 刘易斯和其他人的工作,模态逻辑已经与可能世界语义学紧密连在一起,并且已成为当代逻辑中最为核心的领域。

“模态逻辑旨在展示本质上包含必然性和可能性概念的论证。”——哈克:《逻辑哲学》,1978年,第170页。

模态实在论

与美国哲学家 D. 刘易斯相关联的一种理论,它断言:不同的可能世界存在着,并且像现实世界一样是实在的。这些另外的世界是未现实化的可能性。可能世界的居民在我们的世界中有它们各自的对应体。现实世界和其他可能世界之间惟一有意义的差别在于:现实世界是我们所居住的世界,是在空间上和时间上与我们相关联的世界。所以,根据逻辑可能性去思考就是思考不同的实在世界。一世界的每一种可能存在方式就是某个世界的实际存在方式。只要如此这般的情形可能发生,则存在某个世界,如此这般的情形在其中确实发生。

这一理论已经受到了攻击。批评之一是:如果可能世界和现实世界有同样的本体论地位,则可能世界将是现实的而不是可能的。如果这样的话,我们就不能说明在我们的世界中发生的一个事件和单纯的逻辑可能性之间的差别。但刘易斯争辩说,他的理论能够对模态命题提供最令人满意的解释。按他的说明,“*p* 是可能的”为真当且仅当在某个可能世界中 *p*; “*p* 是必然的”为真当且仅当在每个可能世界中 *p*。他还相信,模态实在论能够用于解释像因果性、条件句、命题态度的内容和存在量化等现象。

world, *p*. He also believes that modal realism can be used to explain phenomena such as causation, conditionals, the content of propositional attitudes and existential quantification.

"I advocate a thesis of the plurality of worlds, or modal realism, which holds that our world is but one world among many." -D. Lewis, *On the Plurality of Worlds*, 1986, p. 2.

Modality

The ways or modes in which a proposition or statement is judged to be true or false. There are various classifications of modalities, such as epistemic modality [it is known (or unknown) that *p*]; deontic modality [it is obligatory (or permissible) that *p*]; temporal modality [it was (or is now or will be) *p*]. Of central concern to logic is logical or alethic modality [necessarily (or possibly) *p*]. Modal logic studies the logical relationships between statements of alethic modality. The doctrine of possible worlds has been developed to provide a semantics for modal logic and has stirred much recent debate in logic and metaphysics.

Modality can be distinguished into *de re* modality (in which a modal term modifies a predicate ascribed to a subject, such as "a is necessarily *f*") and *de dicto* modality (in which a modal term modifies a whole proposition, such as "it is necessary that *fa*").

"Another set of notions as to which philosophy has allowed itself to fall into hopeless confusions through not sufficiently separating propositions and propositional functions are the notions of 'modality': *necessary*, *possible*, and *impossible*. (Sometimes *contingent* or *assertoric* is used instead of *possible*)." -Russell, *Introduction to Mathematical Philosophy*, 1919, p. 165.

Modality *de dicto*

Modality *de dicto* attributes modal terms (necessary, possible) to describe a proposition (Latin: *dictum*), such as "it is necessary that *p*". This contrasts with modality *de re* which attributes modal terms to modify an object (Latin: *res*), such as "a is necessarily *f*". The distinction can be traced to Aristotle's *Prior Analytic*, I. 9, and is widely discussed together with essentialism because modality *de re* asserts of some object that it has some property essentially. This seems to support the recent revival of essentialism, but anti-essentialists or nominalists reject the claim that an object can necessarily possess a property and argue that all necessity is *de dicto*.

"An assertion *de dicto*, for example, 'necessarily nine is composite', predicates a modal property—in this instance necessary truth—of another dictum or proposition—'nine is composite'." -Plantinga, *The Nature of Necessity*, 1974, p. 9.

"我提倡世界多样性的论题，或模态实在论，它主张我们的世界只不过是众多世界中的一个。"——刘易斯：《论多样世界》，1986年，第2页。

模态

一命题或陈述被断定为真或为假的方式或样式。存在各种不同的模态分类：认知模态 [已知 (或未知) *p*]；道义模态 [*p* 是义务的 (或允许的)]；时间模态 [过去 (或现在或将来) *p*]。对于逻辑来说至关重要的是“逻辑模态”或“真势模态” (“必然 *p*” 或 “可能 *p*”)。模态逻辑研究真势模态的陈述之间的逻辑关系。为了给模态逻辑提供语义学，已经发展出可能世界的学说，后者近来在逻辑学和形而上学中引发了许多论战。

模态能够区分为“从物”模态 (其中模态词修饰从属于主词的谓词，例如 “a 必然是 *f*”) 和“从言”模态 (其中模态词修饰整个命题，例如 “必然 *fa*”)。

“此外尚有一组概念，关于这些概念的讨论由于没有把命题和命题函项完全区分开，哲学已使自身陷入无望的混乱之中。这组概念就是‘模态’的概念：“必然”、“可能”和“不可能” (有时偶然或实然被用来代替可能)。”——罗素：《数理哲学导论》，1919年，第165页。

从言模态

“从言”模态把模态词 (必然，可能) 用于描述命题 (拉丁文 *dictum*)，例如 “必然 *p*”。这与“从物”模态恰成对照，后者把模态词用于修饰对象 (拉丁文 *res*)，例如 “a 必然是 *f*”。这一区分可以追溯到亚里士多德的《前分析》第1卷第9章，并且与本质主义一起得到广泛讨论，因为“从物”模态断定某对象具有某些本质属性。这似乎支持了本质主义的新近复兴，但反本质主义者或唯名论者拒绝一对象能够必然地具有一属性这一断言，并论证说所有必然性都是从言的。

“一个从言的断定，举例来说，‘必然地9是复合的’，对另一话语或命题——‘9是复合的’——断定了一模态性质，在此例中是必然真。”——普兰汀格：《必然性的本性》，1974年，第9页。

Modality *de re*, see modality *de dicto*

Mode

[from Latin: *modus*, measure, form or manner] The determinations a thing possesses, the way a quality presents itself or the form in which a thing can be understood. In medieval philosophy, a mode is a characteristic of a thing which marks it out from other things. In both Descartes and Spinoza, there is a system of substance attribute-mode. Thinking and extension are the two principal attributes of substance, and modes are various ways or forms of thinking or extension. Locke took modes as one kind of complex idea. He divided them into simple modes, which are different combinations of the same ideas, and mixed modes, which are the combinations of several different simple modes.

"By mode I understand the modifications of substance, or that which is in another thing through which also it is conceived." - Spinoza, *Ethics*, I, def. 5.

Mode (Locke)

Both Descartes and Spinoza defined a mode as the affection of substance, but Locke used the word for one sort of complex idea which depends on substances. Modes are further divided into two kinds: simple and mixed. Simple modes are complex ideas which are combinations of the same simple ideas or ideas of the same kind. They are the result of the mental operations of compounding or enlarging the simple ideas given in experience. Space, time, number and infinity, for example, are all classified as simple modes. Mixed modes are complex ideas which are combinations of different kinds of simple ideas. They can be gained through experience and observation, by invention and by explaining the names of actions. Mixed modes differ from ideas of substance because ideas of substance must have a prototype in nature, but the mind in framing mixed modes need not determine whether they designate what exists in nature. The majority of examples of mixed modes lie in the sphere of morals and law. Mixed modes can be said to be the names of specific qualities and actions that are important for social life, especially for moral judgements.

"First, modes I call such complex *ideas* which, however compounded, contain not in them the supposition of subsisting by themselves, but are considered as dependences on, or affections of substances;... And if in this I use the word mode in somewhat a different sense from its ordinary signification, I beg pardon." - Locke, *An Essay Concerning Human Understanding*, II, 12, 4.

Mode of production

The way of producing goods. Marx used this term in

从物模态

见“从言模态”条。

样式

[源自拉丁文 *modus*, 尺度、形式或方式] 指一个事物所具有的规定, 一个性质呈现自身的方式, 一个事物借以能被理解的形式等等。在中世纪哲学中, 一个样式就是事物的一个特征, 它使该事物同其他事物区分开。在笛卡尔和斯宾诺莎那里都有实体—属性—样式结构的体系。思维和广延是实体的两个主要属性, 样式是思维或广延的各种各样的方式或形式。洛克把样式当做一种复杂观念, 区分为“简单样式”和“混合样式”。简单样式是同一观念的不同结合, 混合样式是若干不同简单样式的结合。

“我将样式理解为实体的变状, 或在他物内, 通过他物而被构想的东西。”——斯宾诺莎:《伦理学》, 第一部分, 定义 5。

样式 (洛克)

笛卡尔和斯宾诺莎都把样式界定为实体的作用, 而洛克用该词指一种依赖于实体的混合观念。样式进而分为两类: 简单样式和混合样式。简单样式是同样一些简单观念或同一种简单观念结合起来的复杂观念, 是对经验中给予的简单观念进行“混合”或“扩大”的内心活动的结果。例如, 空间、时间、数目、无限等都被归类为简单观念。混合样式是由不同种类的简单观念结合起来的复杂观念。它们可以通过经验和观察, 借助发明和对行为名称的解释来获得。混合样式与实体观念的不同在于, 实体观念必须有自然界中的原型, 而心灵在构成混合样式时不必确定它们是否指示在自然界中存在的东西。混合样式的大多数例子都出在道德和法律领域。所以, 它们可以说是对于社会生活, 尤其是对于道德判断很重要的特定性质和行为的名称。

“首先, 我将这样一些复杂“观念”称作样式, 它们不论怎样混合, 其中都不包含它们独自存在的假定, 反而它们被认为是依赖于实体、或受实体影响的……而如果在此我使用样式这个词的含义与通常意义有些不同, 我请求原谅。”——洛克:《人类理智论》, 第二卷, 第十二章, 第 4 节。

生产方式

生产财富的方式。马克思在许多意义上使

various senses. The material mode of production contains the productive forces. The social mode of production comprises the social characteristics of the productive process, including the purpose of production, the form of surplus labour presented by production and the mode of exploitation in the production. In some uses, the mode of production includes both material and social modes and combines the productive forces and the relations of production. For Marx, modes of production vary historically.

"The mode of production of material life conditions the social, political and intellectual life-process generally." — Marx, *Preface to the Critique of Political Economy*.

Modern logic, another name for symbolic logic

Modernity

An ambiguous term that generally refers to the central characteristic of the modern period as established in the Enlightenment. Postmodernists contrast modernity with postmodernity. In philosophy, modernity is normally taken to begin with Descartes' work in the seventeenth century and to be concerned with the issues, problems and standards of relevance which have since occupied Western philosophers. Authors and critics vary in their accounts of the main strands of modernity. In general, modernity is associated with the supremacy of pure rationality and with the self-assertiveness of the modern self. Equipped with rationality, modern persons seek consensus over a unified metaphysical framework to view the world. They seek their own subjective autonomy and ignore the constraints of history, tradition and culture. They aggressively attempt to organise and control the natural environment, with science as their guiding discipline. Aesthetic objects and their appreciation are measured in terms of economic benefit. Modernity was effective in the rise of industrial capitalism. The critique of modernity has been the chief topic of critical theory, postmodernism, post-structuralism and communitarianism. Each criticism was from a separate standpoint and from a different understanding of modernity.

"The project of modernity formulated in the 18th century by the philosophers of the Enlightenment consisted in their efforts to develop objective science, universal morality and law, and autonomous art according to their own logic." — Habermas, in Foster (ed), *Postmodern Culture*, p. 9.

Modes of scepticism

[from Greek; *tropos*, wa, manner + *skepsis*, investigation, enquiry]. As a technical term in ancient scepticism, a pattern of argument, something like Aristotle's *topos*. Ancient scepticism established many modes aiming to

用这个词。物质生产方式包括生产力, 社会生产方式构成生产过程的社会特征, 包括生产目的, 生产所存在的剩余劳动形式和生产中的剥削方式。在某些用法上, 生产方式包括物质的和社会的方式, 和生产力与生产关系的结合。对马克思来说, 生产方式具有历史性。

"物质生活条件的生产方式决定社会的、政治的和理智生活的一般过程。" —— 马克思, 《政治经济学批判》导言》。

现代逻辑

"符号逻辑" 的另一个名称。

现代性 (或译 "近代性")

这是一个含糊用语, 用来一般性地指称由启蒙运动建立起的现代 (近代) 时期所具有的特点。后现代主义者把现代性与后现代性对立起来。在哲学中, 一般认为现代性始于 17 世纪笛卡尔的工作, 与那时以来西方哲学家们所关注的争论、问题和标准相关。关于现代性的主要成分, 作家们和批评家们的说明多有不同。一般讲来, 现代性与纯粹理性的至上和近代自我的自我肯定相关联。依据理性, 现代 (近代) 的人们寻找那看待世界的统一形而上学构架。他们追求自己主体的独立性, 忽视历史、传统和文化的限制。他们以科学为利器, 得寸进尺地试图安排和控制自然环境, 通过经济利益来衡量美学对象并形成自己的评价。现代性在工业资本主义上升期间是有效的。对于现代性的批判已成为批判理论、后现代主义、后结构主义和共同体主义的首要论题。每种批判都从某个特殊立场出发并基于对现代性的不同理解。

"由 18 世纪的启蒙哲学家们制定的现代性方案包含他们的这样一些努力: 依照他们的逻辑发展客观的科学、普遍的道德和法律, 以及独立的艺术。" —— 哈贝马斯, 见《后现代文化》(福斯特编辑), 第 9 页。

怀疑派论式

[源自希腊语 *tropos* (方式、样式) 和 *skepsis* (考察、探究)] 作为古代怀疑派的专业术语, 它意指论证的范型, 有些像亚里士多德的 *topos*。古代怀疑派建立了多种论式, 其目的是要表明

show the oppositions or contradictions of appearance and to conclude that suspension of judgement is necessary. The most famous and important are the Ten Modes, which form the methodology of scepticism. They are recorded by Sextus Empiricus and ascribed to the Pyrrhonist philosopher Aenesidemus: (1) the mode depending on the variations among animals; (2) that depending on the differences among animals; (3) that depending on the variable constitutions of the sense-organs; (4) that depending on circumstances; (5) that depending on positions; (6) that depending on admixtures; (7) that depending on the quantities of things; (8) that depending on relativity; (9) that depending on the frequency of encounters; (10) that depending on customs and laws.

"In order for us to get a more accurate impression of these oppositions, I shall append the modes through which suspension of judgement is inferred." — Sextus, *Outline of Pyrrhonism*, I, pp. 35-9.

Modularity

A theory of the cognitive processes in the philosophy of mind that originated largely with Jerry Fodor's book *The Modularity of Mind* (1983). The traditional theory of mind considers it to be a general faculty which is exercised in various domains. But theorists of modularity claim that mind is composed mainly of modules. Modules are cognitive systems (input systems) which are relatively independent of each other, each performing its own information-processing autonomously. Fodor lists eight characteristics of being a module: domain specificity, mandatoriness, information encapsulation, speed, shallow output, lack of access of other processes to intermediate representations, natural localization and susceptibility to characteristic breakdown. According to the modularity hypothesis, the human mind should have unique physical structures for acquiring language and for parsing sensations. Although this hypothesis has been disputed, it has led to much fruitful debate.

"Roughly, modular cognitive systems are domain specific, innately specified, hardwired, autonomous, and not assembled. Since modular systems are domain-specific computational mechanisms, it follows that they are species of veridical faculties. I shall assume, hopefully, that this gives us a notion of modularity that is good enough to work with." Fodor, *Modularity of Mind*, 1983, p. 37.

Modus ponens

[Latin; affirming mood, also called *modus ponendo ponens*] A form of hypothetical syllogism named by medieval logicians and providing a rule of inference of the form: "If p then q; p; therefore q". By this rule we infer from the antecedent of a true implication to its consequent. It is the principle that whatever a true proposition implies is itself

现象的对立或矛盾,并得出有必要悬置判断的结论。其中最著名也是最重要的是“十论式”,它们构成怀疑派的方法论。塞克斯都·恩披里柯记录下这十个论式,并将其归功于皮浪主义哲学家爱那西德穆。(1)关于动物中不同变化的论式;(2)关于动物中差异的论式;(3)关于感官可变构造的论式;(4)关于环境情况的论式;(5)关于位置的论式;(6)关于混合物的论式;(7)关于事物数量的论式;(8)关于相对关系的论式;(9)关于经常遭遇的论式;(10)关于习俗和法律的论式。

“为了使我们对这些对立能得到更为准确的印象,我将附上这些论式,通过它们,推出悬置判断的结论。”——塞克斯都:《皮浪主义纲要》,I,第35—39页。

组合性

心的哲学中一种关于认知加工的理论,主要产生于J. 福多的《心的组合性》(1983)一书。心的传统理论将心视为在各种不同领域起作用的普遍官能。但组合论声称,心主要是由组件构成的。组件是彼此相对独立的认知系统(输入系统),各自自主地完成自己的信息加工。福多列举了组件的八个特性:领域特定性、强制性、信息封闭、快捷、浅输出、封闭于中介表征的其他加工、自然定位及敏感于特性损坏。根据组合性假设,人的心应当有独特的物理结构来习得语言和解析感觉。尽管这一假设引起争论,但它所引发的争论是富有成果的。

“大致地说,组件认知系统是特定领域的、先天确定的、硬件的、自主的和非集合的。因为组件系统是特定领域的计算机制,所以它们是那种真实的官能。我该假定,这有希望给予我们一个足够好的组合性概念。”——福多:《心的组合性》,1983年,第37页。

肯定前件式

[拉丁文,肯定式,也叫 *modus ponendo ponens*] 中世纪逻辑学家命名的一种假言三段论形式,提供了一条推理规则,其形式是:“如果p则q; p; 所以q。”根据这一规则,我们从真蕴涵式的前件推出它的后件。它是这样一条原理:真命题所蕴涵的命题本身是真的。它亦称

true. It is also called the affirming mood. In contrast, *modus tollens* has the form: "If p then q ; not q ; not p ". In *modus ponens*, if the categorical premise affirms the consequent rather than the antecedent of the conditional premise, that is, "If p then q ; q ; therefore p ", the argument commits a fallacy called affirming the consequent.

"In the *modus ponens* (also called the constructive hypothetical syllogism) the categorical premise affirms the antecedent of the hypothetical premise, thereby justifying as a conclusion the affirmation of its consequent." —Keynes, *Formal Logic*, 1928, p. 352.

Modus tollens

[Latin; denying mood, also called *modus tollendo tollens*] A form of hypothetical syllogism providing a rule of inference of the form: "If p then q ; not q ; therefore not p ". By *modus tollens*, we infer from the denial of the consequent of an implication to the denial of its antecedent. It is the principle that whatever implies a false proposition is itself false. It contrasts with *modus ponens*: "If p then q ; p ; therefore q ". In *modus tollens*, if the categorical premise denies the antecedent rather than the consequent of the conditional premises, the argument commits a fallacy called denying the antecedent.

"In the *modus tollens* (also called the destructive hypothetical syllogism) the categorical premise denies the consequent of the hypothetical premise, thereby justifying as a conclusion the denial of its antecedent" —Keynes, *Formal Logic*, 1928, p. 352.

Molecular facts. see atomic facts

Molecular propositions

Propositions which are built from the conjunction of atomic propositions related by words such as "and", "or" and "if-then". For example, " p or q " is a molecular proposition made from the atomic propositions " p " and " q " and the logical connective "or". While atomic propositions represent atomic facts, molecular propositions represent molecular facts composed of atomic facts. A molecular proposition is a truth-functional compound of atomic propositions. That is, its truth-value is decided by the truth values of the atomic propositions composing it and by the logical terms conjoining those atomic propositions.

" 'Molecular' propositions are such as contain conjunctions —if, or, and, unless, etc. —and such words are the marks of molecular proposition." —Russell, *Our Knowledge of the External World*, 1926, p. 63.

"肯定式"。与它构成对照的是所谓的"否定后件式",其形式为:"如果 p 则 q ; 非 q ; 所以非 p 。"在肯定前件式中,如果直言前提肯定的是条件前提的后件而不是前件,即是说,"如果 p 则 q ; q ; 所以 p ",该论证就犯了肯定后件的谬误。

"在肯定前件式(亦称构成式假言三段论)中,直言前提肯定假言前提的前件,由此证明以肯定它的后件作为结论是合理的。"——凯恩斯:《形式逻辑》,1928年,第352页。

否定后件式

[拉丁文,否定式,亦称 *modus tollendo tollens*] 假言三段论的一种形式,规定了一条推理规则,其形式如下:"如果 p 则 q ; 非 q , 所以非 p 。"根据否定后件式,我们从一蕴涵式后件的否定推出其前件的否定。它是这样一条原理:蕴涵假命题的命题本身是假的。它相对于肯定前件式:"如果 p 则 q ; p ; 所以 q 。"在否定后件式中,如果直言前提否定条件前提的前件而不是后件,该论证就犯了所谓的否定前件的谬误。

"在否定后件式(亦称破斥式假言三段论)中,直言前提否定假言前提的后件,由此证实否定其前件作为结论是合理的。"——凯恩斯:《形式逻辑》,1928年,第352页。

分子事实

见"原子事实"条。

分子命题

由诸如"和"、"或"、"如果……那么"等词连接,从"原子命题"的结合而建构成的命题。例如," p 或 q "就是由原子命题 " p " 和 " q " 以及逻辑联结词"或"构成的分子命题。如原子命题表现了"原子事实",分子命题也表现了由原子事实构成的"分子事实"。分子命题是原子命题的真值函项的复合。这就是说,其真值由构成它的原子命题的真值和连接这些原子命题的逻辑词来决定。

" '分子命题'是这样的,它们包含某些联结词——如果、或者、并且、除非等等——因而这些词是分子命题的标记。"——罗素:《我们关于外部世界的知识》,1926年,第63页。

Molyneux's problem

A problem about the correlation between sight and touch, proposed by the Irish politician and scientist William Molyneux (1656-1698) in a letter addressed to Locke, and which is included by Locke in the second edition of *Essay Concerning Human Understanding* (ii, ix, 8). Suppose a blind person has learned to distinguish a cube from a sphere of the same metal by the sense of touch. If the person is suddenly made to see, can he immediately distinguish the two objects by sight before touching them? Both Molyneux and Locke answered this question in the negative. They believed that our ordinary perceptions depend on judgements based on experience. A perceiver must learn to build perceptual knowledge by correlating the contents from different channels. Berkeley agreed with this solution but claimed that it proved his own thesis that the data of touch and the data of sight are heterogeneous. Leibniz also discussed this problem, but derived a different answer. He suggested that the two sets of experience have one element in common, that is, extension. Hence it is possible to infer from one type of idea to another. Empirical testing seems to favour Locke's solution.

"A farther confirmation of our tenet may be drawn from the solution of Mr. Molyneux's problem, published by Mr. Locke in his *Essay* :... that the blind man at first sight would not be able with certainty to say which was the globe which the cube, whilst he only saw them."—Berkeley, *An Essay Towards a New Theory of Vision*, Sect. 132.

Monadic relation, Russell's term for quality

Monadology, see monads

Monads

[from Greek: *monas*, unit] Leibniz's mature term for his conception of substance. In his early period he used terms such as substantial form, substantial unity, atom of substance or entelechy. Monads are the ultimate constituents of reality. They are simple, without parts, extension, or shape and are indivisible. They do not affect each other. So each monad is windowless, like a world of its own. It is self-sufficient and a true atom of nature. The simplicity of a monad, however, is compatible with its internal complexity. Leibniz identified monads with perception and appetition. Thus each monad changes, but its change comes from an internal principle and not from an external cause. To be active is the main characteristic of monads. Based on the contents of their perceptions, Leibniz distinguishes three grades of monads. The first grade possesses only basic properties of perception and appetition, with no self-

莫利纽克斯问题

关于视觉和触觉相互关系的问题,由爱尔兰政治家和科学家 W. 莫利纽克斯(1656—1698)在给洛克的一封信中提出。洛克将它收入《人类理智论》第二版(第二卷,第九章,第8节)。假定一个盲人学会用触觉区分同样金属的立方体和球体。如果这个人突然能视物了,他在触到它们之前能够马上用视觉区分两个物体吗?对这个问题莫利纽克斯和洛克两人都给了否定的回答。他们认为,我们的普通知觉依赖于以经验为基础的判断。一个知觉者必须学会通过将来自不同渠道的内容相互联系来建立感性知识。巴克莱同意这一解答,但声称这一解答证明了他自己的论点:触觉和视觉的材料是异类的。莱布尼茨也讨论了这个问题,但引出了不同的回答。他提出,这两组经验有一共同的元素,那就是广延。因此,从一类观念推出另一类观念是可能的。经验的验证似乎有利于洛克的答案。

“对我们的原则的进一步确定,可以从莫利纽克斯问题的解决中得出,该解决办法由洛克先生发表于他的《人类理智论》中……盲人第一眼不能确切说出哪一个是球体,哪一个是立方体,而只是看见它们。”——巴克莱:《视觉新论》,第132节。

一元关系

罗素用于性质的术语。

单子论

见“单子”条。

单子

[源自希腊文 *monas*, 单位] 莱布尼茨对其实体概念所用的一个成熟的词。在早期,他使用“实体形式”、“实体单位”、“实体原子”、“隐得来希”等词。单子是实在的终极要素。它们是简单的,没有部分、广延或形状,它们是不可分割的。它们互不影响。所以,每个单子都“没有窗户”,就像一个属于它自己的世界。它是自足的,是自然界的真正原子。然而,单子的单纯性可以同它内在的复杂性相容。莱布尼茨将单子等同于知觉和欲望。这样,每一个单子都在变化,但它的变化来自一个内在的原则,而非来自外部的原因。具有能动性是单子的主要特点。根据单子的知觉内容,莱布尼茨将单子区分为三个等级。第一等的单子只有知觉和欲望的基本性质,没有自我意识。第二等的单子是动物的灵魂,它具有比较明晰的知觉,并有记忆相伴随。第三等的单

consciousness. The second grade is animal soul whose perceptions are more distinct and accompanied by memory. The third grade is spirits or rational minds, which are completely self-conscious. Within any monad's perceptual states there is a representation of the relatedness of that monad to all other monads. This provides the foundation for intermonadic relations. Each monad is a mirror of the whole universe. Although each of them is self-enclosed, there is a perfect harmonious relation among them which is pre-established by God. Leibniz's theory of monads is called monadology. Many of the puzzling features of Leibniz's doctrine of monads can be understood in the context of his logic and science.

"A simple substance is that which has no parts. A composite substance is a collection of simple substances, or monads. Monad is a Greek word signifying unity, or what is one." —(Leibniz, *Philosophical Essays* (eds. and trans. Ariew and Garber), 1989, p. 267.

Monarchy

[from Greek: *mon*, one — *arche*, rule, rule by one] A type of government in which supreme power and sovereignty are held by one person; the monarch, king or emperor. In many cases, especially where succession to the monarchy is determined by a long-standing hereditary principle, the monarch is viewed as an incarnation of the historical national identity. In some cases, monarchs are elected or emerge through victory in war. The power of monarchical government does not arise from consent or a social contract. The traditional absolute monarchy was inherited and supported by the theory of the divine right of kings. Monarchy contrasts with aristocracy, in which sovereignty lies in the hands of a class of persons, and with democracy, in which sovereignty is in the hands of the majority of people. European monarchies were threatened by the French revolution. Britain developed a compromise between absolute monarchy and liberalism, called constitutional monarchy, in which the monarch mainly plays a ceremonial role, with sovereignty formally held by the monarch and parliament.

"The sovereign may concentrate the entire government in the hands of one single magistrate, from whom all the others will derive their power. This... form of government is the most common, and is called monarchy or royal government." —Rousseau, *The Social Contract*, III, 3.

Mongrel categorical statements

Ryle's term for a statement which falls between categorical statements, which are statements of fact, and hypothetical statements, which are statements of inference or conditionals. They are semi-dispositional claims which explain something as being an occurrence but at the same time a disposition, for example "The bird is migrating" and

子是完全能自我意识的精神或“理性的心灵”。在任何单子的知觉状态内,都表现该单子与其他单子的关系。这就为单子之间的联系提供了根据。每一个单子都是整个宇宙的一面镜子,虽然它们的每一个都是自身封闭的,它们之间却有完全和谐的关系,这个关系是由上帝预先确定的。莱布尼茨关于单子的理论被称作“单子论”。莱布尼茨单子学说的许多令人不解的特征可以在他的逻辑和科学的范围内得到理解。

“单纯的实体是没有部分的实体,复合的实体是简单实体,或单子的集合。‘单子’是希腊词,意思是‘单位’,或‘单一的东西’。”——莱布尼茨:《哲学文集》(阿瑞和加伯编译),1989年,第207页。

君主政体

[源自希腊文,*mon*(一个)和*arche*(统治),即一个人的统治]一种类型的政体,其最高权力和统治权掌握在一个人手里,即君主、国王或皇帝手里。在很多情况下,特别是在君主的继承是由长期存在的世袭原则决定的情况下,君主被看做是历史的国家特性的化身。在有些情况下,君主是通过战争的胜利被选出或涌现出来的。君主政体的权力不是来自人们的同意或社会契约。传统的专制的君主政体是世袭的,并得到国王的神权理论支持。君主政体与统治权掌握在一个阶层手里的贵族政体不同,与统治权掌握在大多数人手里的民主政体也不同。欧洲的君主政体曾受到法国大革命的威胁。英国在专制君主政体和自由主义之间达成了一种妥协,被称为君主立宪制,在这一制度下,君主主要起礼仪性的作用,统治权在形式上掌握在君主和议会手里。

“主权者可以把整个政府都集中于一个独一无二的行政官手里,所有其余的人都从他那里取得权力。这种……政体形式是最常见的,它被称为君主政体或皇家政府。”——卢梭:《社会契约论》,Ⅲ,3。

混杂范畴陈述

赖尔的术语,范畴陈述是关于事实的陈述,假想陈述是对推理或条件句的陈述,混杂范畴陈述则居于二者之间,指将某种东西解释为一个事件并同时又是一个倾向的准倾向说法,例如,“这只鸟正在迁移”和“约翰小心地开车”。它们被用来指一个实际上是一个倾向性表现的活

"John drives carefully". They are employed to refer to an activity which is the actual display of a disposition and thus to explain something in terms of both occurrence and disposition. These kinds of statements can make sense of some mental concepts such as heeding and minding, which seem always to include an element of the actual or the here and now.

"I shall call statements like 'you would do the thing you did' 'semi-hypothetical' or 'mongrel categorical statements'." — Ryle, *The Concept of Mind*, 1949, p. 135.

Monism

A term coined by Christian Wolff for any metaphysical theory claiming that only one kind of entity really exists. What really exists may be matter (as materialism holds) or mind (as idealism holds). Neutral monism holds that mind and matter are both derived from some neutral primary reality. Spinoza's monism argued that God/Nature was the single ultimate reality. The argument for monism can be traced to Parmenides in ancient Greece. Monism is opposed both to dualism, which claims that there are two fundamental realities in the world, and to pluralism, which claims that there are many ultimate non-reducible principles in reality. A special case of monism was put forward by the British Neo-Hegelians, especially Bradley. According to this claim, all relations are internal to their terms and form part of the identity of the related terms. In saying that any one object exists, we are therefore implicitly affirming the existence of all other objects and reality forms a single unity. Monism has a wider application, referring to any attempt to account for phenomena by a single principle.

"In its extreme form monism sees it as a matter of logic that everything is unified." — Ayer, *Philosophy in the Twentieth Century*, 1982, p. 10.

Mood

In syllogistic logic, mood is every valid form within each of the four figures of categorical syllogism. For instance, the first mood of the first figure is called "Barbara", with the form: "If all S are Q, and all P are S, then all P are Q".

In the philosophy of mind, mood is a temporary emotional state of the mind which colours a person's reactions.

In the philosophy of language, different moods, such as indicative, imperative, optative and subjunctive, indicate different forces of the same utterance.

"Given any signal σ of the system, L is to assign it an interpretation $\langle \mu, \tau \rangle$. The component, μ , called a mood, indicates whether σ is indicative or imperative. The component τ of an interpretation, called a truth condition, indicates the state of affairs in which σ is true." — Lewis, *Conventions*, 1969, p. 151.

动因而同时用发生和倾向性来解释某个东西。这种陈述可以解释像注意、留心这样的心的概念。这种概念似乎总是包含一个实际的或当前的元素。

"我将称像'你会做你曾做的事'这样的陈述为'准假设的'或'混杂范畴陈述'。" —— 赖尔:《心的概念》, 1949年, 第135页。

一元论

C. 沃尔夫发明的术语, 指任何主张实际上只存在一类实体的形而上学理论。实际存在的可以是物(如唯物主义所主张的), 或是心(如唯心主义所主张的)。中立一元论认为, 心和物二者都来自于某种中立的基本实在。斯宾诺莎的一元论认为, 上帝—自然是单一的最终实在。对一元论的论证可以追溯到古希腊的巴门尼德。一元论既反对二元论——它主张世界上有两种基本实在, 又反对多元论——它主张实在中有许多终极的、不可还原的基质。英国的新黑格尔主义者, 尤其是布拉德雷提出了一种特别的一元论。根据这种主张, 所有的关系都内在于其关系项, 并构成关系项同一性的一部分。在我们说对象存在时, 我们也由此隐含地断定了所有其他对象的存在, 实在构成单一的统一体。一元论应用得较广, 指任何用单一原理来说明现象的企图。

"最极端的一元论把任何事物都是统一的看成一件逻辑上的事。" —— 艾耶尔:《20世纪的哲学》, 1982年, 第10页。

论式, 情绪, 语气

在三段论逻辑中, mood(论式)是直言三段论的四个格每个格内的每一有效式。例如, 第一格的第三论式叫做"巴巴拉", 其形式是: "如果所有的S都是Q, 而所有的P都是S, 那么所有的P都是Q。"

在心的哲学中, mood(情绪)是心的一种暂时的感情上的状态, 这一状态使一个人的反应带有感情色彩。

在语言哲学中, 不同的 mood(语气), 例如陈述的、祈使的、祈愿的、虚拟的, 表示的是同一话语的不同意义。

"设定这一系统为任意符号 σ , L 被指定为它的解释 $\langle \mu, \tau \rangle$ 。解释组成部分 μ 叫做语气, 它表明 σ 是陈述的还是祈使的。解释组成部分 τ 叫做真值条件, 表明 σ 于其中是真的那种事态。" —— 刘易斯:《约定》, 1969年, 第151页。

Moral

[from Latin: *moralis*, manner, custom, conduct, corresponding to Greek *êthos*. Latin *moralis* places greater emphasis on the sense of social expectation, while Greek *êthos* gives heavier weight to individual character.] Being moral concerns human actions which can be evaluated as good or bad and right or wrong. These actions are in our power and we can be held responsible for them. If a person's actions conform to rules of what is morally right, he is said to be moral. If he violates them, he is immoral or morally wrong. A moral action is also opposed to an amoral action, which is morally value-free, that is, neither right nor wrong. Conflicts can arise between socially accepted rules of morality and rules determined by reason and individual conscience.

"The word 'moral' when it is used as a term of praise is contrasted with 'immoral', or sometimes 'amoral', but is contrasted with 'non-moral' when used as a universe-of-discourse word." - Cooper, *The Diversity of Moral Thinking*, 1981, p. 26.

Moral absolutism

The view that there are certain moral objective principles which are eternally and universally true, no matter what consequences they bring about. These principles can never justifiably be violated or given up. Paradigms of such principles include "don't lie", "keep your promises", and "don't kill innocent people". Moral absolutism is generally represented by various religious moral systems. Kantian deontology is closely associated with moral absolutism, since it claims that some actions are right or wrong intrinsically or in themselves and that they may never be used as means to ends. However, contemporary deontology tends to distance itself from absolutism by admitting the principle of double effect, although the extent to which this stance is successful is disputed. Generally, moral absolutism is contrasted to consequentialism, which believes that the rightness or wrongness of an action is determined by the consequences it promotes, and hence any moral principle can be overridden. It is also contrasted to moral relativism which claims that all concepts of right and wrong are culturally relative and provincial.

"By 'moral absolutism' is meant the theory according to which there are certain kinds of actions that are absolutely wrong: actions that could never be right whatever the consequences." - Haber (ed.), *Absolutism and its Consequentialist Critics*, p. 1.

Moral agent

Any individual who is capable of formulating or following general moral principles and rules, and who has an

道德的

[源自拉丁词 *moralis*, 意为“风度(举止)、习惯、行为”, 对应于希腊词 *êthos*。拉丁词 *moralis* 更多强调的是社会期望, 而希腊词 *êthos* 则有更重的个人品质的色彩]有道德的是指能够评价为善或恶、对或错的人类行为。这些行为是我们能够控制的, 也是我们能够负责的。如果一个人的行为符合道德上正当的规则, 他就可说是有道德的。如果他违反了它们, 他就是不道德的或在道德上是错的。一个道德行为也是与一种非道德的活动相对的, 后者是一种无道德价值的行为, 即既不是对的, 也不是错的。而在社会所接受的道德规则与为理性所确立的规则和个人的良知之间可能会产生冲突。

“‘道德的’一词, 当它用作一个赞美词时, 是与‘不道德的’相对的, 有时是与‘非道德的’相对的, 而当它用作一种普遍的描述词时, 它是与‘无道德的’相对的。”——库珀:《道德思考的多样性》, 1981年, 第26页。

道德绝对主义

这个论点是, 有一定的道德客观原则, 它们是永恒地、普遍地正确, 不论它带来的后果是什么, 这些原则绝不能被合理地侵犯或放弃。这种原则的范例包括“不许撒谎”、“遵守诺言”、“不得杀害无辜”等等。道德绝对主义一般为宗教道德体系所代表。康德的道义论是与道德绝对主义密切相关的, 因为它主张, 某些行为的正当与否, 是由这些行为本身所决定的, 而且这些行为决不是达到目的的手段。不过, 当代道义论通过承认“双重效果原则”而倾向于把它自己与绝对主义区别开来, 虽然对这种姿态成功的程度还有争议。一般而言, 道德绝对主义是与效果论相对的。效果论相信, 一个行为的正当与错误是为它所致的后果所决定的, 因此, 任何道德原则都是可以超越的。它也是与道德相对主义对立的, 道德相对主义宣称, 所有关于正当与错误的道德概念, 都是在文化上相对的和有地方性的。

“‘道德绝对主义’是指这种理论: 它认为某些行为绝对是错的, 不论其后果是什么, 这些行为决不可能是正当的。”——哈伯(编):《绝对主义和对它的效果论的批评》, 第1页。

道德行为者

指任何能够构建或遵循普遍的道德原则和规则的人, 他或她有着自律意志, 能最终决定应

autonomous will so that he can decide ultimately what acts he should perform and not perform. Moral agents can react to the acts of other moral agents. Accordingly they are responsible for their acts and are the subject of blame or praise. Adult human beings are paradigmatic moral agents. Moral agents are contrasted to moral patients: beings that lacks rationality and cannot be held morally accountable for their acts.

"Moral agents are individuals who have a variety of sophisticated abilities, including in particular the ability to bring impartial moral principles to bear on the determination of what, all considered, morally ought to be done and having made this determination, to freely choose or fail to choose to act as morality, as he conceives it, requires."—Regan, *The Case for Animal Rights*, 1983, p. 151.

Moral argument for the existence of God

An argument credited to Kant for the existence of God based upon human moral experience. Kant derived morality from reason alone and not from divine authority, but believed that being moral is not sufficient to secure happiness. Happiness must be added to morality, although only a moral person is worthy of being happy. Being happy means that everything proceeds according to my will and desire. A happy moral person has the highest good that can be acquired in the world. But to guarantee that everything will go according to a person's will and desire and thus to ensure the moral person's ultimate happiness, it is inevitable that we postulate the existence of God. The moral argument has been very popular since Hume and Kant attacked the ontological and cosmological arguments and the argument from design, although later versions depart from Kant's formulation. In later versions the argument proceeds from the existence of moral commands to the existence of God as moral commander, from the existence of moral authority to the existence of God as the authoriser, and from the existence of moral laws to the existence of God as law-giver. Thus, morality itself is claimed to be determined by divine will. This argument is criticised by naturalistic ethics which sees no need to postulate God in order to explain the existence of human moral institutions.

"The Moral Argument is a transcendental argument in the sense that it endeavours to show the existence of God is a necessary condition of morality."—T. McPherson, *The Philosophy of Religion*, 1965, p. 89.

Moral atomism

A variety of ethical theories which take individuals, their rights, value or interests, as the basis for our thinking about moral right and wrong. It contrasts with moral holism, which places ultimate value on the system rather than on the individuals which compose the system. Most

履行和不应履行什么行为的人。一个道德行为者能对其他道德行为者的行为作出反应。因此,他们对自己的行为负有责任,而且也是责备和赞扬的主体。成年人是典型的道德行为者。道德行为者是道德被动者相对照的。道德被动者是指一个缺乏理性、不能为他们的行为负道德责任的人。

"道德行为者是指这样的个体,他们具有多种复杂的能力,尤其是具有能运用公正的道德原则去决定(深思熟虑之后)在道德上应当做以及已经做出这个决定的能力,和能自由地选择不选择按他所认为的道德要求行为的能力。"——里根:《动物权利问题》,1983年,第151页。

上帝存在的道德论证

以人类的道德经验为基础论证上帝存在,此论证归于康德。康德仅从理性而不从神的权威引出道德,但他相信,有道德不足以获得幸福。必须把幸福加到道德上,虽然只有道德的人才配享有幸福。幸福意味着每件事情都按我的意志和欲望进行。一位幸福的、道德的人具有最高的善,而这种善是能在这个世界获得的。但是,为了确保每件事情会按人的意志和欲望进行,并因此而确保道德之人的最终幸福,我们不得不假定上帝存在。由于休谟和康德抨击了本体论论证、宇宙论论证和设计论证,这种道德论证就非常流行,虽然后来的种种说法超出了康德的阐述。在后来的说法中,该论证从道德命令的存在推到作为道德命令者的上帝的存在,从道德权威的存在推到作为授权者的上帝的存在,从道德法则的存在推到作为立法者的上帝的存在。这样,道德本身就被说成是由神的意志决定的。这种论证受到了自然主义伦理学的批判,后者认为,为解释人类道德设定的存在,无需假定上帝。

"'道德论证'是一种超验论证,因为它竭力表明上帝的存在是道德的必要条件。"—麦克斐尔逊:《宗教哲学》,1965年,第89页。

道德原子主义

指那些把个人以及个人的权利、价值或利益作为思考道德对错的基础的理论。它与道德整体主义相对立,后者强调终极价值在于系统而不在于组成系统的个人。大多数西方伦理理论属于道德原子主义,而柏拉图在他的《国家

Western ethical theories belong to moral atomism, while Plato's ethics in the *Republic* is an example of moral holism. The contrast between moral atomism and holism is striking in environmental ethics. While one position extends human-centred ethics to consider the rights or interests of animals, the other position, represented by land ethics, claims that the ecosystem rather than the various individuals in it should be the focus of our moral consideration. This version of moral holism is also called ecological holism.

"Despite their many differences, all of the normative ethical theories discussed so far are in a certain sense atomistic; that is, each demands that individuals be considered equitably." —Regan (ed.), *Matters of Life and Death*, 1993, p. 25.

Moral certainty

The certainty that the natural sciences possess is regarded to be universal or demonstrative, while the social sciences cannot achieve such a degree of certainty, for it involves human affairs. Accordingly, social science is said to possess only moral certainty, because it is generally but not universally true. The word "moral" here is not associated with good or bad, but means pertaining to human affairs or practical concerns. This distinction can be traced to Aristotle's *Nicomachean Ethics*, and has been widely endorsed in the history of philosophy.

"Moral certainty is sufficient to regulate the conduct of one's life even if it is in principle possible that we can be mistaken." —Descartes, *Principles of Philosophy*, sect. 4.

Moral community

Those within the scope of moral consideration. In traditional ethics, only human beings were held to have membership of the moral community. They are the only objects of moral concern because only human beings have reason and hence know what they are doing. Furthermore, only human beings can be in reciprocal relationships involving the recognition of oneself and others as being in a moral relationship. This implies that the moral community consists exclusively of moral agents. Some contemporary moral philosophers, especially those working in environmental ethics, claims that it is a prejudice to restrict the moral community to human beings. If cognitive conditions are necessary for moral concern, some humans, such as infants and brain damaged persons, should be excluded, and some kinds of animals should be included. They claim that rationality should not be the grounds for belonging to the moral community. But the question of what the criterion should be is a matter of dispute. Some philosophers suggest that all subjects-of-a-life should have the same right to be respected as a member and that the moral community should extend to many kinds of animals. Others believe that

篇》中的伦理学是道德整体主义的一个例证。道德原子主义与整体主义的对立在环境伦理学中最为显著。当一种观点在于将人类中心伦理学扩展到考虑动物的权利与利益时,以土地伦理学为代表的另一种观点主张,应该成为我们道德考虑中心的是生态系统而不是在生态系统中的多样个体。道德整体主义的这种观点也称“生态整体主义”。

“尽管它们有许多不同,目前为止讨论的所有规范伦理学理论在一定的意义上都是原子主义;即每种理论都要求平等地考虑个人。”——里根(编):《生命与死亡的问题》,1993年,第25页。

道德确然性

自然科学所具有的确然性被看做是普遍的和证明性的,而社会科学不能获得这种程度的确然性,因为它涉及到人类的事务。因此,社会科学据说仅有“道德的确然性”,因为它是一般性的,但不是普遍正确的。“道德的”这一词在这里并不与善或恶相联,而是意味着与人类的事务或实践相关。这个区分可追溯到亚里士多德的《尼各马可伦理学》,并在哲学史上多有同道者。

“即使我们犯错误在原则上是可能的,道德确然性也足以调整一个人的行为。”——笛卡尔:《哲学原理》,第四部分。

道德群体

在道德考虑范围内的那些群体。在传统的伦理学中,只有人类被认为具有道德群体成员的资格。他们是道德关注的惟一对象,因为只有人类才有理性,因而知道他们在做什么。进而言之,只有人类才能处于交往关系之中,这些关系包括承认自己与他人处于道德关系之中。这意味着道德群体仅是由道德行为者构成的。当代一些道德哲学家,特别是从事环境伦理学研究的那些人提出,把道德群体限于人类是一种偏见。如果认识条件对于道德关注是必须的,那一些人,如婴儿和脑损伤者,就应被排除在外,而某些动物则应包括在内。他们主张,理性不应是属于道德群体的根据。但判断的标准应是什么却是一个有争议的问题。一些哲学家提出,所有生命主体都应拥有作为一个成员同样受到尊重的权利,因而道德群体应扩展到很多动物。另一些哲学家认为,感觉能力应是判断的标准,因而道德群体应包括任何能感受到痛苦的生命。一些哲学家争论说植物和动物都应被包括在内;还有一些哲学家认为整个生态系统及其成员都属于道德群体。一些哲学家主张,即使我们遇上

sentience should be the criterion and that the moral community should include any being that is capable of suffering. Some argue that plants as well as animals should be included, while others believe that the whole ecosystem and its members belong to the moral community. Some philosophers claim that even if we encountered fully rational non-human beings, our basic moral concern would be restricted to humans on the basis of a recognition of ourselves as members of a species.

"Let us define the notion of the moral community as comprising all those individuals who are of direct moral concern or alternatively, as consisting of all those individuals toward whom moral agents have direct duties."—Regan, *The Case for Animal Rights*, 1983, p. 152.

Moral compromise, see compromise

Moral conservatism

A contemporary ethical position emerging out of the anti theory movement, represented by Williams, Nussbaum, and MacIntyre. It attempts to establish ethics without appealing to universal principles, but through examination of particular social conventions, traditions and practices. Its central characteristics include an emphasis on the plurality and diversity of the values and practices of a community, and an objection to any impersonal or universal point of view which places moral judgements above local context. It believes that moral claims can only be assessed from within the historical tradition in which they are embedded, and objects to the universal application of prescriptions. It denies the dichotomy of reason and emotion, and emphasises the formation of virtue. Moral conservatism is associated with virtue ethics, moral particularism, and communitarianism. However, though it tries to distance itself from moral relativism and advocates the practice of critical reflection, it still faces the major difficulty of explaining how it is possible to criticise a culture if the ethical life of the community is primary. The theory is still being developed.

"The second group of writings, *moral conservatism*, offers positive accounts of morality in terms of custom and practice."—Clarke and Simpson, *Anti-Theory in Ethics and Moral Conservatism*, 1989, p. 3.

Moral dilemma

A situation in which one person is morally pulled in opposite directions. In these situations, different apparently sound reasons support different courses of action that cannot be jointly undertaken. The moral agent has reason to do A and has reason to do B, but he cannot do both A and B. Although it is not this person's fault for getting into the dilemma, whatever direction is chosen will inevitably be

完全理性的非人类的生命,我们基本的道德考虑也应只限于人,理由是我们把自己视为一个物种的成员。

“让我们把道德群体概念定义为包括所有那些直接受到道德关注的个人,或是由所有那些道德行为者对其负有直接责任的个人构成的。”——里根:《动物权利问题》,1983年,第152页。

道德妥协

见“妥协”条。

道德保守主义

出现在当代反理论运动中的一种伦理观点,以威廉姆斯、纽斯堡姆、麦金泰尔等人为代表。它企图不诉诸于普遍性准则,而是依据特殊的社会习俗、传统和实践来建立伦理学。它的主要特征包括,强调共同体的实践和价值的多元性和差异性,反对把道德判断置于具体情景之上的非个人或普遍的观点。它相信,道德主张只有在它们所体现的历史传统范围内才可能得到评价,它也反对对规定的普遍运用。它否定理性和情感的二分法,而强调德性的形成。道德保守主义与德性伦理学、道德特殊主义和共同体主义相关。不过,虽然它力图把自己与道德相对主义区分开来,提倡实行批评性反思,它仍然面对着这样的主要困难:如果一种共同体的伦理生活是主要的,怎么可能批评这种文化。这个理论仍然在发展中。

“第二类著作,道德保守主义,根据习俗和实践而对道德给予明确说明。”——克拉克和辛普森:《伦理学中的反理论和道德保守主义》,1989年,第3页。

道德困境

这个处境是,一个人在道德上同时被推向了相反的方向。在这类处境中,明显不同却又似乎合理的理由支持着无法联合完成的不同行为过程。道德行为者有理由做A,也有理由做B,但不能既做A又做B。虽然一个人进入这种困境不是他或她个人的过错,但不论这人选择什么方向,都将不可避免地某些方面犯道德错

morally wrong in some respect and result in the sense of guilt or remorse. For example, a case may arise in which telling the truth (which is required as a moral principle) will involve moral wrongdoing by breaking a promise to someone else to remain silent. In another case, returning a weapon one has borrowed may predictably lead to serious injuries to some innocent person. In such cases one cannot do all that is morally required. Moral dilemmas are the stuff of tragedies. Since to hold that there is one sovereign moral principle, for example utilitarianism, leads to moral dilemmas in many circumstances, this phenomenon represents a challenge to such theories. However, it is a test of every moral theory that it provides some reasonable way to deal with moral dilemmas, although the fact that no way is completely effective might tell us something about the nature of morality.

"The standard definition of moral dilemmas seems to include all and only situations when (at the same time) an agent ought to adopt each of two alternatives separately but cannot adopt both together."—Sinnott-Armstrong, *Moral Dilemmas*, 1988, p. 5.

Moral epistemology, see ethical knowledge

Moral expert

Moral philosophers are often regarded as being able to offer advice about how one should live or about whether an action is wrong or right, just as an art historian can advise whether an artwork is real or a forgery. This attitude takes moral philosophers to be moral experts. The notion of a moral expert is strongly objected to by moral non-cognitivism. Non-cognitivism denies the existence of objective ethical value and accordingly rejects the view that there is any authority who can tell us how to live our lives. According to this theory, morality is nothing but an expression of one's own preferences or emotions. What I need to know when I am making a moral judgement is what I feel in the situation in question. The position of non-cognitivism is not widely shared. Nowadays many philosophers sit on government commissions of enquiry and corporate and institutional ethics committees. The need for advice on a variety of morally complicated issues has greatly promoted the development of applied ethics. However, it is not clear whether moral advice is a matter of good judgement which can be detached from any moral theory, an ability to articulate and clarify moral issues without drawing moral conclusions or a combined capacity to provide moral theory leading to moral conclusions. Although they accept the notion of moral advice, some philosophers object to moral experts making moral decisions for us on the grounds that this would compromise our autonomy as moral agents. They

误,而产生一种负疚感或自责感。例如,在一种情形下说真话(这是道德原则所要求的),将不可避免地要毁了对另一个人保持沉默的诺言,或者是归还某人所借的武器,可以预见到将导致对某些无辜者产生严重的伤害。在这些情形中,一个人不能做道德上所要求的所有事,道德困境永远是悲剧的素材。如果我们认为有一种主导性的道德原则,例如功利主义在许多情况下易于导致道德困境,这种现象就代表了对这种理论的一种挑战。不过,提供某种合理的方式来解决道德困境,这已成了每一道德理论的试金石,尽管没有一种方式是完全有效的,而这一事实也许会揭示道德的某种性质。

"对于道德困境的标准定义似乎包括所有并只有这样的处境:即一个行为者在同一时刻应当分别采用两者之一而不能一并采用。"——辛诺特·阿姆斯特朗:《道德困境》,1988年,第5页。

道德知识论

见“伦理知识”条。

道德专家

道德哲学家常常被认为能够对一个人应如何生活,或一个行为是对还是错提出建议,就如同艺术史学家可以提出一件艺术品是否是赝品的建议一样。这一看法把道德哲学家看做道德专家。道德专家这一概念受到道德非认知主义的强烈反对。非认知主义否认客观的道德价值的存在,因此拒绝接受世上存在能告诉我们怎样生活的权威这一观点。按照这一理论,道德不过是某人自我的偏爱或感情的一种表达。在我做出一个道德判断的时候,我需要知道的是在所说的处境中感觉如何。非认知主义的见解不为人们所广泛认同。现今很多哲学家是政府咨询委员会和社团的、公共机构的伦理委员会的成员。对种种复杂的道德问题提出建议的需要极大地促进了应用伦理学的发展。不过,道德建议是否是—种可与任何道德理论相分离的好的判断的问题,是否是一种无需给出道德结论而可以清楚地表达和阐述道德问题的能力,或是否是一种提供通向道德结论的道德理论的综合能力,这些都不清楚。尽管一些哲学家接受道德建议的看法,但他们反对道德专家为我们作道德决定,其理由是这将危及我们作为道德行为者的自律性。他们认为,按他人的计划去生活不会带来一种好生活,无论这种计划有多么好。总之,他们争论说,道德不像其他学科一样是可以教授的。据此,道德专家的性质就成问题了。

claim that leading a life on someone else's plan is not to lead a good life, however good the plan might be. In any case, they argue that morality cannot be taught like other subjects. On this view, the nature of moral expertise becomes problematic.

"The notion of a moral expert makes no sense on the non-cognitivist view, (for) there are no moral facts about which he or she might have special knowledge."—McNaughton, *Moral Vision*, 1988.

Moral holism, see moral atomism

Moral judgement

The content of a proposition which typically discriminates between good or bad or between right and wrong and determines what should be done in a moral context. Also, moral judgement is the capacity to make such judgements or to make them well. Moral judgements are practical in that they provide direct guidance for action. Different ethical theories have different views about the nature of moral judgements and their relation to action. Moral objectivism claims that a true moral judgement corresponds to objective moral properties, but leaves open the question of why knowledge of such facts would guide action. Deontology holds that a moral judgement is a type of command, used to telling people, including ourselves, what we should or should not do. Emotivism claims that a moral judgement is an expression of a purely personal preference. A view derived from Aristotle holds that a moral judgement is an application of universal moral principles to a particular situation within the scope of the principles. This view recognises that practical reason might need to reach an equilibrium between universal rules and particular circumstances when the rules cannot be straightforwardly applied to the circumstance. On this view, a moral judgement has cognitive and rational elements and is more than a mere a response of feeling. It can be universalised and publicly advocated rather than merely privately preferred.

"To make a moral judgement of an action, person, etc. is to judge the action by relating it to either a moral rule or a moral ideal."—Gert, *The Moral Rules*, 1973, p. 173.

Moral knowledge, another term for ethical knowledge

Moral law

For Kant, all moral laws are principles or maxims, but not all principles or maxims are moral laws. A moral law is a maxim on which a rational being acts, and which he would will to be a maxim for all rational beings. A moral law must have objective necessity and be recognised by reason. It must

"道德专家这一概念在非认知主义的观点看来是毫无意义的,因为不存在他或她能具有专门知识的道德事实。"—麦克诺顿:《道德见解》,1988年。

道德整体主义

见“道德原子主义”条。

道德判断

一种命题内容,它典型地区分了好与坏或对与错,并确定了在道德情景中应做什么。道德判断也是做出这种判断或使判断更好的能力。道德判断具有实践性,因为它们提供对行为的直接指导。不同的道德理论对道德判断的本质及它们与行为的关系有不同的看法。道德客观主义主张真实的道德判断是与客观的道德特性相符合的,但没有解决为什么关于这种事实的知识能够指导行为这一问题。义务论认为道德判断是一类命令,它是用来告诉人们,包括我们自己,什么是我们应当或不应当做的。情感主义认为道德判断是纯粹的个人偏爱的表示。一种出自亚里士多德的观点认为,道德判断是普遍的道德原则在这些原则所及范围内的特殊情况中的应用。这一观点认识到,当普遍规范不能直接应用于特殊情况时,实践理性就要求在普遍规范和特殊情况之间达成一种平衡。根据这一观点,道德判断具有认识的和理性的因素,并不只是感情的反应。它可以普遍化并可以公开提倡,而不仅仅是个人的偏好。

"对一个行为、一个人等等做出道德判断,就是通过将它与道德规范或道德理想联系起来去判断那一行为。"—格特:《道德规范》,1973年,第173页。

道德知识

“伦理知识”的另一个词。

道德法则

对于康德来说,一切道德法则都是原则或准则,但并非所有的原则或准则都是道德法则。道德法则是理性存在者按照它来行动并愿意把它作为一切理性存在者的准则的准则。道德法则必须具有客观必然性并通过理性来认识。它

give rise to imperatives which are definite and specific, yet universal in application. In Kant's ethics, a moral law applies only to rational beings and determines how a rational being as such would necessarily act. It lays down a rule that does not admit of exceptions and which commands rather than counsels. A moral law is a categorical imperative. It is not derived from empirical fact, but is prescribed by reason itself as the ground of its own action. Since Kant believed that a person obeys a categorical imperative only if his will is free, the notion of a moral law leads to an assertion of the existence of freedom.

Kant's notion of a moral law is the culmination of a tradition in Western ethics which views ethics as a network of moral laws which are recognised *a priori* and applied universally. This tradition is opposed to the tradition of Aristotelian virtue ethics, which holds that the application of universal principles should be adjusted according to the salient features of the circumstances in which the principles are applied. Kant's notion of a moral law has become the main target of the current revival of virtue ethics.

"In contrast to laws of nature, these laws of freedom are called moral laws." — Kant, *Metaphysics of Morals*, Introduction, I.

Moral luck

Traditional ethics claims that one's moral status is not subject to luck, that is to matters of chance or factors beyond one's control. Kant states at the outset of his *Foundation of the Metaphysics of Morals* that good will, which is the source of moral worth, is independent of the contingencies of the world. Hence he distinguishes between a moral area which is immune to luck and an amoral area which is inevitably vulnerable to luck, and confines his ethics to rational agency and universal principles. This luck-free morality is challenged by Williams and Nagel. They argue that the estimation of moral worth, and notions such as responsibility, justification, and blame, are indeed subject to luck, and hence morality is also threatened by luck. Williams maintains that luck will influence one's motives, intentions and personality, and is hence closely related to one's moral decisions and moral justifications. Nagel distinguishes different kinds of luck which deeply affect morality: constitutive luck, that is the factors which influence one's constitution as an agent (for example different family background, different environment or education); circumstantial luck, for example the problems and situations one faces; the luck which affects the cause of an action; and the luck which affects the result of an action. Moral dilemmas can also be viewed as a kind of circumstantial luck. Different luck will result in different levels of responsibility for the agent and different moral judgements by others. If I drive a car carelessly, my action will not mean much if no

必须导致确定的、专门的, 然而普遍应用的命令。在康德的伦理学中, 道德法则只应用于理性存在者, 确定了这种理性存在者如何必然地行动。它规定了一种不允许有例外并且是作出命令而不是劝告的规则。因此, 道德法则是绝对命令。它不是来自经验事实, 而是理性把自身规定为它自己行为的根据。由于康德认为, 一个人如果他的意志是自由的, 就只会服从绝对命令, 所以道德法则的观念导致了对自由的存在的确断。

康德的道德法则概念是这样一种西方伦理学传统的顶端, 这种传统把伦理学视为道德法则之网, 而道德法则被先天地认识和普遍地应用。这种传统对立于亚里士多德德性伦理学的传统。后者主张普遍原则的应用应当根据原则被应用的情况的显著特征而调整。康德的道德法则的概念在现代的德性伦理学的复兴中已成为众矢之的。

“相对于自然法则, 这些自由法则称为道德法则。” — 康德:《道德形而上学》, 导言, I。

道德运气

传统伦理学宣称, 一个人的道德形象不受运气、即不受人们不能控制的机遇或因素的影响。康德在他的《道德形而上学基础》的开篇处谈到, 善良意志是道德价值的来源, 是独立于世界的偶然性的。因此, 他区分了一个不受运气影响的道德领域, 和一个不可避免地要受运气影响的非道德领域, 而把他的伦理学界定在理性主体和普遍原则上。这种不受运气约束的道德受到威廉姆斯和内格尔的挑战。他们论证道, 对于道德价值、责任、合理性证明、指责等概念的评估, 确实受到运气的影响, 因此道德也受到运气的威胁。威廉姆斯认为, 运气也影响到一个人的动机、意图和人格, 因此是与一个人的道德决定和道德合理性证明密切相关的。内格尔区分了四种深深影响道德的运气: 构成性运气, 即影响到作为一个行为者的构成性主体的因素(例如, 不同的家庭背景、不同的环境或教育); 环境运气, 即一个人所面对的问题和处境; 影响行为原因的运气以及影响行为结果的运气。道德困境也可看做是一种环境运气。不同的运气对行为者将导致不同层次的责任和对他人会形成不同的道德判断。我心不在焉地开车, 如果不发生什么严重后果, 这种行为没有什么意义, 而如果我碰巧撞倒和压死一个孩子, 那事情就完全不同了。道德运气的问题是反理论运动的一个必不可少的部分, 并导致了诸如德性伦理学和道德情景主义这样的承认运气偶然性的道德思考

serious consequence occurs, but it means something entirely different if I happen to crash and kill a child. The problem of moral luck is an indispensable part of the anti-theory movement, and leads to the creation of moral stances that recognise the contingencies of luck, such as virtue ethics and moral contextualism.

"If moral luck is thinkable, possibly even acceptable, in regard to the character of particular acts, then perhaps the status of certain virtues as virtues can depend on a kind of cosmic (moral) luck."—Slote, *Goods and Virtues*, 1983, p. 57.

Moral patient

A moral status, in contrast to that of moral agent. Traditionally, only rational human beings can be moral agents, for they must hold responsibility for their actions. Marginal human beings, such as children and brain damaged people are not regarded as having moral responsibility for their behaviour, and hence are not moral agents. However, they are still the objects of moral consideration and are protected from suffering by moral laws. Accordingly they are referred to as moral patients. Moral patients cannot formulate or follow moral principles and rules. They can bring about great pain and even disasters to others, but we cannot say that they are morally wrong for doing that. Equally, their acts may bring about good consequences, but we do not say that they are morally right for performing them. Moral agents can act wrongly or rightly in ways that affect moral patients, but moral patients cannot act reciprocally towards moral agents. Contemporary environmental ethics claims that the scope of moral patients should not only include marginal human beings, but also sentient animals, and even the whole biocommunity. A difference in moral status requires different moral considerations and can involve the appeal to different moral principles. This results in a variety of moral tensions in practice. For instance, a foetus is a moral patient. To consider its interest might make abortion immoral. (On the other hand, if we appeal to the autonomy of the mother, abortion would be permissible.

"In contrast to moral agents, moral patients lack the prerequisites that would enable them to control their own behaviours in ways that would make them morally accountable for what they do."—Regan, *The Case for Animal Rights*, 1983, p. 152.

Moral philosophy, see ethics and morality

Moral point of view

To consider or judge behaviour from the perspective of moral rules or principles, rather than from the viewpoint of

方式的创造。

“就具体行为的特性而言,如果道德运气是可以考虑的、可能的并且是可接受的话,那么,也许把一定的德性作为德性的地位就取决于一种宇宙性的(道德的)运气。”——斯洛特,《善与德性》,1983年,第57页。

道德被动者

一种道德身份,与道德行为者相对。在传统意义上,惟有有理性的人能够是道德行为者,因为他们能对他们的行为负责。边缘人,诸如儿童和脑损伤者就不被认为能对他们自己的行为负有道德责任,因此不是道德行为者。不过,他们仍然是道德考虑的对象并受到道德法则的保护以免受伤害。因此,他们被归为道德被动者。道德被动者不能构建或遵循道德原则或规范。他们能对他人带来巨大的痛苦甚至灾难,但我们不能说他们这样做在道德上是错的。同样,他们的行为也能带来好的后果,但我们也不能因此而说他们在道德上是正当的。道德行为者影响道德被动者的方式可能是错误的或正当的,但道德被动者不能以相应的行为来回应道德行为者。当代环境伦理学宣称道德被动者的范围不仅应包括边缘人,也应包括有感觉能力的动物,甚至整个生物共同体。不同的道德身份要求不同的道德考虑,涉及到诉诸不同的道德原则。这导致了实践中的多种道德张力。例如,胎儿是一个道德被动者。要考虑他的利益则堕胎就是不道德的。另一方面,假如我们诉诸于母亲的自主性,堕胎就应是许可的。

“与道德行为者相对,道德被动者缺乏使他们能够控制他们自己行为的先决条件,即使他们在道德上能对他们所做的负责。”——里根,《动物权利问题》,1983年,152页。

道德哲学

见“伦理学和道德”条。

道德观点

从道德规范或原则的视角而不是从自我利益的视角来考虑或判断行为。道德哲学的主要

one's self-interest. The main question of moral philosophy is "Why ought I to be moral?". Thus we must justify why human beings should consider their acts from a moral point of view. Different moralists provide and argue for different points of view, and they are always in conflict. The central tradition of modern moral philosophy claims that morality is the only important thing in one's life, but contemporary virtue ethics believes that it is only a part and that human lives should have other commitments. On this basis, the main question of moral philosophy would be Socrates' question "How should I live?".

"In order to consider the relation between individual rationality and what is sometimes called 'the moral point of view' one has to decide on criteria of rationality, and this is a semi-conceptual investigation."—Cooper, *The Diversity of Moral Thinking*, 1981, p. 10.

Moral principle, see moral rule

Moral psychology

An essential part of ethics, especially in contemporary virtue ethics, concerned with the structure and phenomenological analysis of those psychological phenomena which have great bearing on moral behaviour or action. These phenomena include cognitive states such as deliberation and choice; emotional states such as love, mercy, satisfaction, guilt, remorse and shame; and desires, character and personality. Moral psychology aims to improve understanding of human motivations and emotions. It is also related to the philosophy of law.

"... The problem of the origin of moral judgements and moral sentiments, which is often discussed in 'ethical' writings... but nonetheless belongs to the province of moral psychology"—Pap, *Elements of Analytic Philosophy*, 1949, p. 16.

Moral realism

Any moral theory which holds that moral facts or ethical properties, such as being good or bad or being virtuous or evil, exist independent of our beliefs and will, and that ethics should find out truths about them. It is realism applied to moral affairs and moral statements. It is related to moral objectivism, but contrasts to moral subjectivism and moral relativism. Corresponding to Dummett's characterisation of realism, moral realism is also defined as the claim that moral judgements obey the law of excluded middle and can be true or false. The truth of moral judgements is independent of the evaluator's moral beliefs.

Sometimes it is used in a special sense to refer to Jean Piaget's theory which suggests that we have gone through an essential early stage of moral belief in which moral rules are

问题是“我为什么应当是道德的?”我们必须论证为什么人类应当从一种道德观点考虑他们的行为。不同的道德学家提供和论证了不同的道德观点,它们经常是冲突的。现代道德哲学的核心传统认为道德在一个人的生活中是惟一重要的事情,但当代德性伦理学相信道德仅是生活的一部分,人类的生活应该有其他承诺。据此,道德哲学的主要问题应该是苏格拉底的问题:“我应该怎样生活?”

“为了考虑个人理性与有时被称为‘道德观点’的东西的联系,一个人不得不决定理性的标准,并且这是一种准概念式的研究。”——库珀:《道德思考的多样性》,1981年,第10页。

道德原则

见“道德规范”条。

道德心理学

伦理学的一个实质性部分,特别是在当代德性伦理学中,它涉及到那些与道德行为有重大关系的心理现象的结构和现象学的分析。这些现象包括审慎和选择等认知状态,爱、怜悯、满意、负疚、自责、羞愧等情感状态以及欲求、品格、人格等。道德心理学的目的在于较好地理解人的动机和情感。道德心理学也与法哲学相关。

“……道德判断和道德情感的起源问题,常常在‘伦理的’著作中得到讨论……但它们属于道德心理学的范围。”——帕普:《分析哲学原理》,1949年,第16页。

道德实在论

这样的道德理论相信,道德事实或伦理性质诸如好(善)与坏、德与恶是不依赖我们的信念和意志而存在的,并认为伦理学应当发现有关它们的真理。它是运用于道德事务和道德陈述的实在论。它与道德客观主义相关,而与道德主观主义和道德相对主义对立。相应于达米特对实在论的描述,道德实在论也被界定为这样的一种主张:道德判断服从排中律因而能够是真或是假。道德判断的真独立于评价者的道德信念。

有时它在一种特别的意义上使用,即指称J. 皮亚杰的理论。皮亚杰的理论认为,我们已经经过了一个道德信念的实质性的早期阶段,在这个阶段,道德规则被看做是永恒的和独立

viewed as eternal and independent of social function and in which the degree of praise and blame depends on the consequences of actions rather than intent. According to Piaget, this may be found in the moral development of children in our societies and among adults in primitive societies.

"Moral realism can now be defined as the claim that some moral judgements are true and every moral judgement is true if and only if certain conditions obtain that are independent of the actual and ideal moral beliefs and choices of the people who judge and are judged."—Sinnott-Armstrong, *Moral Dilemmas*, 1988, p. 5.

Moral reason

The representative form of practical reason, the sort of thinking which leads one to make moral judgements and which guides one's moral acts. Moral reason brings general moral principles to bear on the particular situations of the agent and judges whether one's action and the way it is performed conform to the requirements of moral principles. It enables an agent to decide whether he should act and what he should do. The characteristic feature of moral reason is that it employs ethical terms and makes moral judgements which issue commands and advice. It has been disputed whether the procedure of moral reasoning can be formalised into practical syllogism and whether it deals with ends as well as means.

"Moral reasons are ordinary considerations such as the pain I will cause here if I don't tell her soon. This is a moral reason because it is a salient feature of a situation which generates a demand—the demand that I tell her soon, perhaps."—Dancy, *Moral Reasons*, 1993, p. 251.

Moral rule

A general statement guiding action and feeling by characterising certain kinds of action, such as telling the truth or stealing, as generally right or generally wrong. Moral rules are distinguished from moral principles which underlie moral rules, justify their validity and clarify their scope of application. While moral rules are specific and concrete, moral principles are general and abstract. While moral rules are variable, moral principles hold in all circumstances. Moral principles are used to justify rules and to generate new rules to cope with unforeseen circumstances. Rules are more directly involved than principles in determining the morality of behaviour. The elaboration of a consistent and intelligible body of moral principles and rules is the central task of an ethical theory.

"A moral rule states that a certain kind of actions is generally right (or obligatory), and leaves open the possibility that an act (or omission) of that kind may be justifiable."—Singer, *Generalization in Ethics*, 1963, p. 103.

于其社会功能的;在这个阶段,赞扬和责备的程度取决于行为的后果而不是意图。据皮亚杰看来,这可以在我们社会中的儿童道德发展和原始社会的成年人中发现。

“道德实在论现在能被界定为这种主张:当且仅当一定的条件得到满足,某种道德判断就是真的,甚至每一种道德判断都是真的。这种条件就是:它们独立于下判断和被判断人的实际的和理想的道德信念。”——辛诺特-阿姆斯特朗:《道德困境》,1988年,第5页。

道德理性

实践理性的代表形式,一种引导一个人做出道德判断和指导一个人的道德行为的思维。道德理性使一般的道德原则影响一个人所处的特殊境况,影响对一个人的行为及行为方式是否符合道德原则要求的判断。它能使一个人决定他是否应行动和应做什么。道德理性的典型特征是,它使用伦理学的术语并做出成为要求和建议的道德判断。道德推理的过程是否可被公式化为实践三段论,以及它是否既涉及目的又涉及手段,对这两个问题一直存在争议。

“道德理性是普通的考虑,就如同如果这时我不很快讲出我将招致的痛苦一样。它是道德理性,是因为它的显著特征是一种产生要求的情境,这种要求也许是我这时要很快讲出的。”——丹西:《道德理性》,1993年,第251页。

道德规范

一种通过表明某种行为的性质(如讲真话通常是对的,偷窃通常是错误的)来指导行为和情感的一般陈述。道德规范与道德原则不同,道德原则构成道德规范的基础,它论证道德规范的合理性和阐明它们适用的范围。道德规范是特殊的和具体的,而道德原则是一般的和抽象的。道德规范是易变的,而道德原则适用于所有的情况。道德原则用于论证规范,并产生新的规范以应付意料之外的情况。规范在确定行为的道德性时直接比原则包括更多的内容。对道德原则和规范的一致性和可理解性的详细阐述,是道德理论的中心问题。

“道德规范说明某些行为通常是对的(或必须做的),但留下了是否有可能证明那类行为(或没有履行那类行为)会是正当的问题。”——辛格:《伦理学中的普遍化》,1963年,第103页。

Moral sense

Analogous to the sense of beauty, moral sense is supposed to be an intuitive, disinterested faculty which enables us to recognise moral qualities such as being good and bad, virtuous and vicious from what we feel. If the observation of an action is painful and disquieting, the action must be bad or evil. If the observation of an action results in a pleasant feeling, the action is good and virtuous. On such a basis, moral sense further motivates us towards morally right and virtuous behaviour. Moral sense conflicts with the theological position that God's will is the basis of morality and is also opposed to rationalism, since it insists that reason cannot account for our motivation and claims that morality is felt rather than reasoned. The theory which argues for the existence of moral sense is called moral sense theory, and is particularly associated with the eighteenth century British philosophers Shaftesbury, Francis Hutcheson and David Hume. Moral sense theory tries to base itself on Locke's theory of knowledge, and it is a version of moral intuitionism. It is also called sentimentalism. Its major contribution is to emphasise the role of feeling in morality. Criticism of this theory generally alludes to the fact that there is no justification for positing an extra faculty of moral sense and that such a theory cannot avoid moral relativism.

"One man (Lord Shaftesbury, Hutcheson, Hume, etc) says, he has a thing made on purpose to tell him what is right and what is wrong; and that it is called 'moral sense'."—Bentham, *An Introduction to the Principles of Morals and Legislation*, III, 1970, p. 26.

Moral virtue, an alternative expression for ethical virtue

Morality, see ethics and morality

Morals, another term for ethics or moral philosophy

Morals proper, see metaphysics (Kant)

Motion, see change

道德感

类似于美感,道德感被认为是直觉性的、无利害关系的官能,它使我们能够从我们所感觉到的东西认识到诸如好(善)与坏、德性与恶的道德性质。假如对一个行为的观察是痛苦的和令人不安的,这种行为必定是坏的或恶的,如果对一种行为的观察导致一种愉快的感觉,这种行为必定是善的和有道德的。在这样一种基础上,道德感进一步推动我们迈向道德上正当的和有德性的行为。它是与把上帝的意志当做道德基础的神学观对立的,也是与理性主义相对的,因为它坚持认为,理性不能说明我们的动机,道德是感觉到的而不是推理得到的。主张道德感存在的这种理论被称为“道德感理论”,它尤其相联于18世纪的英国哲学家莎夫茨伯利、F. 哈奇森和D. 休谟。道德感理论力图把它自己建立在洛克的认识论上,是道德直觉主义的一种形式,也称为情感主义。其主要贡献在于强调道德中的情感作用。对这个理论的批评一般间接提到这个事实:提出道德感这样一种额外的官能,不可能有任何证明,以及这样一种理论不能避免道德相对主义。

“有人(莎夫茨伯利伯爵、哈奇森、休谟等)说,他有一种东西有意要告诉他什么是对的、什么是错的,它就叫做‘道德感’。”——边沁:《道德与立法原则导论》,第三章,1970年,第26页。

道德

被用作“伦理学”或“道德哲学”的另一个名称。

严格意义的道德

见“形而上学(康德)”条。

运动

见“变化”条。

Motive

The moving force which leads a person to behave or act in this way rather than in another way. A motive is closely related to our desire for the objects for which we act. Reason and cause are generally appealed to for explaining behaviour. While many philosophers believe that reason is also a motive, Hume denied that reason has a moving force. It is a continuing matter of controversy whether motivational explanation is also a type of causal explanation, and there is also some disagreement whether a motivational explanation is an explanation in terms of pattern.

"A motive is a want that leads to action, that is, a goal appraised as good for action without further deliberation; it includes effective and deliberate action tendencies."—Arnold, in Mischel (ed.), *Human Action*, 1969, p. 196.

Motive utilitarianism

A version of utilitarianism which applies the principle of utility directly to behavioural dispositions and indirectly to actions. It claims that concern for the maximisation of human happiness is good, but tries to shift ethical consideration from the traditional utilitarian focus on the moral assessment of actions to the assessment of motives which give rise to actions.

"The theory that will be my principal subject here is that one pattern of motivation is morally better than another to the extent that the former has more utility than the latter... Let us call this doctrine motive utilitarianism."—Adams, "Motive Utilitarianism", *Journal of Philosophy*, 73 (1976), p. 470.

Motive-consequentialism, see consequentialism

Moving rows, paradox of

One of Zeno's paradoxes designed to show the impossibility of motion. Suppose that there are three equally sized rows A, B and C. Each member of each row occupies a minimal unit of time and a minimal part of space. The row A is at rest, but rows C and B move in opposite directions with equal velocities. When the first member of B passes two members of A (taking two units of time), it will at the same time pass four members of C (taking four units of time), leading to the conclusion that "double the time is equal to half the time". The arguments of this paradox are complicated, and there are various other versions.

"The fourth argument is that concerning the two rows of bodies.... This, he thinks, involves the conclusion that half a given time is equal to double that time."—Aristotle, *Physics*, 239b33-6.

M-predicate, see P-predicate

动机

使得一个人以这种而不是那种方式行为或活动的动力。动机与一个人对其行为对象的欲求密切相关。对一个行为的解释常常要借助于理由和原因。许多哲学家认为理由也是动机,但休谟却否认理由具有动力。动机解释是否也是一种因果解释的问题不断引起争议。关于动机解释是否是一种模式解释也存在争议。

“动机是导致活动的愿望,亦即,一个无须进一步的推敲而被褒扬为善的活动目标;它包括有效的和蓄意的活动倾向。”——阿诺德,贝米谢尔(编):《人类活动》,1969年,第196页。

动机功利主义

功利主义的一种形式,它将功利原则直接应用于行为的意向,间接地应用于行为。它认为,对人的最大幸福的关切就是善,但它却试图将伦理学的思考从传统功利主义的以对行为的道德评价为中心,转换为对产生行为的动机评价为中心。

“这个在此将成为我的主题的理论是,就一种动机模式比另一种更多功利色彩而言,前者在道德上优于后者,……让我们把这一学说称为动机功利主义。”——亚当斯:《动机的功利主义》,《哲学杂志》,73(1976),第470页。

动机—效果论

见“效果论”条。

运动列悖论

芝诺关于运动不可能的悖论之一。设想有三个大小相等的排列A、B及C。每一列的每一成员都占据一小个时间单位和一小个空间单位。A列处于静止状态;C和B则以同等速度向相反方向运动。结果,当B的第一个成员越过两个A列成员(两个时间单位)时,它在相同时间中越过四个C列成员(四个时间单位),其结论是,“一倍的时间等于一半的时间”。这一悖论的论证极其复杂,而且有许多不同形式。

“第四个论证是关于两列物体,……他认为这会得出结论说,一给定时间的一半会等于其一倍。”——亚里士多德:《物理学》,239b33—36。

Mundus intelligibilis, see intelligible world

Mundus sensibilis, see intelligible world

Mysticism

The view that there exists a transcendent or ultimate reality which cannot be experienced or rationally conceived. That domain is beyond the description of ordinary language, and knowledge of it can only be achieved through mysterious intuition resulting from long-term spiritual cultivation. By gaining a vision of this ineffable ultimate reality, one reaches a joyous and ecstatic union with it, and this union constitutes the ultimate meaning of human life. Mysticism is associated with religious experience and doctrines. Many properties of the Christian God are ineffable and can only be divinely revealed. Mysticism is also associated with traditional metaphysics or speculative philosophy, which seeks after the first principles that cannot be rationally discussed. Since the existence of mystical entities is not provable, and mystical experience is untestable, mysticism is always under suspicion. Wittgenstein was also concerned with mysticism. For him, the mystical is a realm of ultimate importance which can be shown, but cannot be said. This view of the mystical is aesthetic and ethical value and is distinguished from logic.

"The term mysticism is at present used, as a rule, to designate what is mysterious and incomprehensible; and in proportion as their general culture and way of thinking vary, the epithet is applied by one class to denote the real and the true, by another to name everything connected with superstition and deception." - Hegel, *Logic*, sect. 82.

Myth of passage

A term introduced by D. C. Williams in his paper "The Myth of Passage" (1951). It is a very common to believe that time flows and is a passage. Some philosophers even believe that time as a rolling stream is the feature which distinguishes time from other instances of one-dimensional order, such as the order of points on a line. Williams argued that if time flows past us or if we advance through time, this would be a motion with respect to a hypertime because we could not say that the motion of time is a motion with respect to time itself. Furthermore, if it is of the essence of time that time passes, then hypertime will pass as well, requiring a hyper-hypertime and so on *ad infinitum*. Williams concluded that the passage of time is a myth and should be abandoned.

理智世界

〔“理智世界(intelligible world)”的拉丁词〕见“理智世界(intelligible world)”条。

感性世界

〔“感性世界(sensible world)”的拉丁词〕见“理智世界”条。

神秘主义

这种观点主张,存在着一个超验的或终极的实在,它既不能被经验,也不能被理性把握。那个领域超出日常语言的描述范围,对它的知识只能通过长期的精神教化所形成的神秘直觉才能达到。人一旦目睹这不可名状的终极实在,他就达到一种与它合一的快乐而痴迷的境界,这种合一构成人类生活的终极意义。神秘主义与宗教体验和学说相关联。基督教上帝的许多特性就是不可名状的,只能被神圣启示。神秘主义也与传统形而上学或思辨哲学相关联,因为这种哲学追寻不能被理性讨论的第一原理。既然神秘实体的存在是不可证明的,神秘的体验是不可检验的,那么,神秘主义就总是被怀疑。维特根斯坦也关注神秘主义。在他看来,神秘是第一重要的领域,它能被显示,但却不能被言说。这种神秘的观点具有美学和伦理学价值,但与逻辑相区别。

“在现时,大家一律地把神秘主义一词当做神奇玄妙和不可思议的东西;由于各自的文化背景和思维方式不同,他们对神秘主义的评价也因此相异,一类人认为所指真实无妄,另一类人则称为与迷信和欺诈相关。”——黑格尔《小逻辑》,第82节。

迁移神话

由 D. C. 威廉姆斯在一篇题为《迁移的神话》的论文(1951年)中引入的术语。一种非常普遍的看法认为时间流逝着,并且是一种迁移。有些哲学家甚至相信,时间作为一种潺潺的溪流,是它借以区别于其他一维序列的事例(例如一条线上的点的序列)的特征。威廉姆斯论辩说,如果时间流经我们或者我们穿过时间前进,这将是关于超时间的运动,因为我们不能说时间的运动是关于时间自身的。而且,如果时间的本质即时间流逝,那么超时间也将流逝,需要一种超超时间,如此以至无穷。威廉姆斯得出的结论是,时间迁移是一个神话,应当被抛弃。

“〔有一个命题〕在事件的纯粹扩展之上,和它们的若干特性一起,沿着时间轴,……有着在

"[There is a proposition] that over and above the sheer spread of events, with their several qualities, along the time axis... there is something extra, something active and dynamic, which is often and perhaps best described as passage. This something extra, I am going to plead, is a myth."—D. C. Williams, *Principles of Empirical Realism*, 1966, p. 283.

Myth of the given

A term introduced by the American philosopher W. Sellars in his essay "Empiricism and the Philosophy of Mind". Many empiricists claim that there is a sort of knowledge which is directly presented to our consciousness and call this knowledge the given. The given, to which each of us has privileged access, presupposes no learning and no forming of associations, but provides the foundation for empirical knowledge. It offers the ultimate court of appeals for all our knowledge claims about the world. All other forms of knowledge are derived from the given according to certain rules.

Sellars labels the alleged existence of such knowledge as "the myth of the given". To call something a myth means that it does not exist at all. Sellars rejects all the central arguments that were put forward to support the existence of the given and claims that empirical knowledge, which is a rational and self-correcting enterprise, has no need for the given. His position has had much influence in questioning the need for foundations in epistemology and other areas of philosophy.

"The idea that observation, strictly and properly so-called, is constituted by certain self-authenticating non-verbal episodes, the authority of which is transmitted to verbal and quasi-verbal performances when these performances are made 'in conformity with the semantical rules of the language', is, of course, the heart of the myth of the given."—Sellars, *Science, Perception and Reality*, 1963, p. 169.

此之外的某种东西,某种主动的、动态的东西,它经常并且最好被描述为迁移。我想申明的是,这一之外的某种东西是一种神话。"—威廉姆斯:《经验实在论原理》,1966年,第283页。

所予的神话

美国哲学家 W. 塞拉斯在其论文《经验主义和心的哲学》中提出的术语。许多经验主义者认为,有一种直接呈现于我们意识的知识,并将这种知识称为“所予”。我们每个人都有特权得知的所予不以学习和形成联系为先决条件,但对于经验知识提供了基础。对于我们的有关世界的知识,它设置了上诉的终审法庭。所有其他形式的知识都是根据某些规则从所予中得来的。

塞拉斯把所谓的这种知识的存在贴了个标签,叫做“所予的神话”。把某种东西叫做神话,意味着它根本不存在。塞拉斯反驳了为证明所予存在而提出的所有核心论证,主张经验知识——它是一项理性的、自我校正的事业——并不需要所予。在质疑认识论和哲学其他领域需要基础时,他的立场有极大的影响。

“有人认为观察——严格地和恰当地称呼的——由某种自我证明、非言词的事件构成,当人们‘按照语言的句法规则’做出言词和类似言词的行动时,它的权威性会传递给它们,当然,这种想法是所予的神话的核心。”——塞拉斯:《科学、知觉和实在》,1963年,第169页。

N

Naive realism

The common sense view of the world held by most ordinary people. According to this view, the external world consists of objects such as rocks and trees and the qualities they possess. The world exists and develops independently of our sensations and thought. Our sensations, like mirrors, reflect this world as it is. Such a view also believes uncritically that we have the ability to know the world. However, upon reflection, philosophers find that the nature of the world and our knowledge about it are both much more complicated and puzzling than naive realism suggests. Many so-called secondary qualities such as colour, taste and smell are inseparable from our senses rather than properties of things independent of us. Our perceptions sometimes deceive us. From here we may derive many fundamental philosophical questions such as "What is real?", "What is appearance?", "How is illusion possible?", "Is our experience a reliable source of knowledge?". One of the major tasks of philosophy is to uncover the difficulties hidden in the common assumptions of views such as naive realism in order to understand the world better.

"Naive realism leads to physics, and physics, if true, shows that naive realism is false. Therefore naive realism, if true, is false; therefore it is false."—Russell, *An Inquiry into Meaning and Truth*, 1940, p. 15.

Name

A name is traditionally believed to be a mark, sign or expression referring to things in the world. Names are generally divided into general or common names (referring to kinds of individuals) and single or proper names (referring to particular individuals). Names help people to communicate ideas or to remember ideas. Frege distinguished between the sense (*Sinn*) and reference (*Bedeutung*) of a name. He held that the fact that two names for the same thing cannot always be used interchangeably indicates that names are not merely referential devices but also have sense in terms of which they refer to objects. Russell rejected Frege's distinction between sense and reference and claimed that only logically proper names such as "this" or "that" refer to objects. Ordinary proper names are actually definite descriptions in disguise. Kripke rejects the view that names are descriptions in part on the grounds that the user of a name does not require identifying information about the object in question. He has pro-

素朴实在论

大多数普通人对于世界所持的一种常识观点。照这种观点,外在世界由诸如岩石、树木及它们所具有的性质构成。世界的存在和发展独立于我们的感觉和思想。我们的感觉像镜子一样如实地反映这个世界。这种观点也不加批判地认为我们有能力认识世界。然而,哲学家在反思之后发现,世界的本性和我们对此的知识都要比素朴实在论所认为的要复杂和令人困惑得多。许多所谓的第二性质,诸如颜色、味道、气味,与我们的感觉不可分,它们不是事物独立于我们的性质。我们的知觉有时会欺骗我们。由此我们会得到许多基本的哲学问题,诸如“什么是实在的?”“什么是现象?”“幻象如何可能?”“我们的经验是知识可靠的源泉吗?”哲学的主要任务之一就是要发现隐藏在诸如素朴实在论这样的日常假设中的困难,以便更好地理解世界。

“素朴实在论导致物理学,而物理学则正确地表明素朴实在是错的,因此,素朴实在论的确是错的;因此,它就是错的。”——罗素:《对意义和真理的探究》,1940年,第15页。

名称

名称在传统上被看做是指称世界中事物的标记、记号或表达式。名称通常被分为一般名称或普通名称(指称个体的种类)和单个名称或专门名称(指称特殊的个体)。名称帮助人们交流观念或记忆观念。弗雷格区分了名称的意义(*Sinn*)和指称(*Bedeutung*)。他认为,同一个事物具有的两个名称往往不能交替使用,这一事实表明,名称不仅是指称的手段,而且具有意义,由于这种意义它们才指称对象。罗素抛弃了弗雷格对意义和指称的区分,认为只有“逻辑上的专名”诸如“这个”或“那个”才指称对象。日常的专名实际上是伪装的限定摹状词。克里普克反对认为名称是摹状词的看法,在他看来,名称的使用者并不必须对这个对象有比较清楚的了解。他自己的名称理论认为,名称是严格的指示词,指称在所有世界中存在的同一个体。按这种理解,名词与对象之间关系的建立与维系

posed a theory of names according to which a name is a rigid designator, which refers to the same individual in all worlds in which that individual exists. On his account, the connection between a name and its object is established and maintained causally rather than through descriptive content.

"The name itself is merely a means of pointing to the thing." — Russell, *Logic and Knowledge*, 1956, p. 245.

Narcissism

[from the Greek myth; *Narkissos*, the youth at the riverside who fell in love with his own reflection in water] Narcissism is self-love or an erotic interest in oneself. Freud believed that narcissism exists when the libido is directed toward the self. Narcissism as a psychological phenomenon normally occurs in childhood when individuals believe that they possess every valued perfection and that they are their own ideal. When people grow up, the response of others and their own critical judgement will lead to the realisation that they are not perfect and they will seek to replace childhood narcissism with a new form of ego ideal.

"Clinical experience had made us familiar with people who behaved in a striking fashion as though they were in love with themselves and this perversion had been given the name of narcissism." — Freud, *Standard Edition of the Complete Psychological Works of Sigmund Freud*, Vol. 18, p. 257.

Narrative

A mode of discourse, which establishes orders or logical relations among various events, and makes them into a sequence. Such a sequence is not merely a chronology of events, but provides a configurational understanding by which each occurrence introduced in the narrative forms part of a meaningful whole. In this way a narrative forms a story. A narrative can be oral or written, about what has happened or about the present, in the first person, third person or in a mixture of the two. Narrative differs from analysis and dialogue. We also need to distinguish between the narrative and its narration, as we distinguish between the story and its telling. Any narrative is open to infinite possibilities of re-narration. Narrative is merely a form of language, and is neutral regarding the truth of its contents. However, narrative has its own discoverable structure rather than being a purely subjective projection. Narrative is the characteristic way of presenting historical knowledge and literature. Its epistemological status and ontological implications have been major topics in contemporary analytic philosophy of history and philosophy of literature. Narrative seems to have important cognitive functions, but it is difficult to settle what these function might be.

"Narrative is a major organising device. It is as important to literature as representation to painting and sculpture;

是因果性的，而不是通过摹状内容的。

"名称本身只是指出事物的手段。"——罗素：《逻辑和知识》，1956年，第245页。

自恋

[源自希腊神话：那喀索斯 (*Narkissos*) 乃一河岸边上的美少年，爱上了自己在水中的倒影，死后化为水仙花] 自恋是指对自己产生爱情或对自己有性爱那样的兴趣。弗洛伊德相信，当里比多 (libido, 由性本能产生的动力) 朝向自我时，就会出现自恋。作为一种心理现象，自恋通常出现在儿童期；表现为当事人相信他们具有一切有价值的完美性，并相信他们是自己的理想。当人们长大后，他人的反应和他们自己的批判性判断使他们认识到自己并非完美，并且试图以新的自我理想形式来代替童年期的自恋。

"临床经验已使我们熟悉这样一种人，他们的行为非同寻常仿佛是在与自己恋爱一样。这样一种反常现象被称之为自恋。"——弗洛伊德：《S. 弗洛伊德心理学著作全集标准版》，第18卷，第257页。

叙述

一种话语模式，旨在于不同事件中建立序列或逻辑关系，将其按顺序排列。这种顺序不仅是指事件按照发生的年月顺序排列，而且还提供一种完形的理解力，藉此使得记叙文中所发生的每一事件构成有意义整体的组成部分。这样一来，叙述便构成故事。叙述可以是口头的或笔头的，是关于过去的或现在的，可以用第一人称、第三人称或二者混用。叙述有别于分析和对话。我们在区别故事和讲故事时也需要分清叙述与叙述内容。任何叙述都具有复述的无限可能性。叙述纯然是一种语言形式，对其内容的真实性采取不偏不倚的态度。尽管如此，叙述有其自身的展示结构，并非是单纯的主观投射。叙述是传授历史知识与文学的特有方式。其认识论地位与本体论内涵向来是当代分析的历史哲学与文学哲学的主要话题。叙述看来具有重要的认知功能，但是难以确定这些功能会是什么。

"叙述是一种主要的组织手段。它对文学的重要性犹如再现对绘画和雕塑的重要性；就是说，叙述并非文学的本质所在，因为叙述（类似造型艺术中的再现）不是必不可少的，但是它却是设计多数作品的结构基础。"——朗格：《情感与形式》，1953年，第261页。

that is to say, it is not the essence of literature, for (like representation in plastic art) it is not indispensable, but it is the structural basis on which most works are designed.” — Langer, *Feeling and Form*, 1953, p. 261.

Narrative sentence

A sentence employed by historians in ascribing historical significance to events or persons by connecting them to something which came afterwards, such as “When Petrarch climbed Mount Ventoux he opened the Renaissance”. The problem of assessing the truth value of narrative sentences reflects a distinctive feature of historical knowledge. A person who saw Petrarch climb Mount Ventoux did not know that Petrarch opened Renaissance because no one at that time knew that there would be a Renaissance. As a consequence, a contemporary witness could not know the truth of that narrative sentence. However, historians know that it is true through knowing what happened later. In general, the truth value of a narrative sentence can be known only by those who have access to a temporal whole including all of the relevant time periods.

“I shall designate them as ‘narrative sentences’. Their most general characteristic is that they refer to at least two time-separated events though they only *describe* (are only *about*) the earliest event to which they refer.” — A. C. Danto, *Analytical Philosophy of History*, 1965, p. 43.

Narrow content

The kind of content of a mental state that is purely “in the head” of the subject. It is not related to the world, and is taxonomised according to causal power. It is not subject to existential generalisation, and is not freely substitutable by co-extensive terms. Narrow content contrasts with the ordinary attributes of occurring thoughts and propositional attitudes, which is called wide content or broad content. Wide content is not wholly “in the head” and has a set of truth-conditions. The notion of narrow content is based on Putnam’s distinction between narrow states and wide states. It is useful for providing psychological explanations of behaviour and explaining the privileged access we seem to have to our own mental states.

“The narrow content of a mental state is supposed to be a kind of content that is wholly internal to the mind of the person in the mental state.” — Stalnaker, “Narrow content”, in Anderson and Owen (eds.), *Propositional Attitudes*, 1990, p. 131.

Narrow state

A term introduced by Putnam for the mental states which do not presuppose the existence of any individual other than the subject to whom that state is ascribed. This is in contrast to wide states, such as being jealous of somebody.

叙述句子

是历史学家通过把事件或人物与随后发生的事情联结起来而将历史的意义归结为这些人物和事件的一种句子。例如,“当彼特拉克登上文都山时,他开辟了文艺复兴时期”。对叙述句子真值的估价问题,反映了历史知识的一个显著特性。一个看到彼特拉克登上文都山的人并不知道彼特拉克开辟了文艺复兴时期,因为当时没人知道将会有一个文艺复兴时期。作为一种推断,当时的目击者无法知道这一叙述句子的真。可是,历史学家通过了解后来所发生的事情而知道它是真的。一般说来,叙述句子的真值只能为那些经历了包括所有相关时期在内的整个时代的人所认识。

“我将把它们称为‘叙述句子’。它们的最主要的特征是:虽然它们仅仅“描述”(仅仅是“关于”)它们所涉及的最早的事件,但它们至少涉及的是两个在时间上分开的事件。”——丹托:《分析的历史哲学》,1965年,第43页。

狭内容

是指一种纯粹“在头脑中”的心的状态的内容。它不与世界相关联,依因果力而分类。它不隶属于存在概括,也不能轻易地由共有术语所取代。狭内容相对于呈现思维和命题态度的普通属性。后者被称为广内容或宽内容。宽内容不完全“在头脑中”并有一系列的真值条件。狭内容概念乃是基于普特南关于狭状态与广状态的区分。它有助于提供关于行为的心理学解释并解释我们对自己的心的状态所具有的优先获知。

“一个心的状态的狭内容被认为是一种完全在具有这个心的状态的人的心的内部的内容。”——斯托奈克:《狭内容》,见安德森和欧文(编):《命题态度》,1990年,第131页。

狭状态

由普特南引进的术语,指不预设任何处于这一状态的主体以外的任何个体的心的状态。这与像忌妒某人这样的广状态相对,后者具有指涉主体以外的世界这样的宽内容。方法论的

which have wide content referring to the world outside the subject. Methodological solipsism is a doctrine which holds that psychology ought to be concerned exclusively with narrow mental or psychological states. What is characteristic of narrow states is narrow content, which is constituted simply by what is "in the head". Fodor uses the notion of a narrow state for those mental states which can be individuated by content without regard to truth or reference. These states are solely determined by the intrinsic properties of an individual, without presupposing that anything other than that individual exists. Other philosophers use the term for mental states shared by molecule-for-molecule duplicates. Different thinkers use different criteria for narrowness, but all agree that a narrow state cannot be a belief that is individuated by particular objects in the believer's environment.

"We shall... refer to the states which are permitted by methodological solipsism as 'psychological states in the narrow sense'." — Putnam, *Mind, Language and Reality*, 1975, p. 220.

Nash equilibrium, see game theory

National character

The pattern of thought, feeling and action that is peculiar to a society and its people and forms their particular identity. A national character is cultivated from historical and cultural traditions. Although the explanatory role of national character is disputed, society is claimed to inherit its character from its earlier states, and its character is claimed to form its subsequent states. National character is embodied in public sentiment and social custom, and it greatly influences a society's laws and form of government. J. S. Mill claimed that by analogy to political economy, the social sciences should have a branch, which he called political ethnology, to study national character. Some advocates of the importance of national character, represented by Vico and Herder, emphasise that there is no common measurement of worth for different cultures or characters. This position is echoed by contemporary communitarians. Major problems facing this view are how to avoid relativism and how to make inter-cultural criticism possible. This approach to national character contrasts with liberal universalism, which holds that a set of universal values and rights applies to human beings irrespective of the national communities to which they belong.

"The laws of national (or collective) character are by far the most important class of sociological laws." — *The Collected Works of John Stuart Mill*, VII, p. 905.

Nationalism

In its positive aspect, adherence to a national identity formed by the distinctive characteristics typically derived

唯我论认为心理学只应当关心“狭的”心的状态或心理状态。狭状态的特点在于“狭内容”，后者仅由头脑中的东西所组成。福多使用狭状态概念来指那些不考虑真和指称而可以由内容加以区分的心的状态。这些状态仅仅由个体的内在特性所决定，而不预设任何这一个体以外的东西的存在。另外一些哲学家采用这一概念来指与完全复制品共有的心的状态。不同的人可能使用不同的狭义标准，但所有的人都认为狭状态是一个不由相信者的环境中的特定对象来区分的信念。

“我们应当……将方法论的唯我论所容许的状态称为‘狭义的心理状态’。”——普特南：《心智、语言与实在》，1975年，第220页。

见“游戏理论”条。

民族特性

民族特性是一个社会及其人民特有的并构成他们独特个性的思想、情感和行为的方式。民族特性是由历史和传统文化培养而成的。虽然对民族特性的解释作用有争议，但人们认为社会继承了它以前状况的特性，它的特性又会构成它后来的状况。民族特性体现在舆论和社会习惯中，对社会的法律和政府的形式有着重大影响。J. S. 密尔主张，社会科学应有一门类似政治经济学那样的研究民族特性的学科，他把这一学科称为政治性格学。以维柯和赫尔德为代表的一些鼓吹民族特性的重要性的人强调，对不同的文化或特性而言，不存在共同的价值尺度。这一见解得到了当代共同体主义者的附和。这一观点面临的主要问题是避免相对主义和如何使各种文化之间的批评成为可能。对民族特性的这一看法是与自由主义的普遍主义相对立的，后者认为一组普遍的价值和权利适用于人类，而无须考虑他们从属的民族共同体。

“民族（或集体的）特性的规律是最重要的社会学规律。”——《J. S. 密尔著作集》，第七卷，第905页。

民族主义

就其积极方面而言，它坚持一个民族的特性，这种特性是由那些典型地起源于一个民族

from one's national history, culture, language, and religion. Nationalism emphasises the nation's rights to self-determination and sovereignty and demands the preservation of its culture. Nationalists often claim that the nation's values and interests, at least in times of danger or crisis, override the individual rights of its citizens. Citizens are required to display patriotism by being loyal to the nation and by serving its collective aims.

Negatively, nationalism attaches unreasonable importance to one's national moral, cultural and political values. An exclusive concern for the interests of one's own nation leads to blindness and belligerence in assessing the values and interests of other nations or minorities within one's own nation. In this sense, nationalism is nearly indistinguishable from chauvinism.

"Nationalism, if we extended the sense of the word 'nation' somewhat, could include the self-centred pursuit of the interest of any individual group." —Hare, *Essays on Political Authority*, 1989, p. 37.

Natura naturans

[Latin: literally nature naturing, that is generating or active nature, in contrast to *natura naturata*, literally nature natured, that is generated or passive nature] These two terms derive from scholastic philosophy, in which *natura naturans* refers to God and *natura naturata* refers to the created world. Spinoza introduced them in his *Ethics*, where *natura naturans* is used for substance and attributes, because they are self-explanatory. *Natura naturata* is used for modes, which follow from substances and attributes and must be explained by them. Accordingly, God and the world are one, but are not absolutely identical.

"From what has gone before, I think it is plain that by *natura naturans* we are to understand that which is in itself and is conceived through itself, or those attributes of substance which express eternal and infinite essence." —Spinoza, *Ethics*, I, prop. 29.

Natura naturata, see *natura naturans*

Natura non facit saltum, see contiguity

Natural deduction

The method which constructs a logical system merely on the basis of a set of rules of inference without employing any logical truths as axioms. It contrasts with the standard axiomatic method of forming a logical system which requires both a set of axiom like logical truths and a set of rules of inference. The method of natural deduction was developed independently in 1934 by the Polish logician S. Jaskowski and

的历史、文化、语言和宗教的独具特色的特征构成的。民族主义强调民族的自决权和主权,并要求保存它的文化。民族主义者常常声称,民族的价值和利益,至少在危险或危机的时候,是压倒其公民的个人权利的。公民被要求以对民族的忠诚和为民族集体的目标服务来显示爱国主义。

就其消极方面而言,民族主义热衷于对一个民族的道德、文化和政治价值的过度重视。对一个民族自身利益的孤傲的关注,会导致在评价其他民族或自己国家中的少数民族的价值和利益时的盲目无知和好战。从这种意义上讲,民族主义与沙文主义几乎难以区分。

“如果我们将‘民族’这个词的意思扩展一点,民族主义就可以包括以自我为中心的对个别集团利益的追求。”——黑尔,《政治权威论文集》,1989年,第37页。

产生自然的自然

[拉丁词,字面意思是“能自然化的自然”,即能产生的或能动的自然。与它相对的词是 *natura naturata*,字面意思是“被自然产生的自然”,即被产生的或被动的自然]这两个词都来自经院哲学,前者指上帝,后者指被造的世界。斯宾诺莎在他的《伦理学》中引入了这两个词。根据他的观点,*natura naturans* 指实体和属性,因为它们是由自己来说明的,而 *natura naturata* 指样式,它们是从实体和属性来的,必须由后者来说明。相应地,上帝和世界两者为一,但不是绝对的等同。

“从前面所说的看,我想很明显,我们把 *natura naturans* 理解为在自身内,并通过自身被构想的东西,或理解为实体的表示永恒无限本质的那些属性。”——斯宾诺莎:《伦理学》,第一部分,命题29。

被自然产生的自然

自然演绎

仅仅基于一组推理规则而不使用任何逻辑真理作为公理来构造逻辑系统的方法。它与构造逻辑系统的标准的公理化方法形成对照,后者既要求一组似公理的逻辑真理,又需要一组推理规则。自然演绎方法是由波兰逻辑学家S. 雅斯科夫斯基和德国逻辑学家G. 根岑于1934年各自独立发展的。标准的公理式形式化使逻

the German logician G. Gentzen. While standard axiomatic formalisation makes logic concentrate on the choice and justification of logical truths, the axiomless formalisation of natural deduction focuses on logical consequence, that is on the move from premises to conclusions. For example, from a pair of sentences as premises one infers their conjunction, and from a conjunction one infers either conjunct. With natural deduction, a premise can be introduced at any stage of deduction without need of justification, and a hypothesis can also serve as a premise. In this way, logic not only gets rid of the most troublesome task of justifying its choice of logical truths, but also conforms more properly to its original task, that is, the study of inference.

"The methods of proof so far assembled (techniques for 'natural deduction', as they are sometimes called) permits the demonstration of all logically true propositions constructed out of truth-functional connectives and the quantification of individual variable." —Copi, *Symbolic Logic*, 1967, 3rd ed., p. 129.

Natural kinds

Things which are naturally distinguished, including the species of things such as whales and apples and elements or mass items such as water and gold. These things occur naturally, in contrast to things such as televisions and tables which are invented by human beings. Traditionally, terms naming natural kinds, that is natural kind terms, are taken to be general names that should be defined by giving a connotative meaning or by specifying the necessary and sufficient conditions of their application.

In the 1970s, Kripke and Putnam, arguing against the traditional theory, suggest that natural kind terms, like proper names, are not connotative. While proper names are rigid designators of an individual, natural kind terms are rigid designators of a kind. They have an essential property, namely, the underlying structure discovered through empirical investigation. Water is H_2O in all possible worlds, so anything that is not H_2O is not water, even if it satisfies some list of superficial features that we think characterise water. Accordingly, it is a necessary truth that water is H_2O , although this truth is *a posteriori*, that is empirically known. A natural kind term is ascribed historically, and the justification for its use is passed on through a causal chain.

"What really distinguishes the classes we count as natural kinds is itself a matter of (high level and very abstract) scientific investigation and not just meaning analysis." —Putnam, in Schwartz (ed.), *Names, Necessity and Natural Kinds*, p. 104.

Natural language, see ordinary language

辑集中关注逻辑真理的选择和辩护,而无公理的自然演绎形式化则重点关注逻辑后承,即从前提到结论的步骤。例如,从一对作为前提的语句人们可以推出它们的合取,并且从一合取人们可以推出任意一个合取支。对于自然演绎来说,一前提可以在演绎的任何步骤引入而不需要辩护,假设也可以用作前提。这样一来,逻辑不仅摆脱了下述最烦难的任务,即证明它对逻辑真理的选择是合理的,而且更恰切地适合它本来的任务,即研究推理。

“迄今所列集的证明方法(它们有时被称作‘自然演绎’技巧)使我们能够证明所有那些由真值函项联结词和个体变元量化构造出来的逻辑真命题。”——柯比:《符号逻辑》,1967年,第3版,第129页。

自然种类

自然地区别开来的事物,包括事物的种类如“鲸”和“苹果”,以及元素或物质名词如“水”和“金”。与人们发明的“电视机”、“桌子”等等相反,这些事物是自然地出现的。传统理论宣称,命名自然种类的词项即自然种类词是通名,应该通过给出其内涵意义或刻画其应用的充分必要条件来给它们下定义。

在20世纪70年代,克里普克和普特南反对传统的理论,提出自然种类词像专名一样,不是内涵性的。若专名是个体的固定指示词,则自然种类词就是种类的固定指示词。它们具有一本质属性,即通过经验研究所发现的底层结构。水在所有可能世界中都是 H_2O ,因此任何不是 H_2O 的东西就不是水,即使它满足我们认为水的特征的某些表面特性。相应地,水是 H_2O 是一必然真理,尽管这是后天地也就是经验地知道的。自然种类词历史地归属于一个因果链条,对其用法的辩护也通过这个链条而传递。

“真正把我们称之为自然种类类别区分开来的,是(高层次和非常抽象的)科学研究工作,而不只是意义分析。”——普特南,见施瓦茨(编):《命名,必然性和自然种类》,第104页。

自然语言

见“日常语言”条。

Natural law, another expression for law of nature

Natural law theory

A position holding that there is a system of natural laws which guides political and legal authority, and sets the moral standards for human conduct. It argues that law is essentially normative and that an unjust law is not a law. Natural law theory has two major forms. Classical natural law theory is based on the distinction between nature and convention and considers natural law to be a conception of justice. It is universal and everlasting, grounded either in God's will or human nature and discovered by human reason. This form can be traced to Aristotle's teleological ethics and Stoicism and was developed by Medieval philosophers in combination with Christian thought. It was revived in this century, especially by John Finnis and Robert Nozick. Modern natural law theory claims that natural laws grant natural rights to each individual. These include rights to freedom, life and equality. Political rights and obligations are derived through the social contract of individuals who hold these natural rights. This theory was developed by Grotius, Locke and Rousseau and was revived in this century especially by John Rawls. Natural law theory forms a major tradition in legal philosophy in virtue of its claim that law is necessarily connected with morality. Human law derives its binding force from natural law and is null if it does not conform with natural law. The chief motive for originating legal positivism was to reject natural law theory.

"A 'natural law' theorist... would insist that all valid moral standards are tacitly incorporated by the Constitution, so that any interpretation that ascribes to it moral stands of an inferior or defective kind must be mistaken." — J. Feinberg, *Offense to Others*, 1985, p. 167.

Natural light

[Latin: *lumen naturale*, also called *lux rationis*, the light of reason] Generally regarded by seventeenth century philosophers as a universal faculty shared by all human beings that could be expected to reach the same view about certain basic issues. Descartes in particular favoured this term, using it to refer to the transparent clarity of cognition. Truths which are presented to the intellect by the natural light allow no room for denial and are not open to doubt. Descartes used it as an authority whenever he wished to introduce some fundamental premises as a basis for further argument. He associated this notion with intuition by defining intuition as what the mind clearly and indubitably conceives from the natural light. According to this view, the natural light could be developed through the study of sciences, but could also be obscured if we are not capable of heeding rea-

自然法

“自然法 (law of nature)” 的另一英文表述。

自然法理论

这一主张认为, 存在一种指导政治权力和法律权力, 并为人们的行为制定道德标准的自然法体系。它论证道, 法在本质上是规范性的, 恶法不是法。自然法理论有两种主要形式。古典的自然法理论以自然和约定的区分为基础, 认为自然法是正义的观念。自然法是普遍的和永恒的, 它或者基于神意, 或者基于人的本性, 并且是为人的理性所发现的。这种自然法理论可以追溯到亚里士多德的目的论伦理学和斯多亚哲学, 并通过与基督教思想的结合为中世纪的哲学家所发展。它在本世纪又得以复兴, 这主要是得益于 J. 芬尼斯和 R. 诺齐克。现代自然法理论认为自然法赋予每一个人以自然权利。这些权利包括自由权、生存权和平等权。政治权利和义务起源于拥有这些自然权利的个人之间的社会契约。这一理论为格劳修斯、洛克和卢梭所发展, 它在本世纪的复兴主要得益于 J. 罗尔斯。由于认为法律与道德有必然的联系, 自然法理论构成了法哲学中一个主要传统。人定法是从自然法获得其约束力的, 如果不与自然法相一致它就等于零。法律实证主义起因的主旨就是反对自然法理论。

“一个‘自然法’理论家会坚持认为, 所有有效的道德标准不言而喻都为宪法所体现, 以至任何把差的或有缺陷的道德标准归结于它的解释都肯定是错误的。” — 芬伯格:《对他人的伤害》, 1985 年, 第 167 页。

自然之光

[拉丁文 *lumen naturale*, 亦称“理性之光” (*lux rationis*)] 17 世纪的哲学家一般把它看做有望能在某些基本问题上达成共识的全体人类共同享有的普遍官能。笛卡尔特别喜欢用这个词指认识的清晰透彻状态。以这种方式出现于理智面前的真理是不容否认、不可怀疑的。每当笛卡尔希望为进一步的证明提出某些基本前提作为基础时, 他都把理性之光当做权威。他把直觉界定为心灵通过自然之光清楚无疑构想的东西, 从而将自然之光这个概念同“直觉”联系起来。根据这个观点, 自然之光可以通过科学研究而得到发展, 但如果我们不能对理性加以关注, 自然之光也可以变得昏暗。

“认识的自然之光或官能是上帝给我们的, 就一个对象的确被这个官能所包含, 即就一个

son.

"The light of nature or faculty of knowledge which God gave us never encompass any object which is not true in so far as it is indeed encompassed by this faculty; that is, in so far as it is clearly and distinctly perceived." - Descartes, *The Philosophical Writings* (tr. by Cottingham et al), 1985, Vol. 1, p. 203.

Natural philosophers

[Greek: *phusikoi* or *phusiologi*, literally the men who talk about nature; also translated as physicists, referring to the pre-Socratic philosophers who attempted to explain the world by appeal to natural causes, in contrast to the *theologi* who explained the generation and structure of the world in terms of myth and supernatural forces] Aristotle claimed that the founder of the natural philosophy is Thales. Natural philosophy is concerned with the question "What is the world made of?" and natural philosophers usually answer the question by appeal to a single material substratum, something equivalent to Aristotle's material cause. Historians of philosophy, however, generally believe that Aristotle's account is not very accurate, for natural philosophers did not have the concept of matter, and their keyword was "nature", the principle of a thing's growth and present organisation. Most of them wrote books entitled "On Nature".

"Natural philosophers have two modes of explanation. The first set make the underlying body one, ... The second set assert that the contrarieties are contained in the one and emerge from it by segregation." - Aristotle, *Physics*, 187a11-20.

Natural philosophy, another name for philosophy of nature

Natural religion, another expression for natural theology

Natural rights

Rights which belong to us simply because of our humanity and not because of any special legal, political or social institutions. According to many writers of the Enlightenment, natural rights, which are held in the state of nature in virtue of natural law, cannot be transferred to the government through a social contract. According to Hobbes, with no government in the state of nature, an individual has a right to take everything necessary to preserve his life or to promote his survival. The supreme natural right to defend and preserve oneself also establishes one of the basic natural laws. But because everyone has natural rights which can conflict with the natural rights of everyone else, Hobbes depicted the state of nature as a state of war of all against all. Ac-

对象被清楚明晰地知觉而言,它决不会把任何不真实的对象包含进来。”——笛卡尔:《哲学著作集》(科庭汉姆等译),1985年,第一卷,第203页。

自然哲学家

[原文为希腊语 *phusikoi* 或者 *phusiologi*, 意指“谈论自然的人”,也被译为“物理学家”,表示苏格拉底以前的那些试图通过研究自然因进而解释世界的哲学家,他们有别于那些依据神话和超自然力量来解释世界生成与结构的神学家] 亚里士多德声称自然哲学家的创始人是泰勒斯。自然哲学家关注的是“世界由什么构成的?”这个问题,他们通常在回答这个问题时主要凭借一种单一的物质基质,等同于亚里士多德所说的质料因。然而,哲学史家一般认为亚里士多德的阐述并不怎么精确,因为自然哲学家并非接受“质料”这个概念,他们的主词是“自然”,而“自然”则是事物生长与现有组织的原理。许多自然哲学家的著作标题是“论自然”。

“自然哲学家有两套解释方式,第一套是将潜在的物体统一为太一,第二套断言对立因素包含在太一之中,但又是从太一中分离出来的。”——亚里士多德:《物理学》,187a11—20。

自然的哲学

“自然哲学 (philosophy of nature)” 的另一名称。

自然宗教

“自然神学” 的另一种表述。

自然权利

是指属于我们只是因为我們的人性而不是因为特殊的法律、政治或社会制度的那些权利。根据启蒙运动时期许多著作家的看法,自然权利是在自然状态下凭借自然法而持有的,它不可能通过社会契约而转移到政府那里。按照霍布斯观点,由于自然状态下没有政府,个人有权取得所需的东西以维持他的生命或促进他的生存。保护和维持自身的最高的自然权利,还确立了一个基本的自然法。不过,由于每个人拥有的自然权利会与其他人拥有的自然权利发生冲突,霍布斯把自然状态描绘为一切人反对一切人的战争状态。按照J. 洛克的见解,自然权利包括生存权、自由权和财产权。边沁公然反对自

according to John Locke, natural rights include the rights to life, liberty and property. Bentham notoriously rejected the possibility of natural rights on the grounds that nature does not provide rights and that rights can only be created by law. In spite of his objections, the notion of natural rights remains influential in moral, social and political thought. Natural rights are considered to be basic rights at the core of human rights. Writers are divided over the need to associate natural rights with natural law.

"The right of nature, which writers commonly call *jus naturale*, is the liberty each man hath, to use his own power, as he will himself, for the preservation of his own nature; that is to say, of his own life; and consequently, of doing anything, which in his own judgement, and reason, he shall conceive to be the aptest means thereunto." —Hobbes, *Leviathan*, I, 14.

Natural selection

A central term of Charles Darwin's evolutionary theory. Organisms have features with functions that are adapted to the natural world and that help them survive and reproduce. Christianity claims that this is due to God's design, but Darwin showed that this functional adaptation for survival can be explained by a causal mechanism, natural selection. Adaptations are selected because they aid the survival of individuals or species and are transmitted to succeeding generations. Natural selection gives rise not only to the often striking forms and functions of living creatures but also to their enormous diversity. Those organisms which fail to develop suitable features lose in the struggle for survival and reproduction. The basic spirit of natural selection is summarised in Spencer's phrase survival of the fittest. Natural selection is still at the centre of the dominant accounts of evolution.

"Drawing on the analogy of the animal and plant breeders' skill at transforming through picking desired forms, Darwin christened his new mechanism 'natural selection'." —Ruse, *Taking Darwin Seriously*, 1986, p. 16.

Natural theology

Also called natural religion or rational theology, a theological discipline which tries to prove truths about the existence and attributes of God through the employment of natural human reason. From this viewpoint, reason unaided by revelation can provide a firm basis for religion and shows that there exists an omnipotent, omniscient and perfectly good God who created the world. It does not propose a supernatural communication with God through revelation and grace, because such revelation is not rationally justifiable. Rather, it makes use of data available to all rational beings. It intends to prove that theistic beliefs are not only true for believers, but for all rational human beings. It also tries to understand the action of divine providence regarding human beings and to

然权利的可能性,其根据是自然不提供权利,权利只能是由法律造成的。不管边沁如何反对,自然权利的看法仍对道德、社会和政治理论有影响。自然权利被视为人权的核心的基本权利。著作家在是否需要将自然权利和自然法联系起来的问题上存在分歧。

“著作家通常称为 *jus naturale* 的自然权利,就是每一个人拥有的按照自己的意愿运用自身的力量保全自己的天性——也就是保全他本人的生命力的自由;因此,这种自由就是用他自己的判断和理性认为是最适合的手段去做任何事情的自由。”——霍布斯:《利维坦》,第一部,第14章。

自然选择

C. 达尔文进化论的中心术语。有机体具有适应于自然界、从而有助于它们的生存和繁衍的功能特征。基督教宣称这是出自于上帝的设计,但达尔文证明这种适者生存的作用可以解释为一种因果机制,即“自然选择”。适者得以选择是由于它们有助于个体的生存或种类的生存并被遗传给后代。自然选择不仅经常导致生物的令人吃惊的形式和功能,而且导致它们大量的多样性。那些不能发展出这些合适特征的有机体是这种生存和繁殖斗争中的失败者。自然选择的基本精神被概括在斯宾塞的“适者生存”的警句之中。“自然选择”一词仍然处在进化思想的主导图景的中心。

“达尔文利用类比于动物和植物养育者通过挑选想要的形式来改良物种的技艺,把他的新机制命名为‘自然选择’。”——罗斯:《慎思达尔文》,1986年,第16页。

自然神学

也称作“自然宗教”或“理性神学”。神学的一个学科,即力图通过运用自然的人类理智来证明关于上帝存在及其属性的真理。根据这种观点,不靠启示相助的理智,能够为宗教提供坚实的基础,也能表明存在着一位全能的、全知的、全善的创世者上帝,它不提倡通过启示和恩典达到与上帝的超自然的沟通,因为这样的启示是理性不可证明的。它宁愿把一切理性存在物作为有效的证据材料来使用。它试图证明,有神论的信念不仅对于信仰者,而且对于一切有理性的人都是真实的。它也企图理解关于人类的神意行为,并力图处理邪恶问题。因此,自然神学是与超自然神学对应的,后者把关于上帝

deal with the problem of evil. Natural theology is thus contrasted with supernatural theology, which locates the source of truths about God in revelation. In this sense, natural religion is rational, while supernatural theology is not based on reason. This contrast is associated with the contrast between rational and revealed theology. For this reason, natural theology is a branch of metaphysics dealing with divine being. Many traditional arguments for God's existence, such as the ontological argument, cosmological argument, teleological argument, moral argument and argument from design, are examples of natural theology. Aquinas's five ways are its paradigm. Natural theology was criticised by Hume and Kant. Hume provided especially important criticism of the argument from design. For Kant, natural theology cannot be right because the object whose existence it aims to prove is outside possible human experience where reason inevitably falls into conflict with itself, although he claimed that belief can be maintained not as knowledge but as a matter of faith and hope. Much of natural theology has been assimilated into contemporary philosophical theology.

"The fourth branch of metaphysics is natural or rational theology. The notion of God, or God as a possible being, the proofs of his existence, and his properties, formed the study of this branch." —Hegel, *Logic*, sect. 36.

Natural virtue

For Hume, virtue is the moral quality in ourselves or others which is approved of by our moral sentiments. He distinguished between natural virtue and artificial virtue. Natural virtues are virtuous tendencies and characteristics which arise from the fundamental propensities of human nature itself and are not cultivated deliberately. These characteristics include charity, benevolence, generosity, the love of one's children, clemency and so on. Artificial virtues, such as justice, allegiance and fidelity, in contrast, are effects of artifice and education and are obtained over a long period of time. They are artificial and invented, but not arbitrary. Hume claimed that natural virtues provide the basis for family life and intimate friendship, while artificial virtue is required for our broader social life.

"When I deny justice to be a natural virtue, I make use of the word, natural, only as opposed to artificial." —Hume, *A Treatise of Human Nature*, III, 2, 1.

Naturalism

The claim that everything is a part of the world of nature and can be explained using the methodology of the natural sciences. Naturalism accepts explanatory monism rather than dualism or pluralism, is committed to science and is opposed to mysticism. In different areas, naturalism has different forms. In metaphysics, it rejects the postulation of any unnatural theoretical entities, faculties or causes, and it re-

的真理来源设定在启示中。在这种意义上,自然宗教是理性的,超自然神学则不以理性为基础。这个对立与理性神学和启示神学之间的对立相关联。正因如此,自然神学是形而上学的一个分支,处理神圣存在问题。关于上帝存在的许多传统论证,如本体论论证、宇宙论论证、目的论论证、道德论证、设计论证等等,都是自然神学的例证。阿奎那的“五法”是它的范例。自然神学受到了休谟和康德的批判。休谟尤其提出了对设计论证的重要批判。在康德看来,自然神学不可能正确,因为它意欲证明其存在的那个对象是处于人类可能的经验范围之外的,在那里理性必然与自己相矛盾,尽管康德自己也宣称信仰必须被维持,但不是作为知识,而是作为信念和希望。自然神学大多已被同化进当代哲学神学中。

“形而上学的第四个分支是自然神学或理性神学。上帝的观念,或作为一种可能存在的上帝,关于他存在的证明、他的特性,构成了这个分支的研究课题。”——黑格尔:《小逻辑》,第36节。

自然的德

在休谟看来,德是在我们自己或他人身上被我们的道德情感所赞许的道德品质。他区分了自然的德和人为的德。自然的德是从人性自身的根本倾向中产生出来的道德趋向和特征,不是刻意培植出来的。这些特征包括博爱、慈善、慷慨、对子女的爱、宽厚等。而人为的德,诸如正义、忠实、真诚之类,是设计和教育的结果,是经过很长一段时期才得到的。它们是为人为的和发明出来的,但不是任意的。休谟声称,自然的德为家庭生活和亲密友谊提供了基础,而人为的德是我们广泛的社会生活所需要的。

“当我否认正义是自然的德时,我所用自然一词,仅仅是与人为的一词对立的。”——休谟:《人性论》,第三卷,第2章,第1节。

自然主义

认为每一事物都是自然世界的一部分,都可以用自然科学的方法加以解释。自然主义承认解释上的一元论,不承认解释上的二元论或多元论。它赞成科学,反对神秘主义。在不同的领域,自然主义有不同的形式。从形而上学方面来看,它反对假设任何非自然的从理论上推出的实体、官能或原因,反对科学探究无法接近的

jects supernatural beings and processes which are inaccessible to scientific inquiry. It also contests the claim that first philosophy is prior to natural science. In epistemology, naturalism holds that epistemological justification and explanation are continuous with natural science and argues that scientific method is the only way to secure our knowledge. According to nineteenth century psychologism and twentieth century naturalised epistemology, epistemology should be assimilated to empirical psychology. Ethical naturalism rejects the is-ought or fact-value distinction and explains ethical terms in terms of natural properties. This position was characterised by Moore as the "naturalistic fallacy", but it is uncertain whether it is a real fallacy. In aesthetics, naturalism holds that artwork should represent the world as it is. In philosophy of mind, naturalism holds that mental phenomena are, or are caused by, brain processes. Recent naturalistic interpretations of Hume, Kant and Wittgenstein place emphasis on unavoidable natural human tendencies rather than on the priority of science. For any form of naturalism, there is a corresponding form of anti-naturalism.

"Naturalism has a representative already in 1830 in the antimetaphysician Auguste Comte, who declared that positive philosophy does not differ in method from the special sciences."—Quine, *Theories and Things*, 1981, p. 72.

Naturalistic epistemology

A term from Quine's paper, "Epistemology naturalised", although Quine himself does not offer an explicit definition of it. Quine takes it as an epistemological project which suggests that in order to discover the grounds for construing knowledge and its acquisition, we must appeal to behavioural psychology and to the historical study of science. The proper questions to ask about knowledge are not about the justification of claims to knowledge, but about how the formation of knowledge is to be explained. We need to reconstruct the notion of evidence so that it refers to the sensory stimulations that cause us to have the scientific beliefs which we possess. The main question that epistemology asks is how one's output of a theory of nature which transcends one's input of evidence is generated in a human subject. Naturalised epistemology was established partly by criticising the traditional epistemology started by Descartes, which believes that epistemology asks how we ought to arrive at our beliefs prior to any scientific reasoning. Quine argues that epistemology should be a branch of natural science, especially a chapter of psychology. Epistemology is contained in the natural sciences and the natural sciences are contained in epistemology. Quine believes that the approach of naturalised epistemology can diminish scepticism and free epistemology from the labour of refuting scepticism.

Quine's controversial project has been followed by many other philosophers who explicitly consider themselves to be

超自然的存在物和过程。它还批驳了第一哲学优于自然科学的主张。从认识论方面来看,自然主义认为认识论上的证明和解释是与自然科学相伴随的持续过程,并论证说科学的方法是我们获得知识的惟一方法。按照19世纪的心理主义和20世纪自然科学化的认识论,认识论应比作经验的心理学。伦理自然主义反对对是与应该,或事实与价值的区分,并用自然的特性来解释伦理学的术语。这一主张被密尔描述为“自然主义的谬误”,但它是否真是谬误还不能肯定。从美学方面来看,自然主义认为艺术作品应体现世界的本来面目。在心的哲学方面,自然主义认为精神现象是大脑活动的过程,或是由大脑活动过程所引起的。近代自然主义的阐述者休谟、康德和维特根斯坦强调的是不可避免的自然人的倾向而不是科学的优越性。对任何形式的自然主义而言,都存在相应形式的反自然主义。

“自然主义早在1830年反形而上学的学者中就有了代表人物A. 孔德,他宣称实证哲学在方法上与特殊的科学没有区别。”——奎因:《理论与事物》,1981年,第72页。

自然主义认识论

这一术语来自奎因的论文《自然化的认识论》,尽管奎因本人并没有提供它的清晰定义。奎因把这作为一种认识论方案,即提出为了发现构成知识及其获得的基础,我们必须诉诸行为主义心理学以及对科学的历史探究。关于知识可以问及的适当问题,不是有关知识主张的辩护问题,而是关于如何解释知识的形成问题。我们需要重建“证据”的概念,使它指涉那些感官刺激,正是它们导致我们具有我们所拥有的科学信念。认识论所问的主要问题是,人们的超越“证据”(输入)的自然理论(输出)是如何在人类主体中产生的。自然化认识论的确立,部分是通过批判始于笛卡尔的传统认识论,后者认为认识论问的是在任何科学推理之前,我们应如何得出我们的信念。奎因论认为,认识论应当是自然科学的一个分支,尤其是心理学的一章。认识论包含在自然科学中,而自然科学也包含在认识论中。奎因相信,自然化认识论的方法可以消除怀疑论,把认识论从反驳怀疑论的努力中解脱出来。

奎因的这一有争议的方案,为其他许多明确认为自己做的是规范认识论的哲学家所追随。他们认为,人类及他们的认知官能是自然中的实体,并主张自然科学、尤其是生物学和经验心理学的成果对认识论是至关重要的。

“对于知识主张的系统评价是认识论的中

pursuing normative epistemology. They see human beings and their cognitive faculties as entities in nature and hold that the results of natural sciences, particularly biology and empirical psychology, are crucial to epistemology.

"The systematic assessment of claims to knowledge is the central task of epistemology. According to naturalistic epistemologists, this task cannot be well performed unless proper attention is paid to the place of the knowing subject in nature."—Shimony and Nails (eds.), *Naturalistic Epistemology*, 1987, p. 1.

Naturalistic ethics

Also called ethical naturalism. In a broad sense, the view that ethical statements are empirical or positive and must be understood in terms of natural propensities of human beings, without mysterious intuitions or divine help. As attacked by Moore, it is the view held, for example, by Utilitarianism and evolutionary ethics, according to which there is no sharp demarcation between statements of fact and statements of value. As a consequence, ethical properties are natural properties and we may derive "ought" from "is". Moore accuses this view of committing the naturalistic fallacy, but proponents of naturalistic ethics have tried to show that this is not a fallacy at all.

"... Theories which owe their prevalence to the supposition that good can be defined by reference to a natural object... are what I mean by the name, ... 'Naturalistic Ethics'." Moore, *Principia Ethica*, 1903, p. 39.

Naturalistic fallacy

Moore claims that philosophers traditionally define the conception of good in terms of natural properties or attributes, such as pleasure, the desirable, progress in evolution; in so doing they confuse the ethical conception of "good" with a natural object, and ignore the distinction between what good means and what things are good. This, according to Moore, is the "naturalistic fallacy". Instead of seeking a naturalistic definition, Moore argued that we should see "good" as a simple indefinable non-natural quality to which we have access through a kind of intuition. Moore argues that all philosophers who derive ethics from metaphysics committed this fallacy. Consequently, ethics was said not to be based on metaphysics, and could not be reduced to any natural or social science. This idea echoes Hume's view that "ought" is different from and cannot be derived from "is". But it is disputable whether this is really a genuine fallacy. In particular, there have been recent attempts to justify the derivation of "ought" statements from "is" statements. Moore's influential *Principia Ethica* attempted to dispose of the naturalistic fallacy, but his arguments against naturalism and for his own account have both been challenged.

心任务。按照自然主义认识论,除非适当注意到认识主体在自然中的地位,否则这一任务就不可能很好地执行。”——西莫尼和奈耳斯(编)《自然主义认识论》,1987年,第1页。

自然主义伦理学

也叫伦理的自然主义。在宽泛的意义上,它主张伦理陈述是经验的或实证的,必须根据人类的自然倾向来理解,无需神秘的直觉或神灵的帮助。正如摩尔所批评的那样,这是由(例如说)功利主义和进化论伦理学主张的观点,它认为在事实陈述和价值陈述之间没有分明的分界线。结果,伦理性质就是自然性质,我们可以从“是”推出“应当”。摩尔谴责这种观点犯了自然主义谬误,但自然主义伦理学的支持者力图证明这根本不是什么谬误。

"……认为善可以靠指称自然对象来定义,由于这种看法而得以流行的理论……就是我用这名称所指的……‘自然主义伦理学’。”——摩尔:《伦理学原理》,1903年,第39页。

自然主义谬误

摩尔认为,哲学家以传统方式用自然性质或属性,诸如快乐,可欲的事物,进化过程中的进步来定义善这个概念。在这么做的时候,他们混淆了“善”这个伦理概念和自然对象,忽视了善的意思和事物很好的意思之间的区别。在摩尔看来,这就是“自然主义的谬误”。摩尔不寻求自然主义的定义,而主张我们应把“善”视为简单的、不可定义的、非自然的性质,我们是通过一种直觉来得到它的。摩尔认为,所有从形而上学得到伦理学的哲学家都犯有这种错误。因此,伦理学被说成是并非基于形而上学,不能还原为任何一种自然科学或社会科学。这种看法是呼应了休谟的观点:“应当”与“是”不同,“应当”也不能从“是”中推导出来。但对于这是否确为一种真正的谬误,是有争议的。特别是最近有人要证明从“是”这样的陈述推导出“应当”这样的陈述是有理由的。摩尔有影响的著作《伦理学原理》力图清除自然主义谬误,但他反对自然主义和支持自己说明的论证都受到了挑战。

“我曾说明过,那种[自然主义的]谬误在于这样的意图:善不过是意味着某种简单的或复杂的概念,可以用自然的性质来定义。”——摩

"That [naturalistic] fallacy, I explained, consists in the contention that good means nothing but some simple or complex notion, that can be defined in terms of natural qualities."—Moore, *Principia Ethica*, 1903, p. 73.

Nature

[Greek: *physis*, from the verb *phuein*, to grow or to give birth to; Aristotle's book *Physics* is "On Nature"] Nature stands in contrast to things made by men, such as conventional things or artefacts. Aristotle defines nature as the inner origin of the change or stability of a thing. Such a source comprises (1) the material from which a thing is made, and (2) the structure of the thing. Both matter and form are thus nature, although Aristotle held that form is more a nature than matter. Pre-Socratic philosophy is generally called the philosophy of nature because it seeks for the ultimate material stuff out of which the world is constructed. For Aristotle, a discussion of matter as nature leads to a discussion of necessity. His discussion of form as nature leads to teleology, and eventually to the theory of the unmoved mover as the final cause of nature, for Aristotle claims that a formal cause coincides with an efficient cause and a final cause. Aristotle requires those who study nature to know both matter and form, but the latter is more important. In Aristotle's ethics, nature means (1) the original constitution or tendency that a man has without involving human intervention, in contrast to what results in him from law and education, and (2) a man's function or the end to which he tends. The task of ethics is to develop this natural tendency in order to achieve the appropriate natural end.

Nature is also used to refer to the totality of things in the universe. Our knowledge of this natural world changes with the development of sciences. Nature in this sense is sometimes contrasted with man, with nature seen as exploitable by human rationality, but this attitude has been recently challenged by some aspects of environmental philosophy, according to which humans must be seen only as part of nature.

"The word nature has two principal meanings: it either denotes the entire system of things, with the aggregate of all their properties, or it denotes things as they would be, apart from human intervention."—J. S. Mill, *Collected Works of J. S. Mill*, 1969, X, p. 401.

Naturphilosophie

[German: nature-philosophy] A view of nature which flourished in the Romantic criticism of science in Germany at the beginning of nineteenth century and which was fully elaborated by the German philosopher Schelling. It criticised the Newtonian scientific view of nature which treated nature as mechanistic and meaningless and suggested that nature undergoes a process of self-development culminating in a state

of perfection. —Moore, *Principia Ethica*, 1903, p. 73.

自然

[源自希腊语中的动词 *phuein* (意指“生长”或“化育”)；亚里士多德的著作《物理学》就是“论自然”] 自然与人为的事物(诸如习俗或人工制品)截然不同。亚里士多德把自然定义为事物变化或稳定的内在起源或本源。这一本源包括(1)一物形成的物质材料和(2)此物的结构。因此,质料与形式便是自然,尽管亚里士多德认为形式与其说是质料不如说是自然。前苏格拉底哲学一般被称为自然哲学,因为它探讨的是构成世界的终极物质材料。在亚里士多德看来,讨论质料即自然的结果是讨论必然性。他本人对形式即自然的论述导向了目的论,最终又导向了作为自然之终极因的不动的动者理论,因为他认为形式因与动力因和终极因是一致的。亚里士多德要求研究自然的人应当熟悉质料与形式,但又认为后者更为重要。在亚里士多德的伦理学里,自然意指(1)人在未受人类干扰时所具有的本性或倾向,这与法律和教育在他身上所形成的东西是截然不同的;(2)人所习惯的职能或追求的目的。伦理学的任务在于发展这种自然本性以便获取适当的自然目的。

“自然”也被用来表示宇宙万物的整体。人们对这个自然界的认识是随着科学的发展而变化的。自然在此意义上有时与人形成对立,因为自然被视为人类理性掠夺的对象,但是,这种态度最近遇到环境哲学某些方面的挑战,根据环境哲学的某些观点,人应当被看成是自然的一部分。

“自然一词的基本含义有二:一是表示事物的整个系统,即所有事物特性的集合体;二是表示事物成其所然,不受人类干预。”——《J. S. 密尔著作集》,1969年,第十卷,第401页。

自然的哲学

[“自然的哲学”的德语词] 19世纪初在德国浪漫主义对科学的批评中兴盛起来的自然观。它由德国哲学家谢林充分地加以详细阐发。它批判牛顿的自然科学观,后者把自然视为机械的和无意义的,而前者认为,自然经历了自我发展的过程,在自我呈现的状态中达到顶点。它强调主观和客观、理想和现实的统一。与那通过

of self-presentation. It emphasised unities between the subjective and objective and between the ideal and real. In opposition to the scientific method of exploring nature through external observation and experiment, it sought to understand nature's own language through intuition and contemplation on the grounds that natural phenomena are expressions of life. It also rejected the dichotomy of subject and object, according to which the thinking subject is simply opposed to nature as a world of objects. Instead it claimed that the subject is itself part of nature.

"If you recall what was said about the *Naturphilosophie*, what in humankind is conscious of itself and has come to itself is what has gone through the whole of nature, which has, as it were, carried everything, experienced everything, it is that which has brought everything back into itself, into its essence, from self alienation." —Schelling, *On the History of Modern Philosophy*, 1994, p. 179.

Nausea

For Sartre, an existentialist feeling of disgust for the facticity and contingency of our bodies in analogy to our physical disgust at our bodies. According to Sartre, awareness of my own body is the basic means by which I have contact with the external world, and nausea becomes my primitive and original feeling about the world and my pure apprehension of myself as factual experience. This basic nausea produces vomiting and provides the ground for various concrete and empirical nauseas, such as those caused by spoiled meat or fresh blood. Nausea is an inescapable concomitant of physical existence and is a disclosure that one's existence is contingent. Nausea is nihilated by active transcendence. The title of one of Sartre's novels is *Nausea*.

"This perpetual apprehension on the part of my for-itself of an *insipid* taste which I cannot place, which accompanies me even in my efforts to get away from it, and which is *my* taste—this is what we have described elsewhere under the name of *Nausea*. A dull and inescapable nausea perpetually reveals my body to my consciousness." —Sartre, *Being and Nothingness* (tr. Barnes), 1957, p. 338.

Necessarily false, see logical truth

Necessarily true, see logical truth

Necessary condition

Suppose *p* and *q* are related so that *q* only if *p*. Consequently, if *p* is not the case, then *q* is not the case, and if *p* is the case, then *q* is not necessarily the case. *p* is then a necessary condition of *q*.

In contrast, suppose *p* and *q* are related so that if *p* then

外部观察和实验而探索自然的科学方法相对立,它努力通过直观和沉思去理解自然自身的语言,因为它认为自然现象就是生命的表达,它也反对主体和客体的二分法,按此二分法,思维主体只是对立作为对象世界的自然,反之,它主张主体自身是自然的部分。

“如果你回想对自然的哲学所说的话,人类对自身所意识到的和已达到自身的的东西就是经历了整个自然的东西,自然似乎携带一切事物,经验一切事物,那么,正是自然使一切事物从自我异化返回自身,达到它的本质。”——谢林:《论现代哲学史》,1994年,第179页。

厌恶(或译“恶心”)

在萨特看来,这是一种对于我们身体的实际状态和暂时状态的生存主义厌恶感,类似于我们对于自己身体的感官厌恶。据萨特看,对于我自己身体的意识是我与外在世界接触的基本手段,而厌恶则成为我对于世界的原初的和天然的感觉,成为我对于作为事实经验的我自己的纯领受。这种基本的厌恶引起呕吐,并为各种具体和经验中的厌恶,比如那些由腐肉和鲜血引起的厌恶,提供了基础。厌恶是肉体生存不可避免的伴生物,并透露出人的生存是暂时的,厌恶被主动的超越性消除掉。萨特的一部小说的名字就叫做《厌恶》。

“在我的‘为自身’(自为之我)里,总有对于一种无味(*insipid*)之味的不断领受。对于这种无味之味,我不能左右;它甚至在我企图摆脱它的努力之中也伴随着我;它就是我的味道。这就是我在其他地方用‘厌恶’这个名字来描述的东西。一种沉闷的和无法逃脱的厌恶不断地将我的身体透露给我的意识。”——萨特:《存在与虚无》(巴奈斯英译),1957年,第338页。

必要条件

如果 *p* 和 *q* 具有这样的关系:只有 *p* 才 *q*; 于是,如果 *p* 不出现则 *q* 不出现,但是 *p* 出现 *q* 不必然出现,那么, *p* 是 *q* 的必要条件。

相反,如果 *p* 和 *q* 具有下述关系:如果 *p* 则 *q*; 于是,如果 *p* 出现 *q* 就出现,但 *p* 不出现时 *q*

q. Consequently, if p is the case, then q is the case, but if p is not the case, then q is not necessarily the case. p is then a sufficient condition of q. If p is a necessary condition of q, then q is a sufficient condition of p, and if p is a sufficient condition of q, then q is a necessary condition of p.

If p and q are related so that p if and only if q and q if and only if p, then p is both a necessary and sufficient condition of q. If p is a necessary and sufficient condition of q, then q is a necessary and sufficient condition of p. p and q are then logically equivalent statements. Logicians use "iff" as a shorthand for "if and only if".

"When one statement entails another, the truth of the first is a sufficient condition of the truth of the second, and the truth of the second is a necessary condition of the truth of the first."—P. F. Strawson, *Introduction to Logical Theory*, 1952, p. 25.

Necessary / contingent, see contingent / necessary

Necessary truth

The distinction between necessary truth and contingent truth is a version of Leibniz's distinction between truths of reason and truths of fact. A necessary truth must be true and could not be false, whatever way the world is. It is true in itself. A contingent truth, on the other hand, depends upon the empirical world and might have been false, had the world been different. Logically necessary truths are based on the principle of contradiction, having negations which are logically impossible. Necessary truths are not established on the basis of sense experience. They are either intuitively analytic or deduced from intuitively acceptable premises. Logical and mathematical truths are generally regarded as the paradigms of necessary truths. For rationalism, necessary truth is truth of reason and is based on the insight into real connections between facts. For empiricism, knowledge of the world must be based on sense-perception. Hence either there are no necessary truths, or there are necessary truths, but they have no direct reference to the factual world. The necessary / contingent distinction is closely related to the *a priori* / *a posteriori* distinction and the analytic / synthetic distinction. It is difficult to get an adequate grasp of any one of these without understanding the others. A crucial question is whether Kant was justified in claiming that some fundamental necessary truths are synthetic and *a priori*. Kripke has argued that some necessary truths are *a posteriori*.

If there are other kinds of necessity and possibility, such as metaphysical or natural necessity and possibility, they could also be used to distinguish between necessary and contingent truths, and necessary truth would become relative to the sort of necessity in question. We could then ask about the relations among the various kinds of necessary truths. In

不必然出现,那么,p是q的充分条件。如果p是q的必要条件,则q是p的充分条件;并且如果p是q的充分条件,则q是p的必要条件。

如果p和q具有下述关系:p当且仅当q,并且q当且仅当p,则p是q的充分必要条件。如果p是q的充分必要条件,则q是p的充分必要条件。p和q因此就是逻辑等值的陈述。逻辑学家使用"iff"作为"if and only if"(当且仅当)的缩写。

"当一个陈述衍推另一个陈述时,前者真是后者真的充分条件,并且后者真是前者真的必要条件。"—斯特劳森:《逻辑理论导论》,1952年,第25页。

必然/偶然

见"偶然/必然"条。

必然真理

必然真理和偶然真理之分是莱布尼茨的理性真理和事实真理之分的翻版。不论世界取何种方式,一个必然真理必定真不可能假。它自身就是真的。反之,一个偶然真理依赖于经验世界,如果世界有了不同,它就会成为假的。必然真理在逻辑上依据矛盾律,它的否定在逻辑上是不可能的。必然真理不是建立在感觉经验的基础上的。它们要么是直觉分析的,要么是从直觉上认可的前提推演出来的。一般把逻辑的和数学的真理看做必然真理的样板。对于理性主义来说,必然真理是理性的真理,它依据于对事实的真正联系的洞见。对于经验主义来说,有关世界的知识应当建立在感性知觉的基础上。因此,不论有没有必然真理存在,它们同事实世界都没有直接关系。必然和偶然之分同先天和后天之分、分析和综合之分是密切联系的。如果不理解其中一个,就很难恰当把握另一个。一个重要的问题是,当康德说某些根本的必然真理是先天综合真理时,他是否正确。克里普克论证说,有些必然真理是后天的。

如果有其他种类的必然性和可能性,诸如形而上学的或自然的必然性和可能性,那么,它们也可以用于区分必然真理和偶然真理,而且必然真理会变成与此处所说的这类必然性有关。于是,我们就可以提出关于各种不同必然真理之间的关系问题。在此意义上,"必然真理"一词就变得不明确了,而且随关于必然性的不同叙述而异。

"看起来,像我们在纯数学,特别是算术和几何中发现的那类必然真理,必定有一些原则是不依靠实例来证明,因而也不依靠感觉的见

this sense, the term "necessary truth" becomes ambiguous and varies with different accounts of necessity.

"It appears that necessary truths, such as we find in pure mathematics and particularly in arithmetic and geometry, must have principles whose proof does not depend on instances nor, consequently, on the testimony of the senses, even though without the senses it would never occur to us to think of them."—Leibniz, *New Essays on Human Understanding*, preface, p. 50.

Necessitarianism

The doctrine that what happens in the world is determined or necessitated by the essence of things or by general laws and hence that necessity and possibility are objective notions. The world has different modes of necessity, such as logical, nomic and metaphysical necessity. Objectively necessary relations in the natural world are the subject-matter of scientific inquiry. The clearest expression of necessitarianism is physical determinism, which claims that nature is determined by universal laws. Necessitarianism is opposed by philosophers who reject all necessity, reject non-logical necessity or consider necessity to be a matter of expectation, a degree of epistemic commitment or a verbal feature, rather than as an objective property. This opposing view can be termed anti-necessitarianism. Another contrasting theory is contingentism, which holds that nature and mind are not completely predetermined and that the world contains irreducible elements of the unpredictable. As necessitarianism is associated with determinism, contingentism is related to indeterminism and accepts the existence of free will.

"Peirce gave the name 'necessitarianism' to the belief in the principle of universal lawfulness."—Bunge, *Causality*, 1959, p. 23.

Necessity

Necessity is ascribed to a state which must occur or is always the same, irrespective of changing circumstances or of our interventions. Necessity is distinguished from contingency or possibility, which is ascribed to a state that may or may not occur and that varies with circumstances. If necessity is unconditional, it is absolute necessity, but if it is based on certain premises, it is relative necessity. Logical necessity is ascribed to a statement or proposition which could not have been false and which is guaranteed to be true by the laws of logic. In contrast, a contingent statement is one whose contradiction is possible. Necessity attached to a whole proposition (in the form "it is necessarily true that...") is necessity *de dicto*, in contrast to necessity *de re*, in which necessity belongs to an object. Necessary knowledge is true under all circumstances and is hence universal. Traditionally, a necessary truth is thought to be analytical and to be known *a priori*, although Kant introduced synthetic *a priori* judgements

证的,尽管没有感觉我们决不会想到它们。"……莱布尼茨:《人类理智新论》,序言,第50页。

必然论

指这么一种观点,认为世界上的事实都为其实质或为一般规律所决定或必需,因此必然性与可能性是客观的概念。世界上有着不同的必然性模式,例如“逻辑的”、“规则的”、“形而上学的”等。自然界中的客观必然关系是科学探究的主题。必然论的最清楚的表达为“物理决定论”,它认为自然为普遍规律所决定。必然论为一些哲学家所反对,他们反对一切必然性,反对非逻辑的必然性,或认为必然性是一种预期问题,或是一种认识论承诺的程度,抑或一种语词特征,而不是一种客观性质。后一种观点可以用术语“反必然论”来表示。另一种与此相对立的理论称为“偶然论”,它主张自然和精神都非完全预先决定的,世界上存在着不可预言事件的不可还原因素。由于必然论与决定论相关联,因此偶然论与非决定论相联系,承认自由意志的存在。

“皮尔士给予普遍合法性原理的信念以‘必然论’的名称。”——邦格:《因果性》,1959年,第23页。

必然性

必然性被描述为一种必定发生或总是相同的状态,无论情况是否发生变化还是我们有否干预,莫不如此。必然性区别于偶然性或可能性,后者指可能发生或可能不发生的状态,也指随情况变化而变化的状态。如果必然性是无条件的,就是绝对的必然性;但如果它以某些前提为基础,则是相对的必然性。逻辑必然性被归结为不能虚假,且其真实性靠逻辑规则确保的陈述或命题。与此相对,偶然陈述指其矛盾陈述可能成立的陈述。必然性附到整个命题上(即以“……必然真实”的形式出现),就叫做关于命题的必然性,和必然性属于对象的关于事物的必然性相对应。必然的知识在一切情形下都真,因此是普遍的。在传统上,必然真理被认为是分析的,并且是先天得知的,虽然康德引入先天综合判断和先验必然性观念来形容判断,为经验的可能性提供条件。克里普克引入了后天必然真

and the notion of transcendental necessity to characterise judgements giving the conditions for the possibility of experience. Kripke introduced the notion of necessary *a posteriori* truth, for truths concerning the essence of a thing which are known through empirical inquiry. This is also called metaphysical necessity. Some philosophers hold that nature is governed by laws of natural necessity, but Hume argued that what appear to be necessary connections in the world are as associations of ideas in mind and involve psychological necessity, which is not objective necessity.

"A thing is called necessary either in reference to its essence or its cause. For the existence of a thing necessarily follows either from the essence and definition of the thing itself or from a given efficient cause." —Spinoza, *Ethics*, I, Prop 33.

Necessity, absolute

For Leibniz, the contrast between absolute necessity and hypothetical necessity is basic. Absolute necessity, also called logical, metaphysical or mathematical necessity, is necessary in itself. It is the necessity possessed by a truth whose denial would involve a contradiction, as in the case of the truths of arithmetic and geometry. Absolute necessity is universally and unconditionally the case. The truth of such necessity is the truth of reason. Hypothetical necessity, also called moral, consequential or physical necessity, is necessary, given that such and such antecedents occur. The term "hypothetical necessity" is derived from Aristotle's *Physics* 200a13–14. According to Leibniz, the present state of the world is not absolutely necessary, but is only hypothetically necessary. All laws of nature are only hypothetical, for they depend on God's will to create the best possible world. The distinction between absolute and hypothetical necessity is an attempt to avoid Spinozistic rigid determinism and to establish the possibility of freedom of the will. It also plays an important role in Leibniz's metaphysics of possible worlds. For other philosophers, hypothetical necessity is also called relative necessity because it is relative to underlying premises.

"There are necessities, which ought to be admitted. For we must distinguish between an absolute and a hypothetical necessity." — Leibniz, *Fifth Paper to Clarke*, Paragraph 4.

Necessity, hypothetical, see necessity, absolute

Necessity, natural

Also called physical necessity. The necessary connection existing between distinct events in the natural world. This sort of necessity is not logical, for it is not guaranteed by the laws of logic, but is based on the laws of nature. It exists, according to some philosophers, because objects are endowed

with ideas, i.e. through empirical inquiry, and the notion of transcendental necessity to characterise judgements giving the conditions for the possibility of experience. Kripke introduced the notion of necessary *a posteriori* truth, for truths concerning the essence of a thing which are known through empirical inquiry. This is also called metaphysical necessity. Some philosophers hold that nature is governed by laws of natural necessity, but Hume argued that what appear to be necessary connections in the world are as associations of ideas in mind and involve psychological necessity, which is not objective necessity.

"一物之被称为必然的,或因其本质,或由其原因。因为一物的存在,或必出于该物自身的本质及定义,或必出于一个给定的动力因。" — 斯宾诺莎:《伦理学》, I, 命题 33。

绝对的必然性

在莱布尼茨那里,绝对的必然性和假说的必然性的对立是一个基本的对立。绝对的必然性也称“逻辑的”、“形而上学的”或“数学的”必然性,它自身就是必然的。绝对的必然性是由那样一种真理所具有的必然性,这种真理的否定包含着矛盾,就像算术或几何的真理那样。绝对的必然性普遍而无条件地都是如此。这样一个必然性的真理是理性的真理。假说的必然性也称“道德的”、“后果的”或“物理的”必然性,它是这样的必然性:假定此前有这样那样的事情发生,那么,它是必然的。“假说的必然性”一词出自亚里士多德的《物理学》200a13–14。根据莱布尼茨的观点,世界的现状不是绝对必然的,只是假说必然的。一切自然规律都只是假说的,因为它们依赖于上帝要创造最好的可能世界的意志。绝对的必然性和假说的必然性的区分是为了避免斯宾诺莎的严格决定论,确立意志自由的可能性所做的一个尝试。它对莱布尼茨关于可能世界的形而上学也起了重要作用。其他一些哲学家也把“假说的必然性”称作“相对的必然性”,因为它是相对于它的基础性前提而言的必然性。

"应当承认有各种必然性存在,我们必须区分绝对的必然性和假说的必然性。" — 莱布尼茨:《致克拉克的第五封信》,第4节。

假说的必然性

见“绝对的必然性”条。

自然的必然性

亦称“物理的必然性”,指存在于自然界各不同事件之间的必然联系。这类必然性因为没有逻辑规律的保证,所以不是逻辑的必然性,它是建立在自然规律的基础上的。根据某些哲学家所说,因为各种对象具有一种力量,它在一定

with a force which compels, under certain circumstances, the occurrence of such and such effects. Materialism generally holds that there is such a natural necessity which serves as the basis of induction and scientific knowledge. But Hume and his followers object to its existence, for no such force is observable. For them, the necessity between matters of facts is psychological, arising from the constant conjunction of states of affairs of given kinds.

"Some necessity is itself necessary; other necessity is contingent. It is, moreover, feasible to think that logical necessity is of the formal type, but that natural or physical necessity is of the latter." — G. H. von Wright, *Truth, Knowledge and Modality*, 1984, p. 69.

Necessity, physical, another name for natural necessity

Necessity, psychological

A form of necessity first discussed by Hume. According to rationalists, logical necessity was the sole valid form of necessity and was confined to the sphere of ideas. Hume claimed that in our knowledge of the natural world, we connect one idea with another through the relations of resemblance, contiguity and causality. There is a sort of necessary connection between the idea of a cause and the idea of its effect, but that is not logical necessity. The causal relation is simply a regulatory relation. This sort of necessity is brought about by the constant conjunction of the two ideas in our minds. Hence it is subjective and psychological rather than objective and logical.

"Psychological necessity, in Hume's view, marks some of our knowledge of matter of fact." — Walsh, *Reason and Experience*, 1947, p. 44.

Necessity, relative, see necessity, absolute

Needs

Anything required to lead a normal human life. It is widely claimed that fundamental and universal needs for a rational agent include the physical conditions for survival and freedom. Further, it is held that a central task of any government is to arrange for the satisfaction of the basic needs of its members, either by itself or through non-governmental institutions. There are various other kinds of human needs, some of which are culturally relative. Philosophers dispute the weight that should be given to the claims of needs in considering how to treat the members of society and how to distribute resources. These disputes are important in discussing justice and in determining the relation between equality and equity.

"The thought we have now arrived at is that a person

情况下,迫使这样那样的结果发生,所以,自然的必然性是存在的。唯物主义一般认为,这样一种作为归纳和科学知识的基础的必然性是存在的。但是,休谟和他的追随者反对这种必然性的存在,因为我们不能观察到任何这样的力量。在他们看来,事实之间的必然性是心理上的,是从既定种类的两个事态的恒常会合中产生出来的。

"有些必然性本身是必然的,有些必然性是偶然的。而且,可以认为逻辑的必然性是前一种必然性,自然的或物理的必然性是后一种必然性。" — 冯·赖特:《真理、知识和模态》,1984年,第69页。

物理的必然性

"自然的必然性"的另一名称。

心理的必然性

休谟首先加以讨论的必然性的一种形式。根据理性主义的观点,逻辑的必然性是必然性的惟一有效形式,而且仅限于观念的范围内。而休谟则声称,在我们关于自然界的知识中,我们通过类似、接近和因果性关系将一个观念和另一个观念联系起来。在原因的观念和它的结果的观念之间有一种必然联系,但它不是逻辑的必然性。因果关系只不过是规则性关系。这种必然性是由于我们心中的两个观念的恒常会合而造成的。因此,它是主观的和心理的,而不是客观的和逻辑的。

"按照休谟观点,心理的必然性是我们的某些事实知识的标志。" — 瓦尔西:《理性和经验》,1947年,第44页。

相对的必然性

见"绝对的必然性"条。

需要

过正常人的生活所需的东西。人们广泛认为,对于一个理性的人而言,基本的和普通的需要包括生存的物质条件和自由。进而言之,这种看法认为,任何一个政府的中心任务都是安排满足其成员的基本需要,无论这种安排是由政府本身来进行还是通过非政府的机构来进行。人类还有其他的各种需要,其中有些是与文化相关的。哲学家们在考虑如何对待社会成员和如何分配资源时,在应给予需要的要求以重视的问题上有争议。这些争议在讨论正义和确定平等与公平的关系时有重要作用。

"我们现在得出的思想是,假如而且只是假如一个人需要 X[绝对地],那(在经济、技术、政治、历史等等方面)就有可能设想,无论什么在

needs X [absolutely] if and only if, whatever morally and socially acceptable variation it is (economically, technologically, politically, historically, etc.) possible to envisage occurring within the relevant time-span, he will be harmed if he goes without X." Wiggins, *Needs, Values, Truth*, 1991, p. 10.

Negation

[from Latin: *negare*, to say no] As a logical term, negation is contrasted to affirmation and the positive and denies either a proposition as a whole or a predicate within a proposition. The standard sign of negation is \neg . A proposition and its negation form a contradiction; both cannot be true and the truth of one implies the falsehood of the other. If a proposition is true, its negation must be false, and *vice versa*. A predicate and its negation are also contradictory. Negation is thus a truth-functional operator, so that we can know the truth value of a proposition formed by an initial proposition and negation if we know the truth value of the initial proposition.

In Hegel's philosophy, negation is mainly a feature of concepts or things. Following Spinoza's idea that all determination is negation, Hegel claimed that negation is also a way of determining what it negates and hence has a positive result.

"Negation is no longer an abstract nothing, but as a determinate being and somewhat, is only a form of such being — it is as otherness." — Hegel, *Logic*, sect. 91.

Negation of the negation

Also called double negation. In formal logic, the negation of the negation of a proposition returns to the original starting-point of the original and unnegated proposition. The negation of "this is red" is "this is not red", but the negation of "this is not red" once again becomes "this is red".

Hegel supposed that a negation of the negation does not return to its original affirmative state, but reaches a higher degree of affirmation than the initial state and represents a greater development of the thing itself. Any finite affirmative contains its contrary or its negation and, according to Hegel, will develop into the latter. This is the first negation. The negation of the negation overcomes the opposition between the original affirmation and its negation. The negation of the negation will itself be negated as the process of negation proceeds. The process of "affirmation-negation-negation of the negation" is equivalent to the process of "thesis-antithesis-synthesis". It provides the architectonic of Hegel's philosophy and is omnipresent in his system. In this process, the first stage is a simple or natural unity; the second stage is one of separation; and the third stage, the negation of the negation, repairs the separation and restores unity on the higher level of a harmonious whole. Hegel also took this pat-

道德方面和社会方面可以接受的变化都会出现在相关的时间跨度中,如果他没有 X,他将受到伤害。"——威金斯:《需要、价值与真理》,1991年,第10页。

否定

[源自拉丁词:*negare*,说不是]作为逻辑术语,否定相对于肯定和确定而言,它或者否定整个命题,或者否定命题的谓项。否定的规范符号是 \neg 。一命题和它的否定形成了矛盾,它们不能同真,其一的真蕴涵了另一命题的假。如一命题为真,它的否定必为假,反之亦然。一谓项和它的否定也是矛盾的。这样,否定就是真值函项的算子,因此,如果我们知道了原初命题的真值,就会知道通过原初命题和它的否定而形成的命题的真值。

在黑格尔哲学中,否定主要指概念或事物的特性。按斯宾诺莎的观点,一切规定即否定,黑格尔主张,否定也是规定它所否定的东西的方式,因而有肯定的结果。

“否定不再是抽象的虚无,而是一种定在和某物,它只是这种存在的形式——它就是作为他物存在。”——黑格尔:《小逻辑》,91节。

否定之否定

也称为双重否定,在形式逻辑中,一命题的否定之否定返回到原来的、未否定的命题的原来起点。“这是红的”的否定是“这不是红的”,但“这不是红的”的否定又变为“这是红的”。

黑格尔提出,否定之否定没有返回到原来的肯定状态,而是达到了比原初状态更高程度的肯定,并表现了事物自身的更大的发展。任何有限的肯定都包含它的对立或它的否定,并且按黑格尔的观点,前者会发展为后者。这是第一个否定。否定之否定克服了原初的肯定和它的否定之间的对立。否定之否定将自身否定作为否定进行的过程。“肯定—否定—否定之否定”的过程等值于“正题—反题—合题”的过程。它提供黑格尔哲学的建筑术,在其体系中无所不在。在此过程中,第一阶段是单纯的或自然的统一;第二阶段是一种分离;第三阶段,否定之否定,纠正了分离,在更高水平的和谐整体基础上回复统一。黑格尔也把这种发展模型用来描述认识过程。认识的第一阶段是抽象的,相应于知性;第二阶段相应于否定的理性;第三阶段,否定之否定,相应于肯定的理性。

否定之否定以后特别由恩格斯在《反杜林

tern of development to characterise the process of cognition. The first stage of cognition is abstract and corresponds to understanding; the second stage corresponds to negative reason; and the third stage, the negation of the negation, corresponds to positive reason.

The negation of the negation was later adopted to become a basic feature of dialectical materialism, especially by Engels in *Anti-Dühring*. He claimed that the negation of the negation is also a law of the natural world and a law in the history of philosophy. Critics have questioned the alleged ubiquity of the dialectic pattern and its capacity to explain the development of consciousness, nature, cognition or history. They question Hegel's understanding of negation and, more generally, logic.

"The second negative, the negative of the negative, at which we have arrived, is this sublation of the contradiction." Hegel, *Science of Logic*, II, iii, 3.

Negative facts

A negative fact is the non-existence of a state of affairs, that is "something is not the case", in contrast to a positive fact, the existence of a state of affairs, that is "something is the case". There has been a debate about the nature of negative facts. Russell believes that negative facts exist and are represented by negative propositions. Wittgenstein claims that all elementary propositions depict positive facts and that negative facts, rather than really existing, merely indicate that there is no such combination between objects or things. Hence, what corresponds to a negative fact is a false elementary proposition.

"I think you will find that it is simpler to take negative facts as facts, to assume that 'Socrates is not alive' is really an objective fact in the same sense in which 'Socrates is human' is a fact." Russell, *Logic and Knowledge*, 1956, p. 214.

Negative liberty

The Oxford philosopher Isaiah Berlin distinguished between positive and negative liberty. Positive liberty is the "liberty or freedom to", while negative liberty is the "liberty or freedom from". Negative liberty is characterised by an absence of coercive force. With negative liberty, one is protected from the constraints of moral, legal, political and social requirements, but such constraints seem needed to achieve any sort of positive freedom. Different political philosophies give different priorities to these two kinds of freedom, with proponents of each seeing the rival conception as frustrating its own notion of liberty. Berlin, himself, supports the liberalism associated with negative liberty, while others from a Hegelian or idealist perspective emphasise positive liberty. The soundness of this distinction has been contested, but rich debate has contributed much to contemporary discus-

论》中用来作为辩证唯物主义的基本特征。他主张,否定之否定也是自然界的规律和哲学史的规律。批评家怀疑辩证模型所断定的普遍存在和它解释意识、自然、认识或历史的发展的能力。他们也质疑黑格尔对否定,乃至更一般地对逻辑的理解。

“第二个否定,我们已达到的否定之否定,是这种矛盾的扬弃。”——黑格尔:《逻辑学》,II,iii,3。

否定事实

否定事实是事态的不存在,即是“没有这种情况”,它与肯定事实即事态的存在相反,那是“有这种情况”。关于否定事实的性质一直存在争论。罗素认为存在否定事实,并以否定命题来表示。维特根斯坦认为,所有的基本命题描绘了肯定事实,而否定事实实际上并不存在,仅仅是指明没有这种对象或事物间的结合。因此,对应于否定事实的是假的基本命题。

“我想你会发现,把否定事实当做事实更简单,即假定‘苏格拉底没有活着’确实是一客观事实,其含义和‘苏格拉底是人’为一事实相同。”——罗素:《逻辑和知识》,1956年,第214页。

消极自由

牛津大学哲学家I. 柏林区分了积极自由和消极自由。积极自由是“做什么的自由”,而消极自由是“免受什么束缚的自由”。消极自由以不受强制为特征。在消极自由的情况下,一个人得到不受道德、法律、政治和社会要求强制的保护,但这样的强制似乎需要取得任何一种积极自由。不同的政治哲学家对这两种自由给予不同的优先权,每一方的支持者都把对方的看法视为对己方自由概念的阻挠。伯林本人支持与消极自由相联系的自由主义,而其他以黑格尔主义或唯心主义观点为根据的人则强调积极自由。对这种区分的合理性一直有争论,但这一有意义的争论对当代有关自由的讨论做出了很大的贡献。

“(遵循大量的先例)我将把自由(freedom

sions of liberty.

"The first of these senses of freedom or liberty (I shall use both words to mean the same), which (following much precedent) I shall call the 'negative' sense, is involved in the answer to the question 'What is the area within which the subject—a person or group of persons—is or should be left to do or be what he is able to do or be, without interference by other persons.'—Berlin, *Four Essays on Liberty*, 1969, pp. 121-2.

Negative responsibility

The responsibility for something which is not caused directly by the agent but which the agent fails to prevent from happening. The notion is derived from the distinction between action and omission or between intervening and letting things take their own course. Moral agents must bear positive responsibility for their actions or intervenings, but should they be responsible for their omissions or for letting things happen? It is a matter of dispute whether we can have negative responsibility. Utilitarianism claims that we should bring about the best consequences, and this implies that we all have negative responsibility. But its critics point out that by accepting this claim we would have boundless responsibilities.

"[T]he notion of negative responsibility: that if I am ever responsible for anything, then I must be just as much responsible for things that I allow or fail to prevent, as I am for things that I myself, in the more everyday restricted sense, bring about."—Williams, in *Utilitarianism For and Against*, 1973, p. 95.

Negative theology

Also called apophatic theology, theism based on the method of the *via negativa*. It describes God by saying what he is not, rather than what he is because as finite beings we cannot recognise God's attributes in any real and full sense and because God is beyond what our language can positively describe. Negative theology claims that religious language is noncognitive and equivocal. The ultimate thing is beyond all human concepts, and so what is affirmed of it must also be denied. Hence, all predicates—not only the negative ones such as evil and false, but also the positive ones such as good and true—should be subtracted from God. Such a negation of description does not lead to scepticism or unbelief, but leads instead to the truth that God is beyond all such words. It is only by removing from God all the imperfections of his creatures that his transcendence and otherness can be safeguarded. Negative theology enables us to maintain the radical distinction between God and his creatures. The Scriptures are full of paradoxical descriptions of God because they try to show something inexpressible which cannot be stated positively. This type of theology is rooted in Platonic thought as

or liberty) (我将在同一含义使用这两个词)的这些意思的首要的意思称为消极的自由,它包含在对这样一个问题的回答中,这一问题就是:让或应当让主体——一个人或人的群体去做什么的范围是什么?或者说,在不受其他人干预的情况下,什么是他能做的或应当能做的?"——柏林:《自由四论》,1969年,第121—122页。

消极责任

这种责任指的是某事不是由某人直接造成的,但此人却没有阻止其发生。这一概念来源于对行动与缺乏行动二者间,或对于预事情和让事情自己发生二者间的区分。道德的人必须对他们的行动或干预负有积极责任,但他们应当对缺乏行动或让事情发生负责任吗?对我们是否能负消极责任人们是有争议的。功利主义认为我们应当造成最好的结果,这含有我们所有的人都负有消极责任的意思。但它的批评者指出,如果接受这一主张,我们将负有无限的责任。

"消极责任这一概念指的是:如果我对一切事情都负有责任,那我就必须对我让其发生的和没有阻止其发生的事情都负有同样大的责任,因为我要对我本人造成的从更为普通意义上讲的事情负责。"——威廉姆斯,见《功利主义:赞成与反对》,1973年,第95页。

否定神学

亦称“阿波发神学”,以否定方法为基础的有神论。它通过断言上帝不是什么,而不是他是什么来描述他。这是因为,我们作为有限的存在,不能认知上帝在任何实在和完全意义上的属性,而且也因为,上帝超越我们的语言所能正面描述的范围。否定神学认为,宗教语言是非认知性的、多含义的。终极事物非一切人类概念所能及,所以,对它的断定必定也是否定的。因此,一切术语(不仅邪恶、虚假之类的否定术语,而且善、真之类的肯定术语)都应从上帝那里抹去。这种否定描述不导致怀疑论或无信仰,相反,会导向上帝超越一切此类语词的真理。只有把他的造物的一切缺陷从上帝那里清除掉,才能确保他的超验性和他性。否定神学使我们能够在上帝和他的造物之间保持根本的区别。《圣经》充满着对上帝自相矛盾的描述,因为它们企图表示不能被肯定说明的不可表述的东西。这种类型的神学,植根于柏拉图的思想中,在新柏拉图主义那里得到发展。它的创立者被认为是亚历山大里亚的克莱门德,主要倡导者

developed in Neo-platonism. Clement of Alexandria is thought to be its founder, and its main proponents were the Jewish philosopher Moses Maimonides and the German theologian Eckhart.

"When the negative theology says that no conceptions apply to God, it is, in a perhaps still subtler way, making a comparable mistake. For where there are no definite common aspects there are no definite contrasts either." — Hartshorne, *Creative Synthesis and Philosophical Method*, 1970, p. 139.

Neo-Darwinism, see Darwinism

Neo-Hegelianism

Also called British idealism. A Hegelian school developed in the latter part of the nineteenth century by the British philosophers F. H. Bradley, Bernard Bosanquet, John McTaggart, and the American philosopher Josiah Royce. This school sought to build an idealistic metaphysical system in which all internally connected particulars are absorbed into a single reality. It ignored the dialectical and historical dimension of Hegel's thought and instead emphasised the relations between time and eternity, between matter and mind and between the many and the one. It claimed that "what is" is the manifestation of spirit and in principle can be known by the human spirit. Subject and object are correlative because they are both rooted in one ultimate spiritual principle. Neo-Hegelianism was a form of absolute idealism which opposed the British empirical tradition and dominated British philosophy for nearly half a century. The interpretation of Hegel in the English-speaking world has been greatly influenced by this school. The analytic philosophy of Russell and Moore grew out of their criticisms of neo-Hegelianism.

"It is not altogether unreasonable to describe British idealism, as is often done, as a Neo-Hegelian movement, provided at least that it is understood that it was a question of receiving stimulus from Hegel rather than of following him in the relation of pupil to master." — Copleston, *A History of Philosophy*, vol. vii, 1963, p. 150.

Neo-Kantianism

A philosophical movement prevailing in late nineteenth and early twentieth century German philosophy, with a motto "back to Kant" from Liebman's manifesto, *Kant and the Epigoni*. Precursors of the movement included H. von Helmholtz, Liebman, A. Lange, E. Zeller and Kuno Fischer. Common features of the movement were the repudiation of speculative naturalism and materialism, irrationalism, and the authority of natural science, and its emphasis on the central status of Kant's epistemology in philosophy. More loosely, Neo Kantianism comprised a variety of schools which have different directions and which debated with one another

是犹太哲学家 M. 迈蒙尼德和德国神学家艾克哈特。

"当否定神学断言没有一个概念适于上帝时,在某种或许更加微妙的意义上,它正在犯一种相同的错误。因为凡不存在确定的共同方面的地方,也就根本不存在确定的对比。"——哈特肖恩:《创造性综合与哲学的方法》,1970年,第139页。

新达尔文主义

见“达尔文主义”条。

新黑格尔主义

也称为“英国唯心主义”,在19世纪后期由英国哲学家 F. H. 布拉德雷, B. 鲍桑葵, J. 麦克塔加特和美国哲学家 J. 罗伊斯所发展的黑格尔学派。这个学派企图建立唯心主义的形而上学体系,在此体系中,一切内在联系的特殊性都吸收到单一的实在中。它忽略了黑格尔思想的辩证法和历史方面,而强调时间和永恒、物和心、多和一之间的关系。它主张:“存在者”是精神的表现,原则上可由人类精神来认识。主体和客体是相关的,因为它们都根源于一个最高的精神原理。新黑格尔主义是绝对唯心主义的一种形式,它对立英国经验主义传统,并支配着英国哲学几乎半个世纪。在说英语的世界中对黑格尔的解释受到该学派的巨大影响。罗素和摩尔的分析哲学生长自对新黑格尔主义的批判中。

“人们常常把英国唯心主义描述为新黑格尔主义的运动,这种做法不是全无道理的,只要它被理解为:它是一种从黑格尔那里得到启发因素的问题,而不是像师生关系那样追随他。”——柯普莱斯顿:《哲学史》,第七卷,1963年,第150页。

新康德主义

盛行于19世纪晚期和20世纪初德国哲学中的一场哲学运动,以“回到康德”的口号为旗帜(这个口号出自李普曼的宣言《康德与模仿者》)。这个运动的先驱包括 H. 冯·赫尔姆霍茨、李普曼、A. 朗格、E. 策勒和 K. 费舍。其共同特征是抛弃思辨的自然主义和唯物主义,抛弃非理性主义以及自然科学的权威,并强调康德认识论在哲学中的核心地位。更宽泛地说,新康德主义包含许多不同方向的、相互争论的各种学派,其中以马堡学派和海德堡学派影响最大。马堡学派强调康德的理论哲学,特别是他对

er. Among these, the Marburg and Heidelberg schools were the most influential. The logico-methodological Marburg school emphasised Kant's theoretical philosophy, especially his idealism in relation to natural science. Its major representatives were H. Cohen, P. Natorp and E. Cassirer. The axiological Heidelberg school, also called the Baden or South-east German school, was more interested in applying Kant's transcendental method to specifying universal cultural value. Its major representatives were W. Windelband and H. Rickert. Outside these schools, A. Riehl's realistic neo-Kantianism argued for the reality of Kant's thing-in-itself. In Göttingen, L. Nelson developed a psychological neo-Kantianism, which holds that introspection plays a central role in discovering *a priori* principles.

"Neo-Kantians ... announced that they had had enough of the airy metaphysical speculations of the idealists and that it was time to return to the spirit of Kant himself." — Copleston, *A History of Philosophy*, vol. vii, 1963, p. 8.

Neo-platonism

The philosophical tradition founded by Plotinus, developed through his disciple Porphyry, the Syrian School of Iamblichus, the school of Athens, represented by Plutarch, Proclus and Simplicius, and the Alexandrian school until the fall of Alexandria in 642. Plotinus's *Enneads* (edited by Porphyry) was the source of this tradition, and Proclus's *Elements of Theology* was the systematic exposition of its doctrines. Neo-platonism, which was the last philosophical system of the classical world, explained the origin of the world in terms of Plotinus' three *hypostases* (the one, *nous* and the soul) and the process of emanation. Neo-platonism attempted to reconcile the two supposedly incompatible systems of Plato and Aristotle, by considering Aristotle's philosophy as an introduction to Plato's higher wisdom. This attitude led many Neo-platonists to comment extensively on both Plato and Aristotle and thus contributed greatly to the history of philosophy. Neo-platonism advocated polytheism and mysticism and had a favourable attitude towards theology. Hence it became the main opposition of early Christianity, which it directly attacked. The school of Athens, which was based on Plato's academy, was closed by the emperor Justinian in 529 precisely because of its conflict with Christianity. This event is usually regarded as marking the end of Hellenistic philosophy. However, Neo-platonism exerted great influence upon the development of Christian philosophy because it sought to explain the world by appeal to one ultimate principle. Neo-Platonism was revived in the Renaissance by Ficino in Florence, and there was another resurgence by the Cambridge Platonists in the seventeenth century.

"Neo-platonism emphasised that aspect of Plato's thought that stressed the transcendence of the One (or the Good), and the way the One is beyond all categorical lan-

guage. It was the only philosophical position in the history of the natural sciences, with its logical-methodological character. Its main representatives were H. Cohen, P. Natorp and E. Cassirer. The Heidelberg school (also called the "Baden school" or the "South-east German school") was more interested in applying Kant's transcendental method to specifying universal cultural value, with its axiological character. Its main representatives were W. Windelband and H. Rickert. Outside these schools, A. Riehl's realistic neo-Kantianism argued for the reality of Kant's thing-in-itself. In Göttingen, L. Nelson developed a psychological neo-Kantianism, which holds that introspection plays a central role in discovering *a priori* principles.

"New Kantianism claimed: they had suffered enough from the idealists' empty metaphysical speculations and that it was time to return to the spirit of Kant himself." — K. Popper, *Philosophy of Language*, vol. vii, 1963, p. 8.

新柏拉图主义

由普罗提诺创立的哲学传统,经由他的弟子波菲利、扬布里柯的叙利亚学派,普鲁泰克、普罗克洛和辛普里丘为代表的雅典学派以及亚历山大里亚学派发展,一直持续到公元642年亚历山大里亚城陷落为止。普罗提诺的《九章集》(由波菲利编纂)是该传统的源头,普罗克洛的《神学要旨》是对其学说的系统阐释。新柏拉图主义是古典世界的最后一个哲学体系。它用普罗提诺的三个本在(太一、心智和灵魂)和流溢过程来解释世界的起源。新柏拉图主义通过把亚里士多德哲学视为柏拉图更高智慧的入门,试图调和柏拉图与亚里士多德这两个被认为是不相容的体系。这种态度,使得不少新柏拉图主义者广泛注释柏拉图和亚里士多德,并因而对哲学史作出了重大贡献。新柏拉图主义倡导多神论和神秘主义,甚至对神学也持友好态度。因此,它成为早期基督教的主要竞争对手,甚至直接攻击基督教。以柏拉图的学园为基础的雅典学派之所以在529年被查士丁尼皇帝下令关闭,正是由于它与基督教的冲突。这个事件通常被看做是希腊化哲学终结的一个标志。但是,由于新柏拉图主义通过诉诸一个终极本原来寻求对世界的解释,它对基督教哲学的发展产生了很大影响。在文艺复兴时期,新柏拉图主义被费其诺在佛罗伦萨复活,它的另一次复兴是由剑桥柏拉图派的学者们在17世纪实现的。

"新柏拉图主义强化了柏拉图思想的一个方面,即强调太一(或善)的超验,以及太一处于一切范畴化的语言或思想之外。" — 史蒂威尔,《宗教语言哲学》,1996年,第16页。

guage or thought.” Stiver, *The Philosophy of Religious Language*, 1996, p. 16.

Neo-Pragmatism

A postmodern version of pragmatism developed by the American philosopher Richard Rorty and drawing inspiration from authors such as Dewey, Heidegger, Sellars, Quine and Derrida. It repudiates the notion of universal truth, epistemological foundationalism, representationalism and the notion of epistemic objectivity. It is a nominalist approach which denies that natural kinds and linguistic entities have substantive ontological implications. While traditional pragmatism focuses on experience, Rorty centres on language. Language is contingent on use, and meaning is produced by using words in familiar manners. The self is seen as a “centerless web of beliefs and desires”, and Rorty denies that the subject-matter of the human sciences can be studied in the same ways as we study the subject matter of the natural sciences. Neo-pragmatism, which focuses on social practice and political experimentation, claims that there is no objective and transcendental standpoint from which to pass judgement and that truth must be relative to specific social contexts and practices.

“The sense in which the new pragmatism differs from the old are, first, with regard to the shift from experience to language and, second, with regard to an acquired suspicion of ‘scientific method’ deriving from the historicising of science in the works of thinkers such as Thomas Kuhn and P. F. Feyerabend.” Hall, *Richard Rorty*, 1994, p. 101.

Neo-Pythagoreanism

A philosophical and religious tendency that flourished from the first century B.C. to the third century A.D. It regarded Pythagoras as the revealer of religious truth, but it actually mixed early Pythagorean material, Plato's doctrines and the views of the Peripatetics and Stoicism. It stressed the necessity of purification and represented the change of soul according to moral progress. It advocated abandoning all theoretical research and living in union with both superior and inferior gods. It popularised the notion of moral retribution in a future life. Major proponents of neo-Pythagoreanism include Figulus, Apollonius of Tyana and Philo of Alexandria. Neo-Pythagoreanism deeply influenced Neo-platonism and early Christianity.

“For the neo-Pythagorians, philosophy became the art of curing, or a devotional guide. Men were no longer seeking to understand.” -Sheen, *Philosophy of Religion*, 1952, p. 364.

Neo-realism

Also called new realism. An American philosophical movement of the early twentieth century which originated

新实用主义

一种对于实用主义的后现代观点,由美国哲学家 R. 罗蒂阐发。这种观点受到像杜威、海德格尔、塞拉斯、奎因和德里达这样的作者的影响。它拒绝接受普遍真理观、认识论的基础主义、表象主义和认知客观性。这是一种唯名论的方法,否定自然种类和语言存在物具有实体意义上的存在论含义。传统实用主义关注经验,罗蒂则以语言为中心,语言依靠使用,意义来自以熟悉的方式使用词语。自我被看做一张“无中心可言的信念和欲望之网”。罗蒂还否认我们能够以研究自然科学问题的方式来研究人文科学的问题。新实用主义的注意力集中在社会实践和政治实验;它声称并没有一种规范我们判断的客观和先验的立场,真理总是相对于特殊的社会境况和实践而言的。

“新实用主义与老实用主义的区别在于,首先,它经历了从经验到语言的转变;其次,它对‘科学方法’表示怀疑,而这种怀疑来自像 T. 库恩和 P. F. 费耶阿本德这些思想家著作中使科学历史化的努力。”——霍尔:《罗蒂》,1994年,第 101 页。

新毕达戈拉斯主义

盛行于公元前 1 世纪到公元 3 世纪的一种哲学和宗教倾向。它把毕达戈拉斯认作宗教真理的揭示者,但实际上,它是早期毕达戈拉斯学派材料、柏拉图学说、漫步学派和斯多亚派观点的混合物。它强调净化的必然性,并根据道德进步展现灵魂的变化。它鼓吹放弃一切理论研究,要求与诸神和合而生活,无论这些神炼是高等的还是低等的。它散布未来生命中的道德报应观念。新毕达戈拉斯主义的主要人物包括费古鲁、提亚那的阿波隆尼和亚历山大里亚的斐洛。新毕达戈拉斯主义深深地影响了新柏拉图主义和早期基督教。

“在新毕达戈拉斯主义者那里,哲学成了治疗术或皈依向导。人们不再寻求理解。”——谢恩:《宗教哲学》,1952年,第 364 页。

新实在论

也称作“新的实在论”,出现在 20 世纪初美国的一场哲学运动。它开始于《哲学杂志》

with a common manifesto published in the *Journal of Philosophy* (1910), entitled "A Program and First Platform of Six Realists". The six philosophers were Ralph Barton Perry, William P. Montague, E. B. Holt, Walter Pittkin, Edward Spaulding and Walter Marvin. In 1912, they published a co-operative volume *The New Realism* which gave the movement its name. New realism rejected idealism, in particular that of Royce. It claimed that idealism argues fallaciously from the premise that everything known is known to the conclusion that for every thing to be is to be known. It rejected the egocentric predicament, which moves from our being at the centre of what we know to the claim that this placement affects the nature of what we know. The nature of reality cannot be inferred merely from the nature of knowledge. The entities which are the objects of scientific studies are not conditioned by their being known, although they are presented to consciousness and have cognitive relations. As a version of direct realism, neo-realism emphasised a direct acquaintance with physical objects and claimed that what is known is independent of the knowing relation. Reality is a datum, given independently of whatever ideas may be formed about it. The perceived object is identical in substance with a part or aspect of the physical object. The movement was replaced by critical realism as a result of its failure to provide a satisfactory account of error, illusion, doubt, hypothesis, and the progress of knowledge. Occasionally, the term new realism is also used to refer to the refutation of idealism of Russell and Moore and to their attempt to establish a logical method by which legitimate conclusions can be derived from any body of data.

"Neo-realism arose as a protest against Roycean absolutism in particular, and idealism in general." Werkmeister, *A History of Philosophical Ideas in America*, 1949, p. 407.

Neo-Scholasticism

Also called Neo-Thomism, a Roman Catholic philosophical and theological movement of the nineteenth and twentieth centuries. It is a revival of Thomism and seeks to demonstrate that medieval scholasticism, especially the philosophy of Thomas Aquinas, is consistent with the development of modern science. The movement assumes that Aquinas' doctrines can be reappropriated to solve modern philosophical problems such as those arising from Cartesian dualism. Neo-Scholasticism attempts to bring Aristotelian and Thomistic metaphysics into a modern intellectual setting in order to deal with contemporary issues. In 1879 Pope Leo XIII sent his letter *Aeterni Patris* to all bishops of the Church, making Thomas Aquinas the leading Doctor of the Church, and thus sanctioning Thomism as the authoritative and orthodox Catholic theology. It proposed to consider Thomism as the exclusive response in Catholic philosophy and theology to

(1910)上发表的一篇普通的宣言,题目是“六位实在论者的方案与初步纲领”。这六位哲学家是 R. B. 佩里、W. P. 蒙塔古、E. B. 霍尔特、W. 皮特金、E. 斯鲍尔丁和 W. 马文。1912 年,他们出版了一本论文集《新实在论》,随后这场运动就以此命名。新实在论反对唯心论,特别是罗伊斯的唯心论。它声称,唯心论错误地从已知事物被知的前提推出存在即被知的结论。它反对自我中心论的困境,不再相信我们的存在位于我们所知事物的中心,而是认为这种地位影响着我们所知事物的性质。实在的性质无法简单地从知识的性质中推论出来。作为科学研究对象的实体并不是由于它们已被认识而决定的,尽管它们出现在意识中并有认知关系。作为“直接实在论”的一种形式,新实在论强调直接熟知物理对象,认为所知的东西独立于认知关系。实在是一个素材,它独立于任何关于它的可能形成的观念。已知的对象实质上就是物理对象的某个部分或方面。这场运动后来被“批判的实在论”所取代,因为它没能满意地描述错误、幻象、怀疑、假设以及知识的进步。有时,“新的实在论”一词也指罗素和摩尔对唯心论的反叛,他们试图确立逻辑的方法,认为用这种方法可以从任何素材中推出合理的结论。

“新实在论提出的抗议就具体而言是针对罗伊斯的绝对论,而一般来说是针对唯心论的。”——韦克美斯特:《美国哲学观念史》,1949 年,第 407 页。

新经院学派

亦称“新托马斯主义”,在 19 至 20 世纪发展起来的一场罗马天主教哲学和神学运动。它是托马斯主义的复活,力图证明中世纪经院学派,尤其是 T. 阿奎那哲学,与现代科学的发展是一致的。该运动假定,阿奎那的学说能够再一次恰当地解决现代哲学问题,譬如从笛卡尔的二元论生发出来的问题。新经院学派企图把亚里士多德和托马斯的形而上学引入现代的思想背景,以处理当代问题争端。1879 年,教皇列奥十三世向教会的所有主教发送出他的通谕《永恒之父》(*Aeterni Patris*),确定 T. 阿奎那“教会博士”头衔,并批准托马斯主义作为官方的、正统的天主教神学。它提出把托马斯主义认作天主教哲学和神学与现代哲学体系打交道的独一路径。这极大地刺激了新经院学派的发展,起初是在天主教的教育圈内,后来在更广泛的公

modern philosophical systems. This greatly stimulated the development of Neo-Scholasticism, first in Catholic educated circles and then for a wider public. Scholars produced intensive examinations and interpretations of Aquinas' works and established a variety of Thomistic systems. There is not a unified set of doctrines in Neo-Thomism, because different philosophers have adopted different versions of Thomism. Some have even resisted the description Neo-Thomist, although Aquinas' five ways for demonstrating God's existence were regarded as vital for all Neo-Thomist thinkers. The Institute Supérieur de Philosophie at Louvain founded by Cardinal Mercier has been an influential centre for Neo-Thomism. The French philosopher Etienne Gilson established an Institute of Medieval Studies in Toronto where the influential scholar Joseph Owens applied Thomism to reconstruct Aristotle's metaphysics. Another important representative was Jacques Maritain, whose work has had wide public influence.

"Neo-Scholasticism, a new-realism once more, a doctrine that refuses to fall in with the method foreshadowed by Descartes, or at least if it does so tries hard to avoid its conclusion."—Gilson, *The Spirit of Medieval Philosophy*, 1936, p. 229.

Network theory of meaning, an alternative term for conceptual role theory

Neural network modelling, see connectionism

Neurath's ship

A metaphor invented by the Austrian sociologist and philosopher Otto Neurath. Neurath was a leading member of the Vienna Circle, but disagreed with the epistemological foundationalism of another important member, Rudolf Carnap. Carnap believed that there is a set of incorrigible protocol statements which directly report sense experience. All other valid complex statements are constructed out of these protocol statements. In criticising this picture, Neurath compared our body of knowledge to a ship, and said: "We are like sailors who have to rebuild their ship on the open sea, without ever being able to dismount it in dry-dock and reconstruct it from the best components". Accordingly, knowledge is historically conditioned and is maintained if a sufficient range of its claims is acceptable at any given time. Nevertheless, any piece of knowledge can be replaced to keep the whole project of knowledge going. Nothing can claim to be the foundation of knowledge. This metaphor was adopted by Quine and is widely cited as a powerful image of anti-foundationalism.

"The philosopher's task was well compared by Neurath

共社会中。许多学者对阿奎那著作进行了大量的考察和阐释,也建立起不同的托马斯主义体系。在新托马斯主义中,没有一套统一的学说,因为不同的哲学家采纳的是托马斯主义的不同说法。有些人甚至反对被称作新托马斯主义者,虽然托马斯证明上帝存在的“五法”被所有的新托马斯主义思想家认作富有活力。由 C. 梅西尔创办的、设在卢汶大学的哲学高级研究所是新托马斯主义的一个很有影响的中心。法国哲学家 E. 吉尔松参与创办了设在多伦多的中世纪研究所,正是在这里,产生出那位影响极大的学者 J. 欧文斯,他运用托马斯主义来重构亚里士多德的形而上学。另一位重要代表人物是 J. 马里旦,他的著作具有广泛的公众影响。

“新经院学派是一种新实在论,是这样的学说:避免遭遇笛卡尔所预示的那种方法,或者至少,如果那样做了,也竭力避免它的结论。”——吉尔松:《中世纪哲学精神》,1936年,第229页。

意义的网络理论

纽拉特之船

由奥地利社会学家和哲学家 O. 纽拉特发明的隐喻。纽拉特是维也纳学派的主导成员之一,但他不同意这一学派的另一中心人物卡尔纳普认识论的基础论。卡尔纳普认为,有一系列的基本句子直接报告感觉经验,它们是无可纠正的。所有其他可靠的复杂陈述都由这些基本句子结构而成。在批评这一图画时,纽拉特将我们的知识体比作一只船。他说:“我们像水手一样,不得不在大海上重造我们的船,从未能将它卸下并用最好的元件来重建它。”因此,知识是以历史为条件的,并且在任意时期,只要其足够多的声称是可接受的,它就得到坚持。然而,知识的任意一部分都可以被代替,以保持整个知识体系的运行。没有什么可以声称是知识的基础。这一隐喻为奎因所采用,并被作为反基础论的有力比喻。

“纽拉特很好地将哲学家的任务比作一个必须在大海上重建他的船的水手的任务。”——奎因:《从逻辑的观点看》,1953,第79页。

to that of a mariner who must rebuild his ship on the open sea." Quine, *From a Logical Point of View*, 1953, p. 79.

Neuro-philosophy, see connectionism

Neustic/phrastic

Different sentences may have the same content but different moods. For example, "Shut the door!" and "You will shut the door". The content of these two sentences — your shutting the door in the immediate future — is the same, but the sentences differ because one is a command and the other is a statement. In *The Language of Morals*, R. M. Hare called the common content of such sentences the phrastic [from Greek: *phrazein*, literally what is said, to indicate or to show] and called their different moods the neustic [from Greek: *neuein*, to nod, to assent]. With this distinction, he claims that phrastics allow imperatives to stand in logical relations.

"I shall call the part of the sentence that is common to both moods (your shutting the door in the immediate future) the phrastic, and the part that is different in the case of commands and statements (yes or please), the neustic." Hare, *Language of Morals*, 1952, p. 18.

Neutral monism

A theory formulated by the American Pragmatist William James and developed by American realism, but propounded independently by the Austrian philosopher Ernst Mach. In contrast both to idealistic monism (that mind is the real existent) and materialistic monism (that matter is the real existent), the theory holds that both mental things and physical things are constructed out of the same primary stuff which is neither mental nor physical, but neutral between them. Both mind and matter are logical functions of the same stuff. Thus there is no real distinction between mind and matter. Russell in one period accepted this view by claiming that the world is composed of neutral events. This position proposed a solution to the mind-body problem, but there are difficulties with the neutral status of that which constitutes minds and bodies and with how arrangements of what is neutral can issue in minds and bodies. If experiences are proposed as the neutral entities, it is not clear whether neutral monism clarifies or obscures the nature of experience.

"'Neutral monism'... is the theory that the things commonly regarded as mental and the things commonly regarded as physical don't differ in respect of any intrinsic property possessed by the one set and not by the other, but differ only in respect of arrangement and context." — Russell, *Collected Papers of Bertrand Russell*, VII, p. 15.

见“联结主义”条。

语调/内含

不同的句子可有相同的内容但有不同的语气。例如，“关上门！”和“你将关上门”，这两个句子的内容——你将很快关上门——是相同的，但句子却不同，因为前一个是命令，后一个是陈述。在《道德语言》一书中，R. M. 黑尔把这类句子中的共同内容称作内含[源自希腊文 *phrazein*，字面的意思是所说、所指出或所表明东西]，把它们不同的语气称作语调[源自希腊文 *neuein*，字面的意思是点头表示同意，表示赞同]。通过这一区分，他认为内含允许祈使句出现在逻辑关系中。

“我将把句子中对于两种语气(你将很快关上门)而言是共同的那部分称作内含，把句子中在命令情况和陈述情况(是或请)方面的不同的部分称作语调。”——黑尔：《道德语言》，1952年，第18页。

中立一元论

由美国实用主义者 W. 詹姆斯阐明，由美国实在论所发挥，但由奥地利哲学家 E. 马赫独立提出的一种理论。与唯心主义一元论(认为心是真实的存在)和唯物主义一元论(认为物是真实的存在)相反，这种理论认为心的东西和物的东西都由同样的基本材料构成，这材料既非心的又非物的，而是在二者之间的中立之物。心和物是同一材料的逻辑函项。因此，在心与物之间并无真正的区别。罗素有一段时间接受了这种观点，认为世界由中立的事件构成。这种主张对于心身问题提出了一种解决办法，但对于构成心与身的东西的中立性，对于中立的东西的排列何以能产生于心与身之中的问题，还有一些困难。如果认为经验是中立实体，不清楚中立一元论究竟是澄清了还是模糊了经验的性质。

“‘中立一元论’……是这样的理论：通常被认为是心的事物和通常被认为是物的事物就其内在性质而言并无差异，通常认为一方具有此属性而另一方不具有该属性，差异仅在于排列和前后关系方面。”——罗素：《罗素文集》，第七卷，第15页。

New criticism

A school of literary criticism developed by J. C. Ransom, A. Tate, C. Brooks, among others, in the United States during the 1930s and 1940s. It rejected the historical method in literary study which emphasised the influence of history upon literature. Instead it suggested that a literary work is not an historical object, but should be treated merely as a text. It embraced the idea of art for art's sake and emphasised the autonomy of art. The central task of literary criticism should be to focus on the literary devices present in a work, such as harmony, structure of discourse, imagery, figurative use of language and rhythm. Facts external to the work itself were claimed to be irrelevant to the appreciation or criticism of that work. The movement has affinities with Derrida's more recent theory of deconstruction.

"This doctrine (of the new criticism) holds that in trying to understand a work of art we cannot make use of facts external to the work itself—facts of biography, convention and (perhaps) intention."—Casey, "The autonomy of art", in *Philosophy and the Arts* (Royal Institute of Philosophy), 1973, p. 66.

New England transcendentalism, see transcendentalism

New organon

The title of Francis Bacon's major book and also a technical term in his philosophy. The book, titled *Novum Organum* in Latin, was published in 1620, as the second part of a uncompleted project called the Great Instauration. The subtitle of *Novum Organum* is "true directions concerning the interpretation of nature". It was intended as a guide to the correct use of human understanding in the investigation of nature. The central idea is that we should interpret rather than anticipate nature. We can only know on the basis of what has been observed in fact or in thought. Hence, the traditional syllogistic deductive logic which starts from abstract notions and principles is not adequate. Bacon called his own logic new in order to distinguish it from Aristotle's *Organon*, in which syllogistic logic is systematically elaborated. The correct logic should be inductive, although it is not the method of induction in general which he favours, but induction by elimination. What, then, does Bacon mean by a new organon? He claims that there are three basic differences between the old logic and his new logic. (1) While the old logic is aimed at inventing arguments and overcoming an opponent's argument, the new logic aimed to discover the principles of nature itself and to command nature in action. (2) While the old logic focuses mainly on syllogism, new logic rejects it and claims that induction is the form of demonstration which upholds sense and mirrors nature. (3) While in the old logic the starting point of inquiry is princi-

新批评

20 世纪 30—40 年代在美国兴起的一种文学批评学派,倡导者主要有 J. C. 兰萨姆、A. 塔特和 C. 布鲁克斯等人。新批评摒弃文学研究中的历史方法,因为后者侧重历史对文学的影响。相反,新批评认为文学作品并非历史对象,而只能被当做文本。新批评拥护为艺术而艺术的思想,并且强调艺术的自律性。文学批评的中心任务应当注重分析作品中的文学表现手法,譬如和谐、话语结构、想像、语言修辞与节奏等等。对作品欣赏和批评来讲,外在于作品本身的事实是无关紧要的。新批评运动与德里达新近提出的解构理论密切相关。

"(新批评)学说认为,在理解艺术作品的过程中,不可借用外在于作品本身的事实——譬如传记资料、社会习俗、(或许)意向等等。"——卡西:《艺术的自律性》,见皇家哲学研究所编《哲学与艺术》,1973 年,第 66 页。

新英国先验论

见“超验主义”条。

新工具

F. 培根主要著作的标题,也是他哲学的一个专门术语。这本拉丁名为 *Novum Organum* 的著作发表于 1620 年,是一部未完成的被称作“伟大复兴”的写作计划的第二部分。它的副标题是“关于自然解释的真正指导”。培根打算把它用作探索自然时正确运用人类理智的一个指导。它的中心思想是:我们应当解释而不是预测自然。我们只能在事实或思想中已经观察到的东西的基础上来认识。因此,从抽象概念和原则出发的传统三段论演绎逻辑是不恰当的。培根称自己的逻辑是“新的”,以区别于亚里士多德的《工具论》,在后者,三段论逻辑得到系统的阐述。正确的逻辑应当是归纳,尽管他所赞成的不是完全归纳法,而是淘汰归纳法。那么,培根用“新工具”指的是什么呢?他声称,在旧逻辑和他的新逻辑之间有三个基本的区别:(1)旧逻辑的目的是发明论证和驳倒对方的证明,而新逻辑的目的是发现自然本身的原理,在行动中命令自然。(2)旧逻辑主要关注于三段论,而新逻辑拒绝三段论,声称归纳是拥护感觉、反映自然的证明形式。(3)旧逻辑的研究起点是原则,而新逻辑要求我们从对信息的判断开始,这些信息是通过感官获得的。

“至于合法的[归纳]形式,我认为它是新工具。”——培根:《著作集》,1905 年,第 515 页。

ple, new logic requires that we start with a judgement about the information obtained through the senses.

"As for the legitimate form [of induction] I refer it to the new organon." —F. Bacon, *The Works*, 1905, p. 515.

New realism, another name for neo-realism

New riddle of induction

A problem which has provoked heated debate about the nature of induction. Induction is normally characterised in terms of inference to the continuation of previously observed regularities on the assumption of the uniformity of nature. But Nelson Goodman argued that this analysis itself depends on an unjustifiable assumption. Suppose that so far all observed emeralds have been green. The classical analysis of induction will lead us to believe that future emeralds will be green. But suppose there is another predicate *grue*, such that *x* is *grue* if and only if it is green when observed before time *T* (in the future) and blue thereafter. Given this, all our evidence for the hypothesis that emeralds are green equally supports the hypothesis that emeralds are *grue*. The evidence which we naturally take as confirming a given hypothesis always confirms some contrary hypothesis to an equal degree. Thus correct induction cannot be defined in terms of inferences to events similar to those observed. There are no language-independent similarities in nature. Induction can only apply to projectible properties, but the paradox shows that it is unclear what these properties are. This new riddle of induction is also called Goodman's paradox or the *grue* paradox.

"We have so far neither any answer nor any promising clue to an answer to the question what distinguishes lawlike or confirmable hypotheses from accidental or non-confirmable ones; and what may at first have seemed a minor technical difficulty has taken on the stature of a major obstacle to the development of a satisfactory theory of confirmation. It is this problem that I call the new riddle of induction." —Goodman, *Problems and Projects*, 1972, p. 386.

Newcomb's problem

A paradox about choice formulated by the American physicist William Newcomb in the early 1960s, and published by Robert Nozick in his paper "Newcomb's problem and two principles of choice" (1969). Suppose that a Supreme Being who has a successful record of prediction offers you two boxes A and B. You can choose to have either both boxes or the Box B alone. He puts a thousand pounds in Box A, and puts either a million pounds in B if he has predicted that you will choose B alone, or nothing if he has predicated that you will choose both boxes. Now which alternative should you choose? One line of reasoning suggests that you should trust

新的实在论

“新实在论”的另一个名称。

新归纳之谜

一个引发了有关归纳本性的热烈争论的问题。归纳的特征表述,通常是依据对于既往所观察到的规则性的持续,亦即依据自然的齐一性的推理。但 N. 古德曼论证说这一分析其本身依赖于一个未得到辩护的论定。假设迄今所观察到的所有绿宝石都是绿色的。经典的归纳分析将导致我们相信未来的绿宝石也是绿色的。但是设想有另一谓词“绿蓝”,使得 *x* 是绿蓝的当且仅当在(未来的)时间 *T* 之前观察它是绿色的,而在这时间之后是蓝色的。假定如此,则我们所有对于假说“绿宝石是绿色的”的证据也同样支持“它们是绿蓝的”这一假说。我们自然地看做确证了一给定假说的证据,总是同等程度地确证某些相反的假说。这样,正确的归纳就不能按照对于已观察到事件的类似事件的推理来定义。自然界中没有独立于语言的相似性,归纳仅能应用于可投射的性质,但是这一悖论表明并不清楚这些性质是什么。这一新归纳之谜也称作“古德曼悖论”或“绿蓝悖论”。

“迄今我们对这个问题既没有答案,也没有有希望的思路,这问题就是什么使类似规律的或可确证的假说区别于偶然的或不可确证的假说;起初似乎仅是较小的技术上的难题的东西,已成为令人满意的确证理论发展的主要障碍。正是这一问题我称之为新归纳之谜。”——古德曼:《问题与投射》,1972年,第386页。

纽康问题

一个有关选择的悖论,由美国物理学家 W. 纽康于 20 世纪 60 年代早期提出,并为 R. 诺齐克在其论文《纽康问题和两条选择原理》(1969 年)中发表。假设一个有着成功的预言纪录的至上存在者提供给你两个盒子 A 和 B。你可以选择或是两个盒子全要,或是仅要盒 B。他在盒 A 中放一千镑,然后在盒 B 中或是放入一百万镑,如果他预测你会仅选盒 B;或是什么也不放,如果他预测你将选两只盒全要的话。现在你应作出何种选择?一种推理思路建议你应相信这个至上存在者的预见能力,因而选择仅要

the demonstrated predictive capacity of the Supreme Being and choose B alone; so you will end up rich. The other reasoning suggests that you should take both, for you can get at least one thousand pounds in this way. If you choose B alone and the Supreme Being has predicted that you would take both boxes, you will end up with nothing. Both ways of reasoning are sound, but they are incompatible. If the Supreme Being's prediction were based on the assumption of your rationality and one option were more rational than the other, you would know what to choose, but any attempt to predict your choice on the basis of rationality will not produce a determinate result.

"Newcomb's problem presents a conflict between dominance reasoning and expected utility reasoning, both of which seem to have great intuitive appeal."—Campbell and Snowden (eds.), *Paradoxes of Rationality and Cooperation*, 1985, p. 24.

Nicod's criterion

A test of the relevance of evidence for confirmation put forward by the French philosopher Jean Nicod, saying that for a generalisation "All As are Bs", an instance A is B provides confirming evidence; an instance A is not B disconfirms the generalisation and justifies its rejection, and evidence of something which is neither A nor B is irrelevant, that is, it neither confirms nor disconfirms. This criterion is plausible in its own right, but when it is put together with other principles of confirmation, "Hempel's paradox" of confirmation arises.

"Nicod's criterion, ... states that ' $\phi a, \phi a$ ' always confirms, ' $\phi a, \sim \phi a$ ' always disconfirms, while ' $\sim \phi a, \phi a$ ' and ' $\sim \phi a, \sim \phi a$ ' are always irrelevant to, 'of physical necessity all ϕ 's are φ 's'."—Swinburne, *An Introduction to Confirmation Theory*, 1973, p. 152.

Nihilism

[from Latin: *nihil*, nothing] A theory which advocates that nothing is believable and that no distinction is significant. Metaphysical nihilism claims that the world and human life do not have the value and meaning we suppose them to have. Epistemological nihilism holds that no knowledge is possible. Ethical nihilism supposes that there is no ground to justify any absolute moral value. Political nihilism suggests that any political organisation must be corrupt. Nietzsche claimed that he is a nihilist. But his nihilism holds that the world lacks value and meaning if value and meaning are conceived in a traditional way. His nihilism is the devaluation of all values and provides a motive to seek new values.

"Right here is where the destiny of Europe lies—in losing our fear of man we have also lost our love for him, our respect for him, our hope in him and even our will to be

B, 由此你最终富起来了; 另一种推理建议你选择两个盒子都要, 这样你至少可以得到一千镑。如果你选择了仅要 B 而那个存在者却预言你会选择二者都要, 你将一无所获。两种推理方式都是正确的, 但它们是不相容的。如果至上存在者的预测是基于对于你的理性的假定, 你的一种选择比另一种更为合理, 则你应能知道选择什么; 可是任何基于理性去预测你的选择的尝试都不会产生一个确定的结果。

"纽康问题表现出优势推理与预期效用推理之间的冲突, 这两种推理看上去都有着直观上极大的吸引力。"——坎贝尔和斯诺敦(编): 《理性的悖谬与合作》, 1985 年, 第 24 页。

尼柯德标准

由法国哲学家 J. 尼柯德提出的关于确证的证据相干性检验, 说的是对于一个概括"所有的 A 是 B", 一个事例"A 是 B"提供了确证证据, 一个事例"A 不是 B"产生了一个反驳或否证, 而关于某物既不是 A 也不是 B 的证据则是不相干的, 即它既没有确证也没有否证。这个标准就其自身而言似乎是合理的, 但当与其他确证原理结合起来, 就产生了关于确证的"亨佩尔悖论"。

"尼柯德标准……说的是对于'所有的 ϕ 是 φ ' 的物理必然性而言, ' $\phi a, \phi a$ ' 总是确证它, ' $\phi a, \sim \phi a$ ' 总是否证它, 而 ' $\sim \phi a, \phi a$ ' 和 ' $\sim \phi a, \sim \phi a$ ' 总是无关的。"——斯文布勒: 《确证理论导论》, 1973 年, 第 152 页。

虚无主义

[源自拉丁文 *nihil* (虚无, 什么也没有)] 一种主张没有可信的东西和没有有意义的区分的理论。形而上学的虚无主义认为世界和人生没有我们假定它们具有的价值和意义。认识论的虚无主义坚持没有任何知识是可能的。伦理的虚无主义提出, 不存在任何能为绝对的道德价值辩护的基础。政治上的虚无主义则建议, 任何政治组织必是腐败的。尼采声称他是一个虚无主义者, 但他的虚无主义所坚持的是: 如果价值和意义以传统的方式来看待, 那么这世界就是无价值和无意义的。他的虚无主义使所有[传统]价值贬值, 并提供去寻求新价值的动机。

"欧洲的命运就在这里: 由于丧失了对人的恐惧, 我们也丧失了我们对他的爱、尊敬和希望, 甚至还丧失了要成为人的意愿。今天, 人的

man. The sight of man now makes us tired — what is nihilism today if it is not that?” — Nietzsche, *On the Genealogy of Morals*, sect. 12.

No ownership theory

A theory which maintains that states of consciousness do not belong to anything, although they may be causally dependent on the body in a contingent way. If something is owned, its ownership is logically transferable, but this is not the case with experience. Strawson ascribed this theory to Wittgenstein at one period and to Schlick, and criticises it in his own discussion of persons. He accepts that the theory correctly claims that the unique role of a single body in one's experience is not sufficient for ascribing experience to it, but argues that the theory itself is incoherent. For the experience or consciousness to be causally dependent on states of the body, it must be owned by something. We could not refer to an independent particular experience. We refer to mental states by way of their owners, and therefore experience must be owned.

“The [no-ownership] theorist could maintain his position only by denying that we could ever refer to particular states or experiences at all; and his position is ridiculous.” — Strawson, *Individuals*, p. 98.

Noble lie

A falsehood uttered for the interest of the state. The term was introduced by Plato in *Republic* 414-5 for a myth used to safeguard social harmony by persuading a population to accept class distinctions. According to the myth, God made human beings from the earth. For the rulers, he added gold to the composition; for the auxiliaries, he added silver; and for the farmers and other workers, he added iron and bronze. For this reason, rulers should enjoy the greatest prestige. The distinction is not firmly fixed, for a golden child might be born of silver parents. It is the duty of the rulers to ensure that only a golden person can become a ruler. Plato believed that the myth can make the citizens happy with their current status and can thus promote social stability. Other Western political thinkers have accepted the legitimacy of political lies for the sake of public or party interest, and some theorists have examined related questions about the role of myth, ideology or false consciousness in political life.

“How then... might we contrive one of those opportune falsehoods of which we were just now speaking, so as by one noble lie to persuade if possible the rulers themselves, but failing that the rest of the city.” — Plato, *Republic*, 414C.

Noble savage

A term introduced by J-J Rousseau, for human beings before the appearance of civilisation and government. In con-

形象使我们厌倦——这不正是今天的虚无主义？”——尼采：《论道德的谱系》，第12节。

无所属论

这种理论认为，意识状态尽管可能以偶然的方式因果地依赖于身体，但却不属于任何事物。如果某物是有所属的，其所属关系就是在逻辑上可传递的；但经验并不是这样。斯特劳森将这一理论归予石里克和某一个时期的维特根斯坦，并在他自己关于人的讨论中对之作出批评。他承认这一理论正确地主张一个单一的身体在一个经验中的独特作用不足以将经验归结于它，但他论辩说，这一理论本身是自相矛盾的。因为经验或意识要因果地依赖于身体的状态，它就必须属于某物。我们不能指称一个独立的特定经验。我们通过其所有者来指称心的状态。因此经验一定是有所属的。

“[无所属]论者若要坚持其立场就必须否认我们曾经指称特定的状态或经验；而这一立场是荒谬的。”——斯特劳森：《个别物》，第98页。

高贵的谎言

为了国家的利益而说的假话。这个词是柏拉图在《国家篇》414—415段讲到一个神话时提出的，这个神话被用来通过劝说全体居民接受阶级的划分来维护社会的和谐。根据这个神话，神用土来造人。对于统治者，神在他们身上加了黄金；对于辅助者，神在他们身上加了白银；对于农民和其他技工，神在他们身上加了铁和铜。由于这一原因，统治者应享有最高的威望。这种区分不是固定不变的，因为统治者的孩子可以出生于辅助者的父母。统治者的责任是保证只有含有黄金成分的人才能成为统治者。柏拉图认为，这个神话可以使平民对他们当前的地位感到愉快，因而可以有益于社会的稳定。其他西方政治思想家承认为了公众或政党利益的政治谎言的合理性，一些思想家还考察了与此相关的神话、意识形态或虚假意识在政治生活中的作用问题。

“不久前，……现在我们或许可以说一个我们刚刚谈过的那些适宜的假话，以便如有可能的话，以一个高贵的谎言使统治者自己相信，或至少使城邦里其他人相信。”——柏拉图：《国家篇》，414C。

高尚的野蛮人

卢梭提出的一个术语，指的是文明与政府出现之前的人类。与霍布斯的处于自然状态下

trast to Hobbes' view that men in the state of nature are savage, Rousseau claims that if they are savages, they are noble savages. He held that human beings in the state of nature are free, peaceful, innocent, independent and happy. They are faithful to human nature and are free from the disease of our civilisation. It is the establishment of society that deforms human nature and makes humans subject to the conditions of domestic slavery. But it is argued that Rousseau held this view only in the early stage of his thought and that in general he did not think that men in the natural state are capable of virtue and moral relationships.

"Except possibly in the Discourse on the Arts and Sciences, written before his theories had been properly thought out, Rousseau was no believer in the 'noble savage', though that expression is often wrongly associated with his name."—Hail, *Rousseau*, 1973, p. 76.

Noema

[From Greek: *noema*, what is thought about; in contrast to a correlative term, *noesis*, the act of thinking. The terms are related to *nous*, reason] Husserl distinguished two aspects of intentional experience, the material and the formal. While the material aspect comprises the sensory stuffs passively received by consciousness, the formal aspect, or *noesis*, bestows sense on the material stuffs and generates unity among multiplicity by means of its synthetic activities. This account is deeply influenced by Kant's discussion of apperception. *Noema*, in contrast, is what is unified and synthesised by *noetic* activity. For Husserl, a major task for phenomenology is to reveal the *noetic-noematic* structure of intentional experience. The interpretation of *noema* is a difficult and has been subject to dispute. Generally, it is neither an object nor a part of an object, but is an entity corresponding to Frege's sense (in his distinction between sense and reference). *Noema* is a complex which includes every factor determining the meaning of *noetic* activity. It is the crucial notion for Husserl's theory of intentionality, for he claims that *noema*, rather than objects, are directed by a mental act.

"Corresponding at all points to the manifold data of the real noetic content, there is a variety of data displayable in really pure intuition, and is a correlative 'noematic content', or briefly, 'noema'—terms which we shall henceforth be continually using."—Husserl, *Ideas* (tr. Kersten), 1982, sect. 88.

Noesis

[Greek; variously translated as intellection, intelligence and understanding; it is cognate with the verb *noein* and its object *to noeton*] In a wider sense *noesis* is thought, in contrast to perception (Greek: *aisthesis*). In its narrow sense, *noesis* is identified with *nous* (immediate or intuitive thinking)

的人是野蛮的观点不同,卢梭声称,即使他们是野蛮人,他们也是高尚的野蛮人。他认为,在自然状态下的人是自由的、爱好和平的、单纯的、独立的和快乐的。他们忠于人性,没有我们的文明造成的那种弊病。正是社会的建立才扭曲了人性并使人屈从于国内的奴隶制状态。不过有人争论说,卢梭只是在他思想的早期阶段持这种观点,一般说来他不认为自然状态下的人能具有美德和道德关系。

"可能除了在他的理论完全成熟以前写的《关于艺术的演说》外,卢梭并不是'高尚的野蛮人'的信徒,虽然这一说法常常被错误地与他的名字联系在一起。"——霍尔:《卢梭》,1973年,第76页。

意向对象

[源自希腊文 *noema*,意思是“那被想到的东西”;与之相对相关的希腊词是 *noesis*,指“思想的行为”。这两个词都与 *nous*(努斯,理性,心灵)有关]胡塞尔将意向经验区别为两个方面:质料的方面和形式的方面。质料的方面由意识被动接受的感觉材料组成,而形式的方面,或意向作用,则给予这物质材料以意义,并凭借其综合行为在复合多样中产生出统一。这种讲法受到康德对于统觉讨论的深刻影响。与之相对,意向对象是那被意向作用的行为统一和综合的东西。对于胡塞尔来说,现象学的一项主要任务就是去揭示意向经验中的意向作用—意向对象结构。对于意向对象的解释是困难的,已经引起争论。一般说来,它既不是对象,又不是对象的一部分,而是相应于弗雷格所讲的意义(在其对意义和所指的区分中所讲的)那样一种存在者。意向对象是一个复合体,包括决定意向作用行为意义的每一个因素。它是胡塞尔意向性理论中的关键概念,因为他认为心的行为所指向的是意向对象而非对象。

"在每一点上,对应于意向作用的实项内容的多样化材料,都有一种材料复合体可显示在现实的纯直观中,都有一种相关的'意向对象内容',或简言之,'意向对象'。这些术语我们从此将经常使用。"——胡塞尔:《观念》(克尔斯滕英译),1982年,第88节。

理解

[希腊词,有多种译法,如才智、通晓、理解等;它与动词 *noein* 同词根,它的对象是 *to noeton*]在广义上, *noesis* 意指思想,与感觉(希腊词 *aisthesis*)相对应。在狭义上, *noesis* 与直接或直觉思维意义上的 *nous* 一致,和 *dianoia*(推论思

and contrasted to *dianoia* (discursive thinking). It is the thought which constitutes the being of the Unmoved Mover in Aristotle's *Metaphysics* and is pure intuitive apprehension in Neo-platonism. In Plato's simile of the Line, *noesis* is beyond *dianoia*, and while *dianoia* is concerned with mathematical entities, *noesis* is the highest state of the mind which reasons from Forms to Forms, reaches first principles, and then deduces from them. It is dialectical or philosophical reason. For Husserl's account of *noesis*, see *noema*.

"Life is defined in the case of animals by the power of perception, in that of man by the power of perception or *noesis*." Aristotle, *Nicomachean Ethics*, 1170a16.

Noesis, see *noema*

Nomic necessity

The regularity and uniformity existing amongst contingent natural phenomena. "Spring follows winter" and "Ice melts at a certain temperature" are statements that express empirical laws. They are not logically or mathematically necessary, but appear to be necessary in some sense. This sort of necessity is often called nomic or lawlike necessity. Such a necessity reveals that things will at least generally happen in that way or, in a stronger form, that they must happen in that way or that it is inevitable that they will so happen. Lawlike necessity is often expressed in a hypothetical supposition: if anything had the characteristics $c_1 \dots c_n$, then it would have the characteristic x . Different philosophers have offered various interpretations of this sort of necessity. Hume denied its objectivity by claiming that it is nothing more than our habitual expectation. Among those who have admitted it, medieval thinkers considered it to be due to God's force, while Kant suggested that it results from the imposition of our categories of understanding upon experience.

"The nomic necessity—anything characterised by $p \rightarrow q \rightarrow r$ would be characterised by x —implies the factual universal that 'everything that is $p \rightarrow q \rightarrow r$ is actually x '. "—Johnson, *Logic*, III, 1964, p. 9.

Nominal definition, see real definition

Nominal essence

The distinction between real essence and nominal essence, drawn by Locke, roughly corresponds to the traditional metaphysical division between substance and quality or between essence and appearance. A nominal essence is the quality or qualities by which we recognise an item and which justifies on any given occasion applying the item's name to it.

维)相对应。在亚里士多德的《形而上学》中,它是构成“不动的动者”存在的思想,在新柏拉图主义那里,它是纯直觉的领悟。在柏拉图的“线段之喻”中,*noesis* 超越于 *dianoia* 之外,*dianoia* 关涉的是数理实体,而 *noesis* 则是心的最高状态,即从形式出发推论到形式,到达第一原理,然后从它们下降。它是辩证的或哲学的理智。关于胡塞尔对 *noesis* 的主张见“意向对象”条。

“生命是有限定的,对动物而言,为感觉能力所限,对人而言,为感觉或理解的能力所限。”——亚里士多德:《尼各马可伦理学》,1170a16。

意向作用

见“意向对象”条。

规则必然性

存在于偶然的自然现象之间的规则性和齐一性。“冬去春来”和“冰雪在某一温度下消融”都是表述经验规律的陈述,它们既非逻辑上也非数学上必然的,而只是看上去在某种意义上必然的,这种必然性经常被称作“规则”必然性或拟规律必然性。这种必然性揭示出事情至少一般地将以这种方式发生,其较强的形式则为它们必然以这种方式发生,或是不可避免它们会如此发生。拟规律必然性经常表述于一种假设推测的语境中:如果一事物具有特性 $c_1 \dots c_n$, 则它将具有特性 x 。不同的哲学家对这种必然性提出了各种解释。休谟否认它的客观性,认为它不过是我们的习惯性预期。而在那些承认它的人中,中世纪思想家认为它是出自上帝的力量,康德则提出它来自于我们加在经验上的知性范畴。

“规则必然性——任何为 $p \rightarrow q \rightarrow r$ 所表征的事物将为 x 所表征——意味着事实上普遍有‘每一个是 $p \rightarrow q \rightarrow r$ 的东西实际上都是 x ’。”——约翰逊:《逻辑学》,第三卷,1964年,第9页。

名义定义

见“真实定义”条。

名义的本质

洛克大致根据实体(或译本体)和性质或者本质和现象的传统形而上学的划分,区分了实在的本质和名义的本质。名义的本质指性质或一组性质,我们依靠它们来辨认一个事项,依靠它们在任何给定的情况下,证明一个人对一个事项名称的使用是正当的。在洛克看来,名义的

For Locke, it is the abstract ideas for which a general or sortal name stands. For example, according to its nominal essence gold is a metal which is malleable, heavy and yellow. Because gold has these properties, we can recognise it as such and can apply the name "gold" to it. A thing's real essence is its internal but unknown constitution. While the qualities which constitute the nominal essence depend on the real essence, only the nominal essence serves to distinguish one thing from another. Traditional metaphysics emphasised real essences, but Locke's philosophy shifted the emphasis to nominal essences. This distinction made essence *qua* unknown real essence superfluous. Berkeley and his followers therefore rejected the notion of real essence, and this leads to phenomenalism.

"[Real essence] is the real constitution of its insensible parts, on which depend all those properties of colour, weight, fusibility, fixedness, &c. which makes it to be gold, or gives it a right to name, which is therefore its nominal essence."—Locke, *An Essay Concerning Human Understanding*, III,iii,18.

Nominalism

[from Latin: *nomen*, name] The view that the only feature that particulars falling under the same general term have in common is that they are covered by the same term. Hence, universals are only names rather than entities in their own right, although there are universal elements in knowledge. Nominalism is opposed to realism, according to which universals are real entities which are required to explain how general terms apply to different particulars. For nominalism, language, rather than independent reality, underlies perceived similarity. Everything that exists is particular, and universals are terms invented by the mind to talk about similarities. Talk about properties and abstract entities is legitimate only if it can be reduced to talk about particulars. Nominalism follows the spirit of Ockham's razor, that is by avoiding positing the existence of unnecessary entities. Nominalism is the traditional empiricist theory of universals, and its major advocates include Ockham, Hobbes, Locke, Berkeley, and in this century Carnap and Quine, although different philosophers in the tradition have different reasons for rejecting universals and ways of eliminating them. Many philosophers are attracted to the ontological austerity of nominalism, but problems remain concerning how language, especially predication, works on nominalist principles.

"Nominalism maintains that universals are names only, corresponding to no reality."—Walsh, *Reason and Knowledge*, 1947, p. 99.

本质是用通名或类名称来代表的抽象观念。例如,根据金子的名义本质,金子是可延展的、沉重的、黄色的金属,因为金子有这些性质,所以我们可以依此来辨认它,我们可以将“金子”一词用在它之上。一个东西的实在的本质是它的内在的未知的结构。虽然构成名义的本质的各种性质依赖于实在的本质,但只有名义的本质适于将一个东西同另一个东西区分开来。传统的形而上学强调“实在的本质”,而洛克的哲学转而强调名义的本质。这个区分使作为未知的实在的本质这个本质变成多余的。因此巴克莱及其追随者拒绝实在的本质的概念,这导致了现象论。

“黄金的[实在的本质]是黄金的颜色、重量、可熔性、确定性等所有这些性质所依靠的不可感部分的实在结构,这个结构使那团物质成为黄金,或使它有权使用黄金之名,因此这个名称就是黄金的名义本质。”——洛克:《人类理智论》,第三卷,第三章,第18节。

唯名论

[源自拉丁文 *nomen*, 名称]指如下观点:被归入同一普遍词之下的各个殊相所共同具有的惟一特征,是它们都为这同一个词所指称。因此,共相只是名称,不是独自的存在物,尽管在知识中有共相的成分。唯名论与唯实论相反,根据唯实论,共相是实在的实体,它们被用来说明普遍词如何应用于不同的殊相。对于唯名论来说,语言而非独立的实在,成为已知相似性的基础。每一存在物都是殊相,共相是为谈论相似物而由心灵发明的词。对性质和抽象实体的谈论,只有当它们可还原为对殊相的谈论时,才是合法的。唯名论遵循奥康剃刀的精神,即避免假定不必要的实体的存在。唯名论是传统的经验主义共相论,它的主要拥护者包括奥康、霍布斯、洛克、巴克莱和本世纪的卡尔纳普、奎因。尽管该传统中的不同哲学家对拒斥共相和消除共相的方法有不同的理由。许多哲学家注意到唯名论的本体严肃性,但是,关于语言,尤其是主谓关系怎样根据唯名论的原则来运作的问题仍然存在。

“唯名论坚持认为,共相仅仅是名称,没有相对应的实在。”——瓦尔西:《理性和知识》,1947年,第99页。

Nomological dangler

A term introduced by Feigl in his 1958 article "The mental and the physical", referring to the lawlike relations which connect intersubjectively confirmable events with events that are in principle not intersubjectively and independently confirmable. It means in particular the laws which relate non-physical conscious experience to their associated brain processes. We accept these relations or laws but they cannot be accounted for in scientific formulations. They are quite outside normal scientific conceptions, that is, they dangle from the nomological net of science. The identity theory of mind attempts to rule out these danglers.

In his 1960 paper "Sensations and brain processes.", Smart used this term for the physical entity that is supposed to dangle from the psychological law rather than to the psychophysical law itself. But he later reverted to Feigl's use, although he viewed such laws with great suspicion.

"At best a nomological dangler would merely subsume a lot of As that are associated with Bs under the generalization 'All As are Bs'. The reason for this is that the nomological danglers would be laws purporting to connect physical events, in fact, neurophysiological ones, with allegedly non-physical ones, conscious experiences."—Smart, *Essays Metaphysical and Moral*, 1987, p. 215.

Nomos

Law or convention, and used to refer to written or customary laws and rules, custom, habits and conventions. Because all of these are men-made and can be changed and modified by men, in Greek philosophy *nomos* is contrasted to *physis* (nature). Democritus claims that such things as colour and taste are conventions, while only atoms and the void are real (natural). In the fourth-fifth century BC, philosophers disputed whether human nature or human morality is *nomos* or *physis*. The defenders of *nomos*, e. g. Protagoras, insist that human nature or morality is affected by the beliefs of different societies. Socrates, Plato and Aristotle all attack this relativism, and attempt to base human morality on objective grounds.

"What is fine and what is just, the topics of inquiry in political science, differ and vary so much that they seem to rest on *nomos* only, not on nature."—Aristotle, *Nicomachean Ethics*, 1094b15-6.

Noncognitivism

Also called non-descriptivism, a type of meta-ethical theory which denies that we can have moral knowledge by intuition, and also denies that ethical statements can be construed as scientific statements, confirmable by observation or inductive reasoning. It claims that ethical terms do not refer to properties and that ethical judgements are not used to convey what is the case and are neither true nor false. Thus, it

法则学关联

由费格尔在他 1958 年的论文《心的与物的》中引入的一个术语,指把主体间可确证事件与原则上不能主体间及独立确证的事件相联系的拟规律关系。它特别意味着那些联系非物理的意识经验与和它们相关的脑过程的规律。我们承认这些关系或规律,但它们不能用科学公式来说明。它们完全在常规科学观念之外,即它们在科学的法则学网络上关联着。“心的同一论”试图罗列出我们的这些关联。

斯马特在他 1960 年的论文《感觉与脑过程》中用这个术语指那些被看做关联于心理学定律而不是心理物理学定律自身的物理实体。但后来他又回到费格尔的用法,尽管在他看来这些规律很有疑问。

“法则学关联充其量不过是把许多与 B 相联系的 A 归属于概括‘所有的 A 都是 B’之中。这么做的理由是,法则学关联是意在将物理事件、事实上是神经生理事件与据说是非物理的事件、即意识经验相联系的规律。”——斯马特:《形而上学与道德文集》,1987 年,第 215 页。

规范

指法律或惯例,也用来表示成文法或不成文法,以及习俗、习惯与惯例等等。因为所有这些东西是人为的,而且是由人来改变或修正的,因此在古希腊哲学中规范(*nomos*)有别于自然(*physis*)。德谟克利特认为,诸如色彩和趣味之类的东西就属惯例,而只有原子和真空属于实在(自然)。公元前 4 至 5 世纪,哲学家对人性或人类道德属于规范还是属于自然的问题争论不休。规范的辩护者有普罗泰戈拉等人,他们坚持认为人性或人类道德是受不同社会之信仰的影响。而苏格拉底、柏拉图和亚里士多德都批评这种相对主义,并且试图把人类道德建立在客观的基础之上。

“美好与公正的东西,作为政治学探讨的话题,是彼此截然不同的,它们看来只是有赖于规范而非自然。”——亚里士多德:《尼各马可伦理学》,1094b15-16。

非认知主义

也称“非规定主义”,一种元伦理理论,它否定我们能够通过直觉而得到道德知识,也否定伦理陈述能够解释为可为观察或归纳推理证实的科学陈述。它主张伦理词汇不指涉属性,伦理判断不被用来表达事态,因而既不真也不假。因此,它是与许多传统的伦理理论相对立的,这些理论认为,有伦理知识以及规范伦理判断能够

is opposed to the many traditional ethical theories which hold that there is ethical knowledge and that normative ethical judgements can be said to be true or false. These rival theories are therefore termed cognitivism and include both naturalist and nonnaturalist varieties.

The positive thesis of noncognitivism is that in ethical thinking we should concentrate on the non-fact-stating functions of ethical expressions. Exactly what these functions are is an issue dividing many forms of noncognitivism. For some, ethical expressions express attitude; for some, they issue commands; for some, they express exclamations; for some, they are prescriptions; and so on. The most influential noncognitive theories are emotivism, developed by Stevenson, and prescriptivism, developed by Hare.

"Noncognitivism: the job of ethical sentences is not to state facts." Brandt, *Ethical Theory*, 1959, p. 203.

Non-consequentialism, see consequentialism

Non-descriptivism, see noncognitivism, descriptivism

Non-doxastic theory, see doxastic theory

Non-Euclidean geometry

We can informally render Euclid's fifth 'parallels' postulate (or Axiom XI) as follows: 'through a given point P not on a line L, there is one and only one line in the plane of P and L that does not meet L'. This axiom turns out to be independent of the other axioms of Euclid. The exploration of the consequences of this fact led to the development of various non-Euclidean geometries. They develop systems in which two different denials of this postulate are used: Lobachevskian geometry contains an infinite number of parallels through P; Reimannian geometry contains no parallels through P. Reimannian geometry has played a crucial role in the development of the General Theory of Relativity.

"If the parallel axiom is independent of the other axioms of Euclid, then a statement incompatible with the parallels axiom can be substituted for it without logically contradicting the other axioms. By trying different alternatives, new axiom systems, called non-Euclidean geometries, were created" —Carnap, *Philosophical Foundations of Physics*, 1966, p. 130.

Non-monotonic logics

In logic, an inference is monotonic if a conclusion C, which can be inferred validly from a set of premises, can also

是真或假的。这些匹敌的理论因此也被命名为认知主义,它们包括自然主义和非自然主义。

非认知主义的积极论点是,在伦理思考中,我们应该集中于伦理表达的非事实陈述的功能。正是在说明这些功能的问题上,区分了非认知主义的许多不同形式。在某些人看来,伦理述词表达态度;对于另一些来说,它们发布命令;对于其他一些来说,则表达感叹;而对其他人而言,它们是规定等等。最有影响的非认知主义理论有斯蒂文森发展的情感主义,以及黑尔所发展的规定主义。

"非认知主义,伦理句子的作用不是描述事实。" 布朗特,《伦理理论》,1959年,第203页。

非效果论

见“效果论”条。

非规定主义

见“非认知主义”、“描述主义”条。

非信念论

见“信念论”条。

非欧几何

我们可以把欧几里德的第五条“平行”公设(或第十一条公理)非正式地表述如下:“经过不在直线L上的一给定点P,在平面P和L上有且仅有一条直线不与L相交。”这一公理证明为独立于欧几里德的其他公理。对这一事实的后果的探索导致了各种非欧几何的发展,它们探讨运用了对这公设的两种不同否定形式的系统:罗巴切夫斯基几何学包含经过P的无穷条平行线,黎曼几何学则不包含经过P的平行线。黎曼几何学在广义相对论的发展中起到了关键作用。

“如果平行公理独立于其他欧几里德公理,则一个与平行公理不相容的陈述可用以取代它,而不与其他公理相矛盾。通过尝试不同的选择,新的称作非欧几何的公理系统就创造出来了。” —卡尔纳普,《物理学的哲学基础》,1966年,第130页。

非单调的逻辑

在逻辑中,当一结论C能永真地从一组前提推论出来,也能在无论什么更多的前提被增

be inferred validly no matter what further premises are added to the originally valid argument. It is non-monotonic if the addition of further information leads to a different conclusion. Non-monotonic logics, used in artificial intelligence research, explore logical systems in which monotonicity does not hold.

"Non-monotonic inferences are inferences of the form: a ; there is no reason to suppose otherwise; so b ."— Priest, *Beyond the Limits of Thought*, 1995, p. 48.

Non-natural property

According to G. E. Moore, ethical terms such as "good" refer to objective properties which are the basis of truth-values of ethical statements. However, these ethical properties are not natural, that is they are not observable or subject to scientific explanation. Instead they can only be known through moral intuition. According to Moore, any attempt to define ethical terms by appeal to natural terms commits the naturalistic fallacy. However, critics deny the existence of such properties or qualities, and claim that the appeal to a special kind of intuition is not convincing. In addition, it is hard to say how non-natural moral properties could guide our actions.

"The alleged concept of a nonnatural property is not connected with experience, does not function to guide expectations, is not part of a theoretical system with consequences predicative of observation, in the way in which this is true of the concepts of empirical science."—Brandt, *Ethical Theory*, 1959, p. 190.

Nonnaturalism (ethical)

In opposition to ethical naturalism, ethical non-naturalism claims that ethical terms cannot be defined by appeal to natural terms. Ethical properties are presented as non-natural properties that are not observable and not subject to scientific explanation. There is a firm distinction between ought and is, or between value and fact, so that ethical statements (value statements or "ought" statements) cannot be derived from statements of facts. To attempt to do so is to commit the so called naturalistic fallacy. Distinct from non-cognitivism, non-naturalism argues that ethical statements have objective meanings and truth-values because they refer to non-natural ethical properties, but they can only be known by intuition, rather than by observation or experiment, as naturalism holds. In this century, the main proponent of non-naturalism is G. E. Moore.

"The most vulnerable point of nonnaturalist doctrine, however, is the epistemology, the theory of how we know or are justified in believing ethical statements."— Brandt, *Ethical Theory*, 1959, p. 183.

加到原来永真的主目上都会永真地推论出来,那么这个推理就是单调的。当所增加的信息导致了不同的结论,那么它就是非单调的。非单调的逻辑被用于人工智能的研究,它探索单调性所没有把握的逻辑体系。

"非单调的推理是这种形式的推理: a ;没有理由假定其他方面;因此 b 。"—普里斯特,《超出思想的界限》,1995年,第48页。

非自然的特性

依据 G. E. 摩尔的观点,伦理词汇诸如"善",指的是作为伦理陈述真值基础的客观特性。不过,这些伦理特性不是自然的,即它们不是可观察的或可为科学解释的,它们只能通过"道德直觉"而被认识。据摩尔看来,任何以自然词汇来为伦理词汇下定义的企图都要犯自然主义的谬误。不过,批评家否定这样的特性或性质的存在,宣称诉诸一种特别的直觉不是令人信服的。此外,很难说这些非自然的特性怎样指导我们的行动。

"所谓的非自然特性的概念不与经验相联,没有指导期望的作用,不是有着可观察的效果理论系统的一部分。而经验科学的概念具有这些特性。"—布朗特,《伦理理论》,1959年,第190页。

非自然主义(伦理学的)

与伦理学的自然主义相对,伦理学的非自然主义主张,伦理词汇不能诉诸自然词汇而下定义,伦理特性是非自然特性,是不可观察和不可为科学解释的。在"应当"与"是"或"价值"与"事实"之间有着确定的区分,所以伦理陈述(即价值陈述或"应当"陈述)不能从对事实的陈述中得出。企图这样做就犯了所谓自然主义的谬误。与非认知主义相区分,非自然主义相信伦理陈述有客观意义和真值,因为它们指非自然的伦理特性,但它们只有靠直觉才可认识到,而不是通过观察或实验,如同自然主义所认为的那样。在20世纪,非自然主义的主要提倡者是 G. E. 摩尔。

"不过,非自然主义最脆弱的地方是认识论,即关于我们怎样知道或怎样证明我们相信伦理陈述为合理的理论。"—布朗特,《伦理理论》,1959年,第183页。

Non-reflexive, see irreflexive

Nonsense

Inspired by Kant's description of reason's inevitably failed attempt to extend beyond the limits of knowledge, Wittgenstein draws a demarcation between meaningful propositions and meaningless propositions. While meaningful propositions are bipolar, that is, either true or false, meaningless propositions are not bipolar and are hence nonsensical. Such propositions are not obviously false or pointless, but simply lack sense. Most questions asked in philosophy and the propositions with which we attempt to answer them are nonsense (German *Unsinn*), and one cannot say that they are true or false. These propositions fail in their attempt to say something about the world, due to our failure to understand the logical syntax of language which is obscured by grammar. Nonsense can be divided into overt nonsense and covert nonsense. Overt nonsense can be seen intuitively to be nonsense, such as the question "Is the good more or less identical than the beautiful?", but covert nonsense has to be discovered by analysis. For Wittgenstein, the task of proper philosophy is to clarify good sense. What is nonsensical cannot be said, but can be shown. In this sense, even his own theory of logical syntax is nonsensical, for it tries to say what can only be shown. In the Vienna Circle, all statements which are not capable of scientific treatment or are not verifiable are nonsense, and "nonsense" accordingly becomes a label for metaphysical statements. Nonsense should be distinguished from what is senseless.

"It will therefore only be in language that the limit can be shown, and what lies on the other side of the limit will simply be nonsense."—Wittgenstein, *Tractatus*, preface.

Non-teleological ethics, see consequentialism

Non-tuism

A term coined by the economist Wicksteed in *The Common Sense of Political Economy and Selected Papers and Reviews on Economic Theory* (1933), originally referring to the specific character of economic relations. Non-tuists are not interested in the interests of those with whom they interact. This sort of motivation is neither egoistic nor altruistic. Some philosophers extend this term to the moral area to offer a rationale for morality, suggesting that people are neither egoists nor altruists. We need moral constraints, but morality is merely a device rather than a fundamental concern for others.

"The market requires only that persons be conceived as not taking an interest in the interests of those with whom they exchange. This is Wicksteed's requirement of non-

见“反自返的”条。

无意义

康德认为,如果理性企图超越知识的界线就不可避免地会失败,受此激励,维特根斯坦在有意义的命题和无意义的命题间划出一条界线。有意义的命题是两极性的,即是说要么真,要么假,而无意义的命题不是两极性的,因此是无意义的。这样的命题不是明显地错或不得要领,而只是没有意义。哲学中提出的大部分问题和用来回答这些问题的命题是无意义(德文为 *Unsinn*),我们不能说,它们是真还是假。这些命题在力图对世界有所述说时失败了,是因为未能懂得语言的逻辑句法,它被语法弄得模糊不清。无意义可以分为明显的和不明显的两种。明显的无意义可以被直观地看到是无意义,例如这样的问题:“善或多或少等同于美吗?”但不明显的无意义需要用分析来发现。对维特根斯坦而言,哲学的专门任务是澄清适当的涵义。无意义的东西不能说出,而只能显示。在此含义上,甚至他自己关于逻辑句法的理论也是无意义的,因为它试图说出只能显示的东西。在维也纳小组中,一切不能够科学处理或不可证实的陈述都是无意义,因此“无意义”成了形而上学陈述的标签。应将无意义与没有意义的东西相区别。

“因此,只是在语言中,界限才能显示,而处于界限另一边的只会是无意义。”——维特根斯坦,《逻辑哲学论》,序言。

非目的论的伦理学

见“效果论”条。

非亲密性

经济学家威克德在他的《政治经济学常识和经济理论论文及评论选》(1933年)中所造的一个词,最初是指经济关系的特殊性质。非亲密者对于他们所接触的那些人的利益不感兴趣。这种动机既不是利己主义也不是利他主义。某些哲学家把这个词引入道德领域,来论证道德的合理性,认为人们既不是利己主义的,也不是利他主义的,我们需要道德束缚,但道德仅是一种工具,而非对他人的根本性的关注。

“市场所需要的仅仅是,不对与他们交换的人的利益感兴趣的那些人。这是威克德对于非亲密性的要求。”——高塞:《约定的道德》,1986年,第87页。

tuism" Gauthier, *Morals by Agreement*, 1986, p. 87.

Normative

From norm, which means standard or rule and it is associated with evaluation. A theory is normative if it involves norm-prescription and is descriptive if it simply describes the facts but does not prescribe what one ought to do. Normative ethics is the subject of inquiring about the principles or rules of correct moral behaviour and is contrasted to meta-ethics, which analyses the meaning and logical relations of evaluative terms. To define a normative term in terms of non-moral properties is called by Moore the definist fallacy. Sociologists as well as moral philosophers have pictures our lives as governed by complex hierarchies of norms.

"Theories that prescribe standards are normative."
Glymour, *Thinking Things Through*, 1992, p. 110.

Normative egoism, see egoism, ethical

Notation

The abbreviation for a notational system or notational scheme, which consists of certain characters or symbols. Notation is the mark of identification distinguishing one type of art from another and determining whether two works belong to the same form of art. It also determines whether two performances are the instances of the same work or whether different inscriptions are copies of the same score. Notation indicates the constitutive properties of a work and distinguishes them from its contingent properties. Establishing this distinction generally relies on boundaries drawn in the antecedent practices. Some forms of art, such as music, have traditional notation, while other, like painting, do not. For other forms of art, like dance, attempts to provide a notation have lacked total success. Since notation is a system of characters, it should be syntactically disjoint so that all marks belonging to the same character are interchangeable without syntactic effects. It should also be finitely differentiated, that is to say, by using the notation we can tell whether or not two marks belong to the same character. Moreover, a notation should also be semantically unambiguous, so that, for example, performances of different works cannot conform to the same score.

"In sum, the properties required of a notational system are unambiguity and syntactic and semantic disjointness and differentiation. These are in no sense merely recommended for a good and useful notation but are features that distinguish notational systems—good or bad—from non-notational systems."—Nelson Goodman, *Language of Art*, 1968, p. 156.

规范的

源自名词“规范”，意为“标准”或“规则”，与“评价”相联。一个理论如果涉及到规范规定，它就是规范的，如果只是叙述事实而不规定一个人应当做什么，就是描述的。规范伦理学是研究正确道德行为的原则和规则的科学，是与元伦理学相对的，元伦理学分析评价词的意义和逻辑关系。依据非道德的特性为一个规范词汇下定义，被摩尔称为定义主义的谬误。社会学家和道德哲学家把我们的生活描画为被复杂的规范等级体系所支配的图画。

“规定标准的理论是规范的。”——格里摩尔：《透彻思考问题》，1992年，第110页。

规范利己主义

见“伦理利己主义”条。

标志法

“标志系统”或“标志图式”的缩写形式，由某些特征或符号构成。标志法是一种识别的标志，表示一种艺术与另一种艺术的区别，同时还决定两件作品是否属于同类艺术。另外，标志法还决定两台演出是否是同一作品的实例，或者不同的题词是否是同一总谱的拷贝。标志法表明作品的构成特性，同时又使其有别于作品的偶然特性。建立这种区别一般取决于在先前实践中所划定的界限。有些艺术形式，譬如音乐，具有传统的标志法，而其他一些艺术形式，譬如绘画，则没有这种方法。另外一些艺术形式，譬如舞蹈，虽然试图提供一种标志法，但却未能取得完全的成功。由于标志法是一种特征系统，因此应当在句法结构上予以拆解，从而使所有属于相同特征的标志在没有句法作用的情况下能够彼此变通。标志法的区分也应当是有限的，也就是说，人们凭借标志法便可辨别出两个标志是否属于同一特征。另外，一种标志法也应当在语义上是非歧义性的，如此一来，不同作品的演出就不会遵从同一总谱。

“总而言之，标志系统所需要具备的特性包括非歧义性、句法与语义的拆解性与差异性。这些特性绝非是为一套优秀的和有用的标志法所设定的条件，而是区别标志系统（无论好坏）与非标志系统的特征使然。”——古德曼：《艺术语言》，1968年，第156页。

Notational scheme. see notation

Not-being

That which is not. Parmenides claimed that not-being can be neither spoken nor thought, for everything that can be spoken or thought is being. He also believed that Heraclitus's position that everything is always in change amounts to saying that a thing is both being and not-being, and this is an account which can only lead to opinion rather than truth. Plato argues that Forms or Ideas are truly beings and that the sensible world as appearance is both being and not-being. According to Plato's analysis in the *Sophist*, not-being is neither absolutely nothing nor a kind of thing. Instead it is the absence of being, and is "other than" or "being different from" a positive determination or being. In Plotinus, "not being" refers to matter, which is at the bottom of the hierarchy of reality, and is identified with pure passivity, evil and darkness. Modern discussion tends to follow Plato and characterise not-being as a negative event, which is expressed by negative propositions. But there has been debate concerning how to avoid a commitment to non-existents through negative propositions. If not-being is a negative property, then we must find a way to distinguish negative properties from positive properties. Non-being is generally taken to be identical with nothingness.

"When we speak of 'not being', it seems that we do not mean something contrary to what exists but only something that is different."— Plato, *Sophist*, 257b.

Nothingness

Also called negation, not-being, or nihilation. Nothing is an abbreviated form of "not-anything". The nature of negation has been a difficult puzzle from the Pre-Socratic philosophers. Through nominalisation, negation seems to become an entity, "the not", and the ontological status of nothing becomes a problem. Parmenides claimed that not-being is unsayable. Plato suggested that not-being exists and means "other-than-being". Aristotle believed that not-being is what lacks any and every property. The dispute continued through medieval philosophy, which tried to connect nothingness, privation and evil. At the beginning of his *Logic*, Hegel proposed a dialectic of Being and Nothingness.

In contemporary philosophy, there are two quite different usages. Heidegger took "nothingness" (German: *das Nichts*) as a referring expression, denoting a special kind of subject matter. We can experience nothingness, that is the experience that human existence has no ground and is meaningless. This experience is revealed in anxiety and culminates in the experience of death. Sartre distinguished between being-for-itself and being-in-itself. The former is conscious being, especially human being, and the latter is the being of

标志图式

见“标志法”条。

不是

即那不是(不存在)的事物。巴门尼德认为,“不是”既不能被说,也不能被想,因为一切能说能想都是“是”。他也相信赫拉克利特的观点,即一切事物都处于变化之中,等于是说一切事物即“是”又“不是”。这种说法只能产生意见,而不能产生真理。柏拉图论证说,形式或形相是真实的“是”,而可感世界作为现象则既“是”又“不是”。根据柏拉图在《智者篇》中的分析,“不是”既非绝对的无又非一类事物。事实上,它是“是”(存在)的缺乏,是“异于”或“不同于”——正面的规定或“是”。在普罗提诺的哲学中,“不是”乃指质料,处于现实等级的底层,并等同于纯被动、邪恶与黑暗。近代讨论倾向于跟随柏拉图,把“不是”看做是一否定事件,由否定命题表示。但如何避免由否定命题引起的对不存在的承诺,一直是一个争论不休的问题。如果“不是”是一个否定属性,难道我们不是得设法区分否定属性与肯定属性吗?“不是”一般当做是“无”的同义词。

“当我们说‘不是’时,我们似乎不是指那与存在物相反的东西,而是指与其不同的东西。”——柏拉图:《智者篇》,257b。

无

也叫作否定、不是或虚无。“无”是“并非任何东西”的缩写形式。自前苏格拉底的哲学家们以来,否定的性质就成了一个令人困惑的难题。通过命名或名词化,否定似乎成为了一个存在者,即“这个并非”;而无的存在论身份也就成了一个难题。巴门尼德声称,“不是”是不可说的。柏拉图则提议说,“不是”也存在着(exists),并且意味着“在存在之外”。亚里士多德相信“不是”缺少任何性质。这类争论贯穿了中世纪哲学,那时的人们试图将无、缺乏与邪恶联系起来。黑格尔在他的《小逻辑》开端,提出了一种是与无的辩证法。

在当代哲学中,对这个词有两种很不同的用法。海德格尔将“无”(德文为: *das Nichts*) 当做一个指示一种特殊主题的指称表达式。我们能体验到无,即体验到人类生存的无根基和无(现成)意义的状态。这种体验在畏惧中透露出来,并在对死亡的体验中达到高峰。萨特区别了“为自身的存在”(自为存在)和“在自身中的存在”(自在存在)。前者是有意识的存在,特别是人类存在;后者则是世界中事物的存在,受制于

things in the world that are causally determined. Consciousness as being-for-itself is directed upon some object, but is also aware of itself as conscious of some object. Hence it presents a vacancy or gap between itself and its object, by which consciousness detaches itself from the rest of the world or being-in-itself and identifies itself by reference to the things which are other than itself. For Sartre, this gap is precisely what nothingness is, as an awareness of he-is-not-what-he-is or he-is-what-he-is-not. Hence, nothingness is the separation between itself and its object and is an implicit awareness of not-being-the-object. Sartre holds that this separation is the source of human freedom by causing human beings to choose what they will be rather than simply being. Consciousness is negation in itself because it cannot exist without a separation from its object. Human being, as the agent of consciousness, is the only being that can bring nothingness into the world. It takes a different view of being-in-the-world and modifies it. The awareness of nothingness results in feeling anguish, and an escape from anguish leads one to fall into bad faith. The conception of nothingness lies at the foundation of Sartre's *Being and Nothingness*.

On the other hand, Carnap rejects Heidegger's use of "nothing" as typical metaphysical nonsense. Nothing does not refer to anything, but simply marks the absence of an expected existent. For Carnap, Heidegger's question about nothing is a violation of logical syntax. It is generally held in analytic philosophy that nothingness is a pseudo-object which is invoked to fill the gap produced by insisting that every mental state is intentional in form. In modern logic, "nothing" is interpreted in terms of quantified sentences rather than as a designator of an object.

"We perceived then that Nothingness can be conceived neither outside of being, nor as a complementary, abstract notion, nor as an infinite milieu where being is suspended. Nothingness must be given at the heart of Being, in order for us to be able to apprehend that particular type of realities which we have called *négalités*." —Sartre, *Being and Nothingness* (tr. Barnes), 1957, p. 22.

Nooumenon

[from Greek: *noein*, to think, hence the thing thought or the intelligible thing; plural: *noumena*] A thing as intelligible object or ultimate reality, in contrast to a *phenomenon*, which is a thing as it appears or is sensed. This ancient distinction was carefully explored in Plato's theory of ideas. But the term *noumenon* is especially associated with Kant. In his philosophy, *noumenon* is mainly used in a negative sense, as something which is beyond the limits of sensibility, intuition or experience, that is beyond the world of appearance. Hence, a *noumenon* is an unknown thing, employed to show the limits of possible knowledge, which is postulated by pure reason as a starting point for all scientific inquiries. Kant

因果律。作为“为了自身的存在”的意识指向某个对象,但也意识到自身乃是对某对象意识。因此,这意识在它自身与其对象之间造成了一个空档,凭借此空档而使自身脱离世界的其余部分或“在自身中的存在”,并在与那些不是其自身的东西的关联中得到自己的身份。对于萨特,这个空档正是“无”所意味的,也就是对于“他不是他所是”或“他是其所不是”的状态的意识。所以,无是自身与其对象的分离,并且是对于“不是此对象”状态的模糊意识。萨特认为这种分离是人类自由之源,迫使人类存在者们去选择他们将成为的状态,而不仅仅是一种〔现成的〕存在状态。意识是在自身中的否定,因为它不能不以与其对象分离的方式生存。人类有意识,因而是能将无带入此世界的惟一存在者。萨特在此采取一种与〔海德格尔的〕“在此世界之中存在”不同的观点并修改了它。对于无的意识导致焦虑感,而逃避焦虑则导致自欺〔bad faith, 伪劣信念〕。无这个概念是萨特《有与无》〔或《存在与虚无》〕一书的基础。

另一方面,卡尔纳普将海德格尔对于“无”的使用当做典型的形而上学胡说来拒斥。无并不指涉任何东西,而只标志着某个被期待存在者的缺失。在卡尔纳普看来,海德格尔关于无的探求违反了逻辑语法。分析哲学中的普遍看法是:无是一种伪对象,来自要填充一种空档的企图;此空档则出自这样一种主张,即认定每个心的状态在形式上都是意向性的。在当代逻辑中,“无”通过量词化的语句而得到解释,并不被当做某个对象的指称者。

“我们于是知道,无既不能被视为外在于存在,又不是—个补充性的和抽象的观念,也不是—个存在被悬置起来后的无限背景。无必须在存在的中心处被给出,以使得我们能够理解那被我们称之为‘否定’的真实性所具有的特殊类型。”——萨特:《存在与虚无》(巴奈斯英译),1957年,第22页。

本体

〔源自希腊文 *noein*(思维),其意为“被思想的事物”,或“理智的事物”,复数是: *noumena*〕作为可理解对象或终极实在的事物,相对于现象,即“显现的或可感的事物”。这个区别古已有之,并在柏拉图的形式论中得到充分的讨论。但是“本体”(noumenon)一词特别与康德有关。在他的哲学中,本体主要用于消极的意义,即某种超越于感性、直观或经验界限的东西,即超越现象世界的东西。因此,本体是不可知之物,用于表明可能知识的界限。它只是纯粹理性设定以作为一切科学探究的起点。在康德看来,这样的设定作为人类自由的条件尤为必要。而且,我们

held that such a postulation is necessary as a condition of a human freedom. Also, if we attribute objectivity to the *noumenon*, we proceed from a logical form without content to an object necessarily existing in itself as an object of positive knowledge. For Kant, this is a dialectical error which leads inevitably to the errors of traditional metaphysics. *Noumenon* is sometimes used interchangeably with thing-in-itself, although each has its own emphasis.

"The concept of a noumenon that is, of a thing which is not to be thought as object of the senses but as a thing in itself, solely through a pure understanding -- is not in any way contradictory." --Kant, *Critique of Pure Reason*, B310.

Nous

[Greek: intellect in general or in some aspect] Anaxagoras took *nous* to be a cosmic force separating elements from the primitive mixture and setting up the order of the world. Although not satisfied with the detailed explanation given by Anaxagoras, Socrates was inspired by this account. In his simile of the line, Plato took *nous* to be the highest level of intellect. In contrast to *dianoia* (discursive reasoning) which is concerned with mathematical reality and proceeds from hypotheses to a conclusion, *nous* is concerned with Forms and proceeds from hypotheses to the first principle from which everything else is deduced. Aristotle used *nous* in various senses: (1) general rational thought and understanding which is not distinguished from *dianoia*; (2) intuitive reasoning which grasps the first principles of demonstrative sciences, principles which are necessary and admit of no further justification; (3) practical *nous* which grasps the relevant features of particular cases, and is an element of practical reason; (4) active reason, which immediately grasps pure forms and is an eternal, divine intellect altogether separable from body, an account which conflicts with Aristotle's other views about soul.

"No other kind of thought except *nous* is more accurate than scientific knowledge." --Aristotle, *Posterior Analytics*, 100b8.

Nuclear deterrence, see deterrence

Null class

A class or set of which nothing is a member. It is often symbolized by " \emptyset " and is also called the null set or empty class. This is the smallest set possible. Logically, since sets are distinguished from one another by their members, only one null-class is possible. Since we tend to think of a set or class as a heap, the existence of the null class seems puzzling, but if we think of classes more abstractly the puzzle disappears.

"One of these concerns the null-class, i. e. the class

如果把客观性归于它,那么,我们就从一个没有内容的逻辑形式进展到一个必然地自在存在的对象,一个实证知识的对象。在康德看来,这是一种辩证的谬误,是不可避免地导致传统形而上学错误的根源。本体有时可与“物自体”交替使用,尽管它们分别有不同的侧重点。

“本体之概念——它关涉于不应被思考作是感性对象,而是只通过纯理智认作是物自身的東西——是绝无矛盾的概念。”——康德:《纯粹理性批判》,B310。

努斯

[希腊文,指理智一般,或在某些方面的理智]阿那克萨戈拉把努斯当做一种宇宙力量,它从原初混沌中将元素分离出来,并建立世界秩序。苏格拉底虽然对阿那克萨戈拉所提供的详细解释不甚满意,但却从中受到了启发。在其线段之喻中,柏拉图把努斯看做是理智的最高阶段,与 *dianoia* (推论理性) 相对。 *Dianoia* 关涉数学实在,从假设推至结论;而努斯则关注形式,从假设进展到第一原则,再从第一原则推出其他一切。亚里士多德在许多意义上使用努斯一词:(1)一般理性思想和理解,与 *dianoia* 不加区别;(2)直观推理,它把握证明科学的第一原则,即那些必然的,不必需要进一步说明的原则;(3)实践努斯,它把握特殊情形的相关特征,是实践理性的一个因素;(4)主动理性,它直接领悟纯形式,是一种可与肉体相分离的永恒的神圣的理智。不过,这一学说很难与亚里士多德关于灵魂的其他学说相调和。

“除了努斯外,没有其他思维比科学知识更精确。”——亚里士多德:《后分析》,100b8。

核威慑

见“威慑”条。

零类

没有元素的类或集合。常常以符号“ \emptyset ”来表示,也常常称为零集或空类。这是可能的最小的集合。从逻辑上说,因为集合是以元素的数目而相互区别的,所以只可能有一个零类。因为我们倾向于认为一个集合或类是一些东西的堆积,所以零类的存在似乎令人困惑,但如果我们更为抽象地想像类,则困惑就会消失。

“这些关心之一是零类,即没有元素组成的类,它是很难在纯外延的基础上处理的。”——

consisting of no members, which is difficult to deal with on a purely extensional basis.”—Russell, *Logic and Knowledge*, 1956, p. 267.

Nulla poena sine lege

[Latin; no punishment without law making it so] A principle that requires any determination of offence to be justified by appeal to clearly defined and preannounced laws. The grounds for imposing punishment on wrongdoers cannot be a discretionary matter, but must be according to expressed or expressible legal forms. Statutes must be clear in what they enjoin and forbid, so that the citizens have clear knowledge about how they should behave. An associate principle is *nullum crimen sine lege* (Latin; no crime without law making it so).

“*Nulla poena sine lege* is the battlecry (and translated with strict accuracy, let us not forget, it means ‘No punishment without a statute’).” —N. MacCormick, *H. L. A. Hart*, 1981, p. 132.

Nullum crimen sine lege

[Latin; no crime without law making it so] A principle that conduct does not constitute a crime unless it has previously been declared to be criminal by the law. Anything that is not forbidden within a certain normative rule or system is permitted within that rule or system. Whatever is not prohibited is thereby *ipso facto* permitted. It is a rule about people’s freedom to act, which is also called the principle of legality. If a judge creates new offences in order to punish morally objectionable or harmful acts, he violates this principle. The principle is associated with the rule *nulla poena sine lege* (Latin; no punishment without law making it so).

“A *nullum crimen* [*sine lege*] rule permitting all not-forbidden acts and forbearances may or may not occur within a given normative order.” von Wright, *Norm and Action*, 1963, p. 87.

Number

Philosophical issues arise over the ontological status of numbers. The Greek Pythagoreans discovered relationships of ratio and proportion among natural numbers and even considered number to be the first principle which determines the structure of the world. The tendency of contemporary philosophy of mathematics to identify numbers with sets has led to the revival of Platonism in mathematics. The traditional position holds that numbers are used to answer questions of the form “How many X’s are there?” and, hence, that a number is a property ascribed to an object or group of objects. This view was rejected by Frege who argued that a number statement ascribes a property to concepts rather than to objects. Hence a number is a second-level predicate rather

罗素：《逻辑和知识》，1956年，第267页。

非根据法律不得惩罚

[拉丁文，从字义上讲就是“不是法律认可的犯罪就不得惩罚”]它指的是这样一条原则，即要求对任何犯罪行为的判决都要通过诉诸明确规定的并且是事先宣布的法律而被证明是公正的。对犯罪之人施加惩罚的根据不能是任意的事，而必须依据表达出的或可表达的法律形式。法规对其所禁止的事情必须是明确的，以使得公民清楚地知道他们应怎样行为。与此相关的原则是 *nullum crimen sine lege* (拉丁文；不是法律认可的犯罪就不是犯罪)。

“非根据法律不得惩罚是这样一一个口号(将其严格准确地翻译过来，我们不要忘记，它的意思就是‘没有法规不能惩罚’)。”——麦考密克：《H. L. A. 哈特》，1981年，第132页。

非根据法律不得判罪

[拉丁文，不是法律认可的犯罪就不是犯罪]它指的是这样一条原则，即一个行为除非以前已被法律宣布为犯罪，否则它不构成犯罪。任何事情，只要不是在某一规范的法律规则或法律制度中被禁止，它就是为那种法律规则或法律制度所允许的。不禁止的也就是实际上允许的。这是有关人的行动自由的一条准则，它也被称作合法性原则。如果一个法官为了惩罚道德上的有害或伤害行为而提出新的违法行为，他就违背了这一原则。与此相关的原则是 *nulla poena sine lege* (拉丁文；非根据法律不得惩罚)。

“在一个既定的规范的制度中，[非根据法律]不得判罪的准则允许所有非禁止的行为，宽容也许会发生，也许不会发生。”——冯·赖特：《规范与行为》，1963年，第87页。

数

有关数的本体论地位引起许多哲学问题。希腊毕达哥拉斯学派发现了自然数中的比率和比例间的联系，甚至认为数是决定世界结构的第一原则。当代数学哲学把数与集合相等同的趋向导致了柏拉图主义在数学中的复兴。传统的观点认为，数是用来回答“有多少X存在”这类问题的，因此，数是归属于一个对象或一组对象的特性。弗雷格反对这一观点，认为一个数陈述是将特性归属于概念，而不是归属于对象。因此，数是二阶谓词，而不是一阶谓词。在这一基础上，弗雷格推论说，存在像数一样，也是概念的特性而不是对象的特性。

“一个数的陈述内容乃是一种关于一个概

than a first level predicate. On this basis, Frege inferred that existence, like number, is a property of concepts rather than of objects.

"The content of a statement of number is an assertion about a concept."—Frege, *The Foundation of Arithmetic*, Sec. 54.

Numinous

[from Latin: *numin*, a spirit inhabiting a natural object or phenomenon, filling it with a sense of divine presence] A term introduced by the German philosopher of religion Rudolf Otto. Otto claimed that the term holy is used both in a religious and an ethical sense and suggested that we need a term simply for the part of the meaning of holy which is distinct from absolute moral goodness. He put forward the numinous as term to designate the awe-inspiring and overpowering object of human religious experience. The numinous has been understood as a distinguishing feature of religion. Although the experience of the numinous is meant to characterise religion in isolation from moral sense, it is a matter of dispute whether a distinction between the numinous and other aspects of the holy is tenable. In a related secular sense, the numinous appeals to the high emotions or aesthetic sense.

"For this purpose I adopt a word coined from the Latin *numen*. *Omen* has given us 'ominous', and there is no reason why from *numen* we should not similarly form a word 'numinous'."—Otto, *The Idea of the Holy*, 1950, p. 7.

念的断定。”——弗雷格：《算术的基础》，54 节。

圣秘

[源自拉丁词, *numin*, 居于—自然对象或现象中的精灵, 赋予事物或现象以神圣呈现的意义] 这个术语是由德国宗教哲学家鲁道夫·奥托引入的。奥托认为, “神圣”一词既用于它的宗教意义, 也用于它的伦理意义, 他提议, 我们应该用一个新词, 单纯指称与绝对的道德善相区别的“神圣”一词的那部分意义。他提出“圣秘”一词, 用于指人类宗教体验的庄严和超力量的对象。圣秘被理解为宗教的一个特殊特征。虽然圣秘的体验意味着排除道德含义, 仅具宗教特征, 但圣秘和其他方面的神圣之间的区分是否站得住脚, 是个有争议的问题。在相对世俗的意义上, 圣秘求助于高尚情感和美学含义。

“为此目的, 我采用一个由拉丁语 *numen* 造出的词。既然 *omen* (预兆) 给了我们 'ominous' (预兆的), 我们为什么没有理由从 *numen* 同样地构成 'numinous' 一词呢。”——奥托：《神圣观念》，1950 年, 第 7 页。

O

Obiter dictum, see *ratio decidendi*

Object

[German: *Gegenstand*] A generic term for whatever is the bearer of a proper name, or whatever can be referred to or designated, approximately identical with “thing”. Objects can be distinguished from their properties and relations and also from subjects. Physical objects are real, but there are also unreal objects such as phantoms or images. Unlike physical objects, abstract objects are not spatiotemporal. Intentional objects are objects of mental states, like desire or hope, and need not exist. Objects are often recognised in ontology as the most basic entities, although some recent arguments have rejected the priority of objects in favour of events.

For Wittgenstein objects are the constituents of states of affairs or atomic facts, and thus form the substance of the world. Every object contains in its nature all the possibilities of combining with other objects. In themselves, objects are simple and unchanging. What changes is the combination or separation of objects (the complex objects). In this way objects are related to the atoms of ancient atomism. Objects are correlated to the simple names which constitute propositions. The simple names are discovered through logical analysis and are the terminus of such analysis.

“A name means an object. The object is its meaning.”—Wittgenstein, *Tractatus*, 3. 203.

Object language

Russell developed the notion of a hierarchy of languages. The language of the lowest order, in which symbol and vocabulary are not determined by the logical conditions, is called the object language or primary language. This is the language with which we talk about extra-linguistic things and objects. It applies object-words and studying it involves the relation between sentences and non-linguistic occurrences. Any given ordinary language is an object language. It is so called, in contrast to higher order languages which deal not with objects, but with the lower order languages. Tarski takes the notion of an object language and contrasts it with metalanguage, in which we talk about an object language.

“I call this the ‘object language’, or the ‘primary language’. In this language, every word ‘denotes’ or

见“判决理由”条

对象

[德文 *Gegenstand*] 对任何作为专名的承担者, 或可以被指称、被命名的东西的一般称呼, 与“事物”十分相近。对象可以区别于其特性和关系, 也可以区别于主体。物理对象是实在的, 但也有不实在的对象, 例如幽灵或心象。抽象对象与物理对象不同, 不具有时空性。意向对象是心的状态的对象, 如欲望或希望, 是不需存在的。对象常常被认为是在本体论中最基本的实体, 虽然近来有些论证否认对象的优先性而宁要事件。

对维特根斯坦而言, 对象是事态或原子事实的组成部分, 从而成为世界的实体。每个对象在其本性中包含与其他对象结合的全部可能性。就其自身而言, 对象是简单的、不变的。变化的是对象的结合或分离(复合对象)。这样, 对象与古代原子论中的原子有关。对象与构成命题的简单名称相关。简单名称通过逻辑分析而发现, 是分析的最终产物。

“名称意指对象。对象是其意义。”——维特根斯坦, 《逻辑哲学论》, 3. 203。

对象语言

罗素提出了语言分层的观念。最底层的语言, 其中的符号和词汇并不由逻辑条件所决定, 叫做对象语言或初阶语言。这是我们用以谈论语言之外的事物和对象的语言。它应用对象语词, 对它的研究涉及到语句和非语言事件之间的关系。任何给定的日常语言都是对象语言。之所以如此称呼它, 是为了与不处理对象、而处理较低阶语言的更高阶语言相对照。塔斯基提出了对象语言的概念, 并将其与元语言(我们用其谈论对象语言)相比较。

“我把这叫做‘对象语言’或‘初阶语言’。在这一语言内, 每一个词都‘指示’或‘意谓’某个可感知的对象或此类对象的集合; 并且当单独使用时, 每一个词都断定了它所指示或意谓的

'means' a sensible object or set of such objects; and when used alone, asserts the sensible presence of the object, or of one of the set of objects, which it denotes or means." Russell, *An Inquiry into Meaning and Truth*, 1940, p. 20.

Object sentence. see pseudo-object sentence

Object words

Object words indicate the presence of what they mean through indicating something that one can point to, such as "cat", "France", and so on. In contrast, syntax words are words such as "or", "not", "than", "but", which do not indicate anything one can point to, but can only be defined verbally in terms of other syntax words.

"Some words denote objects, others express characteristics of our belief attitude; the former are object-words, the latter syntax words."—Russell, *Human Knowledge*, 1948, p. 521.

Objective knowledge

Popper's term for linguistically formulated theories which form the constituents of his "World 3". Knowledge in this sense is man-made but transcends its origins and has various properties and relationships independent of any subject's awareness of them. In Popper's view, it contrasts with subjective knowledge, which is a dispositional expectation or anticipation of relevant impending events and is a kind of adaptation to the environment. The study of subjective knowledge belongs to psychology. Popper claimed that this distinction between objective and subjective knowledge is ignored in traditional epistemology. Traditional epistemology views knowledge as justified true belief or as perception, and hence limits knowledge to the utterances or expressions of the knowing subject. This is the source of many difficulties in traditional epistemology, especially its justificationism.

"The traditional theories of knowledge (from Plato's *Theaetetus* to Wittgenstein's *On Certainty*) fail to make a clear distinction between objective and subjective knowledge." Popper, *The Philosophy of Karl Popper* (ed. Schilpp), 1974, p. 1028.

Objective particulars

Strawson's term for particulars which are not the private occurrences or states or conditions of oneself or anyone else, but rather are the actual or possible public objects of experience or states of consciousness. These particulars are reidentifiable in speaker-hearer identification. Objective particulars, which Strawson also calls public particulars, contrast to private particulars, that is sensations, mental events or sense-data in general.

"I shall henceforth use the phrase, 'objective

某个对象或对象集合中某个元素的可感知的出现。"——罗素:《对意义和真理的探究》,1940年,第20页。

对象语句

见“伪对象语句”条。

对象词

对象词通过指示人们可以指向的某物,例如“猫”、“法国”等等而指出它们所意味的东西的存在。与之相对的是句法词,如“或”、“并非”、“比之于”、“但是”,它们不指任何人可以指向的东西,而只能通过其他句法词作字面上的定义。

“有些词指对象,其他的词表示我们信念态度的特征,前者为对象词,后者为句法词。”

罗素:《人类的知识》,1948年,第521页。

客观知识

波普的术语,指用语言系统表述的理论,它们构成他的“世界3”的成分。这种意义上的知识是人创造的,但却超越其起源,具有各种独立于主体对它们的认识的性质和关系。在波普看来,与之对立的“主观知识”是一种对于相关的即将发生事件的倾向性期望或预期,是一种对于环境的适应。主观知识的研究属于心理学。波普认为客观知识和主观知识之间的区别在传统认识论中被忽视了,因为传统认识论把知识看做是得到证明的真的信念或感知,因而把知识仅限于认识主体的表达或表述。这是传统认识论、尤其是其证明主义中许多困难的根源。

“传统的知识论(从柏拉图的《泰阿泰德篇》到维特根斯坦的《论确定性》)未能在客观知识和主观知识间作出明确区分。”——波普:《K. 波普的哲学》(希耳普编),1974年,第1028页。

客观殊相

斯特劳森以此术语指称这样一类殊相,它们不是自己或其他某人的私人的事件或状态或条件,而是现实的或可能的公共经验对象或意识状态。这些殊相是可以在说者—听者的认同中得到再辨认的。客观殊相相对于私人殊相,即一般性的感觉、心的事件或感觉资料。斯特劳森也把它们叫做公共殊相。

“我将以‘客观殊相’这一术语作为‘为思想者所区分的殊相’这一术语的缩写。”——斯特

particulars' as an abbreviation of the entire phrase, 'particulars distinguished by the thinker, etc. '—Strawson, *Individuals*, 1959, p. 61.

Objectivism

The contrast between objectivism and subjectivism is a central and recurring feature of philosophy. Objectivist theories claim that truth and falsity are determined by external objects and their relations independent of our minds, while subjectivist theories claim that truth and falsity are relative to our minds. The contrast between these two positions is presented differently in different areas of philosophy. Objectivist metaphysics claims that the external world exists without regard to our minds, while subjectivist metaphysics claims that the world exists only insofar as it exists for us. Objectivist epistemology holds that the source and validity of knowledge are derived from external objects, while subjectivist epistemology claims that the source and validity of knowledge are derived primarily from our sensibility and our ability to form conceptions. Both naturalist and anti-naturalist varieties of objectivist ethics suggest that ethical properties and values exist independent of our belief and desires, while subjectivist ethics proposes that ethical judgements cannot be judged true or false according to an objective standard, but are rather the expression of our emotions or feelings. Objectivist aesthetics holds that aesthetic properties are inherent in things, while subjectivist aesthetics claims that they are projected by us upon the objects. Subjectivism is associated with anti-realism and idealism, while objectivism is associated with realism. However, objectivism is not identical with materialism, for it can be held in either materialist or idealist form.

"[T]he objectivism of the natural sciences tries to view them [social complexes] from the outside; it treats social phenomena not as something of which the human mind is a part and the principles of whose organisation we can reconstruct from the familiar parts, but as if they were objects directly perceived by us as a whole."—Hayek, in O'Neill, *Modes of Individualism and Collectivism*, 1973, p. 44.

Objectivity

Belonging to objects and not to ourselves as subjects; also, beliefs or perceptions which are not limited or distorted by the bias or partiality. Objectivity can be contrasted with subjectivity and with a lack of objectivity. We can be objective in determining beliefs, and our judgements themselves can be objective. In spite of the dangers, we often use our assessment of the person judging to guide our determination of the objectivity of the judgement. A commitment to objectivity is a general mark of intellectual integrity, according to which one respects the virtue of truth and seeks valid and unbiased theories, explanations and judgements. A theory or

劳森:《个别物》,1959年,第61页。

客观主义

客观主义和主观主义的对立是哲学的一个主要的和反复出现的特征。客观主义的理论认为,真理和谬误是由独立于我们的心的外在对象及其关系决定的;而主观主义的理论则认为,真理和谬误是同我们的心相关的。这两种观点的对立在哲学的不同领域有不同的表现。客观主义的形而上学主张外在世界的存在与我们的心无关,主观主义的形而上学则主张世界仅仅是为我们而存在的。客观主义的认识论认为知识的源泉和正确性来自外部对象,而主观主义的认识论则认为知识的源泉和正确性主要是来自我们的感觉和我们形成概念的能力。各种客观主义的伦理学,无论是自然主义的还是反自然主义的,都提出道德的特性和价值的存在不依赖于我们的信念和愿望;主观主义的伦理学则提出,道德判断不能根据客观标准来判定对错,而只能根据我们感情或感觉的表达来判定对错。客观主义的美学认为,美的特性是事物固有的;主观主义的美学则认为,美的特性是我们赋予对象的。主观主义是与反实在论和观念主义相联系的,客观主义则是与实在论相联系的。不过,客观主义并不等同于唯物主义,因为它既有唯物主义的形式,又有唯心主义的形式。

“自然科学的客观主义试图从外部来观察它们[社会复杂现象];它不是把社会现象看做在某种意义上是这样一种现象,即人的心是其中一个部分,其组织原则我们可以从熟知的部分加以重构,而是把它们看做仿佛是我们直接看到的作为一个整体的对象。”——海耶克,载于奥尼尔编辑的《个人主义的模式和集体主义的模式》,1973年,第44页。

客观性

客观性从属于对象,而不从属于作为主体的我们自身。客观性也从属于不受偏见或偏好的限制或歪曲的信念或感觉。客观性可与主观性和缺少客观性相对照。我们对信念的确定可以是客观的,我们的判断本身也可以是客观的。我们常常是不顾危险而用我们对人的判断的评价去指导我们对判断的客观性的确定。对客观性的赞成是诚实的智力活动的一般标志,为此,人们尊重真理的功效,追求正确公正的理论、解释和判断。一个理论或一个判断,如果与外部事实相符或能够通过合理的方式被确定为真或

judgement is objective if it corresponds to external facts or can be determined to be true or false by rational means. Sometimes these two senses are related because a theory can be rationally judged because it conforms to facts, but more often a theory is abstract and idealised and does not correspond directly or sensibly to any facts. In this case, a theory is regarded as objective if it is can be justified rationally, with agreement available or expected from all reasonable persons. The primary task of a theory should be to explain the sort of objectivity which is possible for it and to state the conditions which would justify its rational acceptance. Moreover, a sound account of rationality is required to enable us to achieve the objectivity of theories and judgements through overcoming partiality, arbitrariness, relativity and bias and to assess the objectivity of people. Because personal and social intention and prejudice are indispensably involved in many fields, the possibility of objectivity in history and ethics, for example, has been an issue of dispute.

"We might explain the objectivity of a judgement that p as follows. There exists knowledge k such that everyone with this knowledge agrees that p is true (and expects that anyone else with this knowledge would agree that p is true and would have this very same expectation), while there is no further knowledge which, when added to k , undercuts the agreement that p ."—R. Nozick, *Philosophical Explanations*, 1981, p. 728.

Objectual quantifier

Quine distinguishes two interpretations of the quantifier, the objectual quantifier and the substitutional quantifier. He, along with Davidson, endorses the objectual quantifier interpretation, according to which one should interpret a quantifier in terms of the values of the variables and the objects over which the variables range. For example, $(x)Fx$ is interpreted as "For all objects x in the domain D , Fx ". According to the substitutional quantifier interpretation one should interpret a quantifier by appealing to substituends rather than values of the variables, that is, the expressions that can be substituted for the variables. On this view, $(x)Fx$ is interpreted to be "All substitution instances of $F...$ are true". These two interpretations involve some different consequences. For example, the substitutional interpretation of the quantifier says that the truth of quantified formulae can be directly defined by the truth of their substituted atomic formulae, but this is not admitted by the objectual interpretation.

"The Q-quantifiers are called 'objectual'. The reason is that whether or not a quantification is true upon an interpretation depends on how things are with the objects in the domain of interpretation." Sainsbury, *Logical Form*, 1991, p. 197.

伪,就是客观的。有时这两种意义上的客观性是相联系的,因为一种理论可被合理地判断是由于它与事实相符,但更多的情况是,一种理论是抽象的和观念化的,不与任何事实直接地或明显地相符。在后一种情况下,一种理论,如果它能合理地证明为正确的,并可得到或期望得到所有有理性的人的同意,它就被视为是客观的。一种理论的首要任务应是说明那种对其是可能的客观性,并阐明那些可以证明它在理性上可被接受的条件。此外,对合理性的正确说明也是需要的,从而使我们能够通过克服不公正、专断、相对性和偏见而取得理论和判断的客观性,并能对人们的客观性做出评价。由于个人及社会的意向和偏见不可避免地卷入许多领域,客观性是否可能一直是一个争论的问题,例如,在历史学和伦理学中就是如此。

"我们可以对一个判断 p 的客观性解释如下:存在着知识 k ,以致每一具有这一知识的人都同意 p 这一判断是真的(而且期望其他具有这一知识的人也会同意 p 这一判断是真的并会有与这极为相同的期望),同时也不存在进一步的、在对 k 做出补充时会从根本上损害同意判断 p 的知识。"—诺齐克:《哲学说明》,1981年,第728页。

对象量词

奎因区分了关于量词的解释,对象量词和替换量词。他与戴维森一道,赞成对象量词解释,根据这一解释,人们应该根据变元的值和变元值域中的那些对象来解释量词。例如, $(x)Fx$ 被解释为"对论域 D 中的所有对象 x , Fx "。根据替换量词解释,人们应该通过诉诸替换例而不是变元的值,也就是凭借能够用来替换变元的那些表达式来解释量词。按这种观点, $(x)Fx$ 被解释为" $F...$ 的所有替换例是真的"。这两种解释包含某些不同的后果。例如,量词的替换解释说:量化公式的真能够直接用其被替换的原子公式的真来定义,而量词的对象解释则不允许这样做。

"Q-量词叫做'对象的',其理由是:量化命题根据一解释是否为真,取决于事物是如何与解释域中的对象相关的。"—塞斯伯里:《逻辑形式》,1991年,第197页。

Obligation

[from Latin: *obligare*, to bind one to something] Generally, something we are required to do arising from some circumstance, such as having signed a contract or having made a promise. Duty is also something we are required to do, but generally because of some social or other role that we occupy. In Kant's ethics, an obligation is the general dependence of the human will upon the moral law, while duty is the necessity of acting from obligation. Obligation informs not only duty but also rights. Many philosophers, however, use obligation and duty interchangeably as a determination of what ought to be done.

"The connexion between duties and the demands of others comes out clearly in the fact that we use the word 'obligation' as a synonym for 'duty'." Nowell-Smith, *Ethics*, 1951, p. 200.

Obligationes

[Latin: the conditions under which the parties to a dispute agree to proceed] A form of disputation adopted in medieval universities from the early thirteenth century. It involved a respondent and an opponent. The opponent was obliged to make the respondent concede or deny his initial propositions. On the basis of Aristotle's discussion of form of debate in *Topics* and *De Sophistic Elenchis*, medieval logicians engaged in various studies concerning the rules of *obligationes*. Normally, the rules were characterised in terms of the feature of constructive counterfactual reasoning.

"Obligationes are obligations assumed by a party to a disputation, or conditions within which such a discussion must be conducted."—Kneale and Kneale, *The Development of Logic*, 1962, p. 234.

Oblique intention, see direct intention

Observation language

Many philosophers divide the language of each branch of the sciences into observation language and theoretical language. Observation language is directly related to sense impressions and can be analysed in the standard empirical way. It is characterised by observability, explicit definability and extensionality. Theoretical language, on the other hand, is not directly related to sense experience, but talks about unobservable properties and events (e. g. atoms, electrons) which are also called theoretical constructs or hypothetical constructs. The terms an observation language employs are called observational terms, and those employed by theoretical language are called theoretical terms. One major issue in the methodology of science is about the relationship between the two kinds of languages. Should theoretical language be translated and replaced by observation language? How can it

义务

[源自拉丁文 *obligare*, 把某人与某物捆在一起] 它一般意指某种我们在某些情况下被要求去做的事情, 诸如对已签订的合同, 已作出的诺言要履行。职责也是某种我们被要求去做的事情, 但一般是出于人们所担任的某种社会的或其他的角色。在康德伦理学中, 义务是指人类意志对道德法则的一般性依赖, 而职责是出于义务的行为必然性。义务不仅表示职责也表示权利。然而, 对大多数哲学家来说, 义务和职责可交替使用, 都是指对应该做的事情的规定。

“职责和他人的要求之间的联系清楚地表现于这种事实, 我们把‘义务’用作‘职责’的同义词。”——诺威尔-史密斯:《伦理学》, 1950年, 第200页。

尽责

[拉丁词, 争辩的双方同意按此进行的条件] 中世纪的大学所采用的一种辩论形式, 始于13世纪早期。它包括一位应答者和一位反对者。反对者迫使应答者赞成或反对他最初提出的命题。以亚里士多德在《正位篇》和《驳诡辩》中提出的对辩论形式的讨论为基础, 中世纪逻辑学家们致力于尽责规则的多种研究。通常来说, 这些规则具有建构反事实推理的特征。

“所谓尽责, 是参加辩论的一方所承担的责任, 或者是这种讨论必须得以在其中进行的条件。”——W. 涅尔和 M. 涅尔:《逻辑学的发展》, 1962年, 第234页。

间接意图

见“直接意图”条。

观察语言

许多哲学家都把每一科学分支的语言分为观察语言和理论语言。观察语言直接与感觉印象相联系, 可以用标准的经验方法加以分析。它通常被刻画为可观察性、明确的可定义性和可扩延性。另一方面, 理论语言则不是直接与感觉经验相联, 而是谈论不可观察的特性和事件(例如原子, 电子), 这些也被称作“理论构造物”或“假设的构造物”。观察语言使用的术语被称作“观察术语”, 而理论语言使用的术语则被称作“理论术语”。科学方法论的一个主要问题就是讨论这两种语言之间的关系。理论语言应该翻译和替代为观察语言吗? 这如何能够做到? 我们怎能知道理论语言是有意义的? 理论术语所指称的东西的本体论地位是什么? 对这些问题一直存在各种讨论。参见“双语模型”、“克雷格定

be done? How can we know that theoretical language is meaningful? What is the ontological status of an item to which a theoretical expression refers? Various discussions have taken place about these issues. See also double language model, Craig's theorem, Ramsey sentence, correspondence rules.

"The observation language uses terms designating observable properties and relations for the description of observable things or events."—Carnap, in *Minnesota Studies of the Philosophy Of Science*, 1, 1956, p. 65.

Observation proposition, see basic proposition or protocol sentence

Observation sentence

Observation sentences are a subset of occasion sentences. An occasion sentence is a report about observation, sense-data or stimulations, but its acceptance relies on the circumstances of its utterance. If an occasion sentence is assented to or dissented from consistently in response to the same stimulation, it is an observation sentence. The verdict of its truth and falsity depends only on present sensory stimulation, although certain stored information which is implied in the expression of the sentence itself is inevitably relevant to determining whether it is true. Hence, an observation sentence is not private, but must be acceptable by the speech community. All speakers of a language give the same verdict when given the same concurrent stimulation. Observation sentences correspond to the protocol sentences of logical positivism, which offered an influential account of the foundations of empirical knowledge. Critics deny that protocol sentences are the basis of empirical knowledge, either because they lack the possibility of being true or false or because empirical knowledge does not need foundations.

"A sentence . . . is an observation sentence if all verdicts on it depend on present sensory stimulation and on no stored information beyond what goes into understanding the sentence." Quine, *Ontological Relativity and Other Essays*, 1969, p. 77.

Observation term

Empiricist philosophy of science has commonly divides the language of science into theoretical language, concerning unobservable entities, properties and relations, and observation language, concerning items, like sense impressions, which are claimed to be observable, although "observation" in this sense covers perception, sensation and even introspection. Observation terms are employed in this observation language to refer to observable items. Each observation term has an explicit and determinate extension and can be displayed in a limited model. According to proponents of this

theory, "拉姆塞语句"、"对应规则".

"观察语言使用术语指称可观察的特性和关系,用于描述可观察的事物或事件。"——卡尔纳普,载《明尼苏达科学哲学研究》,第一卷,1956年,第65页。

观察命题

见“基本命题”或“记录语句”条。

观察句子

观察句子是“场合句子”的子集。一个场合句子是对观察、感觉材料或刺激的报道,但对它的接受则依赖于说出它的环境。如果一个场合句子在对相同刺激的反应中前后一致地得到赞同或反对,那么它就是一个观察句子。对其真假的裁决完全取决于眼下的感觉刺激,尽管蕴涵在这个句子自身表达式中的某个储存的信息不可避免地确定它是否为真有关。因此,观察句子不是私人的,而必须是可以为言语共同体所接受的。当同时出现了相同的刺激,所有使用这个语言的人都会做出相同的裁决。观察句子对应于逻辑实证主义的“记录语句”,而逻辑实证主义则提出了对经验知识基础的有力论述。批评者们否认记录语句是经验知识的基础,或是因为这些句子欠缺被判定为真假的可能性,或是因为经验知识不需要基础。

“一个句子……是一个观察句子,是由于对它的所有裁决都依赖于眼下的感觉刺激,而任何储存的信息都没有超出对这个句子的理解。”——奎因:《本体论的相对性及其他论文》,1969年,第77页。

观察术语

经验主义的科学哲学通常把科学的语言划分为理论语言和观察语言,前者涉及观察不到的存在物、特性和关系,后者涉及的是像感觉印象这样的被认为是可观察得到的东西,虽然这种意义上的“观察”包括感觉、知觉甚至内省。在这种观察语言中,观察术语被用来指可观察得到的东西。每一观察术语都有清晰确定的扩展范围,并可在一个限定的模式中展现。在这一观点的支持者看来,观察术语大多是通过实指获得的,它们的意义是由于它们的对象的出现而

view, observation terms are learned mostly by ostension, with their meaning reinforced by the presence of their objects, with any questions of context or definition irrelevant to understanding them. Observation terms are widely applied to publicly observable bodies as well as to private sensory states. Observation terms can be directly analysed empirically. In contrast to observation terms, theoretical terms are employed by theoretical language to refer to unobservable or theoretical entities and their features. Philosophers of science disagree whether all theoretical terms can be eliminated from a theory, that is, whether they can be translated into or replaced by observation terms. Some philosophers claim that the distinction between observation terms and theoretical terms cannot be maintained because all terms are theory-laden.

"In regard to an observational term it is possible, under suitable circumstances, to decide by means of direct observation whether the term does or does not apply to a given situation." —Hempel, in *Minnesota Studies in the Philosophy of Science*, vol. II, 1958, p. 42.

Obversion

In traditional logic, an immediate inference which derives a conclusion from another proposition by negating its predicate term and changing its quality either from affirmative to negative or from negative to affirmative. The conclusion, called the obverse, is a logical equivalent of the premise, called the obvertend. All four forms of proposition in traditional logic can be validly obversed: "All *s* are *p*" is obversed into "No *s* are non-*p*"; "No *s* are *p*" into "All *s* are non-*p*"; "Some *s* are *p*" into "Some *s* are not non-*p*"; and "Some *s* are not *p*" into "Some *s* are non-*p*".

"Obversion is a process of immediate inference in which the inferred proposition (or obverse), while retaining the original subject, has for its predicate the contradictory of the predicate of the original proposition (or obvertend)." —Keynes, *Formal Logic*, 1928, p. 133.

Occasion sentence

Quine's term, for sentences whose meanings are relative to their context and which contain indexical words, for example, "It is snowing" or "It is Thursday". They are true on some occasions of utterance, and false on others. Whether such a sentence is acceptable depends on the background. We should only assent to these sentences when it is indeed snowing or Thursday. The sentence "It is snowing" is more observational than "It is Thursday". Observation sentences are a subset of occasion sentences. If all speakers assent to an occasion sentence in response to the same stimulations, then it is an observation sentence. Occasion sentences are directly connected with sensory stimulations and are contrasted to standing sentences which are not relative to context and

得到加强,以及有关语境的问题或与理解它们无关的定义获得的。观察术语被广泛地应用于明显可观察得到的物体以及个人的感觉状况。观察术语可直接做经验的分析。相对观察术语而言,理论术语被理论语言用来指观察不到的或假设的存在物及其特征。科学哲学家对是否所有的理论术语都能被从理论中清除,即它们是否能被转化为观察术语或被观察术语所取代,持有不同意见。一些哲学家认为,观察术语和理论术语之间的区分不能维持,因为所有的术语都充满理论。

“就一个观察术语而言,有可能在适当的情况下,通过直接观察的方法来决定这一术语是否适用于一个给定的条件。”——亨佩尔,见《明尼苏达科学哲学研究》,第二卷,1958年,第42页。

换质

传统逻辑中从另一命题导出结论命题的直接推理,其办法是否定原命题的谓词,并将其性质由肯定变为否定或者由否定变为肯定。结论(叫做“换质命题”)是前提(叫做“被换质命题”)的逻辑等值命题。传统逻辑中所有四种命题形式都可以有效地换质:“所有 *s* 是 *p*”被换质为“没有 *s* 是非 *p*”;“没有 *s* 是 *p*”换质为“所有 *s* 是非 *p*”;“有些 *s* 是 *p*”换质为“有些 *s* 不是非 *p*”;“有些 *s* 不是 *p*”换质为“有些 *s* 是非 *p*”。

“换质是一直接推理过程,其中推出命题(或换质命题)仍保留原有主词,而以原命题(或被换质命题)谓词的矛盾作为它的谓词。”——凯恩斯:《形式逻辑》,1928年,第133页。

场合句子

奎因的术语,是指其意义与语境有关并带有索引词的句子。例如,“下雪了”或“今天是星期二”。它们在某些被说出的场合是真的,而在另一些场合则是假的。是否能够接受这种句子取决于背景。当的确下雪了或是星期二时,我们才能同意这些句子。“下雪了”这个句子比“今天是星期二”更具有观察性。“观察句子”是场合句子的一个子集。如果所有的说者对相同的刺激都赞同某个场合句子,那么它就是一个观察句子。场合句子直接关系到感觉刺激,它与“标准句子”相反,而标准句子则与语境无关,是经常并永远会得到赞同的。标准句子是对常识说法的分析或陈述,例如“雪是白的”。

which have assent always and all the time. Standing sentences are either analytic or statements of a common-sense truism, for example, "Snow is white".

"We must concentrate on occasion sentences. These, as opposed to standing sentences, are sentences whose truth value changes from occasion to occasion, so that a fresh verdict has to be promoted each time."—Quine, *Theories and Things*, 1981, p. 25.

Occasionalism

A doctrine developed by Descartes' disciple Malebranche as a solution to the Cartesian mind-body problem. He claimed that the two completely distinct substances, *res cogitans* and *res extensa*, can causally interact with each other because of the miraculous intervention of God. God regulates the world so that our volitions are followed by bodily movements, and conversely that certain patterns of bodily movements give rise to appropriate emotions and sensations in the mind. The so-called natural causes are actually occasions on which God acts to produce the effects which usually accompany the natural causes. There is no real causation in the finite created world, no real efficacy of finite causes. Only an infinite substance can be a genuine cause of anything at all. Occasionalism maintained mechanical explanation by grounding it outside the limits of physics proper. This provided a new metaphysical framework. This theory was criticised by its contemporary critic Leibniz who replaced it with his own theory of pre-established harmony.

"The occasionalists were a group of 17th century philosophers who maintained that human volitions never really cause bodily movements but are only the occasions for divine intervention in the physical world."—Pap, *Elements of Analytical Philosophy*, 1949, p. 277.

Ockham's razor

A methodological principle in theory construction associated with the medieval philosopher William of Ockham, although Aristotle suggested it in his criticism of Plato's theory of ideas. The principle states that one should not posit the existence of more entities than are absolutely necessary for adequate philosophical explanation. Accordingly, if two or more theories have the same explanatory force, the one which makes use of the fewest assumptions and explanatory principles should be chosen, other things being equal. Common formulations of this principle are "Entities are not to be multiplied beyond necessity" or "Plurality is never to be posited without need" (Latin: *Entia non sunt multiplicanda prater necessitate*). But this is the invention of the seventeenth century rather than Ockham's own formulation, which was "It is pointless to do with more what can be done with fewer". Simplicity is the spirit of this principle. The term Ockham's razor was introduced by Sir William Hamil-

"我们必须关注场合句子。与标准句子相反,这些句子的真值是随场合而变化的,因而每次都要求一种新的裁决。"——奎因:《理论与事物》,1981年,第25页。

偶因论

由笛卡尔的信徒马勒伯朗士发展出的一个学说,用作解决笛卡尔的心—身问题的一个办法。马勒伯朗士主张,两个完全不同的实体,思维的东西和广延的东西,可以因上帝的奇异干预而互相发生因果作用。上帝对世界进行调节,使得我们的意志有肉体活动跟随,而且反过来,某种方式的肉体活动也在心中引起适当的情绪和感觉。所谓自然的原因实际上是上帝对之发生作用以产生出结果来的偶因,这些结果通常伴随着自然的原因。在有限的被造世界上没有真正的因果关系,没有有限原因的真正效应。只有一个无限的实体才能完全成为任何事物的真正原因。偶因论坚持机械论的说明方式,而将它的根据建立在物理学自身界限之外。这样就提供了一个新的形而上学框架。这个理论遭到了同时代的批评家莱布尼茨的批判,莱布尼茨用自己的前定和谐理论来取代它。

"偶因论者是一批 17 世纪的哲学家,他们坚持认为,人类意志从未实际引起身体的运动,它们只是神干预物理世界的偶然原因。"——帕普:《分析哲学原理》,1949年,第277页。

奥康剃刀

理论构造中的一条方法论原则,与中世纪哲学家奥康的威廉的名字连在一起,尽管亚里士多德在批评柏拉图的形相论时提到过它。这一原则陈述说,人们不应设定比合适的哲学解释所绝对必需的实体更多的实体。相应地,在具有同等解释力的两个或多个理论中,人们应该选择使用了最少的假定和解释原则的那个理论,假如其他情况都相同的话。这一原则的通行表述是"除非必要,勿增实体"或"若无必要,绝不设定多样性"(拉丁语: *Entia non sunt multiplicanda prater necessitate*)。但这是 17 世纪的发明,而不是奥康本人的表述。他只是说:"用较多的东西去做用较少的东西能够做的事情,是无意义的。"简单性是这一原则的精髓。"奥康剃刀"一词是由威廉·汉密尔顿爵士引入的,他把它等同于所谓的节俭原则("自然从不用比所需要的更复杂的工具去工作")。奥康剃刀亦称"简

tion, who identified it with the so-called principle of parsimony: nature never works by more complex instruments than are necessary. Ockham's razor is also called the principle of simplicity or the principle of economy, and has wide application in metaphysical debates.

"Ockham's razor counsels us against an unnecessary luxuriance of principles or laws or statements of existence." Stuart, *Essays Metaphysical and Moral*, 1987, p. 38.

Oedipus complex

In Greek myth, Oedipus, acting according to his destiny, killed his father and married his mother. Freud claimed that in the mental life of a male child there is desire for his mother as a sexual object and hatred for his father as a rival. He calls this pattern the "Oedipus Complex" and claims that it is a central factor in the child's experience of his relations to his parents and in his later sexual development. Because the Oedipus Complex can lead to later neuroses, Freud sought access to the feelings, images and relations characterising the complex in dealing with later problems. The complex itself presents a fundamental tension between sexual drive and the submission to the parental authority. It is also claimed to be a source of religion, society, morals and arts. In girls, the complex is allegedly manifested is a wish to take the mother's place. Moving beyond the complex in a child is meant to allow acceptance of the value of one's parents. The dissolution of the complex in society provides defence of authority.

"In the very earliest years of childhood (approximately between the ages of two and five) a convergence of the sexual impulses occurs of which, in the case of boys, the object is the mother. This choice of an object, in conjunction with a corresponding attitude of rivalry and hostility towards the father, provides the content of what is known as the Oedipus Complex, which is of the greatest importance in determining the final shape of his erotic life."—Freud, *Standard Edition of the Complete Psychological Works of Sigmund Freud*, vol. 18, p. 245.

Offence, see harm

Oligarchy

[from Greek: *oligos*, few or small | Literally, rule by the few, but for Plato a state ruled by the rich, maybe because the rich are the few most likely to dominate a state. In the *Republic*, oligarchy is the second stage in the degeneration of the Ideal State, the first stage being timocracy or rule by the spirited rather than the rational element. Oligarchy is dominated by the appetite for money-making, and the unity of the state is fragile because of conflict between the poor and

单性原则"或"经济原则",并且在形而上学论战中有广泛应用。

"奥康剃刀忠告我们勿在使用原则或规律或存在陈述方面不必要的奢侈。"——斯马特:《形而上学与道德文集》,1987年,第38页。

俄狄浦斯情结

在古希腊神话中,俄狄浦斯在其命运支配下,杀父娶母。弗洛伊德声称在男孩子的心灵生活中,有以其母亲为性对象的欲望,并将其父当做情敌来憎恨。他将这种心态样式叫做"俄狄浦斯情结",认为它是孩子与其父母的关系以及他后来的性发展中的一个中心事实。由于俄狄浦斯情结会导致后来发生的精神病,弗洛伊德在对付这些问题时寻求了解这情结特有的感情、形象和关系。这情结本身造成了性冲动和屈从父母权威之间的基本张力。它也被认为是宗教、社会、伦理和艺术的一个来源。在女孩子中,这种情结被说成是表现于要取代其母亲的位置的愿望。一个孩子超出这情结就意味着承认其家长的重要性。在社会中,此情结的消解就意味着对于权威的护持。

"在儿童期的最早年头(大约2岁至5岁),出现了性冲动的会聚。就男孩子说来,其对象是母亲。这种对象的选择,加上相应的对父亲的竞争敌意态度,提供了所谓俄狄浦斯情结的内容。它在决定这个孩子性生活的最后形态上是最重要的。"——弗洛伊德:《S. 弗洛伊德心理学著作全集标准版》,第十八卷,第245页。

冒犯

见"伤害"条。

寡头政制

[源自希腊文:*oligos*,少或小]从字面上讲,寡头政制就是少数人的统治,但在柏拉图看来,它指的是富人统治的国家,这也许是因为统治一个国家的富人最可能是少数人。在柏拉图的《国家篇》中,寡头政制是理想国家退化中的第二阶段,第一阶段是尊荣政制,或者说是被情绪的而不是被合理的因素所统治的阶级。寡头政制被发财的欲望所支配,而且由于穷人和富人

the rich. Parallel to this state, the oligarchic man also lacks internal harmony. He is dominated by the desire for money, and his reason and spirits are forced to work only in the interests of money. Oligarchy is more unjust and more miserable than timocracy and will further degenerate into democracy and tyranny.

"Oligarchy is of necessity not one city but two, one of the poor and the other of the rich, living in the same place and always plotting against each other."—Plato, *Republic*, 551d.

Omnipotence

[from Latin: *omnis*, all — *potens*, powerful] One of the chief divine attributes. By being all powerful, God has infinite or maximal power and is the ruler of everything. The notion of an all powerful being has given rise to many logical impossibilities, called the paradoxes of omnipotence. Can God create a rock so large that he cannot move it? If he cannot, he is not omnipotent because there are limits on what he can create. If he can, he is not omnipotent, because there are limits on what he can move. Other questions leading to paradox include "Can God's deny God's essence?", "Can God lie?", "Can God sin?". Some philosophers try to redefine the notion of omnipotence in order to avoid such problems. A deeper philosophical problem emerges from combining divine omnipotence, omniscience and goodness. How are the claims that God is all powerful, all knowing and perfectly good compatible with the existence of evil? None of the many responses to this question, such as the claim that evil is due to the fall of the first man or the claim that God permits evil as a means of purifying the soul, has won general approval, but belief in God is often enhanced rather than diminished through experience of evil in the world.

"Theists have often wished to claim that God is omnipotent, that is, literally, can do anything."—R. Swinburne, *The Coherence of Theism*, 1977, p. 149.

Omniscience

[from Latin: *omnis*, all — *sciens*, present participle of *scire*, to know] One of the chief divine attributes, according to which God is all knowing or has unlimited knowledge. This attribute gives rise to the paradox of God's omniscience, a perennial problem concerning freedom of the will. This paradox has two versions. The first concerns God's omniscience and human freedom. If every future thing happens exactly as God knows it will happen, how is there room for human freedom of the will? This version of the paradox has led philosophers to examine whether God's foreknowledge of a future human act implies that the human agent lacks control over the act or is not responsible for it. Another version of the paradox concerns God's omniscience and his own free will. If everything occurs according to complete divine fore-

的冲突,国家的统一很脆弱。与这一情况相伴,寡头统治者也缺少内在的和谐。他为金钱的欲望所支配,他的理性和情绪被驱使着只是为金钱去工作。寡头政制比尊荣政制更不公正、更悲惨,它将进而退化到民主政制,然后是僭主政制。

“寡头政制的城邦必然不是一个而是两个,一个是富人的城邦,一个是穷人的城邦,它们生活在同一个地方,总是在互相阴谋反对对方。”——柏拉图:《国家篇》,551d。

全能

[源自拉丁语 *omnis* (全部) 和 *potens* (力量的)] 主要的神性之一。所谓全能,指上帝具有无限的或最大的力量,是万物的统治者。全能存在的观念引起了许多逻辑上的不可能性,即所谓的全能悖论。上帝能够创造出一块大得他不能移动的岩石吗? 如果不能,他就不是全能的,因为他能创造的东西有限;如果能,他也不是全能的,因为他能移动的东西有限。导致悖论的其他问题包括“上帝能否定上帝的本质吗?”“上帝能躺卧吗?”“上帝能犯罪吗?”有些哲学家企图重新界定全能观念,以便避开这样的问题。一个更深层次的哲学问题源于神的全能、全知和全善的结合。上帝全能、全知和全善的断言如何与邪恶的存在不矛盾? 对这个问题,有许多种回答,譬如认为邪恶是由于第一个人的堕落,或认为上帝容许邪恶作为净化灵魂的一种手段,但是,没有一种回答赢得普遍赞同,不过,人们在世上经验到恶,只是增进而不是减少对上帝的信仰。

“有神论者经常愿意主张上帝全能,从字面上讲,即上帝能做任何事情。”——斯文布勒:《有神论的融贯性》,1977年,第149页。

全知

[源自拉丁语, *omnis* (全部) 和 *sciens* (*scire* 的现在分词,知道)] 主要的神性之一。根据这个属性,上帝知道一切,或有无限的知识。这个属性引出了上帝的全知悖论,关于意志自由的一个永恒的问题。这个悖论有两种形式。其一是关于上帝的全知与人类的自由。如果每个将来的事物都恰好像上帝知道它将发生的那样发生,人类的意志自由如何有存在的空间? 悖论的这个形式导致哲学家们考察上帝对未来的行为行为的预知是否意味着人类行为者缺乏对行为的控制力或不应对它负责任。这个悖论的另一种形式是关于上帝的全知与他自己的自由意志。如果每物都按照完全的神圣预知发生,上帝怎么能够行使他自己的自由意志? 如果上帝被认

knowledge, how can God exercise his own free will? Another problem concerning the scope of divine foreknowledge arises if God is held to have no sensory organs and to exist outside time. It is difficult to understand how God in these circumstances could have knowledge of material and temporal things.

"Traditionally, God is said to be omniscient, to know all things." — R. Swinburne, *The Coherence of Theism*, 1977, p. 162.

On, Greek; the participle of being

One

[Greek: *hen*] Many Greek philosophers argued that their first principles, no matter whether they are one or many, must be at one with themselves and form a unity. Aristotle discussed various meanings of the term one in *Metaphysics*, book 5. Things might be called one because of accidental features or by their own nature. Of things that are called one in terms of their nature, they might be continuous, have the same substratum, have the same genus or share the same definition. Things can also be one in number, in species or in genus. Plotinus called his absolute transcendent first principle the One, and identified it with the Good or God. It is the power behind everything, the source of the Divine Mind and Souls (Forms), although the One itself is neither Mind nor Soul. It is beyond being, for if it is a being, it must be describable by a predicate, and that would involve duality and compromise its unity. Therefore, the One can only be understood negatively and is beyond the reach of our thought or language. It is the simple object of intuitive knowledge. Plotinus' One is based on the Good in Plato's *Republic*, and prepared the way for the development of negative theology.

"Everywhere the one is indivisible either in quantity or in kind." — Aristotle, *Metaphysics*, 1016b23.

One over many

We can apply one predicate to many different things. How can they be related in this way? According to Plato, a common description suggests that there is a common intrinsic feature of nature shared by these different things which determines their real existence. This common nature is one and the same and stands over many particular things. This is Plato's "one over many principle". He called the one common nature Form or Idea and declared that Ideas are objects independent of our minds and that each of the many particulars imitates or participates in their Idea. Ideas are objects of knowledge, while particulars are objects of opinion. The central aim of Plato's Theory of Ideas is to argue for this principle and to deal with various difficulties arising from it.

为是无感官的,存在于时间之外的,则产生了神圣预知的范围的问题。很难理解上帝在这些情况中如何能够具有关于物质的和时间性事物的知识。

“在传统上,上帝被说成全知的,即知道一切东西。”——斯文布勒:《有神论的融贯性》,1977年,第162页。

是

希腊词,“是(being)”的分词。

—

[希腊语是 *hen*] 许多希腊哲学家都认为,他们的第一原则必定是自身一致的、统一的,无论它们是一还是多。亚里士多德在《形而上学》第五卷中讨论了“一”这个词的不同含义。事物由于偶性或由于自身本性都可被称为一。由于自身本性而被称为一的事物,原因又有多种,可能因其是连续的,或有相同的载体,或有相同的属,或分有相同的定义等等。事物也能在数目上、种上或属上是一。普罗提诺把他那个绝对超验的第一本原称为“太一”,并将它与善或神同一。它是万物背后的力量,是“神圣心智”和“灵魂”(“形式”)的根源,虽然“太一”自身既不是“心智”,也不是“灵魂”。它是超存在的,因为如果它是一个存在,就必定可被述语描述,而这会陷入二元性,损害它的元一性。所以,“太一”只能被否定地理解,并超越于我们的思想或语言所能达到的范围。它是直觉知识的单一对象。普罗提诺的“太一”,以柏拉图《国家篇》中的“善”为基础,为否定神学的发展开辟了道路。

“无论在何处,一在数量上或种类上都是不可分的。”——亚里士多德:《形而上学》,1016b23。

多上之一

我们可以把同一谓词应用于许多不同的事物。它们如何能以这一方式相连?根据柏拉图的解释,一个共同的解释表明有一个共同的自然特征存在;这一特征为许多事物所分有,并决定了它们的真实存在。这一共同本性是单一的,居于许多特殊事物之上。这便是柏拉图的“多上之一”的原则”。他把这一共同性质叫做“形式”或“形相”,并认为它们是独立于我们心灵的对象,而许多殊相中的每一个则模仿或分有形相。形相是知识的对象,而殊相是意见的对象。柏拉图“形相论”的中心目的是要论证这一原则,并处理由此而引起的种种困难。这些困难后来变成了争论不已的“殊相与共相关系问题”。关于这

These difficulties have become the problem of the relation between universals and particulars. The discussion of this problem forms one of the chief issues in Western metaphysics, although it is closely linked to logical questions about meaning and predication. The one over many problem is also called the one-many problem, but this latter expression is also used to ask whether the substance of the world is one or many in the debate between monism and pluralism.

"Those who say that the Forms exist, in one respect are right, in giving the Forms separate existence, if they are substances; but in another respect they are not right, because they say the one over many is a Form."—Aristotle, *Metaphysics*, 1040b28-30.

One-many problem, see one over many

Ontico-ontological distinction

Heidegger's distinction, concerning two levels of analysis of *Dasein*. The ontic level is concerned with the concrete, specific and local matter of *Dasein*, i. e. the factual matter open to observation, which Heidegger calls *existentiell*. The ontological level is, on the other hand, concerned with the deep structure that underlies and instantialises the ontical or *existentiell* matter and provides a phenomenological description. This deep structure is called by Heidegger *existentiale*. *Dasein* has three main *existentiales*, i. e. existentiality, facticity and fallingness. The problems of traditional metaphysics confuse these two levels by taking Being as entity. Heidegger's own fundamental ontology is both ontical, that is the analysis of the actual existence of *Dasein*, and ontological, that is the analysis of the general conditions of possibility for existence. This is because *Dasein* itself is both ontical (as an entity), and ontological (the only entity that can ask the question of Being). In these terms, his thought contrasts with Husserl's phenomenology, which brackets the phenomenon.

"By indicating *Dasein's* ontico-ontological priority in this provisional manner, we have grounded our demonstration that the question of Being is ontico-ontologically distinctive."—Heidegger, *Being and Time* (tr. Macquarrie and Robinson), 1962, pp. 34-5.

Ontological argument

One of the most celebrated arguments attempting to prove the existence of God. It was first formulated in the eleventh century by Anselm of Canterbury in *Proslogion*. The argument assumes that God is a being than which nothing greater can be conceived. If he is thus, God must exist in our understanding. But if he exists in the understanding only and does not exist in reality, a being which is greater than

一问题的讨论构成了西方形而上学的一个主要议题,而且它与关于意义和谓词的逻辑问题密切相关。“多上之一”的问题也叫“——多问题”。不过此一表述还用于在一元论与多元论之间的辩论中询问世界的本体是一还是多。

“那些说形式存在的人,在一方面是对的,即认为形式是分离的存在,如果它们是本体的话;可在另一方面则不对了,因为他们说形式是多上之一。”——亚里士多德:《形而上学》,1040b28—30。

——多问题

见“多上之一”条。

存在者的与存在论的区别(或译“本体的与本体论的区别”)

海德格尔对于缘在(*Dasein*)分析的两个层次的区别。存在者的(ontic)层次涉及缘在的具体的、特殊的和局部的方面,即可观察到的事实的方面。海德格尔称之为“生存者的”(Existenziell, 英文为 existentiell)。另一方面,存在论的层次涉及位于存在者或生存者方面之下的深层结构,提供现象学的描述,这个深层结构被海德格尔称为“生存论性质”(Existenzial, 英译为 existentiale)。缘在有三种主要的生存论性质:生存性、实际性和沉沦性。传统形而上学的问题在于混淆了这两个层次,将存在当做了存在者。海德格尔自己的基础存在论既是存在者的,即对于缘在实际生存的分析,也是存在论的,即对于生存可能性的一般条件的分析。这是因为缘在本身既是存在者的(作为一个存在者),又是存在论的(能追问存在问题的惟一存在者)。因此,他的主张与胡塞尔的将(存在)现象置入括弧之内(即悬置掉存在问题)的现象学相反。

“以这种先行引导的方式,我们显示出了缘在在存在者与存在论上的优先地位;因此从根本上支持了这样一个证明,即存在问题在存在者与存在论上是有区别的。”——海德格尔:《存在与时间》(马库阿里和罗宾逊英译),1962年,第34—35页。

本体论论证

试图证明上帝存在的最有名的论证之一。它是11世纪时,由坎特伯雷的安瑟尔谟在他的《宣讲》中第一次系统讲述的。该论证假定,上帝是一个能被设想的无与伦比的伟大存在。如果上帝果真如此,就必定存在于我们的理解中。但如果他仅存在于我们的理解中而不存在于现实中,就可设想出一个比上帝还伟大的存在,即既

God is conceivable, namely a being which exists both in our understanding and in reality. But since it is a premise of the argument that God is a being than which nothing greater can be conceived, it is contradictory and logically impossible for us to conceive a being which is greater than God. Therefore, God must exist not only in the understanding, but also in reality.

Gaunilo, a contemporary of Anselm, and later figures such as Descartes sought to reject the ontological argument by asserting that similar arguments could prove the existence of absurd things, such as the greatest possible island. Anselm replied that in talking about a thing so great that nothing greater could be conceived, he was making a logical point about greatness rather than a factual point about different kinds of things.

Kant proposed the most important objection to the ontological argument with his claim that existence is not a predicate. His view is a major topic of discussion in contemporary philosophical logic.

Few philosophers are convinced by the ontological argument, but many find it difficult to overcome. Today there are both opponents and defenders of the argument, and many new versions have been elaborated, with some relying on recent developments in modal logic. The American philosopher A. Plantinga argues in this way. It is possible for there to be a being that has maximal greatness. Therefore, a possible being in some world *w* has maximal greatness. A being has maximal greatness in a given world only if it has maximal excellence in every world. A being has maximal excellence in a given world only if it has omniscience, omnipotence, and moral perfection in that world. If a being has maximal excellence in every world, it has maximal excellence in this world. If a being has maximal excellence in this world, then it has omniscience, omnipotence and moral perfection in this world. But these are the attributes of God, and if a being has these attributes in this world, then that being is God.

The ontological argument is so fascinating because it leads into many significant philosophical questions, such as "Is existence a property?", "Can there be existential propositions that are necessarily true?" and "In what sense of 'is' can we say that something does not exist?". The modern versions are more plausible if entities retain their identity across worlds, but are less persuasive if terms designate counterparts from one world to another or if possible worlds and their contents are understood as descriptions rather than as real objects of reference. If these and many other problems are not solved, a proper analysis of the ontological argument will continue to elude us.

"Because of the crucial role which the concept of existence or being plays in this argument it has been called the Ontological Argument."—C. J. F. Williams, *What is Existence*, p. 17.

存在于我们的理解中又存在于现实中的一个存在。但是,既然论证的前提是上帝乃能被设想的无与伦比的一个伟大存在,那么,我们设想一个比上帝还伟大的存在就是矛盾的,在逻辑上是不可能的。所以,上帝必定不仅存在于理解中,而且也存在于现实中。

安瑟尔谟的同代人高尼罗,以及后来的笛卡尔等人,通过断定同样的论证也能证明荒谬事物的存在(譬如最大可能的岛屿),力图反驳本体论论证。安瑟尔谟回答说,在谈论一物如此之大,以至于无物能被设想为与之伦比时,他指的是关于人的逻辑点,而不是关于不同种类事物的事实点。

康德以他存在不是一个谓词的主张提出了对本体论论证的最为重要的反驳。他的观点是当代哲学逻辑讨论的一个主要论题。

很少有哲学家信服本体论论证,但许多哲学家发现,克服它却不容易。在当今,既有该论证的反对者,也有辩护者,而且,又出现了不少新的表述,有些表述以模态逻辑的新近发展为依靠。美国哲学家 A. 普兰汀格就是以这种方式论证的。一个极度伟大的存在是有可能的。所以,在某个世界 *w* 中,有一个可能的极度伟大的存在。在一个给定世界中具有极度伟大的存在,仅当它在每一世界中都极度优秀。一个在给定世界中具有极度优秀的存在,仅当它在那个世界具有全知、全能和道德的完美。如果一个存在在每个世界都极度优秀,它在这个世界也极度优秀。如果一个存在在这个世界极度优秀,那么,它在这个世界就具有全知、全能和道德的完美。但是,这些都是上帝的属性,而且,如果一个存在在这个世界具有这些属性,那么,那个存在就是上帝。

本体论论证之所以如此具有魅力,是因为它引入了许多有意义的哲学问题,譬如,“存在是一种特性吗?”“能有必然真的存在命题吗?”“在‘是’的什么意义上,我们能够说某物不存在?”现代的各种说法更具可能性,如果实体在不同世界中能保持同一的话,但却更不令人信服,如果术语指称从一个世界到另一个世界的摹本,或如果可能世界及其内容被理解作是描绘而非指称的实在对象的话。如果这些以及许多的其他问题得不到解决,我们将依然达不到对于本体论论证的真切分析。

“由于存在概念在这个论证中所起的决定性作用,它被称为本体论论证。”——威廉姆斯:《什么是存在》,第 17 页。

Ontological commitment

The use of language commits us to the existence of external objects, for example saying "Pegasus has wings", carries a commitment to the existence of Pegasus. A person's ontology consists of the set of objects which he takes to exist, that is, which he takes to make up the furniture of the world. Theories differ according to what objects they posit as existing in the world. Ontology is the answer to the question "what is there?" Determining which answer is right amounts to determining what ontological commitments are acceptable. We are thus faced with the problem of finding a criterion for ontological commitment. The famous criterion put forward by Quine, is that a theory is committed to those objects which must exist if it is true. A theory is committed to the existence of entities of a certain kind if and only if they must be counted among the values of its bound variables of quantification in order for the theory to be true. This criterion is a development of Russell's theory of definite descriptions. Its major significance is to show that when a singular term occurs in a true statement, it does not automatically warrant an assertion that the term refers to something real or existent.

"If what we want is a standard for our own guidance in appraising the ontological commitments of one or another of our theories, and in altering those commitments by revision of our theory, then the criterion at hand well suits our purpose."—Quine, *From a Logical Point of View*, 1953, p. 105.

Ontological guilt, another expression for anguish

Ontological relativity

One of Quine's main doctrines, which holds that there are no absolute facts according to which we may determine the ontological commitments of a theory. There is no determinate answer either to the question "what is there?" or to the question "what objects is one really talking about?". The ontological imports of a theory can only make sense relative to a translation or an interpretation of some background theory or language; and this background theory is itself relative to some further translation of it into another theory. An ontological question, if taken absolutely, is meaningless. To answer "what is F", we have to say "An F is a G". But then we can ask: "what is G?". We always need further terms in relation to which we can again ask or answer questions. The regress can only be stopped when we ultimately accept some background theory at face value. Hence, a full interpretation of a theory is nothing more than a complete translation of the theory into another theory, using our manual of translation which is essentially inscrutable and indeterminate. This relativity thesis is a radical departure from a basic assumption

本体论的承诺

使用了语言我们就承诺了外在对象的存在。例如,当我们说“柏伽索斯有双翼”时,我们会相信存在一个柏伽索斯。某人的本体论是由他视为存在的一些对象构成的,就是说,他把它们看做是组成世界的内容。各种理论正是根据它们认为存在于世界上的对象而千差万别的。本体论是对“何物存在?”这个问题的回答。决定哪一种回答是正确的,也就是决定可以接受什么样的本体论承诺。我们因而面临着发现本体论承诺标准的问题。由奎因提出的著名标准是,如果一个理论是真的,那么它就承诺了必定存在某些对象,也就是说,一个理论承诺了某种实体的存在,当且仅当在使这个理论为真的量化的约束变项值中,这些实体必须是可数的。这个标准是对罗素限定摹状词理论的发展,其主要意义在于,它表明,当单个词出现在真的陈述中时,它并不自动地保证它指称了某个实在的或存在的东西。

“如果我们需要的是一种标准,它能引导我们评价我们这个或那个理论的本体论承诺,并通过修正我们的理论而改变这些承诺,那么这里的标准就非常适合我们的目的。”——奎因:《从逻辑的观点看》,1953年,第105页。

存在论之罪感

“焦虑”的另一种表达。

本体论的相对性

奎因的主要理论之一,它认为不存在这样的绝对事实,根据这一事实我们可以决定一个理论的本体论承诺。对“何物存在”或“人们实际上谈论的对象是什么”这种问题,不存在任何决定性的答案。一种理论的本体论地位只有相对于对某种背景理论或语言的解释或翻译才有意义;而背景理论本身也是相对于把它进一步翻译为另一种理论。绝对地谈论本体论问题是无意义的。如果要回答“F是什么?”我们就得说“一个F是一个G”。但我们于是就会问“G是什么?”我们总是需要对能够再次提出或回答的问题做出进一步的说明。而只有当我们最终接受了某种背景理论作为价值取向时,这种无穷后退才会停止。因而,对一种理论的完整解释,不过是我们基本上无法理解的和不确定的翻译手册,把这种理论全部翻译为另一种理论。这种相对性论题完全背离了包括卡尔纳普和维特根斯坦等许多分析哲学家所持的一种基本假定,他们认为,我们从一开始就可以绝对地谈论

which many analytic philosophers, including Carnap and the early Wittgenstein, held, namely that we can start with absolute talk about the structure, meaning, or content of linguistic expressions. Ontological relativity implies not only that reality itself is indeterminate, but also that the conceptual import of our language in talking about reality is similarly incomplete and indeterminate. Carnap's distinction between external questions which deal with linguistic structures and internal questions which deal with facts, collapses over this thesis, for external questions themselves become relative and factual.

"Paraphrase in some antecedently familiar vocabulary, then, is our only recourse; and such is ontological relativity." -Quine, *Ontological Relativity and Other Essays*, 1969, p. 54.

Ontology

[from Greek: *logos*, theory + *ont*, being] The Latin term *ontologia* was introduced in the seventeenth century for a branch of metaphysics to be distinguished from other branches, namely rational theology, rational cosmology and rational psychology. Christian Wolff did much to gain acceptance for the term. As the theoretical or general part of metaphysics and as the general theory of being, ontology is often used for metaphysics as a whole. Ontology deals with the essential characteristics of being itself (of Aristotle's being *qua* being), and asks the questions such as "What is or what exists?", "What kind of thing exists primarily?" and "How are different kinds of being related to one another?". The investigation of the meaning of being began with Parmenides and received a systematic discussion in Aristotle. In this century, Heidegger and Quine have taken completely different approaches to ontology. Heidegger asks what character Being must have if human consciousness is to be what it is. Quine proposes his maxim "to be is to be the value of a bound variable" to determine what things a theory claims to exist. His doctrine of ontological relativity suggests that what we can take to exist is relative to the theory and language that we bring to the situation.

"... the general thought of an intimate connection between logic and ontology or metaphysics has run like a thread, one of many threads, right through the history of philosophy, from Aristotle to the present." -Strawson, *Analysis and Metaphysics*, 1992, p. 37.

Open concept, see open-texture

Open sentence

A formula which has one or more free variables, in contrast to a closed sentence which is a formula that has no free variable. When the variables in an open sentence are replaced

结构、意义或语言表达式的内容。本体论的相对性不仅表明实在本身是不确定的,而且表明我们的语言在谈论实在时的概念意义同样是不完整的、不确定的。这个论题推翻了卡尔纳普对涉及语言结构的“外部问题”和涉及事实的“内部问题”的区分,因为外部问题本身也是相对的,有关事实的。

“于是,某些先前熟悉的词汇中的意译,就成了我们的惟一依靠;这就是本体论的相对性。”——奎因:《本体论的相对性及其他论文》,1969年,第54页。

本体论

[源自希腊文:*logos*(理论)和 *ont*(是,或存在)] [严格地说,应译做“是论”或“存在论”。] 在17世纪,学者们创造了拉丁词“*ontologia*”,指称形而上学的一分支,以区别于其他分支,即理性神学,理性宇宙论和理性心理学。C. 沃尔夫为这一术语的盛行作了不少贡献。作为形而上学的一般性的或理论性的部分,作为关于“是”的一般理论,本体论常常用以指整个形而上学。本体论关注“是”自身(即亚里士多德的作为“是”的“是”)的本质特性,其主要的问题包括“什么是‘是’或什么存在?”“什么样的事物在某种意义上存在?”以及“不同种类的‘是’如何互相联系?”对“是”的意义的研究始于巴门尼德,在亚里士多德哲学中得到了系统的讨论。在本世纪,海德格尔和奎因采取了极不相同的本体论研究方式。海德格尔问如果人类意识具有所“是”的本质,“是”必须具有什么特征。奎因提出其格言“‘是’即一约束变项的值”来决定一个理论可确定其存在的是何事物。他的本体相对性主张表明,我们可以认为存在的事物相对于我们引入当下环境中的理论和语言。

“关于逻辑与本体论或形而上学之间密切关系的普遍思想,就像千丝聚一线,横穿从亚里士多德至今的整个哲学史。”——斯特劳森:《分析与形而上学》,1992年,第37页。

开放概念

见“开放性”条。

开语句

开语句是含一个或多个自由变元的公式,与作为不含自由变元的公式的闭语句形成对照。当开语句中的这些变元被普通表达式所替

by ordinary expressions, it becomes a genuine or closed sentence. For instance, "X is mortal" is an open sentence. If we replace "X" with "Socrates", we have a closed sentence "Socrates is mortal". Open sentences are sentential or propositional functions rather than sentences or propositions themselves, and hence are neither true nor false. An open sentence is true or false according to the values of its variables. The extension of an open sentence is the class of all the objects of which the open sentence is true. A closed sentence, on the other hand, has a truth-value and is actually a statement.

"Expressions such as 'X is a book', 'X=X', 'X is a man' \supset 'X is mortal', which are like statements except for containing 'X' without a quantifier, are called 'open sentences'."—Quine, *Methods of Logic*, 1952, p. 90.

Open society

The distinction between an open society and a closed society was first proposed by Bergson, but Popper gave the term its current importance. Member of an open society are autonomous individuals who can decide on the basis of their own intelligence what to do. Members compete fairly for social positions. In contrast, a closed society is authoritarian or totalitarian, and its members do not have a free choice over what to do. A closed society is supported by an ideology which functions like a magical taboo, while an open society is rational and critical. Liberal democratic society is an example of an open society, while the Platonic ideal state is a typical closed society.

"The magical or tribal or collectivist society will also be called the closed society; the society in which individuals are confronted with personal decisions, the open society."—Popper, *The Open Society and Its Enemies*, 1, 1945, p. 173.

Open-question argument

Moore's argument against naturalism in *Principia Ethica*. Naturalism, in his understanding, defines "good" or other ethical terms by reference to natural or non-ethical qualities. If such a procedure were right, he argues, then the statement that what is F (some natural property) is good would be identical with the statement that whatever F is F. But this is not the case. For whatever F is F is a tautology and its denial involves self-contradiction. That what is F is good, on the other hand, remains open to question. Whatever natural properties a naturalist uses to define "good", we can still ask, "Are these natural properties good?". A negative answer to such a question will not involve self-contradiction. Hence this kind of statement is not really a definition of "good", and naturalism is wrong. Moore claims that "good" is indefinable. This argument is a subject of controversy, for it is not generally accepted that the definition of an ethical term must be analytic. The nature of definition more general-

代时,它就成为一个真正的语句或闭语句。举例来说,"X是有死的"是一开语句。如果我们用"苏格拉底"替换X,我们就得到一闭语句"苏格拉底是有死的"。开语句是语句或命题函项,而不是语句或命题本身,所以既不真也不假。开语句根据它的变元的值为真或为假,并且它的外延是使该开语句为真的所有那些对象的类。另一方面,闭语句有真值并且实际上是一陈述。

"像'X是一本书', 'X=X', 'X是人' \supset 'X是有死的'这样的表达式,除含有'X'而不含量词外,它们类似于陈述,叫做'开语句'。"—奎因:《逻辑方法》,1952年,第90页。

开放社会

对开放社会和封闭社会的区分首先是由柏格森提出的,但波普赋予开放社会这一术语以现时的重要性。一个开放社会的成员是自主的个人,他们可以基于自己的理智决定做什么。成员们公平地竞争社会地位。与此相反,封闭社会是独裁主义的或极权主义的,它的成员不能自由选择做什么。封闭社会靠意识形态支持,后者的作用类似巫术的禁忌,而开放社会则是理性的和批判的。自由民主社会是开放社会的样板,而柏拉图的理想国则是典型的封闭社会。

"神秘的或部族的或集体主义的社会也可称为封闭社会;而每个人都面临个人决定的社会则称为开放社会。"—波普:《开放的社会及其敌人》,第一卷,1945年,第173页。

未决问题论证

摩尔在他的《伦理学原理》中反对自然主义的论证。摩尔理解的自然主义是参照自然或非伦理的性质来定义"善"和其他伦理概念的。他认为,如果这样一种方法是正确的,那称作F(F代表自然特性)的东西是善这样一种陈述就与"不论什么F都是F"的陈述相等同。但情形并不是如此。因为"不论什么F是F"是一同义反复,它的否定涉及到自我矛盾。另一方面,那什么F是善,仍然是未决问题。一个自然主义者不论用什么自然特性来定义"善",我们仍然可以问,"这些自然特性是善吗?"对于这种问题的否定回答并不涉及到自相矛盾。因此,这种陈述并不真正回答是"善"的定义,因此自然主义是错的。摩尔宣称"善"是不可定义的。这个论证引起不少争论,因为一个伦理词的定义必须是可分析的这样一种观点并不被普遍接受。更普遍的是,在评论这个论证中,对这种定义的性质产

ly can be called into question in assessing the argument.

"Moore's most important suggestion was the proposal of what has been called the 'open question' test or criterion for sameness of meaning."—Brandt, *Ethical Theory*, 1959, p. 164.

Open-texture

A term introduced by Friedrich Waismann in his paper "Verifiability" (1945) for an unavoidable feature of empirical terms or statements. An empirical term, no matter how precise its core meaning, faces unlimited uncertainties of meaning when its dominant reference is extended or when it is employed in different contexts. The number of possible conditions in which it may be used is infinite. In the face of such open-texture, Waismann concluded that no final verifiability is available for empirical statements. Open-texture is the possibility of vagueness, because vagueness arises when a word is actually used in a fluctuating way while open texture exists because there are always possible gaps in determining the meaning of a term. The term is used widely in legal philosophy for the particular cases in which a legal rule, although having a core of settled meaning, is unclear regarding what it prescribes or prohibits. No clean-cut conceptual boundary is provided in these cases, and consequently general legal rules are limited in their capacity to determine decisions and must be supplemented by judicial discretion. H. L. A. Hart took this feature of legal rules as an instrument for the criticism of legal formalism.

The notion of an open concept, which is derived from open texture, is a concept which has an incomplete intension and needs to be modified in order to deal with unforeseen situations. It does not admit of a precise definition. The necessary and sufficient conditions of its application are not fixed. An open concept is not a vague concept but is the basis of the possibility of vagueness. Such concepts can be extended or modified, but they cannot be replaced by concepts that are not open. All concepts displaying what Wittgenstein called family resemblance are open concepts.

"Open texture, then, is something like possibility of vagueness." Waismann, in Flew (ed.), *Logic and Language* (first series), 1963, p. 120.

Operational definition

A definition of a theoretical terms formed by constructing a set of performable operations or activities. A conception of an object is the sum of our ideas of the observable consequences of this object disclosed by operations. This idea can be traced back to Peirce's pragmatic maxim and is a type of definition articulated by Bridgman as the central doctrine of operationism. A scientific term can be meaningful only when it can be defined operationally. The claim, to a certain extent, is a generalisation of the working practice of sci-

生疑问。

"摩尔的最重要的意见是提出被称作'未决问题'的检验标准或意义相同的标准。"——布朗特:《伦理理论》,1959年,第164页。

开放性

F. 魏斯曼在他的《可证实性》(1945)一文中提出的一个术语,以表示经验术语或陈述的一个不可避免的特征。一个经验术语,无论它的核心意思是多么准确,在它的主要指称被扩大时,或在它被用于不同的语境中时,都会面临无限的意义不确定。它被用于的可能的条件是无数的。面对这一开放性特征,魏斯曼断定,对经验陈述而言,最终的可证实性是得不到的。开放性就是含糊性的可能性,因为含糊性是在一个词实际上是以一种不确定的方式使用时出现的,而开放性的存在是由于在确定一个术语的意义时总存在可能的空白。这一术语在法哲学中被广泛用来指称这样的特殊情况,即一条法规尽管具有意义确定的核心内容,但就它规定的东西或禁止的东西而言又是不清楚的。在这些情况下不能提供明晰的概念界定,因而,一般的法规在确定判决的能力上受到限制,必须为法官的斟酌处理所补充。H. L. A. 哈特把法规的这一特征作为批判法律形式主义的一个武器。

对开放概念的见解来自开放性,它指的是一个概念其意义是不完整的,为了处理意料不到的情况就需要对它做修改。它不承认精确的定义。它适用的必要的和充分的条件是不固定的。一个开放的概念不是一个含混的概念,但却是可能造成含混的基础。这样的概念可以被扩展或修改,但不能被非开放的概念所取代。所有展示维特根斯坦所说的家族相似的概念都是开放的概念。

"开放性是与含混的可能性相类似的东西。"——魏斯曼,见弗留(编):《逻辑和语言》第一辑,1963年,第120页。

操作定义

通过构造一组可实行的操作或活动所形成的理论术语的定义。一个对象的概念,是我们通过操作所揭示的关于这个对象的可观察结果的观念之和。这一观念可以追溯到皮尔士的实用主义格言,而作为一类定义,则由布里奇曼把它表述为其操作主义的核心主张。一个科学术语仅当它被操作地定义时才是有意义的,这一观念在某种程度上是对科学家工作实践的概括。

"操作定义是借助于观察术语以限定理论

tists.

"[O]perational definitions [are] statements specifying the meanings of theoretical terms with the help of observational ones." —Hempel, in *Minnesota Studies in the Philosophy of Science*, vol. ii, 1958, p. 49.

Operationalism, another term for operationism

Operationism

[from Latin: *operari*, work] Also called operationalism, a theory first proposed in physics by P. W. Bridgman, and then applied to other fields. It holds that things and their properties, powers and interactions, as the subject-matter of science, should be understood in terms of operations that scientists perform. Scientific knowledge is knowledge of operations, and the meaning of scientific terms is established in terms of a description of a set of operations, that is in terms of operational definitions. To be operationally meaningful, a statement must be confirmable at least in principle. This theory denies the distinction between theory and evidence. In the final analysis, a scientific theory is connected to operations that are empirically rooted. As a movement within the philosophy of science it is closely linked with logical positivism. The application of this theory to the field of psychology led to the emergence of behaviourism. A major difficulty is that it cannot guarantee that the experiments or selected operations are scientifically valuable or that the meaning of a term remains the same if it is approached from more than one experimental directions.

"The principle of operationism says that a term is empirically meaningful only if an operational definition can be given for it." —Carnap, in *Minnesota Studies in the Philosophy of Science*, vol. i, 1956, p. 65.

Operator, see logical constant

O-proposition, see A-proposition

Optimism

[From Latin: *optimus*, the best] A French term (*optimisme*) referring to Leibniz's claim in *Theodicy* that the actual world is the best of all possible worlds because God who created it is the most perfect being. More generally, optimism is a positive and hopeful attitude towards things and the future, involving the claim that in the long run things are getting better. Optimism is contrasted to pessimism, which holds that this world is radically imperfect or that the future will be worse than the present. Schopenhauer's thought is

术语的意义的陈述。”——亨佩尔,见《明尼苏达科学哲学研究》,第二卷,1958年,第49页。

操作主义

“操作主义(operationism)”的另一英文表述。

操作主义

[源自拉丁文 *operari*, 意思是“劳作”]其另一种英文表述为 operationalism。这个理论首先为 P. W. 布里奇曼在物理学中提出,然后应用于其他领域。它主张事物及其特性、能力和相互作用作为科学的主题,应按照科学家实施的操作来理解。科学知识是操作的知识,科学术语的意义应按照对一组操作的描述,即按照操作定义来确定。一个陈述必须至少原则上是可确证的,才是操作上有意义的。这个理论否认理论和证据之间的区别,归根结底,一个科学理论与植根于经验的操作相联系。作为科学哲学中的一种倾向,它与逻辑实证主义密切相关。这个理论对心理学领域的应用导致了行为主义的出现。其主要困难是不能保证实验或操作在科学上是有价值的,也不能保证一个术语的意义在从不同的实验方向来探索时,仍然会是一样的。

“操作主义原理认为一个术语是经验上有意义的,仅当能给它一个操作定义时。”——卡尔纳普,见《明尼苏达科学哲学研究》,第一卷,1956年,第65页。

算子

O 命题

见“A 命题”条。

乐观主义

[源自拉丁词: *optimus*, 最佳]法语词(*optimisme*)指莱布尼茨在《神正论》中的主张:现实世界是一切可能世界中最好的世界,因为创造它的上帝是最完善的存在。更一般地说,乐观主义是一种对待事物和未来的积极的和充满希望的态度,它声称,从长远来看,事情会越来越好。乐观主义对比于悲观主义,后者认为这个世界从根本上是不完善的,未来将比现在更糟。叔本华的思想是哲学中悲观主义的最重要的例子。

the most important example of pessimism in philosophy.

"I cannot here withhold the statement that optimism, whether it is not merely the thoughtless talk of those who harbour nothing but words under their absurd, but also a really wicked, way of thinking, a bitter mockery of the unspeakable sufferings of mankind."—Schopenhauer, *The World as Will and Representation* (tr. Payne), I, p. 326.

Ordinary language

Everyday and non-technical language as an object of philosophical investigation. It can be distinguished from natural language, a term for actual human languages as studied in the philosophy of language and linguistics. Language has been a central concern of twentieth century philosophy. Some philosophers believe that ordinary language is defective and must be replaced by a rigorously reconstructed language or grammatical system (an ideal language), while others argue that we should rather seek to understand the logical diversity and complexity of ordinary language and its correct use to deal with philosophical problems. They hold that a replacement for ordinary language is unnecessary and impossible. This difference in attitude has led to a major division in analytical philosophy between ideal language philosophy represented by Russell and Carnap and ordinary language philosophy represented by the later Wittgenstein, Ryle and Austin.

"Certainly, then, ordinary language is not the last word; in principle it can everywhere be supplemented and improved and superseded. Only remember, it is the first word."—Austin, *Philosophical Papers*, 1970, p. 133.

Ordinary language philosophy

A kind of linguistic philosophy, originating with criticism of the ideal language philosophy of Russell, certain interpretations of Wittgenstein's early philosophy and Logic Positivism. Ideal language philosophy claims that we need an artificial language to be a suitable vehicle for philosophical reasoning, with a view to solving the philosophical perplexities caused by the unsystematic, irregular and imperfect nature of ordinary language. Ordinary language philosophy believes that the creation of an ideal language to replace ordinary language is unnecessary and also impossible. Rather, we must pay close attention to the meanings, categories, implications, grammatical or logical forms, functions, uses and distinctions in ordinary language. This approach to philosophy was pioneered by Moore and practised in varying ways by the later Wittgenstein, Ryle, Hare, Austin and Strawson. Because this approach to philosophy was fully developed in Oxford, it also became known as Oxford philosophy. According to Strawson, we must uncover the nature of linguistic structure as it has traditionally been presented. Ordinary language presupposes a structure of reality and hence an in-

"我在这里不能阻止那种乐观主义的陈述,不论它是那些无头脑的人们独无仅有的一派胡言,还是一种实在恶劣的思维方式,对人类的难言之苦的辛酸的嘲笑。"——叔本华:《作为意志和表象的世界》(佩尼译),第一卷,第326页。

日常语言

作为哲学研究对象的每天使用的非专业语言,可以区别于自然语言,后者是指语言哲学和语言学研究的人类现实语言。语言一直是20世纪哲学关心的中心内容。某些哲学家相信,日常语言是有缺陷的,必须用严格构造起来的语言体系或语法体系(一种理想语言)取而代之;而另外的哲学家则认为,我们更应当去理解日常语言的逻辑多样性和复杂性,正确地使用它讨论哲学问题。这种看法认为,对日常语言的替换不仅是不必要的,而且是不可能的。这种不同的态度导致了分析哲学中以罗素、卡尔纳普等人为代表的理想语言哲学和以后期维特根斯坦、赖尔和奥斯汀等人为代表的日常语言哲学之间的主要分歧。

"当然,日常语言的确不是最后的语言:它在原则上是可以随处补充、改进和替换的。只是要记住,它是最初的语言。"——奥斯汀:《哲学论文集》,1970年,第133页。

日常语言哲学

一种语言哲学,开始于批评罗素的理想语言哲学,以及对维特根斯坦前期哲学和逻辑实证主义的某些解释。理想语言哲学声称,我们需要创造一种人工语言作为哲学推理的恰当工具,并认为可以解决由于日常语言的没有体系、无规则和不完善而造成的哲学困惑。日常语言哲学相信,创造一种理想语言来取代日常语言,这不仅是没有必要的,而且是不可能的。相反,我们必须更加关注日常语言中的意义、范畴、蕴涵、语法形式或逻辑形式、功能、用法和区别。摩尔是这种哲学方法的先驱,而后期维特根斯坦、赖尔、黑尔、奥斯汀和斯特劳森则以各种方式运用这种方法。由于这种哲学方法完全是在牛津得到发展的,因而它也被看做是"牛津哲学"。根据斯特劳森的看法,我们必须像传统所做的那样揭示语言结构的性质。日常语言预设了实在的结构,因而研究这种语言也就是理解可能存在的语言之外的世界的有效方式。这就是他"描述的形而上学"的核心。日常语言哲学特别强调从使用语言表达式中提出的问题。奥斯汀的言

vestigation of that language is a fruitful means of understanding what the extralinguistic world may really be like. This is the essence of his descriptive metaphysics. Ordinary language philosophy emphasises in particular the problems that have arisen from the use of linguistic expressions. This dimension was developed in Austin's speech-act theory.

"Ordinary language philosophers saw the task of linguistic philosophy to lie in the clarification of the ordinary concepts that give rise to philosophical puzzles."—Katz, *Linguistic Philosophy*, 1971, p. 177.

Organon

[Greek; instrument or tool] The title given to the collection of Aristotle's logical works by sixth century commentators rather than by Aristotle himself. These logical works include the *Categories*, *De Interpretatione*, *Prior Analytics*, *Posterior Analytics*, *Topics* and *Sophistic Elenchi*. These works do not form an organic whole and were composed at different dates. The reason for naming them collectively derived from Aristotle's view that logic is not a part of science, but is rather an instrument of thought.

"Logical matters have the place of a tool (Organon) in philosophy."—Alexander of Aphrodisias, *Topics*, 74. 29.

Original apperception, see transcendental apperception

Original choice an alternative expression for fundamental project

Original position

A hypothetical bargaining situation postulated by Rawls in *A Theory of Justice*, in which the basic structure of just society can be rationally chosen. Each participant in the original position acts under two conditions. The first condition limits their knowledge through a veil of ignorance. Participants are ignorant of the circumstances of their society and their position in them, their particular talents and their special interests. The second condition is motivational, participants are rational and mutually self-interested. They are not altruistic and do not have substantive moral sentiments. In addition, there are some formal constraints upon the principles to be chosen. They must be formulated in general terms which avoid proper names and hold for a well-ordered society in perpetuity; they must be universal and hold for everyone in the society throughout their lives; they must be open to public knowledge; they must be capable of ordering competing claims; and they must provide the highest and final court of appeal for claims. According to Rawls, the principles chosen in the original position will be the principles of justice, partly because the original position is intended to achieve ideal impartiality and partly because the principles selected will

语行为理论推进了这个方面的研究。

"日常语言哲学家把语言哲学的任务看做是对产生哲学困惑的日常概念的澄清。"—卡兹:《语言哲学》,1971年,第177页。

《工具论》

[希腊文,"工具"]6世纪的注释家而非亚里士多德本人将该名作为题目给予亚里士多德的逻辑著作。这些逻辑著作包括《范畴》,《解释》,《前分析》,《后分析》,《正位篇》和《驳诡辩》。这些著作并不构成一个有机整体。它们是在不同时期写成的。把它们集在一起的根据是亚里士多德的观点,即逻辑不是科学的一部分,而是一种思想的工具。

"逻辑问题在哲学中具有工具的地位。"—阿弗罗迪西的亚历山大:《正位篇》,74.29。

本源的统觉

见"先验统觉"条。

原初的选择

"基本谋划"的另一种表达。

原初状态

罗尔斯在《正义论》中要求的一种假设的达成协议情况,在这种情况下,正义社会的基本结构可以合理地选择。原初状态的每一参加者都在两个条件下行事。第一个条件以无知之幕后限制他们的知识。参加者不知道他们的社会环境及他们在其中的地位,也不知道他们的才能和特殊利益。第二个条件是动机方面的,参加者是理性的和相互冷淡的。他们不是利他主义的,没有真实存在的道德情操。此外,还存在一些对所选原则的形式限制。它们必须以一般概念提出,这些概念不能是专有名称并始终适合一个组织良好的社会;它们必须是普遍的并适合社会中每一个人的终身;它们对公众的知识必须是公开的;它们必须能够安排冲突的要求,它们必须为那些要求提供最高和最终的上诉法庭。根据罗尔斯的论述,在原初状态下选择的的原则将是正义的原则,这部分地是因为原初状态试图实现理想的公正,部分是因为所选择的的原则与我们直觉的正义概念相符合。原初状态可以被看成是对康德的自律和绝对命令观念的一个程序性解释。这一状态下所有的人都是自由、平等和

cohere with our intuitive notion of justice. The original position can be viewed a procedural interpretation of Kant's conception of autonomy and the Categorical Imperative. All agents in that position are free, equal and rational beings who are autonomous because they choose the law themselves. The original position differs from the state of nature in classical social contract theory because it is a device to give us insight into our moral and political thinking rather than an exercise in historical speculation. If an agreement on principles is not reached in the original position, we remain in our imperfect and imperfectly understood society. In classical social contract theory, the participants would return to the state of nature.

"The idea of the original position is to set up a fair procedure so that any principle agreed to will be just." — Rawls, *A Theory of Justice*, 1971, p. 136.

Original sin

A Judeo-Christian doctrine. According to the *Bible*, the common ancestors of all human beings, Adam and Eve, could not resist the temptation of the Devil and broke the divine injunction not to eat the fruit of the tree of knowledge. Hence they committed original sin and lost the favour God. PS. 51. 5 says: "I was brought forth in iniquity, and in sin did my mother conceive me" (cf. Genesis, 3, Romans, 5. 21). This sin has been transmitted to all the descendants of Adam and Eve and is therefore shared by them all, although the precise method of this transmission has been a subject of dispute among theologians. This official doctrine of original sin is essential for the Catholic Church, for it justifies the need to have Grace for redemption, the need for the sacrament of Baptism, and the justification of eternal punishment for those who are not saved. It is, however, unclear whether this is a personal guilt on the part of each individual or each individual's share of a defective human nature. The doctrine is criticised as being inconsistent with God's omnipotence, omniscience and his absolute goodness, for it must be God who created the Devil, and God must have had foreknowledge that Adam would be tempted. Critics ask why God did not help Adam to overcome this temptation. It is also cruel for God to multiply Adam's sin throughout humanity. Philosophically, the doctrine might be regarded as a confession of the natural inadequacy of human beings and our inability to lead perfectly virtuous lives. The enduring power of the account of original sin lies more in the Biblical narrative and in our recognition of our own imperfection than with the philosophical argument.

"Original sin consists in human nature being left to itself by the withdrawal of the supernatural gift which God has bestowed on men's creation." — Aquinas, *Summa Theologiae*, Ia2, 17, 9.

理性的人,他们是自主的,因为他们自己选择法律。原初状态不同于古典的社会契约论中的自然状态,因为它是给我们洞察我们的道德和政治思想的一种手段,而不是一种历史推测中的运用。如果对原则的一致同意在原初状态下没有达成,那我们就仍然是有缺陷的,我们对社会的理解仍然是有缺陷的。在古典的社会契约理论中,参加者应返回到自然状态。

"原初状态的观念旨在建立一种公平的程序,以便任何被一致同意的原则都将是正义的。" — 罗尔斯:《正义论》,1971年,第136页。

原罪

犹太基督教的一种学说。根据《圣经》,所有人的共同祖先亚当和夏娃没能抵挡住恶魔的诱惑,破了不得偷食智慧之树果实的戒律。因此,他们犯下了原罪,失去了上帝的宠爱。《诗篇》51. 5说:"我是在罪孽里生的,在我母亲怀我的时候就有罪。"(也参见《创世纪》3,《罗马书》5. 21)这种罪被遗传给了亚当和夏娃的所有后裔,所以,被他们大家所分有,虽然此种遗传的恰当方法是神学家们争论的问题。这种官方的原罪学说对天主教教会来说,是至关重要的,因为它证明了恩典对于救赎的必需,洗礼圣礼的必需,对没获救的人进行永久惩罚的正当。但不清楚的是,它是每一个人都有罪,还是每个人分有有缺陷的人类本性。这个学说被人批评为与上帝的全能、全知和绝对善不一致,因为创造了那个恶魔的必定是上帝,而上帝又必定预知了亚当会受诱惑。批评者们问,为什么上帝没有帮助亚当战胜这个诱惑。上帝通过人性来增大亚当的原罪也是残忍的。从哲学上说,这个学说可被看做是人类本性不完善以及我们不能过完美的有德性的生活的自白。这一原罪学说的持续力量并非在于哲学论证,而是在于圣经的叙述,在于我们对自身不完美性的认识。

"原罪存在于人类本性中,是被遗留给它自身的,通过上帝赐予人的超自然馈赠才得以解脱。" — 阿奎那:《神学大全》,Ia2, 17, 9.

Ostensive definition

The term, introduced by W. E. Johnson in his *Logic* in 1921, was discussed in detail by Russell, Wittgenstein and the logical positivists. An ostensive definition proceeds by simply pointing to something or showing actual examples of the thing being defined, as we usually do when we teach a child. For example, we point to a house and say, "The word 'house' means this". There are three factors in this kind of definition: a demonstrative term, a deictic (pointing) gesture and a sample of what the word designates. For Wittgenstein, an ostensive definition only answers the question "What is that called?" and does not settle how a term will be used in the future. It therefore does not fix the meaning of a term at all. For a private ostensive definition, I seemingly could concentrate my attention on a particular sensation and associate it with a particular sign. The problem is that the sign must be defined in terms of our public language, but in a private ostensive definition it can only be used to name the sensation for myself alone. Wittgenstein denied the possibility of a private ostensive definition as part of his rejection of the possibility of a private language.

"It is obvious that an ostensive definition must depend upon experience."—Russell, *An Inquiry into Meaning and Truth*, 1940, p. 368.

Ostensive proposition

Ayer's term for a kind of proposition which other logical positivists held to be the direct record of an immediate experience and therefore to have self-evident validity. These propositions are taken to be purely demonstrative in character and cannot be refuted by further evidence. Instead they are the ultimate foundation for determining the validity of other empirical propositions. Ayer himself denies the existence of ostensive propositions, for if a proposition is ostensive, it must consist of purely demonstrative symbols. As a consequence, it would merely name a situation without describing anything about it. Such a sentence cannot be a genuine proposition and cannot even be expressed.

"But a proposition would be ostensive only if it recorded what was immediately experienced, without referring in any way beyond."—Ayer, *Language, Truth and Logic*, 1948, p. 91.

Other, the

In phenomenological philosophy since Husserl, humans other than the subject, self or ego. The self's relation to the Other gives rise to the problem of one's knowledge of other minds that is also discussed in analytical philosophy, but issues concerning the Other in ontology, ethics and political philosophy have come to be considered more fundamental. Emmanuel Levinas argued that the possibility of ethics rests on respecting the absolute alterity or otherness of the Other

实指定义

这个术语由 W. E. 约翰逊于 1921 年在其《逻辑学》一书中提出, 罗素、维特根斯坦和逻辑实证主义者对之做了详细讨论。实指定义的给出是仅指着某物, 或出示被定义事物的实例, 就像我们平常教小孩时那样。例如, 我们指着一栋房子说: "‘房子’这个词指的是这个东西。" 这种定义有三个要素: 指示词、直指(指着)的姿势, 以及语词所指示的样本。对维特根斯坦而言, 实指定义只回答这个问题: "那个东西叫什么?" 而不解决语词在将来如何使用的问题。因此, 这完全没有确定语词的意义。对于私人的实指定义而言, 我似乎可以把我的注意力集中于某一特定感觉, 将其与一特定符号相联系。问题在于, 这符号必须以我们的公共语言来定义, 但在私人的实指定义中, 这只能用来称呼我一个人的感觉。维特根斯坦否认私人实指定义的可能性, 作为他拒斥私人语言可能性的部分内容。

"显而易见, 实指定义必须依靠经验。"——罗素:《对意义和真理的探究》, 1940 年, 第 368 页。

实指命题

艾耶尔对一类命题的称呼, 其他逻辑实证主义者认为这类命题是对当下经验的直接记录, 因此具有自明的有效性。人们认为这些命题的特征是纯粹指示性的, 不能被将来的证据驳斥。相反, 它们倒是决定其他经验命题的有效性的最终基础。艾耶尔本人否认存在实指命题, 因为一个命题如果是实指的, 它就必须由纯指示性符号构成。其结果是, 它仅仅命名了一种情况, 而没有描述有关它的任何事情。这样的语句不可能是真正的命题, 甚至不能表达出来。

"但是, 一命题是实指的, 仅当它记录了直接经验到的东西, 而决不指称除此之外的东西。"——艾耶尔:《语言、真理和逻辑》, 1948 年, 第 91 页。

他人

在胡塞尔以来的现象学哲学中, 这是指不同于主体、自己或自我的人。自我对他人的关系产生了对他心的认识问题, 该问题也在分析哲学中讨论, 但关于他人在本体论、伦理学和政治哲学的争论问题已逐渐被认为是更基本的问题。E. 莱维纳斯证明, 伦理学的可能性依赖于对绝对的他在性或他人的他在的尊重, 而不是把他人还原为意识的对象。我们满足这种根本

rather than reducing the Other to an object of consciousness. Our ability to satisfy this radical demand depends on our understanding of how we can think an alterity which transcends our categories of thought. The Other presents problems of separation, opposition and alienation. In broader cultural terms, death, madness and the unconscious have been called the Other because they fall outside the model of rational self consciousness. The notion of the Other has been embraced in anthropology, post-colonial philosophy and feminism in an attempt to undermine the entrenched conceptual priority of the metropolitan culture and the male.

"The absolutely other is the Other. He and I do not form a number. The collectivity in which I say 'you' or 'we' is not a plural of the 'I'." — Levinas, *Totality and Infinity*, p. 39.

Other minds

If one can have direct knowledge only of one's own mental states, it is a serious philosophical question how and what we can know about other minds, that is whether other persons have minds and what other persons are thinking and feeling. Descartes saw free and intelligent action, especially in the use of language, inexplicable without the actor having a mind. A prominent traditional account relies on an argument by analogy. We may find correlations between our own physical behaviour and our own psychological or mental states. The knowledge of these correlations can be used as inductive evidence, so that if we observe similar physical behaviour exhibited by another person, we can infer ultimately by appeal to our own experience, that he has a certain kind of mental state. The conclusion thus inferred is not secure, for physical resemblance does not logically entail mental resemblance, the inductive base is very small and we can never check to see if our inference is sound. This argument is criticised for example by behaviourists who argue that if psychophysical relationships are contingent, then one can not even establish a correlation between bodily states and mental states. Wittgenstein's rejection of the possibility of a private language has challenged the basis of the analogy response, but for many it has also undermined the problem of other minds itself.

"Let's us begin with the problem of other minds. How can we know another person is in pain, or thrilled, or overcome with emotion, or thinking about philosophy?" — R. Nozick, *Philosophical Explanations*, 1984, p. 218.

Other-regarding, see self-regarding

Ought

[related to owe, suggesting that something that is not being done should be done] A general word used in moral

要求的能力取决于我们对如何能思维一个超越我们的思想范畴的他在的理解。他人产生了分离、对立和异化的问题。在更广泛的文化意义上,死亡、疯狂和无意识一直被称为他在,因为它们处于理性的自我意识的模式之外。他人的概念一直在人类学、后殖民地哲学和女性主义运动中被加以研究,企图破坏或削弱宗主国文化和男性的根深蒂固的概念优先性。

“绝对的他在是他人。他和我相加并不构成数目。在其中我说‘你们’或‘我们’的集体不是‘我’的复数。”——莱维纳斯:《整体与无限》,第39页。

他心

如果我们只具有关于自己的心的状态的直接知识,那么就有这样一个重大的哲学问题:我们是如何了解他心的?关于他心我们知道些什么?亦即,他人是否具有心以及他人的思维和感觉是什么?笛卡尔认为行为者若没有心,那我们就不能解释他何以具有自由的智能行为,特别是语言使用中的这种行为。对于他心知识的传统描述是借助于类比论证。我们可能发现我们自己的物理或身体状态与我们自己的心理的或心的状态之间的关联。关于这些关联的知识可以被用作归纳证据,所以如果我们观察到另一个人表现出某种物理状态,我们就可以最终借助于我们自己的经验、通过归纳来推断他具有某种心的状态。这样推断出的结论显然是不牢固的,因为物理的相似并不在逻辑上推断心的相似。归纳的根据十分微弱,而且我们永远不能检验我们的推断是否正确。这一论证为(例如)行为主义者所批评,他们认为,如果心物关系是偶然的,那么一个人就不能在身的状态与心的状态之间建立关联。维特根斯坦对私人语言可能性的拒斥对类推反应的基础提出了挑战,可对许多人来说,它也削弱了他心问题本身。

“让我们从他心问题开始。我们怎么能够知道另一个人是处于疼痛中、感到激动、被情绪压倒还是在进行哲学思维?”——诺齐克:《哲学说明》,1984年,第218页。

应当

[与“拖欠”有关,说明某事未做而该做]在道德话语中作为义务和职责的主要表述的一个

discourse as the principal expression of obligation and duty. Many moral philosophers consider "I ought to" to be identical in meaning to "I am obligated". Many major issues surround the notion of ought. Is there a kind of "ought" which is specifically moral and, if so, how does it relate to other kinds of "ought"? What is the relation between ought and is, in particular can evaluative claims about what we ought to do be derived solely from factual claims? Does ought imply can or are there things which we ought to attempt to do even if we know that we shall fail? Is the moral "ought" independent of other motives to action, such as sympathy or self-interest, and is the moral worth of what we do spoiled if we act on these other motives rather than through a recognition of the authority of this "ought"? The analysis of ought-statement is one of the main topics in Prescriptivism.

"If the analysis of 'ought' which I have just sketched bears any close relation to the use of 'ought' in ordinary language, it shows how it is that moral judgements provide reasons for acting in one way rather than another."—R. M. Hare, *The Language of Morals*, pp. 196-7.

Ought implies can

A formula in Kant's ethics, meaning that correctly judging that a given agent is morally obliged to perform a certain action logically presupposes that the agent can perform it. He can perform it not just if he wants, prefers, or wills to, but in some absolute sense. This capacity is a categorical freedom in contrast to the hypothetical freedom defended by Hume and others, for it is freedom both to do and to forbear doing a certain action under the same set of conditions.

"Perhaps all that the formula 'ought implies can' means is that it would be pointless to issue an imperative if it were impossible that the imperative should be obeyed."—Pap, *Elements of Analytical Philosophy*, 1949, p. 63.

Ousia

[Greek: substance, essence, entity, reality, from *ousa*, the singular feminine participle of *einai*, to be; the term is closely linked to *on*, the neutral participle of *einai*] Although Plato used *on* and *ousia* synonymously, Aristotle classified different kinds of being and used *ousia* for *on* (being) in its first sense, namely, ultimate reality. In the *Categories*, Aristotle defined *ousia* as the ultimate subject which underlies everything else. According to this test, a sensible individual is primary *ousia*, while species and genus are secondary *ousia*. In the *Metaphysics*, *ousia* is the focal meaning of being, but it is divided into form, matter and the composite of matter and form. If *ousia* were still determined by the subject criterion, matter would be the primary subject and hence primary *ousia*. But Aristotle held this to be impossible, and presented the separation (independent existence) of

广义词。许多道德哲学家认为“我应当”在意思上等同于“我有责任”。围绕着“应当”这个概念有许多重大问题。是否有一种“应当”特别具有道德性,若如此,它与其他种类的“应当”关系如何?“应当”和“是”的关系如何,特别是,关于我们应当做什么的评价性论断能够仅从事实性论断中得到吗?应当是否蕴涵能够,或者说是否有我们应当尽力去做的事,即便我们知道我们做不成?道德的“应当”独立于其他行动的动机,诸如同情或自私吗,如果我们遵从这些其他的动机而不是通过服从这个“应当”的权威性而行动,我们所做事情道德价值会受到污损吗?对应当陈述的分析是规定主义的主要话题之一。

“如果我刚才概述的对‘应当’的分析与在日常语言中对‘应当’的使用有任何密切关系,它表明道德判断何以对这样行动而不是那样行动提供了理由。”——黑尔,《道德语言》,1952年,第196—197页。

应该隐含能够

康德伦理学的一个公式,意思是对一个既定的人在道德上应该履行某一行为的正确判断,在逻辑上就预先假定了这个人能够履行它。他能履行它不仅仅是假如他想要、喜欢或愿意履行就能履行,而是在绝对意义上的能履行。这一能力是一种绝对自由,它与休谟及其他人为之辩护的假设的自由相反,因为它既是在同一条件下进行某一行为的自由,也是在同一条件下克制进行某一行为的自由。

“也许‘应该隐含能够’这一公式的全部含义就是:如果一个命令应被遵守是不可能的,那发布这个命令就是无意义的。”——帕普:《分析哲学原理》,1949年,第63页。

本是

[希腊词,本体,本质,实体,实在,源自 *ousa*, 希腊动词 *einai* (是) 的阴性单数分词; 故它与 *einai* 的中性分词“是”或“存在”(希腊词 *on*) 紧密相连] 柏拉图将 *on* 和 *ousia* 作同义词使用。亚里士多德区分了不同种类的“是”,并把 *ousia* 用作“是”的第一含义,即终极实在。在《范畴》中,亚里士多德把 *ousia* 定义作是承载其他一切事物的终极主体。根据这种规定,可感的个别事物是第一 *ousia*, 而属和种乃是第二 *ousia*。在《形而上学》中, *ousia* 是“是”的中心含义。但它被划分成形式、质料和形式与质料的复合物。如果 *ousia* 仍是由主体标准确定的,则质料就会是第一主体,也因而成为第一 *ousia*。但亚里士多德认为这是不可能的,他引入本体与其地位的分离(独立存在),作为“这一个”(*to de ti*),成为

substance and its status as a *this (tode ti)* as more important criteria for deciding what is *ousia*. According to these new criteria, form is *ousia* in the primary sense, with composites being *ousia* in a derivative sense. Species and genus, which are secondary *ousia* in the *Categories*, are rejected as *ousia* in the *Metaphysics*. This has given rise to the problem of explaining the relation between form and the universal.

To search for primary *ousia* is tantamount to searching for primary being. Aristotle emphasised the central position of *ousia* in the network of categories. All other categories depend on *ousia* for their existence, and *ousia* is prior to them in time, knowledge and definition. Thus, Aristotle claimed in the *Metaphysics* Z that the study of being can be reduced to the study of *ousia* (ousiology). Ousiology has come to be used for describing Aristotle's mature view of ontology.

Ousia is generally translated as substance as a consequence of Boethius' influential medieval commentary on the *Categories* in which *ousia* and subject coincide. But this translation is unsatisfactory because substance has no etymological connection with *ousia*. Moreover, the translation does not really fit with the doctrine of *ousia* in the *Metaphysics*. Alternative English translations of *ousia* include essence, entity and reality.

"It follows, then, that 'ousia' has two senses, (a) the ultimate substratum, which is no longer predicated of anything else, and (b) that which, being a 'this', is also separated—and of this nature is the shape or form of each thing."—Aristotle, *Metaphysics*, 1017b23-25.

Outer sense, see inner sense

Overman, an English translation of *Übermensch*

Owl of Minerva

Minerva was the Roman goddess of wisdom, and her companion the owl was traditionally regarded as being wise. In his preface to the *Philosophy of Right*, Hegel used the owl of Minerva, which flies only at dusk, as a metaphor for the nature of philosophy. It implies that philosophy is essentially retrospective and can provide understanding of a stage of reality only after it has occurred. This claim challenges the view that we have a universal capacity to know independent of our context as subjects of knowledge.

"When philosophy paints its grey in grey, then has a shape of life grown old. By philosophy's grey in grey it can-

决定什么是 *ousia* 的更重要的标准。根据这些新标准,形式是第一意义的 *ousia*,而复合物则是派生意义上的。种和属在《范畴》中被看做是第二 *ousia*(本体),而在《形而上学》中不被承认是 *ousia*(本体)。这引起了如何解释形式与共相的关系这一问题。

寻求第一 *ousia* 即等于寻求第一“是”。亚里士多德强调 *ousia* 在范畴网络中的中心地位。一切其他范畴都依靠 *ousia* 而存在,而 *ousia* 在时间、知识和定义上都是在先的。所以,亚里士多德在《形而上学》第七卷认为,对“是”的研究可以归结为对 *ousia* 的研究(本是论)。本是论变成了一个专门描绘亚里士多德成熟的本体论观点的术语。

Ousia 一般译作“本体”(substance),历史上这是由于中世纪哲学家波埃修斯关于《范畴》的极有影响的注释,而在《范畴》中 *ousia* 与主体是重合的。但这种翻译并不令人满意,因为 substance 与 *ousia* 并无字根上的联系。此外,这一译法也并不符合《形而上学》中的 *ousia* 学说。其他关于 *ousia* 的英译包括 essence, entity 和 reality。(中文按 substance 译作“本体”,甚至“实体”。但根据该词与“是”的关系,最精确的译法当为“本是”。)

“*Ousia* 因而有两义:(a)最终的基质,它不再述说其他任何事物,(b)那作为‘这一个’,也是分离的事物——这一本性乃是每一事物的形状或形式。”——亚里士多德:《形而上学》,1017b23-25。

密纳发的猫头鹰

密纳发是罗马智慧女神,她的同伴猫头鹰传统上被视为具有聪明智慧。黑格尔在《法哲学》序言中把在黄昏起飞的密纳发的猫头鹰作为对哲学本性的比喻,意思是,哲学本质上是反思的,它只能理解某个已经发生而成为过去的实在阶段。这个主张向以下观点提出了挑战:我们作为认识主体具有不依赖于我们的前后关系的普遍的认识能力。

“当哲学把它的灰色描绘成灰色之时,这一生活形态就老化了。把哲学的灰色描绘成灰色,不能使生活形态返老还童,而只能对之加以理

not be rejuvenated but only understood. The owl of Minerva spreads its wings only within the falling of the dusk."—Hegel, *Philosophy of Right*, preface.

Ownership

In political and legal philosophy, a relationship of absolute or limited control between persons and property. We can ask about the origin of ownership and about its legitimacy. We can argue that ownership should be governed by rules of licit acquisition and transmission or by rules of fair distribution. As part of a general exploration of rights, we can examine whether ownership rights are absolute or relative to other social concerns. We can explore the claim that some things should not be owned or the claim that persons, if they may be owned at all, should be the subject of self-ownership. We can examine whether other social relations, including relations between parents and children or between persons and social or political institutions, can be understood in terms of ownership. We can ask whether we own our actions and the actions of those whom we authorise to represent us in institutions.

Ownership has been extended to examine our relations, as persons or bodies, to our mental states and to explore the claim that our bodies are our own. An investigation of ownership in this domain leads to questions about the nature of persons and about the mind-body relationship. Different accounts of causal relations between mental events and bodily events carry different justifications for our ownership of our mental states. Although in the following views ownership of our mental states is ascribed to ourselves as bodies, the mind-body relations that are discussed can also offer a necessary basis for ascribing ownership to ourselves as persons.

According to interactionism, a body owns mental states if there is a particular sort of interaction between them. For epiphenomenalism, a body owns mental states if events in the body are the main or only cause of events in the mind. For double-aspect theory, mental states are owned by a body because a mind and a body are different aspects of the same basic entity and are not causally distinct from one another. For parallelism, there is a parallel relationship between mental and bodily states, with ownership related to this association rather than to causal priority. According to the identity theory of mind, mental states are owned by the body which has brain states that are identical to those mental states.

All of these theories, which link mental states to bodies, conflict with a no ownership theory, which denies that mental phenomena must belong to a certain person or to a certain body. Hume's bundle theory implies that mental items are not necessarily owned by the mind to which they belong because the mind is an accidental collection or bundle of such items, but other philosophers reject the possibility of mental states which do not belong to a subject or person.

解。密纳发的猫头鹰只有在黄昏来临之际,才会展翅飞翔。”——黑格尔:《法哲学》,序言。

所有权

所有权在政治哲学和法哲学中是指人和财产之间的绝对的或有限的控制关系。我们可以询问所有权的起源及其合法性。我们可以争论所有权应由合法获得和遗传的规则所决定,还是由公平分配规则所决定。作为对权利的一般性探究,我们可以考察所有权对其他社会事物是绝对的还是相对的。我们可以探究那种认为某些东西不应成为所有物的说法,或那种认为如果人们也可以被所有,他们就应是自我所有的主体的说法。我们可以考察其他社会关系,包括父母和孩子的关系,或人们和社会或政治机构的关系,是否可以从所有权方面来理解。我们可以询问我们是否拥有我们的行为,是否拥有那些我们授权在公共机构中代表我们的人的行为。

所有权已被扩展到考察我们作为人或身体与我们心的状态的关系,探究那种认为我们的身体是我们自己的说法。在这一领域对所有权问题的研究导致了有关人的本质和身心关系的问题。对心身活动因果关系的不同说明包含着对我们心的状态所有权的不同辩护。虽然在下面的观点中,对我们心的状态的所有权被归为作为肉体的我们自身,但所讨论的这些身心关系仍可为把所有权归于作为人的我们自身提供一个必要的基础。

按照交互作用论,如果在身和心的状态之间存在一种特殊的相互作用,那么身就拥有心的状态。对附随现象论而言,如果身的活动是心的活动的主要或惟一的原因,身就拥有心的状态。根据两面理论,心的状态是为身拥有的,因为心和身是同一基本实体的不同方面,它们在因果上是区分不开的。平行论认为,在心的状态和身的状态之间存在一种平行的关系,所有权与这种联系相关,而不是与原因的首要性相关。根据心的同一论,心的状态为身所拥有,身的大脑的状态与那些心的状态是同一的。

所有这些将心的状态与身相连的理论都同非所有权理论相冲突,后者否认心的现象必须属于某一个人或某一身体。休谟的捆束理论意味着心的成分不必为它们从属的心所拥有,因为心是这些成分的偶然集合或捆束,但其他哲学家拒绝心的状态不属于一个主体或人这种可能性。

是什么使我的身体成为我的,以及我如何知道我的身体是我的,这些问题要求对我们的身体在我们作为主体和相关者中的位置有一个了解。

The questions of what makes my body mine and how I know that my body is mine require an understanding of the place of our bodies in our being subjects and agents.

"Let us name the relation which everybody speaks of in this way by calling a certain body his own, the relation of ownership."—John Wisdom, *Problems of Mind and Matter*, 1934, p. 37.

Oxford philosophy

Philosophy has been studied and taught at Oxford since the thirteenth century, and from as early as the fourteenth century, Oxford has contributed eminent philosophers such as Duns Scotus and William of Ockham. Hobbes, Locke and Bentham were students of Oxford. From the nineteenth century to the first part of this century, Oxford has contributed J. H. Newman, B. Butler, Cook Wilson, H. A. Prichard, and R. G. Collingwood, among others. However, "Oxford philosophy" as a technical term refers to a distinct approach to analytical philosophy that flourished at Oxford after the Second World War. It places emphasis on clarifying perennial philosophical problems in terms of the analysis of ordinary language, and is in contrast to Logical Positivism and the Russellian strand of philosophy in Cambridge. This approach started with H. H. Price and Gilbert Ryle, although it is related to the work of G. E. Moore and Wittgenstein's later work in Cambridge. It was further articulated in distinctive ways by J. L. Austin and P. F. Strawson. It made Oxford the dominant centre of analytical philosophy from the 1940s to the 1960s, and is also called "Ordinary Language Philosophy". Other contemporary Oxford philosophers include H. L. A. Hart, A. J. Ayer, Elizabeth Anscombe, Philippa Foot, G. E. L. Owen, Michael Dummett, Bernard Williams, David Pears, R. M. Hare, Charles Taylor and Ronald Dworkin. But these philosophers have different approaches, and some would vigorously reject being classes as Oxford philosophers in the above sense. Oxford is still a major centre of philosophy today and is the birth place of this dictionary.

"During the last quarter of a century Oxford has occupied, or reoccupied, a position it last held, perhaps, six hundreds years ago: that of a great centre of philosophy in the Western world."—Strawson, "Meaning and Truth", in *Logico-Linguistic Papers*, 1971, p. 170.

"让我们把每一个人以这种方式谈及的,即称某一肉体是他自己这种关系,称为所有权关系。"——威斯顿:《心与物的问题》,1934年,第37页。

牛津哲学

从13世纪开始牛津一直在研究和教授哲学,而且早在14世纪,牛津就产生了杰出的哲学家,例如D. 司各脱和奥康的威廉。霍布斯、洛克和边沁都是牛津的学生。从19世纪到本世纪初,牛津产生了J. H. 纽曼、B. 巴特勒、C. 威尔逊、H. A. 普里查德和R. G. 柯林伍德等人。然而,"牛津哲学"作为一个专门术语,是指第二次世界大战以后在牛津逐渐形成的一种分析哲学的独特方法。它强调通过分析日常语言澄清历史遗留下来的哲学问题,这与罗素风格的剑桥哲学和逻辑实证主义相对。这种方法开始于H. H. 普赖斯和G. 赖尔,这虽然与G. E. 摩尔的工作和后期维特根斯坦在剑桥的工作有关,但最后是由J. L. 奥斯汀和P. F. 斯特劳森以不同的方式充分阐明的。它使牛津从40年代到60年代成为分析哲学的主要核心,这也被称作"日常语言哲学"。其他的当代牛津哲学家包括H. L. A. 哈特、A. J. 艾耶尔、E. 安斯康、P. 福特、G. E. L. 欧文、M. 达米特、B. 威廉姆斯、D. 皮尔斯、R. M. 黑尔、C. 泰勒、R. 德沃金等人。但这些哲学家有着不同的方法,其中某些人就坚决反对被称作上述意义上的"牛津哲学家"。牛津至今仍然是哲学的一个主要中心,也是本词典的诞生地。

"在本世纪过去的15年期间,牛津一直占据着或先前就占据着它在(也许)600年前就占据着的地位:这就是西方世界伟大的哲学中心。"——斯特劳森:《意义与真理》,载《逻辑-语言学论集》,1971年,第170页。

P

Pacifism

[from Latin: *pacificare*, to make be at peace] A position that objects to war as a means to achieve national aims or to solve disputes. More broadly, it objects to any sort of killing and violence. It claims that even the use of force to meet force is wrong and that nobody may use force without specific overriding justification. Pacifism advocates co-operation and negotiation and actively encourages activities promoting peace. Absolute pacifism holds that war and violence are intrinsically wrong and cannot possibly be justified. Critics argue that pacifists fail to distinguish between aggression and legitimate national defence in a just war and fail to distinguish between intentional harming or killing and legitimate individual self-defence. Many forms of pacifism are conditional, in that they claim that war and violence are *prima facie* wrong, but allow that wrong to be overridden. In this respect, they approach their rival theory of a just war.

"A. J. P. Taylor coined the word pacifism as a general descriptive term designed to cover all the different attempts made (for any reason) to abolish war, and we can contrast this idea with that of pacifism proper, which involves being against a war on more than merely pragmatic grounds. Pacifism proper involves a moral judgement and a personal commitment." — Teichman, *Pacifism and the Just War*, 1986, p. 3.

Paideia

[Greek: education, from *pais*, child] In ancient Greece, *paideia* included *mousike* (mainly literature and song) and gymnastics. Moral education trained a youth by habituation until he acquired the right habits, that is the right patterns of action. Education was not confined to children and youth, for adults were held to need it as well to become as virtuous as possible.

"What will this *paideia* be? ... It is in part physical training for the body and training in the arts for the soul." — Plato, *Republic*, 376e.

Pain

Either physical or mental suffering which is generally regarded to be a negative feeling. The main tenet of hedonism is that it is human nature to pursue pleasure and to avoid pain. However, philosophers have been puzzled by the nature of this feeling. Wittgenstein sought to show that pain is

和平主义

[源自拉丁文: *pacificare*, 使处于和平状态] 一种反对把战争作为达到国家的目的或解决争端的手段的主张, 更广义地讲, 它反对任何形式的杀害和暴力。它甚至认为用武力反对武力是错误的, 没有特别的、压倒一切的正当理由任何人都不能使用武力。和平主义提倡合作和协商, 并积极鼓励促进和平的活动。绝对的和平主义认为战争和暴力从本质上就是错误的, 是不可能为之辩护的。批评家们争论说, 和平主义者没有区分侵略与正义战争中正当的国家的防卫, 也没有区分有意的伤害或杀害与合法的个人自卫。很多形式的和平主义是有条件的, 因为它们认为战争和暴力不言而喻是错误的, 但又允许制服这种错误。就这方面而言, 它们与其对立面正义战争的理论又是相近的。

"A. J. P. 泰勒创造了和平主义这个一般描述性的概念, 用来涵盖所有不同的取消战争的企图(不论是出于什么理由), 我们可以将这一概念与严格意义上的和平主义做比较, 后者包含的反对战争不仅是基于实用主义的理由。严格意义的和平主义包含道德判断和个人的信奉。" —— 泰西曼:《和平主义和正义战争》, 1986年, 第3页。

教育

[希腊词, 意为“教育”, 源自 *pais* (孩子)] 在古希腊, 教育包括文艺修养(主要是文学和歌曲)和体育锻炼。道德教育通过习俗来培养一个青年, 直到他获得适当的习性, 也就是正确的行为方式。教育也不仅仅局限于青少年, 因成年人也需要它, 以尽可能地变为有德性的。

"这种教育是什么?……它部分是关于身体的体育锻炼, 部分是关于灵魂的文艺方面的训练。" —— 柏拉图:《国家篇》, 376e。

疼痛

物理的或心的痛苦, 通常被认为是一种负面的感觉。享乐主义的主要原则是: 人的本性就是追求快感逃避痛苦。但哲学家一直对这种感觉的性质感到困扰。维特根斯坦试图表明疼痛不是用只有自己能懂的私人语言来表达的私人

not a private sensation expressed by a private language which can only be understood by oneself. In order to be used in a public language, expressions for pain must have meanings for which there are public criteria given in the outward expression of pain. Other philosophers reject the criterial account in favour of reducing pain to pain behaviour. This behaviourist move is rejected by the identity theory which identifies pain with neurological processes. On the basis of his account of meaning and identity, Kripke argues that because we can describe a world in which pain states and accompanying physical state are not identical, they are not identical in the actual world. Some philosophers ask why we would wish to avoid pain on accounts which do not give central consideration to its raw qualitative feel. Scholars also debate over whether there is a common and intrinsic quality shared by all token feelings of pain.

"The truth is; it makes sense to say about other people that they doubt whether I am in pain, but not to say it about myself." —Wittgenstein, *Philosophical Investigations*, 246.

Panentheism

[from Greek: *pan*, all + *en*, in + *theos*, god] The view that all things are imbued with God's being through being parts of God or Absolute Being. Because on this view God extends beyond all that there is in the world, panentheism rejects the pantheist claim that God is identical with the totality of things. Rather, God is consciousness and the highest possible unity. This position was developed by the German philosopher Karl Christian Krause by combining Spinoza's notion of substance and Fichte's notion of self-consciousness. Whitehead also used this term in his process theology.

"Panentheism is the view that all is God, while panentheism occupies a position midway between theism and pantheism. For panentheists, while it is not strictly true that everything is God, everything is lodged or embedded within God, making the two interdependent." —C. Taliaferro, in Bunnin and Tsui-James (eds), *Blackwell Companion to Philosophy*, 1996, p. 447.

Panosomatism, another term for reism

Panpsychism

[from Greek: *pan*, all — *psyche*, soul] The view that everything in the universe, including things which we ordinarily regard as not living, possesses a mental aspect or level of consciousness, although this does not imply that each thing has a mind or soul like our own. The universe as a whole is considered to be alive, with the character of an animated organism. God is described as being completely immanent in all things as a psychic force or spirit. Panpsychism is

感觉。疼痛表述要在公共语言中使用,对于其意义就一定要有一个由疼痛的外部表达所给定的公共标准。其他哲学家拒斥标准论,而主张将疼痛还原为疼痛行为。这种行为主义的解释也被同一论所拒斥,后者将疼痛同一于神经过程。克里普克根据其对意义及同一性的解释,认为我们可以描述一个世界,其中疼痛状态与所附随的物理状态不同一,所以它们在现实世界中也不同一。由于不给疼痛的原初性质感觉以中心地位,有的哲学家就问为什么我们会希望逃避疼痛。学者们还就是否有一个为所有的痛觉例证所共有的普通的、内在的性质展开争论。

"真实的情况是:说别人怀疑我是否处于疼痛中是有意义的,而这样来说我自己就是没有意义的。"——维特根斯坦:《哲学研究》,第246节。

万物在神论

[源自希腊语, *pan* (一切) 和 *en* (在……之中) 及 *theos* (神)] 指这种观点:万物因其是上帝或绝对存在者的一部分而受上帝存在的影响。因为按这种观点,上帝延伸的范围在世上存在的一切东西之外,所以,万物在神论否认泛神论者主张的上帝与事物总体的同一。他们宁愿认为上帝是意识,是最高的可能统一体。这种见解被德国哲学家 K. C. 克劳斯所发展,他把斯宾诺莎的实体观念和费希特的自我意识观念结合了起来。怀特海在他的过程神学中,也使用了这个术语。

"万物在神论是这样的观点:一切都是神。它占据的是一神论和泛神论之间的中间位置。在万物在神论者看来,即使万物是神的说法不严格真切,但为了使两者相互依赖,万物也寄宿或置留于神之中。"——塔里亚斐洛,见布宁和崔-詹姆斯编的《布莱克韦尔哲学指南》,1996年,第447页。

泛体论

"实有论"的另一个名称。

泛心论

[源自希腊语, *pan* (一切) 和 *psyche* (灵魂)] 指这种观点:宇宙中的每一事物,包括我们通常认为没有生命的事物,都具有心的方面或意识水平,尽管这并不意味着每物都有像我们自己一样的心或灵魂。作为整体的宇宙被认作是活生生的,具有生物有机体的特征。上帝被描述为作为一种灵魂力量或精神完全内在于万物之中。泛心论也被称作"活力论"、"物活论"

also called animism, hylozoism [from Greek: *hule*, matter + *zoe*, life] or mentalism.

In spite of the difficulty of accepting panpsychism's explanation of mental aspects, the theory has been endorsed by some thinkers who find greater difficulty in alternative explanations of how mental phenomena can be caused by non-mental things. Leibniz, Schopenhauer, Schelling and Whitehead offer different forms of panpsychism.

"By panpsychism I mean the view that the basic physical constituents of the universe have mental properties, whether or not they are parts of living organisms." —Nagel, *Mortal Questions*, 1979, p. 181.

Pantheism

[from Greek: *pan*, all + *theos*, god] A term originated by John Toland for the belief that God is identical with the universe, that is with the totality of all there is, rather than being a supernatural power above or alongside the universe. Because God is the universe taken as a whole, no divine act of creation is required and the distinction between God and his creatures, sharply drawn in Christianity, is denied. All is God, and God is all. Everything in the universe is a mode or element of God. The claim that the divine is all-inclusive distinguishes pantheism from panentheism, which holds that God includes all things but is greater than their totality. The most important pantheist was Spinoza who offered sophisticated arguments to support the claim that there is only one substance which can be understood as God or nature. Hegel was also a pantheist in virtue of his identification of God with the whole of Being.

"Pantheism applies the term 'God' in such a way that nothing positive can be distinct from him. God is considered wholly immanent within the universe, and the universe—in so far as its has being—is identical with God." —Ferre, *Basic Modern Philosophy of Religion*, 1968, p. 303.

Paradigm

[from Greek: *paradeigma*, model, pattern] Plato describes Forms as paradigms to which particular objects have a likeness or resemblance, and to which we must look in order to acquire knowledge. In the *Republic* it is said that the ideal state might be a paradigm laid up in the heaven; in another dialogue, the *Timaeus*, Forms are paradigms by reference to which the divine craftsman constructs the sensible world.

In this century, the American philosopher Thomas Kuhn in his classic *The Structure of Scientific Revolutions* (1962), employs the word "paradigm" to refer to a framework of concepts, assumptions and approaches within which members of a scientific community conduct their research. When a paradigm has to be changed or shifted, there comes a scientific revolution.

"Close historical investigation of a given speciality at a

[hylozoism, 源自希腊语 *hule* (质料、物质) 和 *zoe* (生命)] 或 "心灵论".

虽然难以接受泛心论对心的方面的解释, 但还是有些思想家承认了这种理论, 因为他们发现另一种选择解释起来难度更大, 即心的现象如何能被非心的事物引起。莱布尼茨、叔本华、谢林和怀特海都提出过不同形式的泛心论。

"所谓泛心论, 我意指这种观点: 宇宙的基本物理要素具有心的特性, 无论它们是否是生命有机体的部分。" ——内格尔: 《人的主要问题》, 1979年, 第181页。

泛神论

[源自希腊语 *pan* (一切) 和 *theos* (神)] J. 托兰德发明的一个术语, 用以指称这种信念: 神与宇宙同一, 即与存在的一切之总和同一, 而不是在宇宙之上和之侧的超自然力量。由于神是当做整体的宇宙, 因而无需任何神圣的创造行为, 基督教中严格坚持的神与他的创造物之间的区别也被否定了。一切是神, 神也是一切。宇宙中的每物都是神的样式或成分。神是所包括的一切这个主张把泛神论和万物在神论区别开来, 后者认为神包括万物但比它们的总和更大。最重要的泛神论者是斯宾诺莎, 他提出了一些复杂的论证来支持这样的主张: 只存在着一个实体, 它能被理解为神或自然。由于把神和整个存在视为同一, 黑格尔也是一位泛神论者。

"泛神论在这种意义上应用 '神' 这个词: 没有任何确实的东西能与他不同。神被认为完全地内在于宇宙之中, 而宇宙——仅就它具有存在而言——是与神同一的。" ——费勒: 《现代宗教哲学基础》, 1968年, 第303页。

范式

[源自希腊词 *paradeigma*, 意指 "模范" 或 "模型"] 柏拉图把形式描写为范式——即具有相似性的特殊对象的范式, 认为人们审视范式是为了获取知识。柏拉图在《国家篇》里谈到, 理想国或许是建立在天国的范式; 在另一篇题为《蒂迈欧篇》的对话里, 形式即范式, 具有神性的工匠凭借范式建构了感觉世界。

在本世纪, 美国哲学家 T. 库恩在其经典著作《科学革命的结构》(1962年) 中, 使用 "范式" 一词来表示一种由诸多概念、假设与方法构成的框架, 在此框架中科学共同体的成员从事着他们的研究。当某一范式需要变化或转型时, 就会发生一场科学革命。

"在特定时间对特定专业进行仔细的历史研究, 就会发现一套重现的、半标准的展示方

given time discloses a set of recurrent and quasi-standard illustrations of various theories in their conceptual, observational, and instrumental applications. These are the community's paradigms, revealed in its textbooks, lectures, and laboratory exercises." —Kuhn, *The Structure of Scientific Revolutions*, 1962, p. 43.

Paradigm case argument

A challenge to scepticism regarding the existence of such things as the external world, free will, valid inductive arguments, certainty or time. The paradigm case argument claims that if we have learned to use a referring expression for which typical or paradigmatic referents have become the meaning of that expression, then such an expression refers in standard cases to genuine existents. Our ability to employ a certain type of expression in ordinary speech is the proof that it has application. Accordingly, if a words such as "table" and "chair" are in common use, there must be physical objects. Similarly, the fact that words such as "choose" and "decide" are in common use shows the existence of free will. This argument, influenced by Wittgenstein's theory of language games, had wide appeal in the 1950s and 1960s. The argument was criticised because different ways of teaching an expression might involve different, and perhaps conflicting, paradigms. Many philosophers are dissatisfied with conformity to linguistic norms as the mark of truth. Accordingly, the argument is currently little used.

"The paradigm case argument held that some situations were the very type of situation wherein was taught the application of a term, 'free will' for example, the term must refer to that type of situation." —R. Nozick *Philosophical Explanations*, 1984, p. 168.

Paradigm shift

In contrast to the traditional view that science is cumulative in the gradual increase of its empirical content within a stable framework, Kuhn explained scientific change in terms of revolutionary shifts in scientific paradigms as well as in terms of work carried out within a paradigm in periods of normal science. A paradigm, in Kuhn's sense, has two dimensions. First, it is a set of beliefs, values, techniques, practices and examples of explanatory success shared by a scientific community within a social and institutional context. Secondly, a paradigm is the model or explanatory framework which normal sciences apply to solve problems. However, the scope of any given paradigm is limited. Once there is an accumulation of outstanding problems which cannot be solved within a paradigm, a scientific community go into crisis. In response to the crisis, a new paradigm will emerge. The new paradigm is better than its predecessor because it can formulate new problems and set procedures for solving the existing accumulation of outstanding problems. Scientific revolutions

式,即一套表明其概念、观察与工具运用方面的各种理论的方式。这些便是该共同体的范式,大多体现于教材、讲座与实验工作之中。”——库恩:《科学革命的结构》,1962年,第43页。

范例论证

对于关于外部世界、自由意志、有效归纳论证、确定性或时间的怀疑论的一种挑战。范例论证断定,如果我们已经学会用一指称表达式,而这一表达式已经具有典型的或范例性的指称作为其意义,则这一表达式在标准的情形中就会指称真正的存在物。我们在日常语言中使用某一特定表达式的能力就证明了它是可以使用的。因此,如果一个像“桌子”和“椅子”这样的词汇是大家共同使用的,则一定有物理对象存在。同样地,如果“选择”和“决定”这样的词汇是大家共同使用的,那就一定存在有自由意志。受维特根斯坦语言游戏理论的影响,这一论证在50年代及60年代具有十分广泛的影响。这一论证也受到批评,因为教授一种表达式的不同方式可能牵涉到不同乃至相冲突的范例。许多哲学家也对把遵从语言规范作为真理的标志表示不满。因此,这一论证现在很少使用。

“范例论证认为某些情境是教会一个术语的使用的情境类型,例如‘自由意志’这一术语一定是指那样一类情境。”——诺齐克:《哲学说明》,1984年,第168页。

范式转换

传统观点认为,在一个稳定的框架内,科学的经验内容的逐渐增加是累积的,与此相对立,库恩以科学范式的革命性转换,以在规范科学时期内范式所进行的工作,来说明科学的变化。库恩意义上的范式有两个层面。在第一层面上,它是一组为一个科学共同体在一个社会和体制情境中所共有的成功说明的信念、价值、技术、实践和范例。在第二层面上,范式是常规科学用以解决问题的模型或说明框架。然而,任何给定范式的范围都是有限的。当在一个范式中不能解决的突出问题累积起来,这个科学共同体就面临着危机。作为对危机的反应,一个新的范式将会出现。这个新范式要优于旧范式,因为它能形成新的问题,并能设定程序以解决现存累积的未解决问题。当科学家舍弃旧范式并代之以新范式时,科学革命就发生了。因为一个新范式涉及到概念、理论结构及科学实践的根本性转换,新旧范式之间是不可通约的。因此科学革命

happen when scientists reject an old paradigm and replace it with a new one. Because an new paradigm involves fundamental shifts in concepts, theoretical structures and scientific practices, the old and new paradigms are incommensurable. Hence scientific revolution is equivalent to paradigm shift. The replacement of a paradigm by another is also informed by political and social development.

"What seems to have been involved was the exploitation by genius of perceptual possibilities made available by a medieval paradigm shift." —Kuhn, *The Structure of Scientific Revolutions*, 1962, p. 118.

Paradox

[from Greek; *para*, beyond or *doxa*, belief] Literally, something which is against the generally accepted view or something which looks implausible but implies a philosophical challenge. In logic, a paradox is a contradictory position arising from sound premises or sound proof. In this sense, it is a synonym for an antinomy. Medieval logicians called paradoxes *insolubilia*. In ancient Greece, Zeno of Elea and the Megarians invented a number of interesting paradoxes, but paradoxes became the focus of serious philosophical concern after the discovery of Russell's paradox, which posed fundamental issues of philosophical method and principles. Russell's paradox gave rise to a crisis in Frege's logicist programme, and the intellectual advance of the programme depended upon overcoming this paradox.

Generally, following Peano and Ramsey, paradoxes are divided into two main types: semantic paradoxes and logical paradoxes (or set-theoretical paradoxes). Semantic paradoxes, such as the liar paradox, Berry's paradox, Richard's paradox and Grelling's paradox, arise because of some peculiarity of semantic concepts, such as truth, falsity and definability. Logical paradoxes, such as Russell's paradox, Burali-Forti's paradox, and Cantor's paradox, arise because of some peculiarity of set-theoretical concepts and due to faulty logic and mathematics. Such a distinction is not without controversy. Russell, for instance, claimed that all paradoxes arise because of violations of the vicious circle principle. The general solution of semantic paradoxes involves replacing ordinary language with artificially constructed language. The general procedure for solving logical paradoxes involves restricting set-existence principles. But both of these types of solutions have been contested. Various paradoxes are recorded in this dictionary under their particular names.

"A paradox can be defined as an unacceptable conclusion derived by apparently acceptable reasoning from apparently acceptable premises." —Sainsbury, *Paradoxes*, 1995, 2nd ed., p. 1.

Paradox of confirmation, another expression for Hempel's paradox

等同于范式转换。一个范式为另一个范式所取代,也是在政治和社会发展中所得来的。

“看起来是天才对知觉可能性的探索,其实是建立在一个中世纪的范式转换的基础上的。”——库恩:《科学革命的结构》,1962年,第118页。

悖论

[源自希腊语 *para* (超越,在……之上)和 *doxa* (信念)]从字面上说,它意指某种与通常接受的观点相反的东西,某种看起来不合理但意味着哲学挑战的东西。在逻辑中,悖论是从可靠的前提或可靠的证明中产生的矛盾立场。在这种意义上,它是二律背反(antinomy)的同义语。中世纪逻辑学家把悖论叫做不可解问题(*insolubilia*)。在古希腊,埃利亚的芝诺和麦加拉学派发明了大量有意思的悖论,但只是在发现了罗素悖论之后,悖论才开始在哲学上受到严肃关注,并引出了许多有关哲学方法和原则的根本问题。罗素悖论引发了弗雷格逻辑主义纲领中的危机,这一纲领的思想发展取决于克服这个悖论。

一般遵循皮亚诺和拉姆塞的做法,把悖论分成两种主要类型:语义悖论和逻辑悖论(或集合论悖论)。语义悖论,像说谎者悖论,贝里悖论,理查德悖论和格里林悖论,产生于真、假、可定义性等语义概念的某些特性。逻辑悖论,像罗素悖论,布拉里-福蒂悖论和康托尔悖论,产生于集合论概念的某些特性以及有缺陷的逻辑和数学。这样一种划分不是没有争议的。举例来说,罗素认为,所有悖论都产生于违背了恶性循环原则。对语义悖论的一般解决方案涉及到用人工构造的语言替代日常语言。对逻辑悖论的一般解决方案涉及到给集合存在的原则施加限制。但这两种解决方案都是有争议的。本辞典按它们各自的名称收录了各种悖论。

“悖论可以定义为从明显可接受的前提凭借明显可接受的推理而导出的不可接受的结论。”——塞斯伯里:《悖论》,1995年,第2版,第1页。

确证悖论

“亨佩尔悖论”的另一种表述。

Paradox of God's omniscience, see omniscience

Paradox of self-deception, see self-deception

Paradox of size, see Cantor's paradox

Paradox of the heap, see sorites paradox

Parallel distributed processing, see connectionism

Parallelism

Also called psycho-physical parallelism, a theory which is particularly associated with Spinoza. It claims that the mental realm and the physical realm, or thought and extension, do not affect each other in any way. Instead, they are independent of each other, although there is a precise correspondence between them. "The order and connection of ideas is the same as the order and connection of things" (Spinoza, *Ethics*, II, 7). If two items in the physical realm are similar, their counterparts in the mental realm are similar; and vice versa. If two items in thought are related as cause and effect, their corresponding items in extension are also related as cause and effect. However, mental events never cause bodily events, and bodily events never cause mental events. There are physical causal laws and there are psychological laws, but there cannot be any psycho-physical causal laws. Parallelism is a classical response to the Cartesian mind-body problem. Sometimes Spinoza claimed that such a parallelism is a relation of identity on the grounds that each mental mode is a physical mode. This view, together with his claim that thought and extension are different attributes of one and the same substance, has led many scholars to argue that Spinoza's philosophy of mind should be termed a dual-aspect theory.

"Parallelism, in the mild sense, is the proposition that for every mental event there is a bodily event which always accompanies it."—John Wisdom, *Problem of Mind and Matter*, 1934, p. 103.

Paralogism

[from Greek: *para*, beyond + *logizesthai*, to reason] Generally, a formally invalid inference. Aristotle in *Poetics* defined a paralogism as the fallacy of inferring from the truth of the consequence to the truth of the premise. For Kant, a paralogism is the inevitable erroneous outcome of reason in rational psychology when it extends beyond the limits of ex-

平行论

也称“心—物平行论”，这个理论特别与斯宾诺莎有关。它主张，心理界和物理界，或思想和广延，在任何情况下都互不影响。它们是互相独立的。不过，在它们之间有精确的相应。“观念的秩序和联系与事物的秩序和联系是一样的”（斯宾诺莎：《伦理学》，第二部分，第7章）。如果物理界中的两个事项是相似的，它们在心理界中的对应者也是相似的，反之亦然。如果思想中的两个事项因果联系着，它们在广延中的对应事项也因果联系着。无论如何，心的事件决不会引起任何物理事件，反之，身体事件也不会引起心的事件。存在着物理的因果律和心理的因果律，但不可能有任何心理—物理的因果律。平行论是对笛卡尔的心—身问题的一个经典回答。有时，斯宾诺莎声称这样的平行论主张的是一种同一性关系，其根据就在于：每个心的样式就是一个物理的样式。这个观点以及他关于思想和广延是同一个实体的不同属性的看法一起，使许多学者认为应当把斯宾诺莎的心的哲学称作“两面理论”。

“在适度的意义上，平行论是这样的命题：对于每一个心的事件都有一个永远与之相伴随的身体事件。”——威斯顿：《心与物的问题》，1934年，第103页。

谬误推理

[源自希腊文 *para*（超越）和 *logizesthai*（推理）]一般指在形式上无效的推理。亚里士多德在他的《诗学》中把它规定为从结论为真推出前提为真的谬论。对于康德来说，谬误推理是理性在理性心理学中超越经验界限的不可避免的结果。理性从“我思”的先验根据引致四种谬误

perience. Reason leads from the transcendental ground of the "I think" to four kinds of paralogism: (1) the soul is a substance; (2) the soul is simple; (3) the soul is identical over time; (4) the soul is self-conscious only. Kant also called these claims transcendental paralogisms. He held that all of these inferences are invalid because they infer from the formal conditions of thought to a substance of thought. Kant's target in exposing the paralogism is the rational psychology of Descartes and his rationalist successors and the misinterpretation of the *Cogito* which infers from thinking to existence.

"In the first kind of syllogism I conclude from the transcendental concept of the subject, which contains nothing manifold, the absolute unity of this subject itself. . . . This dialectical inference I shall entitle the transcendental paralogism." — Kant, *Critique of Pure Reason*, B398.

Paraphrasis, another term for contextual definition

Pareto improvement, see Pareto optimality

Pareto optimality

A principle, also called Pareto efficiency, named after the Italian economist and sociologist Vilfredo Pareto, referring to a state whereby no one can be better off without making someone else worse off. A change makes at least one person better off and no one worse off is called a Pareto improvement. In this case, at least one individual prefers X to Y, and no one else regards Y as better than X. To change from Y to X certainly improves the welfare of the whole society. Pareto optimality and Pareto improvement are widely accepted as criteria for justifying or criticising changes in economic policy. They are also used to evaluate the utilitarian summing of welfare across individuals without the need to compare interpersonal utility. Since each policy change in a social context generates a loser, a Pareto improvement is hard to achieve.

"The familiar economist's concept of Pareto efficiency (or Pareto optimality) is a very different matter. A distribution of resources is Pareto efficient if no change in that distribution can be made that leaves no one worse off and at least one person better off." —Dworkin, *A Matter of Principle*, 1986, p. 239.

Parsimony, the principle of , another term for Ockham's razor

Partial concept

For Kant, each concept typically contains other concepts, namely, various predicates which can jointly apply to

推理：(1) 灵魂是实体；(2) 灵魂是单纯的；(3) 灵魂在时间流程中同一；(4) 灵魂只是自我意识。康德也把它们称为先验谬误推理。他认为，所有这些推理都是无效的，因为它们从思想的形式条件推论出思想的实体。康德在阐述谬误推理时所对准的靶子是笛卡尔的理性心理学和他的理性主义后继者以及对“我思”的曲解，即从思维推论出存在。

“在第一种三段论中，我从绝不包含杂多的主体的先验概念来推断这个主体自身的绝对统一，……这种辩证推理我命之为先验的谬误推理。”——康德：《纯粹理性批判》，B398。

释义

“语境定义”的另一表述。

帕累托改良

见“帕累托最佳度”条。

帕累托最佳度

以意大利经济学家和社会学家 V. 帕累托命名的一个原则，也称帕累托效率，指这样一种状态：在那样一种状态中，如果不使另一个人更坏，则一个人不能变得更好。一种至少使某人境况更佳，但不使任何一个人更坏的变化，被称作帕累托改良。在这种情形中，至少有一个人偏爱 X 而不是 Y，但没有人把 Y 看做比 X 更好。而从 Y 变到 X 确实改善了整个社会的福利。帕累托最佳度和帕累托改良被广泛地接受为是辩护或批评经济政策变化的标准。它们也被用来评价福利的功利性增长而不需要比较人际间的功利。由于在社会背景中每一次政策改变将产生一类失败者，因而帕累托改良是很难实现的。

“经济学家所熟悉的概念帕累托效率(或帕累托最佳度)这一概念是一种相当不同的事情。如果不使任何人更糟而至少使一个人处境更好，则不能对分配作任何改变，即这种分配或方法合乎帕累托效率。”——德沃金：《原则问题》，1986年，第239页。

最经济原则

“奥康剃刀”的另一个名称。

部分的概念

在康德看来，每个概念一般都包含其他概念，即各种谓项，它们能共同地应用于这个概念

the object or instance of this concept. A predicate contained in this concept is a partial concept, for it can identify its object only in virtue of being conjoined with other predicates contained in the same concept. All partial concepts are related, either co-ordinately, such as being a man and being rational, or subordinately, such as being a man and being an animal. The process of clarifying all partial concepts and their relationships is conceptual analysis, and the result of this process is an analytic judgement.

"For when I make a distinct concept, I begin with parts and proceed from these to the whole."—Kant, *Logic*, Introduction, VIII.

Participation

[Greek: *methexis*, from the verb *metechein*, to participate, to share in and to partake] In Plato's theory of Forms, particular things possess some characteristic because they participate in the relevant Forms; e. g., beautiful things are beautiful because they participate the form "beauty". So particular things are only the less complete realisation of the form. However, the form is one, and particular things are many, how can one single form be in many things at the same time? In what way do things participate a Form? This is the problem of how universals can be in particulars. Plato formulates it in his self-criticism in the *Parmenides*, and the problem remains today. In his later dialogues Plato talks more about the participation of one Form in other Forms, rather than the participation of particular things in the Forms. Neo-platonism also uses this concept in the sense that the lower orders of beings participate in the higher.

"It seems to me that whatever else is beautiful apart from absolute beauty is beautiful because it participates in that absolute beauty, and for no other reason."—Plato, *Phaedo*, 100c.

Particular

[from Latin: *pars*, *partis*, part] For Aristotle, particulars cannot be predicated of things, in contrast to a universal, which can be predicated of many things. "Particular" is used an adjective for things that are partial, limited or some, rather than whole, unlimited or all. As a noun, "particular" has various applications, with some of them leading to philosophical dispute. As a single entity of a class or kind, a particular has a unique path through space and time and unlike universals cannot be instantiated by other entities, however similar they are to the initial particular. A particular is a unity, in contrast to an aggregation of things. If we maintain the notion of substance, a particular is a substance which bears attributes, qualities or properties, whilst attributes are universals. Particulars include historical events, material objects, people and their shadows, but do not include qualities and properties, numbers and species. Particulars should be

的对象或事例。包含于这个概念中的谓项就是部分的概念，因为它只有同借助于那些包含于同一概念的谓项结合在一起才能识别其对象。所有的部分的概念都是相关的，或者是同位的（例如，“是一个人”和“是有理性的”），或者是从属的（例如，“是一个人”和“是一个动物”），澄清所有部分概念和它们的关系的过程就是概念分析；它的结果是分析判断。

“如果我制造一个明晰的概念，那么我从部分〔概念〕开始，由这些部分进展到整体。”——康德：《逻辑》，导言，VIII。

分有

[希腊词 *methexis*, 源自动词 *metechein*, 意指“分有”、“共有”、“参与”] 在柏拉图的形式学说里，特殊事物之所以具有某些特征，是因为它们分有了相关的形式，譬如，美的事物之所以是美的，是因为它们分有了“美”的形式。如此说来，特殊的事物只是形式的不完满的实现而已。尽管形式是一，特殊事物是多，但是单一的形式何以能够同时出现在许多事物中呢？事物又是以何种方式分有形式的呢？此乃共相如何成为殊相的问题。柏拉图在《巴门尼德篇》里以自我批评的方式对此做了详细的阐述，然而，这个问题一直延续至今。在后来的对话里，柏拉图谈论更多的是一种形式分有多种形式的问题，而不是特殊事物分有多种形式的问题。新柏拉图主义者也使用这一概念意指低级存在物分有高级存在物。

“在我看来，除了绝对美之外，所有其他美的东西之所以是美的，是因为它分有了那种绝对美，此外别无其他原因。”——柏拉图：《斐多篇》，100c。

殊相

[源自拉丁词: *pars*, *partis* (部分)] 在亚里士多德看来，殊相不能用作事物的谓词，与此相对，共相是可以作许多事物的谓词的。“殊相”用作形容词是指部分的、有限的或某些事物，而不是指全部的、无限的或所有的事物。作为一个名词，“殊相”有多种用法，其中有些引起了哲学争论。作为某一类或某一种中的一个单一个体，殊相有着独特的穿越时空的轨迹；与共相不同的是，殊相不能用其他个体说明，而相同的是，它们都是最初的殊相。一个殊相是一个统一体，与此相对的是许多事物的堆积。如果我们保留使用本体这一观念，殊相便是一个承载属性、性质或特性的本体，而属性则是共相。殊相包括历史事件、物质对象、人及他们的影子，但不包括性质、特性、数和属。殊相应与“个别”相区分，因为虽然一切殊相都是个别，但许

distinguished from individuals, for while all particulars are individuals, many individuals, instead of being particulars, are abstract and general. Philosophers have different opinions about the ontological status of particulars, depending on their account of universals.

"A particular is defined as an entity which can only enter into complexes as the subject of a predication or as one of the terms of a relation, never as itself a predicate or a relation." --Russell, *Collected Papers of Bertrand Russell*, VII, p. 58.

Particular proposition

In traditional syllogistic logic, propositions of the form "some S are P" or "some S are not P" are called particular propositions. Propositions of the first form, particular affirmative propositions, are symbolised as "I" (SIP), and propositions of the second form, particular negative propositions, are symbolised as "O" (SOP). In the predicate calculus, a particular affirmative proposition is analysed as "there is at least one x such that x is S and x is P". Particular propositions are generally held to contain referring expressions and therefore to have existential import. Particular propositions are contrasted to universal propositions, that is propositions of the form "all S are P" and "all S are not P". Together, these are the four basic types of propositions in traditional logic.

"The proposition 'Some x's are y's' makes an assertion about part of the class x and is, therefore, called a particular proposition." --Stebbing, *A Modern Introduction to Logic*, 1950, p. 46.

Particularised quality, another term for abstract particular

Partition

The division of a class into sub-classes (each of which is called a partition class, and all of which jointly form an exclusive class), or a process of dividing a whole into its parts, as long as the parts are homogeneous with each other and with the whole. For instance, the property "having the same weight as" can divide a class in terms of weight into a sub-class which includes all objects with that weight. An object with that weight belongs to only one sub-class. Partition is closely related to the notion of equivalent class within which each member bears an equivalent relation to every other member. A related concept is resolution which is a process of exhibiting a whole in terms of its components. Both partition and resolution are forms of analysis.

"By partition is meant transforming what is first presented as a mere unit by exhibiting it in the form of a whole consisting of parts." --Johnson, *Logic*, part II, 1921, p. 116.

多个别是抽象的,一般的,而殊相则不是,哲学家们根据各自对共相的理解,对殊相的本体论地位有不同的观点。

“殊相可定义为这样一个事物,它只是作为主谓关系中的主词或作为一种关系的一端而进入复合体,而其自身则不作谓词或联系。”——罗素:《罗素文集》,第七卷,第56页。

特称命题

在传统三段论逻辑中,“某些S是P”或“一些S不是P”的命题形式叫做特称命题。第一种命题形式即特称肯定命题,用符号“I”(SIP)表示,第二种命题形式是特称否定命题,用符号“O”(SOP)表示。在谓词演算中,特称肯定命题被分析为:“至少存在一个x,以致这个x是S并且x是P”。特称命题一般被认为含有指称表达式,因此具有存在意义。特称命题相对比于全称命题,后者的命题形式是“所有S是P”和“所有S不是P”,它们一起构成传统逻辑的四种基本类型的命题。

“命题‘某些x's是y's’作出了对某类x的部分的断定,因此被称为特殊命题。”——斯特宾:《现代逻辑导论》,1950年,第46页。

特殊化的质

“抽象殊相”的另一表述。

划分

把一个类分成子类(每一个子类叫做划分类,所有子类一起构成全类),或把一个整体分成其部分的过程,只要这些部分是相互同质的并且与整体也是同质的。例如,“与……有相同的重量”这个特性能够根据重量从一个类分出一个子类,后者包括有该重量的所有对象。具有该重量的某个对象只属于一个子类。划分与等价类的概念密切相关,在等价类中每一个元素与每一个其他元素有等价关系。一个相关的概念是分解(resolution),后者是根据其构成要素来展示一整体的过程。划分和分解都是分析的形式。

“所谓划分,是使初看起来是一纯粹单元的东西变形,其办法是显示它是由各部分组成的一个整体。”——约翰逊:《逻辑学》,第I卷,1921年,第116页。

Partitive term, Quine's expression for mass noun

Pascal's wager

A practical argument to suggest that it is rational to believe in God, formulated by the French thinker Blaise Pascal in his *Pensées* (1670). Pascal initiated the use of practical argumentation as a new line of thought in support of Christian faith. If we cannot use metaphysics to prove decisively whether or not God exists, what then should we do? On the basis of his work on probability, Pascal claimed that belief in God is the soundest bet in face of the uncertainty of an after-life. If we believe, then God either exists or does not exist. If he does not exist, we lose little. If he exists, we will be awarded eternal bliss and avoid the possibility of going to the hell. Hence, the choice to be a believer carries with it the possibility of immense gain, while the choice not to believe carries with it the possibility of a vastly greater loss. This argument has been treated scornfully by critics, but it has been accepted by some as a legitimate theological use of practical reason. It can be placed in a context of examples from rational choice theory, although Pascal's wager concerns the choice of belief rather than action. For this reason, it is related to problems about the will and belief in James' pragmatism.

"Notwithstanding its methodological modernity as a course of argumentation cast in the mold of decision theory, the spirit of Pascal's Wager is thus profoundly conservative in its substantive message." —Rescher, *Pascal's Wager*, 1985, p. 6.

Passion, see feeling

Passive intellect, see active intellect

Past

The past is meant in some sense to contain what happened at an earlier time, but it is not clear that the past is real. Objectivists argue that the past exists independent of human minds and knowledge and provides a basis for historical statements. For sceptics, the past can hardly exist. What actually exists must be present, but if the past were present, it would not be the past. Because it is the past, it cannot exist. For subjectivists and relativists, the past exists merely as a construction of historians.

How, then, would it be possible to establish the truth of a statement about the past? For sceptics, the past does not exist and knowledge of the past is impossible. According to relativists, because the intentions and prejudices of historians

部分词

李因用于指“总量词”的名称。

帕斯卡尔的赌博

假定相信上帝合理的一个实用论证, 由法国思想家 B. 帕斯卡尔在他的《思想录》(1670) 一书中系统表述。帕斯卡尔把实践论证的用途作为新的思想线索加以引入, 以支持基督教信仰。如果我们不能运用形而上学来确切地证明上帝是否存在, 那么, 我们应该做什么呢? 以他的或然性理论为基础, 帕斯卡尔认为, 相信上帝是面对来世不确定性的最为稳妥的赌博。如果我们相信, 那么, 上帝或者存在或者不存在。如果他不存在, 我们没多少损失; 如果他存在, 我们将被赐予永远的福祉, 避免进入地狱的可能性。因此, 选择做一名信仰者意味着随之有巨大得益的可能性, 而选择不相信则意味着随之有更巨大的受损的可能性。过去, 批评家们对这个论证采取了蔑视对待的态度, 但近来却被有些人接受, 认为这是实践理性的一种合法的神学运用。它可以看做是理性选择理论的一例, 虽然帕斯卡尔的赌博关注的是信仰的选择, 而不是行为的选择。由于这一原因, 它与詹姆斯实用主义关于意志与信念问题相关。

“虽然作为一个论证方向, 它的方法论上的现代性具有决定论的性格, 但帕斯卡尔赌博的精神就其实质性的使命来说, 却是极其保守的。”——雷谢尔: 《帕斯卡尔赌博》, 1985 年, 第 6 页。

激情

被动理智

见“主动理智”条。

过去

从某种意义上讲, 过去被解释为早些时候发生的事情, 但过去是否是真实的并不清楚。客观主义者论证说, 过去的存在是不依赖于人的心和知识的, 过去为历史陈述提供了一个基础。对怀疑论者来讲, 过去简直是不存在的。实际存在的只能是现实的, 如果过去是现实的, 那它就不是过去。因为它是过去, 它不可能存在。在主观主义者和相对主义者看来, 过去仅仅作为历史学家的建构而存在。

那么, 如何才能确立关于过去的陈述的真实性? 对怀疑论者来讲, 过去是不存在的, 因而关于过去的知识是不可能的。在相对主义者看来, 由于历史学家的意志和偏见在历史探究中

are indispensable to historical inquiry, historical knowledge need not be rejected, but it is not objective. For objectivists, historical knowledge represents what really took place, but because historical statements are made on the basis of memory, testimony and evidence rather than on direct observation, we can still ask how it is possible to secure the reliability of statements about the past. Some claim that such statements are about the present rather than about the past, and others claim that they are rules for the prediction of future historical experiences. The existence and intelligibility of the past have been important topics in contemporary analytic philosophy.

"From my own part, I do not find anything excessively paradoxical in the view that propositions about the past are rules for the prediction of those 'historical' experiences which are commonly said to verify them, and I do not see how else 'pure knowledge of the past' is to be analysed." — Ayer, *Language, Truth and Logic*, 1967, p. 102.

Past-referring term

In our conceptual scheme, all expressions or terms describing present objects can be classified into three kinds: past-referring terms, temporally neutral terms and future-referring terms. Past-referring terms apply to present events or objects in a way which entails the existence of an event or object at an earlier time logically related to the present object. For example, to call a woman a mother entails that she gave a birth to a child. Temporally neutral terms apply to present events or objects, but do not imply any reference to past or future items. For example, to call somebody a man does not imply anything about the past or future. Future-referring terms apply to present items in a way which is conditioned by their reference to some future objects or events. For example, to call a woman a mother-to-be entails that she will give birth at some future time. Historical language is rich in past-referring terms, but philosophers and logicians argue over the possibility of determining the truth-value of historical statements which contains past-referring terms.

"By a past-referring term, I shall mean a term, whose correct application to a present object or event, logically involves a reference to some earlier object or event which may or may not be causally related to the object to which the term is applied." — A. C. Danto, *Analytical Philosophy of History*, 1965, p. 71.

Paternalism

[from Latin: *pater*, father] Paternalism is derived from parental caring towards one's children. In ethics it means interfering with another person's liberty or freedom in the belief that one is promoting the good of that person, or preventing harm from occurring to that person, even if one's action provokes that person's disagreement or protest. Paternalism is challenged by liberalism and is now often viewed as

是不可避免的,对历史知识虽无需拒绝,但它却不是客观的。对客观主义者而言,历史知识描述的是真实发生的事情,但由于历史陈述是根据记忆、证明和证据而不是根据直接观察做出的,我们还可提出如何才能保证关于过去的陈述的可靠性问题,一些人认为,这样的陈述是关于现在的陈述而不是关于过去的陈述,另一些人则认为,它们是对未来历史经验做出预言的规则。过去的存在和可理解性一直是当代分析哲学的一个重要课题。

“就我个人而言,我没有发现这样一种观点中有什么过多自相矛盾的东西,这种观点就是:有关过去的陈述是对那些‘历史’经验做出预言的规则,这些经验通常被说成是对那些历史陈述的证实。我看不出其他‘纯粹的关于过去的知识’是如何被分析的。”——艾耶尔:《语言、真理和逻辑》,1967年,第102页。

指称过去的用语

在我们的概念体系中,所有描述现存物体的语词和术语可分为三类:指称过去的用语,时间中立的用语和指称将来的用语。指称过去的用语是通过使早些时候存在的事件或物体与现存物体在逻辑上相联而应用于现存事件或物体的。例如,叫一个女人“妈妈”,意味着她生过一个小孩。时间中立的用语应用于现存的事件或物体,但不含有与过去或将来的东西的联系。例如,称某人“一个男人”不含有涉及过去或将来的内容。指称将来的用语通过规定现存事件或物体与某些将来的事件或物体的联系而应用于现存的事件或物体。例如,称一个女人“未来的妈妈”,意味着她将来要生小孩。历史语言含有丰富的指称过去的用语,但哲学家和逻辑学家对包含指称过去的用语的历史陈述的真值能否确定存在争议。

“就指称过去的用语而言,我指的是这样一个术语,将其正确地应用于现存的物体或事件,就在逻辑上包含着与某一更早的物体或事件的关系,这更早的物体或事件与这一术语所应用的物体或事件也许有因果联系,也许没有因果联系。”——丹托:《分析的历史哲学》,1965年,第71页。

家长主义

[源自拉丁词 *pater*, 意为父亲] 家长主义源于父母对自己孩子的关怀。在伦理学中,它意为某人干涉另一个人的自由,而相信他这样做正在促进他所干涉的那人的善,或使他所干扰自由的人免遭伤害,即使这个行动引起了那人的反对或抗议。家长主义受到自由主义的挑战,在现代社会一般被认为是对自由、自主和个人权

a violation of liberty, autonomy, and individual rights. It can be justified towards moral patients who do not have a sufficient degree of rationality to choose and act.

"Paternalistic intervention must be justified by the evident failure or absence of reason and will." — Rawls, *A Theory of Justice*, 1971, p. 250.

Pathetic fallacy

The term was introduced by John Ruskin in *Modern Painters*, vol. 3 (1856), referring to the alleged fallacy that projecting or ascribing human emotions, intentions, dispositions and thoughts to inanimate things as if they were really capable of these qualities. For instance, one is committing this fallacy if one says that weather is friendly or that the sea is angry. In general, it means the human tendency to project our subjective feeling caused by the external thing into the external thing itself.

"Pathetic fallacy... is the fallacy of treating a psychological relation as an independently existing property." — Sorensen, *Thought Experiments*, 1992, p. 128.

Pathos

[Greek: suffering, feeling or what happens to affect a person; plural, *pathe*; from *paschein*, to suffer, to undergo, to experience] For Aristotle, *paschein* and the contrasting *poiein* (to make, to do) are both categories. *Pathos* has a passive tone. In Greek, *pathos* is a changeable quality, but especially concerns extreme grief, misfortune or distress. As the feeling of an individual, it is also contrasted with *ethos* (communal feeling).

"By *pathe*, I mean appetite, anger, fear, confidence, envy, joy, love, hate, longing, jealousy, pity, in general whatever implies pleasure or pain." — Aristotle, *Nicomachean Ethics*, 1103b22-4.

Patriarchy

[from Greek: *pater*, father + *arche*, rule] Originally, a social system centred around an extended family with a male as its leader (patriarch). For many feminists, patriarchy is the universally perpetuated male power over women and male aggression toward women. They claim that a patriarchal attitude or prejudice runs through all economic and social institutions. Societies are often patriarchal in the sense that the male half of the population uses various deeply embedded means to control the female half. A main concern of radical feminism is to uncover the roots of patriarchy and to reveal its various representative forms.

"Patriarch is a name was coined to denote the universal domination of women by men." — Nyre, *Feminist Theory and the Philosophy of Men*, 1988, p. 95.

利的侵犯,但对于“道德被动者”则被看做是合理的。道德被动者即是缺乏足够的理性程度来选择行为的人。

“如有明显的理性或意志的缺失,家长主义的干涉就是合理的。”——罗尔斯:《正义论》,1971年,第250页。

感情误置

这个词由J. 拉斯金在其《现代画家》(第3卷,1856年)一书中引入,用来指称这样一种误置,即将人类的感情、意向、脾气和思想投射到或归到无生命的东西上,仿佛它们真的能够具有这些品性似的。例如,如果一个人说“天气友善”或“大海愤怒”,就犯了这种误置的错误。一般说来,这种误置就意味着这样一种人类倾向,它将我们由外物引起的主观感情投射到了外物本身上面。

“感情误置……是将心理关系当做独立的存在特性的错误。”——索仑森:《思想实验》,1992年,第128页。

感受

[希腊词,指遭受,情感或一切影响一个人所发生的事。复数是 *pathe*,它来自动词 *paschein* (遭受,经受,经验)] 在亚里士多德哲学中,*paschein* 与相反的动词 *poiein* (制作,做)都是范畴。感受具有被动的含义。在希腊文中,*pathos* 是一种可变的质,但特别是指极度的悲哀、不幸或痛苦。作为个人情感,它也与 *ethos* (公共情感)相对立。

“所谓感受,我是指欲望,愤怒,恐惧,信心,嫉妒,欢喜,爱,恨,盼望,羡慕,怜悯等一般而言隐含快乐或痛苦的东西。”——亚里士多德:《尼各马可伦理学》,1105b22—24。

父权制

[源自希腊文: *pater* (父亲)和 *arche* (统治)] 最初指的是围绕以一个男人为主导(父权)的扩大的家庭为核心的社会制度。对很多女性主义者来说,父权制是男权对妇女的普遍的永久性的压迫和男人对妇女的侵犯。他们认为父权制的看法或偏见贯穿于所有经济和社会的组织机构及其制度。从占人口半数的男人使用各种深藏的手段控制半数的妇女这种意义上讲,社会常常是父权制的社会。激进的女性主义主要关注的一个问题是揭露父权制的根源和展示其种种有代表性的形式。

“父权制是一个创造出来用以表示男人对妇女的普遍统治的名词。”——尼雷:《女性主义理论和男人的哲学》,1988年,第95页。

Peirce's thesis

The claim that the meaning of a sentence is determined by the evidence for its truth. In other words, the conditions of semantic evaluation supervene upon confirmation relations or confirmation relations are semantic relations. This is a form of verificationism which equates meaning with evidence. According to this theory, if two theories have different entailments, they differ with respect to what observation statements are true.

"Peirce's thesis just is the claim that confirmation relations constitute semantic relations and are therefore not contingent." —Fodor and Lepore, *Holism*, 1992, p. 51.

Per accidens

[Latin: by accident] A scholastic term for the accidents possessed by a substance or for the non-essential properties which a thing has but which it may lose without changing its nature. A *per accidens* predication is a predication in which an accident is predicated of a substance. A *per accidens* thing is either an accident or a composite of a substance and an accident. *Per accidens* contrasts with *per se* (Latin: by itself), which is a substance itself or is the essential property which a thing possesses and cannot lose without changing its nature. In scholastic philosophy, God alone is a being *per se* in the absolute sense, for anything else will have to depend on God for existence. Sometimes, *per se* means what is directly intended in an action, while *per accidens* is a result which is not directly intended.

"All that exists of another (*quod est per accidens*) comes back to what exists of itself (*quod est per se*)." —Aquinas, *Summa Theologiae*, Ia, 49, 3.

Per se, see *per accidens*

Percepta

The term for the properties which an observer actually perceives or observes. Percepta contrast with *percipienda*, the properties which we think that an object should appear to have, according to our knowledge of its nature and its position. When I watch a round tower from a distance, it is round according to *percipienda*, but might be square according to *percepta*. There are various forms of discrepancy between the *percepta* and *percipienda* of a given object. One may change while another not. This distinction is useful in discussing the nature of perceptual consciousness.

"I shall use the term 'percepta' or 'actually perceived properties' to refer to how the object actually appears to an observer." —Hirst, *The Problem of Perception*, 1959, p. 246.

皮尔士论题

它认为, 一个句子的意义是由证明其为真的证据所确定的, 换句话说, 语义评价的条件伴随着确证关系, 或者确证关系是语义关系。这是把意义等同于证据的一种证实主义形式。根据这种理论, 如果两个理论有着不同的内容, 那么它们在为真的观察陈述方面也是不同的。

"皮尔士论题只是认为, 确证关系构成了语义关系, 因而它们不是偶然的。" ——福多和拉普:《整体论》, 1992年, 第51页。

偶性地

[拉丁语, 偶性地] 经院哲学术语, 指实体具有的偶性, 或指一物具有但如果失去不会改变该物本性的那种非本质特性。*Per accidens* 的述语是实体由偶性陈述的述语, *Per accidens* 的事物或指偶性, 或指实体和偶性的合成物。*Per accidens* 对应于 *per se* (拉丁语, 由自身), 而 *Per se* 指实体本身, 或指一物具有且不能失去, 否则会改变该物本性的那种本质特性。在经院哲学中, 只有上帝能是绝对意义上的 *per se* 的存在, 因为其他的任何事物将不得不依赖上帝才能存在。有时, *per se* 意指在行为中直接企图的东西, *per accidens* 则是不直接企图的结果。

"由偶性而存在的一切, 都背对由自身而存在的东西。" ——阿奎那:《神学大全》, Ia, 49, 3。

由自身

见“偶性地”条。

实际知觉特性

指一个知觉者真正知觉或观察到的特性。它与“应当知觉特性”相对, 后者是我们根据我们关于客体的本质和地位的知识认为一个对象应当看起来具有的特性。当我从远处看一个圆形的塔时, 根据应当知觉特性它是圆的, 但根据实际知觉特性它却可能是方的。一个给定对象的“实际知觉特性”与“应当知觉特性”之间有各种不同形式的差异。其中的一个可能发生变化, 而另一个却没有变化。这一区分在关于知觉意识的讨论中是有用的。

"我将使用‘实际知觉特性’或‘实际知觉到的特性’这一术语来指对象对一个观察者所真正呈现的样子。" ——赫斯特:《知觉问题》, 1959年, 第246页。

Perception

The faculty of being aware of the world, the contents of sensory experience, and what is perceived. Perception involves both our capacity to be sensorily affected by external objects and our ability to bring these objects under concepts, although other capacities might also have a role to play. The analysis of perception and the attempt to deal with sceptical arguments about perceptual knowledge are central philosophical topics, in particular in epistemology. A major problem is whether we directly perceive sense data or the external physical world. This is related to problems about nature of the external world and our knowledge of it. Perception is the area where scepticism functions actively and where the distinction between phenomenalism and realism is sharply drawn. There are various positions about how to understand perception, such as the causal theory of perception, the representative theory of perception, and various forms of perceptual realism. There are also competing accounts of the relations between perception and belief and between perceptual knowledge and inferential knowledge.

“‘Perception’ is a generic term which may be defined disjunctively as either seeing or hearing or touching or ... etc. Perception, in short, is awareness of the external world through the senses.” —Pap, *Elements of Analytic Philosophy*, 1949, p. 120.

Percepts

Sometimes identified with sense-data. Whereas sense-data directly represent particulars and concrete items, percepts are closer to subjective states in an act of perception. Percepts are contrasted with concepts, which are the abstractions in thinking.

“The immediate object of all knowledge and all thought is, in the last analysis, the percept.” —*Collected Papers of Charles Sanders Peirce*, 1933, 4: 538.

Perceptual consciousness

The consciousness which is presented in the same way in normal perception, illusion and hallucination. The term is introduced by H. H. Price in order to deal with the relation in perception between sense-data and material objects and to uncover the nature of perceiving. However, the nature of perceptual consciousness itself is disputed. Some philosophers believe that it consists in seeing a datum and judging or inferring that the datum belongs to a material object. For others, including Price, perceptual consciousness senses a datum and takes it for granted that it belongs to a material object.

The dispute between “judging” and “taking for granted” in an account of perceiving is characteristic of many philosophical arguments in which slight verbal differences signal important theoretical conflicts.

知觉

意识这个世界的官能，感性经验的内容和所感觉到的东西。知觉既是指我们受外界对象感性影响的能力，也是指把这些对象归属于概念的能力，虽然其他的能力也起这种作用。对知觉的分析和解决有关感性知识的怀疑主义论证，是主要的哲学论题，尤其是在认识论中。一个主要的问题是，我们是否可直接感觉到感性材料或外部的客观世界。这是与外部世界和我们对外部世界的知识相关的问题。正是在这个知觉领域，怀疑论极为活跃，现象论和实在论的区分鲜明。关于理解知觉有许多理论，诸如知觉的因果论，知觉的反映论，和各种形式的知觉实在论。关于知觉与信念的关系、感性知识和推理知识的关系也有许多讨论。

“‘知觉’是一个一般性概念，可分别界定为看、听、接触、或……等等。总之，知觉是通过感官对外部世界的意识。”——帕普：《分析哲学原理》，1949年，第120页。

知觉对象

有时等同于“感觉材料”。感觉材料直接代表殊相和具体的东西，而知觉对象则与知觉活动中的主体状态更为接近。“知觉对象”与概念相对，后者指思维中的抽象物。

“在最终的分析中，所有知识和思维的直接对象是知觉对象。”——《C. S. 皮尔士文集》，1933年，第4卷，第538页。

知觉意识

与在正常的知觉、错觉和幻觉中相同的方式呈现的意识。H. H. 普赖斯提出这个术语是为了处理知觉中感觉材料和物质对象之间的关系，发现知觉活动的性质。然而，知觉意识的性质本身引起了争议。有的哲学家认为，它由看见一感觉材料，判断或推论出感觉材料属于物质对象构成。包括普赖斯在内的其他人认为知觉意识感觉到一感觉材料，并认为它属于物质对象是不言而喻的。

在说明知觉行为时，“判断”和“视为不言而喻”之间的争执是许多哲学论证中的典型特征，其中一点微小的言词差别都标志着重大的理论冲突。

“我们必须为我们已经谈论过的意识的非感觉方式找到某个名称。至于现在，我们将简单

"We must find some name for the non-sensuous mode of consciousness of which we have spoken. For the present we shall simply call it 'perceptual consciousness'." --H. H. Price, *Perception*, p. 25.

Perceptual knowledge

Knowledge about the world around us acquired through the activation of our sense organs, especially our eyes. We know that we can cross the street when we see that the traffic light is green. Perceptual knowledge is concerned with perceptual facts, and so must be distinguished from the perception of simple objects. It is not sensation, pure perception or mere acquaintance. Perceptual knowledge is associated with previously acquired ideas. A proposition of the form "S knows that P" reports perceptual knowledge if P is a perceptual proposition. It is controversial whether sense perception itself can lead to justified beliefs. While direct realism insists that experience itself can provide the justification required for this kind of knowledge, many other philosophers believe that such knowledge must involve some background knowledge or assumptions about connecting regularities which might be gained by inductive inference from past observations.

"Perceptual knowledge is knowledge that one sees or hears or smells or tastes or feels some specific sort of non-mental thing (s) or state (s) of affairs or event (s)." --Ginet, *Knowledge, Perception and Memory*, 1995, p. 82.

Percipienda, see *percepta*

Perennial philosophy, English expression for *philosophia perennis*

Perfect duty, see *imperfect duty*

Perfection, the principle of, another expression for the principle of the best

Perfectionism

The ethical position which claims that the good of human actions consists in whether they promote the maximal realisation of human excellence, measured by the ideal standards of perfection in fields such as art, science and culture. This theory presupposes that there are certain kinds of activities or experiences that possess the highest values and the deepest significance and encourages people to pursue these activities and experiences. It supposes that some human beings are intrinsically inferior to other human beings and that some forms of human life are intrinsically inferior to other forms of human life. Hence it endorses an aristocratic view of

地将其称为‘知觉意识’。”——普赖斯：《知觉》，1961年，第25页。

知觉知识

通过我们的感官活动特别是眼睛的活动而得到的关于我们周围世界的知识。我们知道，当我们看到交通灯是绿的时候，我们就可以穿越街道。知觉知识关心的是知觉的事实，因此必须把它与关于简单对象的知觉区分开来。它不是感觉、纯粹的知觉或简单的感性认识。知觉知识是与先前获得的观念相联系的。如果P是一个知觉命题的话，那么，一个具有“S知道P”这种形式的命题表达的就是知觉知识。但对感性知觉本身是否能够带来得到辨明的信念，这尚有争论。直接的实在论坚持认为，经验本身就可以产生这种知识所需要的阐明，而其他许多哲学家则相信，这种知识必定包含了有关连接规律的背景知识或假设，这些规律是可以通过对过去观察的归纳推理得到的。

“知觉知识就是人们看到、听到、闻到、尝到或感觉到某种特殊的非心的事物或事态或事件的知识。”——吉内特：《知识、知觉和记忆》，1995年，第82页。

应当知觉特性

永恒哲学

“永恒哲学 (*philosophia perennis*)”的英文词。

完全职责

见“不完全职责”条。

最完善世界原则

“最好世界原理”的另一表述。

完美主义

这种伦理立场主张，人类行为的善在于是否有利于人类的卓越的最大实现，其衡量的尺度就是在诸如艺术、科学、文化领域里的完美的理想标准。这个理论的前提条件是，某种活动或经验具有最高的价值和最深的意义，并鼓励人们追求这些活动和经验。它设定某些人是内在地低于其他人的，并认为有些人类生活的方式是内在地低于其他方式的。因此它赞成有关人类社会的贵族观而反对平等主义。它认为一个社会应当安排得可以最大程度地获得人类的卓越。罗尔斯用这个概念指亚里士多德和尼采持

human society and is opposed to egalitarianism. It argues that a society should be so arranged as to maximise the achievement of human excellence. John Rawls employed this term to refer to the position held by Aristotle and Nietzsche. Rawls argues that since the notion of intrinsic value is controversial, perfectionism should be bypassed as a political principle.

"Teleological doctrines differ, pretty clearly, according to how the conception of the good is specified. It is taken as the realisation of human excellence in the various forms of culture, we have what may be called perfectionism." — Rawls, *A Theory of Justice*, 1971, p. 25.

Performance and competence, see competence and performance

Performative

Austin's term for utterances which are contrasted with ordinary statements, or constatives. The distinction mainly consists in two aspects. First, while a constative merely states an independently existing fact, a performative utterance, such as "I name this ship the Queen Elizabeth", or "I bet you sixpence it will rain tomorrow", does not describe anything, but constitutes an action. Such sentences actually do something in the appropriate circumstances, that is naming or betting. Secondly, while the truth or falsity of a constative is determined by the distinct fact or state of affairs it describes, a performative is open to assessment according to whether it is a happy or unhappy act, not in terms of truth and falsity. Austin made a great effort to establish a clear-cut distinction between constatives and performatives because he believed that many philosophical problems have arisen because people do not understand the nature of performatives. But Austin was unable to find a satisfactory criterion for performatives, and he gave up this distinction in favour of his theory of illocution in *How to Do Things With Words*.

"The name [performative] is derived, of course, from 'perform', the usual verb with the noun 'action'; it indicates that the issuing of the utterances is the performing of an action—it is not normally thought of as just saying something." — Austin, *How to Do Things with Words*, 1962, pp. 6-7.

Performative theory of truth

A form of deflationary theory of truth, ascribed to Peter Strawson. It claims that the truth predicate is used not to describe things, but to perform certain speech acts such as agreeing, conceding or endorsing. By saying "That is true" we agree or endorse another speaker's utterance. The primary characteristic of truth is to perform this endorsing or confirmatory speech function. The theory is also called the *amen theory of truth*.

有的观点。罗尔斯认为,由于内在价值的概念是易于引起争议的,完美主义不应作为一个政治原则。

“很明显,根据怎样说明善的概念,目的论的学说是不同的。它被看做是在不同形式的文化中的人类卓越的实现,这样我们就有了所谓完美主义。”——罗尔斯:《正义论》,1971年,第25页。

运用和能力

见“能力和运用”条。

完成行为式

奥斯汀的术语,是指与普通陈述或记述式相对而言的话语。这种区别主要有两个方面:首先,记述式只是陈述独立存在的事实,而完成行为式话语,诸如“我命名这条船为伊丽莎白号”或“我向你赌六个便士明天下雨”,它们并没有描述任何东西,而只是构成了一种行为。这种语句实际上是在某种恰当的场合做某个事情,即命名或打赌。其次,记述式的真假是由它所描述的事实或事态决定的,而对完成行为式的评价则以得体或不得体,而不是以真假为标准的。奥斯汀竭尽全力地确立记述式与完成行为式之间的明确区分,因为他相信,许多哲学问题的出现都是由于人们不了解完成行为式的性质。但奥斯汀无法找到一种令人满意的完成行为式标准,所以他在《如何以言行事》中放弃了这种区分而采取他的以言行事理论。

“这个名称[完成行为式]当然来自‘行动’,即名词‘行为’的普通动词形式;它表明,说出话语就是在完成行为——这并不是通常认为的那种只是说出某些东西。”——奥斯汀:《如何以言行事》,1962年,第6—7页。

真理履行论

真理紧缩(deflationary)论的一种形式,由P. 斯特劳森提出。它宣称,真谓词不是用来描述事物的,而是用来展示某种言语行为的,如同同意、承认、赞成等。通过说“那是真的”,我们就同意或赞成了另一个说话者的话语。真理的首要特征就在于这种赞成或肯定的言语功能。这种理论亦称“真理的阿门(amen)理论”。

“较不熟悉的情形是斯特劳森对真理的履

"A less familiar case is Strawson's performative account of truth. This turns on ... the fact that by saying 'That is true' we can endorse an utterance made by another speaker." — Price, *Facts and the Functions of Truth*, 1988, p. 26.

Peripatetics

A term applied to Aristotle and his pupils. According to tradition, the term was derived from *peripatein* (to walk about) because Aristotle and his pupils were said to spend long periods every day walking up and down discussing advanced philosophical questions in the garden of the Lyceum, the school Aristotle founded in 335, BC. But according to another account, the term was derived from *peripatos* (covered walking hall), which was a part of the Lyceum. The Peripatetics whose names are known include Theophrastus of Eresus, Strato of Lampsacus and Eudemus of Rhodes. If the chief characteristic of Plato's Academy was its mathematical achievement, the Peripatetics contributed greatly to various natural sciences, in particular to botany, biology and medicine. In the Hellenistic period, the Peripatetics, Academics, Stoics and Epicureans were the four major schools in Athens.

"The Peripatetic school, as an institution comparable to the Academy, was probably not founded until after [Aristotle's] death. But with some distinguished students and associates he collected a natural history museum and library of maps and manuscripts ... and organised a program of research which inter alia laid the foundation for all histories of Greek natural philosophy, mathematics and astronomy, and medicine." — Owen, *Logic, Science and Dialectic*, 1986, p. 151.

Perlocutionary act

Austin's term for his third kind of speech act. While locutionary acts are concerned with meaning, and illocutionary acts are concerned with the way an utterance is taken, perlocutionary acts are linguistic acts which by saying something with design or intention, bring about specific effects on the feelings, thoughts or behaviour of the hearers, for example, persuading or convincing someone to do something. It is essentially a consequential act.

"Saying something will often, or even normally, produce certain consequential effects upon the feelings, thoughts or actions of the audience, or of the speaker, or of other persons ... We shall call the performance of an act of this kind the performance of a perlocutionary act or perlocution." — Austin, *How to Do Things with Words*, 1962, p. 101.

Perseity - see aseity

行式说明。这依赖于……下述事实，即通过说‘那是真的’，我们能够赞成另一个说话者所说的话语。”——普赖斯：《事实和真理的功用》，1988年，第26页。

散步学派

此名用以指亚里士多德及其学生（或译作“逍遥学派”）。根据传统，该词出自 *peripatein*（散步，漫步），据说亚里士多德和他的学生每天花许多时间在里克昂（亚里士多德于公元前335年所创的学校）的花园中边散步边讨论高深的哲学问题。可另一种说法是，该词出自 *peripatos*（有顶的散步廊）。那是里克昂设施的一部分。著名的散步学派成员包括爱里苏斯的泰奥弗拉斯多、朗伯塞库斯的斯特拉多及罗特的欧德谟斯。如果柏拉图学院派的主要特征是其数学成就，散步学派则对众多自然科学贡献良多，尤其是在植物学、生物学和医学方面。在晚期希腊时代，散步学派与学院派、斯多亚派和伊壁鸠鲁派一起是雅典的四个主要学派。

“散步派学派，作为一个可与学院相比的机构，可能是在[亚里士多德]死后才建立的。但与他的一些杰出的学生和助手一起，亚里士多德收集了一个自然史博物馆，一个藏有地图和手稿的图书馆……还组织了一个研究项目，这一项目的众多贡献之一是奠定了希腊自然哲学、数学、天文学和医学的历史基础。”——欧文：《逻辑、科学和辩证法》，1986年，第151页。

以言取效的行为

奥斯汀所说的第三种言语行为。以言表意的行为关心的是意义，以言行事的行为关心的是说出一句话所用的方式，而以言取效的行为则是语言行为，这种行为通过说出带有设想或意图的东西，对听者的情感、思想或行为产生特别的效果。例如，敦促或确信某人做某事。这基本上是一种后果性的行为。

“说出什么东西，通常会或往往会对听众、说者或其他人的情感、思想或行为产生一定的后果……我们把运用这种行为称作运用以言取效的行为或以言取效。”——奥斯汀：《如何以言行事》，1962年，第101页。

自主

见“自足性”条。

Person

[from Latin: *persona*, mask or actor, a man's role or dignity in relation to other men] In theological usage, *persona* is the equivalent of the Greek *hypostasis* (standing under) and is closely related to the notion of *ousia* (substance). For Boethius, a person is an individual substance of a rational nature.

Locke argued that consciousness provides the criterion of being the same person over time, although being a person presupposes having a body. Locke in turn identified consciousness with memory. He also held that person is a forensic notion that is related to responsibility and to reward and punishment. Hence in a legal sense, there can be artificial persons, like companies, as well as natural persons, so long as persons have legal responsibility and status. For Descartes and later dualists, a person is a combination of a mind and a body that are essentially distinct. In contrast, Strawson held that "person" is a logically primitive technical term. A person owns both states of consciousness and bodily characteristics, but cannot be reduced either to something mental or to something physical. The concept of a person is presupposed by both physical states and state of consciousness. Strawson's arguments have led to much discussion and have helped to place the nature of a person as a central topic in contemporary metaphysics.

Metaphysics usually discusses persons rather than human beings, partly to leave conceptual room for non-human persons and partly to avoid giving too much emphasis to biological classification in forming the concept of a person. Some forms of species-based naturalism would challenge both of these motives. The notion of a person implies that the central phenomena of personhood, such as thinking, experiencing, acting and having moral worth are related to one another, although many philosophers would defend the status of severely brain-damaged human beings as persons.

"What I mean by the concept of a person is the concept of a type of entity such that both predicates ascribing states of consciousness and predicates ascribing corporeal characteristics, a physical situation, &c. are equally applicable to a single individual of that single type." —Strawson, *Individuals*, 1959, pp. 101-2.

Person-affecting restriction

A position which claims that the evaluation of moral choices should appeal to the outcome produced by the choices for the persons affected. If choice A brings a worse outcome than choice B to at least some specific individuals and if choice B does not bring a worse outcome than choice A to any specific individuals, then choice A is worse than choice B. According to Derek Parfit, such a restriction can be applied universally in moral areas. Many choices, particularly those involving the interests of future generations, cannot be

人

[源自拉丁文 *persona* (面具或演员), 一个人在与他人关系中的角色或尊严] 在神学的用法中, *persona* 是希腊词 *hypostasis* (处在……之下) 的对应词, 与 *ousia* (实体或本体) 的概念有密切关系。在波埃修斯看来, 一个人就是一个具有理性本质的单个实体。

洛克论证说, 虽然要成为一个人必须先要有身体, 但是, 意识为某个人在一段时间后仍为同一个人提供了标准。洛克转而又将意识等同于记忆。他还认为人的概念是与责任、赏罚相关的论辩的概念。因此, 在法律的意义, 既可以有自然人, 也可以有人为的人, 如各种公司, 只要这些“人”有法律责任和地位。对于笛卡尔和后来的二元论者来说, 一个人就是在本质上截然不同的心与身的结合。与此相反, 斯特劳森认为, “人”是一个逻辑上原始的专用词。一个人拥有意识状态和肉体特性两者, 但是他既不能还原为心的东西, 也不能还原为物的东西。人的概念是以物理状态和意识状态两者为先决条件的。斯特劳森的证明引起了许多讨论, 使得人的性质问题被确立为当代形而上学的中心论题。

形而上学通常讨论人而不讨论人类, 部分是为了在概念上给非人类的人 (non human persons) 留出余地, 部分是为了避免在形成人的概念时过分强调生物学上的分类。某些形式的自然主义是以物种为根据的, 它们会向上述两种动机提出异议。人的概念意味着, 人的主要现象, 诸如思维、经验、行动、具有道德价值等, 都是互相关联的, 尽管许多哲学家会捍卫人类中严重脑损伤者仍具有的人的地位。

“我用人的概念指的是那样一种类型的存在物的概念, 即属于意识状态的谓词和属于肉体特性、物理状态等的谓词, 都可以同样用于那个单独类型〔存在物〕的一个单一个体上。”——斯特劳森:《个别物》, 1959年, 第101-102页。

人的影响的限定

这一见解认为, 道德选择的评价应诉诸于这些选择对受影响的人所产生的结果。如果至少对某些具体的人而言, 选择A产生了一个比选择B更坏的结果; 如果对任何具体的人而言, 选择B没有产生一个比选择A更坏的结果; 那选择A就比选择B更坏。按照D. 帕菲特的看法, 这种限定可被普遍应用于道德领域。很多选择, 特别是那些包含后代人利益的选择, 不能由它们对未来个人的影响来判断, 因为我

judged by their effects on future individuals because we have no way of telling what individuals there will be.

"The Person-affecting Restriction: This part of morality, the part concerned with human well-being, should be explained entirely in terms of what would be good or bad for those people whom our acts affect." —Parfit, *Reasons and Persons*, 1984, Set. 134.

Personal identity

In a popular sense, personal identity is determined by the fundamental values, loyalties, associations and aims of a person's life. In contrast, the philosophical investigation of personal identity seeks to explain the criteria by which an individual is identified as the same person at different times, in spite of having changed characteristics. The problem of personal identity (also called the problem of the self or the problem of self-identity or the problem of self-knowledge) arises from the difficulties in accounting for how the ascription of personal identity is justified. Since the discussion of personal identity concentrates on the necessary and sufficient conditions under which we recognise or re-identify a person, the problem is also called the problem of the criteria of personal identity, although criterial relations can be looser than those set out by necessary and sufficient conditions.

Locke and Hume provided two classic discussions of personal identity. Locke claimed that the criterion of personal identity is consciousness, in particular memory. His position has been attacked as not providing sufficient conditions for personal identity by those who argue that personal identity is impossible without bodily continuity. Moreover, Locke's view seems circular if we distinguish between genuine memory and apparent memory. The memory test of personal identity seems to fail because genuine memory presupposes identity rather than providing an independent test for identity.

According to Hume, we perceive nothing but impressions and ideas and do not have an impression or idea of a unique and simple self. He therefore maintains that the notion of personal identity is a fiction. What we really have is a bundle or collection of particular perceptions, which we ascribe without justification (and perhaps without need of justification) to a continuing self.

Contemporary discussion is characterised by sophisticated testing of the arguments for the bodily criterion and the memory criterion of personal identity. Discussion has been shaped by considerations of the logic of identity, which is an all or nothing relationship and a relationship which blocks two distinct entities at the same time from being identical with one another. In particular, thought experiments about split-brains indicate that an apparent advantage for the bodily criterion is illusory. The English philosopher Derek Parfit argues that attempts to cope with the problem of personal identity fail, but that what is really important to us is conti-

们无法说出将来的个人是什么样的。

“人的影响的限定：道德的这一部分，即涉及人的幸福的部分，应当完全以对受我们影响的那些人将是好是坏来解释。”——帕菲特：《理性与人》，1984年，第134节。

人格的同一性

在通常的意义上，人格的同一性是根据一个人生活中的基本价值、忠诚、交际和目标来确定的。与此相对照，哲学对人格同一性的探讨力图对一些标准作出说明，根据这些标准，一个人被认为在不同时间里是同一个人，而不管他的特点已经改变。人格同一性问题（也称作“自我等同问题”、“自我同一性问题”或“自我认识问题”）是在说明人格同一性的归因如何得到证明时所遇到的困难中产生的。既然对人格同一性的讨论集中在我们辨认或再认一个人时所依据的充要条件上，所以，这个问题也被称作人格同一性的标准问题，尽管标准关系可能不如根据充要条件表示的关系那么严格。

洛克和休谟提出了关于人格同一性的两个经典讨论。洛克声称，人格同一性的标准是意识，尤其是记忆。他的主张受到了抨击，因为它没有提供人格同一性的充足条件，那些抨击他的人论证说，没有肉体的持续，人格的同一性是不可能的，而且，如果我们将真正的记忆和表面的记忆区分开来，洛克的观点似乎陷入了循环。对人格同一性的记忆检验似乎是不成功的，因为真正的记忆是以同一性为先决条件的，而不是提供对同一性的独立检验。

根据休谟的观点，我们知觉的只是印象和观念，而且我们没有惟一而简单的自我的印象或观念。因此他坚持认为，人格同一性的概念是一个虚构。我们实际具有的是一把或一束特殊的知觉，我们没有正当理由（或许不需要正当的理由）就将它们归于一个持续自我。

当代的讨论是以细致地检验对人格同一性的肉体标准和记忆标准的各种证明为特征的。讨论体现为对同一性逻辑的考察。同一性逻辑是一种或者全有或者全无的关系，一种阻止两个截然不同的实体同时互相等同的关系。尤其对裂脑人的思想实验表明，肉体标准的表面优势是虚幻的。英国哲学家D. 帕菲特论证说，解决同一性问题的尝试虽然失败了，但是，对我们真正重要的是在我们的生活中的持续性与关联性和我们作为人的生存。他声称这些事情可以被理解，而同时又避免了人格同一性的僵化。其他一些哲学家认为，对人格同一性的讨论应当更贴近于科学，而不是当前许多讨论中引进的对各种事例的科学虚构。奎因已经证明，人格的

nuity and connectedness in our lives and our survival as a person. He claims that these matters can be understood while avoiding the rigidities of personal identity. Other philosophers hold that the discussion of personal identity should be closer to science than to the science fiction of the examples introduced in many recent discussions. Quine has argued that the problem of personal identity adds nothing important to the more general problem of identity.

Personal identity is intensively discussed in contemporary philosophy for its own sake, but also because it is related to other major issues, such as dualism, survival and immortality, self-knowledge, responsibility, morality and the self.

"Philosophers are continuing the long-standing debate as to whether personal identity should be analysed in terms of the identity of the relevant bodies or in terms of some sort of continuity of memory and character." —Brody, *Identity and Essence*, 1980, p. 3.

Personalism

Also called personism, a philosophical movement that flourished in the early part of the twentieth century in the United States, with G. H. Howison, B. P. Bowne and E. S. Brightman as its leading proponents. According to its central doctrines, persons are ontologically ultimate and personality has the highest value. Experience, which discovers meaning, belongs to some self. All hypothetical and inferred entities must be reduced to the experience of a self, with their truth tested by their coherence with the total data of experience. Reality as a whole is an expression of a universal personal consciousness, and characteristics possessed by persons and their personality are the fundamental elements in the explanation of reality. For personalists, God is the external person who constitutes the most coherent value of all interactions.

Personalism, which has developed over the last two centuries, can be traced back to the theological use of the notion of person. The Greeks associated person and *hypothesis* (standing under) with the notion of *ousia* (substance). As a consequence, personalism has been integrally connected with theism, holding that God is the transcendent person and the creator of all other persons. Personalism has had realistic, absolutist, idealistic, pantheistic and other forms, many of which can be viewed as varieties of idealism. The exploration of human existence in existentialism and phenomenology has been influenced by personalism.

In a related use, personalism concerns ideas developed by the French philosophers and theologians E. Mounier, J. Maritain and E. Gilson, who claimed that God is an infinite person in contrast to finite persons like ourselves and that the autonomy and value of the person is of supreme importance.

The term personalism also designates the philosophy of

同一性问题并未给更基本的同一性问题增加任何重要东西。

在当代哲学中,人格的同一性因其本身之故被认真讨论,不过,这也是因为它与其他一些主要论题有关系,诸如二元论、生存和不朽、自我认识、责任、道德和自我等论题。

“哲学家们继续对人格的同一性应当根据有关的身体的同一性来分析,还是应当根据记忆和性格的某种持续性来分析,进行了长期的争论。”——布洛迪:《同一性和本质》,1980年,第3页。

人格主义

亦称 personism, 20 世纪上半叶流行于美国的一个哲学运动,主要倡导者有 G. H. 霍维森、B. P. 鲍恩和 E. S. 布赖特曼。根据它的核心学说,人在本体论意义上是第一的,人格具有最高价值。发现意义的经验属于某个自我。因此,一切假设的和推论的实体,连同靠它们与总体的经验材料的一致而被检验的真理,都必定被化归为自我的经验。作为整体的实在是普遍的个人意识的表现,个人具有的性格特征和人格是实在解释中的根本要素。在人格主义者看来,上帝是外在的人格,他构成一切相互作用的最有凝聚力的价值。

在上两个世纪得到了系统发展的人格主义,能被追溯到人之观念的神学运用。希腊人把“人”和本在(*hypothesis*,直译为“站在下面”)与本体(*ousia*)的观念相结合。结果,人格主义内在地与有神论相结合,认为神是超验的人,是一切其他人的创造者。人格主义有实在论、绝对论、观念论、泛神论和其他形式,其中的许多形式能被认作是观念论的不同种类。存在主义和现象学对于人类存在的探究,深受人格主义的影响。

人格主义还有一种相关的用法,指由法国哲学家和神学家 E. 穆尼埃、J. 马里旦和 E. 吉尔松等人发展的观念。他们主张,上帝是无限的人格,对应于像我们自己一样的有限人格,这种人格的自主和价值是最为重要的。

“人格主义”一词也指称由拉姆塞和德·费莱蒂开创,由沙伐奇发展的概率哲学。按照他们的观点,概率不是被发现的某种客观的东西,而是对命题真实性确信程度的一种人格表现。

“人格主义或人格论是这样的哲学理论:—

probability initiated by Ramsey and de Finetti and developed by L. J. Savage, according to which probability is a personal expression of a degree of confidence in the truth of a proposition and not something objective to be discovered.

"Personalism or personism is the philosophical theory that a person is (or many persons are) the supreme reality, i. e. highest in value and dominant in power." —Werkmeister, *A History of Philosophical Ideas in America*, 1949, p. 326.

Personality

The general character of being a person or the distinctive features of mind and character of an individual person. As a biological concept, personality is related to species membership. Philosophers of mind and philosophers of psychology are interested in personality as a psychological concept dealing with psychological functions, abilities and capacities. Moral philosophers are interested in ethical personality. Political and social philosophers are concerned with persons in relation to political or social entities. The conception of personality thus has different levels.

"Personality is the totality of human potentialities, activities, and habits organized by the person in the active pursuit of his self ideal." —Arnold, in Mischel (ed), *Human Action*, 1969, p. 196.

Perspective

The term Russell uses to refer to all the momentary sets of data, both perceived and unperceived, which present the universe from a certain point of view. In doing so he uses the subjective data of psychologists in their classification of particulars which correspond to the "things" used by physicists to classify objects. The actually perceived perspective is called by Russell a "private world", that is the view of the world which a percipient has at any given moment. The totality of perspectives in an individual's life is that person's "biography".

"The assemblage of all my present objects of sense, which is what I call a 'perspective'." —Russell, *Mysticism and Logic*, 1918, p. 139.

Persuasive definition

A term introduced by Stevenson. In defining terms which have both descriptive meaning (referring to qualities in things), and strongly emotive meaning (expressing or arousing affective or emotional states), we alter the descriptive meaning but keep the emotive meaning unchanged in the term's application. The purpose of persuasive definition is, consciously or unconsciously, to secure a change in people's attitudes and interests. The speaker introduces a new sense which the hearer accepts without being aware that he is being influenced. For example, when Hitler claimed that "national

人格(或多个人格)是至上的实在,即在价值上最高,在力量上最具支配性。”——韦克美斯特:《美国哲学观念史》,1949年,第326页。

人格

作为一个人的·一般性格或心灵的独特特征和个人的性格。作为生物学概念,人格与种族成员相关。心的哲学家和心理学的哲学家乐于把人格作为研究心理学功能、才能和能力的心理学概念。道德哲学家感兴趣于伦理上的人格。政治的和社会的哲学家关注与政治或社会存在体相联系的个人。这样,人格概念具有不同的层次。

“人格是个人在对他自身理想的积极追求中所形成的人的潜能、活动和习惯的全体。”——阿诺德,见米谢尔:《人类活动》,1969年,第196页。

视域

罗素用此术语来指一切短暂的感觉材料集合,不管是知觉到的还是未知觉到的,它从某个特定的角度呈现了宇宙。罗素在这样使用此术语时,用到了心理学家在对殊相做分类时用的主观材料,它们对应于物理学家在对对象分类时用到的“事物”。罗素把实际知觉到的视域称为“私人世界”,这是一个知觉者在任意特定时刻所具有的世界观。个人生活中的整个视域就是此人的“传记”。

“我的全部当下感觉对象的集合,就是我称为的‘视域’。”——罗素:《神秘主义和逻辑》,1918年,第139页。

劝说定义

斯蒂文森所采用的术语。在定义那些既有描述意义(指一个事物的性质)又有很强的情感意义(表达或唤起情感状态)的术语时,我们可在该词的运用中改变其描述意义但保持其情感意义不变。劝说定义的目的是有意无意地寻求人们的态度和兴趣的改变。说者引入一种新的意义,听者接受了但没有意识到他已经受到了影响。例如,当希特勒宣称“国家社会主义是真正的民主”时,他正在运用一种劝说定义。

“劝说定义,如运用得巧妙,旨在重新引导

socialism is true democracy", he was employing a persuasive definition.

"A persuasive definition, tacitly employed, is at work in redirecting attitudes." —Stevenson, *Ethics and Language*, 1944, p. 213.

Pessimism

[from Latin; *pessimus*, the worst] A term originally used for Schopenhauer's world-view in *The World as Will and Representation* (1844). He believed that this world is the worst of all possible worlds because it is determined by blind and irrational will. Hence hope is unreasonable, and life is nothing, empty, meaningless and painful. The term also applies to philosophies which emphasise nihilism, nothingness, anxiety, absurdity, and death, for example those of Nietzsche, Heidegger and Sartre. In common use, pessimism is a negative and despondent attitude which focuses on the least hopeful side of situations. In contrast, optimism is a hopeful attitude which sees the world as meaningful. In a form proposed by Leibniz, optimism claims that this world is the best of all possible worlds.

"There are unhappy men who think the salvation of the world impossible. Theirs is the doctrine known as pessimism." —William James, *Pragmatism*, 1955, p. 184.

Petitio principii, The Latin term for begging the question.

Phantom limb

A phenomenon which was first described and investigated by Descartes. If one's arm is amputated, one may afterwards feel that it is still there and feel pain in the non-existent fingers, wrist and forearm. This is because the nerves which previously connected the arm to the brain and which remain in the untouched part of the limb continue to send impulses like those normally caused by external stimulations. This phenomenon seems to have raised two problems for the philosophy of perception. First, it seems to indicate that sensations occur only in the brain and that the mind is not immediately affected by all parts of body, but only by the brain. Secondly, the mental states of phantom limb patients can be explained by psycho-physical laws. The pain this patient feels is akin to an hallucination. This last point suggests problems for the representative theory of perception.

"The brain— or some part of it— inadvertently played a mechanical trick on the mind. That was Descartes' explanation of phantom-limb hallucinations." —Dennett, *Consciousness Explained*, 1991, p. 8.

Phenomenal property, see qualia

态度。”——斯蒂文森：《伦理学与语言》，1944年，第213页。

悲观主义

[源自拉丁文 *pessimus*, 最坏的] 这一术语最初用来指叔本华在《作为意志和表象的世界》(1844)一书中阐述的世界观。他认为这个世界是所有可能的世界中最坏的世界，因为它是被盲目的和非理性意志所决定的。因此，希望是非理智的，生活是虚无的、空洞的、无意义的和痛苦的。这一术语也被用于那些强调虚无主义、虚幻、焦虑、荒谬和死亡的哲学，例如尼采、海德格尔、萨特的哲学。在通常的用法中，悲观主义是一种只看到事情最无希望一面的消极失望的态度。相比之下，乐观主义是一种把世界看做富有意义的怀有希望的态度。在莱布尼茨提出的一种形式中，乐观主义声称这个世界是所有可能世界中的最好的。

“一些不幸福的人认为拯救这个世界是不可能的。他们的看法被认为是悲观主义。”——詹姆斯：《实用主义》，1955年，184页。

窃取论题

“窃取论题 (begging the question)” 的拉丁词。

幻肢

由笛卡尔首先描述和研究的一个现象。如果一个人的手臂由于某种原因被截掉，这个人可能以后还会感到手臂仍在那里并感到不存在的手指、手腕和前臂在疼痛。这是因为保存在肢体未损坏部分的先前连结手臂与大脑的神经仍在传递通常由外部刺激所引起的冲动。这一现象对知觉哲学提出了两个问题。其一，它似乎表明感觉只发生于大脑，亦即，心不是直接受身体所有部分的影响，而只是受大脑的影响。其二，幻肢患者的心的状态可以用心物定律来解释。这个病人所感到的疼痛类似于幻觉。这最后一点对知觉的表征理论提出了一个问题。

“大脑——或它的某一部分——无意地对心玩了一个花招。那就是笛卡尔对幻肢幻觉的解释。”——丹奈特：《解释意识》，1991年，第8页。

现象特性

见“感受性”条。

Phenomenalism

Acceptance of the sense datum theory, according to which what we are directly aware of in perception is not the material object itself but rather *sensa*, renders problematic the nature and status of material objects as the cause of perception. Phenomenalism is one attempt to elucidate the nature of material objects by reducing them to sense-data. It is derived from Berkeley's immaterialism that holds only phenomena or sense-data can be known. There is no underlying substratum behind appearance. Reality is the totality of all actual and possible conscious experience, and cannot be said to exist independent of these experiences. Berkeley, unlike later phenomenologists, holds that material objects are combinations of actual sense impressions. As a consequence, he has to introduce God to preserve the continuity of objects and the existence of unobserved objects. Hume's claim that what we know to exist is nothing more than *sensa* occurring in various patterns or sequences raises the problem of what fills the gaps between actual *sensa*. J. S. Mill's position, which is called *factual phenomenalism*, is that material objects are permanent possibilities of sensation. Hence a material thing consists of a family of actual and possible sense-data. However, it sounds odd to say that possible sense-data are constituents of material things. Another way of filling the gap between actual *sensa*, called *sensibilism*, was developed by Russell (although he later abandoned it) and Price. On this view, *sensibilia* are unsensed sense-data, while sense-data amount to sensed *sensibilia*. Hence a material thing is described as a family of items with a similar status, except that sense-data are sensed and *sensibilia* are unsensed. The dominant version of phenomenalism to appear in this century was developed by the Logical Positivists and Operationalists and is called *linguistic phenomenalism* or *analytical phenomenalism*. This theory attempts to explain the notion of material object by reducing or translating all statements about material objects into statements about perceptual experience or *sensa*. The main difficulty with linguistic phenomenalism is that the equivalence between statements about *sensa* and statements about physical objects is hard to find. Phenomenalism is generally considered to be unsuccessful, for to specify the meaning of *sensa* and to distinguish one sense-datum from another always seems to involve reference to material things. Phenomenalism gives priority to experience and constructs the world out of it, but experience itself needs to be constructed out of the actual way of the world. Even Ayer, a chief proponent of linguistic phenomenalism, disavowed it in his later works.

"The phenomenalist is bound to hold that the identity of any physical body is subject to analysis in terms of sense-data." Ayer, *The Problem of Knowledge*, 1956, p. 190.

现象主义

是对感觉材料论的接受。根据这种理论,我们在知觉中直接觉知的并非物质对象本身,而是感觉材料,这就使得物质对象作为知觉原因的本质和地位成了问题。现象主义是试图通过将物质对象还原为感觉材料来解释物质对象的本质的一个尝试。它源自巴克莱的非物质论,这个观点认为只有现象或感觉材料才是可知的。在外观的后面没有另外的根基。现实就是所有实际的与可能的意识经验的总和,不能独立于这些经验而存在。与后来的现象主义者不同,巴克莱认为,物质对象就是实际的感觉印象的组合。结果,他不得不引入上帝来保持对象的连续性和未观察到的对象的存在。休谟说道,我们所确知存在的只是以各种模式和顺序出现的感觉材料。这也导致填补实际的感觉材料之间的空缺问题。J. S. 密尔的观点被称为“事实现象主义”,他认为物质对象是“感觉的永久可能性”。因此一个物质的东西是由一族实际的和可能的感觉材料所组成的。然而,说可能的感觉材料是物质的东西的组成部分未免有些离奇。填补实际的感觉材料之间之空缺的另一方法是由罗素(尽管他后来放弃了这一观点)和普赖斯提出的“感觉主义”。这一观点认为,可感觉物是未感觉到的感觉材料,而感觉材料则相当于感觉到的可感觉物。因此一个物质的东西就被描述为一族具有相似地位的项目,只是感觉材料是被感觉到的,而可感觉物是未被感觉到的。出现于本世纪的主导的现象主义形式是逻辑实证主义者和操作主义者所提出的“语言现象主义”或“分析现象主义”。这一理论试图通过将所有关于物质对象的陈述还原或转译为关于知觉经验或感觉材料的陈述来解释物质对象概念。语言现象主义的主要困难在于,我们很难找到感觉陈述与关于物理对象的陈述之间的同义语。通常认为现象主义是不成功的,因为要区分感觉的意义并将一个感觉材料与另一个感觉材料区分开来似乎总是包含着对物质的东西的指称。现象主义给经验以优先地位并由它来建构世界,但经验本身却需要由世界的实际方式来建构。甚至语言现象主义的主要支持者之一艾耶尔也在其后期著作中拒斥它。

“现象主义者注定要认为,任何物理体的确认都要经受借助于感觉材料的分析。”——艾耶尔:《知识问题》,1956年,第190页。

Phenomenological epoche, see phenomenological reduction

Phenomenological reduction

The characteristic methodological procedure of Husserl's phenomenology. Phenomenological reduction is a means of detecting the intentional or essential structure of experience. By turning away from the sense contents of my own stream of experiences, I can concentrate on what is essential, basic and irreducible in experience. The reduction moves from the empirical to the transcendental level and provides access to the intentional structure or *noematic* content of experience, which is the source of our knowledge of the world. The reduction contrasts to the reduction of all knowledge into certain basic or protocol sensory experiences or statements in phenomenism or logical positivism.

The basic instrument of phenomenological reduction is phenomenological *epoche* (Greek: holding back, hence suspension of judgement). In our cognitive relationship with the world, our natural attitude assumes the existence of the external spatio-temporal world and assumes the existence of ourselves as psycho-physical individuals. Husserl's phenomenological *epoche* "brackets" this natural attitude or puts it out of play. This bracketing does not deny the existence of the fact-world, but refrains from any judgement regarding the world and our own physical being within it. For Husserl, we can thus regard our experience in a different manner and enter the region of transcendently purified experiences. We can consider consciousness strictly as intentional agency, also called "transcendental consciousness", "pure consciousness" or "absolute consciousness". We are in a position to have *eidetic* or essential intuition towards the intentional structures of experience.

Phenomenological *epoche* is also called transcendental reduction. This is what phenomenological reduction normally means, but sometimes Husserl broadens its reference to include *eidetic* intuition as well. The whole programme is influenced by the Cartesian method of doubt and is intended to provide an absolutely certain grounds for knowledge.

"On grounds of method this operation will split up into different steps of 'disconnexion' or 'bracketing', and thus our method will assume the character of a graded reduction. For this reason we propose to speak, and even preponderantly, of phenomenological reductions (though, in respect of their unity as a whole, we would speak in unitary form of the phenomenological reduction)." —Husserl, *Ideas* (tr. Kersten), 1982, sect. 33.

Phenomenology

[from Greek *phainomenon*: to appear + *logos*: theory, literally, a theory of appearance] The idea of phenomenology can be traced to Aristotle's "saving the *phainomena*", but the

现象学的悬置

见“现象学还原”条。

现象学的还原

胡塞尔现象学特有的方法论步骤。现象学的还原是一个探测体验的意向结构或本质结构的方式。通过撇开我自己的体验流中的感官内容,我就能专注于这体验中本质性的、基本的和不可还原的东西了。这还原从经验的层次移向先验的层次,使得我们可以达到体验的意向结构或意向对象的内容;而这结构或内容乃是我们关于这个世界的知识的源头。这种还原与现象主义或逻辑实证主义中那种将所有知识还原为某些基本的或记录式的感觉经验或陈述的做法正相反对。

现象学还原的基本方式是现象学的悬置(*epoche*,这个词为希腊文,意味着“抑制”,衍变为“判断的中止”)。在我们与世界的认知关系中,我们的自然态度预设了外部时空世界的实存,并预设了作为心理及肉身个体的我们自身的实存。胡塞尔的现象学悬置将这种自然态度“放进括弧之中”或让它失去作用。这种放进括弧的悬置并不否认事实世界的实存,只是抑制住关于这个世界和我们在其中的身体存在的判断。这样,在胡塞尔看来,我们就能以不同的方式来看待我们的体验,进入被先验地纯粹化了的体验领域。我们于是能将意识严格地视为意向机能,也叫做“先验的意识”、“纯意识”或“绝对意识”。我们就这样处在了一个让本质直观面对体验的意向结构的地位上。

现象学的悬置也叫做“先验的还原”。这就是“现象学的还原”一般所意味的,但有时胡塞尔扩大了它的指称范围,将本质直观也包括了进来。这整个学说受到笛卡尔的怀疑方法的影响,意在为知识提供一个绝对确实的基础。

“作为方法,这种操作(即悬置)将分为‘分离’或‘加括弧’的不同步骤;因此,我们的方法将具有分级还原的特点。出于这个理由,我们要谈论、甚至是强调复数形式的现象学还原(尽管就其全体的统一性而言,我们将以合一的方式谈论现象学的还原)。”——胡塞尔:《观念》(克尔斯滕英译),1982年,第33节。

现象学

[源自希腊文 *phainomenon* (显现) 和 *logos* (理论);字面意思为“关于显现的理论”]关于现象学的观念可追溯到亚里士多德的“从赫拉

word was first used by J. H. Lambert, a follower of Christian Wolff, in his *Neues Organon* (1764), meaning the study of the forms of appearances and illusions. Kant took over this word, claiming that phenomenology determined the principles of sensibility and understanding which can be applied only to the world of appearance and not to things-in-themselves. Hegel's *Phenomenology of the Spirit* brought this word into prominence. However, for Hegel, phenomena are not illusions or appearances. They are stages in the development of knowledge, in the manifestations of which Spirit itself appears, and are the expressions of a self-developing Absolute idea. Phenomenology is therefore the study of the evolutionary process of consciousness from its simplest to its most sophisticated forms. The American pragmatist C. S. Peirce developed in his early work a kind of phenomenology, also called "phaneroscopy", as a system of categories to classify the main types of phenomena that make up the world.

Phenomenology in its most popular sense refers to an influential philosophical movement, founded by Edmund Husserl and developed in Germany by Max Scheler, Nicolai Hartmann and Martin Heidegger and in France by Gabriel Marcel, Jean-Paul Sartre and Maurice Merleau-Ponty. It has gradually fused with Existentialism and Hermeneutics. In this sense, Phenomenology is a philosophy of consciousness concerned with the truth or rationale of immediate experience. Originally, Husserl conceived phenomenology as a philosophical method to reveal and elucidate the internal structures and essential features of various types of experience. Through analysis of this sort, one could discover the ultimate sources of our knowledge, especially the fundamental logical and epistemological categories. In his later stage, Husserl considered phenomenology to be first philosophy, which could describe the region of pure experience in which all sciences are rooted and provide a unified theory of science and knowledge. Husserl's phenomenology was deeply influenced by Descartes' demand that knowledge be clear and distinct and opposed relying on any *a priori* assumption that has to be justified elsewhere. Phenomenology in this sense differs from studies that seek to explain things, for example, from their causal relations or evolutionary origins. Its slogan is "to the things (phenomena) themselves". Husserl emphasised the function of intuition in achieving insights into the essential structures of experience. Phenomenology characteristically emphasises the intentionality of consciousness. Its philosophical novelty is the demonstration that intentional objects of every sort, existing and non-existing, can and should be described in their own right. Phenomenology can be contrasted with analytical philosophy, which is concerned with the analysis of propositions, although J. L. Austin sometimes called his work linguistic phenomenology.

Heidegger analysed the two components of the word "phenomenology". On his analysis, *phenomenon* means that

克利特的“流变”中“拯救现象”之说，但这个词首先是由 J. H. 朗姆贝特（他是沃尔夫的一个追随者）在其《新工具论》（1764 年）中使用的，意味着对显露和假象诸形式的研究。康德采用了这个词，认为现象学的任务是确定感觉和知性的原则；这些原则只适用于显现的世界，不可用于物自身。黑格尔的《精神现象学》使这个词获得了突出的地位。然而，对黑格尔来说，现象不是假象或显露，它们是在知识的发展中、在精神显示自身的展现中的各个阶段，并且是自身发展着的绝对理念的表达。现象学因此就是对意识的进化过程，即从最简单到最复杂形式的过程的研究。美国实用主义者 C. S. 皮尔士在他的早期著作中提出了一种现象学，也被他称作“phaneroscopy”（显象学）；将它当做对于那构成了这世界的主要现象类型进行分类的范畴系统。

现象学在它最广为人知的意义上指的是一个影响深远的哲学运动，由 E. 胡塞尔建立，在德国由 M. 舍勒、N. 哈特曼和 M. 海德格尔发展，在法国为 G. 马塞尔、J.-P. 萨特和 M. 梅洛-庞蒂所阐发。它逐渐地与生存主义和解释学融合。在这个意义上，现象学是一种关于意识的哲学，涉及直接体验的真理和原则。一开始，胡塞尔将现象学设想为一种揭示和说明不同的体验类型的内在结构和本质特点的哲学方法。通过这种分析，我们能够发现知识的最终源头，特别是基本的逻辑和认识论的范畴。在他的后期阶段，胡塞尔将现象学看做第一哲学，它可描述所有的科学都植根于其中的纯粹体验的领域，并为科学和知识提供一个统一理论。胡塞尔的现象学受到笛卡尔这样一个要求的深刻影响，即知识必须是清楚明白的，不可依赖于任何还要在其他地方被证实的先天假设。在这个意义上，现象学不同于那些去解释事物的研究，比如那些从因果关系或进化来源方面对事物的解释研究。它的口号是：“到事情（现象）本身中去。”胡塞尔强调直觉在获得对体验的本质结构的洞察方面的功能。现象学特别强调意识的意向性。它的哲学新颖性在于表明每一种意向对象，不管是实存的还是非实存的，都能够并且应该以其自身的方式被描述。现象学与关心命题分析的分析哲学极为不同，尽管 J. L. 奥斯汀有时也称他的工作为语言现象学。

海德格尔分析了“现象学”这个词中的两个成分。在他的分析中，“现象”（*phenomenon*）意味着“那在自身中显示自身者”；“学”或“逻各斯”（*logos*）从 *legomenon*，即“那被显示者”这个词来。他的结论是现象学意味着“让那在自身中显示自身者被从其自身看到”。因此，现象学仅仅是一种方法，它告诉人们一个研究应该如何去进行，而不是什么东西应该被研究。这个方

which shows itself in itself and *logos* is derived from *legomenon*, that which is exhibited. He concludes that phenomenology means "to let that which shows itself in itself be seen from itself". Accordingly, phenomenology is merely a method, which prescribes how a study should be conducted rather than what should be studied. The method indicates that any subject-matter must be treated by exhibiting it directly and demonstrating it directly. Heidegger called his own approach to *Dasein* and Being "hermeneutic phenomenology". Here "hermeneutic" does not refer to a method for uncovering the meaning embodied in an expression, but to the constitution of *Dasein*. The whole expression refers to a method by which Being can be approached or brought to self showing.

"Phenomenology is accordingly the theory of experience in general, inclusive of all matters, whether real or intentional, given in experiences, and evidently discoverable in them." —Husserl, *Logical Investigations II* (tr. by Findlay), 1970, p. 862.

Phenomenon

[From Greek: *phainomenon*, what appears by itself, hence appearance] Perceptual appearance in general, that is what may be observed and how things look. For Aristotle, all the widely accepted beliefs, things commonly held as well as the beliefs of the wise about a certain matter, are also phenomena. In this latter sense, phenomenon means the same as *legomenon* (what is said) and *endoxa* (common belief). Phenomena of this kind were taken by Aristotle to be the starting-point of dialectical argument. He claimed that a good theory should start from the phenomena and insofar as possible should be consistent with the phenomena and explain the phenomena. This is what he called saving the phenomena. A scientific theory should enable us to understand the empirical phenomena, and a philosophical theory should enable us to understand the phenomena in the sense of common beliefs.

"This view [that there is no weakness of will] plainly contradicts the phenomena." —Aristotle, *Nicomachean Ethics*, 1145b27.

Philanthropy

[from Greek *philos*, love + *anthropos*, man, loving one's fellow men] A synonym for love, benevolence, altruism and charity. Philanthropy is regarded as a virtue, especially in Christian ethics. In modern times, the term is used for large-scale actions to help those who are poor and in need. Sometimes, governmental agencies offering social support, such as the social welfare or health systems are regarded as socially philanthropic institutions. Some occupations in the areas of health, education, welfare or social work are associated with a philanthropic vocation.

法指出, 必须直接展示和直接表明任何被讨论的主题。海德格尔称他自己对缘在 (*Dasein*) 和存在的探讨为“解释学的现象学”。这里, “解释学”并不意味着那种揭示隐含在某种表达中的意义的方法, 而是指缘在的构成。这个表达式 [解释学的现象学] 指一种能够进入存在或让存在自身显现的方法。

“因此, 现象学是关于普遍意义上的体验的理论, 包括所有在体验中被给予的并可在体验中被明白发现的东西, 不管它是实在的还是意向的。”——胡塞尔:《逻辑研究》第二卷 (芬德雷英译), 1970 年, 第 862 页。

现象

[源自希腊文 *phainomenon*, “显现自身的东西”, 等于“表象”] 它一般意为感知表象, 即可以感觉到的东西和事物所看起来的样子。对亚里士多德来说, 一切广泛接受的信仰, 共同认可的东西, 以及聪明人对某些事物的看法, 也都是现象。在这后一种意义上, 现象就等同于 *legomenon* (所说的东西) 和 *endoxa* (共同信仰)。这类现象被亚里士多德看做是辩证论证的出发点。他认为, 一个好的理论应当从现象出发, 尽可能地与现象相一致, 并解释现象。这便是他所谓的“拯救现象”。一个科学理论应使我们明白经验现象, 而一个哲学理论应使我们明白共同信仰意义上的现象。

“[说意志薄弱不存在] 这样一种观点显然与现象相矛盾。”——亚里士多德:《尼各马可伦理学》, 1145b27。

慈善

[源自希腊文 *philos* (爱) 和 *anthropos* (人), 即爱同胞] 爱、仁慈、利他主义和博爱的同义词。慈善被认为是一种美德, 特别是在基督教伦理学中。在当代, 这一术语用来指大范围地帮助那些贫穷的、有困难的人的行为。有时政府机构提供的社会帮助, 如社会福利制度或国家医疗保险制度被认为是社会慈善机构。一些卫生、教育、福利或社会工作领域的职业是与慈善行业相联系的。

“如果社会工作想要存在下去, 那么就必须

"If social work is to exist at all, there have to be either private philanthropists or a system of imposing philanthropy on the general public by means of taxes." —Downie and Telfer, *Caring and Curing*, 1980, p. 12.

Philia

[Greek: friendship, derived from *philein*, love, but without sexual implications. Empedocles uses a slightly different term *philotes* (also love or friendship) which, in opposition to *neikos* (strife), is the unifying principle of elements.] *Philia* is an affectionate personal relationship, requiring some degree of mutual goodwill, mutual recognition and shared activities. *Philia*, which is much broader than our current notion of friendship, includes the love of members of families for each other, the favourable attitudes of business partners and of fellow citizens for each other, and the mutual admiration between virtuous men for virtuous character. *Philia* is a major topic in Greek ethics, for it is taken as a kind of virtue and as a necessary condition for happiness. Aristotle chiefly distinguishes three types of friendship: for pleasure, for usefulness and for goodness. While the first two kinds are incidental, the last kind is complete and perfect, especially between virtuous men. Each virtuous person wishes the other to be good for the good of the other party itself. The root of the perfect friendship is to take the friend as another self, with friendship being a kind of self-love of a good man. Aristotle's discussion of friendship seems to offer an approach for breaking the antithesis between egoism and altruism and therefore attracts much current attention. Friendship is also a major topic in contextualist and feminist approaches to moral philosophy.

"The defining features of *philia* (friendship) that are found in friendship to one's neighbours would seem to be derived from features of friendship towards oneself." — Aristotle, *Nicomachean Ethics*, 1166a1-2.

Philosophe

[French: philosopher] The eighteenth century French thinkers of the Enlightenment such as Voltaire, Rousseau, Diderot, Montesquieu, Helvetius, Condillac, D'Holbach, and other Encyclopedists. These philosophers are generally materialists, atheists and liberals. They believed in the strength of reason and scientific knowledge and intended to judge everything in accordance with the measure of reason.

"The French philosophes of the eighteenth century were the examples we sought to imitate, and we hope to accomplish no less results." — *The Collected Works of John Stuart Mill*, I, p. 111.

Philosopher-king, see guardians

有私人慈善家，或有通过税收手段强加于一般大众的慈善制度。”——道尼和特尔弗：《关怀和治疗》，1980年，第12页。

友情

[希腊语，指友谊，源自 *philein* 一词，意思是没有性爱的爱或爱情。恩培多克勒使用了一个稍有差异的词 *philote*，意思是指友爱或友谊。这种友爱与冲突 (*neikos*) 相对立，是统一诸要素的原理] 友情表示一种友爱的人际关系，需要某种程度的相互友善、相互承认和协同活动。友情的内涵要比现行的友谊观念更为广泛，包括家庭成员之间的爱护，商务伙伴与同胞之间的友好态度以及有德之士对道德品格的相互仰慕等等。在希腊伦理学中，友情是一个主要话题，因为它是一种美德，是幸福的必要条件。亚里士多德主要区分了三种友情：为了愉快的友情，为了有用的友情和为了善的友情。前两种友情是偶然发生的，后一种友情才是完美的，尤其是在有德之士之间。每位有德之士都期望他人善待对方。完美友情的根源在于把朋友当做另一个自我，将友情视为善者的一种自爱。亚里士多德在论述友情时提出了一种打破自我主义与利他主义彼此对立的方法，因此十分引人注目。在研究道德哲学的语境主义和女性主义方法中，友情也是主要的话题。

“友情的决定性特征存在于对邻居的友情之中，这一点源自对待自己的友情特征。”——亚里士多德：《尼各马可伦理学》，1166a1-2。

启蒙哲学家

[法语，哲学家] 18世纪法国启蒙运动思想家，诸如伏尔泰、卢梭、狄德罗、孟德斯鸠、爱尔维修、孔迪亚克、霍尔巴赫，以及其他百科全书派人物。这些哲学家一般都是唯物主义者、无神论者和自由主义者。他们相信理性和科学知识的力量，并试图依据理性的尺度评判一切。

“18世纪法国哲学家是我们追求效仿的榜样，我们希望取得他们那样多的成就。”——《J. S. 密尔著作集》，第一卷，第111页。

哲学王

见“护卫者”条。

Philosophia perennis

[Latin: perennial philosophy] A metaphysical thesis that there is a single Divine reality as an impersonal Absolute is common to all great Western and Eastern religions. The soul is the divine spark of light in our body, and by means of its contemplative practice we can have mystical access to this divine reality. The term and the basic idea can be traced to Leibniz, but the thesis was fully explicated by Aldous Huxley in *The Perennial Philosophy* (1946). According to Huxley, perennial philosophy unifies all religions with the consequence that there is only one sort of mysticism or fundamental metaphysics. Opponents argue that the thesis wrongly amalgamates different strands of mysticism.

"*Philosophia perennis*—the phrase was coined by Leibniz, but the thing—the metaphysic that recognises a divine reality substantial to the world of things and lives and minds; the psychology that finds in the soul something similar to, or even identical with, divine reality; the ethic that places man's final end in the knowledge of the immanent and transcendent ground of all being—the thing is immemorial and universal." —Huxley, *The Perennial Philosophy*, 1945, vii.

Philosophical anthropology

[from Greek: *anthropos*, man] The comprehensive study of human nature, which considers each human being as a biological, psychological, cultural, social and religious complex, in contrast to the simplicity of God and to the traditional rationalist view of man as an exclusively rational being. All discussions about man as such belong to philosophical anthropology, and in this broad sense it is as old as philosophy itself. Kant considered anthropology to be a pragmatic branch of philosophy concerning "what man as a freely acting entity makes of himself or can and should make of himself". Feuerbach took anthropology as a synonym for philosophy. Based on the German philosophical tradition, Max Scheler introduced philosophical anthropology in *Man's Place in Nature* (1928) as a special discipline. This discipline was a synthesis of Dilthey's life philosophy and Husserl's phenomenology, but also embraced most of the social sciences. Scheler attempted to discover the basic structure of human nature and accordingly to explain human existence, experiences, potentialities and various other aspects of human activities. He also sought to establish philosophical anthropology as the foundation of other social sciences in virtue of its central aim of achieving human self-understanding. Consistent with this aim, Scheler used philosophical anthropology to criticise his contemporary bourgeois society in terms of the theory of alienation of Hegel and Marx. Other major figures of philosophical anthropology include Plessner, Gehlen, Cassirer and Sartre. As an interdisciplinary study, philosophical anthropology has practitioners in many areas and has developed various approaches to the study of man.

永恒哲学

[拉丁语,永恒哲学]一个形而上学论题,其主张是:存在着一个单一的神圣实在,作为非人格的绝对,它对西方和东方的一切大的宗教都是共同的。灵魂是我们体内的神圣火花,依靠它的沉思实践,我们能够神秘地达到这个神圣的实在。这个术语及其基本观念可以追溯到莱布尼茨,但是,该论题的充分阐释,却是由 A. 赫胥黎在其《永恒哲学》(1946)一书中完成的。按照赫胥黎的观点,永恒哲学统一所有的宗教,因此,只存在着一种神秘主义或根本形而上学。但是,反对者们认为这个论题错误地混淆了神秘主义的不同标准。

"*Philosophia perennis* 是由莱布尼茨生造的一个短语,但是那个东西——形而上学认作是作为事物、生命和精神世界实体的神圣实在;心理学发现它是灵魂中的某个相似于、甚或同一于神圣实在的东西;伦理学将其视作人的终极目的置于一切存在内在的、超验的根据的知识中——那个东西是恒古的、普遍的。"——赫胥黎:《永恒哲学》,1946年, vii。

哲学人类学

[源自希腊文 *anthropos*, 人] 对人的本质的综合研究,它把每个人视为生物的、心理的、文化的、社会的和宗教的复合体,这与上帝缩影的观点和把人视为惟一理性存在物的传统理性主义观点形成对照。所有关于这样的人的讨论都属于哲学人类学,从广义上讲,它和哲学本身一样久远。康德把人类学看做是哲学的一个实用分支,它关心的是"作为自由行动存在物的人塑造自身,或能够和应当塑造自身"。费尔巴哈把人类学作为哲学的同义词。在德国哲学传统的基础上, M. 舍勒在他的《人在宇宙中的地位》(1928)一书中提出了作为一门特殊学科的哲学人类学。这一学科是狄尔泰的生命哲学和胡塞尔的现象学的综合,但也包含绝大部分社会科学。舍勒试图发现人的本质的基本结构,从而解释人的存在、经验、潜能和人的活动的其他各方面。他还试图把哲学人类学确立为其他社会科学的基础,其根据是哲学人类学的中心目的是达到人的自我理解。与这一目的相一致,舍勒还根据黑格尔和马克思的异化理论,将哲学人类学用于对当代资本主义社会的批判。哲学人类学的其他主要代表人物包括普莱斯特纳、盖伦、卡西尔和萨特。作为一门交叉学科,哲学人类学在很多领域都有实践者并发展出各种不同的研究人的方法。

"理论家们对人们具有的(他们的'哲学人类学',就像人们称呼的那样)愿望和要求存在争执,而且常常是强烈的争执,但没有一方怀疑,只要人们的要求和信念能够一致,他们的行

"The theorists disagree, often very strongly, over the wants and desires that people have (their 'philosophical anthropology', as it is often termed), but neither side doubts that if only people's wants and beliefs could be identified their action would be intelligible." Yearley, *Science and Sociological Practice*, 1984, p. 88.

Philosophical behaviourism, see behaviourism

Philosophical hermeneutics, see hermeneutics

Philosophical logic

Russell's term for the study of philosophical problems arising from applying formal logic to natural language. It does not contain formal logical systems themselves, and it is not confined to arguments which formal logic has codified. In British philosophy, philosophical logic is considered to be a basic philosophical discipline, concerned with the analysis of key notions indispensable to rational thinking such as analyticity, necessity, definition, description, entailment, existence, identity, reference, predication, proposition, quantification, truth, meaning, negation and existential statements. Many problems in philosophical logic are intertwined with other branches of philosophy, especially with epistemology and ontology.

Some scholars suggest that philosophical logic can also be called "philosophy of logic". But others try to distinguish them on the grounds that philosophical logic is a philosophy interested in language, thought and the world structure, while philosophy of logic is the study of the scope and nature of logic systems, especially philosophical issues arising from non-standard logic.

"The contrast between philosophical logic and philosophy of logic can accordingly be put like this: when one does philosophy of logic, one is philosophising about logic; but when one does philosophical logic, one is philosophising." Grayling, *An Introduction to Philosophical Logic*, 1982, p. 15.

Philosophical psychology, see philosophy of psychology

Philosophical radicals

A group of political and economic liberals deeply influenced by Jeremy Bentham and active in London in the first half of the nineteenth century, including the philosopher James Mill and later his son John Stuart Mill, legal philosopher John Austin, economist David Ricardo, lawyer E. Chadwick and classical historian George Grote. They criticised the evils existing in the government and social policies

of just what is understandable."——耶利:《科学和社会学实践》,1984年,第88页。

哲学行为主义

见“行为主义”条。

哲学解释学

见“解释学”条。

哲学逻辑

罗素的术语,指把形式逻辑应用于自然语言而产生的哲学问题的研究。它并不包含形式逻辑体系本身,也不限于形式逻辑已经整理过的证明。在英国哲学中,哲学逻辑被视为基本的哲学学科,它涉及对理性思维不可缺少的关键概念的分析,如分析性,必然性,定义,描述,衍推,存在,同一性,指称,谓词,命题,量词限定,真,意义,否定,存在陈述等概念。哲学逻辑中的许多问题与哲学的其他部门相互联结,特别与认识论和本体论密切相关。

某些学者提出,哲学逻辑也可称为“逻辑哲学”。但是其他学者对它们作出区分,根据是,哲学逻辑是研究语言、思想和世界结构的哲学,而逻辑哲学是对逻辑系统的本性和范围,特别是从非规范逻辑中产生的哲学问题的研究。

“哲学逻辑和逻辑哲学因此能这样对比:当某人做逻辑哲学时,那么他就是在做关于逻辑的哲学研究;但是当某人做哲学逻辑时,那么他就是在做哲学研究。”——格雷林:《哲学逻辑导论》,1982年,第15页。

哲学心理学

哲学激进主义者

一群深受J. 边沁影响,于19世纪上半叶活跃于伦敦的哲学和经济学的自由主义者,包括哲学家詹姆斯·密尔和他的儿子约翰·斯图亚特·密尔,法哲学家J. 奥斯汀,经济学家D. 李嘉图,律师E. 查德威克和古典历史学家G. 格罗特。他们批判当时存在于不列颠政府和社会政策中的弊病,认为所有这些弊病在于政府、

of Britain at that time and believed that the source of all evils lay in the aristocratic principle adopted by the government, economic monopolies and the established church. The group embraced Bentham's utilitarianism, Adam Smith's economics, Austin's rational jurisprudence and J. S. Mill's rationale for democracy. They tried to provide a justification for radically transforming the traditional aristocratic regime into a modern, secular, democratic market society. This group exerted great influence upon British philosophy and political life.

"Those whom... we call philosophic radicals are those who in politics observe the common practice of philosophers—that is, who, when they are discussing means, begin by considering the end, and when they desire to produce effects, think of cause." —*The Collected Works of John Stuart Mill*, VI, p. 353.

Philosophical theology

A contemporary discipline largely derived from the methods and subject-matter of natural theology. It employs standard techniques of reasoning and makes use of every possible consideration to justify theistic belief and to examine the coherence and implications of various traditional theistic doctrines. It aims to clarify the content of the central concepts, presuppositions and tenets of theological commitment. Its main questions include the concept of God, the nature of divine attributes, the source of our ideas of God, proofs of the existence of God, the nature of divine knowledge, the essence of divine creation, God's relation to time, and God's relation to human beings. It differs from the philosophy of religion in that it is not a neutral discussion about theism, but presupposes the existence of God. It is essentially a way of using philosophy to do theology rather than an independent philosophical enterprise.

"Philosophical theology is a species contained within the theological genus. Insofar as its specific difference is that it makes use of philosophical methods and techniques to explicate the meaning or to discover the implications of theological doctrines, it continues to stand within [the] 'theological circle'." — Ferre, *Basic Modern Philosophy of Religion*, 1968, p. 10.

Philosophy (Kant)

Kant held that philosophy is a mere idea of a possible science which nowhere exists concretely, but which we can endeavour to approximate by many different routes. What we learn is not philosophy itself, but how to philosophise by exercising our talent to reason on certain actually existing philosophical attempts. Since human reason is always active, it is impossible to offer an ultimate and dogmatic answer to the question of what philosophy is and who possesses it. That would mean the end of philosophising and hence the

经济垄断组织和国教奉行的贵族统治原则。这些人信奉边沁的功利主义、A. 斯密的经济学、奥斯汀的理性法学和 J. S. 密尔对民主的理论说明。他们力图为将传统的贵族统治的社会转变为现代的、世俗的和民主的市场社会而进行的激进的变革提供论证。这些人对英国的哲学和政治生活产生了重大的影响。

“那些我们称之为哲学激进主义者的人，是在政治上奉行哲学家的通常习惯的人——就是说，当他们讨论手段时，是从考虑目的入手，当他们期望产生结果时，思考的是原因。”——《J. S. 密尔著作集》，第六卷，第 353 页。

哲学神学

一门当代的学科，很大程度上以自然神学的方法和主题为基础。它使用标准的推理技巧，应用每种可能的材料，为有神论的信条提供证明，并考察各种传统的有神论学说的统一性和复杂含义。它的目的，是要弄清神学信奉的主要概念、假设和教义的内容。它的主要问题包括上帝的概念、神性的本性、我们的上帝观念的来源、上帝存在的证据、神圣知识的本性、神圣创造的本质、上帝与时间的关系、上帝与人类的关系等等。它与宗教哲学的区别在于，它不是中立地讨论有神论，而是以上帝存在为前提条件。它本质上是以哲学的方式来建构神学，而不是一种独立的哲学事业。

“哲学神学是包含在神学这个属内的一个种。虽然它的种差是运用哲学的方法和技巧来阐释神学学说的意义或发现神学学说的蕴意，但它依旧处在‘神学圈’内。”——费勒：《现代宗教哲学基础》，1968 年，第 10 页。

哲学（康德）

康德认为，哲学只是一可能科学的观念，它并非具体地存在于任何地方，但我们可以通过不同的途径来努力接近它。我们所学的不是哲学本身，而是如何进行哲学思考，即在某些已存在的哲学尝试中去锻炼我们的推理能力。因为人类理性总是主动的，对“什么是哲学”和“谁拥有哲学”的问题作出最终的和独断性的回答是不可能的。那意味着哲学思考的终结，因而是哲学的死亡。

death of philosophy.

Accordingly, for Kant philosophy is an activity of reason rather than a static body of knowledge. He thought that the scholastic tradition took philosophy to be the logical perfection of knowledge, but another conception which forms the real basis of philosophy takes it as a science for relating all knowledge to the essential ends of human reason. The so-called philosopher is the lawgiver of human reason. Philosophical knowledge can arise either out of pure reason or empirical inquiry. Kant's own philosophy is systematic, attempting to answer all the questions of philosophy in a single scheme, and critical, determining the limits as well as the extent of our knowledge through an examination of reason by itself.

Kant divided the philosophy of pure reason into a propaedeutic, which deals with the *a priori* knowledge of the faculty of reason, and metaphysics as the system of pure reason. The latter is divided into the metaphysics of nature, which is concerned with what is, and the metaphysics of morals, which is concerned with what ought to be. They are respectively the theoretical and practical employment of pure reason.

"The legislation of human reason (philosophy) has two objects, nature and freedom, ... the philosophy of nature deals with all that is, the philosophy of morals that which ought to be." —Kant, *Critique of Pure Reason*, A840/B868.

Philosophy (Logical Positivism)

On the basis of a strong conviction that science serves as a paradigm for all knowledge, Logical Positivism requires philosophy to have scientific standards of precision and objectivity. There are only two kinds of statements that meet the strict standards of science, that is *a priori* statements of logic and pure mathematics, and empirical statements. Thus, most of the statements in traditional metaphysics and moral philosophy cannot constitute knowledge and should be eliminated. The positive role of philosophy is concerned with the logical analysis of the rules and frameworks of scientific theory and language and is a department of logic. Philosophy must employ scientific method to provide knowledge, and epistemology is nothing more than the philosophy of science.

"Once philosophy is purified of all scientific elements, only the logic of science remains." —Carnap, *The Logical Syntax of Language*, 1937, p. 279.

Philosophy (Ryle)

To clarify the nature of philosophy was one of Ryle's major concerns. Logical Positivism had dethroned philosophy from its position of priority regarding the sciences, and Ryle tried to show what is left for philosophy to do. He held that Philosophy does not have its own domain and is not concerned with the problems of entities. It is a meta occupation

因此对于康德来说,哲学是一种理性的活动,而不是一静态的知识系统。他认为,经院哲学的传统把哲学作为知识的逻辑完满,但构成哲学真正基础的另一概念是把它看做连接一切知识与人类理性本质目的的科学。所谓的哲学家乃是人类理性的立法者。哲学知识既可产生于纯粹理性,也可产生于经验研究。康德自己的哲学是体系性的,企图以单一的模式回答所有的哲学问题;其哲学又是批判的,它通过对理性自身的考察来规定我们知识的界限和范围。

康德把纯粹理性哲学划分为涉及理性官能的先天知识的预备性学科,和作为纯粹理性体系的形而上学。后者又依次划分为论及“什么是”的自然形而上学和涉及“什么应当是”的道德形而上学。它们分别是纯粹理性的理论应用和实践应用。

“人类理性之立法(哲学)有两大目标,即自然和自由……自然哲学论究一切存在(是),道德哲学论究什么应该存在。”——康德:《纯粹理性批判》,A840/B868。

哲学(逻辑实证主义)

逻辑实证主义相信,科学可以作为一切知识的范例。根据这种坚定的信念,它要求哲学也应该具有精确性和客观性这样的科学标准。而只有两种陈述满足这样严格的科学标准,即先天的逻辑和纯数学陈述以及经验陈述。因而,传统形而上学和道德哲学中的大多数陈述都不能构成知识,应该被清除掉。哲学的积极作用是关于对科学理论和语言的结构与规则的逻辑分析,是逻辑的一部分。哲学必须用科学的方法提供知识,而认识论则只是科学哲学。

“一旦哲学清除了一切科学成分,那么剩下的就只能是关于科学的逻辑。”——卡尔纳普:《语言的逻辑句法》,1937年,第279页。

哲学(赖尔)

澄清哲学的本质是赖尔所关心的主要问题。逻辑实证主义已经否认了哲学对科学的优先性,而赖尔则试图表明哲学还可以做什么。他认为哲学没有它自己的领域,而且也不关心存在问题。它是一个超职业,它所要做的就是揭示支持我们的日常或科学语言的表面语法的逻辑

and an activity with the role of laying bare the logical categories which underlie the surface grammar of our ordinary or scientific language. This is necessary because these logical structure are often hidden or distorted by surface grammar. Philosophy has the function of mapping and comparing the logical geography of concepts and clarifying the connections between concepts. In brief, the task of philosophy is not to discover truth about the world but to re-arrange and analyse language in order to reveal its correct logical form or real meaning. It is not an empirical science, but is closely associated with a logic of diverse categories or forms. Ryle's work was a major example of the linguistic turn taken by English-speaking philosophy in this century.

"Science talks about the world, while philosophy talks about talk about the world." — Ryle, *Collected Papers*, vol. 1, p. 237.

Philosophy (Wittgenstein)

Philosophy does not present any picture of reality, and it can neither explain nor deduce anything. In trying to do so, philosophy becomes traditional metaphysics, which can give no meaning to its expressions. Proper philosophy should stop this misleading way of working. Philosophy is different from the natural sciences and shares no method with them. It can neither confirm nor refute scientific investigations. Since the whole of natural science is constituted by the totality of true propositions, philosophical propositions are not truths.

Philosophy is an activity rather than a theory and aims to cure us of the misuse of ordinary language by means of clarifying propositions. Most traditional philosophical questions are generated through the misuse of language, and hence we should not seek to answer them (the solutions for them do not exist). We should rather treat the questions as we treat illness. We should make the questions disappear by showing how they violate logical syntax. In the *Tractatus* Wittgenstein proposes that the way to clarify language is to reveal its hidden structure, but in *Philosophical Investigations* he turns to the study of language-games to clarify language.

"All philosophy is a 'critique of language'." — Wittgenstein, *Tractatus*, 4.0031.

Philosophy of art, see aesthetics

Philosophy of biology

A relatively independent area of the philosophy of science dealing with philosophical issues arising from biological studies. Because of certain characteristics of biological inquiry, philosophy of biology is more than the mere application of general principles of scientific explanation. Biology explains a trait of an organism in terms of its function to pro-

vide. This is necessary, because these logical structures are often masked or distorted by surface grammar. Philosophy has the function of mapping and comparing the logical geography of concepts and clarifying the connections between concepts. In brief, the task of philosophy is not to discover truth about the world but to re-arrange and analyse language in order to reveal its correct logical form or real meaning. It is not an empirical science, but is closely associated with a logic of diverse categories or forms. Ryle's work was a major example of the linguistic turn taken by English-speaking philosophy in this century.

"Science talks about the world, while philosophy talks about talk about the world." — Ryle, *Collected Papers*, vol. 1, p. 237.

Philosophy (Wittgenstein)

Philosophy does not present any picture of reality, and it can neither explain nor deduce anything. In trying to do so, philosophy becomes traditional metaphysics, which can give no meaning to its expressions. Proper philosophy should stop this misleading way of working. Philosophy is different from the natural sciences and shares no method with them. It can neither confirm nor refute scientific investigations. Since the whole of natural science is constituted by the totality of true propositions, philosophical propositions are not truths.

Philosophy is an activity rather than a theory and aims to cure us of the misuse of ordinary language by means of clarifying propositions. Art philosophy

See "Aesthetics" entry.

Biology philosophy

A relatively independent area of the philosophy of science dealing with philosophical issues arising from biological studies. Because of certain characteristics of biological inquiry, philosophy of biology is more than the mere application of general principles of scientific explanation. Biology explains a trait of an organism in terms of its function to pro-

more the well being, development or survival of that organism, its genes or its species. This functional explanation seems to explain a cause by its effect and hence to differ from a standard causal explanation which explains an effect by its cause and it also differs from the covering law model of explanation. The nature of functional or teleological explanation and its rationality therefore become major topics in the field. Many philosophers argue that we should understand biological traits in terms of the past evolutionary history of the organism rather than in terms of their future consequences. On this view, functional explanation can be assimilated to a causal account. Other philosophers of biology argue for an autonomous level of functional explanation which cannot be reduced to ordinary causality. Darwin's theory of evolution led to the formulation of various philosophical problems concerning for example the logic of natural selection and the implications of the concepts of adaptation and fitness. In a sense, philosophy of biology is the discussion of the philosophical problems raised by the theory of evolution. The biological classification of species had been a paradigm of philosophical classification of reality. Darwin suggested that species themselves evolve. The features of a species are not eternal, and the distinctions between species are not fixed. This evolutionary perspective has seriously transformed our understanding of the structure of the world. From the theory of evolution, philosophers have developed evolutionary epistemology, which attempts to explain cognitive faculties, knowledge acquisition and the progress of knowledge in terms of the process of natural selection. Philosophers have also proposed an evolutionary ethics, which claims that what we ought to do should be determined on an evolutionary basis according the principle of the survival of the fittest. Evolutionary ethics can also have a less controversial role in explaining the pattern of our ethical thinking in terms of our being members of a particular naturally evolved species. Some philosophers also attempt to explain social, cultural and psychological phenomena in terms of biological structure in a reductionist approach called socio-biology.

"Evolutionary biology is the centre of gravity for both the science of biology and for the philosophy of the science. The philosophy of biology does not end with evolutionary issues, but that is where I think it begins." - Sober, *Philosophy of Biology*, 1993, xix.

Philosophy of education

A branch of applied philosophy dealing with philosophical issues in education. Although philosophy of education can be traced to Plato's *Republic*, it did not become a specific branch of philosophy until the beginning of the twentieth century. Interacting with political philosophy, the philosophy of education attempts to work out a conception of education which is suitable for contemporary liberal society. In

说明原因,因而不同于通常的从其原因来说明效果的标准因果说明,也不同于说明的覆盖律模型。这种功能的或目的论的说明的本性及其合理性问题,因而成为这一领域的一个主要论题。许多哲学家论证说,我们应当按照有机体过去的进化史,而不是按它未来的结果来理解生物学特性。按这种观点,功能说明能同化为一种因果说明。而另一些生物学哲学家则主张一种不能归结为一般因果性的自主性层次的功能说明。达尔文进化论导致了种种哲学问题的提出,例如自然选择的逻辑、适应和合目的性概念的涵义等。在某种意义上,生物学哲学就是有关进化论提出的哲学问题的讨论。生物学的物种分类是哲学中实在分类的一个范式。达尔文提出物种自身也在进化,种的特征并非永恒的,种之间的区别并非固定的。这种进化的视域极大地转变了我们对世界结构的理解。哲学家们由进化理论发展出“进化认识论”,它试图按照自然选择过程来说明认知才能、知识获取和知识进展;哲学家们也发展出“进化伦理学”,它相信我们的道德规范应基于按“适者生存”原则的进化来决定。进化伦理学也可以有不那么引起争议的功用,因它能根据我们是一种独特的自然进化物种的一员来说明我们伦理思维的模式。有些哲学家还试图依据生物学结构来说明社会、文化和心理学现象,这种还原论方法被称作“社会生物学”。

“进化论生物学对于生物学科学和科学哲学二者都处于问题的中心。生物学哲学并非终止于进化论问题,但我认为它正是由此开始的。”——索伯:《生物学哲学》,1993年,第xix页。

教育哲学

应用哲学的一个分支,它涉及的是教育中的哲学问题。虽然教育哲学可以追溯到柏拉图的《国家篇》,但直到20世纪初它才成为哲学的一个专门分支。与政治哲学相互影响,教育哲学试图创立一个适合当代自由社会的教育概念。柏拉图和卢梭认为,教育的目标是一个具有牢固的共同价值的正义社会;与此相反,当代自由

contrast to both Plato and Rousseau, who believed that education aims at a just society with strongly shared values, contemporary liberal education theorists, such as John Dewey, Michael Oakeshott, Paul Hirst and R. S. Peters, hold that education is individualistic, existing simply for the sake of developing one's rational mind, exploring with our natural inquisitiveness, acquiring knowledge for the sake of knowledge or cultivating personal autonomy. The philosophy of education is concerned with a series of problems arising from this picture of education, such as the relation between education and moral development, education and censorship, education and the role of art, the education of personal emotion and feeling and the equality of educational opportunity. It also provides a critical evaluation of educational theory. Different theories of human nature result in different theories of education. In the twentieth century, the development of psychology, such as Freud's psychoanalysis and Piaget's theory of the stages of psychological development in the child, have deeply affected the discussion of education, although in Freud's case not always to its benefit. In radically incompatible ways, Chomsky's linguistics and Skinner's behaviourism altered notions of learning. Philosophy of education is less developed than other branches of the philosophy of the social sciences.

"Philosophy of education focuses on the language of educational theory and practice." —Moore, *Philosophy of Education*, 1982, p. 6.

Philosophy of history

History is the actual human past, but it is also a branch of knowledge about the human past. Correspondingly, there are two major types of philosophy of history. Speculative philosophy of history is concerned with actual history and seeks to provide a philosophical history of the world. Analytic philosophy of history, in contrast, is concerned with historical thinking and knowledge and with other philosophical issues arising out of the practice of historians. The distinction between these two kinds of philosophy of history is widely characterised as also being a distinction between substantive and critical philosophy of history and between material and formal philosophy of history.

Speculative philosophy of history can be traced to its origin in Augustine's *City of God*. It assumes that history is not a sequential aggregate of random past events and argues that an underlying factor or structure renders the whole historical process rational and intelligible. The claim that temporal succession itself has logical implications was first derived from a theology and teleological world view which viewed human history as controlled by some divine force. In the Enlightenment, some philosophers, such as the eighteenth century French Encyclopedists, were inspired by the development of physics to explore the uniformity of history on the

主义的教育理论家如 J. 杜威、M. 奥克肖特、P. 赫斯特和 R. S. 彼得斯主张,教育是个人主义的,它的存在只是为了发展人的理性心智,探究我们天生的好奇心,是为了知识而学知识,或为了培养个人的自主。与此相关,教育哲学关注这样一系列由这一教育图式引起的问题,如教育和道德发展的关系、教育和检查制度、教育和艺术的作用、个人的情感教育和教育机会的平等。它还对教育理论提出批判性的评价。不同的人性理论导致了不同的教育理论。在 20 世纪,心理学的发展,如弗洛伊德的精神分析和皮亚杰的儿童心理发展阶段理论,对教育的研讨产生了深刻的影响,尽管后者并不总是从弗洛伊德那里受益。乔姆斯基的语言学和施金纳的行为主义以极不相同的方式改变了学习的观念。与社会科学的其它哲学分支相比,教育哲学的发展极其缓慢。

"教育哲学关注的是教育理论与实践的语言。"——摩尔:《教育哲学》,1982 年,第 6 页。

历史哲学

历史是现实人类的过去,它也是关于人类过去的一个学科。与此相应,历史哲学有两种主要的类型。思辨的历史哲学涉及的是实际的历史,并试图提供一部哲学的世界历史。相比之下,分析的历史哲学涉及的是历史思考和历史知识,以及产生于历史学家实践的其他的哲学问题。这两类历史哲学的区别也被广泛地说成是实在的历史哲学和批判的历史哲学的区别,以及实质的历史哲学和形式的历史哲学的区别。

思辨的历史哲学可以溯源至奥古斯丁的《上帝之城》。它假定历史不是偶然的过去事件的前后堆积,并论证说一个基本的因素或结构使得整个历史过程成为合理的和可以理解的。时间的连续性本身就有逻辑意义这一主张,最初来自神学和把人类历史视为由某种神的力量控制的目的论的世界观。在启蒙运动时期,一些哲学家,如 18 世纪法国百科全书派,受物理学的发展所鼓舞,根据人性的一致性这一假定探讨了历史的一致性。另一些哲学家,如 G. 维柯和 J. G. 赫尔德,则赞同更为经验的方法,即将历史的意义同它的文化背景联系起来的方法。黑格尔主张,历史有一个秘密计划,历史的发展

basis of the assumption of the uniformity of human nature. Others, such as Giambattista Vico and J. G. Herder, endorsed a more empirical approach in connecting the meaning of history with its cultural milieu. Hegel claimed that history has a plot and that the development of history is a dialectical movement governed by the absolute spirit. Marx substituted an economic foundation for Hegel's absolute spirit as the engine for historical development. In the twentieth century, authors such as Arnold Toynbee and Oswald Spengler continued to believe in the overall meaning of human history, but substantive philosophy of history is in general out of favour.

Analytic philosophy of history emerged in the twentieth century. Rather than dealing with the underlying structure of actual history, its subject-matter is the underlying structure of historic explanation and the nature of historical understanding. It is concerned with the conceptual framework of historical thinking and the nature of historical objectivity. Analytic philosophy of history has two general tendencies. The first, represented by Hempel, attempts to assimilate historical explanation to scientific explanation and to offer a model of universal laws for historical knowledge. The second, influenced by the works of Rickert, Dilthey, Croce and Collingwood, is the mainstream of analytic philosophy of history. It distinguishes historical study from the natural science and argues for the autonomy of history. It does not take a historical event as an instance of a covering law, but attempts to understand the reasons behind each action. In the work of Lyotard, Foucault and others, it is concerned with the epistemological status of narrative, which is the characteristic form of presenting historical knowledge.

"Unlike their speculative predecessors, most present-day contributors to the philosophy of history take it to be a second order form of inquiry with the aim, not of trying to seek and assess the human past itself, but rather of seeking to elucidate and assess the ways in which historians typically describe or comprehend that past." (Gardiner (ed), *The Philosophy of History*, 1974, p. 3.

Philosophy of language

Contemporary philosophy of language resulted from the linguistic turn in philosophy and is based on the assumption that all philosophical analysis can be reduced to the analysis of language. In a broad sense, philosophy of language is nearly synonymous with analytic philosophy. Hence, logical positivism, ordinary language philosophy, and the early and later Wittgenstein all exemplified different philosophical approaches to language in dealing with philosophical problems.

In a narrow sense, philosophy of language is related to linguistics or the science of language and is concerned with the underlying reality of language and its philosophical import. Traditionally semiotics is divided into syntax, seman-

是一个由绝对精神统治的辩证运动。马克思用经济基础取代了黑格尔的绝对精神作为历史发展的动力。在 20 世纪,一些学者,如 A. 汤因比和 O. 斯宾格勒,仍然相信人类历史的总体意义,但实质的历史哲学一般说来已不受欢迎。

分析的历史哲学出现于 20 世纪。它的论题涉及的不是实际历史的基本结构,而是历史说明的基本结构和历史理解的本质。它关注的是历史思维的概念结构和历史客观性的本质。分析的历史哲学有两种大体的趋势。第一种趋势以亨佩尔为代表,它试图将历史说明与自然科学说明同化,并试图为历史知识提出一个普遍规律的模式。第二种趋势受到李凯尔特、狄尔泰、克罗齐和柯林伍德的著作的影响,是分析的历史哲学的主流。它把历史研究与自然科学区别开来,并为历史的自律性做辩护。它不把历史事件看做覆盖律的例证,而是试图理解每一行为背后的原因。在利奥塔、福柯和其他人的著作中,它涉及的是叙述的认识论地位,而叙述乃是展现历史知识的特有形式。

"与他们思辨的前辈不同,绝大多数现今致力于历史哲学的研究者都把它看做第二等级的研究形式,其目的不是试图探索和评价人类过去本身,而是试图阐明和评价历史学家有代表性的描述或领会那种过去的方式。"——加德纳(编辑):《历史哲学》,1974 年,第 3 页。

语言哲学

当代语言哲学产生于哲学中的“语言的转向”,它基于这样的一种假定,即认为一切哲学分析都可以还原为对语言的分析。在广义上,语言哲学几乎是“分析哲学”的同义语。因而,逻辑实证主义、牛津日常语言哲学和前后期的维特根斯坦,都是用不同的语言哲学方法讨论哲学问题的。

在狭义上,语言哲学与语言学或语言学科有关,它关心的是内在的语言实在及其哲学意义。符号学在传统上被分为句法学、语义学和语用学。语言哲学讨论的是句法学与语义学之间的区分问题,以及诸如言语行为理论和格莱斯

tics and pragmatics. The philosophy of language deals with the problem of the distinction between syntax and semantics, and some pragmatic problems, for example in the theory of speech acts and Grice's theory of conversational implication. There are different conceptions of what the philosophy of language should be, but its central concern is with semantic questions such as meaning, truth, reference, predication, quantification and the nature of the propositions. Other major issues in this field of philosophy are the universal features of language and the relationships between language and world and between language and thought. Because of the inseparable relations between logic and language and among intentionality, understanding, thinking and language, the philosophy of language shares many common topics with philosophical logic and the philosophy of mind. It is sometimes regarded as a part of the philosophy of mind and sometimes even as a part of the philosophy of action. An influential type of philosophy of language developed out of Chomsky's generative grammar, which tries to uncover the structure of conceptual knowledge by revealing the linguistic structure underlying surface irregularities and variations.

"Though the philosophy of language might be reasonably be thought of as comprising anything that philosophers do when they think, qua philosophers, about knowledge... I have presented the philosophy of language in one of its guises, as an attempt to get clear about the basic concepts we use in thinking about language." - Alston, *Philosophy of Language*, 1964, xi.

Philosophy of law

Also called legal philosophy, a branch of philosophy that deals with philosophical problems or issues concerning the law and legal systems and that applies philosophical method to legal problems. The major topics of this field are: the nature and the definition of law, properties and identity conditions of legal systems, the ends to be attained by law, legal responsibility, legal reasoning, the nature and justification of punishment, the nature and justification of the state's coercive power and the relationships between moral right and legal right, between moral obligation and legal obligation, and between law and justice.

Philosophy of law is often used as a synonym for jurisprudence (from Latin: *juris prudentia*, knowledge of or skill in law). Jurisprudence, however, has a wider reference. Some of its divisions, such as analytical jurisprudence (the logical analysis of law and of legal concepts) and normative or critical jurisprudence (the evaluation of law and legal obligations) fall into the domain of philosophy of law. Other divisions such as historical jurisprudence (dealing with the origin and development of law), sociological jurisprudence (dealing with the relationship between legal rules and legal behaviour) and functional jurisprudence (dealing with legal

的交谈意义理论这样一些语用学问题。对语言哲学应当是什么还存在着不同的看法,但它的核心问题无疑是诸如意义、真理、指称、谓词、量化和命题的性质等这样的语义学问题。在这个哲学领域中的其他主要问题是,语言的一般特征和语言与世界以及语言与思想之间的关系。由于逻辑与语言和意向性、理解、思维与语言之间不可分的关系,语言哲学就与哲学逻辑和心的哲学有着许多共同关心的问题。有时,它也被看做心的哲学的一部分,有时,甚至被看做行为哲学的一部分。一种较有影响的语言哲学出自乔姆斯基的生成语法,它试图通过揭示隐藏在各种不规则和变化背后的语言结构,揭示概念知识的结构。

“虽然有理由把语言哲学看做是哲学家们在思考知识问题时所做的一切,……但我始终按照语言哲学的字义,把它看做是企图澄清我们在思考语言时所使用的基本概念。”——阿尔斯通:《语言哲学》,1964年,第xi页。

法哲学

也称为legal philosophy,哲学的一个分支,涉及的是与法律和法律制度相关的哲学问题或争论,以及哲学方法在法律问题中的应用。这一领域的主要论题有:法律的本质和定义、法律体系的特性和同一性的条件,法律所要达到的目的,法律责任,法律推理,惩罚的本质及其正当性,国家的强制权力的本质及其正当性以及道德权利和法律权利、道德责任和法律责任以及法和正义之间的关系。

法哲学也常常被用来作为“法理学”(源自拉丁语 *juris prudentia*, 关于法律的知识 and 技巧)的同义语。不过,法理学涉及的面更宽。它的某些分支,如分析的法理学(涉及的是法律和法律概念的逻辑分析)和规范的或批判的法理学(它涉及的是法律评价和法律责任)属于法哲学的领域。其他分支,如历史法理学(涉及的是法的起源和发展),社会学法理学(涉及的是法律规范和法律行为的关系)和功能法理学(涉及的是法律规范和社会需要),则同法哲学无关。

法哲学可以追溯到柏拉图的《法篇》,以及亚里士多德对分配正义和平均正义的区分。对法律的主要的哲学探讨包括:以T. 阿奎那为

norms and social needs), are not the concerns of philosophy of law.

Philosophy of law can be traced to Plato's *Laces*, and Aristotle's distinction between distributive justice and corrective justice. Major philosophical approaches to law include natural law theory, represented by Thomas Aquinas, which holds that law is essentially connected with moral right and good; legal positivism, represented by Jeremy Bentham, John Austin, and H. L. A. Hart, which argues for the moral neutrality of law and separates law from morality; and legal realism, represented by Oliver Wendell Holmes, Jr. and Alf Ross, which claims that the law should be understood in terms of how it operates in courts.

"The philosophy of law studies philosophical problems raised by the existence and practice of law." —Dworkin (ed.). *The Philosophy of Law*, 1977, introduction, p. 1.

Philosophy of logic, see philosophical logic

Philosophy of mathematics

Starting with Plato, mathematics has been viewed by philosophers as the model of necessary truth and *a priori* knowledge. Hence, the ontological status of mathematical objects, the foundation of mathematics, the nature of mathematical knowledge and truth, and the structure and function of mathematical theories have been of central interest for many philosophers. Modern philosophy of mathematics started with Frege's logicism and the establishment of set theory in mathematics. In opposition to the traditional claim that there is a kind of mathematical intuition which guarantees the necessity of mathematical truth, logicism argues that mathematics can be reduced to logic, and this idea was classically presented in Russell and Whitehead's *Principia Mathematica*. The approach inspired logical positivism, but was attacked by Quine with his criticism of the notion of analyticity. The paradox Russell discovered in set theory led to a foundational crisis of mathematics. To cope with the crisis, philosophers of mathematics have adopted different approaches. Some philosophers, following Plato, believe that mathematical objects are abstract entities independent of our minds, and this realistic position is called mathematical Platonism. Others, like Quine and Putnam, suggest that mathematics does not have objects proper to itself. Hilbert's formalist programme saw the meaning of mathematical expressions in terms of the formal mathematical system to which they belong rather than in terms of objects. Hilbert's attempt to prove the consistency and completeness of formal systems expressing arithmetic was undermined by Gödel's incompleteness theorems. In the Kantian tradition, others claim that mathematical objects are mental constructions or creations, a view best represented by constructivism.

代表的自然法理论,这一理论认为法律在本质上是与道德权利和善相联系的;以J. 边沁、J. 奥斯汀和 H. L. A. 哈特等人为代表的法学实证主义,这一理论坚持法律的道德中立思想,把法律与道德分离开来;以及以 O. W. 小霍尔姆斯和 A. 罗斯为代表的法学现实主义,这一理论认为应当根据法律如何在法庭中起作用去理解它。

“法哲学研究的是由于法律的存在和实践而出现的哲学问题。”——德沃金编:《法哲学》,1977年,导言,第1页。

逻辑哲学

见“哲学逻辑”条。

数学哲学

自柏拉图始,数学就被哲学家看做是必然真和先验知识的模型。由此,数学对象的本体论地位,数学基础,数学知识和数学真的本性,数学理论的结构和功能等成为许多哲学家的主要兴趣之所在。现代数学哲学始于弗雷格的逻辑主义和集合论在数学中的确立。传统观点认为,有一种数学直觉保证了数学真的必然性,与此观点相对立,逻辑主义相信数学可以还原为逻辑,这种观念在罗素和怀特海的《数学原理》中得到经典体现。这鼓舞了逻辑实证主义,但却受到了奎因通过他对分析性概念的批评所进行的攻击。罗素在集合论中所发现的悖论导致了数学基础的危机,而为了克服这一危机,数学哲学家采取了不同的方式。有些哲学家追随柏拉图,相信数学对象是独立于我们意识的抽象实体,这种实在论立场被称为“数学柏拉图主义”;还有些哲学家如奎因和普特南则提出数学并没有自己特有的对象。希尔伯特的形式主义纲领根据数学表达式所属的形式系统而不是对象来解释表达式的意义。希尔伯特试图证明表达算术的形式系统的一致性和完全性,但这一努力为哥德尔不完全性定理所摧毁。康德传统中的其他哲学家认为数学对象是心的构造或创造,这种立场的最好表述为“构造主义”;布劳维尔的直觉主义试图通过证明的构造去解释数学推理,这导致否认处于经典数学核心的排中律。数学哲学与当代本体论、认识论和当前的实在论与反实在论之争中的许多问题密切相关。

“数学哲学的中心问题是数学真的定义。”——卡里:《形式主义数学哲学纲要》,1951年,第3页。

Brouwer's intuitionism, which attempted to explain mathematical reasoning in terms of the construction of proofs, led to the denial of the law of excluded middle which is at the heart of classical mathematics. Philosophy of mathematics is closely connected with contemporary issues in ontology and epistemology and with current debates between realism and anti-realism.

"The central problem in the philosophy of mathematics is the definition of mathematical truth." —Curry, *Outline of a Formalist Philosophy of Mathematics*, 1951, p. 3.

Philosophy of mind

The philosophical examination of the nature of the mind and its relationship with body. Plato and Aristotle provided theories of mind, and so have many modern philosophers, in particular Descartes, Locke, Hume and Kant. But only with the emergence of psychology as a distinct discipline at the end of the nineteenth century, did the philosophy of mind become an independent sub-discipline within philosophy. Since then, theories of mind have aimed at deepening our understanding of the mind itself, rather than at placing an account of the mind within a traditional metaphysical or epistemological framework. Franz Brentano and his successors played a major role in this process.

Contemporary philosophy of mind established a new focus with the publication of Gilbert Ryle's *The Concept of Mind* (1949). Ryle tried to understand our mental states by analysing the logical structures and relations of our mental concepts. This work is distinguished from psychology, which studies the actual operations of mind through experimental methods and from philosophy of psychology which investigates the philosophical implications of the results and methods of psychology. Major topics in the philosophy of mind include the mind-body problem; the nature of the mind; consciousness; mental causation; intentionality, propositional attitudes and mental contents; knowledge and belief; representation; perception; feelings; sensations; thought and language; will; and the emotions. Various approaches to the mind have been explored, such as dualism, phenomenalism, epiphenomenalism, behaviourism, parallelism, materialism, functionalism and eliminativism. The philosophy of mind has been an extremely active discipline in recent decades. In the most recent years, some philosophers have sought to soften the distinction between philosophical and empirical studies of the mind and have linked philosophy of mind with such fields as computational modelling and cognitive psychology.

"The aim of the philosophy of mind is to conduct an a priori investigation into the essential nature of mental phenomena, by elucidating the latent content of mental concepts." —McGinn, *The Character of Mind*, 1982, p. 14.

心的哲学

对心的本质及其与身的关系的哲学考察。柏拉图和亚里士多德曾提出过关于心的理论,许多近代哲学家也是如此,特别是笛卡尔、洛克、休谟和康德。但只是当心理学在19世纪末成为一个独立的学科时,心的哲学才成为哲学的独立分支。因为从那以后,心的理论旨在加深我们对心本身的理解,而不是在一个传统的形而上的或认识论的框架中置入一个关于心的说明。F. 布伦塔诺及其继承者在这一过程中起到了重要作用。

当代心的哲学随着赖尔《心的概念》(1949)一书的出版而确立了新的问题。赖尔试图通过分析我们的心的概念的逻辑结构和关系来理解我们的心的状态,这与通过实验方法来研究心的实际操作的心理学的本身不同,也不同于研究心理学成果与方法的哲学意义的心理学哲学。心的哲学的主要论题包括心身问题、心的本质、意识、心的因果性、意向性、命题态度和心的内容、知识和信念、表征、知觉、情感、感觉、思维和语言、意愿以及情绪等等。心的哲学对心提供了多种多样的研究方法,如二元论、现象论、附随现象论、行为主义、平行论、唯物论、功能主义及取消论。近年来心的哲学成为哲学中最为活跃的部分。最近,有的哲学家试图弱化关于心的哲学与经验研究之间的区分,并将心的哲学与像计算机模拟和认知心理学这样的领域相联系。

"心的哲学的目标就是通过阐明心的概念的潜在内容来进行对心的现象的必要本质的先验研究。"——麦金:《心的特性》,1982年,第14页。

Philosophy of nature

In one sense, the analysis and clarification of the concepts used by natural scientists, particularly those concepts that cut across the frontiers of the various scientific disciplines. In a traditional sense, philosophy of nature employs the philosophical contemplation of nature to work out general principles to explain the constituent stuff, basic structure and movement of the natural world. This study was the main preoccupation the Pre-Socratic philosophers who originated western philosophy. Philosophy of nature is also called "physics" [from Greek: *physis*, nature], and one of Aristotle's major philosophical works is entitled *Physics*. Philosophy of nature has been a standard part of Western metaphysical systems, although it has been increasingly superseded by the empirical study of nature. Kant, however, held that philosophy of nature should seek to determine the basic concepts and principles on which scientists could build the whole structure of their knowledge of the world by establishing the *a priori* presuppositions of natural science. For Hegel, philosophy of nature stood above the empirical natural sciences by providing its own insights into the structure of facts and by going beyond scientific investigation. Philosophy of nature is also called "natural philosophy", but it should not be confused with the nature-philosophy (*Naturphilosophie*) of the German romantic movement.

"The philosophy of nature takes up the material which physics has prepared for it empirically, at the point to which physics has brought it, and reconstitutes it, so that experience is not its final warranted base." —Hegel, *Philosophy of Nature*, Introduction 10.

Philosophy of organism

A term used by Alfred North Whitehead for his own metaphysical outlook, although his metaphysics, which is also called process philosophy. Influenced by field theory in physics, he believed that the ultimate basis of the natural world is force rather than matter. Nature is analysed into units called actual occasions. An actual occasion is a process of becoming with its own orientation and is like the Leibnizian monad, although it is not windowless. Each actual occasion actively interrelates with other actual occasions in its immediate past. This process is called *concretere* (Latin: to grow together) and generates an actual entity. Whitehead claimed that this picture explains the organic structure of the world. Physics studies smaller units, while biology studies larger units. Each unit has its own inner structure and is an organism. Larger units are systems of smaller units.

"In all philosophic theory there is an ultimate which is actual in virtue of its accidents. It is only then capable of characterization through its accidental embodiments, and apart from these accidents is devoid of actuality. In the philosophy of organism this ultimate is termed 'creativity'." —

自然哲学

在一种意义上,是指为自然科学家所使用的概念,尤其是对那些横跨各门学科的概念加以分析和澄清的一个哲学分支。在传统意义上,自然哲学运用对自然的哲学沉思而制造出一般原理以解释自然界的构成材料、基本结构和运动。这个研究是前苏格拉底哲学家关注的主题,他们开创了西方哲学。自然哲学也称为“物理学”[源自希腊词: *physis*, 自然],亚里士多德的一本重要哲学著作就题名为《物理学》。自然哲学一直是西方形而上学体系的标准部分,虽然它已逐渐被对自然的经验研究所代替。然而,康德认为,自然哲学应该努力规定基本概念和原理,在这些概念和原理的基础上,自然科学家才能通过建立自然科学的先天前提而建构他们对世界的整个知识结构。对于黑格尔来说,自然哲学凌驾于经验自然科学之上,因为前者提供它自己对事实结构的洞察,并超越科学的研究。自然哲学不应与德国浪漫主义运动的“自然的哲学”相混。

“自然哲学在物理学使它达到的立脚点上接受物理学从经验中为它准备的材料,并把这种材料加以重构,以至于不再把经验作为最终有根据的基础。”——黑格尔:《自然哲学》,导言 10。

有机体哲学

英国哲学家 A. N. 怀特海用于他自己的形而上学观点的名称,尽管他的形而上学一般也称作“过程哲学”。为物理学中的场论所影响,他相信自然界的终极基础是力而不是物质。自然被分析为称作“现实事态”的单位。一个现实事态就是一个带有其自身方向性的生成过程。它就像莱布尼茨的单子,但不是无窗的。每个现实事态都与刚刚过去的其他现实事态能动地互相关联。这个过程叫做 *concretere* (源自拉丁文,意思是“共同生长”),并且产生出“现实实有”。怀特海宣称这一图景说明了世界的有机结构。物理学研究较小的单位,而生物学研究较大的单位。每一单位都有其内在结构,都是一个有机体。较大的单位是较小单位的系统。

“在所有哲学理论中都有一个基本原理,它借助于其偶然性而现实化。只有通过它偶然的体现,它才能特征化;离开了这些偶然性也就丧失了现实性。在有机体哲学中,这个基本原理用‘创造性’这一术语表示。”——怀特海:《过程与实在》,1929年,第10页。

Whitehead, *Process and Reality*, 1929, p. 13.

Philosophy of physics

A discipline of philosophy of science dealing with the philosophical impact of the development of modern physics, in particular philosophical issues arising in theory of relativity, quantum mechanics, modern thermodynamics and contemporary cosmology. The major topics of philosophy of physics include space, time, motion, probability, causation and objectivity in the quantum world. The discipline also investigates the foundations of physical theory, the aim of a physical theory, the inter-relation of physical theories and scientific methodology in physics and the logical systems suitable for modern physics. By exploring ideas and methods developed in physics, philosophy of physics contributes to our understanding of physics as a science. It tests the implications of new metaphysical claims arising within physics and shapes our insight into both human knowledge and the nature of things.

"The philosophy of physics performs at least four useful functions, which may be called philosophical assimilation, research planning, quality control, and home cleaning."

Bunge, *Philosophy of Physics*, 1973, p. 13.

Philosophy of psychology

The study of psychological concepts and theories, philosophical presuppositions of approaches to psychology and implications of psychological discoveries. It is part of a general development in the philosophy of science towards the integration of empirical and philosophical aspects of study, but in some respects philosophy of psychology overlaps with philosophy of mind. For many contemporary philosophers, philosophy of psychology has replaced philosophical psychology, which sought to analyse psychological concepts without attending to major developments in scientific psychology.

Philosophy of psychology is concerned with empirical or experimental psychology. Empirical psychology as an independent discipline began with the establishment of the first psychology laboratory at University of Leipzig in 1879 by the German psychologist Wilhelm Wundt, although empirical psychology was also based initially on the associationist theory developed by Hume and J. S. Mill. Philosophy of psychology explores complex relations among different theories of mind, empirical data and experiment in seeking a general account of the nature of mind. Psychological theories contributing to philosophical discussions about the mind have included Gestalt Theory, Freudian theory and behaviourism, but the source of much recent influence is cognitive science, in which the boundary between philosophy and psychology remains undetermined. This boundary is also challenged within philosophy, with Quine's naturalised epistemology tending to reduce epistemology to psychology.

物理学哲学

科学哲学的一门学科,它研究现代物理学发展的哲学影响,特别是在相对论、量子力学、现代热力学和当代宇宙学中产生的哲学问题。物理学哲学的主要论题包括空间、时间、运动、可能性、因果性和量子世界的客观性。这个学科也研究物理学理论的基础和目的、物理学理论和其科学方法、适合于现代物理学的逻辑体系的相互关系。通过探索物理学中所提出的观念和方法,物理学哲学对作为科学的物理学作出了我们的理解。它考察了在物理学中产生的新的形而上学主张的内涵,并形成我们对人类知识和事物本性的见识。

"物理学哲学至少执行四种有用的功能,它们可称为哲学同化、研究规划、质量控制和家园清洁。"——邦格:《物理学哲学》,1973年,第13页。

心理学哲学

对于心理学概念和理论、心理学方法的哲学前提和心理学发现的含义的研究。它是科学哲学中总体发展的一部分;这种发展的倾向是要整合研究中经验的和哲学的这两个方面。但在某些方面,心理学哲学与心的哲学相重叠。对于许多当代哲学家来说,心理学哲学已经取代了哲学心理学;后者试图在不关注科学心理学主要进展的情况下分析心理学概念。

心理学哲学涉及到经验心理学或实验心理学。经验心理学作为一门独立学科始于1879年莱比锡大学的第一座心理学实验室的建立,它出自德国心理学家W. 冯特之手;尽管在这之前,休谟和J. S. 密尔提出的联想主义理论已为经验心理学提供了一个初步的基础。心理学哲学探讨那些关于心灵、经验材料和实验的不同理论之间的关系,以寻求对于心灵本质的普遍性说明。已经影响到关于心的哲学讨论的心理学理论有格式塔理论、弗洛伊德理论和行为主义;但相当多的近期影响的来源是认知科学,其中哲学与心理学界限是未定的。在哲学里,由于奎因的自然化的认识论要将认识论还原为心理学,这样一种界限也受到挑战。

"心理学哲学就是对于科学心理学的结果和方法的本质及意义的哲学研究。"——麦金:《心的特性》,1982年,第4页。

"[P]hilosophy of psychology, that is, the philosophical study of the nature and significance of the results and methods of scientific psychology." — McGinn, *The Character of Mind*, 1982, p. 4.

Philosophy of pure reason, see metaphysics (Kant)

Philosophy of religion

A branch of philosophy dealing with the meaning, nature and philosophical implications of religious beliefs and claims and of religious practices. Theoretically, all religions constitute its subject-matter, but since the philosophy of religion as a speciality developed in Western countries, it naturally focuses on the claims of Western religions, especially the doctrines of Christianity but also including doctrines of Judaism and Islam. Its main topics include: the conception of God; the conceptual analysis of divine attributes such as omnipotence, omniscience, goodness, eternity, and the paradoxes resulting from these attributes; the logical characteristics of religious language; the examination of the logical structure of arguments for and against the existence of God, in particular of the most influential arguments such as the ontological argument, the argument from design, the cosmological argument and the problem of evil; the relation between faith and reason; the relations between religion and morality, art and science; the philosophical comparison of different forms of religion; the phenomenology of religious experience and its role, if any, in justifying religious belief; the methods of religious argument; the afterlife or immortality; the discussions of particular Christian doctrines such as the Trinity, Incarnation and Atonement. Many of these themes are also included in metaphysics and were the central topics in medieval philosophy.

"What are the distinctive features of religious ideas? Do they here and there contain contradictions? On what possible basis can they be considered true or false? How do they mesh in, if at all, with the other concepts which we use? Such are the questions which typically fall within the ambit of the philosophy of religion." — Ninian Smart, *The Philosophy of Religion*, 1970, v.

Philosophy of science

The study of logical, epistemological and metaphysical problems arising from reflections on the sciences and scientific activities. It is a philosophical critique of science. This area is new as a specific discipline and has emerged in conjunction with the intellectual achievements of modern science, but in a wider sense has been a part of epistemology and metaphysics in the philosophical tradition. The exact bound of its research domain is hard to define, for science itself comprises a wide range of activities, modes of thoughts

纯粹理性哲学

见“形而上学(康德)”条。

宗教哲学

哲学的一个分支,研究宗教信条和主张以及宗教实践活动的意义、本性和哲学蕴意。从理论上讲,一切宗教都建构有自己的主题。但是,既然宗教哲学作为一个专业是在西方国家中发展起来的,那么,它自然要聚焦在西方宗教的主张,尤其是基督教学说上,但也包括犹太教和伊斯兰教的学说。它的主要论题包括:上帝的概念;对全能、全知、善、永恒等神性以及导源于这些神性的悖论的概念分析;宗教语言的逻辑特征;对关于上帝存在的论证和反驳的逻辑结构考察,特别是对那些最有影响的论证的考察,譬如本体论论证、设计论证、宇宙论论证和邪恶难题;信仰和理性之间的关系;宗教和道德、艺术、科学的关系;不同形式宗教的哲学比较;宗教体验及其在证明宗教信仰中的作用(如果有某种作用的话)的现象学;宗教论证的方法;来世或不朽;对“三位一体说”、“道成肉身说”、“赎罪说”等特殊基督教学说的讨论等等。其中的许多题目也包括在形而上学中,而且是中世纪哲学的核心论题。

“宗教观念的不同特征是什么?它们包含有这样那样的矛盾吗?在什么可能的基础上,它们能被认作真的或假的?如果真有必要的话,它们怎样与我们使用的其他概念相吻合?诸如此类的问题,是典型地属于宗教哲学范围的问题。”——斯马特:《宗教哲学》,1970年,v。

科学哲学

对于由反思科学和科学活动而产生的逻辑、认识论和本体论问题的研究。它是对科学的哲学批判。这一领域作为一个新的特殊学科,其产生是与近代科学在思想上的成就相关联的,但在更广泛的意义上,它是哲学传统中认识论和形而上学的一部分。其研究领域的精确边界很难确定,因为科学本身是由范围广泛的活动、思想方式和话语构成的。一般而言,它所研究的最重要的问题有:科学的目的;科学概念之间和

and discourses. In general, the most important issues it investigates include the aims of science, the relations between scientific concepts and between scientific propositions; the principles assumed in science; the nature and structure of scientific rationality and methodology; scientific knowledge and its confirmation; rationality and scientific progress; explanation; scientific laws; natural necessity; probability; the unity or diversity of science; reduction and relations among the sciences; objectivity in science; certainty and fallibility in science; theory, observation, experiment in science; models in science; the ontological implications of science and the nature of theoretical entities; scientific creativity, invention and discovery; science and other knowledge; science and religion; the social effects of scientific ideas; the relation of philosophy of science to history and sociology of science; the ethics of science. Major figures in this field include the logical positivists (logical analysis of the structure of science, verificationism), Hempel (scientific explanation), Popper (falsificationism), Lakatos (progressive and degenerating research programmes) and Kuhn (paradigm shift and scientific revolutions). Before the Second World War, philosophy of science mainly focused on the logic of science. Since then, philosophers have been more interested in the developmental paradigms of sciences and the epistemology of science.

Aside from general issues regarding the enterprise of science, there are specific problems arising in particular fields of science leading to discipline-specific studies, such as philosophy of mathematics, philosophy of physics, philosophy of biology and philosophy of psychology.

"In any event, much is gained in the way of clarifying the aims of philosophical analysis by limiting the philosophy of science to a group of related questions that arise in attempting to understand the intellectual products of scientific inquiry as embodied in explicitly formulated statements." — Ernest Nagel, in Danto and Morgenbesser (eds.), *Philosophy of Science*, 1960, p. 13.

Philosophy of social science

In the eighteenth century enlightenment, social sciences aimed to achieve the ideal of scientific objectivity and universality. But are natural sciences and social sciences similar? Philosophers who emphasise the meaning of human action or the role of ideology in social scientific inquiry believe that social sciences explain the social world in a distinct way. The tension between scientific explanation and interpretative understanding led to the emergence of the philosophy of social sciences. This discipline is concerned with the methodology and knowledge claims of the social sciences, especially with the logic of theory construction in the social sciences, with the nature, validity and adequacy of social theory, and with causation or laws among social phenomena. It is also concerned with explanation without universal laws and the role

科学命题之间的关系;科学中设定的原理;科学合理性和方法论的本性和结构;科学知识及其确证;合理性与科学进步;说明;科学法则;自然必然性;或然性;科学的统一性与多样性;科学之间的还原和关系;科学中的客观性;科学中的确定性和可错性;理论,观察,科学实验;科学模型;科学的本体论意义与理论实体之本性;科学的创造性、发明与发现;科学与其他知识;科学与宗教,科学观念的社会影响;科学哲学与科学史和科学社会学的关系;科学伦理学等。这一领域的主要代表人物包括逻辑实证主义者(科学结构的逻辑分析,证实主义),亨佩尔(科学说明),波普(证伪主义),拉卡托斯(进步与退化的研究纲领)和库恩(范式转换与科学革命)。在第二次世界大战前,科学哲学主要集中于科学的逻辑。自那以后,哲学家逐渐对科学的发展范式和科学认识论更感兴趣。

除了关于科学事业的一般问题外,还有出现于科学的特定领域中的专门问题。对于它们的研究形成了科学哲学中的几个专门学科,例如数学哲学、物理学哲学、生物学哲学、心理学哲学,等等。

“无论如何,澄清哲学分析目的的方式都会大有收获,而这种澄清借助于把科学哲学限于一组相关的问题,这些问题产生于试图去理解体现在清晰表述的陈述中的科学探究的精神产物。”——内格尔,见丹托和莫根贝瑟(编):《科学哲学》,1960年,第13页。

社会科学哲学

在18世纪的启蒙运动中,社会科学的目的寻求实现科学的客观性和普遍性的理想。但自然科学和社会科学相同吗?强调社会科学探究中人的行为的意义或意识形态的作用的哲学家,相信社会科学是以独特的方式解释人类社会的。科学说明与阐释性理解之间的矛盾导致了社会科学哲学的出现。这一学科关注的是社会科学的方法论和有关知识的主张,特别是社会科学中理论框架的逻辑,社会理论的本质、有效性和适应性,以及社会现象中的因果联系或规律。它还关注无需普遍规律的说明,以及社会科学中的意义和解释的作用。它的目的是阐明应用于社会科学中的推理形式和说明框架。它所涉及的一个中心问题是在说明的优先性上社

of meaning and interpretation in the social sciences. It aims to elucidate the forms of reasoning and explanatory frameworks practised in social sciences. A central question concerns the relation between social institutions and individuals with regard to explanatory priority, leading to a long-standing debate concerning methodological collectivism and methodological individualism. Major approaches in the philosophy of social science include those initiated by Emile Durkheim, Karl Marx and Max Weber. The hermeneutics of Wilhelm Dilthey and Hans-Georg Gadamer have challenged the unity of science model of the social sciences proposed by the logical positivists. The later work of Wittgenstein influenced Peter Winch's attack on an account of the social sciences on the model of the natural sciences. Martin Hollis, who emphasises the importance of rationality in understanding society, has argued for a possible accommodation between the rival traditions in the philosophy of social sciences. On this view, we must take care to determine the sort of questions we are asking and the sort of answers which would be appropriate. The philosophy of social sciences should be distinguished from social philosophy, for while social philosophy is the philosophical discussion of the substance of human society, the philosophy of social science deals with philosophical, in particular epistemological and methodological, issues arising out of the practice of social scientists. Nevertheless, the work of Alasdair MacIntyre is a recent example of how these two philosophical enterprises can influence one another and in some instances merge.

"To what extent can society be studied in the same way as nature? Without exaggerating, I think one could call this question the primal problem of the philosophy of the social sciences." — Bhaskar, *The Possibility of Naturalism*, 1979, p. 1.

Philosophy of thought

A new philosophical approach to thought represented by Christopher Peacocke and the late Gareth Evans. Its roots can be traced to Frege's criticism of psychologism and his assertion that thought is the third realm (the others being the physical and the psychological). In contrast to the central tenet of traditional analytical philosophy that an analysis of thought must depend on the analysis of language and that language is prior to thought, advocates of the philosophy of thought believe that the order of priority of this analysis should be reversed. Language can only be explained in terms of antecedently given notions which are thought-laden. Hence, the central consideration of philosophy is no longer language, but thought. It is thought that determines language, and not *vice versa*. Thought can be explained independent of language. Of course, traditional Cartesian epistemology also focuses on the question of the nature of thought,

会制度和个人之间的关系,这导致了关于方法论的集体主义和方法论的个人主义的长时期争论。社会科学哲学中的主要方法包括那些由杜克海姆、卡尔·马克思和M.韦伯开创的方法。狄尔泰与伽达默尔的解释学对逻辑实证主义提出的社会科学的科学模式的统一性提出了挑战。维特根斯坦的后期著作影响了P.温奇对以自然科学为模型的社会科学论述的非难。M.霍利斯强调合理性在理解社会中的重要性,并对社会科学哲学中的对立传统之间可能的和解做了论证。据此,我们必须小心确定我们所问的问题及适合它的答案。社会科学哲学应与社会学哲学相互分开,因为社会学哲学是对人类社会本体的哲学探讨,而社会科学哲学涉及的则是产生了社会科学家实践的哲学问题,特别是认识论和方法论的问题。不过,麦金泰尔最近的工作表明了这两个哲学事业如何能够相互影响并在一定情况下结合。

"在何种程度上社会能以研究自然的同样方法进行研究?毫不夸张地说,我想人们可以把这个问题叫做社会科学哲学的首要问题。"——巴斯卡:《自然主义的可能性》,1979年,第1页。

思想哲学

对思想的一种新的哲学探讨,以C.皮考克和已故的G.埃文斯为代表。它的根源可以追溯到弗雷格对心理主义的批判和对思想是“第三领域”(其他两个领域是物理领域和心理领域)这一观点的肯定。传统分析哲学的核心原则是,思想的分析必定依赖于语言的分析,语言先于思想。与此相对,思想哲学的拥护者认为,分析的这一先后顺序应当倒过来。语言只能根据先已给出的、充满着思想的概念来说明。因此,哲学主要考虑的不再是语言,而是思想。决定语言的正是思想,而不是相反。思想可以不需语言而得到说明。当然,传统的笛卡尔的认识论也关注思想的性质的问题,不过,思想哲学把思想认作命题的内容,研究如下之类的问题:如何成为一个思想,我们如何把握一个思想,思想有怎样的结构,思想是如何关于某物的,我们如何

but the philosophy of thought considers thought as the content of propositions and deals with questions such as what it is to be a thought, how a thought can be grasped, how a thought is structured, how a thought can be about something, how we can judge a thought to be true and how concepts that we grasp are related to thoughts. This type of philosophy is distinct from the philosophy of language and philosophy of mind, although it is related to them.

"The philosophy of thought concerns itself with the question what it is to be a thought, and with the structure of thoughts and their components; what it is for a thought to be about an object of one or another kind, what it is to grasp a concept and how a concept can be a component of a thought." Dummett, *Origins of Analytical Philosophy*, 1983, p. 129.

Phonologism

Derrida's term for the feature of traditional metaphysics which establishes an opposition between speech and writing and then prefers speech or voice to writing. Voice [Greek: *phono*] is traditionally considered to be the locus of truth, the real sign of essence and truth and the presence of consciousness to itself. One 'hears' the voice of 'reason' when one seeks the truth. Writing is considered to be a parasitic, supplementary, inferior and derivative form of communication. Such a philosophical tradition is fully presented in Plato's *Phaedrus*, and even Lévi-Strauss accepts this view. Derrida's notion of phonologism is closely associated with, or even used interchangeably with his notions of logocentrism and metaphysics of presence. The speech/writing opposition is one of the main objects of Derrida's deconstruction.

"This notion remains therefore within the heritage of that logocentrism which is also phonocentrism: absolute proximity of voice and being, of voice and the meaning of being, of voice and the ideality of meaning." — Derrida, *Of Grammatology* (trans. by Spivak), 1974, pp. 11-2.

Phrase-marker

Chomsky's term for the components of the structural skeleton of a sentence. It is generated by starting with a rule for rewriting the sentence and further expanding its components using phrase-structure rules, eventually reaching a categorial structure. This structure will mark items such as noun phrases, prepositional phrases and clauses. Phrase-markers are the elementary units from which deep structures are constituted. When we insert words into phrase markers and tidy them up, for example to ensure that the words have the right endings, we will have an actual sentence.

"The base of the syntactic component is a system of rules that generate a highly restricted (perhaps finite) set of basic strings, each with an associated structural description called a base phrase marker." — Chomsky, *Aspects of the*

能判断一个思想是正确的, 我们所把握的概念是如何与思想联系着的。此类哲学与语言哲学和心的哲学有关系, 但又与它们不同。

"思想哲学关心的问题是如何成为一个思想, 以及思想的结构和成分问题: 一个思想如何成为关于这种或那种对象的思想, 如何掌握一个概念以及一个概念如何成为一个思想的组成部分。" —— 达米特: 《分析哲学的起源》, 1983年, 第129页。

语音主义 (或译“语音中心主义”)

德里达用来表示传统形而上学特点的词, 形而上学将说话与书写对立起来, 并看重说话或语音 (voice, 声音), 贬低书写。语音 [古希腊文为 *phono*] 在传统中被认为是真理所在地、本质和真理的真实符号以及意识对自身的显现。当一个人追求真理时, 他/她“听到了”“理性的”声音。书写则被认为是寄生的、附加的、低级的和衍生出的交流形式。这样一个哲学传统充分表现在柏拉图的《费得罗篇》中, 甚至列维-斯特劳斯也接受这种观点。德里达关于语音主义的观点与他关于逻各斯中心主义和在场的形而上学这两个观念有密切联系, 甚至可以相互使用。这种语音与书写的对立是德里达要解构的主要对象之一。

“所以, 这个观念就保持在逻各斯中心主义, 也叫做语音中心主义的遗产之中: 语音与存在、语音与存在的意义、语音与意义的理念性的绝对亲近。” —— 德里达: 《论书写学》(斯庇瓦克英译), 1974年, 第11-12页。

短语记号

乔姆斯基的术语, 指一个句子构架的组成部分。它首先产生于重写这个句子的规则, 然后用短语结构的规则扩展其组成部分, 最后达到一种范畴结构。这种结构就标记为名词短语、介词短语、从句等等。短语记号是构成深层结构的基本单位。当我们把语词插入短语记号并把它们整理一番 (譬如当我们确信这些语词有恰当的头尾), 我们就会得到一个实际的句子。

“句法成分的基础是一套规则体系, 它们产生了一套严格限制的 (或许是有限的) 基本线索, 而其中具有相关结构描述的每个线索称作基本的短语记号。” —— 乔姆斯基: 《句法理论的若干方面》, 1965年, 第17页。

Theory of Syntax, 1965, p. 17.

Phrase-structure grammar

One of the three models Chomsky uses in order to characterise our understanding of language and grammar (the other models are finite state grammar and transformational grammar). It is a form of grammar associated with the theory of linguistic structure based upon immediate constituent analysis or parsing (from Latin; *pars*, part). This analysis parses a sentence into various components and then assigns these components to categories such as Noun, Verb, Adverb, and so on. A language which can be thus derived is called a phrase-structure language. This analysis is characterised by the use of diagrams and the introduction of rewriting rules for turning symbols into other symbols. For example, we can rewrite "Sentence" as "Noun Phrase - Verb Phrase" and then rewrite "Noun Phrase" as "Article - Noun", and so on. The different aspects of an utterance are successively disclosed in such an analysis. However, it can only be applied when we know what sentence we want to derive, and it fails to exhibit the intuited inter-relationships that hold between different sentences. For instance, this grammar cannot incorporate "to be" into the class of verbs. Hence, Chomsky takes this grammar to be inadequate for linguistic description, and holds that it should be replaced by transformational grammar.

"A phrase-structure grammar consists of an unordered set of rewriting rules, and assigns a structural description that can be represented as a tree-diagram with nodes labelled by symbols of the vocabulary." —Chomsky, *Aspects of the Theory of Syntax*, 1965, p. 88.

Phrastic, see noautic / phrastic

Phronesis, Greek term for practical wisdom

Physical determinism

The belief that everything in the world, including human action, is governed by universal laws of nature. This position was presented in ancient atomism, and was fully articulated by Hobbes. The development of modern science, especially physics, led many to think that physical determinism must be true. Science claims that its aim is to discover these objective laws. If we can provide a complete physical explanation at this time for one thing, we will be able to predict its future on the grounds of natural laws. Human freedom should be understood as the lack of constraints, rather

短语结构语法

乔姆斯基用于阐明理解语言和语法的三种模式之一(另外两个是“有限状态语法”和“转换语法”)。它是与一种语言结构理论相关的语法形式,而这种理论是基于直接的结构分析或分解(源自拉丁语 *pars*, 即“部分”)。这种分析是把句子分解为各种组成部分,然后赋予这些部分这样一些范畴,诸如名词、动词、副词等等。由此产生的语言就被称作短语结构语言。这种分析被明显地刻画为使用图表和引入把某些符号转换为其他符号的重写规则,譬如,把“句子”重写成“名词短语+动词短语”,又把“名词短语”重写成“冠词+名词”,等等。话语的不同部分在这种分析中不断地得到揭示。但这只能用在当我们知道我们想要推出什么样的句子的时候,它并没有展现不同句子之间直观到的内在关系。譬如,这种语法不能把“to be”归为一种动词。因而,乔姆斯基认为这种语法不适合语言描述,并认为应该把它替换为转换生成语法。

“短语结构语法是由一些不规则的重写规则构成的,它确定了一种结构描述,这种描述可以表示为一种以词汇符号做标记的三维图表。”——乔姆斯基:《句法理论的若干方面》,1965年,第88页。

实践智慧

“实践智慧 (practical wisdom)”的希腊词。

物理决定论

相信世界中的一切事物,包括人的活动,都是由自然的普遍规律支配的。这一见解出现于古代原子论中,并被霍布斯明确表述。现代科学的发展,特别是物理学的发展,使得很多人认为物理决定论肯定是对的。科学宣称其目的是发现这些客观规律。如果我们能在此时为一事物提供完整的物理解释,我们将能根据自然规律预测它的未来。人的自由应被理解为不受强制,而不是脱离这种因果关系。如果我们所做的一切都可以用物理规律解释,灵魂不朽就必须

than as freedom from such causation. If all that we do is explicable in terms of physical laws, the immortality of soul must be denied.

"Physical determinism is based on there being physical laws of nature, many of which have actually been discovered, and of whose truth we can reasonably hope to be quite certain, together with the claim that all other features of the world are dependent on physical factors." — Lucas, *The Freedom of the Will*, 1970, p. 65.

Physical objects, another term for material objects

Physical phenomenon, see mental phenomenon

Physicalism

A refinement of materialism introduced because not all physical phenomena are material. Physicalism assumes that the physical sciences can encompass everything in the world, and that ultimately everything in the world can be explained through physics. It is possible to reduce any scientific predicate to a physical predicate. The word was introduced by the Logical Positivists for the claim that all scientific statements could be translated into statements about physical or observable objects. In this sense, physicalism is close to scientism, which claims that any language which cannot be reduced to scientific language is defective. Carnap took physicalism as a synonym for behaviourism. However, the Australian philosopher J. J. C. Smart contrasted physicalism with behaviourism, taking the former to be a scientific approach and the latter a linguistic approach. Smart's physicalism is also called the identity theory of mind or central-state materialism, because its main thesis is that mental events are identical to brain events. On this view, propositions about mental states turn out to be propositions about brain states that belong to the science of neuro-physiology. Neuro-physiology, in turn, is reducible to physics. However, the physicalist view that the identity between mental states and brain states is contingent identity has been challenged by Kripke's claim that all identity is necessary identity. The issues raised by this criticism include the nature of reference, description, meaning, identity, modality and theory.

"The thesis of physicalism maintains that the physical language is a universal language of science—that is to say, that every language of any sub-domain of science can be equipollently translated into the physical language." — Carnap, *The Logical Syntax of Language*, 1937, p. 320.

Physico theological argument

Kant's term for his version of the argument from design. The physico-theological argument is one of the three

予以否认。

"物理决定论是以自然中物理规律的存在为基础的,这些规律有许多实际上已被发现,对这些规律的真理性的,连同那种认为世界的所有其他特性都取决于物理要素的观点,我们都能有理由希望是确定无疑的。"——鲁卡斯:《意志的自由》1970年,第65页。

物理对象

“物质对象”的另一说法。

物理现象

见“心的现象”条。

物理主义

一种改良的唯物论,其引入是因为并非一切物理现象都是物质的。物理主义认为物理科学可涵包世界上的一切,并且宇宙中的万事万物都可以最终借助于物理学而得到彻底的解释。有可能将任何科学谓项都还原为物理谓项。逻辑实证主义者创造这一词汇来指这样一种观点:所有的科学陈述都可以被转译为关于物理的或可观察的对象的陈述。在这个意义上,物理主义近乎“科学主义”,后者认为任何不能还原为科学语言的语言都是有缺陷的。卡尔纳普视物理主义为行为主义的同义语,然而,澳大利亚哲学家 J. J. C. 斯马特则将物理主义与行为主义相对立,将前者视为一个科学方法,而将后者视为语言方法。斯马特的物理主义又被称为“心的同一论”或“中心状态唯物论”,因为其主要论点是,心的事件同一于大脑事件。根据这一观点,关于心的状态的命题就是关于属于神经生理科学的大脑状态的命题,而神经生理科学则转而可以还原为物理学。不过,物理主义关于心的状态与大脑状态的同一是偶然同一的观点受到了克里普克的挑战。他认为,一切同一都是必然同一。由这一批评所引发的问题包括指称的性质,摹状,意义,同一,模态及理论等。

“物理主义的观点认为,物理语言是科学的普遍语言——也就是说,任何科学分支的每一语言都可以等同地转译为物理语言。”——卡尔纳普:《语言的逻辑句法》,1937年,第320页。

自然神论证明

康德的术语,是他关于设计论证的一种形式。自然神论证明是三个主要的上帝存在的神

main theistic proofs for the existence of God, the other two being the ontological argument and the cosmological argument. It argues from observations that the world is purposive and teleologically arranged to the conclusion that there must be an intelligent designer who created it. For Kant, this argument is not sufficient to prove the existence of God because it relies upon the presupposition that there is a supreme being and is thus ultimately based on the ontological argument. Kant argued in detail for the impossibility of the ontological argument and held that its rejection showed that both the cosmological and physico-theological arguments are impossible as well.

"Thus the physico-theological proof of the existence of an original or supreme being rests upon the cosmological proof, and the cosmological upon the ontological." —Kant, *Critique of Pure Reason*, A630/B658.

Pictorial form

Wittgenstein claims that a proposition is a logical picture of reality. The elements in a picture are connected with one another in a certain way, and this is the structure of a picture. But how is such a structure possible? The possibility of the structure is called its pictorial form, which is the common element shared by a picture and the reality it represents. Pictorial form is the way a picture represents how objects are related to one another, allowing a picture to depict any reality whose form it has. The conception of pictorial form generalises the notion of picture beyond its primitive base. The distinction between form and structure enables Wittgenstein to solve the ancient puzzle of the possibility of false judgement.

"Pictorial form is the possibility that things are related to one another in the same way as the elements of the picture." —Wittgenstein, *Tractatus*, 2.151.

Picture theory

Wittgenstein's theory of the proposition in the *Tractatus*, according to which a proposition is a picture of reality. To understand a proposition is to know the situation that it represents. The term "picture" (German: *Bild*) is derived both from a drawn picture and from the mathematical sense of an abstract model. All propositions are truth-functions of elementary propositions. Each elementary proposition is composed of unanalysable names which designate simple "objects". The sense of a proposition is the state of affairs it depicts. The way that elements are related in a proposition represents the same way in which objects are related to each other. Hence, a proposition has a pictorial nature. However, it is a logical picture which shares a "pictorial form" with what it depicts, rather than resembling what it depicts spatially. Although all propositions are pictures, not all pictures are propositions. It is a matter of dispute whether the picture

theory is a proof of the existence of God (the other two being the ontological argument and the cosmological argument). It argues from observations that the world is purposive and teleologically arranged to the conclusion that there must be an intelligent designer who created it. For Kant, this argument is not sufficient to prove the existence of God because it relies upon the presupposition that there is a supreme being and is thus ultimately based on the ontological argument. Kant argued in detail for the impossibility of the ontological argument and held that its rejection showed that both the cosmological and physico-theological arguments are impossible as well.

"Therefore the proof of the existence of the highest being rests upon the cosmological proof, and the cosmological upon the ontological." —Kant, *Critique of Pure Reason*, A630/B658.

Image form

Wittgenstein claims that a proposition is a logical picture of reality. The elements in a picture are connected with one another in a certain way, and this is the structure of a picture. But how is such a structure possible? The possibility of the structure is called its pictorial form, which is the common element shared by a picture and the reality it represents. Pictorial form is the way a picture represents how objects are related to one another, allowing a picture to depict any reality whose form it has. The conception of pictorial form generalises the notion of picture beyond its primitive base. The distinction between form and structure enables Wittgenstein to solve the ancient puzzle of the possibility of false judgement.

"Image form is the possibility that things are related to one another in the same way as the elements of the picture." —Wittgenstein, *Tractatus*, 2.151.

Image theory

Wittgenstein's theory of the proposition in the *Tractatus*, according to which a proposition is a picture of reality. To understand a proposition is to know the situation that it represents. The term "picture" (German: *Bild*) is derived both from a drawn picture and from the mathematical sense of an abstract model. All propositions are truth-functions of elementary propositions. Each elementary proposition is composed of unanalysable names which designate simple "objects". The sense of a proposition is the state of affairs it depicts. The way that elements are related in a proposition represents the same way in which objects are related to each other. Hence, a proposition has a pictorial nature. However, it is a logical picture which shares a "pictorial form" with what it depicts, rather than resembling what it depicts spatially. Although all propositions are pictures, not all pictures are propositions. It is a matter of dispute whether the picture

theory of propositions collapses with Wittgenstein's rejection of the metaphysics of logical atomism of the *Tractatus*.

"It is commonly said that Wittgenstein after the *Tractatus* abandoned the picture theory of proposition." — Kenny, *The Legacy of Wittgenstein*, 1984, p. 21.

Piecemeal engineering

Popper's proposal for an approach to social change. Piecemeal social engineering contrasts with the utopian engineering of rapid, large-scale reform or revolution. Instead of setting up a positive blueprint for society and then seeking the means to realise it, piecemeal engineering confronts the ills of society through a succession of limited reforms. Social life is so complicated that we cannot tell in advance the unintended consequences of any policy, and these consequences might be harmful. If reform is too complex, rapid or wide-ranging, we cannot trace harmful consequences to their source and correct them. Popper argued that reforming society by piecemeal social engineering would improve institutions and maintain social stability more effectively than utopian strategies. Some critics argue that a policy of piecemeal social engineering would succeed only if there is social agreement, but on such matters there are often deep divisions.

"The piecemeal engineer will, accordingly, adopt the method of searching for, and fighting against the greatest and most urgent evils of society, rather than searching for, and fighting for, its greatest ultimate good." — Popper, *Open Society and its Enemies* 1945, p. 158.

Pietism

A devotional religious movement within Protestantism, springing from Lutheranism and flourishing in Germany in the seventeenth and early eighteenth centuries. It was founded by the German Lutheran pastor Philipp Jakob Spener. The name of the movement was derived from the twice-weekly Bible study meetings for devout lay people (called *collegia pietatis*) under Spener's organisation. The movement aimed at being free from the influence of Church and tradition. It stressed autonomous subjectivity and claimed that the real purpose of redemption is to bring the religious subjectivity of man into lively play. The real interest of theology should be to promote the exercise of godliness. The individual should determine the shape of his own religious life by confronting the Bible. The movement emphasised individual experience and practicality rather than evidence and reason. It was concerned with particular problems and situations rather than with the establishment of universal principles. Pietism was the religion of Kant, and the movement also produced figures such as Friedrich Schleiermacher and Gotfried Arnold.

"Pietism represented a turning towards a more inward, emotional, and enthusiastic form of Christianity." — Pinson,

"人们通常说，维特根斯坦在《逻辑哲学论》之后放弃了命题的图像论。"——肯尼：《维特根斯坦的遗产》，1984年，第21页。

渐进工程

波普提出的一种社会变革的方式。渐进式社会工程是相对于激烈的、大规模的改革或革命的乌托邦式工程而言的。渐进工程不是先提出一个明确的社会蓝图然后再寻找方法来实现它，而是通过一系列有限的改革来对抗社会的弊病。社会生活是如此复杂以至我们不可能预先知道任何政策所带来的意想之外的后果，而且这些后果也许是有害的。如果改革太复杂、太快或规模过大，我们就不能找出有害后果的根源并纠正它们。波普论证说，以渐进的社会工程改革社会将会改善社会制度并维持社会的稳定，这样做比乌托邦的策略更有效。一些批评家争辩说，渐进的社会工程的政策只有在社会一致同意的情况下才能成功，但对这样的问题常常存在很深的分歧。

"因此，渐进的工程将采取寻找社会最严重、最迫切解决的社会弊端并与之斗争的方法，而不是采取寻找社会最伟大的终极幸福并为之奋斗的方法。"——波普：《开放的社会及其敌人》，1945年，第158页。

虔敬主义

新教内的一个虔诚的宗教运动，发源于路德教，盛行于17世纪到18世纪早期的德国。由德国的路德教牧师P. J. 斯庇勒创立。该运动的名称源出于在斯庇勒组织下为虔诚的俗界人士举办的每星期两次的圣经研讨会议（被称为 *collegia pietatis*）。该运动的目标是为了摆脱教会和传统的影响。它强调自治的主体性，主张救赎的实在目的是把人的宗教主体性鲜活地发挥出来。神学的实际效用应该是促进敬神的实行。个体应该通过对照圣经，决定他自己的宗教生活形式。该运动强调的是个体体验和实践性，而不是证据和理由。它关注的是特殊问题和境遇，而不是普遍原则的建立。虔敬主义是康德的宗教，该运动也产生出了F. 施莱尔马赫和G. 阿诺德这样的人物。

"虔敬主义代表了基督教转向到较为内向的、激情的和热情的形式。"——宾森：《虔敬主义在日耳曼民族主义中的作用》，1968年，第14页。

Pietism as a Factor in the Role of German Nationalism, 1968, p. 14.

Pineal gland

Descartes held that mind and body are two entities which are completely different in nature. How, then, can the soul have a unified relationship with the entire body? How can mind and body mutually affect one another? Descartes' answer is that the soul does not exercise its functions directly on the body, but affects the body through the pineal gland. The pineal gland is an organ which is situated in the middle of the brain, and which is unique to humans. For Descartes, the pineal gland is the seat of the soul. He claimed that the mind generates movements in the pineal gland, which in turn generates movements in the nerves and hence the body. Giving a location to mind-body interaction is not a satisfactory solution to the problem of psycho-physical causation. The rejection of this appeal to the pineal gland led to the parallelism of Spinoza, the occasionalism of Malebranche and the pre-established harmony of Leibniz.

"There is no other place in the body where they can be thus united unless they are so in this gland." Descartes, *The Passions of the Soul*, 1. 32.

Plagiarism, see forgery

Platonism

Philosophy derived from the spirit of the philosophy of Plato, in particular from his Theory of Forms, which contrasts reality with phenomena; soul with body; knowledge with opinion; reason with sensation; and rationality with emotion. It then claims that the first member of each contrasting pair is superior or more real than the second member. Such contrasts form an essential ingredient of Western philosophy and has inspired many philosophers since Plato. In this sense, Whitehead reasonably claimed that all subsequent philosophies are footnotes to Plato. Those who claim explicitly to be the heirs of Plato include the Academy tradition (the Old, Middle, and New Academy), Neo-platonism, the Renaissance Platonism of Marsilio Ficino and the Cambridge Platonism of the seventeenth century. In contemporary philosophy, all positions which suggest the independent existence of abstract objects are called Platonism. According to these accounts, abstracta can be grasped by the mind, but cannot be created by it. Platonism in this sense is virtually synonymous with realism and is opposed to nominalism.

"Empiricism may properly be contrasted with platonism. For the platonist believes ... that the propositions of logic and mathematics concern an abstract (non-physical and changeless) but genuinely mind-independent realm of objects, including universals such as beauty and wisdom, as

松果腺

笛卡尔认为,心灵和肉体是性质上完全不同的两个东西。那么,灵魂怎么能同整个身体有一种统一的关系呢?它们怎样互相影响的呢?笛卡尔的回答是:灵魂并不将其功能直接作用于身体,而是通过松果腺来做到的。松果腺是位于脑中部的一个器官,它是人类独有的。笛卡尔认为,松果腺是灵魂的所在地。心灵在松果腺中产生各种运动,这些运动转而又在神经中,而后在身体上产生运动。给身心的相互作用指定一个地点不是解决心—物因果关系问题的满意办法。放弃求助松果腺,就引出了斯宾诺莎的平行论、马勒伯朗士的偶因论和莱布尼茨的前定和谐论。

"除了在这个腺体内它们(灵魂和肉体)可以那样结合以外,它们在身体的任何其他地方都不能那样结合。"——笛卡尔:《灵魂的激情》,第一部分,第32节。

抄袭

见“赝品”条。

柏拉图主义

源于柏拉图哲学精神的哲学,尤其以他的“理念论”为基础。“理念论”把实在和现象、灵魂和肉体、知识和意见、理性和感觉、理智和激情对应起来,随后断言,这每组对应关系中的前者要优于后者,或比后者更实在。这样的对应,形成了西方哲学的一种本质要素,启发着从柏拉图以来的许多哲学家。在这种意义上,怀特海断言一切后随的哲学都是对柏拉图脚注是有道理的。明确承认是柏拉图后继者的人,包括柏拉图学园传统(老学园、中期学园和新学园)、新柏拉图主义、M. 费其诺为代表的文艺复兴时期的柏拉图主义和17世纪的剑桥柏拉图学派。在当代哲学中,凡认为抽象对象独立存在的一切主张都被称作“柏拉图主义”。根据这些说明,抽象物能被心智把握,但不能被它创造。在这种意义上,柏拉图主义实际上是“唯实论”的同义语,而与“唯名论”相对。

“经验主义可以恰当地和柏拉图主义相对应。因为柏拉图主义者相信……逻辑和数学命题关注的是抽象的(非物理的、无变化的),但又完全独立于心智的对象领域,包括美、智慧等共相,也包括自然数等数学实体。”——卡拉塞斯:《人类知识与人类本性》,1992年,第10页。

well as mathematical entities such as the natural numbers.” Carruthers, *Human Knowledge and Human Nature*, 1992, p. 10.

Plato's beard

Quine's term for a classical puzzle, which can be traced to Plato's *Sophist* and concerns the existence of nonbeing. We can formulate the true sentence, “The Queen of China does not exist”, but it seems plausible to claim that the non-existent Queen must in some sense be for us to make sense of denying her existence. Yet it seems self-contradictory to say that we can infer the being of something from its nonbeing. This puzzle has led philosophers to examine both the nature of reference and the logical form of existential propositions.

“This is the old Platonic riddle of nonbeing. Nonbeing must in some sense be, otherwise what is it that there is not? This tangled doctrine might be nicknamed Plato's beard.” Quine, *From a Logical Point of View*, pp. 1-2.

Plausibility

A claim is plausible if it subjectively seems worthy of belief even if we have not necessarily studied its objective ground. Plausibility is thus acceptable credibility, and its degree of credibility can depend in part on the authority that advocates it. A plausible claim can turn out to be false, and an implausible claim can turn out to be true. People can disagree on what they find to be plausible. Plausibility is distinct from probability, which is related to alternatives. A belief is probable if its degree of likelihood is greater than that of its alternatives. Probability is more objective than plausibility.

“All holding-to-be true based on grounds concerning which we do not investigate whether they contain a large or a small degree of truth is plausibility.” —Kant, *Lectures on Logic* (ed. by Young), 1992, p. 113.

Pleasure

[Greek: *hedone*, from which hedonism is derived] Pleasure is taken to be contrary to pain but related to enjoyment and liking. Plato in the *Philebus* argues that pleasure is an indeterminate state and cannot be measured, a position challenged by social choice and other theories which depend on some way of measuring pleasure. Aristotle holds that pleasure, in contrast to movement, is an activity having its own end and is the natural accompaniment of successful activity, whether of the mind or the senses. Pleasure is not identical to happiness, but is an important part of it. This position opposes traditional hedonism, which claims that pleasure is the only or the highest good. According to Utilitarianism an action is justified to the extent that it tends to produce pleasure and to reduce pain. Pleasure is generally viewed as an agreeable feeling, but there is much debate regarding its nature,

柏拉图的胡子

奎因的术语，指一个可溯至柏拉图《智者篇》的经典性难题，关注“不是”的存在，我们可以构建一真实的句子，“中国的皇后不存在”。但我们有理由断定，不存在的皇后必定自某种意义上“是”〔存在〕，因而使得我们可否定其存在。可是说我们可从一个事物的“不是”〔不存在〕中推出其“是”〔存在〕，这是自相矛盾的，这一难题吸引了许多哲学家去考察指称的性质和存在命题的逻辑形式。

“这是古老的柏拉图的关于‘不是’的谜。‘不是’必定在某种意义上‘是’；不然，‘不是’又是什么？这一棘手的学说可取绰号为柏拉图的胡子。”——奎因：《从逻辑的观点看》，1956年，第1—2页。

似真性

一个信念是似真的，如果它主观上值得相信，尽管我们尚未必要地研究其客观基础的。这样，似真性就是可接受的可信性，其可信度部分地依赖于提倡它的权威。一个似真观点可证明为是假的，而一个不似真观点可证明为是真的。人们对他们认为是似真的东西会有不同观点。似真性区别于与选择相关的或然性，一个信念是或然的，如果其真实性程度大于其他选择。或然性比似真性更客观。

“所有那些我们主张其为真，但其基础又并非我们对其真实度的研究，就是似真性。”——康德：《逻辑学讲义》（杨编辑），1992年，第113页。

快感

〔希腊词是 *hedone*，“享乐主义”（hedonism）源自该词〕快感与痛苦相对，与享受和喜欢相关。在《费利布篇》中，柏拉图争辩说，快感是一种不确定的状态，是无法衡量的，这一立场受到有赖于某种快感衡量方式的社会选择与其他学说的挑战。亚里士多德认为快感与运动截然相反，它是一种有其自身目的的活动，是成功活动的自然伴随物，无论这种活动是心灵的还是感官的。快感与幸福不同，但却是幸福的重要组成部分。这一立场反对传统的享乐主义，因为后者把快感当做惟一的或至高的善。按照功利主义的观点，举凡产生快感并且消减痛苦的行动就是合理的。快感通常被视为一种欣快的感受，但在其本质、分类及其同欲望的关系等问题上争论颇多，这其中的部分原因在于

classification and relation to desire, in part because of its central role in the discussion of human motivation and value.

"Appetite's concern is pleasure and pain." —Aristotle, *Nicomachean Ethics*, 1111b17.

Pluralism

[From Latin *pluris*, more than one] A doctrine, opposed to monism and dualism, holding that reality consists of many things and that none of its constituents is more fundamental than any of the others. It is therefore impossible to reduce everything in reality to one or two ultimate principles. For pluralism there are many worlds which we are able to construct through the use of different systems of concepts and different standards of measurement. Leibniz's theory of monads, Russell's logical atomism and later Wittgenstein's theory of language games are different forms of pluralism. Sometimes pluralism means that reality has no basic unity or continuity, but is essentially fragmented or indeterminate. In ethics, pluralism means that there are various competing ethical interests or values which cannot be reduced to one single overriding interest or value.

"The extreme form of pluralism is the assumption that all relations are external, with the consequence that the existence of any one object is logically independent of the existence of any other." —Ayer, *Philosophy in the Twentieth Century*, 1982, p. 10.

Pneuma

[Greek: breath] A key term in Stoic philosophy of nature. *Pneuma* was held to be a compound of fire and air, although not a simple chemical compound, and was also called artistic or intelligent *pneuma*. Through having two components, *pneuma* was held to have a peculiar tensional movement making it continuously active. It was described as a material substance with fine and tenuous structure, but also as a cohesive force or energy which pervades the universe to account for its change and persistence. As Nature, God or the universal *logos*, it acted on matter, that is the elements of earth and water, to hold them together. *Pneuma* worked in the macrocosm and also in every individual body. The concept of *pneuma* was influenced by the Pre-Socratics and in turn influenced the postulation of *aether* in the science of the seventeenth to nineteenth centuries. It is also comparable to a field of force in contemporary physics.

"This pneuma possesses two parts, elements or conditions, which are blended with one another through and through, the cold and hot, or if one wished to describe them by different names taken from their substances: air and fire." —Chrysippus, in Gelen, *On Hippocrates and Plato's Doctrines*, 5, 3, 8.

Pneumatology, another expression for rational psychology

快感在讨论人类动机和价值过程中的重要作用。

"欲望所关心的是快感与痛苦。" ——亚里士多德：《尼各马可伦理学》，1111b17。

多元论

[源自拉丁文 *pluris*, "多于·"] 与一元论和二元论相反, 这种学说认为实在由许多事物组成, 其组成元素中没有哪一种比任何其他种更为基本。因此不可能把实在中的任何东西都还原为一种或两种最终的基质。对多元论而言, 有多个世界, 我们可以通过使用不同的概念系统和不同的测量标准而把它们构造出来。莱布尼茨的单子论、罗素的逻辑原子论以及后期维特根斯坦的语言游戏论都是不同形式的多元论。有时, 多元论指的是实在没有基本统一性或连续性, 它本质上是支离破碎和不确定的。在伦理学中, 多元论指有各种对立的伦理兴趣和价值, 不能把它们还原成单一的、压倒一切的兴趣和价值。

"多元论的极端形式是这种假设: 所有的关系都是外在的, 因此任何对象的存在在逻辑上都独立于任何其他对象的存在。" ——艾耶尔: 《20 世纪的哲学》, 1982 年, 第 10 页。

普纽玛

[希腊文, 气息] 斯多亚自然哲学的中心概念。它被认为是火与气的复合物, 虽然不是一种简单的化学复合物。他们也称为"技艺性的"或"理智的"普纽玛。因为普纽玛有两个成分, 它便有一种独特的张力运动, 使其不断地活动。它是一种结构稀薄精致的物质本体, 但也像一种凝聚力或能量般贯穿整个宇宙, 说明后者的变化和持续。它作为自然, 作为神, 作为普遍的逻各斯, 而作用于质料, 即土和水的元素, 将它们相结合。普纽玛既在宏观宇宙, 也在每个个别物体中起作用。这一观念深受前苏格拉底哲学影响, 并转而影响了 17 至 19 世纪科学中关于以太的设定。它也可与当代物理学的"力场"观念相对照。

"这一普纽玛拥有两个部分, 两种元素或两种条件; 它们一直在互相混合, 既冷又热; 如果人们要用取自它们本体的不同名称来描绘它们, 即是气与火。" ——克吕西波, 见盖伦: 《论希波克拉底和柏拉图的学说》, 5, 3, 8。

圣灵论

Poiesis

[Greek: from *poiein*, to act, to do or to make] For Aristotle, *poiesis* is restricted to making or producing which has as its aim something beyond itself, for example ship-building, which has the aim of producing a vessel. It is distinguished from *praxis* (action, conduct), which has aims and value in itself. *Poiesis* belongs to *techné* (craft), while *praxis* belongs to *phronesis* (practical reason). In another sense, *poiesis* is used specifically for poetry and its composition.

"The state involving reason and concerned with action is different from the state involving reason and concerned with *poiesis*." —Aristotle, *Nicomachean Ethics*, 1140a3-4.

Polar-related concept pair

A pair of concepts which are opposite in meaning, where each of them can be understood or identified only in terms of its contrast with the other. The notion is also called conceptual polarity. Neither member of the pair has an autonomous existence as a concept apart from the other, and neither member can logically be reduced to the other. In many cases, one concept of the polar pair is formed in association with the other from which it is distinguished. Examples of polar pairs include up and down, unity and plurality, physical and mental and error and truth. The application of each entails the possibility of applying the other. In the history of Western philosophy, various polarities have been established, and usually one member is thought to be superior to the other. Derrida's deconstructionism is intended to reject dichotomous conceptual structures and their relations of unequal power and value, but it is difficult to determine whether we can do without such concept pairs or whether objectionable implications of value can be detached from them.

"A particularly important type of discrimination is that where one concept which, so to speak, includes by exclusion. Concepts related in this way and such constitute the most important concepts of our thinking, we denoted as 'polar-related concept pairs'." —Reiss, *The Basis of Scientific Thinking*, 1961, p. 5.

Polish notation

The notation employed in contemporary logic is generally Russellian symbolism. Yet there is an important kind of notation which was originates by the Polish logician Lukasiewicz and which was widely employed by Polish logicians between two world wars. It was also preferred by the logician Arthur Prior. The chief characteristic of Polish notation is that it places all its operators immediately before their arguments, and thus gets rid of parentheses. This helps avoid ambiguity and better serves automatic processing. The

"理性心理学"的另一表述。

创制

[希腊词, 源自 *poiein*, 行动、做或制作] 对亚里士多德而言, 创制限于那目的不在自身内的制作或生产, 例如, 造船业的目的是制造船。它与实践(举动, 行为)相区分, 后者具有目的和价值于自身。创制属于技艺(*techné*), 而实践属于实践理性(*phronesis*)。在另一意义上, 创制专门用来指诗及其创作。

"理性地关涉行为的状态不同于理性地关涉创制的状态。"——亚里士多德:《尼各马可伦理学》, 1140a3—4。

极性相关的概念对

一对意义相反、但每一个只能在与另一个的对比中才能理解或鉴别的概念。这一概念也被称作“概念的两极性”。这种概念中的任何一个都既不能作为离开另一方的孤立概念而自主存在, 也不能在逻辑上还原为另一方。在许多情形中, 这种极性对中的一个概念都在与自己相区别的另一概念的相关中形成。这种概念对的例子有“上—下”, “统一性—多元性”, “物理的—心理的”, “错误—真理”等。每一概念的应用都蕴涵着另一方应用的可能性。西方哲学史中确立起种种概念对, 并且通常认为有一方高于另一方。德里达的解构主义力图拒斥两极概念结构以及它们间在力量与价值上不相等的关系, 不过很难决定我们可否取消这些概念对, 或者价值的客观化含义是否可与它们相分离。

“一种特别重要的辨别类型, 是一个概念由排斥而得以包容。以这种方式相关、并由此构成我们思维中最重要的概念, 我们称之为‘极性相关的概念对’。”——里斯:《科学思维基础》, 1961年, 第5页。

波兰记法

在当代逻辑中所使用的记法一般是罗素的符号体系。不过, 还有一类重要的记法, 它起源于波兰逻辑学家卢卡西维茨, 并且被波兰逻辑学家在两次世界大战之间所广泛使用, 亦为逻辑学家普赖尔所偏爱。波兰记法的主要特点在于, 它把所有的算子直接置于其主目之前, 由此就省掉了括号。这有助于避免歧义并更适用于自动编程。下面是这组记号的表列, 括号内是其中文解释:

following is the list of this set of notation, with an English explanation in bracket;

Np (not p)

Apq (either p or q)

Kpq (both p and q)

Cpq (if p then q)

Epq (p if and only if q)

Mp (possibly p)

Lp (necessarily p)

Ixy (x is the same as y)

$\Sigma x\phi x$ (for some x, ϕx)

$\Pi x\phi x$ (for every x, ϕx)

"Polish notation shows which expressions are arguments and which expressions are functions by always writing all arguments to the right of their functions." — Williams, *What is Existence*, 1981, p. 50.

Political liberty

According to liberalism, the basic rights or liberties that citizens of a just society holds equally. It is the liberty held in virtue of citizenship. Political liberty includes negative liberties, such as freedom from the arbitrary arrest and the freedom to pursue one's own interests and plans without obstruction, and positive liberties, such as freedom of thought, freedom of speech, freedom of assembly and the right to possess property. Political liberties provide the main content of human rights.

"I am normally said to be free to the degree to which no man or body of men interferes with my activity. Political liberty in this sense is simply the area within which a man can act unobstructed by others." — Berlin, *Four Essays on Liberty*, 1969, p. 122.

Political obligation

The duty to obey the laws and rules of the state. A fundamental problem for political philosophy concerns the grounds for accepting the authority of the state, given that state jurisdiction has the character of universality and compulsion. Under what conditions is obedience required or disobedience justified? These issues are closely associated with attempts to determine the basis of the authority of the state, the distinction between legitimate and illegitimate governments, and the problem of civil disobedience. Political obligation cannot be understood merely in terms of prudence and the fear of coercive power. Various theories of political obligation have been put forward over the centuries, such as those focusing on divine right, the social contract, consent, the general will, justice and rationality.

"[H]aving a political obligation ordinarily presupposes the existence of a rule (whether a legal rule or some other type) which forbids or requires a specified form of conduct." — Flathman, *Political Obligation*, 1972, xxiv.

Np (非 p)

Apq (或者 p 或者 q)

Kpq (既 p 又 q)

Cpq (如果 p 则 q)

Epq (p 当且仅当 q)

Mp (可能 p)

Lp (必然 p)

Ixy (x 与 y 同一)

$\Sigma x\phi x$ (对某些 x, ϕx)

$\Pi x\phi x$ (对每一个 x, ϕx)

"波兰记法凭借把所有主目总是写在其函项的右边,从而表明了哪些表达式是主目,哪些表达式是它们的函项。"——威廉姆斯:《什么是存在》,1981年,第50页。

政治自由

根据自由主义,政治自由是一个公正社会的公民平等拥有的那些基本权利或自由。它是凭借公民身份而拥有的自由。政治自由包括消极的自由和积极的自由,前者如不受随意逮捕的自由,不受妨碍地追求自己的利益和计划的自由,后者如思想的自由、言论的自由、集会的自由和拥有财产的权利。政治自由为人权提供了主要的内容。

"正常说来,我在没有人或团体干预我的活动这种程度上是自由的。政治自由在这种意义上仅仅是一个范围,在这一范围内,一个人可以不受他人的妨碍去行动。"——柏林:《自由四论》,1969年,第122页。

政治义务

遵守国家的法律和法规的责任。对政治哲学而言,假定国家司法权具有普遍和强制的特性,那所涉及的一个基本问题就是,接受国家权威性的根据是什么?在什么样的条件下所需的服从或不服从才是正当的?这些问题与确定国家权威基础的努力、区分合法政府和非法政府及公民的不服从问题密切相关。政治义务仅从谨慎和对强权的恐惧是不能被理解的。有关政治义务的各种理论被提出已有许多世纪了,如那些关注神权、社会契约、同意、共同意志、正义和合理性的理论。

"政治义务通常以存在一个规定(不管是合法的规定还是其他类型的规定)为先决条件,这一规定禁止或要求一种特定的行为方式。"——弗拉茨曼:《政治义务》,1972年,第xxiv页。

Political philosophy

Political philosophy is distinguished from political science on the grounds that political science is empirical and descriptive, explaining how government in fact works, while political philosophy is normative, establishing the norms or ideal standards which prescribe how governments ought to work. In fact, the boundary between the two fields is not clear. Political theory includes both empirical and normative investigations. Contemporary political philosophers bring analytic skill and ethical commitment to their work. They seek theoretical insight into basic political concepts, such as justice, equality, liberty, democracy, nationalism, the state, power, authority, citizenship, rights and obligations and look for rational grounds to accept or reject particular political institutions. Political philosophers assess existing political institutions and ideologies and in some cases seek to justify alternative political and social systems if existing arrangements are unacceptable. Plato's *Republic* remains the major classic. Other prominent political philosophers include Aristotle, Machiavelli, Hobbes, Locke, Hume, Rousseau, Kant, Burke, Hegel, Mill and Marx. Much recent discussion in political philosophy has responded to the work of John Rawls and Robert Nozick.

A rigid demarcation between political and social philosophy is impossible, and social philosophers, such as Jürgen Habermas, have influenced recent political philosophy. Social philosophy also deals with philosophical issues relating to institutions such as the family, religion and education. Critiques of culture and modernity derived from Nietzsche and his successors have also influenced political philosophy.

"Politics is the exercise of the power of the state, or the attempt to influence that exercise. Political philosophy is therefore, strictly speaking, the philosophy of the state." — Wolff, *In Defense of Anarchism*, 1970, p. 3.

Political theory

An academic discipline aiming to provide a systematic understanding of the nature and purpose of government and to provide certain views about how political institutions ought to be improved. It is distinct from political philosophy, which seeks to explicate and give theoretical insight into normative political concepts, such as justice, liberty, equality, the state, democracy, authority, citizenship and rights, and from political science, which seeks to provide explanatory theories and classifications in relation to the empirical data of politics. Nevertheless, political theory is closely related to these other disciplines and is often regarded as the theoretical aspect of political science. Traditionally, its main preoccupation has been to analyse the work of the classical political thinkers from Plato to Marx and to apply their insights to current political affairs. Recently, political theorists have be-

政治哲学

政治哲学不同于政治科学,其原因在于政治科学是经验性的和描述性的,它解释一个政府实际上是如何运作的,而政治哲学则是规范性的,它确立那些规定政府应如何运作的准则或理想的标准。事实上这两个领域的界线是不清楚的。政治理论既包括经验方面的调查研究,也包括规范方面的调查研究。当代政治哲学家把分析的技巧和伦理学的承诺带进了他们的研究。他们试图从理论上洞察诸如正义、公平、自由、民主、民族主义、国家、权力、权威、公民身份、权利和义务等基本的政治概念,寻求接受或拒绝特定政治制度的合理根据。政治哲学家评价现存的政治制度和意识形态,如果现存的安排不能被接受,他们有时还试图论证可以替换的政治和社会制度。柏拉图的《国家篇》现在仍是政治哲学的主要经典著作。其他著名的政治哲学家包括亚里士多德、马基雅维利、霍布斯、洛克、休谟、卢梭、康德、博克、黑格尔、密尔和马克思。近来政治哲学的许多讨论已转向 J. 罗尔斯和 R. 诺齐克的著作。

政治哲学和社会哲学之间不可能存在一条严格的界线,一些社会哲学家,如 J. 哈贝马斯,已对近来的政治哲学产生了影响。社会哲学也探讨与诸如家庭、宗教和教育这些与制度相关的哲学问题。起源于尼采和他的后继者的对文化和现代性的批判也对政治哲学产生了影响。

“政治是国家权力的运作或影响这些运作的尝试,因此,从严格意义上讲,政治哲学是关于国家的哲学。”——沃尔夫:《为无政府主义辩护》,1970年,第3页。

政治理论

一门旨在提供对政府的性质和效用的系统理解,并提供某些有关政治制度应如何改进的意见的学科。它与政治哲学不同,后者试图解释并从理论上洞察规范的政治概念,如正义、自由、平等、国家、民主、权威、公民身份和权利;它与政治科学也不同,后者试图提供有关政治经验材料的解释性理论和分类法。不过,政治理论同这两个不同学科联系密切,并常常被视为政治科学的理论方面。从传统上看,它的主要着眼点一直是分析从柏拉图到马克思这些经典政治思想家的著作,并把他们的思想运用于当前的政治事务。近些年来,政治理论家关注的是建构政治进程的形式模型。由于当代对分析—综合,事实—价值区分的质疑,政治哲学、政治理论与政治科学已变得越发接近。

come interested in constructing formal models of political processes. With the contemporary questioning of the analytic synthetic and fact-value distinctions, political philosophy, political theory and political science have drawn more closely together.

"Political theory is ... an essentially mixed mode of thought. It not only embraces deductive argument and empirical theory, but combines these with normative concerns ... so acquiring a practical, action-guiding character." —Miller and Siedentop (eds), *The Nature of Political Theory*, 1983, p. 1.

Polyadic, see dyadic

Polysyllogism

An inference composed of a series of syllogisms in which the conclusion of an earlier syllogism become a premise of a later syllogism in the series. The earlier syllogism is called a prosyllogism, and the later syllogism is called an episyllogism. For example, take (1) all *rs* are *ps*; (2) all *ps* are *qs*, (3) all *rs* are *qs*; (4) all *qs* are *ds*, (5) all *rs* are *ds*. Not only is (3) a conclusion derived from (1) and (2), but it is also a premise of the syllogism composed of (3), (4) and (5). A syllogism with more than two premises is generally analysed as two or more syllogisms.

"A series of syllogisms, one providing a premise of another, is called a polysyllogism." —Joseph, *An Introduction to Logic*, 1916, p. 354.

Polytheism

[from Greek: *poly*, many + *theos*, god] A belief that there are many gods, instead of one. Religions that accept and worship many gods are called polytheistic religions. This view is opposed to monotheism (from Greek: *mono*, one, single + *theos*, god), the belief that there is only one God. The religion of the ancient Greeks was polytheistic, and Judaism, Christianity and Islam are monotheistic. It is often held that polytheism is inconsistent with true religious belief, because its gods, who are pictured as quarrelling, lying and cheating, are far from moral perfection. Based on the observation that polytheism characterises the religions of early societies, monotheists argue that polytheism is a stage of human religious development which culminates in monotheism.

"Polytheism: more than one god exists." —Sorensen, *Thought Experiment*, 1992, p. 205.

Pons asinorum

[Latin: the bridge of asses, because asses were traditionally thought to have difficulty in crossing bridges] This term has several usage. It refers to proofs from Euclid's *Elements* of two theorems: first, if two sides of a triangle are

"政治理论是……一种实质上混合的思想模式。它不仅包含演绎性的证明和经验性的理论,而且还把它们与规范的事物结合起来,……从而获得了一种实践的、指导行动的特征。"——米勒、西登托普(编辑):《政治理论的性质》,1983年,第1页。

多元的

见“二元的”条。

复合三段论

由一系列三段论所构成的推理,该系列中较前的三段论的结论变成了较后的三段论的前提。较前的三段论叫做前三段论(prosyllogism),较后的三段论叫做后三段论(episyllogism)。例如,(1)所有*r*都是*p*;(2)所有*p*都是*q*;(3)所有*r*都是*q*;(4)所有*q*都是*d*;(5)所有*r*都是*d*。(3)不仅是从(1)和(2)推出的结论,而且也是由(3),(4)和(5)构成的三段论的一个前提。有多于两个前提的三段论通常被分析为两个或多个三段论。

"一系列三段论,一个为另一个提供了前提,叫做复合三段论。"——约瑟福:《逻辑导论》,1916年,第354页。

多神论

[源自希腊语 *poly* (众多的) 和 *theos* (神)] 一种信仰,相信存在着多个神,而不是一个。接受并崇拜许多神祇的宗教被称作多神论宗教。这种观点与“一神论”(monotheism,源自希腊语 *mono* (一,单) 和 *theos* (神)) 相对立,因为一神论相信只有一位神存在。古代希腊的宗教是多神论,犹太教、基督教和伊斯兰教是一神论。一般认为,多神论与真正的宗教信仰是不一致的,因为它的那些被描述为争吵、撒谎和欺诈的神祇,离道德完美相去甚远。基于发现多神论表现了早期社会的宗教特征,一神论者认为,多神论是人类宗教发展过程中的一个阶段,而这个过程的顶点是一神论。

"多神论:有多个神存在。"——索伦森:《思想实验》,1992年,第205页。

驴桥

[拉丁语,“驴桥”。因为在传统上,它被认为是驴子难以通过的桥]这个术语有几种用法。首先,它指源于欧几里德《几何学原理》两个定理的证明。这两个定理是:第一,“如果一个三

equal, then the angles opposite those sides are also equal; and secondly, the Pythagorean theorem, the square of the hypotenuse of a right triangle is equal to the sum of the squares of the other two sides. Those who fail to follow these proofs are considered to be as stupid as asses. In another sense, a *pons asinorum* is a bridge-like diagram proposed by Alexander of Aphrodisias in his commentary on Aristotle's *Prior Analytics*. It was used as a study aid to show how to proceed from premises to a given conclusion.

"In the later Middle Ages this diagram (with accompanying mnemonic verses to distinguish good connexions from bad) was used extensively for the teaching of syllogism and came to be known as the *pons asinorum*." —W. Kneale and M. Kneale, *The Development of Logic*, pp. 186-7.

Popular art

Art is often distinguished into serious, higher or esoteric art and popular art. Popular art has dominated modern mass-media culture and has great social influence. Critics of popular art claim that it is inferior to the higher forms of art and fear that it corrupts higher culture. They allege that popular art lacks creativity in both form and content and does no more than please its audience. They see it as intellectually shallow and emotionally disruptive and argue that its appreciation requires neither effort nor training, but only passive response. Popular art is alleged to produce spurious gratification rather than real aesthetic satisfaction. In all, these critics see popular art as intrinsically worthless in aesthetic terms. Cultural elitists claim that popular art is a lower taste that reduces the quality of our culture. Perhaps led by aesthetic attention to film, many recent critics and cultural theorists have adopted a more favourable attitude towards popular arts. They have challenged much of the hostile assessment given above and have argued that fastidious higher arts have benefited greatly from the exuberant strength of popular arts. We should at least distinguish among different forms of popular art. Intelligent appreciation might improve them without destroying their character or their legitimate function.

"The distinction between esoteric and popular arts almost coincides in our civilisation with that between art and entertainment, but need not do so; the former distinction, unlike the latter, does not impute insincerity and the will to manipulate." —F. E. Sparsbott, *The Structure of Aesthetics*, 1963, pp. 138-9.

Pornography

A genre of fiction, initially associated with brothels, focusing on the representation of obscene—often perverse—sexual activities, with the intention of sexually arousing its readers, mainly men. The term now extends to cover any work in any medium with the same content and intention.

角形的两边相等,那么,与那些边对应的角亦相等";第二,毕达哥拉斯定理,即"一个直角三角形斜边的平方等于另两个边平方之和"。没有领会这些证明的人被认为蠢笨如驴。在另一种意义上,它指一个像桥的图表,由阿弗罗迪西的亚历山大在其对亚里士多德《前分析》的评注中提出。它用作研究的一种帮助,表示怎样从前提推进到给定的结论。

"在中世纪后期,这个图表(带有区分正确的联结和错误的联结的记忆韵文)曾被广泛地用于教授三段论,逐渐被通称为驴桥。"——W. 涅尔和M. 涅尔:《逻辑学的发展》,第186—187页。

通俗艺术

艺术经常被分为严肃艺术、高雅艺术或难懂的艺术以及通俗艺术。通俗艺术主导着现代大众传媒文化,具有重大的社会影响力。通俗艺术的批评者认为通俗艺术劣于高雅的艺术形式,同时还担心通俗艺术对高雅文化的腐蚀作用。他们认为通俗艺术在形式与内容方面缺乏创造性,只是一味地迎合和取悦观众。批评家们认为通俗艺术在思想上肤浅,在情感上腐朽,认为欣赏通俗艺术轻而易举、无需训练,只是被动地反应而已。据说,通俗艺术给人以虚假的满足而非真正的审美满足。总之,这些批评家认为通俗艺术从审美角度看没有什么内在价值。文化精英论者宣称,通俗艺术低级趣味,有损文化的品质。或许由于对电影的审美注意,近来许多批评家和文化理论家对通俗艺术采取了一种比较积极的态度。他们向敌视通俗艺术的上述评价提出挑战,认为过分讲究的高雅艺术在很大程度上得益于通俗艺术的勃勃生机。人们至少应当区别对待不同的通俗艺术形式。理智的欣赏或许会在不破坏其特征或合理职能的情况下改善通俗艺术。

"在人类文明中,难懂的艺术与通俗艺术之间的区别几乎等同于艺术与娱乐的区别,但是不必这样划分;这两种区别不同,前者并不把虚伪和意志归咎于操纵。"——斯帕肖特:《美学的结构》,1963年,第138—139页。

色情艺术

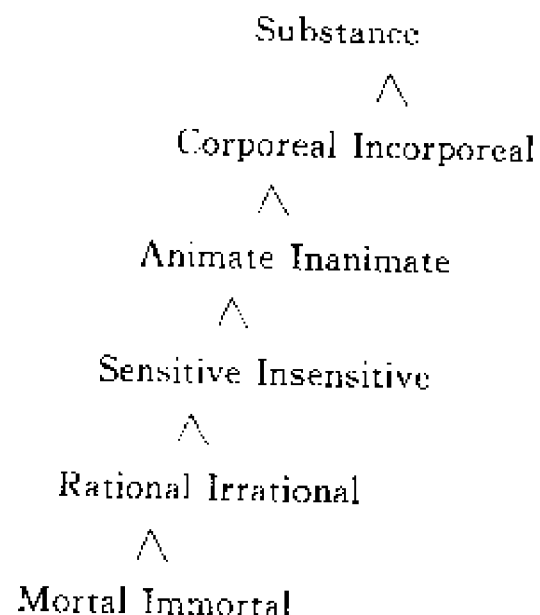

一种小说样式,最初与妓院有关,侧重于表现淫秽——经常是堕落的——色情活动,旨在唤起读者(主要是男人)的性欲。现在,色情艺术包括所有具有相同内容与意向并以各种媒体制作的作品。虽然边界难以划分,但是,赤裸裸

Although the boundaries are difficult to draw, hard-core pornography, which depicts cruelty, violence and explicit arousal can be distinguished from soft-core, which does not. Pornography, as distinct from erotic art, is generally considered to have little redeeming aesthetic interest, for its dominant aim is the gratification of sexual fantasy. Because pornography is thought to be morally harmful and degrading to individuals and society, many consider that any material found to be pornographic should be restricted or prohibited. Others argue that pornography should be eliminated because it supports in fantasy real and objectionable patterns of patriarchal domination in society. Opponents argue that pornography has a positive function of dealing with sexual desire without involving unwelcome sexual advances. The issue of censoring pornography is debated in terms of the freedom of thought and the press, on the one hand, and the need to avoid degrading creators and users of pornography, women and society, on the other.

"If we assume that the majority is correct, and that people who publish and consume pornography do the wrong thing, or at least display the wrong sort of character, should they nevertheless have the legal right to do so?" — R. Dworkin, *A Matter of Principle*, 1986, p. 336.

Porphyrian tree

The Greek Neo-platonist Porphyry, the editor of Plotinus' *Enneads*, wrote an introduction (Greek: *Isagoge*) to Aristotle's *Categories*. It was translated into Latin by Boethius and became the standard philosophical textbook in the Middle Ages. In his introduction, Porphyry presented the basis of Aristotle's thought as a tree-like scheme of dichotomous divisions which indicates that a species (subgenera) is defined by *genus et differentia* and that the process continues until the lowest species (*infirma species*) is reached. In the category of substance, the tree is:

Thus, to define a human being (for example, Socrates), we shall say that he is a mortal, rational, sensitive, animate, corporeal substance. The tree is the standard device by which medieval metaphysics classified natural kinds.

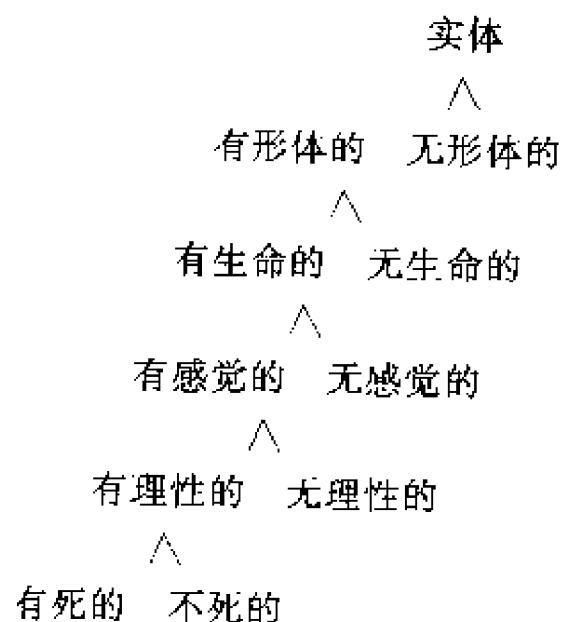

"A Porphyrian Tree begins with an Aristotelian category ... and moves via a series of dichotomies from the most gen-

的性描写以及描写残忍与暴力的色情艺术，有别于委婉描写此类事情的色情艺术。与难懂的高雅艺术截然相反的是，人们一般认为色情艺术没有什么值得注意的审美兴趣，因为其主导目的是为了满足不同性幻想。由于人们认为色情艺术对个体和社会来讲有伤风化，所以许多人认为应当限制或禁止任何描写色情的东西。有些人争辩说，色情艺术理应取缔，因为它引人思淫或想入非非。而反对者则认为色情艺术具有对付性欲的积极功能，同时又不掺杂讨厌的性挑逗。查封色情艺术的问题向来争论不休，一方面是因为思想与新闻自由所致，另一方面是因为有必要避免贬低作者和色情艺术使用者的身份，避免降低妇女的身份和败坏社会的风气。

"我们如果假定大多数人是正确的，假定出版和消费色情艺术的人们是错误的，或者假定人们表现出一种错误的品格，那么他们到底有没有合法权利这样做呢?"——德沃金：《原则问题》，1986年，第336页。

波菲利之树

古代希腊的新柏拉图主义者、普罗提诺《九章集》的编纂者波菲利撰写了一篇亚里士多德《范畴》的导言（希腊语为 *Isagoge*）。它由波埃修斯译成拉丁文，成为中世纪的标准哲学教科书。在这篇导言中，波菲利把亚里士多德的思想基础表述为一张两叉划分的树状图。这张图表明，一个种（子属）是靠 *genus et differentia*（属加种差）而被定义的，这个过程要一直持续达到最低一级的种（不稳固的种）。以实体范畴为例，这棵树是：

可见，要定义一个人（例如，苏格拉底），我们就要说，他是一个有死的、有理性的、有感觉的、有生命的、有形体的实体。这棵树是中世纪的形而上学区分自然种类所依据的标准设计。

"波菲利之树从亚里士多德的一个范畴开始，……从最一般的属出发，经过一系列的两叉

eral genus through at least some of its species.”——Kretzmann, *The Metaphysics of Theism*, 1997, p. 136.

Port-Royal Logic

In 1662, French theologians and philosophers Antoine Arnauld and Pierre Nicole published *La Logique; Ou, l'Art de Penser (Logic; Or the Art of Thinking)*. Both of them were teachers at Port Royal, a monastery in the south-west of Paris and the intellectual centre of Jansenism. Hence the book is generally called the *Port-Royal Logic*. The book defines logic as the art of managing one's reason in the knowledge of things for the instruction of others and oneself. It claims that the mind has four principal operations: conceiving, judging, reasoning and ordering, and the book is divided into four corresponding parts. The *Port-Royal Logic* is established on the basis of Cartesian epistemology and rejects the subtleties of medieval logic. It introduced into logic modern scientific methods and contributed to propositional logic. The book became the standard logic textbook until the nineteenth century and had a wide impact on the development of modern logic. It is also regarded as the precursor of modern linguistic analysis.

"Port royal logic ... both contains an argument against probabilism and is the first occasion on which 'probability' is actually used in what is identifiably our modern sense, susceptible of numerical measurement."——Hacking, *The Emergence of Probability*, 1975, p. 25.

Posit

The assumption or hypothesis which is given as the starting-point of a theory or an explanation. The question of its truth is often left to a later stage of dealing with the theory or explanation or is not dealt with separately at all. For Quine, all the entities we use to explain and organise sense experience are posits. Hence, they are everything that we claim to exist aside from sense experience, including abstract objects as well as physical objects.

"Everything to which we conclude existence is a posit from the standpoint of a description of the theory-building process and simultaneously real from the standpoint of the theory that is being built."——Quine, *Word and Object*, 1960, p. 2.

Positive fact, see negative fact

Positive freedom, an alternative expression for positive liberty; see negative freedom

式划分,最后到达它的某个最低的种。”——克里兹曼:《有神论的形而上学》,1997年,第136页。

波尔—罗亚尔逻辑

1662年,法国神学家和哲学家A.阿尔诺和P.尼柯尔发表了他们的著作《逻辑学;或思维术》。两人都是波尔—罗亚尔的教师。波尔—罗亚尔是巴黎西南部的一所修道院,是“詹森主义”的思想中心,因此这本书一般被称作《波尔—罗亚尔逻辑学》。该书把逻辑定义为一个人在认识事物时运用理性的艺术,用于指导自己与他人。该书断言心灵有四项主要活动:构想、判断、推理和整理,该书也相应地分为四个对应的部分。《波尔—罗亚尔逻辑》建立在笛卡尔认识论的基础上,它反对中世纪逻辑的琐细,它将近代科学方法引入逻辑,对命题逻辑做出了贡献。该书成为直至19世纪为止的标准逻辑学教科书,并对近代逻辑的发展有广泛的影响。它还被认为是现代语言分析的先驱。

“波尔—罗亚尔逻辑……既包含反对概率论的证明,也是‘概率’一词实际用于与近代相同的、可用数值来测量的意义上的第一次。”——哈金:《概率的出现》,1975年,第25页。

假定

它是指被用做一种理论或说明出发点的那种假设或假说。要确定它为真常常是在讨论理论或说明的最后阶段,或者不能完全单独地确定它为真。在奎因看来,我们用于解释和构造感觉经验的一切实体就是假定。因而,它们就是我们认为在感觉经验之外存在的东西,包括抽象对象以及物理对象。

“我们关于存在的每个推论,从描述构造理论之过程的出发点来看,都是一个假定,同时,从这种正在构造的理论出发点来看,它们也是真实的。”——奎因:《词与物》,1960年,第2页。

肯定事实

见“否定事实”条。

积极自由

“积极的自由”的另一表述:见“消极自由”条。

Positive law

[from Latin, *jus*, law + *positivum*, to lay down, hence laws established by human society and institutions] In contrast to natural law, which holds that laws were authored by God or are based on human nature, positive law relies on the will of legislators and applies only to the members of the community for which the legislators legislate. In the philosophy of law, natural law theory claims that the authority of positive law is derived from its compliance with natural law, while legal positivism argues that there is no necessary connection between positive law and morality. In Austin's command theory of law, the conception of positive law is narrowed to the laws laid down by the sovereign of a political society or its subordinates.

"As contradistinguished to natural law, or to the law of nature (meaning, by these expressions, the law of God), the aggregate of the rules, established by political superiors, is frequently styled positive law, or law existing by position." — Austin, *Lectures on Jurisprudence*, 1911, p. 87.

Positive liberty

Positive liberty or positive freedom is concerned with enabling one to be the self-determining master of one's own life and action. With positive liberty, one is autonomous and can freely exercise one's own will. On this view, one's life and decisions do not depend on external forces, but are limited solely by one's capabilities, resources and opportunities. According to Isaiah Berlin, positive liberty contrasts with negative liberty, which is freedom from external interference. Unlike negative liberty, positive liberty has a specific content, so that a person is not deemed to be free unless living according to that content. Berlin argued that such a notion of positive liberty carried with it the danger of despotism and preferred the more open political systems incorporating negative liberty.

"The positive sense of the word 'liberty' derives from the wish on the part of the individual to be his own master." — Berlin, *Four Essays on Liberty*, 1969, p. 122.

Positivism

A philosophical tradition founded by the French philosopher Auguste Comte, although its ancestry may be traced to Francis Bacon. The general spirit of positivism is that philosophy should only be concerned with what is positively given (this is also the meaning of the word "positive") and should avoid any speculative thinking which goes beyond given experience. Accordingly, positivism takes the study of scientific methodology as its major task and presents itself as a kind of philosophy of science. Comte's positivism has a famous Law of the Three Stages which claims that the human mind has developed historically through stages. An initial theological

实在法

[源自拉丁文 *jus* (法) 和 *positivum* (制定), 因此, 是指那些由人类社会和机构制定的法] 与认为法律是神创造的或以人性为基础的自然法不同, 实在法依靠的是立法者的意志并且只应用于立法者为其立法的共同体的成员。在法哲学中, 自然法理论认为实在法的权威来自对自然法的依从, 而法律实证主义则提出实在法和道德之间没有必然联系。在奥斯汀的法的命令理论中, 实在法这一概念被限于由一个政治社会的统治者或他的下属制定的法。

“通过与自然法或自然的法(后一种表达方式意指神的法律)的对比区别, 由政治长官制定的法规的集合体常常被称为实在法, 或通过地位而存在的法。” — 奥斯汀: 《法理学讲义》, 1911年, 第87页。

积极的自由

积极的自由关注的是使一个人能够成为自己决定自己的生活和行动的主人。有了积极的自由, 一个人就是自主的, 可以自由地实行自己的意愿。根据这一观点, 一个人的生活和决定不取决于外在的力量, 而只受他自己的能力、资源和机会的限制。柏林认为, 积极的自由与消极的自由形成对照, 它没有外在的干涉。与消极的自由不同, 积极的自由有特定的内容, 其结果是除非生活与这种内容相一致, 否则不能认为一个人是自由的。柏林论证说, 这种积极的自由概念使其带有专制主义的危险, 因而, 他更喜欢与消极的自由相结合的更为开放的政治制度。

“‘自由’这个词的积极意义来自个人要成为他自己的主人的那种希望。” — 柏林: 《自由四论》, 1969年, 第122页。

实证主义

由法国哲学家 A. 孔德奠基的哲学传统, 虽然其开山祖师可以追溯到 F. 培根。实证主义的一般精神是, 哲学只应当关心实证地给予的东西(这也是“实证的”一词的含义), 应当避免任何在所予经验之外的沉思冥想。因此, 实证主义把科学方法论的研究作为其主要任务, 并使自己呈现为一种科学哲学。孔德的实证主义有一个著名的三阶段定律, 它声称人类精神是通过这些阶段在历史上发展的。最开始的神学阶段特点是力图用超自然的存在物说明事物的内在本性。在其后的形而上学阶段, 早先的神

stage was characterised by attempts to explain the inner nature of things in terms of supernatural beings. In a subsequent metaphysical stage, earlier deities were depersonalised and became explanatory abstractions such as essence or force. Finally, in the positivist stage, the human mind realises that all genuine knowledge is based on sense experience and can only be advanced by means of observation and experience and therefore understands that metaphysics should be abandoned. Comte also initiated a positive sociology, which studied human societies in terms of positive methods, and a positive religion, which sought to replace the worship of God with the worship of Humanity. Herbert Spencer linked positivism with the theory of evolution to make the study of the all-embracing evolutionary process the major task of philosophy. The descendants of positivism include the empirio-criticism of Mach and Avenarius, which held that science describes sense-experience and has no need to postulate any hidden entities such as the atom; the logical positivism of the Vienna Circle, which developed the principle of verification, incorporated the new logical developments of Frege, Russell and Wittgenstein, and held an extremely hostile attitude to metaphysics; and legal positivism, which emphasises that law should be as it is (positive law) rather than as we might believe it should be (natural law).

"Apart from Kantianism, there is no contemporary philosophical movement so closely associated with exact science as positivism."—Schlick, *Philosophical Papers*, vol. 1, p. 178.

Possibilism, see actualism

Possible world

Although philosophers had been talking about what is possible long before, the origin of the discussion of possible world is generally credited to Leibniz, who claimed that although our world contains much that is evil, it is nonetheless the best of all possible worlds. In contemporary philosophy, discourse of possible worlds developed into a semantic interpretation for modal logic and a proposal to solve the truth-value problem of counterfactual conditionals. The idea is to construe a counterfactual as stating some possible states of affairs in which things are other than the way they actually are. There are two views about how to understand possible worlds. One is the extreme possibilism held by David Lewis, which claims that the actual world we inhabit is only one of many real worlds, each of which exemplifies ways that things could have been besides the ways that they are. Such an objective interpretation gives rise to the problem of transworld identity, which in turn motivated Lewis to develop his counterpart theory. The other account of possible worlds, represented by Kripke, is in terms of one or more intensional

被非人格化了,成了诸如本质或力量这种说明性的抽象物。最后,在实证阶段,人类精神认识到,一切真正的知识都基于感觉经验,它们只能根据观察和经验而得到推进,从而理解到形而上学应当抛弃。孔德还首创了实证社会学和实证宗教,前者用实证方法研究人类社会,后者寻求用对于人道的崇拜来取代对于上帝的崇拜。H. 斯宾塞把实证主义和进化论联系起来,使对于无所不包的进化进程的研究成为哲学的主要任务。实证主义的后裔包括马赫和阿芬那留斯的经验批判主义,它主张科学描述感觉经验,没有必要假设像原子这样的隐蔽实体;以及维也纳小组的逻辑实证主义,它提出了证实原则,结合了弗雷格、罗素和维特根斯坦的逻辑的新发展,对形而上学持极端敌视态度;还有法学实证主义,它强调法律应当是其所是(即实证法),而不应该是我们可能会认为的当其所是(自然法)。

“除了康德主义,当代没有哪种哲学运动像实证主义那样与精确科学密切相关。”——石里克:《哲学论文集》,第一卷,第178页。

可能主义

见“现实主义”条。

可能世界

尽管很久以前哲学家们就已经在谈论什么是可能的,但对可能世界的讨论的起源通常归功于莱布尼茨。他宣称,虽然我们的世界包含许多恶的东西,但它仍然是所有可能世界中最好的一个。在当代哲学中,可能世界话语已经演变成模态逻辑的一种语义解释,以及解决反事实条件句真值问题的一种方案。其基本思路是把反事实条件句看做是陈述了某种可能的事态,其中的事物以不同于它们实际所是的方式存在着。在如何理解可能世界的问题上存在两种观点。其一是D. 刘易斯所主张的极端可能主义,它断言我们所居住的现实世界只是众多实在世界中的一个,这些世界中每一个都体现着事物的除实际存在方式外的可能存在方式。这样一种客观的解释引起了跨世界的同一性问题,后者反过来又促使刘易斯发展了他的对应体理论。克里普克所代表的关于可能世界的另一种说明,所依据的是一个或多个内涵性术语如属性、命题或事态,以及某些模态概念如可例

items such as properties, propositions or states of affairs and of some modal notions such as instantiability or possible truth. On this view, a possible world is a world whose properties are not actually instantiated or a world which has obtainable but not actually obtaining states of affairs. According to this latter interpretation, a possible world is not another world, but is given by the descriptive conditions we associate with it. In order to distinguish this account from Lewis' account, Kripke sometimes suggests that we use terms such as a possible state or history of the world or a counterfactual situation to replace the notion of a possible world. There is much debate about the theory of possible worlds, regarding problems such as essentialism, possible but nonactual entities, transworld identity, reference and meaning. Currently, modal concepts are often interpreted in terms of possible worlds. "Necessarily *p*" is equivalent to "*p* is true in every possible world", and "Possibly *p*" is equivalent to "*p* is true in some possible world".

"Possible worlds are total 'ways of the world might have been', or states or histories of the entire world." — Kripke, *Naming and Necessity*, 1980, p. 18.

Post hoc ergo propter hoc, see fallacy of false cause

Post res universals, see *universalia, ante rem*

Post-historical art, see death of art

Postmodernism

A fashionable but elusive term used originally among New York artists and critics in the 1960s to reject any dominant framework dictating artistic style. Postmodernism in art was a reaction to modernism, which has provided such a framework throughout this century. Modernism emphasises experimentation, an inner truth behind surface appearances, and the presence of paradoxical ambiguities and uncertainties in our life experience. In art and literature, postmodernism seeks to cancel the boundary between art and daily life and the distinction between elite and popular taste. It emphasises surface instead of depth and stylistic form rather than content.

In the 1970s, postmodernism was taken up by some influential continental philosophers. Modernity is normally taken to have begun with the work of Descartes in the seventeenth century and has shaped the issues, problems and standards of relevance which have occupied Western philosophers since then. If Descartes is seen as the father of modernism, then postmodernism comprises a variety of cultural positions which reject major features of Cartesian (or allegedly Carte-

zian or possible truth.按照这种观点,可能世界是其属性未被实际例证化的世界,或者是可以得到但未实际得到的事态。根据这后一种解释,可能世界并不是另外一个世界,而是由我们使之关联的描述条件给定的。为了使这种说法与刘易斯的解释区别开来,克里普克有时建议我们用“这个世界的可能状态或历史”或“反事实的情景”之类的术语去代替“可能世界”概念。关于可能世界理论存在很多争论,涉及本质主义,可能但非现实的实体,跨世界的同一性,指称,意义等问题。流行的做法是,经常用可能世界去解释模态概念。“必然 *p*”等于说“*p* 在每个可能世界中真”,“可能 *p*”等于说“*p* 在某个可能世界中真”。

“可能世界是‘这个世界全部可能的存在方式’,或者是这整个世界的状态或历史。”——克里普克:《命名与必然性》,1980年,第18页。

后现代主义

一个流行的但意思含混的词,原本由纽约的艺术家和(文学、艺术的)批评家们在20世纪60年代所使用,表示对任何规范艺术风格的主导构架的拒绝。在艺术中,后现代主义是对于本世纪里提供了这样一个主导构架的现代主义的反动;现代主义强调实验法,强调在表面现象之后的内在真理,并强调对于我们生活经验中的悖谬含糊和不确定性的展现。在艺术与文学中,后现代主义尽力取消艺术与日常生活的界限和精英与世俗趣味的区别。它强调的是表面而非深度,是风格形式而非内容。

20世纪70年代中,“后现代主义”被一些有影响力的欧陆哲学家采用。现代性一般被认为始于17世纪笛卡尔的工作,自那时以来,它就规范了西方哲学家们认为是重要的论点、问题和标准。如果笛卡尔被看做现代主义之父,那么后现代主义就由各种这样的文化立场组成,它们都拒绝笛卡尔的(或被说成是笛卡尔的)现代思想的主要特性。笛卡尔的现代主义的一个主要特点就是坚持纯理性的至上地位。对于知

sian) modern thought. A major characteristic of Cartesian modernism is to insist on the supremacy of pure rationality. The pursuit of knowledge should be independent of practical concerns, traditional beliefs and any social, political, and economic interests of those seeking knowledge. Views which stress the priority of the social to the individual; which reject the universalising tendencies of philosophy; which prize irony over knowledge; and which give the irrational and the rational equal claims to roles in our procedures for acquiring knowledge all fall under the postmodernist umbrella. Postmodernism tries to replace logic with narrative because it disputes the claim that meaning can be determined by logical and semantic analysis. It denies univocality and linearity and rejects any theoretical grounds for culture.

The major exponents of postmodernism include Jacques Derrida, Richard Rorty, Jean-Francois Lyotard, Emmanuel Levinas, Michel Foucault, Jean Baudrillard and Gilles Deleuze. Postmodernism has also greatly influenced the contemporary feminist movement, represented by Julia Kristeva and Luce Irigaray. Postmodernist criticism of modernist concerns with meaning, truth, objectivity, rationality and universality has not led a constructive alternative, but not having a constructive alternative is perhaps part of the point of postmodernism.

"Postmodernism is of great interest to a wide range of people because it directs our attention to changes, the major transformations, taking place in contemporary society and culture." —Sarup, *An Introductory Guide to Post-structuralism and Post-modernism*, 1993, p. 2.

Post-structuralism

The Saussurian model of linguistics is the basis of structuralism. Post-structuralism originated with the rejection of that model. While Saussure emphasised that each signifier acquires its semantic value only by virtue of its differential position within the structure of language, post-structuralists augmented their account of the relations among signifiers through, for example, Nietzschean concerns with power and Freudian concerns with unconscious origin. They reject the existence of the unity of the stable sign and question the possibility of any descriptive and analytical language. They do not believe that authors are the authority for the meaning and truth of what they write, but claim instead that reading is an active performance creating interpretations rather than a passive consumption of a product. Post-structuralism rejects a static notion of meaning and is hostile to any system or attempt at system construction. A truth-claim for what we say or write is not a matter of course, and meaning is not tightly bound up with truth. Thought is constituted through and through by the codes, conventions, languages-games and discourses that make up a given cultural order. In a sense,

识的追寻应该独立于对实践的关注,独立于传统的信仰和任何有关的社会、政治和经济的利益。与之相对,后现代主义的观点强调社会先于个人、拒绝哲学的普遍化倾向、赞赏反讽甚于赞赏知识、在我们以后现代主义的大旗下获取知识的过程中给予非理性以同理性相平等的地位。后现代主义试图用叙述代替逻辑,因为它不认为意义可以被逻辑的和语义的分析所决定。它否认单义性和线性,拒绝任何为文化提供理论基础的做法。

后现代主义的主要阐发者包括 J. 德里达、R. 罗蒂、J.-F. 利奥塔、E. 莱维纳斯、M. 福柯、J. 鲍德里亚和 G. 德勒兹。后现代主义已极大地影响了以 J. 克里斯特娃和 L. 伊莉格莱为代表的当代女性主义运动。后现代主义对于现代主义关于意义、真理、客观性、理性和普遍性等观点的批判还没能导致一种建设性的替代者;但是不提供建设性的替代者可能就是后现代主义观点的一部分。

"后现代主义引起了许多领域中的人们的极大兴趣,因为它将我们的注意力导向那些发生在当代社会和文化中的转化或重大变形,"——萨罗波:《后结构主义与后现代主义导论》,1993年,第2页。

后结构主义

索绪尔的语言学模式是结构主义的基础。后结构主义始于对这样一个模式的拒绝。索绪尔强调每个能指只有通过它在语言结构中的不同位置才获得其语义值;但后结构主义者却是通过(例如)尼采式的对强力的关注和弗洛伊德式的对无意识起源的关注来论证他们关于能指之间关系的说明。他们否认那种不变的符号统一体的存在,怀疑任何描述性的和分析性的语言的可能性。他们不相信作者对自己所写东西的真实意义具有最终的解释权,而是认为阅读是一个创造解释的积极活动,并非是对某个产品的被动消费。后结构主义拒绝关于意义的静态观念,敌视任何系统或任何去做系统构造的企图。认为我们所说和所写的东西中定有真理并非是天经地义的看法,而意义也并非完全受制于真理性。思想彻头彻尾地由造成某个特定文化状况的习俗、常规、语言游戏和言谈所构成。在某个意义上,后结构主义力图颠覆对于语言结构的传统理解。这个运动受到尼采的影响,它的主要代表人物包括 G. 德勒兹、F. 葛塔瑞、

post structuralism seeks to subvert the traditional understanding of the structures of language. The movement is influenced by Nietzsche, and its major representatives include Gilles Deleuze, Felix Guattari, Jean-François Lyotard, Michel Foucault and Jacques Derrida. Post-structuralism shares many common features with postmodernism.

"While structuralism sees truth as being 'behind' or 'within' a text, post-structuralism stresses the interaction of reader and text as a productivity." —sarup, *An Introductory Guide to Post-Structuralism and Post-modernism*, 1993, p. 2.

Postulates of empirical knowledge

For each of his four groups of categories, Kant introduced principles to show the objective validity of the employment of categories of that kind. For the categories of quantity, quality and relation, the principles are respectively the axioms of intuition, anticipations of perception and analogies of experience. For the categories of modality, the principles are the postulates of empirical knowledge. While the other principles determine the ways in which appearances are related to each other, the postulates determine the modes in which the subject of experience is related to its experiences. The postulates include the principle of the possible, which requires that the concepts of things should agree with the formal conditions of experience; the principle of the actual, which requires that the concept is connected to the material conditions of experience; and the principle of the necessary, which requires that the actual experience conforms to both the formal and material conditions of experience. These principles are called postulates, not in the mathematical sense of being immediately certain without justification, but in the sense that they are procedural specifications of relations between the understanding and the synthesis of appearances.

"The same can be asserted of the postulates of empirical thought in general, which concern the synthesis of mere intuition (that is, of the form of appearance), of perception (that is, of the matter of perception), and of experience (that is, of the relation of these perceptions)." —Kant, *Critique of Pure Reason*, A180/B223.

Potentiality

[Greek, *dunamis*, the power or capacity of one subject to effect change in another subject or the power or capacity of one subject to be affected by another thing] We can distinguish non-rational capacities (the capacity of eyes to see) from rational capacities (the capacity of a person to build). The realisation of these capacities is their exercise. For Aristotle, however, this sense is not important philosophically. Potentiality was important for him through connection with substantial change, in which potentiality is associated with

J.-F. 利奥塔、M. 福柯和 J. 德里达。后结构主义与后现代主义有许多共同点。

"结构主义认为真理存在于一个文本的'后边'或'里边',但后结构主义则强调作为一种产生状态的读者与文本之间的相互作用。"——萨罗波:《后结构主义与后现代主义导论》,1993年,第2页。

经验知识之公准

康德四组范畴的每一组都有一组原理以表明该类范畴应用的客观有效性。对于量、质和关系这三组范畴,它们的原理分别是"直观之公理"、"知觉之预测"和"经验之类推"。至于样式范畴,这一组的原理称为"经验知识之公准"。然而,所有前三组原理规定现象相互联系的方式,公准的原理则规定经验主体与他的经验相联系的方式。公准包括要求事物的概念应当符合经验的形式条件的可能性原理:要求概念与经验的质料条件相联系的现实性原理:要求实际经验要与经验的形式和质料的条件相一致的必然性原理。这些原理被称为"公准",不是在数学的意义上,即是无需论证,直接确定的,而是在这个意义上,即它们是知性和现象综合之间关系的程序上的说明。

"同样可以断定经验思想一般之公准,它关涉单纯直观之综合(即现象形式的综合)、知觉之综合(即知觉事务之综合)及经验之综合(即这些知觉的关系之综合)。"——康德:《纯粹理性批判》,A180/B223。

潜能

[源自希腊词 *dunamis*, 一主体引起另一主体变化的力量或能力,或一主体受另一事物影响的力量或能力]我们可以区分非理性能力(眼睛有看的能力)与理性能力(一个人建造的能力)。这种能力的实现即是它们的实施。但对于亚里士多德而言,这一意义在哲学上并不重要。潜能对他的重要性是通过它与本体变化的关系,在本体变化中,潜能与质料相结合。在这种意义上,潜能乃是一物可能的但尚未实现的状态。

matter. In this sense, potentiality was the possible but unrealised state of a thing. (See the entry on potentiality / actuality.)

"For in the course of our analysis it will also become clear, with regard to potentiality, that we not only ascribe potentiality to that whose nature is to move something else, or to be moved by anything else ... but also use the word in another sense." —Aristotle, *Metaphysics*, 1048a27-9.

Potentiality / actuality

When Aristotle moved from a static discussion of the structure of reality to a dynamic discussion, he introduced a distinction between potentiality and actuality in association with a distinction between matter and form. He even used these two distinctions interchangeably. Aristotle divided relationships between actuality and potentiality into two major kinds. The first kind likened the relationship to that between motion and power. It conformed to the etymological senses of potentiality and actuality and concerned relations such as that between the capacity to build and the exercise of that capacity. The second kind likened the relationship to that between generated substance and matter. With regard to Aristotle's discussion of substance, it can also be divided into two types. In the first type, matter (potentiality) develops into some form (actuality) to generate a thing, with potentiality and actuality thus belonging to two different stages. In the second type, form (actuality) and proximate matter (potentiality) in a sense exist together as two aspects of the same thing. In various ways, Aristotle held that actuality is prior to potentiality. In Aristotle's theology, God, having an eternal nature, is pure actuality, without involving any potentiality.

"To all such potentialities, then actuality is prior both in formula and in substantiality; and in time it is prior in one sense, and in another not." —Aristotle, *Metaphysics*, 1049b11-3.

Pour-soi / en-soi, see being-for-itself

Power

The ability or capacity to compel others to act according to one's aims so that they will do what they would not otherwise have done. Power can also affect how such actions are performed. Political power is the ability to get people to obey explicit or tacit commands in virtue of what they anticipate to be the consequences of obeying or disobeying them. The consequences can range from crude threats and promises to subtle patterns of social control. Political power is not only power to do something, but is also power over others through coercion, domination or hegemony. Understanding the relationship between political power and political authority is

态。(参见“潜能--现实”条。)

“在我们分析的过程中将会看到,就潜能而言,我们不仅把潜能归于那些其本性是推动他物或受他物推动的事物,……而且也在另一意义上使用该词。”——亚里士多德:《形而上学》,1048a27--29。

潜能/现实

当亚里士多德从对现实结构的静态讨论进展到一种动态讨论时,他引入了潜能与现实的区分,与质料与形式的区分相联系,并且不加区分地使用这两者。亚里士多德把潜能与现实关系划分成两类:一类比作运动与能力间的关系,它符合潜能与现实这两词的字根意义,指诸如建筑的能力与该能力的实施这样的关系。另一类比作已生成的本体与质料的关系。它与亚里士多德对本体的讨论相联系,可以进一步划分成两类。在第一类中,质料(潜能)发展到某种形式(现实),产生一个事物。潜能和现实因此属于不同的阶段。在第二类中,形式(现实)与近似质料(潜能)在一种意义上是同一事物的两个方面。亚里士多德认为现实在多种意义上先于潜能。在他的神学中,永恒的神是纯现实的,不涉及到任何潜能。

“对所有这些潜能,现实都既在定义上又在本体性上在先;在时间上,它在一种意义上在先,在另一种意义上则不。”——亚里士多德:《形而上学》,1049b11-13。

为自身的/在自身中的(或译“自为的/自在的”)见“为自身的存在”条。

权力

迫使他人按照自己的目的去行动的能力,以使他人做他们可能还没有做的事。权力还可影响这种行动如何履行。政治权力是使人们服从明确的或不言而喻的命令的能力,因为他们预先知道服从或不服从命令的后果是什么。这些后果可能包括从粗暴的威胁到对宽松的社会控制方式的许诺。政治权力不仅是做事的权力,而且也是通过强迫、统治或霸权压制他人的权力。理解政治权力和政治权威的关系是理解政治科学和政治哲学关系的核心。权力与权威不同,它不包括权利,但它与责任和暴力都有关。

central to understanding the relationship between political science and political philosophy. Unlike authority, power does not involve rights, but it is related both to responsibility and force. Relations of political power may be shaped by culture, history or tradition as well as by brute force.

"Power is the probability that one actor in a social relationship will be in a position to carry out his own will despite resistance, regardless of the basis on which this probability rests." —Weber, *The Theory of Social and Economic Organisation*, 1947, p. 152.

P-predicate

Strawson's term for any predicate ascribed to persons and only persons. The apply a P-predicate to something at least implies the possession of consciousness. Examples of this kind of predicate include "is smiling", "is in pain", "believes that you will meet on Tuesday". Philosophical problems arise concerning the possibility of delimiting the class of P-predicates and concerning the closely related possibility of formulating the concept of a person. The logical criteria for the ascription of P-predicates to others closely involves the question of personal identity. P-predicates are contrasted to M-predicates, which can be ascribed to material bodies without consciousness as well as to persons.

"The second kind consists of all the other predicates we apply to persons. These I shall call P-predicates." —Strawson, *Individuals*, 1959, p. 104.

Practical ethics, see applied ethics

Practical law, see maxim

Practical reason (Kant)

The practical application of reason, which concerns what one ought to do, in contrast to the theoretical application of reason (theoretical or speculative reason), which concerns what is. Although Kant held that theoretical and practical reason are fundamentally the same, he recognised their different functions and claimed that practical reason has primacy over theoretical reason in line with the primacy of our being rational agents over our being rational knowers. While theoretical reason is limited by the bounds of experience, practical reason is inseparable from freedom. Kant identified practical reason with the will, which initiates action. Like theoretical reason, practical reason determines and applies its own principles, but in the case of practical reason the application of its principles commands action. Its supreme principle is the categorical imperative. Hence it is the home of the moral law and is the fundamental basis of our autonomy. In Kant's critical philosophy, three works, *The Groundwork*

政治权力关系可以受到文化、历史或传统以及蛮横的暴力的影响。

"权力是这样一种可能性,即一个处于一种社会关系中的行为者能够执行他自己的意愿而不管他人的反对,并且无视这一可能性依据的基础。"——韦伯:《社会和经济组织的理论》,1947年,第152页。

人—谓词

斯特劳森的术语,指任何归属于人,而且只归属于人的谓词。把一个人—谓词应用于某物至少意为被归属者具有意识。举例说,这类谓词包括“在微笑”,“感觉痛苦”,“相信你们会在星期二见面”。这类谓词所引起的哲学问题包括,界定人—谓词的类的可能性,以及与此紧密相联的阐明人的概念的可能性。把人—谓词归属于他人的逻辑标准涉及到个人认同问题。与人—谓词相对照的是物—谓词。物—谓词既可以归属于无意识的物体也可以归属于人。

“第二类包括其他一切我们应用于人的谓词。我把这些叫做人—谓词。”——斯特劳森:《个别物》,1959年,第104页。

实践伦理学

见“应用伦理学”条。

实践的法则

见“准则”条。

实践理性(康德)

理性的实践应用,关涉人们应该做什么,相对于理性的理论应用(理论的或思辨的理性),它关涉“是什么”。虽然康德认为理论理性和实践理性在根本上是同一个理性,但他认识到它们的不同功能,并主张,既然我们更多地作为理性主动者而不是只作为理性的认知者,因而实践理性对于理论理性具有优先性。理论理性受经验界限所限制,而实践理性则与自由不可分离。康德把实践理性与引发行为的意志相等同。像理论理性一样,实践理性规定和应用它自己的原理。不同的是,实践理性对它的原理的使用诉诸行动。它的最高原理是绝对命令。因此它是道德法则的发源地,是我们自主性的根本基础。在康德的批判哲学中,《道德形而上学基础》、《实践理性批判》和《道德形而上学》这三部著作考察了实践理性的运作过程。

“纯粹实践理性一般而言是为目的的能

for the *Metaphysics of Morals*, *The Critique of Practical Reason* and *The Metaphysics of Morals* examine the operation of practical reason.

"Pure practical reason is a capacity for ends generally." — Kant, *Metaphysics of Morals*, II, ix.

Practical reasoning

A kind of argumentation that is directed towards a certain goal and is based on knowledge of an agent's situation and knowledge that a certain sort of action is a means to reach that goal. Its conclusion is an imperative to pursue a course of action for a particular agent. Its sequence of inference is called practical inference because it aims at a practical conclusion. Practical reasoning gives reasons for actions or desires and it is essentially pragmatic. In contrast, theoretical reasoning aims to derive truth from premises and concentrates on the formal validity of arguments. Practical reasoning was first discussed in Aristotle's theory of practical wisdom, where the action itself was seen as the conclusion. In this century, practical reasoning became a special field of philosophical inquiry, partly due to the works of Anscombe and von Wright. It is characterised as a form of argument appropriate to the humanities, rather than as merely a vehicle of means-end deliberation. Although there is much debate about the elements, scope and procedure of practical reasoning, it is widely agreed that it is significant for explaining human action, establishing ranking and priority in one's life plan, understanding personal responsibility for action and evaluating the actions of others. Some theorists have employed a wider notion of practical reasoning to extend rational choice theory in seeking to understand institutions as well as individual behaviour. Moral reasoning is one of the main forms of practical reasoning.

"What then, is practical reasoning? It is the transition (not necessarily conscious) from belief in the premises to acceptance of the putative conclusions of a practical inference." — Raz (ed.), *Practical Reason*, 1978, p. 5.

Practical syllogism

Aristotle's concept, although he instead used the term *sullogismos ton prakton* (syllogism about action). An inference of practical reason starting from a universal ethical premise and concluding with an action. It has a major premise, such as "since the end is such and such", and a minor premise, such as "this is such and such", and a conclusion. In contrast to modern thinking, Aristotle insisted that the conclusion is not an imperative to do something, but the action itself. According to him, if a man gets an order but does not proceed to act, it is not practical reason. Of the two premises, one provides the good end, and the other gives a possible way to achieve the end. Aristotle offers many examples in his writings, but he does not formalise this reasoning.

力。”——康德：《道德形而上学》，II，ix。

实践推论

一种直接针对某一目标的推论，它基于对当事者情况的了解，以及知道某种行动是达到这一目标的途径。它的结论就是命令特定当事者实现行动进程。它推断的结果被称为实际的推断，因为它的目标是一种实际的结论。实践推论为行动或要求提供理由，它在本质上是务实的。相比之下，理论推论的目的是从前提得出正确认识并将注意力集中于论证的形式的有效性。实践推论在亚里士多德的实践智慧理论中首次被探讨，在那里，行为本身被视为结论。在本世纪，实践推论成为哲学研究的一个专门领域，这部分是由于安斯康及冯·赖特的著作。它被描绘为一种适合于人文学科的论证形式，而不仅仅是一种手段—目的式思考的工具。虽然对实践推论的要素、范围和程序存在很多争议，这种推论对于解释人的活动、确立人们生活计划中的顺序和重点、理解人们对活动的责任，以及评价他人的行为，都有重要意义，这一点已得到广泛的认可。一些理论家业已使用一种更为宽泛的实践推论的概念去扩展理性选择理论，以求理解制度和个人行为。道德推论是实践推论的一种主要形式。

“那么什么是实践推论？它是从对前提的相信到接受由实践推断得出的假设结论的（未必是有意识的）过渡。”——拉兹（编）：《实践推理》，1978年，第5页。

实践三段论

亚里士多德的概念，尽管他自己所使用的术语是 *sullogismos ton prakton*（关于行为的三段论）。一种始于普遍伦理前提而止于行动的关于实践理性的推论。它有一个大前提，诸如“由于目的是如此如此”，一个小前提，诸如“这是如此如此”和一个结论。与现代思维相反，亚里士多德坚持说，结论不是一个做什么的命令，而是行为自身。他认为，如果一个人得到一个命令可又不进一步去做它，这就不是实践理性。在两个前提中，一个提供了好的目的，另一个则提供了一种达到那个目的的可能途径。亚里士多德在他的著作中提供了大量例证，可却未能将该推理形式化。人们一直在争论这种形式化是否可

There is much controversy whether such a formalisation is possible.

"For the syllogism about actions have an origin, viz. 'since the end, i. e. what is best, is of such and such a nature', whatever it may be." — Aristotle, *Nicomachean Ethics*, 1144a31-4.

Practical wisdom

[Greek: *phronesis*, thought or understanding, also translated as intelligence, practical reason or prudence] Aristotle's technical term for the reasoning which leads to practical activity. In contrast, contemplation or theoretical wisdom is concerned with invariable things, although both theoretical and practical wisdom are intellectual virtues. Like theoretical wisdom, practical wisdom operates at a general level, concerned with the truth of practical judgement and formulating general rules of action. But practical wisdom also works at a particular level, applying general rules to concrete situations of life and finding the right actions to do. It contains a practical intuition, which grasps the features of the particular action, and a practical syllogism, which infers ways and means of achieving the end. Practical wisdom is inseparable from the virtues of character, for the latter decides the right end. Without a right end, a man can only be said to have cleverness rather than practical wisdom. A person of practical wisdom is a *phronimos*.

Aristotle's theory of practical wisdom is ambiguous and unsystematic. It was criticised by Hume, who claimed that emotion rather than reason determines action. It has nevertheless attracted much attention in contemporary moral theory, especially in virtue ethics. If there really is a kind of reason peculiar to moral actions, it may give a new foundation to ethics and solve many traditional difficulties, such as the tension between objectivity and the practical application of moral judgement.

"[P]ractical wisdom is a state grasping the truth, involving reason, concerned with action about what is good or bad for human beings." — Aristotle, *Nicomachean Ethics*, 1140b4-6.

Practicalism, another expression for experimentalism

Pragmatic maxim, see pragmatism

Pragmatic theory of truth

A theory of truth held in different forms by the American pragmatists Peirce, James and Dewey. Their common ground was the claim that truth should be approached by enquiring about the difference made by a belief being true, namely to examine the idea of truth at work in its context of

能。

“关于行为的三段论有一个起源，即‘由于目的，即最好的事物，是这样这样的一种性质’，不论这一目的本身是什么。”——亚里士多德：《尼各马可伦理学》，1144a31—34。

实践智慧

[源自希腊词 *phronesis* (思想或理解)，也译作“明智”、“实践理性”或“慎思”] 亚里士多德的一个专门术语，意为导向实践活动的推理。相反，思辨或理论智慧关注永恒事物，虽然，实践智慧与理论智慧两者都是理智德性。如同理论智慧一样，实践智慧在一般性层面上运作，关注于实践判断的真实性，及构建行为的一般规则。但实践智慧也在具体的层面运作，将一般规则应用于具体的生活领域，确定应当做的正确行为。它包括一种把握具体行为特征的实践直观，和一种推论如何达到那一目的的途径和手段的实践三段论。实践智慧与品格德性是不可分的，因为后者决定了正确的目的。没有正确的目的，一个人只能说是精明的，而不能说具有实践智慧。一个具有实践智慧的人在希腊文中是 *phronimos*。

亚里士多德关于实践智慧的理论是含混的、不系统的。休谟对它做了批判，并认为决定行为的是情感而不是理性。尽管如此，它在当代道德理论，尤其在德性伦理学中受到广泛注意。如果确实有一类与道德行为相关的独特理性，它就会为伦理学提供一个新的基础，并可解决诸如道德判断的客观性与实践应用性之间的矛盾等许多传统的问题。

“实践智慧是这样一种状态，它把握真理，体现理性，关注于对人类有善恶意义的行为。”——亚里士多德：《尼各马可伦理学》，1140b4—6。

实践主义

“实验主义”的另一种表述。

实用主义公式

见“实效主义”条。

真理实用论

由美国实用主义者皮尔士、詹姆斯和杜威以不同方式主张的一种真理论。他们的共同之处在于主张，应该通过探寻由一信念为真所造成的差别去探究真理，也就是说在其使用环境中考察起作用的真观念。但他们的观点是有些

use. But their views are somewhat different. Peirce held that truth is the eventual consensus of those who use the scientific method and go on long enough in their exploration. James believed that true beliefs are those which are confirmed or verified by experience in the long run. For Dewey, truth is a property attaching to ideas which we are warranted in asserting. He preferred the term warranted assertability to truth.

In addition to his attempt to connect utility with verifiability, according to which truth is useful belief in the sense that it is belief which is secure in the long run. James held that truth is that which is good, useful or expedient to believe. Truth is the expedient in our way of thinking just as the right is the expedient in our way of behaving. This account of truth connects truth with utility and was bitterly criticised by Moore, Russell and Carnap on the grounds that false ideas can have utility and still be false and that we should seek truth for itself rather than for its consequences. This later version of James' theory is generally taken to be the standard pragmatic theory of truth, although the accounts of Peirce and Dewey might prove more fruitful.

"It is the cardinal feature of pragmatic theories of truth that true propositions are characterised as those that we accept." - Ayer, *The Concept of a Person*, 1964, p. 180.

Pragmatism

Although Peirce introduced the word pragmatism, he later invented the term pragmatism for his own version of pragmatism, in order to distance himself from other versions, in particular from the anti-intellectualism he saw in James' more popular pragmatism. Pragmatism was originally a method of logic based on Peirce's pragmatic maxim: "Consider what effects, that might conceivably have practical bearings, we conceive the object of our conception to have. Our conception of these effects is the whole of our conception of the object". This is a criterion of the clarity of meaning which connects the meaning of general terms with expectations of consequences. To attain a clear meaning of an abstract formula, we need only consider what conceivable practical effects it may involve. The conception of these effects is for us the whole positive significance of that formula. Peirce then tried to use this criterion to clarify traditional problems of philosophy and to dismiss traditional metaphysical problems, although he developed his own robust metaphysical doctrines. Peirce emphasised that pragmatism is a theory of logic rather than a speculative philosophy.

"So then, the writer, finding his bantling 'pragmatism' so promoted, feels that it is time to kiss his child good-by and relinquish it to its higher destiny; while to serve the precise purpose of expressing the original definition, he begs to announce the birth of the word 'pragmatism', which is ugly enough to be safe from kidnappers." - Peirce, *Collected Works*, V, p. 415.

差别的。皮尔士认为,真理是那些在其探究中运用科学方法的人们持续工作相当长时间之后所达到的最终一致。詹姆斯相信,真信念就是那些最终被经验所确证或证实的信念。对杜威来说,真理是附属于是我们有根据断定的观念的一种特性。他偏爱“有根据的可断定性”(warranted assertability)胜过“真理”。

詹姆斯除了试图把效用与可证实性相联系之外(根据这种观点,真理是在下述意义上有用的信念:它是长期使用起来安全可靠的信念),他还认为真理就是那些好的、有用的和方便得到的信念。真理在我们的思维方式中是便利的,就像正确在我们的行动方式中是便利的一样。对真理的这种解释把真与效用连在一起,这受到了摩尔、罗素、卡尔纳普等人的严厉批评,其理由是:假的观念也能有效用,却仍然是假的,而且我们应该为真理本身而不是为它所造成的后果去追求真理。詹姆斯理论的这后一种形式通常被当做是标准的实用主义真理论,尽管皮尔士和杜威的说明可能证明是更富有成效的。

“实用主义真理论的基本特征就是,真命题被刻画为我们所接受的命题。”——艾耶尔:《人的概念》,1964年,第180页。

实效主义

虽然“实用主义”一词是由皮尔士本人引入的,但他后来又发明了“实效主义”一词来标示自己的实用主义观点,以使自己与其他形式的实用主义保持距离,尤其是与他认为是反理智的詹姆斯的更为通俗的实用主义保持距离。实效主义起初是一种逻辑方法,建立于皮尔士的实用主义公式基础之上。这一公式表述如下:“考虑我们的概念对象可能有什么样的可想像的具有实际意义的效果,这样我们关于这些效果的概念,就是我们关于这个对象的概念的全部。”这是一个意义澄清的标准,它把一般术语的意义与对结果的预期结合起来。为获得一抽象表达式的清晰含义,我们仅需考虑它涉及什么样的可想像的效果。这些效果的概念对我们来说就是这一表达式总体上的确定意义。皮尔士由此试图用这一标准去澄清传统的哲学问题,去消解传统的形而上学问题,尽管他自己也提出了一种强硬的形而上学主张。他强调实效主义是一种逻辑理论,而不是一种思辨哲学。

“如此,作者发现他的孩子‘实用主义’被如此滥用,觉得已是与其吻别,放手让它寻求好运之时。而正是为了表述此学说原初定义的目的,请允许他宣布‘实效主义’一词的诞生,它的丑陋足可保证其免受绑架。”——皮尔士:《文集》,第五卷,第415页。

Pragmatics

[from Greek: *pragma*, action] The analysis of the relations between signs or languages and their users. It is a branch of semiotics, the other two branches being syntactics or syntax, which deals with grammar, and semantics, which deals with reference and truth. General pragmatics is concerned with the general principles of utterance, and applied pragmatics is concerned with special kinds of linguistic interaction. Pragmatics focuses on the context of the actual use of language by speakers such as its purposes, effects, implications and the relations between speakers and listeners. Many philosophers are concerned with its relations to semantics. Pragmatics classifies a wide variety of interesting types of speech acts, and studies the use and implications of indexical expressions, such as I, you, this, here and now. Pragmatics is an important aspect of contemporary philosophy of language.

"Pragmatics is the study of linguistic acts and the contexts in which they are performed." —Stalnaker, "Pragmatics", in Davidson and Harman (eds.) *Semantics of Natural Language*, 1972, p. 383.

Pragmatism

[from Greek *pragma*: things done, action] When Peirce introduced this term in his article "How to make our ideas clear" (1878), he called it his pragmatic maxim, a criterion of meaning according to which the meaning of a theory is equivalent to the practical effects of adopting it. The term was borrowed by William James, who extended it from a criterion of meaning to a theory of truth, such that an idea is respectable or true if the results of accepting it are good or satisfactory. This theory was further developed by John Dewey and F. C. S. Schiller. Russell and Moore accused James of confusing the theory of truth with the theory of utility. Pragmatism claims that knowledge must relate to practical human purposes and to our adaptation to our environment. Intellectual beliefs should be justified in terms of their social, moral and biological utilities. Truth and theory are tools or instruments, and they are not for solving abstract enigmas. Any idea which proves to have a value for concrete life is true. Pragmatism rejects abstraction and absolute principles and turns towards concreteness, facts and action. This philosophy tries to assimilate modern science, especially the theory of evolution and new statistical modes of reasoning, within philosophy and criticises traditional metaphysical speculations. This theory also became an attitude toward life and a movement emphasising actions and practices. But Peirce himself disliked the anti-intellectual tone of this later development and introduced the word *pragmaticism* for his own version of pragmatism. Pragmatism has been regarded as a typically American approach to philosophy and has exerted

语用学

[源自希腊文 *pragma*, 意味着“行动”] 语用学是对记号或语言与其使用者之间关系的分析。它是“符号学”的一个分支, 另外两个分支是句法学或句法(讨论语法)和语义学(讨论指称和真理)。它又进一步分为讨论话语一般原则的普通语用学和讨论具体语言相互作用的应用语用学。语用学关注说者实际使用语言的语境, 诸如目的、效果、意味、说者与听者的关系等等。许多哲学家都关注它与语义学的联系。它区分了各种有意义的言语行为, 并研究索引词表达式的用法与意义, 比如“我”、“你”、“这个”、“这里”、“现在”。语用学是当代语言哲学的重要方面。

“语用学研究的是语言行为以及完成这些行为的语境。”——斯托奈克:《语用学》, 载戴维森和哈曼(编):《自然语言的语义学》, 1972年, 第383页。

实用主义

[源自希腊词 *pragma*, 意为“所做的事”或“行动”] 当皮尔士在1878年的一篇题为《如何使我们的观念清楚》的文章中首次引入这一术语时, 他指的是他的“实用主义公式”, 一个认为理论意义等价于采用它的实际效果的意义标准。“实用主义”一词为 W. 詹姆斯所借用, 从一种意义标准拓展到一种真理理论: 即认为, 如果接受一个观念的结果是好的或令人满意的, 这个观念就是值得重视的或真的。这个理论为 J. 杜威和 F. C. S. 席勒所进一步发展, 但罗素和摩尔指责詹姆斯混淆了真理理论与效用理论。实用主义主张知识必须与实际的人类目的、与我们对环境的适应相关。思想信念必须依据它们的社会、伦理和生物学效用来辩护。真理和理论都是工具或手段, 它们不是用来解决抽象难题的。任何被证明为具有具体生活价值的观念都是真的。实用主义反对抽象和绝对原理, 转向具体、事实和行动。这种哲学试图把近代科学、尤其是进化论和新的统计推理模式吸收到哲学中来, 批判传统的形而上学思辨。这一理论也成为一种对于生活的态度和一场强调行动和实践的运动。但是皮尔士本人不喜欢这种后来发展中的反理智情调, 因而引入“实效主义”一词以指他自己的实用主义形式。实用主义被看做是典型的美国式哲学, 对当代的美国哲学家如奎因、普特南和罗蒂等有着重大影响。

“实用主义代表一种在哲学上非常熟悉的态度, 即经验主义的态度, 在我看来它所代表的

great influence upon contemporary American philosophers such as Quine, Putnam and Rorty.

"Pragmatism represents a perfectly familiar attitude in philosophy, the empiricist attitude, but it represents it, as it seems to me, both in a more radical and in a less objectionable form than it has ever yet assumed." — James, *Pragmatism*, 1955, p. 45.

Praxis, Greek term for action

Preconceived opinions

[Latin: *praejudicia*, prejudices] Descartes adopted this term for the beliefs which everyone forms in childhood. These beliefs are derived from a reliance on tradition and authority and are also generated from the mere use of senses without consulting the light of reason. These opinions are always so deeply rooted in one's mind that they are generally regarded as implanted by nature and are accepted as utterly true and evident. According to Descartes, these preconceived opinions are the chief source of error and when we begin to philosophise seriously, the first step should be to doubt the certainty of these preconceived opinions and replace them with ideas which are consistent with the standards of reason.

"We must first of all lay aside all our preconceived opinions, or at least we must take the greatest care not to put our trust in any of the opinions accepted by us in the past until we have first scrutinised them afresh and confirmed their truth." — Descartes, *Principles of Philosophy*, I.

Preconception

[Greek: *prolepsis*, also translated as anticipation] A term in the epistemology of Epicurus and Stoicism, a general concept or mental picture generated by repeated similar impressions and experience. Preconceptions record and classify our experience of the world and are foundations of judgments. For example, when we hear "table", we anticipate the kind of thing to which this term refers. Preconceptions are also viewed as the criteria of true perceptual statements. They can be combined together as a basis for inference, and can be used to form the new concepts of things not encountered in experience.

"Preconception, they say, is as it were a perception, or correct opinion or conception, or universal 'stored notion' (i.e. memory) of that which has frequently become evident externally." — Diogenes Laertius, *Lives of Eminent Philosophers*, X, pp. 32-3.

Preconscious

Freud's term for the latent elements of mind waiting to be discovered. These elements, though not being in consciousness, can be brought to consciousness by ordinary in-

experience, not only in the form it has taken, but also in the form it has taken, and it is less likely to be opposed." — James, *Pragmatism*, 1955, p. 45.

实践

"行为" 的希腊词。

先入之见

[拉丁文 *praejudicia*, 意思是“偏见”] 笛卡尔用这个概念指每个人在童年时形成的信念。这些信念来自对传统和权威的信赖,也是由于只使用感觉而不请教理性之光而产生的。这些意见永远深深扎根于一个人的心中,以致一般认为它们是被自然植入的,并被当做完全真实明白的意见接受下来。根据笛卡尔的观点,这些先入之见是错误的主要来源,当我们开始认真研究哲学的时候,第一步就应当怀疑这些先入之见的确实性,并且用与理性标准相一致的观念来代替它们。

“我们应当首先把我们的一切先入之见抛到一边,或至少应极其小心地、在首先对我们过去接受的意见作了重新检查,进一步确证了它们的真实性之前,不要信赖我们过去接受的任何意见。”——笛卡尔:《哲学原理》,第一部分。

预先概念

[希腊词 *prolepsis*, 也译作“预想”] 伊壁鸠鲁及斯多亚学派认识论中的一个术语,它是指一种从不断重复相似的影像和经验中得出的一般概念或心的图像。预先概念记录和分类了我们的世界经验,是判断的基础。例如,当我们听见“桌子”一词时,我们便预想有一类这个词所指的事物。预想概念也被看做是真实的知觉陈述的标准。它们可互相连结,作为推理的基础,可用来构成关于并非在经验中遭遇的事物的新概念。

“预想概念,他们说,就如同知觉,或正确的意见或观念,或普遍的‘储存概念’(即,记忆),是关于那经常外在地变得显然的事物的。”——第欧根尼·拉尔修:《名哲言行录》,X,第32—33页。

前意识的

弗洛伊德使用的一个词,指心中等待被发现的那些潜在因素。这些因素尽管不在意识之中,但可以通过一般的内省方法被唤入意识。弗

rospective methods. Freud distinguishes explicitly between the unconsciousness and the preconscious. The unconscious is repressed and cannot become conscious in an ordinary way. Furthermore, the unconscious is dynamic in that it is active in the determination of behaviour. The preconscious does not have this function.

"The latent, which is unconscious only descriptively, not in the dynamic sense, we call 'preconscious'." — Freud, *Standard Edition of the Complete Psychological Works of Sigmund Freud*, vol. 9, p. 47.

Predestination

[from Latin *praedestinare*, a synonym of predetermination] A theological doctrine which means that all events in someone's life, no matter whether they have happened, are happening, or will happen, have been determined to happen in advance by God. Whether a person's soul will go to heaven or hell has also been decreed by the sovereign will of God when that person was born, no matter how the person behaves in life. According to the doctrine of predestination, God not only has foreknowledge of all that will happen, but also has foreordained that it will happen. This claim arises from the view that God is the cause of everything and is also associated with the view that human beings can be saved only by God's grace. The position had scriptural support in Romans 8 and 9 and Ephesians 1 and was held by Augustine and Calvin, among others. The notion of predestination or predetermination provides the basis for fatalism.

Problems arise for the notion of predestination. If God plans everything and we do not have free will, then God seems to be responsible for our evil deeds. But this cannot be true if God is perfectly good. It is difficult to understand the relation between God's foreknowing and God's foreordaining. In this domain, His omniscience and omnipotence seem hard to distinguish.

In logic, the law of excluded middle has been thought by Łukaziewicz and others to force us into logical predestination when applied to statements about the future. On this view, the truth or falsity of such statements has always been fixed independent of any questions concerning divine knowledge or power. This thought provided a major motive for giving up the law of excluded middle and for developing many-valued logic in contemporary non-classical logic, but others — including many who admire the achievements of many-valued logic — attempt to overcome logical predestination within classical logic.

"If it is held that everything that happens... is planned in every detail, then I do not see how it can be denied that if the responsibility for what we do can be assigned to anyone at all, it must ultimately fall upon the planner rather than ourselves... For someone who takes this view, the doctrine of predestination does seem irresistible." — Ayer, *The Con-*

洛伊德清楚地地区别了无意识和前意识。无意识受到压抑,不能以一般方式进入意识。而且,无意识是动态的,在决定人的行为中起着作用。前意识则没有这种功能。

"这种仅在描述的而非动态的意义上是无意识的潜在者,我们称之为'前意识的'。"——弗洛伊德:《S. 弗洛伊德心理学著作全集标准版》,第九卷,第47页。

宿命论

[源自拉丁文 *praedestinare*, "先定论"的同义词]一种神学学说,指的是人的一生中的所有事件,不管它们是已经发生、正在发生或将要发生,都是预先由上帝决定好要发生的。一个人的灵魂是进天堂还是入地狱也是在此人出生时就由上帝至高无上的意志所判定的,不管他在一生中表现如何。根据宿命论学说,上帝不仅对将要发生的一切有先知,还对将要发生的事情有先定。这种主张出自上帝是万物的原因这一看法,也与人类只能靠上帝的恩典而得救这个看法有联系。这种立场得到圣经中《罗马书》第8章和第9章以及《以弗所书》第1章的支持,除了其他人之外,奥古斯丁和加尔文也持这种立场。宿命论或先定论的概念为天命论提供了基础。

宿命论的概念产生了不少问题。如果上帝规划了一切,而我们没有自由意志,那么上帝似乎要为我们的罪恶行为负责。但这不应该是真的,如果上帝为至善的话。要理解上帝的先知和上帝的先定之间的关系很困难。在这个领域,他的全知和全能似乎难于区分。

在逻辑上,卢卡西维茨和其他人认为排中律在运用于关于未来的陈述时,会强使我们相信逻辑宿命论。根据这种看法,这种陈述的真假总是一定独立于关于神的知识和力量的问题。这种想法提供了在当代非经典逻辑中放弃排中律和提出多值逻辑的主要动力,但其他人——包括很多钦佩多值逻辑成就的人——力图在经典逻辑之内克服逻辑宿命论。

"如果认为发生的每一事情……都是巨细无遗地计划好的,那么我看不出怎么才能否认,如果对于我们所做事情的责任毕竟可以归之于某个人的话,这最终必定要归之于计划者而不是我们……对于持这种观点的人,宿命论的主张似乎是不可抗拒的。"——艾耶尔:《人的概念及其他论文》,1963年,第253—254页。

cept of a Person and Other Essays, 1963, pp. 253-4.

Predetermination, another term for predestination

Predicables

The different relations in which a predicate might stand to a subject in a proposition. In the *Topics*, Aristotle distinguished various predicables: (1) *definition*, in which the predicate states the essence of the subject; (2) *property*, in which the predicate expresses something which is not a constitutive part of the essence, but is inseparably bound up with the subject, for example capable of learning to man; (3) *genus*, in which the predicate defines the subject together with a *differentia*; (4) *accident*, in which the predicate expresses a feature which is neither a constitutive part of the essence nor inseparably bound up with the subject. In the first two of these predicables, the subject and predicate are convertible (we can argue from "X is Y" to "Y is X"), but the latter two are not convertible. According to Aristotle, all problems can be brought under one or other of the predicables, so these predicables are the framework for his whole treatment of the *topoi* (commonplaces). The medieval logician Porphyry added *species* as a fifth kind of predicable. Because species is a subject rather than a predicate for Aristotle, Porphyry's classification produced much confusion.

In addition to this historical sense of predicable, there is an additional sense introduced by the contemporary British philosopher Peter Geach. He noticed that in modern logic the term predicate might refer both to a role that a particular word or phrase is playing in a particular proposition, and to a syntactical category to which expressions belong in virtue of their ability to play this role. To avoid this ambiguity, he uses predicable for membership of the syntactical category and reserves predicate for the actual performance of the predicative role.

"I use 'predicables' as a term for the verbal expressions called 'predicates' by other logicians; I reserve the term 'predicate' for a predicable actually being used as the main function in a given proposition." —Geach, *Logic Matters*, 1972, p. 239.

Predicament, the medieval scholastic equivalent of an Aristotelian category

Predicate

[from Latin: *pare*, in front + *dicere*, to say, literally that which is said in front of] A basic sentence expresses a proposition that some object has a certain attribute ("The dog is running" or "This flower is red") or that there is certain relation between two or more objects ("The horse is

先定论

“宿命论”的另一说法。

述语

在一个命题中，谓词可能保持的与主词的不同关系。在《正位篇》中，亚里士多德区分出不同的述语：(1)“定义”，谓词在其中说明主词的本质；(2)“特性”，谓词所表达的某种东西，虽不是本质的构成部分，但却与主词不可分地连在一起，例如，“学习能力”之于“人”；(3)“属”，谓词与种差一起界定主词；(4)“偶性”，谓词表达的特征既不是本质的构成部分，也不与主词不可分地连在一起。在这些述语中，前两个的主词和谓词可以互换（我们能从“X是Y”论证“Y是X”），但后两个却不可互换。按照亚里士多德的观点，一切问题都能被置于一个或另一个述语之下，所以，这些述语是他对日常用语 (*topoi*) 进行整体处理的框架。中世纪逻辑学家波菲利又添上“种”，作为第五类述语。由于“种”在亚里士多德那里更多地是主词而不是谓词，因而波菲利的分类产生了很大混乱。

除了上述历史上的“述语”含义外，在当代英国哲学家吉奇还引入了另外的含义。他注意到，在现代逻辑中，“谓词”这个词既可指一个特殊的语词或短语在一个特殊的命题中扮演的角色，也可指表达靠自己扮演这种角色的能力所属的句法范畴。为了避免这种歧义，他使用“述语”来表示句法范畴的成员身份，保留“谓词”实际扮演的陈述作用。

“我用‘述语’指其他逻辑学家称为‘谓词’的表述，而保留‘谓词’指实际上作为给定命题中的主要功能来使用的述语。”——吉奇：《逻辑问题》，1972年，第239页。

范畴

中世纪经院哲学对亚里士多德的“范畴”的对应词。

谓词

[源自拉丁文 *pare* (在……面前) 和 *dicere* (叙说)，其字面意思是：“在……前面被叙说的”] 基本语句表达了这种命题，即某个对象有某种属性 (“那条狗在跑”或“这朵花是红的”)，或在两个或多个对象之间存在某种关系 (“马比

larger than the sheep"); The expressions standing for an object (for example "the dog", "this flower", or "the horse" and "the sheep") are called subjects, and the expressions standing for an attribute (for example "is running", "is red") or relation (for example "is larger than") are predicates. A predicate is what is said of a subject in a sentence. A predicate can be a verb, adjective phrase or noun phrase. Predicates are also called predicate expressions or predicate terms. If a given sentence has one subject, its predicate is a one place predicate; if there are two subjects, its predicate is a two place predicate, and so on. One place predicates are connected with intransitive verbs, and two place predicates are connected with transitive verbs or relations. There is also a distinction between logical (first-order) and grammatical (second-order) predicates. A logical or first-order predicate applies to some object, and a grammatical or second order predicate is predicated of a first order predicate. According to this distinction, words such as exist are grammatical predicates rather than a logical predicates.

"The subject is that term about which affirmation or denial is made. The predicate is that term which is affirmed or denies of the subject." Keynes, *Formal Logic*, 1928, p. 92.

Predicate logic, another name for predicative calculus

Predicate nominalism

A term introduced by the Australian philosopher David Armstrong for the theory that what universals there are is simply a matter of what predicates there are. In other words, universals are parasitic upon predicate expressions. Although a predicate like "tree" can apply in principle to more than one object, we need not posit some common property by which a common predicate or general term applies to objects. On the contrary, the applicability of a common predicate needs no further explanation and determines the existence of a universal. Strawson's characterisation of universals in *Individuals* is sometimes said to express this theory. Predicate nominalism is one attempt to solve the fundamental difficulty of nominalism, namely, if only particulars exists, how can we bring numerically different particulars under the same general terms? The difficulty for predicate nominalism is that it does not explain how predicates can determine properties or universals.

"According to Predicate Nominalism, an object's possession of (say) the property, being white, is completely determined by the fact that the predicate 'white' applies to this object." —Armstrong, *Nominalism and Realism*, 1978, p. 17.

Predicate term, another name for predicate

羊大")。其中代表对象的表达式(例如,上面例子中的“这朵花”,“马”,“那条狗”)叫做主词,表示性质(例如“在跑”,“是红的”)或关系(例如“比……大”)的表达式是谓词。谓词就是在句子中述说主词的东西。谓词可以是动词、形容词短语或名词短语。谓词也叫做“谓词表达式”或“谓词词项”。在…给定语句内,如果有一个主词,则它的谓词是一位谓词;如果有两个主词,则它的谓词是二位谓词,如此等等。一位谓词与不及物动词相关联,二位谓词与及物动词或关系相关联。还存在逻辑(一阶)谓词和语法(二阶)谓词的区分。逻辑或一阶谓词应用于某个对象,而语法或二阶谓词则谓述一阶谓词。根据这一区别,像“存在”这样的词语是语法谓词而不是逻辑谓词。

“主词是对之作出肯定或否定的词项。谓词则是用来肯定或否定主词的词项。”——凯恩斯:《形式逻辑》,1928年,第92页。

谓词逻辑

“谓词演算”的另一个名称。

谓词唯名论

澳大利亚哲学家D.阿姆斯特朗引入的术语,指一种认为共相存在即是谓词存在的理论。换言之,共相是寄生于谓词表述的。虽然像“树”这样的谓词在原则上可应用于多个对象,但我们不必设定一个共同谓词或类名,只有通过它才可应用于对象的某种共同属性。相反,共同谓词的可应用性不需要进一步的解释,它决定了共相的存在。斯特劳森在《个别物》中对共相的描绘有时被认为是表达了这一理论。传统的唯名论面临一个根本性的困难,即如果只有殊相存在,我们如何能把数目上不同的殊相归到同一个类名之下?谓词唯名论是力图解决这一困难的一种尝试。但它也有自己的弱点,因它未能解释谓词如何决定属性或共相。

“根据谓词唯名论,一个对象拥有(比如说)白这一属性,完全是由谓词‘白’应用于这个对象这一事实所决定的。”——阿姆斯特朗:《唯名论和唯实论》,1978年,第17页。

谓词词项

Predication

The attribution of a predicate to a subject, or the combination between them. Predication expresses the relation between a thing and its attributes, which is the basic combination in logical thinking. Much of logic depends on understanding the different logical roles of subject and predicate. Predication can be symbolised as Fa (a is F) or Rab (a has relation R with b). Frege held that predicates are unsaturated, that is they contain logical holes which can be filled by subject terms or can be held open by variables. If a predication contains a one-place predicate, it is a one-place predication. If it contains a two-place predicate, it is a two-place predication, and so on. Frege suggested that we distinguish predication from assertion for assertion involves an assent to the truth or falsity of the sentence. While every assertion must be expressed by a predication, not every predication is necessarily an assertion.

"Predication: in logic, the joining of a predicate to a subject of a proposition so as to increase the logical breadth without dismissing the logical depth." —Peirce, *Collected Papers*, II, p. 359.

Predication, metaphysical

A kind of predication related to Aristotle's theory of matter and form, particularly his view that form is predicated of matter, also called form predication. Metaphysical or form predication differs from linguistic predication, which picks out a logical subject and states what that subject is or has. In metaphysical predication, such as "these bones and flesh are Socrates", matter as subject is not a logical subject, but indicates the kind of material stuff (bones and flesh) from which the predicate (Socrates) is constituted or generated by substantial change.

"Let's say that a predicate (a linguistic term) is linguistically predicated of its subject, but that a predicable (a metaphysical term) is metaphysically predicated of its subject." — Lewis, *Substance and Predication in Aristotle*, 1992, p. 4.

Predicative adjective, see attributive adjective

Predicative calculus

Also called the logic of terms, predicate logic or the calculus of predicates. A logic that analyses subject-predicate sentences, including sentences involving "not" and the quantifiers "all" and "some". It deals with the inner structure of propositions, and the arguments whose validity depend on the arrangement of the terms within the premises and conclusion. Predicative calculus is thus distinguished from proposi-

"谓词"的另一个名称。

主谓关系

把一谓词归属于一主词,或这两者之间的某种结合。它表达了事物与其属性之间的关系,是逻辑思考中基本的组合。逻辑的大部分内容取决于如何理解主词和谓词的不同逻辑作用。主谓关系可以被符号化为" Fa "(a 是 F)或" Rab "(a 与 b 有关系 R)。弗雷格认为,谓词是非饱和的,即是说它们包含逻辑空隙,这些空隙能够用主词填充,或者用变元填充且仍保持开放状态。如果一主谓关系包含一个一位谓词,则它是一位主谓关系。如果它含有一个二位谓词,则它是一二位主谓关系,如此等等。弗雷格建议把主谓关系与断定区别开来,因为断定涉及到对该语句的真或假的某种肯定。尽管每个断定必须由主谓关系来表达,但并非每个主谓关系必然地是一个断定。

"主谓关系:在逻辑中,把命题的谓词与其主词组合起来,以至增加了其逻辑宽度而没有消除其逻辑深度。"——皮尔士:《文集》,第二卷,第359页。

形而上学的主谓关系

一类与亚里士多德的形式质料说,尤其是他的形式述说质料的观点相关的主谓关系,也叫形式的主谓关系。形而上学的或形式的主谓关系不同于语言的主谓关系。语言的主谓关系标出一个逻辑主词,并陈述这一主词是什么或有什么。在形而上学的主谓关系中,如"这些骨头和肉是苏格拉底",作为主词的质料不是逻辑主词,而是表示谓词("苏格拉底")通过本体变化所构成或产生的物质材料("骨与肉")。

"让我们认定,一个谓词(一个语义项)在语义上上述说一个主词,而一个可作谓词的项(一个形而上学的项)是在形而上学上述说其主词。"——刘易斯:《亚里士多德哲学中的本体与主谓关系》,1992年,第4页。

谓词形容词

见"归属性形容词"条。

谓词演算

亦称"词项逻辑", "谓词逻辑"或"谓词演算"。它分析主谓式语句,包括那些含有"并非"和量词"所有"、"有些"的句子。它处理命题的内部结构,以及其有效性依赖于前提和结论内词项排列的论证。谓词演算因此区别于命题演算,后者与命题结构有关,并且以命题作为它的单位。谓词演算有时被刻画为词项逻辑,而

tional calculus, which is concerned with propositional structures and has propositions as its units. Predicative calculus is sometimes characterised as the logic of terms, while propositional logic is the logic of propositions. Predicative logic introduces "x, y, z" as variables ranging over individual objects and "F, G, H" as signs for predicates. At its core is quantification theory, which was developed by Frege to analyse the logical properties of quantifiers. First-order predicate logic, which is elementary logic and a modern replacement of Aristotelian syllogism, deals only with individual variables and their quantifications, while second-order or other higher-order predicate logic is also concerned with relational predicates and other predicate variables.

"The laws of the predicative calculus are of two kinds; 1. those that are peculiar to itself (that is to the logic of terms) and 2. those that are analogous or specifications of the laws of the propositional calculus. The propositional calculus and the predicative calculus belong to one system." Mitchell, *An Introduction to Logic*, 1962, p. 94.

Prediction

To forecast that something will happen in advance of its actual happening. This capacity is essential for the human species to survive and is also a central feature of human intelligence. Predicting and controlling the future is a major reason that we pursue knowledge. The problem of how to predict rationally has been of central interest in epistemology and the philosophy of science. Predictability is the main measure by which we may test the efficiency of a scientific theory. The notion of prediction has been associated with the discussion of topics such as free will and determinism, chaos and chance and induction. Problems concerning the truth-value of predictions led to the development of three-valued logic.

"The chain of reasoning which leads from given observational findings to the 'prediction' of new ones actually involves, besides deductive inferences, certain quasi-inductive steps each of which consists in the acceptance of an intermediate statement on the basis of confirming, but usually not logically conclusive, evidence." —Hempel, *Aspects of Scientific Explanation*, 1965, p. 29.

Prediction paradox, another term for surprise examination paradox

Pre-established harmony

Leibniz's proposed solution to the Cartesian mind-body problem. The world, including minds and bodies, is ultimately composed of independent substances or monads. Each monad is isolated and self-enclosed, and develops in accordance with its own internal nature. There is no interaction between finite minds and bodies. No state of a substance has

命题逻辑则被刻画为命题的逻辑。谓词逻辑引入 "x, y, z" 作变元, 以个别的对象为值, 引入 "F, G, H" 作为谓词的记号, 量化理论是其核心部分, 它是由弗雷格提出来分析量词的逻辑特性的。一阶谓词逻辑, 作为初等逻辑和亚里士多德三段论的现代替代物, 只处理个体变元及其量化, 而二阶或高阶谓词逻辑则还关注关系谓词和其他谓词变元。

“谓词演算的规律包括两类: 其一是为它本身 (即词项逻辑) 所特有的规律, 其二是命题演算规律的类似物或限定。命题演算和谓词演算属于一个系统。”——米切尔:《逻辑导论》, 1962 年, 第 94 页。

预测

在某事实发生之前预言某事将发生。对于人这个物种来说, 为了生存下去而具有这种能力是至关重要的, 并且这种能力还决定了人是理智的生物。我们追求知识的主要理由正是为着预测和控制未来。如何进行合理的预测始终是认识论和科学哲学中重点关注的问题。可预测性是我们可以用来检验科学理论的效用的主要手段。预测概念是与关于自由意志和决定论、混沌和机遇、归纳等等的讨论密切相关的。判定预测的真值的努力导致了三值逻辑的发展。

“从给定的观察发现到对新现象的预测的推理链条, 除演绎推理外, 实际上包含着某些准归纳的步骤, 其中每一步都在于根据肯定证据接受某个居间陈述, 但后者在逻辑上通常是非结论性的。”——亨佩尔:《科学说明的诸方面》, 1965 年, 第 29 页。

预告悖论

“意外考试悖论”的另一名称。

前定和谐

莱布尼茨对笛卡尔的心-身问题的解决办法。包括心灵和身体在内的世界最终是由独立的实体或单子构成的。每一个单子都是孤立的、自身封闭的, 根据它自己的内在性质而发展。在有限的心灵和身体之间没有任何相互作用。一个实体的任何状态都不会像一个真正原因那样

as a real cause some state of another substance, for a substance which is properly so-called, must have a kind of self-sufficiency which is incompatible with causal dependence. Yet God, in creating the universe, has pre-established a perfect noncausal harmony of activity among all possible monads. Each monad is like a mirror which reflects the whole universe. A change in one will correspond to a change in other. This harmony is analogous to the non-causal harmony of activity existing between two clocks whose ticking is synchronised perfectly. The doctrine of pre-established harmony is at the centre of Leibniz's metaphysics. It is, in a sense, an incorporation of occasionalism and the view that each substance has its own internal activity.

"There remains only my hypothesis, that is the way of pre-established harmony, through a prior divine artifice, which has formed each of these substances from the beginning in such a way that by following only its own laws, laws which it received with its being, it nevertheless agrees with the other, as if there were a mutual influence, or as if God always meddled with it, over and above his general concurrence." — Leibniz, *Philosophical Essays* (eds. and trans. Ariew and Garber), 1989, p. 148.

Preface paradox

An author, based on the experience that all her previous works contain some mistakes, reasonably acknowledges in the preface of her new book that it also contains mistakes, in spite of her best efforts. This acknowledgement creates a contradiction. On the one hand, she holds that propositions $P_1, P_2, P_3, \dots, P_n$ (which are the views she argues for in this book) are true; on the other hand, she also believes that at least one of them is false. This amounts to saying that at one and the same time she believes that all these propositions are true and believes that some of them are false. This reveals an imperfection in what we take ourselves to know.

"We occupy the posture of the so-called 'preface paradox' — standing in the shoes of the author who apologises in his preface for those errors that have doubtless made their way into his work, and yet blithely remains committed to all those assertions in the body of the work itself." — Rescher, *Empirical Inquiry*, 1982, p. 206.

Prejudice

Prejudice is a target of Cartesian doubt and other rationally based philosophy because it is thought to obstruct reason and philosophy in the pursuit of truth. Prejudice is rehabilitated in Gadamer's hermeneutics, where it is viewed as an essential element in our understanding on the basis of Heidegger's notion of a fore-structure of understanding. All understanding involves the projection of meanings arising out of one's own situation and obtained from a certain perspective. Because this fore-structure of understanding is preju-

含有另一实体的某个状态, 因为严格而言的实体应当有一种与因果依赖不相容的自足性。然而上帝在创造宇宙时已经在一切可能的单子之间预先建立了非因果的、完美的活动和谐, 每一单子都像一面镜子反映着整个宇宙。一个之中的变化都将对应于另一个之中的变化。这种和谐类似于两个完全同步运行的钟表之间存在的非因果的动作和谐。前定和谐说是莱布尼茨的形而上学的核心。在某种意义上, 它是偶因论和关于实体有自己的内在能动性观点的混合物。

"只有我的假设仍然保留着, 那就是先前由神的技巧而造成的前定和谐方法, 神的技巧将这些实体的每一个在一开始就按那样一种方式来形成, 使得它只遵循自己的规律——那些它存在时就得到的规律——行事, 却依然与其他的实体相适合, 就好像它们真的互相影响一样, 或好像上帝在他的基本的活动主流之外, 还总在摆弄那个实体一样。"——莱布尼茨:《哲学文集》(阿瑞和加伯编译), 1989年, 第118页。

序言悖论

作者根据他先前所有著作都包含有错误这个经验, 在他的新著序言中有理由承认, 它也可能包含错误, 尽管他尽了最大的努力。这个承认产生了一个矛盾。一方面, 他认为命题 $P_1, P_2, P_3, \dots, P_n$ (他在这本书中论证的观点) 是真的; 但另一方面, 他又相信其中至少有一个是假的。这就等于是说, 他在既相信所有这些命题为真的同时, 又相信其中的一些是假的。这揭示了我们确知知道的东西是不完美的。

"我们处于所谓的'序言悖论'的状态——即处于这样一个作者的位置, 他在序言中为那些无疑曾经出现在他的著作中的错误而表示歉意, 但又轻松地承认就这本书里的所有断言也有错误。"——雷谢尔:《经验探究》, 1982年, 第206页。

偏见

偏见是笛卡尔的怀疑和其他基于理性的哲学所反对的东西, 因为它被视为妨碍了追求真理的理性和哲学。偏见在伽达默尔的解释学中恢复了名誉, 它在那里被视为我们理解中的一个必要因素, 这种看法基于海德格尔关于理解或领会的前结构的观点。所有的理解都涉及意义的投射或筹划, 这投射则出自一个人自己所处的形势, 由某个视域中获得。由于这种理解的前结构就是偏见, 理解或领会不可避免地植根

dice, understanding is inevitably rooted in prejudice. There is no neutral point of view from which we may get the "real" meaning of a text. According to Gadamer, this does not mean that understanding and interpretation are purely subjective. Prejudice is not a matter of subjective opinion, nor is it personal property. Instead, he holds that it is part of tradition and is developed within the historical tradition to which we belong. Prejudice is the historically and culturally determined horizon and the effectivity of history. Furthermore, Gadamer claims that prejudice is not an obstacle or limit to understanding, but by serving as our orientation to meaning, it is the basis for the possibility of understanding.

"What is necessary is a fundamental rehabilitation of the concept of prejudice and a recognition of the fact that there are legitimate prejudices, if we want to do justice to man's finite, historical mode of being." —Gadamer, *Truth and Method* (tr. Glen-Doepel), 1975, p. 246.

Pre-reflective cogito

Sartre's term for a crucial kind of human consciousness. Our consciousness is always directed upon some object of which we are aware. This is the Cartesian or reflective cogito. But this consciousness is itself accompanied by a consciousness that we are aware. Sartre called this second order awareness, which is consciousness directed upon consciousness, pre-reflective cogito. This consciousness, which always passes without being reflected upon, makes reflection possible. The pre-reflective cogito is the condition of the reflective cogito. On Sartre's view of intentionality, therefore, consciousness operates on two levels at once. Sartre account of consciousness led to his rejection of Freud's notion of the unconscious. A major task of Sartre's philosophy was to give a descriptive account of the pre-reflective cogito.

"I believe that I have demonstrated that the first condition of all reflection is a pre-reflective cogito. This cogito, to be sure, does not posit an object; it remains within consciousness. But it is nonetheless homologous with the reflective cogito since it appears as the first necessity for non-reflective consciousness to be seen by itself." —Sartre, *Being and Nothingness* (tr. Barnes), 1957, p. 74.

Prescriptivism

A moral theory developed by Hare in *The Languages of Morals* (1952) and *Freedom and Reason* (1963). According to this theory, the main concern of moral philosophy is to clarify the nature of moral terms and statements. Distinct from fact-stating statements which tell us what is the case, ethical statements tell us to do something and are used to guide choices. Such statements must have irreducibly prescriptive elements. To express agreement to a prescription or to accept it is to express one's resolve or decision to carry it out. Prescriptivism emphasises the typically prescriptive use

于偏见。并没有能让我们得到一个文本的“真实”意义的中立视角。按照伽达默尔的看法,这也并不意味着理解和解释是纯主观的。偏见并不就是主观意见,也不是个人癖好;相反,伽达默尔认为它是传统的一部分,在我们所属于的历史传统中发展。偏见是被历史和文化决定的视域,是历史的效果。而且,伽达默尔认为偏见不是理解的障碍或局限,相反,它引导着我们朝向意义的方向,因而是使理解成为可能的基础。

“所需要的是从根本上为偏见概念恢复名誉,并认识到这样一个事实,即存在着合法的偏见,如果我们不加偏见地看待人类存在的有限的和历史的样式的话。”——伽达默尔:《真理与方法》(格兰-多培尔英译),1975年,第246页。

前反思的思想

萨特用来表达一种极重要的人类意识的词。我们的意识总是指向某个我们意识到的对象。这是笛卡尔的或反思的思想。但这种意识本身又被我们知道的〔另〕一个意识所伴随。萨特称之为第二层的意识,也就是指向意识的意识或前反思的思想。这种意识总是不被反思地进行着,但正是它使得反思成为可能。这前反思的思想乃是反思思想的条件。因此,按照萨特关于意向性的观点,意识同时运作在两个层次上。萨特对于意识的解释使得他拒绝弗洛伊德关于无意识的观念。萨特哲学的一个主要任务就是去描述性地说明前反思的思想。

“我相信我已表明所有反思的首要条件是一种前反思的思想。当然,这种思想并不设置对象,它保持在意识之中。尽管如此,它与反思的思想是同源的,因为它是让非反思的意识被自身看到的必要前提。”——萨特:《存在与虚无》(巴奈斯英译),1957年,第74页。

规定主义

为黑尔在他的《道德语言》(1952年)和《自由与理性》(1963年)所发展的一种道德理论。根据这个理论,道德哲学的主要任务是阐明道德词汇和陈述的性质。不同于告诉我们事实是什么的表述事实的描述,伦理陈述告诉我们做什么以及被用来指导我们的选择。这样的陈述必定有不可化简的规定成分。表达对一个规定的同意或者接受,就是表达一个人的决定或者是执行它的决心。规定主义强调对于道德判断的典型的规定性使用。它也主张道德规定是

of moral judgements. It also claims that moral prescription is universal, and is directed to everyone at all times. This principle of universalizability is the reason that Hare calls his theory "universal prescriptivism". Both prescriptivism and emotivism are types of noncognitivism, but they have significant differences. While emotivism emphasises the emotional impact of a moral judgement, and its influence on the hearer's attitude, prescriptivism thinks that this result is not necessary for the success of prescription. Emotivism, in distinguishing between factual statements and ethical statements, claims that only factual statements are the objects of reasoning. Prescriptivism, on the other hand, claims that one can also reason about moral questions. It thus avoids the charge of irrationality.

"For the sake of a name, let me refer to the type of doctrine which I put forward in *The Language of Morals*, and still hold, as 'universal prescriptivism' — a combination, that is to say, of universalism (the view that moral judgements are universalizable) and prescriptivism (the view that they are, at any rate typically, prescriptive)." —Hare, *Freedom and Reason*, 1963, p. 16.

Presence

According to Derrida, Western metaphysics from Parmenides to Husserl held the prejudice that the locus of truth is in the pure presence of things themselves to consciousness. Hence he calls traditional Western metaphysics the metaphysics of presence. Because presence gives priority to the spoken over the written, he also considers Western metaphysics to be a tradition of phonocentrism. "To return to the things themselves" has been a central philosophical slogan of the tradition. For Plato, truth lay in the idea or *eidos* (form) which is present to reason, the soul's sight. Plato thus united the notions of presence and evidence with those of objectivity, ideality, and the Good. He established the dichotomy of sensibility and rationality as an ultimate pair of opposing concepts. Plato authorised philosophy as the philosophy of presence or philosophy of *logos*. Derrida calls reason-centred philosophy logocentrism. Aristotle set up a notion of temporal presence through a continuity of time and history. He developed a position of taking the presence of a thing to be its substance, essence and existence. Descartes claimed that the condition of the possibility of knowledge and truth is the clarity and distinctness of ideas immediately present to consciousness. Hegel systematically demonstrated the self-presence of the subject. For most people, presence is the province of certainty. By denying presence, Derrida seems to deny the importance of actual experience. The complex displacement of presence, speech and reason requires careful assessment.

"We already have a foreboding that phonocentrism merges with the historical determination of the meaning of being in general as presence, with all the subdeterminations

普遍的,是在任何时候都对每个人起作用的。这是它的普遍性原则,也是黑尔宁可把他的理论称作为“普遍规定主义”的理由。规定主义和情感主义是非认知主义的两种类型,但它们的意义是不同的。情感主义强调一个道德判断对情感的效果,对听者态度的影响;而规定主义认为这个结果对于规定的成功来说不是必要的。情感主义在区分事实陈述与伦理陈述时,相信惟有事实陈述是推理的对象;而规定主义则主张,人们能够对道德问题进行推理。因此它避免了被指责为是非理性的。

“就名称而言,让我把我在《道德语言》中提出的那类并仍然坚持的学说,称作是‘普遍规定主义’——即普遍主义(把道德判断看成是普遍的观点)和规定主义(即道德判断至少主要地是规定性的)的结合。”——黑尔:《自由与理性》,1963年,第16页。

在场

在德里达看来,从巴门尼德到胡塞尔的西方形而上学都坚持这样一个偏见,即真理的所在地乃是事物本身对意识而言的纯在场。因此他称传统西方形而上学为“在场的形而上学”。由于在场首要关注的是说出的东西而非写出的东西,他也将西方形而上学视为一种语音中心主义的传统。“回到事情本身中”一直是这个传统的最重要的哲学口号。对于柏拉图,真理位于形相或理念之中,而这形相或理念对理性、也就是灵魂之眼而言是在场的。柏拉图因此而将在场和明证的观念与客观性、理念性(相性)和善的观念统一起来。他建立起感性与理性的二元分立,作为所有对立概念的终极模式。柏拉图将在场的哲学或逻各斯的哲学树立为正宗哲学。德里达称以理性为中心的哲学为“逻各斯中心主义”。亚里士多德通过时间和历史的连续性建立起了时间在场的观念。他提出了这样一种立场,即将事物的在场当做这事物的实体、本质和存在。笛卡尔认为,知识和真理可能性的条件是观念的明白和清楚,而这些观念对意识而言都是直接在场的。黑格尔系统地证明主体的自身在场。对绝大多数人而言,在场是确定性的领地。通过否定在场,德里达似乎否定了实际经验的重要性。对这种要逐出在场、说话和理性的复杂观点需要仔细的估价。

“我们已经有了这样一个预知,即语音中心主义的出现伴随着一个历史性的决定:将普遍存在的意义确定为在场;同时伴随着各种依附于这个普遍决定形式的次级决定。在这普遍的

which depend on this general form and which organise within it their system and their historical sequence.”——Derrida, *Of Grammatology* (trans. by Spivak), 1974, p. 12.

Presence-at-hand, see ready-to-hand

Pre-Socratics

A term invented by historians of philosophy to group together the Greek thinkers living between approximately the first half of the sixth century B C and Socrates' lifetime. These include mainly the Milesian school (Thales, Anaximander, Anaximenes), the Pythagoreans, the Eleatic school (Parmenides, Zeno and Melissus), Empedocles, Anaxagoras and the atomists (Leucippus and Democritus). The name is sometimes misleading because some philosophers in this period were actually contemporaries of Socrates. The unity consists rather in the fact that none of them were influenced by Socrates and Plato. They were also called natural philosophers, for many of them concentrated on finding principles to explain the world of nature, although this is not true of Parmenides' way of truth or of Zeno.

The Pre-Socratics took part in the first period of the history of Western philosophy, which began the tradition of free and rational inquiry. None of these philosophers left us a single complete work, so the study of them relies on the scanty and disconnected fragments preserved in the quotations and discussions of the later philosophers, in particular in Aristotle's works and those of his commentators. There was no separation of science and philosophy in this period, but the road leading to this separation was prepared by them. Many contemporary philosophers admire the intellectual freedom and speculative brilliance of the Pre-Socratics and are inspired by their views of man and universe.

“In saying that the Pre-Socratics were rational men I mean no more than this; that the broad and bold theories which they advanced were presented not as ex cathedra pronouncements for the faithful to believe, and the godless to ignore, but as the conclusions of arguments, as reasoned propositions for reasonable men to contemplate and debate.”——Barnes, *The Presocratic Philosophers*, 1979, p. 5.

Presumption

A statement which has some grounds to be considered a candidate for truth, but whose truth is not yet established. It is provisionally acceptable, but falls short of being conclusively acceptable. A presumption possesses a positive but low-level cognitive status and is the raw material for the production of knowledge. A presumption has some similarity to Epicurus' notion of *prolepsis*, the anticipation of the application of a term.

形式中这些次级决定组织起了它们的系统和历史序列。”——德里达：《论书写学》（斯庇瓦克英译），1974年，第12页。

现成在手状态

见“用得称手”条。

前苏格拉底

哲学史家们创造了这一术语，把生活在大约公元前6世纪前半期至苏格拉底时期的希腊思想家归在一起。这些思想家包括米利都学派（泰勒斯，阿那克西曼德，阿那克西美尼），毕达哥拉斯学派，埃利亚学派（巴门尼德，芝诺，梅利索），恩培多克勒，阿那克萨戈拉，原子论者（留基波和德谟克利特）。这一名称有时有些含混，因为这一时期的有些哲学家实际上是苏格拉底的同时代人。这些思想家们的共同之处在于，他们都没有受过苏格拉底和柏拉图的影响。他们也被叫做自然哲学家，因为他们绝大多数都致力于找到可解释自然界的原理，虽然巴门尼德的真理之路与芝诺哲学除外。

前苏格拉底哲学发生于西方哲学史的第一阶段，它开始了自由和理性研究的传统。这些哲学家都没有留给我们一部完整的著作，故对他们的研究是依赖于数量不多且互不相连的残篇。这些残篇被保存在后代哲学家，尤其是亚里士多德及其注释者的引语和讨论中。这一阶段科学与哲学尚未分家，可通往分离之路已经由他们奠定了。许多当代哲学家都敬慕前苏格拉底哲学家的理智自由和思辨才能，并从他们对人和宇宙的观点中吸取灵感。

“说前苏格拉底哲人是理性的人，我的意思只是说：他们提出的大范围的和大胆的理论不是作为教会的宣导，使虔诚的人相信，而被无神论者所忽视；相反，他们的理论是论证的结论，是推论而得的命题，使理性的人去思考和争论。”——巴奈斯：《前苏格拉底哲学家》，1979年，第5页。

假定

一个基于某些论据被考虑为待选的真理，但是其真理性尚未确立的陈述。它是暂时可接受的，但是尚缺乏最后的可接受性。假定拥有确定的然而却是低水准的认知地位，是知识生产的原材料。假定类似于伊壁鸠鲁的 *prolepsis*，即对使用一个词项的预期。

“假定是这样一个问题，它被公开承认为未知（即未知其为真）的，但是有些人宣称（不管

"A presumption is a thesis that is avowedly not known (i. e. known to be true), but having some claim—however tentative or imperfect—to be regarded as a truth." — Rescher, *Methodological Pragmatism*, 1977, p. 115.

Presupposition

In general, what is taken to be true without question as a premise for some conclusion. In this sense, if A presupposes B, B is derivable from A. As a semantic notion, presupposition is a relation between two statements A and B such that A presupposes B if the truth of B is a necessary condition of A of being either true or false. The relation of presupposition differs from the relation of entailment, for if A entails B, the truth of B is a necessary condition of the truth of A, rather than a necessary condition of A possessing a truth value at all. This distinction between presupposition and entailment was employed by Strawson in his attack on Russell's theory of descriptions. For Russell, the statement "The present king of France is bald" entails "There is a present king of France". But Strawson claimed that the former presupposes the latter, but does not entail it. The notion of presupposition is important in the debate about whether "exists" is a predicate and in challenges to the principle of bivalence in three valued logic.

"For if a statement S presupposes a statement S' in the sense that the truth of S' is a precondition of the truth-or-falsity of S, then of course there will be a kind of logical absurdity in conjoining S with the denial of S'." —P. F. Strawson, *Introduction to Logical Theory*, 1952, p. 175.

Prima facie duties

[Latin: *prima facie*, so far as it appears on the surface, or on first appearance] A notion elaborated by W. D. Ross in his ethics, for duties relative to occasions, in contrast to absolute duties or duties proper, which we ought to perform in any situation without exception. *Prima facie* duties are also called conditional duties. We have many sorts of self-evident duties, such as keeping a promise, beneficence, justice and self-improvement. In a particular moral situation, more than one of these duties may matter. In such a situation, we have no way of knowing for certain which duty is fundamental. The only thing we can do is to rank all obligations involved in this particular situation and attempt to decide which one is most important on this occasion or to determine where the balance lies. The duty on which we act and which we take to be the most important on this occasion could be less important on another occasion. Thus, all such duties that we perform are *prima facie*, rather than absolute. Ross' theory rejects the moral monism of Kantian or utilitarian theories, which hold that there is an ultimate moral principle to guide our choices or actions. It faces the problem of accounting for the possibility of measuring the importance of different kinds

是试探性地还是不完满地) 它应被看做是真的。”——雷谢尔:《方法论的实用主义》, 1977年, 第115页。

预设

一般而言, 预设是毫无疑问地认为是真的东西, 作为某个结论的前提。在这种意义上, 如果A预设B, 就说B可从A推出来。作为一个语义概念, 预设是两个陈述A和B之间的关系, 使得A预设B, 如果B的真是A为真或为假的必要条件。预设关系不同于衍推关系, 因为A衍推B意味着B的真只是A的真的必要条件, 而根本不是A具有一个真值的必要条件。预设和衍推之间的这一区别, 被斯特劳森用来攻击罗素的摹状词理论。在罗素看来, “当今的法国国王是光头” 衍推 “有一位当今的法国国王”。但斯特劳森认为, 前者预设后者, 而不是衍推后者。预设这个概念在“存在”是否是一个谓词的论战中, 以及在三值逻辑对于二值原则的挑战中很重要。

“因为如果陈述S在下述意义上预设陈述S': S'的真是S的真或假的先决条件, 那么把S和S'的否定组合在一起当然会出现逻辑上荒谬的情形。”——斯特劳森:《逻辑理论导论》, 1952年, 第175页。

当下职责

[*prima facie* (拉丁语), 意为“就表面看来”或“初看起来”] 这个概念被W. D. 罗斯在他的伦理学著作中得到阐发, 指相对于不同场合的职责, 与绝对的职责或者严格说来的职责, 即在任何情况下都应履行而没有例外的职责相对。当下职责也称“有条件的责任”。我们有许多不证自明的责任, 如遵守诺言、仁慈、正义、自我完善等。在一种具体的道德情境中, 也许会出现不止一种职责。在这种情况下, 我们无法知道哪一种责任是更根本的。我们惟一能做的事情是把这种特殊情况下的义务排个队, 力图决定在这种情况下哪个是最重要的或在哪里可平衡它们。我们在这个场合据以行为的职责或认为是最重要的职责, 在另一种场合也许就不那么重要了。因此, 我们所履行的所有责任都是当下的, 而不是绝对的。罗斯的理论是对诸如康德理论和功利主义的道德一元论的拒斥, 后者认为, 有终极的道德原则指导我们的选择或行动。其难题是如何说明测量不同种类的职责的可能性。

“我建议以‘当下职责’或‘有条件的职

of duties.

"I suggest 'Prima facie duty' or 'conditional duty' as a brief way of referring to the characteristic (quite distinct from that of being a duty proper) which an act has, in virtue of being of a certain kind (e. g. the keeping of a promise), of being an act which would be a duty proper if it were not at the same time of another kind which is morally significant." Ross, *The Right and the Good*, p. 19.

Prima facie justification, see defeasibility

Primary and secondary qualities

The distinction between primary and secondary qualities can be traced to the ancient atomist Democritus and was also suggested by Galileo, Descartes and the seventeenth century corpuscularian philosophers such as Robert Boyle. But it is Locke who provided philosophical argument for this distinction and made it a significant topic in modern philosophy. For Locke, primary qualities are those which are not separable from the body, such as size, shape, texture and bulk, while secondary qualities are those which are not in the objects themselves but are the powers of primary qualities to produce in us various sensations such as colours, sounds and tastes. In an even broader sense, a secondary quality is also a thing's power to change another thing's operation. The ideas produced by primary qualities resemble the qualities themselves, that is, these ideas are qualitatively identical with the qualities in the body that initiated the whole causal process of perception. In contrast, the ideas of secondary qualities do not resemble anything in the bodies at all, for although we habitually think of these qualities as existing in the objects themselves, they are actually only powers to produce ideas in us rather than actual attributes which these ideas resemble. Primary qualities, because they really exist in the bodies, are called real qualities. The ideas of primary qualities, unlike the ideas of secondary qualities, were taken to offer something which could be measured, and were thus considered a suitable basis for scientific explanation. All secondary qualities can be reduced to primary qualities.

While Locke claimed that secondary qualities have their physical basis in the bodies which are causally responsible for the ideas of them, Berkeley interpreted secondary qualities as those qualities which do not exist independently of the perception of them. Locke's distinction between perceptible qualities and powers was taken by Berkeley as a distinction between perceptible qualities and mind-independent qualities. Because he rejected the possibility of the latter, he saw all qualities to be on the same footing.

"These I call original or primary qualities of body, which I think we may observe to produce simple *ideas* in us; solidity, extension, figure, motion or rest, and number." —

责'来简单地指下面这种特征,不同于严格意义的职责,一种行为具有这种特征是由于它是某一类型职责(如遵守诺言),如果不是由于同一时间另有一类更具意义的职责的话,它就是严格意义的职责。"——罗斯:《正当与善良》,第19页。

最初辩明

见“可废弃性”条。

第一性的质和第二性的质

第一性的质和第二性的质的区分可以追溯到古代原子论者德谟克利特,也为伽利略、笛卡尔和像 R. 波义耳那样的 17 世纪微粒论者所提出。然而,正是洛克提出了对这一区分的哲学证明,并使它成为近代哲学中的一个意义深远的论题。根据洛克的观点,第一性的质是与物体不可分的性质,像大小、形状、组织、体积等;第二性的质并不是对象本身中的性质,而是第一性的质在我们身上产生颜色、声音、滋味等各种感觉的能力。在更广泛的意义上,第二性的质也是一事物改变另一事物活动的能力。第一性的质产生的观念相似于该性质本身,即在性质上,这些观念与造成整个知觉因果过程的物体的性质相同。与此相对照,第二性的质的观念与物体中任何东西都毫不相似,因为虽然我们习惯于认为这些性质存在于对象本身,但它们实际只是在我们身上产生观念的能力,而不是这些观念与之相似的实际属性。因为第一性的质实际存在于物体中,所以它们被称作“实在的性质”。第一性的质的观念与第二性的质的观念不同,据认为它们提供了某种可以测量的东西,因而被认为是科学说明的可靠基础。所有第二性的质都可以还原为第一性的质。

洛克主张第二性的质在物体中有物理基础,物体是物体的观念的原因,而巴克莱把第二性的质说成是不能独立于对它们的知觉而存在的。洛克区别的是可被感知的性质和能力,而巴克莱将这种区别变成了可被感知的性质和不依赖于心灵的性质之间的区别。因为他拒斥后者的可能性,所以他认为一切性质都是同样的。

“这些性质我称之为物体的原始的或第一性的质,我想,我们可以观察到这些性质在我们心中产生了以下简单“观念”:固体、广延、形状、运动或静止、数目。”——洛克:《人类理智论》,第二卷,第八章,第10节。

Locke, *An Essay Concerning Human Understanding*, II, 8, 10.

Primary goods

For Rawls, the things which every rational person would want, whatever his plan of life or value orientation might be. Primary goods are basic to the life plans of all rational beings. They are divided into two categories: natural primary goods, including health, vigour, intelligence and imagination and social primary goods, including wealth, power, opportunities, civil rights, such as freedom of thought and speech and the right to participate in political decision making, and, as Rawls particularly emphasises, self-respect. The distribution of social primary goods is of basic concern to the participants who choose the principles of justice in the original position. Primary goods are the subject-matter of the single thin theory of the good and provides the motivation for the unanimous selection of principles of justice behind the veil of ignorance. Critics argue that consideration of primary goods cannot lead to a decision about the principles of justice, either because too little is known for any choice or because too much is known for a unanimous choice. Others argue for a different array of primary goods with different consequences for justice or claim that different values and lifeplans will affect the weighting of the goods even if the agents are temporarily ignorant of them.

"Now primary goods, as I have already remarked, are things which it is supposed a rational man wants whatever else he wants." - Rawls, *A Theory of Justice*, 1971, p. 92.

Primary language, another term for object language

Primary matter

Leibniz distinguished between primary matter and secondary matter. Primary matter is matter in itself, or bulk. It is not a complete substance, for it is separated from soul or substantial form, and needs the latter to be an organic unity. Primary matter is what is passive in any complete substance, but it serves as the foundation of continuity. Secondary matter, on the other hand, as an aggregate or mass is a collection of substances.

"I understand matter as either secondary or primary, secondary matter is, indeed, a complete substance, but it is not merely passive; primary matter is merely passive, but it is not a complete substance." — Leibniz, *Philosophical Essays* (eds. and trans. Ariew and Garber), 1989, p. 162.

Primary reason

Traditionally, reason has been held to explain action. What, then, is the exact relation between a reason and the action it explains? Davidson claims that when agents perform

基本的善

罗尔斯的术语,指每一有理性的人都想要得到的东西,不论他的生活计划和价值取向是什么。基本的善是所有理性的人生活计划的基础。它们被分成两类:自然基本的善和社会基本的善,前者包括健康、精力、理智和想像力,后者包括财富、权力、机会以及公民权利,如思想和言论自由和参加政治决策的权利,还有罗尔斯特别强调的自尊。社会基本的善的分配是那些在原初状态中选择正义原则的参加者首要关注的事情。基本的善是单一的善的弱理论的论题,它提供了在无知之幕后对正义原则的一致选择的动机。批评家认为,对基本善的考虑不能导致对那些正义原则的确定,这既是因为对任何选择所知的东西太少,又是因为对一致的选择所知的太多。其他的批评者则赞成根据对正义的不同重要性对基本的善做不同的排列,或者提出不同的价值观和生活计划将会影响对善的重视,即使参加者暂时还不知道它们。

“而基本的善,像我已经指出过的,是那些被假定为一个理性的人无论他想要别的什么都需要的东西。”——罗尔斯:《正义论》,1971年,第92页。

初阶语言

“对象语言”的另一个名称。

初级的物质

莱布尼茨区分了初级的物质和次级的物质。初级的物质是物质本身,或物块。它不是完整的实体,因为它与灵魂或实体的形式分开了,它要成为有机的统一体,就需要后者。初级的物质虽然是任何完整的实体内的被动的东西,但它是持续性的基础。与此不同,次级的物质是一个堆集或团块,或是多个实体的集合。

“我把物质理解为次级的或初级的。次级的物质实际是一个完整的实体,但它不完全是被动的;初级的物质是完全被动的,但它不是一个完整的实体。”——莱布尼茨:《哲学文集》(阿瑞和加伯编译),1989年,第162页。

第一理由

在传统上,理由一直被认为是用于解释行动的。那么,一个理由和它所解释的行动之间的关系究竟是什么呢?戴维森声称当行为者完成

actions, they have a pro-attitude towards an action of a certain kind, because reason has led them to see or think they see in an action of that kind some feature or consequence which they want or value. Furthermore, agents need to have a belief that acting in a certain way promotes that which they want or value. Such a pro-attitude and belief form the primary reason for agents to act as they did. On Davidson's view, this is how reasons rationalise an action. Their logical relationship can be expressed by a practical syllogism involving the propositional contents of the belief and the pro-attitude. The doctrine of primary reason is the central element of Davidson's causal theory of action, because a primary reason for acting in a certain way can cause an agent to act in that way.

"R is a primary reason why an agent performed the action A under the description D only if R consists of a pro-attitude of the agent towards action with a certain property, and a belief of the agent that A, under the description, has that property." —Davidson, *Essays on Actions and Events*, 1980, p. 5.

Primary rules, see rule of recognition

Prime matter

Aristotle's concept of what exists at the absolute beginning of generation. While elements are basic matter for all things, prime matter serves as the subject when elements change into each other. It is therefore more basic than the elements. Prime matter lacks characteristics in itself, but is what remains after even the three dimensions are stripped away, with nothing left to be removed. In itself, prime matter is in none of the categories, but can potentially be everything.

"And not only is nature the prime matter (and this in two senses, either the first, counting from the thing, or the first in general: ...), but also the form and essence." —Aristotle, *Metaphysics*, 1015a7-10.

Prime mover, an alternative expression for unmoved mover

Primitive belief, see primitive knowledge

Primitive force

Leibniz claimed that active force is either primitive or derivative. Primitive force is inherent in every corporeal substance and stands in contrast to primary matter. It provides the principle of unity for primary matter and forms an organic unity with it. It is what Leibniz also called substantial form or the first entelechy. Derivative force, on the other hand,

行动时,他们就对于某种行动具有一个“赞成态度”,因为理由使得他们在那种行动中看到或认为他们还看到想要或重视的运动的特征或结果。而且,行为者需要有这样一个信念,即以某种方式行事会产生他们想要的或重视的那个东西。这样一个赞成态度和信念构成行为者如此行事的第一理由。根据戴维森的观点,理由就是这样来将行动理性化的。其逻辑关系可以用一个实际的包含信念和赞成态度的命题内容的三段论来表示。第一理由学说是戴维森“行动的因果理论”的要点,因为,以某种方式行事的第一理由可以导致行为者以那种方式行事。

“只有当 R 由一个行为者对具有某个特性的运动的赞成态度和行为者关于符合某一描述的行动 A 具有那个特性时, R 才是行为者进行符合描述 D 的行动 A 的第一理由。”——戴维森:《关于行动与事件的论文集》,1980年,第5页。

主要规则

见“承认规则”条。

原初质料

亚里士多德的概念,指在生成的绝对开端的存在物。元素是一切事物的基本质料,而原初质料则是元素互相转化的承受体,因而它比元素更根本。原初质料自身没有特征,它是当空间三维被去掉后所留下的,其实已经无可再去了。原初质料自身不在任何范畴内,可它潜在地是一切事物。

“自然不仅是原初质料(这有两种意义,或是当下事物的开端,或是一般的开端,……),也是形式和本质。”——亚里士多德:《形而上学》,1015a7-10。

第一推动者

“不动的推动者”的另一表述。

基本信念

见“基本知识”条。

原始的力

莱布尼茨声称能动的力量有两种:原始的力和派生的力。原始的力是每一个有形的实体固有的,并与初级的物质相对应。它为初级的物质提供了统一性原理,从而与它形成为一个有机的统一体。它也就是莱布尼茨所说的“实体的形式”或“第一隐得来希”,与此不同,派生的

arises from a limitation of primitive force through the collision of bodies with one another.

"Primitive force (which is nothing but the first entelechy) corresponds to the soul or substantial form." — Leibniz, *Philosophical Essays* (eds. and trans. Aricw and Garber), 1989, p. 119.

Primitive ideas

The ideas which serve as the grounds for explaining other ideas in a system, but which are not themselves defined by any other ideas within the system. These terms can only be explained by pointing to what is meant. Primitive ideas are associated with primitive propositions, which are the propositions within a given system that are undemonstrable by any other propositions but which form the basis for demonstrating other propositions. Each axiomatic system contains certain primitive ideas and primitive propositions. It is methodologically preferable that any such system should contain the least possible number of primitive ideas and primitive propositions.

"Following Peano, we shall call the undefined ideas and undemonstrated propositions primitive ideas and primitive propositions respectively." — Whitehead and Russell, *Principia Mathematica*, 1960, p. 90.

Primitive knowledge

Russell draws a distinction between primitive knowledge and derivative knowledge. Since knowledge is used here in the sense of belief, the distinction is also drawn between primitive belief and derivative belief. Primitive knowledge or belief is the immediate self-evident experience, which does not need the support of any outside evidence. Derivative knowledge or belief is the belief caused by other beliefs and is something which we believe as a result of inference, although the inference might not be strictly logical. For instance, we judge somebody's feelings from the expression of his face. This distinction is similar to that between hard data and soft data.

"The first thing that appears when we begin to analyse our common knowledge is that some of it is derivative, while some is primitive." — Russell, *Our Knowledge of the External World*, 1926, p. 75.

Principle

[from Latin: *principium*, composed of *primus*, first, chief — *cipium*, a termination, corresponding to Greek: *arche*, starting-point, beginning] A general reason for doing or omitting to do something. A principle is a foundation or starting-point for any physical and mental operation which applies in a wide range of situations. The most general principles are normally not proved by appeal to subordinate principles derived on their basis.

力是由于物体的相互碰撞从原始力的极限中产生的。

"原始的力(它无非是第一隐得来希)相当于灵魂或实体的形式。"——莱布尼茨:《哲学文集》(阿瑞和加伯编译), 1989年, 第119页。

初始概念

指在一个系统中用作解释其他概念的根据,但其本身却不为系统中其他概念所定义的概念。这些术语仅能通过指出其意谓来解释。初始概念与初始命题相联系,初始命题是一个给定系统中不能用其他命题证明,但却构成证明其他命题的基础的命题。每个公理系统都包含某些初始概念和初始命题。从方法论上说,任何这类系统最好包含尽可能少的初始概念和初始命题。

"效仿皮亚诺,我们将分别称未加定义的概念和未加证明的命题为初始概念和初始命题。"——怀特海和罗素:《数学原理》,1960年,第90页。

基本知识

罗素区分了基本知识与派生知识。因为这里是在信念的含义上谈知识的,因此这种区分也是在基本信念和派生信念之间作出的。基本知识或基本信念是当下自明的经验,它不需要外部证据的支持。派生知识或派生信念是由其他信念引起的信念,是我们作为推论的结果而相信的东西,虽然不一定是严格的逻辑推论。例如,我们从某人的面部表情来判断他的感觉。这种区分和硬子料与软子料的区分类似。

"当我们着手分析日常知识时首先出现的问题是:有些知识是派生的,而有些知识是基本的。"——罗素:《我们关于外部世界的知识》,1926年,第75页。

原则

[源自拉丁文 *principium*, 由 *primus* (首先的, 主要的) 和 *cipium* (终点) 构成, 对应于希腊文 *arche* (出发点, 开端)] 做某事或不做某事的一般理由。原则是身体行为或心的行为的基础或出发点, 广泛地用于各种情形。最普遍的原则通常不能靠基于它们而产生的次要原则得到证明。

"一切不可证明的判断, 作为一切判断的基

"All unprovable judgements, in so far as they are the ground of all judgements, are called principles, and they are either theoretical or practical." —Kant, *Lectures on Logic* (ed. by Young), 1992, p. 224.

Principle of charity

A methodological principle for translation or interpretation. A favoured truth theory for a language L should assign truth conditions to most of its sentences held true by a speaker of L in accord with our own view of what is true. In interpreting or translating a system of thought, we must assume that most of the propositions in it are true, that is we must maximise the extent of rationality of the subjects from our point of view. For Quine, this principle is a pre-condition for the possibility of radical translation, and for Davidson it is a pre-condition for radical interpretation. A good theory of interpretation, according to Davidson, should maximise agreement. The principle is based on the claim that only against a background of massive agreement can we intelligibly agree and disagree. It is a charitable assumption about human rationality. It might be false, but if there is no better alternative in interpretation, this can help us to understand what we want to interpret and to make communication possible.

"Charity is forced on us; whether we like it or not, if we want to understand others, we must count them right in most matters." —Davidson, *Inquiries into Truth and Interpretation*, 1984, p. 197.

Principle of fractional prudence

A term introduced by C. I. Lewis for the human tendency to choose a good thing which is available now rather than a better thing in the future even though it is equally likely that one will be able to obtain the latter. It is an expression of the preference that humans have for satisfying present desires and the immediate future. Such a tendency is called by other authors time-preference. On some interpretations, humans are biologically determined to care less about our remote desires and about the distant future. Lewis claimed that this kind of concern is irrational, and Derek Parfit calls it a bias because a sound rationality should be concerned with the good of our whole life and should not sacrifice distant goods to near ones. Others, including Bentham, argue that a preference for the near future is a requirement of practical rationality.

"This anomalous conception, that although we should rationally be concerned with the future, we should be less concerned about it according as it is more remote ... This might be called the principle of fractional prudence or of prudence mitigated by impulse." —C. I. Lewis, *An Analysis of Knowledge and Valuation*, 1946, p. 493.

础,就被称作原则,它们或者是理论上的,或者是实践上的。"——康德:《逻辑学讲义》(杨编),1992年,第224页。

宽容原则

翻译或解释的方法论原则。根据我们所认为的真,有利于语言L的真理论应该把真值条件赋予被L的说者看做为真的大多数句子。在解释或翻译一种思想体系时,我们必须假定,其中的大多数命题都是真的,即我们必须从我们的角度极大地扩展这些主题的合理性。在奎因看来,这个原则就是可能做出“彻底翻译”的先决条件,而在戴维森看来,这是“彻底解释”的先决条件。根据戴维森的观点,一种好的解释理论应该极大地得到赞同。这个原则是基于这样的事实,我们只有具备广泛认同的背景,才能够有理由说赞同或不赞同。这是关于人类理性的宽容假设,它可能是错的,但如果在解释中没有更好的选择,那么这可以帮助我们理解我们究竟想要解释什么,并且使交流变得可能了。

“我们必须接受宽容;无论我们是否喜欢它,如果我们想要理解他人,我们就必须在大多数情况中把他们看作是正确。”——戴维森:《真理与解释的探究》,1984年,第197页。

分段谨慎原则

C. I. 刘易斯生造的词,指人对善物的选择具有这样的倾向,即宁愿选择现在有用的,而不选择将来更好的东西,即使人们将同等可能地能够获得后者。它是人们对满足当下的欲望和最近的将来持有偏好的表现。这种倾向也被其他著者称为“时间偏好”。按照某些解释,人类在生物学上就被确定为对遥远的欲望和将来不甚关心。刘易斯断言这类关心是不合理的;帕菲特则将此称为“偏见”,因为健全的理性应该关心我们整个生命的善,而不应为取近善而牺牲远善。但是,包括边沁在内的其他一些人却论辩说,偏好最近的将来是实践理性的要求。

“这个不规范的概念,即虽然我们应该理性地关心未来,但我们应该少加挂念,因为它更为遥远……可以把这称作分段谨慎原则,或被冲动减轻的谨慎原则。”——刘易斯:《对知识和价值的分析》,1946年,第493页。

Principle of humanity

A principle put forward by Richard Grandy with the intention of improving the principle of charity. The principle of charity claims that when we translate a different language, we should suppose that most of its assertions and inferences are true and rational. However, granted that, if the translation turns out to be unintelligible for us, it is still useless for our purpose. Hence, in interpreting or translating a system of thought, we must impute to this system patterns of relations among beliefs and desires which are similar to our own. We should suppose that the speaker of that language is a person and has certain basic similarities to ourselves. In this way, we can make the best possible predictions and explanation of the translator behaviour.

"We have, as a pragmatic constraint on translation, the condition that the imputed patterns of relations among beliefs, desires and the world be as similar to our own as possible. This principle I shall call the principle of humanity." — Grandy, "Reference, meaning and belief", *Journal of Philosophy*, (70) 1973, p. 445.

Principle of indeterminacy

Also called the principle of uncertainty. A principle established by the German physicist Werner Heisenberg in 1927 and claiming that in the subatomic world it is in principle impossible to determine simultaneously to an arbitrary degree of accuracy both the position of certain particles such as electrons and the momentum (velocity or direction) of their movement. If the position is known, the determination of their motion is uncertain; and vice versa. Hence full predictive knowledge is permanently impossible concerning the future behaviour of these particles. It has been a major issue whether this uncertainty is a matter of epistemology or ontology. A corollary of this principle is that observed phenomena in the sub-atomic world do not give an accurate picture of reality, for the process of discovery affects what is discovered in the world at this level. On this basis, determinism cannot apply to the subatomic world and is therefore seriously limited. Some philosophers believe that these limits on determinism make room for freedom of the will, while others argue that indeterminacy provides an inappropriate ground for the rationality and intelligence required for the notion of freedom.

"If this principle [of indeterminacy] is true, and physicists seem to have little doubt that it is, it follows that some events are strictly unpredictable even in theory. We simply cannot know enough to make a valid prediction." — Baylis, *Ethics*, 1958, p. 22.

Principle of indifference

If we do not have positive reason to favour either one of

人性原则

由理查德·格兰迪为了改进“宽容原则”而提出的一个原则。宽容原则认为,当我们翻译一种不同的语言,我们就应当假定它的大多数断定和推论都是真的、合理的。然而,假设如果这种翻译最终表明对我们来说是不可理解的,那么前面的那个假定对我们的目的来说也就没有任何用处了。这样,在解释或翻译一种思想体系时,我们必须在这种体系中置入与我们的模式相似的各种信念和愿望的关系模式。我们应当假定,这种语言的说者是一个人,他与我们基本相似。用这种方法,我们就能够做出最有把握的预见和对翻译者行为的说明。

“作为对翻译的一种实用要求,我们有这样一个条件,被置入的信念、愿望和世界的关系模式应当尽可能地与我们的模式相似。我把这个原则称作人性原则。”——格兰迪:《指称、意义与信念》,载《哲学杂志》,第70卷,1973年,第445页。

测不准原理

又称为“不确定性原理”,由德国物理学家W. 海森堡在1927年所提出。这个原理认为,在微粒世界中,同时测定某个如电子这样的粒子的任何程度的准确位置和它们运动的动量(速度或方向),在原则上是不可能的。如果已知微粒的位置,那么,对它们运动的测量就是不确定的;反之亦然。因此,完全地预测这些粒子未来行为的知识是永远不可能的。这种不确定性是认识论的事情还是本体论的事情,一直是一个重要的论争。这个原理的一个必然结果就是:微观粒子世界中所观察到的现象并不提供对实在的准确图画,因为观测过程影响了这个层次的世界中被观测的东西。在此基础上,决定论不能应用于微观粒子世界,因而严格地被限制。某些哲学家认为,对决定论的限制为意志自由让出了地盘,但其他哲学家证明,测不准原理为自由概念所需要的理性和理智所提供的只是不恰当的根据。

“如果这个测不准原理是真实的,并且物理学家们看来很少怀疑它的存在,那么就可以得出这一结论:某些事件甚至在理论上是严格地不可预测的。能否作出有效的预测我们简直一无所知”——贝莱兹:《伦理学》,1958年,第22页。

无差别原则

如果我们没有正面的理由去赞成两个相互

a pair of mutually exclusive and competing theories, we must be indifferent or impartial, and ascribe to them the same degree of probability, since there is no positive ground for assigning unequal degrees. This principle was proposed by Bernoulli, who called it the principle of non-sufficient reason, Laplace, and J. Keynes, who also criticised it. The principle is useful in the theory of choice, but faces difficulties with inductive theories. Its application leads to Bertrand's paradox.

"The principle of indifference asserts that if there is no known reason for predicting of our subject one rather than another of several alternatives, then relatively to such knowledge the assertions of each of these alternatives have an equal probability." —J. M. Keynes, *A Treatise on Probability*, 1921, p. 42.

Principle of individuation

To individuate is to specify a character possessed solely by a thing and thus to distinguish it from other things within the same class or species. The principle of individuation explains how such distinctions can be drawn. The problem is associated by medieval philosophers with Aristotle. In *Metaphysics* Z8 he said that when form is universal, matter becomes the principle to distinguish individuals within the same form. However, Aristotle's view of individuation varied, for he also argued that matter itself is indeterminate and must be individuated by form.

Leibniz proposed the identity of indiscernibles as a principle of individuation. He argued that if two entities possess exactly the same characteristics, then these two entities are the numerically identical. This principle implies that entities are different because each possesses a unique set of characteristics and is described by a unique set of predicates. But it is highly disputed whether Leibniz's principle is a necessary truth, with some philosophers arguing that it is logically possible for two numerically distinct entities to have precisely the same set of characteristics.

In *Individuals*, Strawson argues that space and time lie at the basis of all identification and that we can pick out an individual by making reference to the spatio-temporal path it follows and its current position. There are problems with his view, although they can perhaps be overcome. If space and time are relative to entities, then we can determine the spatiotemporal location of any one entity only against the background of an established system of individuated objects in space and time. It is not clear whether our inability to individuate all entities within an absolute space and time is a crucial flaw in a Strawsonian programme of individuating within a relativist setting.

Some philosophers argue that individuation is determined by the bundle of all the characteristics possessed by an individual, and others argue that it is determined by the es-

排斥和竞争的理论中的任意一个,我们必须是“中立的”或“无偏向的”,给它们指派相同的概率度,因为不存在指派不相等概率度的正面根据。这一原则是由伯努利、拉普拉斯和J. 凯恩斯提出来的,伯努利将其称为“不充足理由原则”,凯恩斯则把它作为批评的靶子。这一原则在选择理论中是有用的,但它与归纳理论一样面临着很多难题。它的应用导致“伯特兰悖论”。

“无差别原则断言,如果没有任何已知的理由去对我们的研究对象预测几个选择事件中的某一个而不是另一个将出现,那么相对于这些知识来说,对这每一个选择事件的断定具有同等的概率。”——凯恩斯:《论概率》,1921年,第42页。

个体化原则

所谓个体化就是指明一事物独有的一个特点,从而将这个事物与同类的其他事物区分开来。个体化原则说明如何能作出这样的区分。中世纪哲学家将这个问题与亚里士多德联系起来。在《形而上学》Z8中,亚里士多德说,如果形式是普遍的,质料就变成了将同一形式中的个体区分开来的原则。不过,亚里士多德的个体化观点是有变化的,因为他还证明质料本身是不确定的,必须根据形式使它个体化。

莱布尼茨把不可分辨物的同一性作为个体化原则提出来,他论证说,如果两个东西具有完全相同的特性,那么,这两个东西在数目上就是同一的。这个原则意味着,东西各自不同是因为各自具有独一无二的一组特性,都用独一无二的一组谓词来描述。但是,对于莱布尼茨的原则是否是必然真理有很多争论,有些哲学家论证说,两个数目上不同的东西具有完全相同的一组特性,这在逻辑上是可能的。

在《个别物》一书中,斯特劳森论证说,空间和时间乃是万物识别的基础,而且我们可以通过参考一个个体走过的时空途径和它现在的位置,将这个个体挑选出来。他的观点带来一些问题,尽管这些问题也许是可以解决的。如果空间和时间与存在物有关,那么,我们只能根据时空中既定的个体对象系统的背景,来确定任何一个存在物的时空位置。尚不清楚的是,我们没有能力将绝对时空中的一切存在物个体化这一点,对于斯特劳森建立在相对主义基点上的个体化方案是否是一个严重的缺陷。

有些哲学家论证说,个体化是根据一个个体所具有的全部特征来确定的,另一些哲学家论证说,个体化是根据一个个体的本质特性来确定的。这个本质主义的观点根据是否在承认类本质之外还承认个体本质这一点而有不同的形式。个体化原则具有本体论的维度,涉及使

sential properties of an individual. The essentialist view has different versions, according to whether individual essences as well as essences of kinds are admitted. The principle of individuation has an ontological dimension dealing with the process or circumstances whereby something becomes an individual.

"Given that there are substances, the question that next arises is what marks off any one substance from any other. The mediaeval philosophers called this the problem of the principle of individuation." Hamlyn, *Metaphysics*, 1984, p. 69.

Principle of induction

The ground for the validity of inductive reasoning. It assumes that if a certain type of thing A has been found to be associated with a certain type of thing B, if no As are observed which are not associated with Bs, and if the number of observed associations between As and Bs is sufficiently great, then when we observe on a new occasion the presence of an A, a B will probably appear as well. Sometimes this is regarded as equivalent to the principle of the uniformity of nature, which assumes that the future will resemble the past. Because the principle of induction seems to be justified only on the basis of induction, the proof of the principle, if one is needed, presupposes itself.

"The principle [of induction] itself is constantly used in our reasoning, sometimes consciously, and sometimes unconsciously; but there is no reasoning which, starting from some simpler self-evident principle, leads us to the principle of induction as its conclusion." — Russell, *The Problems of Philosophy*, 1912, p. 66.

Principle of non-sufficient reason, another term for principle of indifference

Principle of parsimony, another name for Ockham's Razor

Principle of perfection, see principle of plenitude

Principle of plenitude

[from Greek: *pleroma*, fullness, completeness] A principle that anything that is possible is realised. A temporalised version of the principle, ascribed to Aristotle, claims that if p is genuinely possible, p will be actualised or realised at some time. The American philosopher Arthur Lovejoy introduced this term and connected the principle with the doctrine of the great chain of being. On his formulation, "no genuine possibility of being can remain unfulfilled". The principle of plenitude is a negative version of the principle of sufficient reason: unless there is sufficient reason for something not to

某物成为个体的过程或环境。

“假定有一些实体存在，随后出现的问题是，把任意实体同任何其他实体划分开来的东西是什么。中世纪哲学家称这个问题为个体化原则问题。” 哈姆林：《形而上学》，1984年，第69页。

归纳原理

归纳推理有效性的基础。它假定，如果发现某类事物 A 与某类事物 B 相联系，并且没有观察到不与 B 联系的 A，那么如果观察到的 A 与 B 相联系的数目足够大，当我们在一个新场合观察到 A 类事物的出现，B 类事物也将很可能出现。有时这被看做与假定未来将类似于过去的“自然的齐一性”原理相同。由于归纳原理似乎只能在归纳的基础上得以辩护，则它的证明预设了它自身，如果需要这证明的话。

“[归纳]原理本身经常被运用于我们的推理，有时是有意识的，有时是无意识的。但是不存在从某种更简单的自明原理出发，给我们导出作为其结论的归纳原理的推理。” — 罗素：《哲学问题》，1912年，第66页。

不充足理由原则

“无差别原则”的另一个名称。

节俭原则

“奥康剃刀”的另一个名称。

完美原则

见“完满原则”条。

完满原则

[源自希腊语 *pleroma*：充满，完全] 任何可能的东西都被实现的原则。此原则的一个时间化表述，归功于亚里士多德，它断言：如果 p 是真正可能的，p 将在某个时间被现实化或被实现。美国哲学家 A. 洛夫乔伊引入了这一术语，并将其与存在之大链学说相关联。按他的表述，“没有任何真正的存在的可能性能够保持不实现”。完满原则是充足理由原则的否定形式：除非有某物不存在的充足理由，那么该物将存在。根据洛夫乔伊的观点，哲学史上有许多人主

be, then that thing exists. According to Lovejoy, the principle has been widely held in the history of philosophy and is identical with what Russell called the principle of perfection in his discussion of Leibniz's philosophy. The principle implies that nature makes no leaps and that there are no sudden transitions of level in the hierarchy of beings in the universe. If an apparent possibility cannot be realised, then it is not genuine, and there are no non-actualised possibilities. These intriguing claims have given rise to much debate.

"I shall call it the principle of plenitude, but shall use the term to cover a wider range of inference from premises identical with Plato's than he himself draws; that is, not only the thesis that the universe is a plenum formarum in which the range of conceivable diversity of kinds of living things is exhaustively exemplified, but also any other deductions from the assumption that no genuine potentiality of being can remain unfulfilled." Lovejoy, *The Great Chain of Being*, 1936, p. 52.

Principle of substitutivity, another name for indiscernibility of the identicals

Principle of the best

Leibniz claimed that when God created this world, he did not exercise his will at random but acted according to the principle of the best. God intended to choose to create among an infinite number of possible worlds the best possible world and had the power and knowledge necessary to work out what that best world would be. Thus, any part of the world, any particular contingent thing, has the nature which it has because it is a part of the best possible world. This principle, also called the principle of fitness, or the principle of perfection, offers a reason why this world rather than any other was created and explains the cause of events and existence of things. Leibniz also used this principle to distinguish contingent truths from necessary truths by saying that while necessary truths are based on the principle of non contradiction, a contingent truth is that "which is or appears to be the best among several things which are equally possible". Sometimes Leibniz called this principle the principle of sufficient reason, although the precise meaning of the latter is that every truth has a reason.

"The contingent which exists owes its existence to the principle of what is best, the sufficient reason for things." — Leibniz, *Correspondence with Clarke*, Paper 5, para 9.

Principle of tolerance

At one stage Carnap claimed that an objective answer to questions can be reached as long as all researchers share the same linguistic framework. A linguistic framework embodies a system of logical principles, and sets up logical relations that connect experience to non-protocol sentences. Because

张这一原则,它等同于罗素在其关于莱布尼茨哲学的讨论中提到的“完美原则”。这一原则意味着:自然从不作飞跃,宇宙中的存在等级没有层次的突然跃迁。如果一个明显的可能性不能被实现,那它就不是真正的可能性,不存在任何非现实化的可能性。这些令人迷惑不解的断言引发了许多论战。

“我将把它称作完满原则,但将使用这一术语去包括从与柏拉图的前提相等同的前提出发所进行的推理,这种推理的范围比柏拉图本人所画出的范围更广;也就是说,它不仅指下述论题:宇宙是一个充实的场所,其中可以设想的多种多样的生物都毫无遗漏地得到例示;而且指从下述假定演绎出来的任何其他结论:没有任何真正的存在潜能能够保持不实现。”——洛夫乔伊:《存在之大链》,1936年,第52页。

置换原则

“等同物的不可分辨性”的另一个名称。

最好世界原理

莱布尼茨认为,上帝创造世界时并非随意乱来,而是按照最好世界原理行事。上帝打算在无限可能的世界中选择创造最好的可能世界,而且他有为造出最好世界所必要的能力和知识。这样一来,这个世界的任何部分,任何特殊的偶然事情,具有它所有的性质,乃是因为它是最可能世界的一部分。这个原理也称“合适世界原理”,或“最完善世界原则”,它说明了为什么上帝创造了这个世界而不是任何其他世界的理由,说明了各种事件的以及各种事物存在的原因。莱布尼茨也用这个原理将偶然真理同必然真理区分开来,他说,必然真理是建立在非矛盾律基础上的,而偶然真理“是或看起来是同样可能的若干情形中最好的情形”。有时莱布尼茨称这个原理为“充足理由原理”,尽管后者的确切意思是每一真理都有一个理由。

“现存偶然事件的存在是由于最好事情原理,即事情的充足理由原理。”——莱布尼茨:《与克拉克通信集》,第5封信,第9节。

宽容原则

卡尔纳普声称,在某个阶段,一旦所有的研究者共有相同的语言框架,那么就会得到对问题的客观回答。一种语言框架体现了一种逻辑原理体系,确立了连接经验与非记录句子的逻辑关系。因为语言框架是各种各样的,由此就产

linguistic frameworks are various, a problem arises about how we decide to employ one framework rather than another. For we adopt a framework only if we believe that it is true, but this seems to be circular. Carnap replied that in choosing a framework, we are not concerned with truth, but with pragmatic considerations of simplicity and usefulness. Thus we are at liberty to build up our own form of language or our own logic as we wish. Such an attitude concerning the choice of framework is called by Carnap the principle of tolerance, and it is also called the principle of the conventionality of language forms. For Carnap, there are no morals in logic. What is required of a logician is that he state his method clearly. We should be cautious in making assertions and be critical in examining them, but should be tolerant in permitting linguistic forms.

"The Principle of Tolerance; It is not our business to set up prohibitions, but to arrive at conventions." —Carnap, *The Logical Syntax of Language*, 1937, p. 245.

Principle of uncertainty, another term for principle of indeterminacy

Principle of utility

Also called the greatest happiness principle or the greatest felicity principle. The central idea of utilitarianism, which was first formulated by Jeremy Bentham. The principle of utility claims that we should judge the moral value of an action according to the consequence it produces. An action is right in proportion to its tendency to promote utility or happiness; wrong according to its tendency to produce pain for the parties concerned. Utility is proposed not only as the sole criterion of morality, but also as the basis for assessing institutions and for justifying political obligation to the State. Bentham claimed that the principle is the secular foundation of any legal system, with utility as the test for what laws there ought to be. The principle of utility has been challenged on many grounds, including its emphasis on consequence rather than intention in evaluation actions, the priority it gives to the theory of good over the theory of right, its indifference to the distribution of happiness and the difficulty in measuring and aggregating happiness. Other versions of the principle have replaced happiness with other goods, such as the satisfaction of wants.

"By the principle of utility is meant that principle which approves or disapproves of every action whatsoever according to the tendency which it appears to have to augment or diminish the happiness of the party whose interest is in question." —Bentham, *An Introduction to the Principles of Morals and Legislation*, 1, p. 2.

Prisoner's dilemma

A classical problem in the theory of choice and the theo-

生了一个问题,即我们是怎样决定运用其中的某个而不是另一个框架的。因为只有当我们相信某个框架是真的,我们才会接受它,但这似乎是一个循环论证。对此,卡尔纳普回答道,在选择一个框架时,我们并不关心真,而是从实用上考虑它的简单和有用。因此,我们是随意地建造我们自己的语言形式或我们的逻辑。卡尔纳普把这种选择框架的态度称作宽容原则,这同样也被称作语言形式的约定性原则。在卡尔纳普看来,逻辑中没有道德而言。对逻辑学家的要求,只是他要清楚地陈述他的方法。我们在形成断定时应当谨慎,在考察它们时应当严格,但在允许语言形式时则应当宽容。

"宽容原则:我们的任务并不是去设立禁止,而是要达到约定。"——卡尔纳普:《语言的逻辑句法》,1937年,第245页。

不确定性原理

"测不准原理"的另一个词。

功利原则

也被称为最大快乐原则或最大幸福原则。它是功利主义的核心观念,由J. 边沁首先系统提出。功利原则主张我们应根据一个行为所产生的后果来判断它的道德价值。一个行为如与它促进功利或快乐的趋向相称就是正确的;如根据它的趋向会给有关当事人造成痛苦,它就是错的。功利不仅被提出作为道德的惟一标准,而且还被作为评价制度和对国家的政治义务做辩护的基础。边沁认为这一原则是任何法律制度的现世基础,并把功利作为应存在什么样的法律的检验。功利原则在很多方面都受到挑战,包括它在评价行为时对后果而不是对意图的强调、它将利益的原理置于权利的原理之上和它对快乐的分配及对衡量、累计快乐时的困难的漠不关心。这一原则的其他形式已经以其他利益,例如需要的满足,取代了快乐。

"就功利原则而言,它意味着每一行为无论是什么,对它的赞成或不赞成都要根据它表现出的不得不增加或减少其利益正被讨论的当事人的快乐的趋向。"——边沁:《道德与立法原则导论》,1,第2页。

囚犯困境

在选择理论和自我利益理论中的一个经典

ry of self-interest. Two prisoners charged with some joint crime are questioned by the prosecutors separately. Both of them know the following options: (1) if neither of them confesses, each will serve 1 year in prison; (2) if each confesses, everyone will serve 2 years; (3) if one confesses and the other does not, then the one who confesses will be released, and the other will serve 3 years. Neither knows the other's choice. What is the rational choice for each?

If every prisoner pursues his own best interest, the reasonable choice for him is to confess. But then neither gets the best result, and there is the worst overall outcome (4 person-prison years). The case shows that furthering one's own interest does not entail that one gets the best consequence or that the public good will be furthered efficiently. On the contrary, only if both co-operate will the best overall result be obtained. The prisoner's dilemma is widely discussed in modern social, political and moral philosophy for it challenges fundamentally the theory of self-interest. Many political situations, such as the arms race between superpowers, can be modelled as prisoner's dilemmas.

"The hazards of the generalised prisoner's dilemma are removed by the match between the right and the good." — Rawls, *A Theory of Justice*, 1971, p. 577.

Privacy

In traditional dualism, one assumes that whatever is mental, such as experiences, sense-data, representations or ideas, is private. This can be meant in two senses. In the first sense, my mental phenomena are inalienably owned by me. Only I have them. In the second sense, only I have access to my mental phenomena. They are incommunicable. Only I am in a position to know or to feel that I am in pain. This idea leads to scepticism about other minds, for one can never know whether another person is in pain or not. It also leads to solipsism, for if all experiences must be interpreted through my private experience, the world can only be my world. The idea of privacy is attacked in detail by Wittgenstein.

"In what sense are my sensations private? — Well, only I can know whether I am really in pain; another person can only surmise it. — In one way this is wrong, and in another nonsense." — Wittgenstein, *Philosophical Investigations*, 1. 246.

Private good, see common good

Private language

A term introduced by Wittgenstein in his later philosophy. A private language is a language the words of which refer to the speaker's immediate private sensations, and cannot be understood by another person. Modern philosophy gener-

问题。两个被指控共同参与了某种罪行的囚犯被检察官分隔开来提审。两人都知道如下的选择: (1) 如果他们两人都不坦白, 两人都将判一年的监禁, (2) 如果两人都坦白, 每人都将判两年的监禁, (3) 如果一人坦白, 另一个不坦白, 坦白的那人将被释放, 而另一人则将判三年的监禁。谁都不知道对方的选择。对于每人而言, 合理的选择是什么?

如果每个囚犯要求得到他自己最好的利益, 对他而言合理的选择应是坦白, 但这样两人每一个都不能得到最好的结果, 而是最坏的总的结果 (四年的监禁)。这种情况表明, 寻求私利并不意味着一个人能得到最好的结果, 也不意味着由此可有效地促进公共的善。相反, 只有双方合作才可获得最好的结果。囚犯困境在现代社会、政治和道德哲学中得到广泛讨论, 因而它对自我利益的理论发出了根本的挑战。许多政治局势、诸如超级大国间的军备竞赛, 可以看做是囚犯困境的模型。

"一般化了的囚犯困境的危险可以被正当与善之间的对比所消除。" —— 罗尔斯: 《正义论》, 1971年, 第577页。

私人性

在传统二元论中, 人们认为, 任何心的东西, 诸如经验、感觉材料、表象或观念, 都是私人的。这可能有两种含义。第一种含义是说, 我的心的现象完完全全属于我自己。只有我拥有它们。第二种含义是说, 只有我得知我的心的现象。它们是不可交流的。只有我才处在知道或感觉到我痛的位置上。这种看法导致了关于他心的怀疑论, 因为一个人决不知道另一个人是否疼痛。它也导致了唯我论, 因为如果所有的经验都必须通过我的私有经验来解释, 那么世界就只能是我的世界。私人性的看法受到了维特根斯坦的详尽批评。

"在哪种含义上我的感觉是私人的? —— 唔, 只有我才能知道我是否真的疼痛。另外的人只能推测它。—— 在一种意义上这是错的, 在另一种意义上这是胡说。" —— 维特根斯坦: 《哲学研究》, 第一部分, 第246节。

私人的善

见“共同善”条。

私人语言

维特根斯坦在其后期哲学中提出的术语。私人语言是这样的语言, 其语词指称说者直接的私人感觉, 但不能被其他人所理解。近代哲学大致始于这种主张: 我们的知识基于我们自己

ally starts by claiming that our knowledge is based on our own immediate experience and this experience can be expressed by language, at least to ourselves. Accordingly a private language is possible, and this seems to be supported by the fact that someone may record the occurrence of a particular kind of sensation in his diary and propose to call it by some name. Wittgenstein, in the *Philosophical Investigations*, sections 243-315, argues against the possibility of a private language, for any use of language presupposes a community in which there is agreement in the rules of applying words and signs. If a language is private there is no way in distinguishing between thinking that one is obeying a rule and actually obeying it. So a private language is not a language, and the notion itself is not coherent. The whole empirical approach is misguided because it is based on a misunderstanding of both the nature of experience and the nature of language. The so-called "private language argument" of Wittgenstein is complicated and is subject to various interpretations. It has stimulated much discussion in contemporary philosophy.

"And sounds which no one else understands but which I 'appear to understand' might be called a 'private language'." —Wittgenstein, *Philosophical Investigations*, I. 269.

Private morality, see public morality

Private ostensive definition

In a private ostensive definition, I concentrate my attention on a particular sensation which can be named only by myself and not in terms of a public language. I associate the sensation with a sign, for example the sign "S". Because the meaning of the sign is private, I alone can know it, and another person cannot understand it. For this to be the case, a private ostensive definition requires that there be a private object which only I can recognize. This view is rejected along with the possibility of a private language by Wittgenstein in *Philosophical Investigations* I. 243-311. If a private object exists as the object of a private ostensive definition, there must be private thought, expressible only in terms of a private language. However, a private language is impossible. Any means of communication must involve criteria of meaning available to others. It is true that sensations have an aspect of subjectivity, but their subjectivity is not of the radical sort which would support a private language and private ostensive definitions.

"You keep on steering towards the idea of the private ostensive definition." —Wittgenstein, *Philosophical Investigations*, I. 380.

的直接经验,这种经验可以用语言来表达,至少可以对我们自己表达。因此,私人语言是可能的,这一点似乎得到下列事实的支持:某人可以在其日记中记下某种特定感觉的出现,并用某个名称来称呼它。维特根斯坦在《哲学研究》的第243节至315节作出论证,否定私人语言的可能性,因为对语言的使用预设了一个共同体,人们在其中对于运用语词和符号的规则达成了一致意见。如果语言是私人的,就没有办法区分认为一个人在遵守规则和事实上在遵守规则。因此,私人语言不是语言,这个概念本身是不一致的。整个经验主义方法是误导人的,因为它基于对经验本性和语言本性的误解。所谓的维特根斯坦的“私人语言论证”很复杂,受到各种各样的解释。在当代哲学中,它引起了大量的讨论。

“可以将没有其他人懂但我‘好像懂’的声音称为‘私人语言’。”——维特根斯坦:《哲学研究》,第一部分,第269节。

私人道德

见“公共道德”条。

私人实指定义

在私人实指定义中,我将注意力集中于某一特定感觉,此感觉只能由我自己命名,而不能用公共语言命名。我将此感觉与一符号,例如符号“S”联系起来。因为此符号的意义是私人的,只有我能知道,其他人不能知道。因为情况就是这样,私人实指定义就要求,有一个只有我才能认识到的私人对象。维特根斯坦在《哲学研究》第一部分第243节至311节否定了私人语言的可能性,从而驳斥了这种看法。如果私人对象作为私人实指定义的对象存在,就必定有私人思想,它只能以私人语言来表达。但是,不可能有私人语言。任何交流方式必定涉及到其他人也可掌握的意义的标准。诚然,感觉有主观性这一方面,但其主观性不属于支持私人语言和私人实指定义的极端的一类。

“你总是执迷于私人实指定义这个想法。”——维特根斯坦:《哲学研究》,第一部分,第380节。

Private particular

Strawson's term covering sensations, mental events or sense-data, in contrast to public or objective particulars. To identify private particulars in our common language we need to identify another class of particulars, that is persons who have them. For instance, to identify a private impression of red one must assign the impression to the person who has it. Because of the dependence of their identification upon the identification of persons, Strawson denies that private particulars can be basic particulars, in contrast to the empiricist tradition of constructing persons and external objects from allegedly basic mental entities.

"Identifying reference to 'private particulars' depend on identifying reference to particulars of another type altogether, namely persons."—Strawson, *Individuals*, 1959, p. 41.

Private / public dichotomy, see public / private dichotomy

Private world, another expression for perspective

Privation

[Greek: *steresis*, from *steresthai*, to lack or to be deprived of] Normally, something suffers privation when it lacks an attribute which, according to its nature, it should possess. According to Aristotle's analysis, privation, substratum and form are the three basic elements in the process of change. Privation at the beginning of change is the absence of a character which the change will provide at its completion and which the substratum is capable of receiving. For example, if a man changes from being unmusical to being musical, the man is the substratum, unmusical is the privation and musical is the form the man will gain when the change is finished.

"For a thing comes to be from the privation, which in its own nature is not-being—this not surviving as a constituent of the result."—Aristotle, *Physics*, 193b16-17.

Privileged access

The special position which apparently gives one awareness of what is presently going on in one's own mind, such

as one's thoughts, beliefs, intentions and emotions. Privileged access is contrasted with the lack of special access in one's knowledge of the external world and other minds. For while one's knowledge of the world and other minds is mediated through certain causal factors and is subject to being checked by experience, one's awareness of one's mind is claimed to be immediate, infallible and incorrigible. On this view, either these states are detectable by oneself alone or one is the final authority concerning their existence and their

私人殊相

斯特劳森的术语,指感觉、心的事件或感觉材料,与公共殊相或客观殊相相对。要在我们的共同语言中辨认私人殊相,我们需要辨认另一类殊相,即拥有私人殊相的人。比如,要辨认一私人的红的印象,就需要把这一印象指定给有这一印象的人。由于它们的认同依赖于对人的认同,斯特劳森否认它们是基本殊相。这一立场与经验主义认为从基本的心理事物中构建人和外在对象的传统相对立。

“对‘私人殊相’的辨认性指称完全依赖于对另一类殊相,即人的辨认性指称。”——斯特劳森:《个别物》,1959年,第41页。

私人和公共的两分法

见“公共和私人的两分法”条。

私人世界

“视域”的另一说法。

缺失

[源自希腊文 *steresis*, 源自 *steresthai* (欠缺或被剥夺)] 一般而言,当某物欠缺一种依照其本性它应该具有的属性时,它就处于缺失状态。根据亚里士多德的分析,缺失、基质和形式是变化过程的三种基本因素。处于变化开端的缺失乃是变化在终了时会提供并且基质能接受的特征遗缺。例如,假定一个人从无教养变成有教养:“人”是基质,“无教养”是缺失,而“教养”则是人在变化终了时获得的形式。

“一物是从缺失变来的,缺失自身的本性是非存在——它不会作为变化结果的一种成分而保留。”——亚里士多德:《物理学》,193b16—17。

优先获知

使得一个人能够明显意识到当前在自己的心中所发生的一切,亦即一个人的思想、信念、意向和

情绪等的特殊地位。优先获知与一个人关于外部世界和他心的知识中缺乏特殊路径的情况相对。因为一个人关于世界和他心的知识是由某些因果因素所中介,并由经验来检验,而一个人对自己的心的意识则据说是直接的、完全无误的和不可纠正的。根据这一观点,或者这些状态只能为一个人自己所觉察,或者一个人是关于这些状态的存在和特性的最终权威。无论哪种情况,关于这些心的状态的报告的准确性都是由

character. On either version, the accuracy of the reports of these mental states is verified by oneself. Since Descartes, many philosophers have believed that this special position exists. One's mental states are private and the first-person account has authority. But Ryle, W. Sellars, Wittgenstein and others denied that one has special access to one's own mind which is different from one's access to other minds, in part because the meaning of expressions used from a first-person perspective needs the support of a third-person use in a single language. It is still difficult to understand how to avoid a collapse of mental terms into first-person solipsism or third-person behaviourism.

"I have also tried to show that from the fact that I do have privileged access to my present thoughts and feelings, in the sense that my testimony concerning them cannot be overridden, it does not follow that they are exclusively mine." —Ayer, *The Concept of a Person and Other Essays*, 1963, p. 81.

Pro-attitude

A term borrowed by Davidson from ethical theory for his causal theory of action. A pro-attitude is a mental attitude of an agent directed towards actions of a certain kind. Such attitudes include wants, desires, urges, moral views, aesthetic principles and economic prejudices. Such a set of mental attitudes, together with a belief of the agent that acting in a certain way promotes what the agent wants or values, form the primary reason for an agent to act in the certain way.

"Reference to other attitudes besides wanting, or thinking he ought, may help specify the agent's reasons, but it seems that some positive, or pro-attitude must be involved." —Davidson, *Essays on Actions and Events*, 1980, p. 83.

Probabilism

Initially, a doctrine developed by the Jesuits in the sixteenth century to determine what one should do when different authorities are found to disagree. The theory claims that if one is willing to perform an action, and that action has some probability in its favour, one has reason to perform that action without being condemned. Here, probable means supported by authority rather than supported by evidence. One may follow a course of action if it is authorised by some authority of the Church. It does not matter how much weight the authority has. The theory has difficulty in making sense of responsibility and was criticised by the *Port-Royal Logic*. The appearance of probabilism suggests a sense of loss of the certainty that characterised the Renaissance.

In another sense, probabilism is any position which requires one to be content with probability because certainty does not obtain or because it is difficult to know whether cer-

自己来证实的。自笛卡尔以来,很多哲学家都认为存在这个特殊地位。一个人的心的状态是私人的,且第一人称描述是具有权威的。但赖尔、W. 塞拉斯、维特根斯坦等人否认一个人对于自己的心的状态具有不同于对他心的优先获知权。部分理由是,从第一人称视角出发而使用的表述的意义需要在同一语言中第三人称用法的支持。人们仍难以理解如何使心的语汇免于陷入第一人称的唯我论或第三人称的行为主义。

“我对我当前的思想和感觉的证明不可能被否定,在这个意义上,我对它们具有优先获知。我还试图由这一事实表明,这并不意味着它们仅仅是我的。”——艾耶尔:《人的概念及其他论文》,1963年,第81页。

赞成态度

戴维森为其“行动的因果理论”从伦理学理论借用的术语。一个赞成态度是一个主体指向某种行动的心的态度。这样的态度包括愿望、欲求、要求、道德观点、美学原则、经济偏见等等。这样一系列心的态度与主体关于以某种方式行事可以导致他所想要或看重的东西的信念,构成主体以一定方式行事的“第一理由”。

“借助于在想要或想他应该做什么之外的其他态度可能会帮助我们确定主体的理由,但似乎必须涉及某些肯定的或赞成态度。”——戴维森:《关于行动与事件的论文集》,1980年,第83页。

或然论

从历史上讲,它是一种由16世纪的耶稣会发展起来的学说,用以处理当发现不同的权威性典籍不一致时人们应如何做的问题。这种学说主张,如果人们想从事某种行动,且这行动具有某种有利于它的或然性,则人们就有理由采取这一行动而不被指责。这里“或然的”一词意味着为权威典籍所支持而不是为证据所支持。人们可以从事一种行动过程,如果它为教会的权威典籍所许可,至于这种权威有多大分量则是无足轻重的。这一理论的困难在于如何理解责任,并为波尔—罗亚尔逻辑所批评。或然论的出现,显示着作为文艺复兴特征的确定性在某种意义上的丧失。

在另一种意义上,或然论用于指任何要求人们满足于或然性的立场,因为不能获得确定性,或因为很难知道是否能获得确定性。

tainty could obtain.

Probabilism is also used for the claim that all things being equal the simplest theory is the most probable. When two theories seem to be equally supported by the evidence, the simpler one is in general more likely to be true.

"The first contact of theories of probability with modern ethics appears in the Jesuit doctrine of probabilism. According to this doctrine, one is justified in doing an action for which there is any probability, however small, of its results being the best possible." — Keynes, *A Treatise of Probability*, 1929, p. 308.

Probability

The different degrees of truth which a rational belief has when such a belief is more or less inconclusive. Probability can apply the occurrence of events, the existence of states or the truth of propositions.

There are various conceptions of probability corresponding to different theories of probability. Frequency theory, associated with J. Venn and R. von Mises, identifies probability with the frequency of occurrence of events of a given kind. Such an understanding of probability is addressed mainly to physical probability, that is probability as an objective factor in the world and as the subject matter of statistics. Physical probability is indefinite in that it attaches to states of affairs or attributes rather than to propositions. Propensity theory argues that physical probability can pertain to specific individuals as propensities. Subjectivism or personalism, associated with de Finetti and Ramsey, takes probability as the degree of belief in an event. On this understanding probability is epistemic and is concerned with knowledge and opinion rather than with the physical structure of the world. This kind of probability is definite in the sense that it attaches to propositions rather than to attributes. Confirmation theory and range theory hold that probability is a connection between our judgement and the objective world. On this understanding probability has physical and epistemic aspects. All theories of probability attempt to establish that their notion of probability satisfies the formal requirement of the probability calculus.

"In metaphysics, in science, and in conduct, most of the arguments, upon which we habitually base our rational beliefs, are admitted to be inconclusive in a greater or less degree. Thus, for a philosophical treatment of these branches of knowledge, the study of probability is required." — Keynes, *A Treatise on Probability*, 1929, p. 2.

Probability, a priori theory of, another expression for probability, logical relation theory of

Probability, classical theory of

The earliest interpretation of probability, developed

或然性也用于指这样一种主张,即认为在所有情形都相同的情况下,最简单的理论是最有可能的。当两个理论似乎同等地为证据所支持时,一般说来更简单的那个更有可能为真。

“或然性学说与近代伦理学的首次接触出现于耶稣会的或然论学说中。按照这一学说,当一个人的行动结果有无论多小的或然性可能为最好时,他就得到了辩护。”——凯恩斯:《论概率》,1929年,第308页。

概率〔也译“或然性”〕

“概率”是指当一个合理信念还多少是非结论性的时候它所具有的不同程度的真。概率可应用于事件的发生、状态的存在或命题的真值。

对应于不同的概率理论,有着不同的概率的概念。与J. 文恩和R. 冯·密斯相联系的频率理论,把概率等同于某个特定事件发生的频率。对概率的这种理解主要是针对物理概率,即作为世界中的一种客观因素,并作为统计学的主题的概率。物理概率是无限的,即它是附属于事态或属性而不是命题的。倾向性理论争辩说物理概率可以作为倾向性附属于特殊的个体。与德·费莱蒂和拉姆塞相联系的主观主义或人格主义,则把概率看做是对一个事件的置信度。按这种理解,概率是认知的,即与知识和意见而不是世界的物理结构相关。这种概率就其附属于命题而不是属性而言是有限的。确证理论和变程理论认为概率是我们的判断与客观世界之间的连接,按这种理解,概率具有物理的方面和认知的方面。所有的概率理论都致力于使它们的概率观念满足概率演算的形式要求。

“在形而上学、科学和行为中,我们惯于将合理信念建于其上的大多数争论,都被承认为程度不同地是非结论性的。因此,对于这些知识分支的哲学论述而言,概率的研究是需要的。”——凯恩斯:《论概率》,1929年,第2页。

先验概率理论

“逻辑关系概率理论”的另一种表述。

古典概率理论

最早的概率解释,由伯努利、贝叶斯和拉普

during the eighteenth century by Bernoulli, Bayes and Laplace. Laplace defined probability as the ratio of the number of favourable cases to the total number of relevant and equally likely cases. This came to be known as the classical definition of probability. This theory takes probability as a ratio among equipossible alternatives and has received comprehensive mathematical elaboration. According to the principle of indifference, it assumes that prior to having any evidence the same degree of probability (equipossibility) should be assigned to each alternative. This account involves a vicious circle because it defines probability in terms of equipossible alternatives, but equipossibility presupposes an understanding of probability. Various attempts have arisen to amend the principle of indifference to avoid this consequence.

"The classical interpretation [of probability] is one of the oldest and best known; it defines probability as the ratio of favourable to equally possible cases." —Salmon, *The Foundations of Scientific Inference*, 1966, p. 65.

Probability, logical relation theory of

Also called the logical theory of probability or the *a priori* theory of probability, an interpretation of probability which proposes that probability is related to propositions rather than to the occurrence of events. Unlike the relative frequency theory, it holds that probability does not concern frequency but is a logical relation between propositions that have been formulated in accordance with evidence and other propositions, hypotheses, whose truth or falsity has not yet been determined by evidence. The probability of a proposition is thus relative to the given evidence and varies with it. It is a measure of the logical support for a proposition on the basis of evidence. The theory was developed by J. M. Keynes, W. E. Johnson, Harold Jeffreys and Carnap, among others. While Keynes and Jeffreys rejected the frequency interpretation of probability, Carnap believed that logical probability differs in nature from empirical or statistical probability, which is the subject-matter of frequency theory. Logical relation theory is a more sophisticated version of the classical theory of probability. It defines probability as the degree of certainty that our beliefs about future events can have as rationally be justified by the available evidence. A problem for the theory is that it cannot verify the ways of constructing the required logical relation. Also, as Carnap saw, not all probability claims can be dealt with by the theory.

"The whole logical relation theory is vitiated, I believe, because it makes out probability to attach to the relations between evidence and conclusions rather than to propositions, or propositional functions, by themselves." —Lucas, *The Concept of Probability*, 1970, p. 50.

Probability, propensity theory of

An interpretation of probability, associated with Pop-

per at the 18th century. Laplace defined "probability" as the ratio of the number of favourable cases to the total number of relevant and equally likely cases. This came to be known as the classical definition of probability. This theory takes probability as a ratio among equipossible alternatives and has received comprehensive mathematical elaboration. According to the principle of indifference, it assumes that prior to having any evidence the same degree of probability (equipossibility) should be assigned to each alternative. This account involves a vicious circle because it defines probability in terms of equipossible alternatives, but equipossibility presupposes an understanding of probability. Various attempts have arisen to amend the principle of indifference to avoid this consequence.

"[Probability's] classical definition is the earliest and most famous definition; it defines probability as the ratio of favourable to equally possible cases." —Salmon, *The Foundations of Scientific Inference*, 1966, p. 65.

Logical relation probability theory

Also called "logical probability theory" or "prior probability theory", a theory of probability, which proposes that probability is related to propositions rather than to the occurrence of events. Unlike the relative frequency theory, it holds that probability does not concern frequency but is a logical relation between propositions that have been formulated in accordance with evidence and other propositions, hypotheses, whose truth or falsity has not yet been determined by evidence. The probability of a proposition is thus relative to the given evidence and varies with it. It is a measure of the logical support for a proposition on the basis of evidence. The theory was developed by J. M. Keynes, W. E. Johnson, Harold Jeffreys and Carnap, among others. While Keynes and Jeffreys rejected the frequency interpretation of probability, Carnap believed that logical probability differs in nature from empirical or statistical probability, which is the subject-matter of frequency theory. Logical relation theory is a more sophisticated version of the classical theory of probability. It defines probability as the degree of certainty that our beliefs about future events can have as rationally be justified by the available evidence. A problem for the theory is that it cannot verify the ways of constructing the required logical relation. Also, as Carnap saw, not all probability claims can be dealt with by the theory.

"I think the whole logical relation theory is wrong, because it takes probability to be a relation between evidence and conclusions, rather than a relation between propositions or propositional functions, by themselves." —Lucas, *The Concept of Probability*, 1970, p. 50.

Propensity probability theory

An interpretation of probability, associated with Pop-

per, that developed out of the relative frequency theory of probability. Both theories agree that probability is an objective feature of reality. While the relative frequency theory considers probability to be an attribute of an infinite sequence of events which we can represent with a finite sample, the propensity theory considers probability primarily to be a primitive undefined attribute of single events although it can also account for the probability of sequences. Probability should be understood as the propensity or disposition of a situation to produce a given result. The main difficulty with this theory lies in the primitiveness of the notion of propensity, which seems to introduce a mysterious theoretical entity. Also, it is unclear whether the propensity of a single case is necessary to understand probability over a sequence.

"All versions of the propensity theory have two important features that no relative frequency account can have. They apply just as well to indefinite populations as to finite ones. And they all allow probabilities to be assigned to superficial individual events." — L. J. Cohen, *An Introduction to the Philosophy of Induction and Probability*, 1989, p. 55.

Probability, relative frequency theory of

An interpretation of probability which holds that probability is the relative or statistical frequency of occurrence within a reference class. It applies primarily to infinite sequences, of which we must take finite samples. It is an objective theory for, as observed frequency, probability is an attribute of the real world. A probability statement is taken as an assertion about the world. Probability concerns a group or a series. That one event is more likely to happen than another means that, for an infinite sequence or a large finite sample, events of the first kind will occur more frequently than events of the other kind. The theory can be traced to Aristotle who claimed that the probable is that which happens for the most part. Its modern expositors include John Venn, Hans Reichenbach and Richard von Mises. This theory fits well with common sense and has a great appeal to the empiricists, but its understanding of probability in terms of hypothetical infinite sequences is rejected by some as being unnecessarily abstract. The theory invites other objections, including those related to the possibility of ascertaining the values of the limit to which the relative frequency will tend over an infinite sequence. There are also problems in applying a frequency to the probability of a single event. A given event may be seen as belonging to different reference classes yielding different probabilities.

"Relative frequency theory [of probability] ... defines probability as the (limiting) relative frequency of some characteristic in some (infinite) sequence." — Logue, *Projective Probability*, 1995, p. 2.

Probability, subjective theory of

相联系,它由“相对频率概率理论”中发展出来。这两种理论都赞同概率是实在的一种客观特征。其中相对频率理论把概率看做我们可用有限样本表征的无限事件系列的一个属性,倾向性理论则认为概率首先是单个事件的初始未定属性,尽管它也能说明系列概率。概率应被理解为一种情形产生给定结果的倾向或趋向。这个理论的主要困难在于倾向性概念的原始性,它看来引入了一种神秘的理论实体。同时,单个事件的倾向是否为理解系列的概率所必需也是不清楚的。

“所有形式的倾向性理论都具有相对频率理论无法具有的两个重要特征。它们都既可以应用于无限的样本也可以用于有限样本。它们都允许把概率归属于表面上单个的事件。”——柯亨:《归纳哲学和概率导论》,1989年,第55页。

相对频率概率理论

一种关于概率的解释,主张概率是一个参照类中事件的相对频率或统计频率。它首先应用于我们必须从中选取有限样本的无穷系列。它是一种客观的理论,因为概率作为观察到的频率,是实在世界的一种属性。概率陈述被认为是有关世界的断言。概率关涉一组或一系列事件。一个事件比其他事件更有可能发生,意味着在一无穷系列或一很大的有限样本中前一种会比其他种更为频繁地发生。这一理论可以追溯到亚里士多德,他提出或然的就是大多数地方都发生的。其近代阐释者包括J. 文恩、H. 赖兴巴赫和R. 冯·密斯。这一理论与常识相当一致,对经验主义者有极大的吸引力。但是它依据假设的无穷系列来理解概率,被有些人斥为不必要的抽象。这一理论也导致了其他许多反对,包括那些相关于对一无穷系列确定相对频率所趋于的极限值的可能性的反对意见。这一理论在应用频率于单一事件的概率上也存在问题。一个给定的事件可被看做属于不同参照类,导致不同的或然性。

“[概率]的相对频率理论……定义概率为在某个无穷序列中某些特性的(极限)相对频率。”——洛格:《投射概率》,1995年,第2页。

主观主义概率理论

Also called personalism, an interpretation of probability which claims that the probability of a proposition is the measure of the subject's degree of reasonable belief or confidence in it. Reasonable belief is constrained by coherence rather than by empirical evidence. Since the intensity of confidence varies from one person to another, it follows that probability varies between subjects. Probability is the degree of belief that a given person has in a given statement on the basis of given evidence. If I believe with perfect certainty that it will rain tomorrow, then my subjective probability is 1. This theory differs from the logical relation theory of probability in that it does not take the relation between a statement and a body of evidence as a purely logical relation. This position has been defended by Ramsey, B. de Finetti and L. J. Savage. Its major difficulty is to justify the notion of reasonable belief, which seems to require a conception of probability. It also has difficulty in explicating the intersubjective assessment of probabilities. Hence a subjective theory of probability cannot fully account for the concept of probability.

"The subjective theory ... defines probability as the degree of belief of a given person in a given proposition at a specific time." —Weatherford, *Philosophical Foundations of Probability Theory*, 1982, p. 6.

Probability calculus

Of the conclusions inferred from probable inferences, some are more reliable than others. Logicians and probabilists have developed a branch of mathematics to determine degrees of probability, and this is called the probability calculus. This is a deductive meta-logical system which is neutral about the material meanings of probability and studies only the mathematical laws involving probability or the logical structure of probability. There are many versions of this calculus. The basic axioms these different systems share include: (1) If P and Q are disjoint, their probability is the sum of the probability of each disjunct minus the probability of their conjunction: $\text{Prob}(P \vee Q) = \text{Prob}(P) + \text{Prob}(Q) - \text{Prob}(P \wedge Q)$; (2) if P is a tautology, then $\text{Prob}(P) = 1$; (3) $0 \leq \text{Prob}(P) \leq 1$.

"We have then a calculus of probability, which, when given its customary interpretation in terms of scientific statements, allows us to calculate relative probabilities of alternative hypotheses in the light of changing evidence." —Caws, *The Philosophy of Science*, 1965, p. 204.

Problem of evil, see evil

Problem of other minds, see other minds

Problem of the self, see personal identity

也称为“人格主义”，是对概率的一种解释，主张命题的概率是主体合理的置信度或对它的信心的量度。合理的信念取决于一致性而不是经验证据。由于信心的强度随不同的人而变化，因此概率在主体之间也有变化。概率是一特定个人对于一基于特定证据的特定陈述所具有的置信度。如果我以完全的确定性相信明天将会下雨，则我的主观概率为1。这一理论不同于“逻辑关系概率理论”之处，在于它不把陈述与证据之间的关系看做是纯逻辑的。这种立场为拉姆塞、B. 德·费莱蒂和L. J. 沙伐奇等所坚持。其主要困难在于对“合理的信念”这个概念的辩护，这被认为本身就需要一种概率的概念。其他的困难还有阐释主体间对概率的评估等。因此一种主观主义概率理论不能完全说明概率的概念。

“主观主义理论……定义概率为一特定个人在一特定时刻对一特定命题的置信度。”——威瑟福特：《概率论的哲学基础》，1982年，第6页。

概率演算

在由或然性推理得出的结论中，有些比其他结论更可靠。逻辑学家和概率论学者发展起一个数学分支以确定或然性程度，这就称作“概率演算”。概率演算是一个演绎的元逻辑系统，对于概率的实质性含义是中性的，只研究涉及概率或概率的逻辑结构的数学规律。关于这种演算有着许多不同的形式，这些不同的系统所共有的基本公理包括：(1) 如果P和Q是不相交的，则它们的概率是每一个不相交项的概率之和减去它们的合取的概率： $\text{Pr}(P \vee Q) = \text{Pr}(P) + \text{Pr}(Q) - \text{Pr}(P \wedge Q)$ ；(2) 如果P为重言式，则 $\text{Pr}(P) = 1$ ；(3) $0 \leq \text{Pr}(P) \leq 1$ 。

“这样我们就得到了概率演算，在给出它的用科学陈述表达的惯常解释后，它允许我们依据变化着的证据去计算可供选择的假说的相关概率。”——考斯：《科学哲学》，1965年，第204页。

Problem of the speckled hen, an alternative expression for the dilemma of attention

Process theology

An approach to God within the conceptual framework of Whitehead's process philosophy, represented by Whitehead and the American philosopher and Theologian Charles Hartshorne. While in traditional theology, God is pure actuality and stands above the world of change, process theology explains God and his relation to the world in terms of change. It emphasises the temporality of God and believes that to be unchanging is to be abstract and dead. For Whitehead, God's being has two aspects, a primordial nature which is his nature in himself and a consequential nature which is constituted by his response to the temporal world and is characterised by process or becoming. The former aspect is formal, conceptual and unconscious, while the latter aspect is material, determined, and conscious. Hartshorne also adopts a similar distinction between the necessary existence of God and his contingent actuality. He claims that God is a temporal society of experiential events.

"The term 'process theology' is applied to the theological speculations produced by a group of twentieth century thinkers. . . . They believe that the idea of 'process' or 'becoming' must be taken as the chief category for interpreting the nature of both the world and God." — Owen, *Concepts of Deity*, 1971, p. 75.

Process-product ambiguity

An expression is ambiguous if it has more than one meaning and it is uncertain which meaning should be used in a given context. Some expressions can be used both to stand for a process and to stand for the product resulting from that process. The word "see" might mean either "I am seeing" or "I have seen". The failure to distinguish between a process and a product in the same context can lead to confusion.

"As a source of confusion, the process-product ambiguity is over-rated. Most processes are easily distinguished from their corresponding product." — Dretske, *Explaining Behaviour*, 1988, p. 73.

Productive force

[German: *Produktivkräfte*, also translated as force of production or productive power] The key category in historical materialism, covering the sum of the elements or factors in the process of producing material use-value, including both the subjective factor of human labour power and the objective factors of the means of production. The means of production are further divided into the object of labour (natural resources including both raw materials and non-raw materials) and the means of labour, such as instruments.

花斑母鸡问题

“注意两难”的另一表达。

过程神学

以怀特海“过程哲学”的概念框架为依据建构的一种对上帝的研究视角，代表人物是怀特海及美国哲学家和神学家哈特肖恩。传统神学认为，上帝是纯粹的现实性，高居于变化的世界之上，过程神学则依据变化来解释上帝及其与世界的关系。它强调上帝的时间性，相信不变是抽象的、僵死的。在怀特海看来，上帝的存在有两个方面，一是原初的本性，即自身本有的本性，二是后继的本性，是由他对变动世界的反应构成的，并具有过程或变化的特征。前一个方面是形式的、概念的、无意识的，后一个方面是物质的、确定的、有意识的。哈特肖恩也在上帝的必然存在性和偶然现实性之间采用了类似的区分。他断言，上帝是经验事件的世俗社会。

“‘过程神学’一词用指20世纪的一批思想家所产生的神学思考……他们相信，‘过程’或‘变化’的观念必须被当成阐释世界和上帝本性的首要范畴。”——欧文：《神的概念》，1971年，第75页。

过程与结果的模糊性

如果一个表达式具有不止一个意义，而且在把它用于某种语境时意义是不确定的，那么，这个表达式就是模糊的。某些表达式既可以用于指一个过程，又可以指产生于这个过程的结果。例如，“看”这个词，既可以意味着“我正在看”，又可以意味着“我曾看见”。在相同的语境中没有区分过程和结果，就会导致混乱。

“作为混乱的来源，过程与结果的模糊性被估计过高了。许多过程是很容易与它们相应的结果区分开来的。”——德雷斯克：《解释行为》，1988年，第73页。

生产力

[德语词: *Produktivkräfte*, 也译为“生产能力”] 历史唯物主义的主要范畴，涵盖生产物质使用价值过程的诸因素或环节，包括人类劳动能力的主观因素和生产资料的客观因素的总和。生产资料被进一步划分为劳动对象(包括天然材料和非天然材料的自然资源)和劳动工具，如仪器等。历史唯物主义认为，生产力是基本的解释术语。它们决定生产关系的性质，生产关系作为经济结构，给法律与政治的和意识形态的

For historical materialism, the forces of production are fundamental in explanatory terms. They determine the character of the relations of production, that is the economic structure, and inform the legal/political and ideological superstructure with content. Productive forces set humans above animals and actualise human capacity. According to Marx, the forces of production always advance throughout history. When they develop to a certain stage, the existing relations of production will no longer correspond to them and will constrain further development. At such times, Marx claimed, social revolutions will take place because the forces of production will break through the fetters of existing relations of production and establish new relations of production which are suitable for further progress. Productive forces are the ultimate determinant of human history.

All of the main claims for the role of productive forces in Marx's explanatory structure have been challenged and defended within Marxism and by other theorists.

"A social formation never comes to an end before all the forces of production which it can accommodate are developed and new, higher relations of production never come into place before the material conditions of their existence have gestated in the womb of the old society."—Marx, *Preface to the Critique of Political Economy*.

Prohairesis. Greek term for decision

Projectibility

A term introduced by Goodman in his discussion of the problem of confirmation. A projection is an inference from the known to the unknown on the grounds of induction from past experience. Projectibility is the degree of entrenchment of this inference. If all observed emeralds are green, we may reasonably infer that future emeralds are green, but not that they are grue (green before some future time *T* and blue thereafter) for "green" is a projectible predicate and is well entrenched, having a high frequency of projection, while "grue" is not well entrenched. This is true even though the claims that all emeralds are grue and that all emeralds are green have equal inductive support. Grounding projectibility involves distinguishing between valid projections and invalid projections. Inductive reasoning can apply only to projectible properties or hypotheses rather than to all properties or hypotheses. Hence, to decide which property is projectible becomes an important issue in epistemology. According to Goodman, a hypothesis is projectible if all conflicting hypotheses are overridden. By introducing the notion of projectibility, and by defining it in terms of the historical record of entrenchment through actual projections, Goodman rejects the traditional discussion of confirmation which allows green and grue to be equally confirmed and aims to construct a

上层建筑赋予内容。生产力使人类超出动物,使人类能力现实化。按马克思的观点,生产力永远推动着整个历史。当生产力发展到某个阶段,现存的生产关系不再适应它们并限制它们的进一步发展。在这个时候,马克思认为,社会革命就会发生,因为生产力将冲破现存生产关系的桎梏,建立起适合进一步发展的新的生产关系。生产力是人类历史最终的决定力量。

一切关于生产力在马克思解释框架中所起作用的主要观点,都始终受到了马克思主义内部的以及其他的理论家们的挑战。

“无论哪一种社会形态,在它们所能容纳的全部生产力发挥出来以前,是决不会灭亡的;而新的更高的生产关系,在它存在的物质条件在旧社会的胎胞里成熟以前,是决不会出现的。”——马克思:《(政治经济学批判)序言》。

决定

“决定 (decision)” 的希腊词。

可投射性

由古德曼在讨论确证问题中所引入的术语。投射是依据对已往经验的归纳而从已知到未知的推理。可投射性是这种推理的牢靠程度。如果所有观察到的绿宝石都是绿的,我们就有理由推理说未来的绿宝石是绿的,而不说它们是绿蓝的(在某个未来时间 *T* 之前为绿而自那之后为蓝),因为“绿”是一个可投射的性质,被更牢靠地确立,即具有更高的投射频率,而“绿蓝”则并不牢靠。即使所有的绿宝石都是绿蓝的与所有绿宝石都是绿的这二者有同样的归纳支持,情况也是如此。确立可投射性的基础,涉及区分有效投射和无效投射。归纳推理仅适用于可投射的性质或假说而不是所有的性质或假说。因此,决定哪个性质是可投射的,就成为认识论中的重要议题。在古德曼看来,一个假说是可投射的,当所有与之相冲突的假说都被否定时,通过引入可投射性概念,并且通过由历史的实际投射的牢靠性记录来确定它,古德曼反对传统对确证的探讨,这一传统允许绿与绿蓝被同等确证的探讨,而他则致力于构造一种纯句法学的确证定义。

“如果我们从证据和假说着手,从既往的投射着手,我们的任务就成为基于实际的投射来

purely syntactical definition of confirmation.

"If we start with past projections as well as evidence and hypotheses, our task becomes that of defining valid projection—or projectibility—on the basis of actual projections."

Goodman, *Fact, Fiction and Forecast*, 1973, p. 86.

Proof theory

A theory dealing with axiomatic systems founded by Hilbert in the 1920s as a tool for carrying out his programme in the foundations of mathematics. In rejecting the claim that the foundations of mathematical analysis were built on sand, Hilbert introduces proof theory to show the consistency of both analysis and set theory, and to establish the decidability of each mathematical question. Although Hilbert's program was undermined by Gödel's incompleteness theorem, Gerhard Gentzen proved the consistency of elementary mathematics by using natural deduction and sequent calculi. Gentzen extended proof theory into a general theory that examines how proofs in formal logical systems, that is systems determined by their axioms and rules of inference, can be investigated by mathematical techniques. Proof theory is now a branch of mathematical logic.

"Hilbert introduced his proof theory. This theory treated the axiom systems of mathematics as pure syntax, distinguishing them from what he called mathematics, where meaning was permitted." — Moore, in *Minnesota Studies in the Philosophy of Sciences*, vol. xi, 1988, p. 116.

Propensity

Generally conceived as the inner and probabilistic disposition or state in virtue of which a thing or a person will act in a certain way under normal circumstances, unless it is blocked by some external force. That I have a propensity to reduce my fat means that I do so if no counter measures are taken. That I have the propensity to have a certain belief means that I will maintain this belief unless it is strongly refuted by some concluding evidence. The term propensity is closely related to the acquisition of belief and to the theory of probability. Popper developed a propensity interpretation of probability according to which the probability of a single case is its propensity.

"Let us say that someone has a propensity to be J if he is in such a state that he will be J unless some special blocking factors intervene." — Smith and Jones, *The Philosophy of Mind*, 1986, p. 112.

Proper name

A simple symbol for a particular, which does not have further symbols as its parts, in contrasted to a description, which is a complex symbol. Whether a proper name has sense in itself has been a puzzling question since Plato's *Theaetetus*. Wittgenstein in the *Tractatus* claims that a prop-

确定有效投射（或可投射性）。"——古德曼：*《事实、虚构与预测》*，1973年，第86页。

证明理论

由希尔伯特于20年代所建立的处理公理化系统的理论，作为在数学的基础上实施其纲领的工具。为了反对那种认为数学分析的基础是建立在沙滩上的观念，希尔伯特引入了证明理论以表明分析与集合论二者的一致性，并确立每个数学问题的可决定性。尽管希尔伯特的纲领为哥德尔不完全性定理所摧毁，吉哈德·根岑通过引入自然演绎和连续演算而证明了基础数学的一致性。根岑把证明理论扩展为一种一般理论，以考察在为系统的公理和推理规则所决定的形式逻辑系统中，如何可以用数学技巧来研究证明。证明理论现已成为数理逻辑的一个分支。

"希尔伯特引入了他的证明理论。这一理论把数学的公理系统作为纯粹的句法来处理，以区别于允许意义出现的他所谓的数学。"——摩尔，见《明尼苏达科学哲学研究》，1988年，第11期，第116页。

倾向性

通常被认为是使得一个事物或一个人在通常情境下以某种方式行事的内部的或盖然的倾向或状态，除非为某种外部力量所阻碍。我具有减肥的倾向意味着如果不采取相反的措施我就会这样做。我具有持有某个信念的倾向意味着除非为某个结论性的证据所强烈反驳，我就会保持这一信念。“倾向性”一词与信念的获得和概率论有密切的关系。波普提出了关于概率的倾向性解释，他认为，一个单个事例的概率就是它的倾向性。

"让我们这样说，某人在这样一个状态中就具有一个成为J的倾向，除非受到某种阻碍因素的干预，他就会成为J。"——史密斯和琼斯：*《心的哲学》*，1986年，第112页。

专名

表示殊相的简单符号，它没有进一步的符号作为其组成部分，这与作为复杂符号的摹状词相反。专名本身是否具有涵义，这是一个自柏拉图的《泰阿泰德篇》以来一直困惑着人们的问题。维特根斯坦在《逻辑哲学论》中主张，专名

er name designates a particular directly and has that particular as its meaning. As a consequence, the proper name has no sense in itself. However, Frege points out that proper names can occur in informative identity statements, for example "The Morning Star is the Evening Star" and uses his distinction between sense and reference to account for this phenomenon. The claim that proper names have descriptive content also gains support from the fact that proper names can appear in existential statements, such as "The Morning Star exists". Russell, in a defence of Wittgenstein's view, distinguishes between ordinary proper names and logically proper names. An ordinary proper name has sense, but is in fact a disguised description. For example, "Socrates" is an abbreviation of something like "the philosopher who drank hemlock". On the other hand, logically proper names, for example names for the items in one's current experience, have their meaning in the objects they stand for. Kripke and Putnam criticise Frege's and Russell's accounts of proper names. Descriptions can be useful in fixing the reference of a proper name, but the meaning of the name is determined by the features (for example, of inner structure or origin) which make the item what it is. These features need not be immediately available to experience, but like water being H_2O , can be discovered.

"The only kind of word that is theoretically capable of standing for a particular is a proper name, and the whole matter of proper names is rather curious." -- Russell, *Logic and Knowledge*, 1956, p. 200.

Proper name theory

A theory about the meaning of the word "I", holding that the word "I" is a logically proper name, that is a word that directly designates an object with which the speaker is acquainted. I can know that I am aware of something or that I am having a certain experience only because I have perceived that there is a subject of experience that has this awareness or experience. "I" is a proper name for this particular subject. A difficulty for this position is that even if we accept that I perceive a self as a subject of experience, it is not clear how I would establish that this self is myself.

"According to proper name theory the person who knows an ego-centric fact is prehending, not only a certain particular as an experience of a certain kind, but also another particular." Broad, *Examination of McTaggart's Philosophy*, 1933, vol. II, p. 174.

Property

A property is a feature or aspect by which a thing can be described or characterised. It is a characteristic that a thing is said to possess and is synonymous with "attribute". An Aristotelian or medieval *proprium*, a characteristic which is unique to the essence of a thing but which is not in its defini-

直接命名殊相,并以该殊相为其意义。其结果是专名本身无涵义。但是,弗雷格指出,专名可以出现在提供信息的同一陈述中,例如“晨星是暮星”,他还利用其对于涵义和指称的区别来说明这一现象。专名有描述内容的主张还从这一事实得到支持:专名可以出现在存在陈述中,例如“晨星存在”。罗素在捍卫维特根斯坦的观点时区分了普通专名和逻辑专名。普通专名有涵义,但事实上是乔装打扮的摹状词。例如,“苏格拉底”是像“喝了毒药的哲学家”这种东西的缩略表达。另一方面,逻辑专名,例如表示一个人当下经验中的东西的名称,以它们所代表的对象为其意义。克里普克和普特南批评了弗雷格和罗素对于专名的说明。摹状词在确定专名的指称中可能是有用的,但名称的意义出使一物成为此物的特征(例如,其内部结构或起源)来决定。这些特征勿需直接与经验有关,而是像可以发现水为 H_2O 一样。

“在理论上可以代表殊相的惟一的一种词是专名,而专名的全部问题是颇为奇怪的。”——罗素:《逻辑和知识》,1956年,第200页。

专名理论

关于词汇“我”的意义的一个理论,认为词汇“我”是一个逻辑上的专名,即一个直接命名说话者所认识的对象词汇。我能够知道我正意识到某事或正具有某个经验,这只是因为我知觉到有一个经验的主体具有这个意识或经验。“我”是这个特定主体的一个专名。这一观点的困难在于,即便我们承认我知觉到一个作为经验的主体的自我,还是不清楚我怎么知道这个自我就是我自己。

“根据专名理论,知道一个自我中心事实的人不只是在领会作为某种经验的特定东西,而且还在领会另一个东西。”——布劳德:《麦克塔加特哲学考察》,1933年,第二卷,第174页。

特性

特性是一个事物可据此得以描绘或刻画的特征或方面。它是一物所拥有的特点,与“属性”意义相同。一个亚里士多德式的或中世纪的 *proprium*, 即一个为一物的本质所特有可又不在该物的定义中的特征,也是一特性。特性经常

tion, is also a property. Properties are often divided into essential and accidental properties, which are also called internal and external properties. An essential or internal property belongs to the essence of a thing, such that the thing cannot lose an essential property without losing its identity. On the other hand, the possession or non-possession of an accidental or external property by a thing does not affect its identity. Interest in essential properties has been revived by recent work in modal logic, the logic of necessity and possibility.

"If I am to know an object, though I need not know its external properties, I must know all its internal properties." —Wittgenstein, *Tractatus*, 2. 0123.

Property dualism, see dualism

Property instance, another term for abstract particular

Proposition

The basic unit of logical analysis, characteristically stated by a declarative sentence and the bearer of the truth-value true or false. There is controversy over the relationships between propositions, statements and sentences. Many theorists identify propositions with statements. Both are distinguished from sentences, but some philosophers wish to eliminate propositions as abstract entities in favour of sentences. If both kinds of entity are accepted, all propositions are sentences or are expressed by sentences. Only declarative sentences generally express propositions, although sentences of interrogative, imperative and other forms have propositional content. A proposition can usually be represented by a "that" clause. Understanding the nature and structure of propositions is often seen as the central task of philosophical logic. Philosophers consider the functions of components of propositions, such as names, predicates and logical constants and consider how the components are unified into something having a truth value. They examine how the form, meaning and use of propositions are related and how different propositions can enter into logical relations. There has been much recent discussion of how linguistic or psychological states can have propositional contents.

"Let us, ... define a proposition as any complete sentence capable of expressing a statement." —Russell, *Collected Papers*, vol. VII p. 105.

Proposition / sentence

A sentence is a group of words (symbols, signs) ordered according to some grammatical rule in any actual or artificial language. Sentences of various grammatical forms are best suited to indicate, plead, request, order, interrogate and so on, although such sentences can also be used outside

划分为本质特性与偶然特性；它们也分别叫做内在的和外在的特性。本质或内在特性属于一物的本质，这使得一个事物如失去了这一特性也就失去了其身份。另一方面，一个事物拥有或不拥有一偶然或外在特性并不影响其身份。对本质特性的兴趣在最近的模态逻辑即关于必然性和可能性的逻辑中得到复兴。

“如果我必须知道一个对象，尽管我并不必知道其外在特性，但我必须知道它的所有内在特性。”——维特根斯坦：《逻辑哲学论》，2.0123。

性质二元论

见“二元论”条。

特性个例

“抽象殊相”的另一表述。

命题

逻辑分析的基本单位，其特点由陈述句表示，是真值“真”“假”的承受者。对于命题、陈述和语句的关系存在着争论。许多理论家把命题与陈述合而为一。这两者都区别于句子，但某些哲学家希望把命题作为抽象的存在物而加以排除，更愿使用句子概念。如果这两种存在物都被接受，那么，所有的命题都是句子或以句子来表达。一般只有陈述句表达命题，虽然疑问句、祈使句和其他形式语句也含有命题的内容。一个命题通常能以“that”子句来表示。理解命题的结构和本性常被视为哲学逻辑的中心任务。哲学家考察命题的组成成分的功能，如名称、谓词和逻辑常项，考察这些成分如何结合成为某种有真值的东西。他们考察命题的形式、意义和用法如何相联系，不同的命题如何形成逻辑关系。对于言语的或心理的陈述如何能具有命题的内容，近年来一直有很多讨论。

“让我们……把命题规定为任何能表达陈述的完整语句。”——罗素：《文集》，第七卷，第105页。

命题和语句

语句是一组语词（符号、记号）在实际的或人工的语言中按某种语法规则排列成序。具有各种语法形式的语句被最恰当地用于指示、辩解、请求、命令、询问等等，虽然这些语句也可用于它们的基本功能以外的目的。语句并不必

their primary functions. A sentence is not necessarily meaningful, and the same sentence may have different meanings and may be used in different ways. All these characteristics make it difficult to determine in the abstract whether a given sentence is true or false or even whether in principle it is verifiable.

Philosophers therefore introduce the term "proposition" for abstract objects which are expressed by sentences and which bear truth values. A proposition can in principle be expressed by a sentence, but not all sentences express propositions. Once sentences and propositions are distinguished, philosophers ask how features of meaning and truth should be divided between the two, which is the vehicle for asserting or denying, for stating that some predicate holds of some subject or that certain items are related in a certain way. A proposition can be expressed by grammatically different sentences or by sentences in different languages, so long as the sentences have the same content. For instance, "A conquered B" and "B was conquered by A" are two sentences that express the same proposition. Propositions seem at first glance to be most closely related to indicative sentences, but sentences of other kinds can be understood to have a propositional content as well.

Ayer takes propositions to be logical constructions out of synonymous sentences rather than as Platonic entities existing in their own right. A proposition, not a sentence, is generally recognised as the truth bearer, while meaning is often ascribed to sentences or statements. We can say that truth or falsity are not merely for one particular sentence S, but for all sentences which are logically equivalent to S. However, there are widely disputed problems in philosophical logic about the existence, nature and individuation of propositions. Philosophers hostile to abstract entities try to do without propositions or to see them as a mere device for dealing with sentences. Realists and reductionists of various sorts must all provide accounts of how propositions and sentences are related.

"The word 'proposition', ... will be reserved for what is expressed by sentences which are literally meaningful." — Ayer, *Language, Logic and Truth*, 1946, p. 8.

Propositional attitude

Russell's term for mental activities signified by verbs such as think, hope, fear, want, wish, believe, guess and consider. These verbs are propositional verbs, in contrast to the cognitive verbs such as know, see, smell or feel. Both kinds of verb demand a grammatical accusative. However, propositional verbs, unlike cognitive verbs, do not necessarily have to have something in reality that answers to their grammatical accusatives. If I see X, there is an X, and if I see that p, then p is true. However, if I hope X, it is open whether there is an X or not, and if I hope that p, it remains

然是有意义的,同一个语句可能有不同的意义,可以按不同的方式使用。所有这些特点使得很难抽象地决定一已知语句是真还是假,甚或决定它能否在原则上可证实。

哲学家因而引入了“命题”这个术语来表示由语句表达的、承载真值的抽象对象。命题在原则上可由语句表达,但并不是所有的语句都表达命题。一旦把语句和命题作了区别,哲学家就要问意义和真理的特征应如何在二者之间划分,肯定或否定、陈述某谓词与某主词相匹配或某些语词以某种方式相关联的载体是什么。命题可以由语法上不同的语句或不同语言的语句来表达,只要这些语句有相同的内容。例如“A征服了B”和“B被A征服”是两个表达了相同命题的语句。命题初看起来似乎与指示性语句关系最密切,但可以把其他种类的语句理解为也具有命题的内容。

艾耶尔把命题当成出自同义语句的逻辑构造,而不是像柏拉图式的独立存在的实体。被广泛承认为真值承载者的是命题,而不是语句,而意义常常被归诸于语句或陈述。我们可以说,真或假不仅仅是对一特定语句S而言,而是对一切与S在逻辑上等值的语句而言。但是在哲学逻辑中,关于命题的存在、性质以及个体化,是有着广泛争论的问题。敌视抽象实体的哲学家力图排斥命题,或仅仅把命题视为处理语句的工具。各式各样的实在论者和还原论者都必定要对命题和语句如何相关提供说明。

“‘命题’这个词……将保留给由在字面上有意义的语句所表达的东西。”——艾耶尔:《语言、逻辑和真理》,1946年,第8页。

命题态度

罗素的术语,指由“认为”、“希望”、“担忧”、“要求”、“但愿”、“相信”、“猜测”、“考虑”之类的动词所表示的心的活动。这些动词是命题动词,以与“知道”、“看见”、“闻起来”、“觉得”等认知动词相区别。这两种类型的动词都需要语法宾格。不过,与认知动词不同,命题动词并不必然有现实中的某物与其语法宾格相对应。如果我看见X,那么有X;如果我看见P,则P是真的。不过,如果我希望X,X是否存在却是悬而未决的;如果我希望P,P是否为真也

open whether p is true. A propositional attitude expresses an attitude to a proposition. Thus, the contexts of all propositional attitudes are intentional. There are many philosophical problems associated with the notion of propositional attitudes. These include the question of whether co-referential designators can be substituted *salva veritate* in the context of propositional attitudes, and the related notion of a referentially opaque context. There are also problems with related notions such as belief, intentionality and content.

"We pass next to the analysis of propositional attitudes, that is believing, desiring, doubting, etc. that so and-so is the case." —Russell, *An Inquiry into Meaning and Truth*, 1940, p. 21.

Propositional belief, see belief in and belief that

Propositional calculus

One main branch of modern formal logic, also called propositional logic, sentential calculus, sentential logic, the logic of propositions and the theory of truth functions. Anticipated partially by the Stoics, it was systematically developed in the works of Frege, Peirce, Russell and Wittgenstein. It formulates the principles of inference in terms of the truth-functional constants of arguments. These constants include negation (not), conjunction (and), disjunction (or), implication (if ... then) and equivalence (if and only if). Each of them is symbolised by logical notation. There are various schemes of logical notation, but one widely used notation contains " \sim " (negation), " \wedge " (conjunction), " \vee " (disjunction), " \supset " (implication) and " \equiv " (equivalence). The basic constituents of an argument are propositions (symbolised as $p, q, r \dots$). The validity of an argument is determined through the truth-table method by the truth-values of its components and the logical constants connecting them. Since propositional logic requires that all propositions are either true or false and cannot be both, it is also called two-valued logic. Because of its importance for any systematic development of thought, it was also called by Whitehead and Russell, the theory of deduction, or by Kneale primary logic.

"The propositional calculus is characterised by the fact that all its propositions have as hypothesis and as consequent the assertion of a material implication." —Russell, *The Principles of Mathematics*, 1903, p. 13.

Propositional content, see content

Propositional form, another term for form of proposition

仍然是悬而未决的。命题态度表达了对一个命题的态度。于是,所有命题态度的语境都是内涵性的。有许多哲学问题与命题态度概念相关。这些问题包括:指称相同的指示词在命题态度的语境中是否可以保真地相互替换,以及与此相关的指称晦暗语境概念。还有与“信念”,“内涵性”,“内容”等概念相关的问题。

“我们下面进入对命题态度的分析,而命题态度是指相信、期望、怀疑等等如此这般的情形发生。”——罗素:《对意义和真理的探究》,1940年,第21页。

命题信念

见“信以为真”和“相信某事”条。

命题演算

现代形式逻辑的一个主要分支,亦称“命题逻辑”,“语句演算”,“语句逻辑”,“命题的逻辑”以及真值函项理论。它部分地为斯多亚学派所预先研究,其系统发展是在弗雷格、皮尔士、罗素和维特根斯坦的著作中。命题演算根据论证的真值函项常项来表述推理原则。这些常项包括否定(并非),合取(并且),析取(或者),蕴涵(如果……则)和等值(当且仅当)。其中每一个都用逻辑记法符号化。存在不同的逻辑记号模式,但其中得到广泛使用的一种记法是“ \sim ”(否定),“ \wedge ”(合取),“ \vee ”(析取),“ \supset ”(蕴涵)和“ \equiv ”(等值)。论证的基本构成要素是命题(用 p, q, r 等等表示)。论证的有效性通过真值表方法由支命题的真值和联结这些支命题的逻辑常项所决定。由于命题逻辑要求所有的命题都是或者真或者假但不能既真又假,它亦称二值逻辑。由于它对思想的任何系统展开所具有的重要性,它亦被怀特海和罗素称作“演绎理论”,或被涅尔称作“初等逻辑”。

“命题演算的特征在于下述事实:它的所有命题都以断定实质蕴涵作为假设并作为后承。”——罗素:《数学原则》,1903年,第13页。

命题内容

见“内容”条。

命题的形式

“命题形式”的另一说法。

Propositional function

An expression or schema, such as “x is mortal”, which can be converted into a proposition, such as “Socrates is mortal”, by replacing “x” with a determinate value, in this case “Socrates”. The term originates in Frege’s investigation into the possibility of deriving mathematics from logical axioms. Russell, who applies the notion of propositional functions in the analysis of propositions, argues that general propositions state connections between propositional functions. For instance, “all men are mortal” can be analyzed into “whatever x may be, if x is a man, x is mortal”. The appeal to propositional functions enables Russell to dispose of the grammatical subjects of universal propositions which we wrongly suppose to refer to existing objects. This manoeuvre is a major factor in his theory of descriptions. A propositional function is necessary if it is always true, impossible if it is sometimes true, and sometimes false. It is impossible if it is never true.

“A form of words containing an undetermined variable—for instance, ‘x is a man’—is called a ‘propositional function’ if when a value is assigned to the variable, the form of words becomes a proposition.” —Russell, *Human Knowledge*, 1948, p. 468.

Propositional knowledge

Knowledge that something is the case, instances of which are expressed in the form of a proposition, i. e. S knows that p, where p can be verbally formulated. As knowledge-that or knowledge by description, it is in contrast to knowledge by acquaintance (perceptual knowledge), that is knowledge of a simple object, *a priori* knowledge, and knowledge-how. The traditional or standard analysis of propositional knowledge is that it must satisfy three conditions: A knows p requires that (1) A believes p, (2) p is true and (3) A is justified in believing p. Historically, the majority of epistemological theories have analysed each of these conditions and their interrelationships. Since Gettier posed his counterexamples to this definition, epistemologists have been discussing whether we need to add a fourth condition to propositional knowledge, and if so, what it should be.

“The general definition of propositional knowledge that I propose to defend is along traditional lines and can be expressed as follows: S knows that P if and only if (1) P, (2) S is confident that P, and (3) S’s being so is supported by a disinterested justification for being so, (4) that is externally conclusive.” —Ginet, *Knowledge, Perception, Memory*, 1995, p. 12.

Propositional logic, another term for propositional calculus

命题函项

一种表达式或格式,如像“x 是有死的”,可以用一个确定的值来代替“x”,从而将其转变为命题,如变成“苏格拉底是有死的”,这里的确定值是“苏格拉底”。这个术语起源于弗雷格研究能否从逻辑公理中导出数学。罗素将命题函项的概念运用于对命题的分析,主张全称命题陈述了命题函项之间的关系。例如,“所有的人都是有死的”可以分析为“不管 x 可能是什么,如果 x 是人,则 x 是有死的”。求助于命题函项使得罗素可以处置全称命题的语法主词,我们往往错误地以为它们指称存在的对象。这种策略是他摹状词理论中的主要内容。如果一个命题函项永远为真,则它是必然的。如果它有时为真有时为假,则它是可能的。如果它永不真,则它是不可能的。

“包含一不定变项的语词排列形式——例如‘x 是一个人’——称为‘命题函项’,如果把一值赋予变项则该语词形式就成为一命题。”——罗素:《人类的知识》,1948年,第468页。

命题知识

以命题形式表达具体事件的知识,即 S 知道 p,在这里,p 是在语言上构成的知识。它是关于内容的知识或描述的知识,与之相对的是亲知的知识(知觉知识),即关于简单对象的知识、先天的知识和关于方法的知识。对命题知识的传统分析或标准分析是,它必须满足三个条件:A 知道 p 需要(1) A 相信 p,(2) p 是真的,(3) A 有充分的理由相信 p。在历史上,绝大多数的认识论理论都分析了这些条件及其相互关系。自从盖梯尔提出他对这个定义的反证以来,认识论者们就在讨论,我们是否需要对命题知识补充第四个条件,如果需要的话,那么它应当是什么。

“我提出捍卫的对命题知识的一般定义,是沿袭着传统的路线,可以把它表达如下:S 知道 P,当且仅当(1) P,(2) S 确信 P,(3) S 的这种确信得到了对此的公正辨明的支持,(4)这在客观上是确定的。”——吉内特:《知识、知觉和记忆》,1995年,第12页。

命题逻辑

表示“命题演算”的另一个术语。

Propositional object, another expression for proposition

Propositional sign

A sign which expresses a thought or a proposition. In Medieval Latin *propositio* has this meaning, although in modern English “proposition” refers rather to propositional contents. According to Wittgenstein, if a sign is a propositional sign, all of its elements must be co-ordinated with one another in a determinate way. A proposition is not a different entity from a propositional sign, but is just a propositional sign taken together with its pictorial relation to its objects.

“A proposition is a propositional sign in its projective relation to the world.” —Wittgenstein, *Tractatus*, 3.12.

Propositional verb, see propositional attitude

Prosentential theory of truth

The term “prosentence” was formed on analogy with “pronoun” in line with the claim that sentences containing truth predicates such as “That is true” relate to sentences in the way that pronouns relate to nouns. An anaphoric pronoun acquires its references from antecedent expressions and can be replaced by its antecedent. For instance, in “John is a student, and he is intelligent”, the pronoun “he” acquires its reference through its relation to the earlier expression “John” and can be replaced by “John”. The prosentential theory of truth claims that a sentence with the truth predicate “is true” has a similar anaphoric function. The only difference is that its reference is acquired from an antecedent sentence rather than an antecedent noun. “That is true”, can be replaced by an antecedent sentence. Accordingly, the truth predicate responds to and comments upon the assertion expressed by that sentence. In particular, the truth predicate does not introduce a property or common characteristic shared by true propositions. It is content-redundant and can be used to provide emphasis. The theory resembles the disquotational theory of truth.

“Briefly, a principal claim of the prosentential theory is that ‘That is true’ and ‘It is true’ are ‘prosentences’. Prosentences function much as pronouns do, except that prosentences occupy the positions in sentences that declarative sentences occupy, while pronouns occupy the positions names occupy.” —Grover, *A Prosentential Theory of Truth*, 1992, p. 12.

Protocol sentences

[from German: *Protokollsätze*, sometimes translated as protocol statements] For Carnap and Neurath, statements which others call basic propositions, basic sentences or basic statements. They are also similar to the atomic proposition

命题对象

“命题”的另一种说法。

命题符号

表达一个思想或命题的符号。在中世纪的拉丁文中, *propositio* 有这种意义, 虽然在现代英语中“命题”更确切地说是指命题的内容。照维特根斯坦的看法, 如果一个符号是命题符号, 则它的所有成分必须以一种确定方式协调一致。命题不是与命题符号不同的东西, 而只是与其对于对象的描绘关系置于一起的命题符号。

“命题是在其与世界的投影关系中的命题符号。”——维特根斯坦:《逻辑哲学论》, 3.12.

命题动词

见“命题态度”条。

真理的代语句论

“代语句”这一术语的构成与“代词”相类似, 它符合这个主张: 包含有像“那是真的”这样的真值谓词的语句, 语句的关系正如代词和名词的关系一样。一个在句首重复的代词可从先行的表达式获得它的指称。譬如, 在“约翰是一名学生, 并且他理解力强”这句话中, 代词“他”通过联系于先前的表达“约翰”而获得它的指称, 并且可以“约翰”来代替。真理的代语句论主张, 具有真值谓词“是真的”的语句具有同样的首语重复功能。唯一的区别是, 它的指称是从先行的语句而不是从先行的名词而获得。“那是真的”可以由先行的语句来代替。因此, 真值谓词对那个语句所表达的断定作出反应和评价。尤其是, 真值谓词并不产生真命题所具有的性质或共同特性。它是多余的内容, 可以用来作出强调。这个理论类似于“真理的消除引语论”。

“简言之, 代语句论的基本主张是: ‘那是真的’和‘它是真的’是‘代语句’。代语句起着和代词一样的作用, 所不同的是, 代语句在句子中具有陈述语句所具有的地位, 而代词则具有名词所具有的地位。”——格罗弗:《真理的代语句论》, 1992年, 第12页。

记录语句

[源自德文 *Protokollsätze*, 有时译为“记录陈述”] 对卡尔纳普和纽拉特而言, 是指其他人称为“基本命题”、“基本语句”或“基本陈述”的陈述。它们也与罗素及维特根斯坦的原子命

of Russell and Wittgenstein. Carnap, in the material mode of speech, defines protocol sentences in terms of our simplest state of knowledge and referring to directly given experience or phenomena. More satisfactorily in the formal mode of speech, he characterises these sentences by their logical place in science, saying that they are the statements which need no further justification and that all other statements of science are verified by reference to them. The notion of protocol statement is significant for Logical Positivism, which held that science is a system of statements based on and verified by experiment and observation and that protocol statements are the basis of verification.

It is a characteristic of protocol sentences that they can be verified only solipsistically and that they therefore provide a poor basis for publicly shared scientific knowledge. Given their peculiar nature, problems arise about the meaning and truth of protocol sentences. There are difficulties in deciding how to identify sentences as protocol sentences and to explain why their truth should be immune from further tests. The private language argument deepens these problems. These difficulties about protocol sentences made the views of logical positivism about the foundations of science untenable. As a result, Carnap and Neurath were driven to rely upon the logical relations between statements rather than ascribing a privileged epistemological position to some. Protocol sentences are also called "observation sentences", but Schlick claimed that observation statements cannot be written down or memorised as protocol statements can.

"Regardless of this diversity of opinion it is certain that a sequence of words has a meaning only if its relations of deducibility to the protocol sentences are fixed, whatever the characteristics of the protocol sentences may be." —Carnap, "The Elimination of Metaphysics Through Logical Analysis of Language" in Ayer (ed.) *Logical Positivism*, 1959, p. 63.

Providence

[from Greek; *pronoia*, foresight, foreknowledge and the Latin equivalent; *providentia*] A crucial religious term for the relation between God and the world, although the extent and meaning of providence has been a topic of dispute. In Stoicism, providence is a non-personal divine order pervading the world. In Christianity, it concerns God's prior knowledge or his plan which guides the path of the world and man. In a broad sense, it covers all of the activities by which God directly controls nature, man and history, including creating and sustaining the world, and the activity of sustaining it. Theologians usually distinguish between general providence, which is God's working through natural laws, and special providence, which is God's working through some specific action such as delivering a message through a prophet. Some argue that special providence includes mira-

题相类似。卡尔纳普以实质的说话方式,用我们最简单的知识状态来定义记录语句,指称直接给予的经验或现象。在使用更令人满意的形式说话方式时,他以这些语句在科学中的逻辑地位来表征它们,说它们是勿需进一步证明的陈述,所有其他科学陈述都是靠与它们的关系而得到证明的。记录陈述的概念对于逻辑实证主义具有重大意义,它认为科学是基于实验和观察并由它们证实的陈述系统,记录陈述正是证实的基础。

记录语句的特点是,它们只能够以唯我论的方式得到证实,因此它们为公共分享的科学知识所提供的基础很薄弱。假定它们具有这种特性,关于记录语句的意义和为真的问题就出现了。要决定如何辨识语句为记录语句,解释它们的真为什么应免于进一步的检验,还有许多困难。私人语言论证深化了这些问题。关于记录语句的这些困难使得逻辑实证主义关于科学基础的观点站不住脚了。其结果是,卡尔纳普和纽拉特被迫依赖陈述间的逻辑关系,而不是把认识论上的特权地位赋予某些陈述。记录语句也叫“观察句子”,但石里克认为观察陈述不能像记录陈述那样被写下来和记住。

“不管这些观点的分歧,确定无疑的是,一串语词有意义,仅当它与记录语句的可推演关系得到了肯定,不管这些记录语句有什么特征。”——卡尔纳普:《通过语言的逻辑分析清除形而上学》,载于艾耶尔编:《逻辑实证主义》,1959年,第63页。

神意

[源自希腊语 *pronoia* (先见、预知),拉丁语的同类词是 *providentia*] 这个严格的宗教词汇用来指上帝和世界之间的关系,虽然神意的精确范围和含义一直是个有争议的论题。在斯多亚学派那里,神意是弥漫于世界的一种非人格的神圣秩序。在基督教中,它指上帝的先知或他为指导世界和人的行为方向而作的计划。从广义上讲,它涵盖上帝的一切活动,通过这些活动,上帝直接控制自然、人和历史,包括世界的创造和维持以及维持它的活动。神学家们通常区分出“一般的神意”和“特别的神意”,前者指上帝通过自然规律起作用,后者指上帝通过某种特别行为起作用,譬如通过先知者传递信息。有些人主张特别的神意也包括奇迹,但遭到了阿奎那的反驳。无论“神意”一词在什么意义

cles as well, but this was rejected by Aquinas. No matter how it is used, the relationship between providence and human free will has been a central problem for theology.

"In taking care of things, there is a distinction between the two, namely the reason in their planned disposition, and this is termed providence, and the disposing and execution, and this is termed government. The first is eternal, the second temporal." Aquinas, *Summa Theologiae*, Ia, 22, 2.

Prudence

The exercise of intelligence or rationality to safeguard one's own interest. According to prudence, the calculation of individual loss and gain motivates an action. It judges what one ought to do with respect to one's desires, inclinations and interest. Prudence differs from morality, which judges what one ought to by reference to the rights of others and one's obligations to others as well as by reference to one's moral concerns with oneself. To act prudently is in itself neither moral nor immoral, but is simply to act wisely and rationally within the scope of one's aims and interests. Acting prudently does not entail that one will satisfy one's own desire at the expense of others. Prudence is opposed not to morality, but to imprudence, that is to acting unwisely, irrationally or foolishly. A moral person does not necessarily act imprudently, and an imprudent person does not necessarily act immorally. Prudence often coincides with common-sense morality.

"The word 'prudence' is used in a double sense: firstly, it can mean worldly wisdom, and secondly, private wisdom. The former is the skill of someone in influencing others so as to use them for his own purposes. The latter is the sagacity to combine all these purposes for his own lasting advantage. The value of the former is properly reduced to the latter, and it might better be said of one who is prudent in the former sense but not in the latter that he is clever and cunning, but on the whole imprudent."—Kant, *Groundwork for the Metaphysics of Morals* (tr. by Ellington), 1981, p. 26.

Pseudo-concepts

A Logical Positivist term for those concepts which appear to be meaningful but which are actually meaningless. Any word or concept should have a meaning, which allows it to pick out objects or other entities. According to logical positivists, however, many words are deprived of any meaning through their metaphysical use. Terms such as Principle, God, the Absolute, the Infinite, Being as Being and Essence are all pseudo-concepts. Although metaphysicians think that they have meaning, these words cannot be used in sentences to assert anything. They are merely allusions to associated images and feelings which do not bestow a meaning on the expressions. They fail to satisfy empirical criteria of meaningfulness, and the definitions given to them in metaphysics

上使用, 它和人的自由意志之间的关系都是神学的一个中心问题。

“在对事物的照看上, 下面二者之间是有区别的, 一是按计划排列事物的缘由, 它被叫做神意, 二是排列和施行, 它被叫做管理。前者是永恒的, 后者是暂时的。”——阿奎那:《神学大全》, Ia, 22, 2。

谨慎

保护一个人自身利益的智力或理性的运用。根据谨慎的含义, 对个人得失的计算是行为的动机。它断定一个人应该做什么的着眼点是一个人的要求、倾向和利益。谨慎不同于道德, 后者判断一个人应该做什么联系他人的权利和一个人对他人的义务, 以及联系一个人涉及自身的道德。谨慎地行事本身无所谓道德还是不道德, 它只是在一个人的目的和利益范围内明智而理性地行事。谨慎地行事并不要一个人以牺牲他人来满足自己的要求。谨慎不是和道德相对, 而是和冒失相对, 即和行事不明智、非理性或愚蠢相对。一个道德的人不一定行事谨慎, 一个不谨慎的人不一定行事不道德, 谨慎常常与通常意义上的道德相一致。

“‘谨慎’这个词被在双重意义上使用: 首先, 它可意指老于世故, 其次, 它可意指个人的明智。前者是某人影响他人以便利用他们实现自己意图的技巧。后者是为了自己持久的利益而把所有这些意图结合起来的明智。前者的价值应变为后者的价值, 一个人是聪明而狡猾的, 对此也许这样说更好, 即他就前一种意义而不是后一种意义而言是谨慎的, 但总的来说是不谨慎的。”——康德:《道德形而上学基础》(埃灵顿译), 1981年, 第26页。

伪概念

逻辑实证主义的术语, 用于指这些概念, 它们看起来是有意义的但实际上是无意义的。任何语词或概念都应该有意义, 使得它辨识出对象或其他实体。但在逻辑实证主义者看来, 许多语词因为它们的形而上学用法而失去了意义。诸如“本原”、“上帝”、“绝对”、“无限”、“是之所是”、“本质”这样的语词都是假概念。虽然形而上学家认为它们有意义, 但这些语词不能用到断定任何事物的语句中。它们不过是一些把意象和情感联系起来的虚幻的东西, 并不把意义赋予表达式。它们不能满足经验主义的有意义性标准, 在形而上学中给它们的定义是伪定义。包含伪概念的语句是伪语句。

are pseudo-definitions. The sentences which contain a pseudo-concept are pseudo-sentences.

"If it only seems to have a meaning while it really does not, we speak of a 'pseudo-concept'" Carnap, "The Elimination of Metaphysics through Logical Analysis of Language", in Ayer (ed.) *Logical Positivism*, 1959, pp. 61-2.

Pseudo-object, another term for logical fiction

Pseudo-object sentence

Carnap distinguishes among three kinds of sentences: (a) an "object sentence", which speaks of an object. For instance, "Babylon was a big town"; (b) a "syntactical sentence", which speaks of a word. For instance, "The word 'Babylon' occurred in yesterday's lecture"; (c) a "pseudo-object sentence", which is formulated as though it refers to objects in the world while in reality it is a syntactical sentence that concerns expressions of the object language. For instance, "Babylon was treated of in yesterday's lecture". Such a sentence has a misleading resemblance to a sentence which speaks about the object Babylon, but it is actually about the word "Babylon". The sentence "Roundness is a universal" is a pseudo-object sentence, and should be replaced with the syntactical sentence "'round' is a predicate". Carnap also calls this kind of sentence a quasi-syntactical sentence. According to him, philosophical statements are syntactical, but in the history of philosophy they have been treated as object sentences or statements. In this mistake lies the root of many traditional problems. We should translate pseudo-object sentences from the material mode of speech into the formal mode of speech by substituting their syntactical equivalents for them, that is we should treat pseudo-object sentences as claims about words, a practice which would avoid much confusion and endless controversy.

"Thus, these sentences are syntactical sentences in virtue of their content, though they are disguised as object sentences. We will call them pseudo-object sentences." — Carnap, *The Logical Syntax of Language*, 1937, p. 285.

Pseudo-paradox, see barber paradox

Pseudo-predicate

Also called metaphysical predicate. A term introduced by Carnap for predicates such as "individual", "universal", "number" and "necessary" that are employed frequently in metaphysics. Sentences in which these predicates function appear to convey certain ontological information, but they do not actually introduce any properties of the objects designated by these sentences. A sentence containing a pseudo-predi-

"如果概念只是看起来有意义,而实际上并无意义,我们就说这是'伪概念'。"——卡尔纳普:《通过逻辑语言的分析清除形而上学》,载于艾耶尔编:《逻辑实证主义》,1959年,第61—62页。

假对象

“逻辑虚构”的另一说法。

伪对象语句

卡尔纳普在以下三种语句之间作出了区分:(a)“对象语句”,它谈及对象。例如“巴比伦是座大城”;(b)“句法语句”,它谈及语词。例如“‘巴比伦’这个词出现于昨天的讲演中”;(c)“伪对象语句”,它被说成好像指称了世界上的对象,但实际上是关于对象语言表达式的句法语句。例如,“在昨天的讲演中提到了巴比伦”。这样的语句与谈到对象巴比伦的语句有令人误导的相似性,但它实际上只涉及“巴比伦”这个词。语句“圆是共相”是伪对象语句,应当被代之以句法语句“‘圆’是谓词”。卡尔纳普也把这种语句叫做“准句法语句”。在他看来,哲学陈述是句法性的,但在哲学史上它们被当成了对象语句或对象陈述。在这种错误中,植下了许多传统问题的根源。我们应当把伪对象语句从实质说话方式翻译成形式说话方式,用句法上等同的东西代替它们,即是说,我们应当把伪对象语句当成为对语词作了断言,实行这种办法会避免许多混乱和无穷的争议。

“因此,这些语句就其内容而言是句法语句,虽然它们伪装成是对象语句。我们将把它们称为伪对象语句。”——卡尔纳普:《语言的逻辑句法》,1937年,第285页。

虚假悖论

见“理发师悖论”条。

虚假谓词

也叫“形而上谓词”。卡尔纳普引入的术语,指经常为形而上学所采用的诸如“个别”、“共相”、“数”和“必然”等谓词。这些谓词在其中起作用的句子似乎在传达本体论信息,可它们实际上并没有给这些句子所表达的对象引入任何特性。包含一个虚假谓词的句子要么是分析性真实的要么是无意义的。这些谓词的真实作

cate is either analytically true or meaningless. The real role of these predicates concerns syntactical classification. The sentence "2 is a number" does not express anything about a property of 2, but rather classifies "2" as a numerical expression. A pseudo-predicate is eliminated when one converts a material mode of speech into a formal mode of speech.

" 'P' is a pseudo-predicate if any sentence obtained from the sentential function 'Px' by substituting a value for 'x' is either analytically true or meaningless on account of resulting from the substitution of an inadmissible value." —Pap, *Elements of Analytic Philosophy*, 1949, p. 411.

Pseudo-problem

Early analytical philosophy, especially logical positivism, claimed that the majority of traditional and perennial metaphysical problems are not genuine questions, although they appear to be. Logical analysis reveals that although these problem have the same grammatical form as genuine questions, they in fact arise from a misuse of language. For example, the question "Does God exist?" arises because metaphysicians confuse the copulative use and the existential use of the verb "to be". Accordingly, pseudo-problems can be dismissed through semantic analysis.

"Grammatical similarities foster the illusion, which proves a source of immortal metaphysical pseudo-problems, as though 'real' and 'unreal' referred to opposite properties of things, just like 'kind-unkind', 'living-dead', 'stable-unstable'." —Pap, *Elements of Analytical Philosophy*, 1949, p. 143.

Pseudo-proposition

A term introduced by Wittgenstein in the *Tractatus*, referring to any judgement which attempts to say that which can only be shown. Unlike other propositions, pseudo-propositions cannot be analysed into atomic pictures and their combinations and therefore they are not pictures of the world. Wittgenstein thinks that in different ways the propositions of logic, mathematics, the *a priori* parts of natural science, ethics and philosophy — including the propositions of his own *Tractatus* — are all pseudo-propositions. Logical Positivists developed this idea in their attack on metaphysics by saying that all propositions and statements which purport to make a factual claim but which cannot be verified by experience are pseudo-propositions. They have emotional significance, but lack cognitive meaning. There are many attempts to retrieve at least some of the fields discarded in this way by Logical Positivism.

"The propositions of mathematics are equations, and therefore pseudo-propositions." —Wittgenstein, *Tractatus*, 6.2.

用涉及到句法分类。“2 是一个数”这样的句子并不表达 2 的任何特性，而只是把 2 分类作为一个数的表述。当我们从实质的说话方式转换成形式的说话方式时，虚假谓词便可取消。

“如果从句子函数 ‘Px’ 中通过对 x 代入一个值而获得的任何句子，因为得自一个不可接纳的值的代入，要么是在分析上为真，要么是无意义的，则 P 是虚假谓词。”——帕普：《分析哲学原理》，1949 年，第 411 页。

虚假问题

早期分析哲学，尤其是逻辑实证主义，认为大多数传统的和永久性的形而上学问题都不是真正的哲学问题，虽然它们显得是这样的。逻辑分析表明，尽管这些问题在语法结构上与真正的问题相同，它们事实上产生于对语言的误用。例如，“上帝存在吗？”这样的问题之所以产生，乃是因为形而上学家们混淆了动词“是”的系词用法和它的存在用法。因而，伪问题通过语义分析就可以得到消除。

“语法上的相似滋生了这种幻觉，而它们证明是不朽形而上学虚假问题的根源，仿佛‘真’和‘不真’是指事物的相反的属性，就如同‘好’和‘不好’，‘活’和‘死’，‘稳定’和‘不稳定’一样。”——帕普：《分析哲学原理》，1949 年，第 143 页。

假命题

维特根斯坦在《逻辑哲学论》中引入的术语，指企图说出只能显示的东西的判断。与其他命题不同，假命题不能被分析为原子图像及其结合，因此不是世界的图像。维特根斯坦认为，逻辑和数学命题，自然科学、伦理学和哲学中的先验部分——包括他自己的《逻辑哲学论》中的命题，在另一种方式之下都是假命题。逻辑实证主义者在攻击形而上学时发展了这种看法，他们说，旨在论说事实的但不能被经验证实的全部命题和陈述都是假命题。它们具有情感意义，但缺乏认识意义。这样，逻辑实证主义就放弃了许多人们至少在其中作出大量努力的领域。

“数学命题是等式，因此是假命题。”——维特根斯坦：《逻辑哲学论》，6.2。

Pseudo-science

[from Greek; *pseudo*, false or unreal] A doctrine or set of views that falsely claims the status of science or knowledge. In unhealthy academic circumstances, especially where an enforced orthodox exists, all other schools can be condemned without justification as pseudo-sciences. Determining whether a doctrine is a pseudo-science is an issue in the philosophy of science and requires that one first determines what counts as scientific knowledge. For Logical Positivism, if a thesis satisfies the verifiability criterion, it is scientific; otherwise it is pseudo-scientific. Accordingly, traditional metaphysics is pseudo-scientific and meaningless because none of its claims can be verified. Popper claimed that the criterion for demarcating science from pseudo-science is that of falsifiability. To be scientific, a theory must be falsifiable, that is, in principle there must be some observation statements that would contradict the theory. Popper does not deny that the statements of a pseudo-science are meaningful. Some critics of Popper claim that pseudo-sciences are typically both falsifiable and falsified, but are still retained by their supporters. From this perspective, the integrity of individual investigators and of the institutions of the scientific community is a more important consideration in distinguishing science from pseudo-science.

"Social scientists use the epithets 'scientific' and 'pseudo-scientific' as a major part of the ritual language of denunciation." — Yearley, *Science and Sociological Practice*, 1984, p. 122.

Pseudo-statement

A statement-like word sequence which cannot be reduced to protocol sentences or statements and which cannot pass the test of the verification principle, either because it contains meaningless words (pseudo-concepts) or because it puts together meaningful words in a way violating syntax. Such a word sequence appears to be a statement but it is not. It fails to assert anything and expresses neither a true proposition nor a false proposition. Pseudo-statements are of major concern to Logical Positivism, which labels all metaphysical statements as pseudo-statements. They claim that the origin of metaphysical pseudo-statements lies in the logical defects of ordinary language. The notion of pseudo-statements is the target to which much criticism of Logical Positivism has been directed.

"Our thesis, now, is that logical analysis reveals the alleged statements of metaphysics to be pseudo-statements." — Carnap, "The Elimination of Metaphysics through Logical Analysis of Language", in Ayer (ed.) *Logical Positivism*, 1959, p. 61.

Psyche, Greek term for soul

伪科学

[源自希腊语 *pseudo*, “虚假的”、“不真实的”]是对科学或知识状况提出错误主张的一种学说或一套观点。在不健康的学术环境中,尤其是在强硬正统派存在的地方,一切其他学派都会不加辩护地被指责为伪科学。如何确定一种学说是否是伪科学,是科学哲学中的一个争论问题,而且,还需要首先确定,到底什么东西算是科学知识。在逻辑实证主义看来,如果一个命题满足可证实性标准,就是科学的;否则就是伪科学的。因此,传统形而上学是伪科学的和毫无意义的,因为它的主张无一能被证实。波普断言,划分科学与伪科学的标准是可证伪。如果一个理论是科学的,它必定可证伪,也就是说,原则上必定有某种会与该理论相矛盾的观察陈述存在。波普并不否认伪科学的陈述是有意义的。有些波普的批评者认为,伪科学一般地既是可以证伪的,也是已经证伪了的,但仍为其支持者所拥护。从这一角度看,单个研究者的整合性、科学共同体机制的整合性乃是区分科学与伪科学的更为重要的因素。

“社会科学家把‘科学的’和‘伪科学的’这对性质形容词作为宣言式的礼仪语言的主要部分来使用。”——耶利:《科学和社会学实践》,1984年,第122页。

伪陈述

貌似陈述的一串词,不能将其还原为记录语句或陈述,不能通过证实原则的检验,原因在于包含了无意义的语词(伪概念)或是在于把有意义的词以违反句法的方法放在一起。这种语词串貌似陈述,但实际上不是。它未能对事物作出任何断定,既未表达真命题,也未表达假命题。伪陈述是逻辑实证主义的主要关注点,它给所有的形而上学陈述贴上了伪陈述的标签。他们认为,形而上学伪陈述源于日常语言的逻辑缺陷。伪陈述的概念成了很多针对逻辑实证主义的批评的靶子。

“现在,我们的观点是,逻辑分析揭示了所谓的形而上学陈述是伪陈述。”——卡尔纳普:《通过语言的逻辑分析清除形而上学》,载于艾耶尔编:《逻辑实证主义》,1959年,第61页。

灵魂

“灵魂(soul)”的希腊词。

Psychoanalysis

A therapeutic practice and associated theory of mind founded by Freud. As a theory, it postulates the existence of an unconscious mind, comprising painful thoughts which through repression are excluded from consciousness, except as disguised through symbolic transformation in such phenomena as dreams, puns and slips of the tongue. The unconscious has a dynamic role in determining behaviour. Psychoanalytic theory places great emphasis on the origin of neurosis in the sexual drives and fantasies of early childhood, especially the in relations of a child to his parents through the Oedipus Complex. The theory claims to reveal and explain a variety of affective disturbances and intellectual blindnesses in people not suffering from a psychic disorder. The theory has a causal physical side in Freud's early concern with the workings of the nervous system, but also an interpretative side based on interpreting back to their origin the repressed thoughts which surface consciously in symbolically distorted ways through such things as dreams, puns and slips of the tongue. For analysts, anything important in an analytic session is likely to be below the surface of overt meaning.

As a therapy, classical psychoanalysis is ideally conducted as a kind talking cure. In regular conversations between analyst and patient, the analyst's neutrality allows the patient to project the repressed early relations and emotions allegedly at the root of the disorder. The analyst may employ various techniques, including dream interpretation or free association, to reach what is repressed. The analyst analyses what the patient says, trying to reveal from the recovered material the repressed unconscious thoughts allegedly at the root of the patient's illness. The main aim of psychoanalysis is to bring repressed thoughts to consciousness, and this kind of discovery, when accepted by the patient, is meant to lead to a cure.

Freud claimed that psychoanalysis, after the Copernican and Darwinian revolutions, was the third blow to human claims to uniqueness. He believed that it provided a key to the theory of human nature and suggested that philosophy should correct its long-term prejudice in favour of the conscious. The discovery of the processes of the unconscious mind would enlarge our conception of the self and greatly enhance human self-knowledge. Freud also used a psychoanalytic approach to interpret art and culture.

In spite of a suggestive richness which has placed psychoanalysis near the centre of many developments of twentieth century culture, virtually all of its major claims as a theory and its major practices as a therapy have been attacked by outside critics and through schisms and expulsions by those within the psychoanalytic movement. The promise of therapeutic success remains broadly unfulfilled. Psychoanalysis has been attacked as bad science, as pseudo-science and as a bad humane discipline, and the best way to characterise and

心理分析

由弗洛伊德创立的一种有关心的治疗实践及相关的理论。作为一个理论,它设定一个无意识心灵的存在,它由令人痛苦的思想组成,这些思想遭到压抑,被排除出了意识,只能通过像梦、双关语和口误这些象征转换的现象而伪装出现。这个无意识在决定人的行为中扮演一个原动力的角色。心理分析理论极为强调神经病起源于早年儿童期的性驱动和性想像,特别是一个孩子通过俄狄浦斯情节与其父母发生的关系。这个理论声称它揭示和解释了那些未患精神失常病的人们所具有的各种感情躁动和理智盲点。在弗洛伊德早期对于神经系统作用的关注中,这个理论具有服从因果律的物理的一面,但也有解释的一面;就这后一面说来,此理论通过找出被压抑的思想的起源来解释它们。这些被压抑的思想以梦、双关语和口语这些扭曲了的象征方式出现于意识中。对于心理分析家们而言,在分析阶段中的任何重要东西都可能处于公开意义的表层之下。

作为一种疗法,经典的心理分析从理想上讲是一种谈话治疗。在分析家和病人之间定期安排的谈话中,分析家的中立性使得病人可以唤出那些被压抑着的早年关系和感情,它们被认为是〔精神〕不正常的根源。分析家可以使用各种技巧,包括对梦的解释或自由联想,来得到那被压抑的东西。分析家分析病人所说的东西,试图从这些重新获得的材料中揭示出那些被压抑的无意识思想,它们被认为是病人所患疾病的原因。心理分析的主要目标是将被压抑的思想带入意识,而这种发现如被病人接受,就意味着治愈的开始。

弗洛伊德声称,心理分析是继哥白尼和达尔文的革命之后,对人类自视独特态度的第三次冲击。他相信它提供了解决人类本性问题的关键性的东西,并建议哲学应该纠正它长期以来偏重意识的失误。对于无意识心灵过程的发现将扩大我们关于自我的概念,大大提高人类的自知水平。弗洛伊德还运用心理分析方法来解释艺术和文化。

尽管这启发人的丰富性使心理分析差不多处于20世纪许多发展的中心,但它所有主要的理论和治疗实践的主张遭到了外部批评者与心理分析运动中的分裂者和持异端者的攻击。治疗成功的许诺在很大程度上得不到兑现。心理分析已被攻击为坏科学、伪科学和糟糕的人文学科;如何最合适地去描述它、估价它,依然是个让人争论不休的问题。某些心的哲学以及欧陆哲学的所有主要流派都受到心理分析的影响。

“心理分析意味着:(1)这样一个调查程序,它调查的物质过程以任何其他方法都几乎不可

assess the enterprise remains in dispute. Some philosophy of mind and almost all major schools of continental philosophy have been influenced by psychoanalysis.

"Psycho-analysis is the name (1) of a procedure for the investigation of material processes which are almost inaccessible in any other way; (2) of a method (based on that investigation) for the treatment of neurotic disorders and (3) of a collection of psychological information obtained along those lines, which is gradually being accumulated into a new scientific discipline." — Freud, *Standard Edition of the Complete Psychological Works of Sigmund Freud*, Vol. 18, p. 235.

Psycholinguistics

An interdisciplinary science of psychology and linguistics, dealing mainly with individual psychological reality and the processes which determine the production, acquisition and learning of language. Although the name of this discipline appeared in 1895 in a book by the German scholar Meringer, the discipline did not flourish until the 1950s, marked by the publication of C. E. Osgood and T. A. Sebeok, eds, *Psycholinguistics: A Survey of Theory and Research Problems* (1954). The development of psycholinguistics is stipulated by Chomsky's work in linguistics and psychological cognitivism. Scholars disagree widely about the characterisation of this discipline and its main problems. But its basic tenet is to oppose the behavioural theory of language, to discover the psychological entities behind linguistic structures and to determine the competence beneath the performances of language-speakers. Recently its focus has been on the devices of language acquisition.

"Psycholinguistics is the study of the mental mechanisms that make it possible for people to use language. It is a scientific discipline whose goal is a coherent theory of the way in which language is produced and understood." — Garnham, *Psycholinguistics*, 1985, p. 1.

Psychological determinism

The view that human behaviour or action is determined by psychological events within the agent's mind, rather than by objective natural laws as physical determinism claims. What underlies this position is the dualist view of the relation between body and soul which was dominant in Greek philosophy and was fully articulated by Descartes. On this view, the body and soul are two distinct entities, with the soul governing the body. Psychological determinism denies that there is a problem of free will. Freedom is freedom from coercion and constraints, and an act is free if the agent performs it in accordance with the determination of the mind.

"Psychological determinism maintains that there are certain psychological laws, which we are beginning to discover, enabling us to predict, usually on the basis of his experiences in early infancy, how a man will respond to different situa-

达到; (2) 一种基于这种调查的方法, 用来诊治神经失常; (3) 通过这些进程得到的心理信息的集合, 它被逐渐地积累起来, 发展成为一门新的科学学科。" — 弗洛伊德: 《S. 弗洛伊德心理学著作全集标准版》, 第十八卷, 第 235 页。

心理语言学

心理学与语言学的交叉学科, 主要讨论确定语言产生、获得和学习的个人心理现实和过程。虽然这个学科的名称早在 1895 年就出现在德国学者梅林格的著作中, 但这个学科本身直到 20 世纪 50 年代才得到兴起, 其标志就是由 C. E. 奥古德和 T. A. 西彪克编辑的《心理语言学: 理论与研究问题概观》(1954) 一书的出版。乔姆斯基在语言学和心理认识论方面的工作作为心理语言学的发展确立了方向。关于这个学科的特征和主要问题, 学者们并没有达成广泛的一致。但它的基本信念是要反对语言的行为理论, 发现语言结构之下的心理实体以及确定语言使用者活动的的能力。近年来, 它始终关注语言的获得机制。

"心理语言学是研究人们之所以能够使用语言的心理机制。这门科学的目标在于得到一种关于产生和理解语言之方式的连贯理论。" — 加纳姆: 《心理语言学》, 1985 年, 第 1 页。

心理决定论

这一观点认为, 人的行为或行动是由人内心的心理事件决定的, 而不是像物理决定论所说的那样是由客观的自然规律决定的。构成这一观点的基础是身体与灵魂关系的二元论观点, 后者曾在古希腊哲学中居支配地位, 并在笛卡尔的哲学中得到充分阐述。按照这一观点, 身体和灵魂是两个不同的实体, 灵魂支配身体。心理决定论否认自由意志问题的存在。自由是摆脱强迫和压制的自由。如果一个人是根据心的决定去行事, 那他的行动就是自由的。

"心理决定论强调存在某些心理规律, 这些规律是我们在开始时要发现的, 它们能使我们通常是基于一个人婴幼儿时期的经历去预测他在后来的人生中如何应付不同的情况。" — 鲁卡斯: 《意志的自由》, 1970 年, 第 65 页。

tions throughout his later life.”—Lucas, *The Freedom of the Will*, 1970, p. 65.

Psychological egoism

The position that by nature people pursue what they believe to be in their self-interest and are by nature egoistic. Certainly, people may sacrifice their immediate and obvious self-interests but only if doing so is a means to a longer-term self-interested goal. This is a psychological theory about the dispositions and motivations of human nature, rather than an ethical position about the moral virtue of these motivations and their consequent behaviour. For this reason, ethical egoism is also called normative egoism. Psychological egoism provides a basis for ethical egoism, and if it is true, all versions of ethical altruism are psychologically groundless. Yet it is hard to prove that psychological egoism is true, and critics maintain that we are also motivated by non-egoistic desires.

“Psychological egoism... can be formulated as follows: A person can perform an act only if that act has at least as much agent utility as any alternative.”—Feldman, *Introductory Ethics*, 1978, p. 86.

Psychologism

A theory which became popular in the nineteenth century and was initiated by the German philosophers J. F. Fries and F. E. Beneke. According to its neo-Kantian position, psychology is the basis of philosophy and introspection is the primary method of philosophical enquiry. Every discipline in philosophy is nothing more than applied psychology. The view was especially associated with logic. In that area it rejected Kant's transcendental psychology as unscientific mystery mongering and claimed that logic is based upon the laws of thought which can be explained in terms of empirical psychological principles. It attempted to explain logical connections in terms of psychological causes and therefore tended to confuse logical issues and psychological issues. It had some connection with both British empiricism and naturalism. J. S. Mill and R. H. Lotze defended psychologism in their logic by claiming that introspection provides the only basis for the axioms of mathematics and the principles of logic. The position was severely criticised by Frege and Carnap, but has been revived in naturalised epistemology.

“Psychologism, that is, the explanation of sense in terms of some inner psychological mechanism possessed by the speaker.”—Dummett, *The Sea of Language*, 1993, pp. 101-2.

Psychologist's fallacy

William James' term for the confusion of a psychologist's own characterisations of a mental state with the actual features of the original mental state that he is

心理利己主义

这个观点认为,人出于本性追求他们认为是他们的自我利益的东西,故在本性上是利己的。无疑,人们也许会牺牲他们的直接明显的自我利益,但这样做的目的是充当长期自我利益目标的一个工具而已。这是一种关于人的性情与动机的心理理论,而不是关于这些动机和它们的行为后果的道德德性的伦理观点。因为这个原因,伦理利己主义也被称为规范利己主义。但心理利己主义为伦理利己主义提供了一个基础。假如它是正确的,所有的伦理利他主义的说法就没有心理学的根据。但难于证明它是正确的,批评家坚持认为,我们同样为非利己的欲望所驱动。

“心理利己主义……能够表述如下:只有当一个行动与任何其他选择相比对于行为者的功利至少是一样多时,一个人才能够实行这个行动。”——弗尔德曼:《伦理学导论》,1978年,第86页。

心理主义

一种在19世纪普遍流传的理论,由德国哲学家J. F. 弗里斯和F. E. 贝内克首创。这是一种新康德主义的立场,它认为,心理学是哲学的基础,内省是哲学探究的主要方法。哲学中的每个学科都只不过是应用心理学。这种看法与逻辑有着特殊的关系,在这里,它把康德的先验心理学视为非科学的迷信而加以抛弃,声称逻辑是以思想规律为基础的,而这些规律可以用经验心理学原理加以解释。它试图用心理学原因解释逻辑联结,因而往往混淆了逻辑问题与心理学问题。它与英国经验主义和自然主义有着某种联系。J. S. 密尔和R. H. 洛采都在自己的逻辑中捍卫心理主义,他们声称,内省为数学公理和逻辑原理提供了惟一基础。这个立场遭到了弗雷格和卡尔纳普的严厉批评,但在自然化的认识论中却得到了复兴。

“心理主义,即用说者具有的某个内在心理机制解释意义。”——达米特:《语言之海》,1993年,第101—102页。

心理学者谬误

W. 詹姆斯的术语,用以指对心理学者自身心的状态特征与他正在研究的原本心的状态的实际特征的混淆。这种谬误有不同表述,既可

studying. It has different formulations, and can refer either to a psychologist's relation to the experience of others or to a person's comments on his own experience. The fallacy also arises from the psychologist's failure to recognise the hierarchy of relations of an original mental state. A person who possesses such a mental state may report at a higher level, and the psychologist will comment in turn on the report. He will believe that the original mental state may only have the characteristics he defines within his theory and will take his own knowledge as the whole sphere of knowledge about the object. With the formulation of this fallacy, James claimed that there is a gap between theoretical constructs and the experience on which they are based.

"Another variety of the psychologist's fallacy is the assumption that the mental state studied must be conscious of itself as the psychologist is conscious of it." —James, *The Principles of Psychology*, 1890, vol. 1, p. 197.

Psycho-physical parallelism, see parallelism

Public choice

Also called social choice, an area of political philosophy that is heavily influenced by economic theory and concerns the establishment of a logic of rational social action, such as voting procedures, lobbying or electoral reform. Each individual is motivated to act by self-interest, and a rational choice is necessary for an action to achieve greatest advantage. However, under many circumstances, action has to be social and the rationality of individual choice has to depend on the rationality of the choices of other agents. Otherwise, a choice seeking the greatest consequence can turn out to obtain the worst outcome, as the prisoner's dilemma powerfully indicates. A major concern of public choice theory is to establish how rational agents might co-ordinate to achieve their mutual advantage. Since the public good is not the simple aggregate of individual goods, another aspect of public choice theory is to work out the strategy by which a society can generate a single rational and impartial choice to maximise public goods from the various rational preferences of individuals, although Kenneth Arrow has shown that on certain plausible assumptions this is not possible. Since democracy is based on such an ideal, public choice theory becomes important for virtually every operation of democracy.

"Public choice applies economists' method to politics, and in particular, to two central problems: the collective action problem and the problem of aggregating preferences." —McLean, *Public Choice*, 1987, p. 10.

Public goods

Goods which anyone may enjoy whether or not they pay for them, for instance police protection or traffic lights.

指心理学者与他人经验的关系,也可指一个人对自己经验的评论。这种谬误的产生也因为心理学者不能识别最初心的状态的关系层次结构。一个拥有这种心的状态的人可以在一更高的层次上报告,而心理学家再就基于前者的报告加以评述。于是他会相信最初心的状态只具有他在其理论中所定义的特性,因而把自己的知识当做关于这个对象的全部知识。詹姆斯通过对这一谬误的表述,意在指出在理论构造物和作为其基础的经验之间有着相当的差距。

“另一种心理学者谬误,是假定所研究的心状态对于自身的意识,必定与心理学者对它的意识一样。”——詹姆斯:《心理学原理》,1890年,第1卷,第197页。

心—物平行论

见“平行论”条。

公众选择

也被称为社会选择,是政治哲学的一个领域,它受到经济学理论的很大影响,涉及的是对诸如投票程序、游说或选举的改革这些合理的社会活动的逻辑确立。每一个人都是在个人利益的促使下去行动的,合理的选择对于取得最大利益的行为是必要的。可是,在很多情况下,行为都必须都是社会性的,个人的合理选择必须依赖于其他人选择的合理性。否则,追求最佳结果的选择就会最终得到最坏的结果,就如同因犯困境有力地表明的那样。公众选择理论关注的一个主要问题是确立理性的人能如何协调以实现他们的互利。由于公众的利益不是个人利益的简单相加,公众选择理论的另一面就是制定策略,据此,一个社会就能从个人的各种合理选择中产生一个单一合理而公正的选择以实现最大的公众的利益,尽管K.阿罗已表明,根据某些可能的假定,这是不可能的。由于民主是基于这样一种理想,公众选择理论实际上对每一民主制度的运行都是重要的。

“公众选择把经济学家的方法运用于政治学,特别是运用于两个中心问题:集体行为问题和集合的选择问题。”——麦克利恩:《公众选择》,1987年,第10页。

公共利益

任何人都可以享受的利益,而不管他们是否对这些利益做出过贡献,如警察的保护或交

They are not subjected to crowding, that is one person's enjoyment of a public good does not entail that other people will enjoy the good less. The problem of public goods is associated with that of the free rider, for if no one pays for enjoying them, the public goods will be difficult to maintain. As a result, either the quality of the goods will be reduced or these goods might be entirely withdrawn. Understanding the possibility of maintaining public goods is also a central concern of public choice theory.

"A pure public good is defined as a good requiring indivisibility of production and consumption, non rivalness and non-excludability." —McLean, *Public Choice*, 1987, p. 11.

Public morality

The sphere in which standards of human behaviour are enforced by the law and violations of this moral legislation are subject to punishment according to the criminal law. Murder and stealing, for instance, are matters for public morality. It is generally held that public morality is essential to the maintenance of communal existence. In contrast, private morality and law are different spheres, and violations of private moral principles are condemned but are not subject to the law. Sometimes the demarcation between public and private morality is not easy to draw, for example in the cases of prostitution and pornography. It is a matter of controversy on what grounds and to what extent a society has the right to enforce its prevailing morality.

"The public morality of a state consists partly of those central tenets of morality which no reasonable man, we think, can reasonably dissent from; and partly of those collective aspirations and ideals which the community, either implicitly in the course of its history, or explicitly by deliberate avowals, has collectively adopted or affirmed." —Lucas, *The Principles of Politics*, 1985, p. 318.

Public particulars, see objective particulars

Public /private dichotomy

The distinction between the public and private spheres amounts to a distinction between the political and the personal and between what falls under the law and what falls outside the law. The state and social power should not apply to the private sphere, which is the limit of the public institutions of law. Traditionally, the family, home and personal taste and preference are private or domestic matters. Religion sometimes joins these other concerns and is a sign that the distinction is not absolute. Whatever the boundaries, the invasion of the private sphere is considered shameful. In contrast, the public sphere is the domain of relationships which are subject to the regulations of law and political authority. The distinction between the public and the private is essential

通指示灯。它们不会出现拥挤的问题,一个人对公共利益的享受不会使其他人少享受它们。公共利益问题与只享受而不付酬报相关,因为如果没人为享受它们付酬报,公共利益就难以为继。其结果只能是,要么公共利益的质量会降低,要么这些利益可能就根本提供不了。对维持公共利益的可能性的理解也是公众选择理论的一个核心问题。

"纯粹的公共利益被定义为这样一种利益,这种利益要求生产和消费以及非竞争和非排他的不可分离。"——麦克利恩:《公众选择》,1987年,第11页。

公共道德

公共道德是这样—一个领域,在这一领域中,人们行为的准则是由法律所强制的,违反这一道德法规将根据刑法而受到制裁。例如,谋杀和偷窃就是公共道德的问题。一般认为,公共道德对维护共同的生存是必不可少的。相比之下,私人道德和法律则是两个不同的领域,违反私人道德原则会受到谴责,但不受法律的管辖。有时公共道德和私人道德之间的界限不容易区分,如卖淫和色情描写问题。社会根据什么和在多大程度上有权强制其流行的道德是一个有争议的问题。

"—一个国家的公共道德,部分地是由一些道德的核心原则构成的,这些原则我们认为没有一个有理性的人会对它们合理地持有异议;部分地是由一些已为公众接受和肯定的共同要求和理想构成,这些要求和理想或者隐含在其历史过程中,或者为有意的宣称所明确表述。"——鲁卡斯:《政治学原理》,1985年,第318页。

公共殊相

见“客观殊相”条。

公共和私人的两分法

公共领域和私人领域之间的区分,相当于政治领域和个人领域之间的区分、法律管辖之内的东西和法律管辖之外的东西的区分。国家和社会的权力不应运用于私人领域,这是对公共法律机构的限制。从传统上讲,家庭、住宅及个人的兴趣和偏爱是个人的或家里的事。宗教有时连接这些其他方面的事情,它表明这种区分不是绝对的。无论这种区分的界线是什么,对私人领域的侵犯都被认为是可耻的。相比之下,公共领域是受法律规范和政治权威支配的关系的领域。对自由主义理论而言,公共与私人的区分对于维护个人的隐私权和自由(虽然其他权利是基于公共领域的)及表明政治权威的合法

for liberal theory to maintain the privacy-based rights and freedom of the individual (although other rights are based in the public sphere) and to indicate the legitimate extent of political authority. The distinction is not respected in fascist and totalitarian systems.

The distinction is challenged by many feminists, who describe the public sphere as one of justice, autonomy and independence and the private sphere as one of care, nurturing and bonding. Feminists claim that the distinction is gender based, that it legitimates the exclusion of women from the public sphere, that it ignores domestic violence and male domination over women and children in the private sphere. Hence, feminism attempts to demolish this dichotomy or to remove it from patterns of domination.

"A clear dichotomy between the public (political and economic) and the private (domestic and personal) has been taken for granted, and only the former has been regarded as the appropriate sphere for developmental studies and theories of justice, respectively, to attach to." —Okin, in Nussbaum and Glover (eds), *Women, Culture and Development*, 1995, p. 179.

Punctuate property

Also called atomistic property, a property which is unique to the thing that possesses it, and is not shared by any other things. In contrast, an anatomic property or holistic property is a property possessed by at least two things. A major question in contemporary philosophy of language asks whether a semantic property can be punctuate.

"An atomistic or punctuate property is one which might, in principle, be instantiated by only one thing." —Fodor and Lepore, *Holism*, 1992, p. 1.

Punishment

Punishment contains three factors: (1) it is the infliction of harm to the wrongdoer; (2) this infliction is imposed by authority; (3) the authority imposes the infliction intentionally. Since punishment itself looks like a kind of harm, it requires a theoretical justification. Historically, there are two rival theories of the justification of punishment. The first is retributivism which claims that a wrongdoer deserves a punishment because it is in proportion to his offence. Through punishment, a society indicates its intolerance of certain types of behaviour committed by rational beings. Accordingly, punishment in itself is an intrinsic good. The second position is utilitarianism or consequentialism which claims that punishment itself is an evil, but it can be justified if this evil is outweighed by the good consequences of its results. These consequences include: the deterrence of the same offender from committing crime again, the prevention of others from doing the same wrong, and the rehabilitation of the offender. There is much debate about which of these

限度是至关重要的。这种区分在法西斯主义和极权主义制度中是不受尊重的。

这种区分受到很多女性主义者的挑战,她们把公共领域说成是公正的、自主的和独立的领域,而把私人领域说成是照管、养育和维系的领域。女性主义者认为,这一区分是以性别为基础的,它使将妇女排除在公共领域之外合法化,它无视私人领域里的家庭暴力和男人对妇女和儿童的统治。因此,女性主义者试图推翻这种两分法或使其摆脱支配的模式。

“公共的(政治的和经济的)和私人的(家庭的和个人的)之间明确的两分法一直被认为是理所当然的,而且只有前者一直被视为发展研究和正义理论分别隶属的适当的领域。”——奥肯,见纽斯堡姆和格洛弗(编):《妇女、文化和发展》,1995年,第179页。

精细特性

也称作“原子特性”,是指拥有它的事物唯一具有的那种特性,而其他任何事物都不具有这个特性。与之对应的是解剖特性或“整体特性”,这是至少为两个事物所拥有的特性。当代语言哲学中讨论的一个主要问题就是,语义特性是否能够是精细的。

“原子的或精细的特性在于,它原则上只能用一个事物加以说明。”——福多和拉普:《整体论》,1992年,第1页。

刑罚

刑罚包含三个因素:(1)它是对做坏事的人的伤害性的处罚;(2)这种处罚是由权力强加的;(3)这一权力是有意识地强加那种处罚的。由于刑罚本身看上去是一种伤害,它要求一种理论上证明其是正当的理由。从历史上看,有两种争论不休的有关刑罚的正当性的理论。第一种是惩罚主义,它主张做坏事的人应受刑罚,因为这与他的罪过是相称的。通过刑罚,一个社会表明它对有理性的人的某些行为是不能容忍的。因此,刑罚就其本身而言是一种内在的善。第二种主张是功利主义或后果主义,它认为刑罚本身是恶的,但如果这种恶在价值上为其所导致的好的后果所超过,它就可以被认为是正当的。这些后果包括:制止同一犯罪者再次犯罪,防止其他人犯同样的罪行,以及使犯罪者从新做人。对在正当的刑罚中这些后果中的哪一种应置于优先地位,人们有很大的争议。这两种立场为得到承认而相互争论。惩罚主义认为,假

consequences should have priority in justifying punishment. These two positions have vied with one another for acceptance. According to retributivism, an utilitarian position could lead to the punishment of the innocent provided that it can produce better consequences. Utilitarianism, on the other hand, charges retributivism with cruelty, for it favours harm and suffering even if it does not produce any good. Various proposals have been advanced to reconcile the conflict between retributivism and utilitarianism concerning punishment, but they are generally unconvincing. One influential suggestion is that utilitarianism should be appealed to when we justify the need of a society for a system of punishment, and retributism should be appealed to if we need to justify the punishment of a particular person in a particular way.

"Let us describe punishment as simply an authority's infliction of a penalty on an offender, and now allow an offender to be a man who has broken a rule out of intention or negligence, or a man who has broken certain rules out of neither, or a man who occupies a certain position of authority with respect to a rule-breaker in either of the preceding sense." Honderich, *Punishment*, 1989, p. 19.

Pure

In Kant's philosophy, something which is independent of experience. It is associated with terms such as transcendental, form, spontaneity, autonomy, original, *a priori* and rational and contrasts with terms such as empirical, matter, receptivity, heteronomy, derived, *a posteriori* and sensational. Kant also used pure as an adjective to qualify terms such as apperception, concept, intuition, principle, reason, representation.

"A priori modes of knowledge are entitled pure when there is no admixture of anything empirical." —Kant, *Critique of Pure Reason*, B3.

Pure apperception, see transcendental apperception

Pure concepts of reason, see idea (Kant)

Pure ego theory

Locke claimed that we do not know the substance which is the bearer of all attributes and only recognise its existence through its various attributes. The pure ego theory of the self is the application of this epistemological and metaphysical claim to the problem of the self. The theory holds that the self itself is unknown, for it is outside experience, yet we know of its existence through its manifestations. A pure ego is the substance of all psychological attributes, and is the grammatical subject of all psychological statements. It is a

如刑罚能产生更好的后果,那功利主义的主张就会导致刑罚无辜。另一方面,功利主义则指责惩罚主义残酷,因为后者赞同伤害和使人痛苦,即使在处罚并不导致任何好的结果的情况下也是如此。调和惩罚主义与功利主义二者在刑罚问题上的分歧的各种尝试已经提出,但一般说来都不能让人信服。一种有影响的建议是,当我们论证一个社会需要一种刑罚制度时需求助于功利主义,如果我们需要论证对某人处以某种刑罚时则应求助于惩罚主义。

"让我们把刑罚简单地描述为权力对犯罪者实行的一种处罚,那犯罪者就可以是一个故意或因疏忽触犯了法规的人,或一个既不是故意也不因疏忽触犯法规的人,或一个与前两种意义上的触犯法规者相关的掌握某种权力的人。"——洪德里奇:《惩罚》,1989年,第19页。

纯粹

在康德哲学中,它指某种独立于经验的东西。它常常与下列术语相关联:先验、形式、自发性、自律、本源的、先天的和理性的等,而与它相对的是这样的术语:经验的、质料、接受性、他律、派生的、后天的和感性的。“纯粹”在康德那里也用作形容词来修饰限制统觉、概念、直觉、原理、理性、表象等术语。

“知识的先天方式如果未混杂有任何经验的东西时,使命之曰纯粹。”——康德:《纯粹理性批判》,B3。

纯粹统觉

见“先验统觉”条。

理性纯粹概念

见“观念(康德)”条。

纯自我理论

洛克声称,我们并不了解那个具有所有属性的实体,我们只通过其各种属性来认识其存在。关于自我的纯自我理论是这一认识论的和形而上学主张在自我问题上的应用。这一理论主张,自我本身是未知的,因为它在经验之外,但我们通过它的表现而得知它的存在。一个纯自我是那个具有所有的心理属性的实体,在语法上是所有的心理陈述的主语。它是一个支持在自我的一段短暂历史中的各种事件的整体性

peculiar constituent which supports the unity of the various events in one temporal slice of the history of a self, and it is the unity of the successive slices of the total history of a self. Such a pure ego is an inferred entity, which is posited because there must be something which underlies and supports various modes of experience. We may call it the I, the self, the ego or the subject. The totality of states of the same mind belong to this pure ego and it persists as long as the mind persists. This theory can be contrasted to the bundle theory. A major difficulty faced by pure ego theory is how to account for the knowledge of one's own self. Kant's claim that the "I think" which accompanies all our representations is not an object and Wittgenstein's critical assessment of the metaphysical subject might help us to retain the self without requiring that it is a pure substantial basis for our experiences.

"The pure ego theory preserves the unity and the endurance of the self, but it does so at the cost of making the self non-experiential, and that is at odds with our native knowledge of ourselves." —Evans, *The Subject of Consciousness*, 1970, p. 30.

Pure hypothetical syllogism, see mixed hypothetical syllogism

Pure reason, see *Critique of Pure Reason*

Pure theory of law

A theory developed by the Austrian legal philosopher Hans Kelsen and philosophically based on Neo-Kantianism. The theory is pure in the sense that the law should be a universally valid system that is free of all that is changeable and yet able to give ideals which guide lawyers in the search for justice. All moral, political and sociological contents must be purged from the science of law. According to Kelsen, law is a system of norms, a hierarchy of normative relations which measures human conduct by the use of sanction. The legal norms constitute a relation of condition and sequence rather than a command. "If A is done, B ought to happen". The validity of legal norms is not based on conflicting authorities, but is ultimately derived from a basic norm (*Grundnorm*) which is postulated in the historically first constitution. The validity of the basic norm is not derived, but must be assumed as an initial hypothesis. Legal theory is concerned with the conceptual tools for analysing the relations between the fundamental norms and all lower norms within a legal system. It is not concerned with its moral content, which should be the subject-matter of politics or moral theory. On this basis, Kelsen attacked natural law theory, which insists on a necessary connection between law and morality. He drew a sharp distinction between "is" and "ought", and denied the possibility of obtaining objective knowledge of legal

的特殊组成成分, 又是自我的整个历史的相继片段的整体。这样一个纯自我是一个推断的存在物, 它之被假定是因为一定要有某种东西支持各种形式的经验。我们可以称之为我、自我或主体等等。同一个心的诸种状态的整体属于这个纯自我并且这个纯自我与心持续的时间一样长。这一理论可与捆束理论相对照。纯自我理论所面临的主要困难, 在于如何说明一个人关于自己的自我的知识。康德认为, 那伴随我们一切表征的“我认为”不是一个对象, 而维特根斯坦则对形而上学主体做了批判考察, 他们的观点或许可以帮助我们保留自我, 而不要求它是我们经验的纯实体性基础。

“纯自我理论维护自我的统一和持续, 但它这样做的代价是使自我变成非经验的东西, 而这与我们关于自己的朴素知识是相左的。”

埃文斯:《意识的主体》, 1970年, 第30页。

纯假言三段论

纯粹理性

见“《纯粹理性批判》”条。

纯粹法学

奥地利法哲学家H. 凯尔逊创立的一种理论, 其哲学基础是新康德主义。这一理论在这样一种意义上是纯粹的, 即法律应当是一种普遍有效的体系, 这一体系摆脱了一切可变的東西, 但能提供指导律师寻求正义的理想。所有道德的、政治的和社会学的内容都必须从法律科学中清除出去。在凯尔逊看来, 法律是一个规范的体系, 是运用制裁来衡量人类行为的规范关系的等级结构。法律规范构成一种条件和结果的关系而不是一种命令。“如果做了A, B就应该发生”。法律规范的效力不是基于冲突的权力, 而是最终起源于历史上第一部宪法中所要求的“基本规范”(Grundnorm)。这种基本规范的效力不是派生的, 但必须被假定为最初的前提条件。法学理论涉及的是用来分析一个法律体系中的基本规范和所有低级规范之间关系的概念工具。它不涉及道德内容, 后者应是政治学或道德理论的主题。以此为基础, 凯尔逊攻击了坚持认为法律和道德之间有必然联系的自然法理论。他在“是”与“应当”之间做了截然的区分, 并否认获取法律规范的客观性知识的可能性。法律科学是描述性的而不是规定性的。凯尔逊的纯粹法学是20世纪最有影响的法学理论之一, 他的探讨类似奥斯汀的分析的法理学, 并为

norms. The science of law is descriptive rather than prescriptive. Kelsen's pure theory of law is one of the most influential legal theories in the twentieth century. His approach is similar to Austin's analytical jurisprudence, and was further developed by H. L. A. Hart.

"A pure theory of law must be uncontaminated by politics, ethics, sociology, history. Its task is knowledge of all that is essential and necessary to law, and therefore freed from all that is changing and accidental in it." —Friedmann, *Legal Theory*, 1967, p. 275.

Purely referential, see referentially opaque

Pyrrhonism, see scepticism

Pythagoreanism

Philosophy of the Greek philosopher Pythagoras and his followers. Little literature exists to enable us to present a systematic picture of this philosophy or even to distinguish Pythagoras' own view from those of his followers. Generally, Pythagoreanism is a mixture of religion and science. It accepted the transmigration of the soul and enjoined the practice of an ascetic way of life. The aim of philosophy was to purify the soul. Through its study in mathematics, music, and astronomy, Pythagoreanism derived the doctrine that number is the first principle of all things and that the whole universe is a harmony. Accordingly, it held that everything could be explained in mathematical terms. All this deeply influenced Euclid, Empedocles and especially Plato. In the first century BC there was a revival of Pythagoreanism, usually called Neo-Pythagoreanism, which concentrated on the mystical and superstitious side of Pythagoreanism and its reverence for number. This revival had great impact on Neo-platonism.

"With Pythagoreanism begins the transformation of the Greek mode of thought by a foreign element which originated in the Orphic mysticism." —Zeller, *Outlines of the History of Greek Philosophy*, 1980, p. 3.

H. L. A. 哈特进一步发展。

“纯粹法学肯定没有被政治学、伦理学、社会学和历史学所污染。它的任务是认识所有对法律说来是本质的和必然的东西,因此,它也就摆脱了其中所有变化的和偶然的东西。” 弗里德曼:《法学理论》,1967年,第275页。

毕达戈拉斯主义

指希腊哲学家毕达戈拉斯及其追随者的哲学。由于所存文献极少,我们很难对该派哲学作系统描述,甚至要将毕达戈拉斯本人的观点与其追随者的观点相区分也不是一件容易的事。一般地说,毕达戈拉斯主义是科学与宗教的混合物。它相信灵魂轮回,实践一种禁欲的生活方式。哲学的目的被认为是净化灵魂。通过它在数学、音乐和天文学等领域的研究,毕达戈拉斯主义主张,数是万物的第一原则(本原),并且整个宇宙是一种和谐。据此,一切事物都用数学术语来解释。所有这些深深地影响了欧几里德、恩培多克勒,尤其是柏拉图。在公元前1世纪,有一场毕达戈拉斯主义的复兴运动,通常叫做“新毕达戈拉斯主义”。新毕达戈拉斯主义集中发展毕达戈拉斯主义的神秘的和超自然的方面,尤其是后者对数的崇拜。这场复兴运动对新柏拉图主义影响甚巨。

“从毕达戈拉斯主义开始,希腊思想方式由于受到起自奥尔菲神秘主义的外来因素的影响而发生变化。” —策勒:《希腊哲学史纲要》,1980年,第3页。

Q

Quadrivium

The liberal arts curriculum in the medieval university consisted in seven disciplines, which were divided into a lower division of *trivium*, including grammar, rhetoric and logic, and a higher division of *quadrivium*, including geometry, arithmetic, astronomy, and music. The former is concerned with the art of discussion, and the latter is concerned with the physical world and its principles. The *quadrivium* was studied after the study of the *trivium* was completed. Virtually every graduate of a medieval university received a training in these seven subjects.

"The *quadrivium*-geometry, arithmetic, astronomy and music-constituted a 'scientific' syllabus, summarising the principles of order in the physical world." - Haren, *Medieval Thought*, p. 68.

Quale, singular of qualia

Qualia

[the plural of quale, from Latin; *qualis*, of such a kind or qualities]. The immediately experienced contents or objects of sense-awareness, giving what it feels like to have a sensation or to be in a perceptual state. Qualia, which include things such as the smell of coffee or the taste of sugar, are also called phenomenal properties. Qualia are neither intentional nor representational. How to understand the nature of qualia has been a matter of debate. Different accounts have been developed on the basis of different analyses of sense-data. The term was introduced by C. I. Lewis and Goodman for the simplest qualitative elements in the contents of sense-experience. Ayer claims that a quale should be distinguished from a sensory particular which is confined to a momentary episode of awareness. Instead a quale is a sensory universal, intersubjective and repeatable. It can be empirically realised in different minds and at different times.

"My qualia, then, are visual or other sensory patterns. I conceive of their range as being very wide. Anything counts as a quale that a person is able to pick out as a recurrent or potentially recurrent feature of his sense-experiences, from a two-dimensional colour expanse to a complex three-dimensional gestalt." - Ayer, *The Origins of Pragmatism*, 1968, p. 309.

四艺

在中世纪的大学中，学艺的课程由七门学科组成，分为低级和高级两段，低级的是 *trivium*（三艺），包括语法、修辞和逻辑，高级的是四艺，包括几何、算术、天文和音乐。前段涉及的是讨论的艺术，后段涉及的则是物理世界及其原理。“四艺”要在“三艺”的学习完成之后才能进行。实际上，中世纪大学的每个毕业生都接受了这七门功课的训练。

“四艺（即几何、算术、天文和音乐）构成了一张‘科学的’课表，因为它扼要讲授了物质世界中秩序的原理。” 哈仁：《中世纪思想》，第 68 页。

感受性

“感受性 (qualia)” 的单数。

感受性

「quale 的复数，源自拉丁文 *qualis*，是这种的或具有这样的性质的」指直接经验到的内容或感觉意识的对象，亦即具有一个感觉或处于一个知觉状态的样子。诸如咖啡的气味、糖的味道，这样的感受性也被称为“现象特性”。感受性既不是意向的，也不是表征的。如何理解感受性的本质一直是一个有争论的话题。基于对“感觉材料”的不同分析，人们提出了不同的解释。这一术语由 C. I. 刘易斯和古德曼引进，指感觉经验的内容中最简单的性质元素。艾耶尔声称，一个感受性应当与一个局限于意识的瞬间情节的感觉殊相相区别。一个感受性是一个普遍的、主体间的、可重复的感觉。它可以在不同的时刻、在不同的心中经验地实现。

“因此，我的感受性是视觉的或其他感觉模式的。我设想它们的范围是非常广的。从二维的颜色平面到复杂的三维格式塔，一个人由其感觉经验中所能看到的任何再发的或潜在再发的特征都是一个感受性。”——艾耶尔：《实用主义的起源》，1968 年，第 309 页。

Qualified good

Kant's distinction between qualified good and unqualified good contrasts with the distinction between instrumental and intrinsic goods drawn by utilitarianism. For Kant, many goods are intrinsic, such as pleasure, the absence of pain and happiness in general, because they are not for further ends. But they are still goods with qualification, rather than goods which are absolute or unqualified. Even happiness is good only when it is deserved and is not good if it is enjoyed by a bad person who does not deserve it. Many other traditional goods, such as moderation or courage, can be put to bad use under some circumstances. Kant held that the only unqualified good, which is good whatever the circumstances, is a good will and that other goods always presuppose a good will.

"Moderation in emotions and passions, self-control, and calm deliberation are not only good in many respects but even seem to constitute part of the intrinsic worth of a person. But they are far from being rightly called good without qualification... For without the principles of a good will, they can become extremely bad." —Kant, *Groundwork for the Metaphysics of Morals*, p. 394.

Quality of life

The degree of satisfaction or happiness in one's life. A traditional version of utilitarianism claims that the quality of life should be assessed by utility according to an objective measure such as GNP per capita. But this raises problems, because even with utility there are problems about its distribution and its bearing on people's life. It seems that many other indicators have to be included, such as health care, education, social and natural environments, life expectancy, the legal privileges one enjoys and the freedom one has. Furthermore, in many cases the quality of life seems to be a subjective matter about how one feels about one's life, without regard to external conditions. A person could be very happy in a situation which others judge to be miserable. Accordingly, it is a matter of dispute whether there is a unique standard of requirements which leads to a better quality of life the more completely it is satisfied. In discussions of euthanasia and suicide, some philosophers ask whether it is morally permissible to terminate a life that is not worth living in terms of quality of life.

"When we inquire about the prosperity of a nation or a region of the world, and about the quality of life of its inhabitants, Sissy Jupe's problem still arises: how do we determine this? What information do we require? Which criteria are truly relevant to human 'thriving'?" —Nussbaum and Sen (eds), *The Quality of Life*, 1993, p. 1.

有条件的善

康德作出的有条件的善和无条件的善的区别,与功利主义作出的工具的善和内在的善的区别相对照。对于康德来说,许多善是内在的,如愉快、没有痛苦和一般的幸福,因为它们不是为了更进一步的目。但它们仍然是有条件的善,不是绝对的或无条件的。因为,即使幸福是善的也只有当它是应得的时候,如果幸福被那些不应得到它的坏人获得,那么幸福就不是善的。许多其他传统的善,如节制,勇敢等等,在某些情况下也可以服务于恶。康德认为,惟一的无条件的善,即在任何情况下都保持为善的惟一的东西,乃是善良意志,其他的善永远以善良意志为条件。

“节制情欲,情感适度,自持自制,深思熟虑不仅在许多方面来看是善的,而且甚至看来构成了一个人的内在价值的一部分。但它们远不能说成是无条件的善……因为不以善良意志为原则,它们就会变成极端的恶。”——康德:《道德形而上学基础》,第394页。

生活质量

对人生活的满意或幸福的程度。传统的功利主义观点认为,生活质量应根据一种客观的尺度,如人均国民生产总值由功利来评估。但这引起了问题,因为即使就功利来说,也还存在有关它的分配以及它对人生活的影响问题。看起来还有很多其他指标必须包括进去,如保健、教育、社会和自然环境、估计寿命、所享受的法律特权以及所拥有的自由。此外,在很多情况下,生活质量似乎只是一个主观的问题,即只是一个人如何感受其生活的问题,而与外部条件无关。一个人在其他人看来是悲惨的境况下也可以是非常愉快的。因此,是否存在一个惟一的导致令人更完全满意的更好的生活质量的要求标准,是一个有争议的问题。在有关安乐死和自杀的讨论中,一些哲学家提出了这样一个问题:在一个人就其生活质量而言已不值得活下去的情况下,从道德上讲是否允许结束他的生命?

“当我们询问一个国家或世界的一个地区的繁荣,以及其居民的生活质量时,S.朱佩的问题还会出现:我们如何确定这个问题?我们所需的信息是什么?哪一标准是真正与人的‘繁荣’相关的?”——纽斯堡姆和森(编):《生活质量》,1993年,第1页。

Quantifier

In categorical propositions of standard form, "some" is a quantifier for particular propositions and "all" or "no" are quantifiers for universal propositions. Modern predicate logic calls "some" the existential quantifier and "all" the universal quantifier. The existential quantifier is symbolised as $(\exists x)$, which reads "there is at least one x that..." or "for some x ...". The universal quantifier is symbolised as (x) or $(\forall x)$, which reads "for any x ..." or "for all x ...". Quantifiers are employed in sentences with variables (x, y, \dots), predicates (F, G, \dots), relations (R, \dots), the identity sign ($=$) and the logical constants (and, or, not, if-then...), $(\exists x)(\exists y)$ (if Fx and Gy , then $x = y$) reads "For some x and for some y , if x is F and y is G , then x is identical with y ". The individual or multiple use of the universal quantifier "all" and the existential quantifier "there exists" to bind variables in sentences has been seen as the key to the development of a powerful and flexible system of modern predicate logic. Quantifiers can occur more than once in a statement, for example "All human beings have some ancestors". The application of the quantifier, called quantification, turns an open sentence with unbound variables into a closed sentence in which the variables are bound with quantifiers. There is debate whether quantifiers can bind items other than individual variables, such as predicate, relational or sentential variables.

"Usual notations for these respective purposes are ' (x) ' and ' $(\exists x)$ ', conveniently read 'everything x is such that' and 'something x is such that'. These prefixes are known, for unobvious but traceable reasons, as quantifiers, universal or existential." —Quine, *Word and Object*, 1960, p. 163.

Quantum theory

A modern physical theory, developed by Planck, Bohr, Heisenberg and Schrödinger to deal with the structure and behaviour of sub-atomic particles. According to quantum theory, in the subatomic world the position and velocity of an electron at any moment can be known only with mutually related uncertainty. Newton's theory of causality does not apply in the microworld. For sub-atomic particles, we can specify neither the energy at a particular time nor the momentum at a particular position with precision. We can, however, calculate the energy over a period of time or the momentum over a range of positions. This lack of certainty at a fundamental physical level establishes a new picture of reality and seriously undermines the classical conceptions of particle and thing. The principle "every event has a cause" is no longer true *a priori*. If the theory of relativity challenges the traditional concepts of time and space, quantum mechanics challenges the traditional conceptions of physical causality and determinism. Although the theory has had great empirical success, interpreting the theory and explaining why it

量词

在标准形式的直言命题中，“有些”是一个用于特称命题的量词，而“所有”或“没有”是用于全称命题的量词。现代谓词逻辑称“有些”为存在量词，称“所有”为全称量词。存在量词用符号 $(\exists x)$ 表示，读作“至少存在一个 x ……”或“对有些 x ……”。而全称量词用符号表示为 (x) 或 $(\forall x)$ ，意思是“对于所有 x ……”或“对任何 x ……”。量词被运用于带有变项 (x, y ……)，谓词 (F, G ……)，关系 (R, \dots)，等号 ($=$) 和逻辑常项 (与、或、非、如果……则) 等的句子中。 $(\exists x)(\exists y)$ (如果 Fx 与 Gy ，则 $x = y$) 读作“对于有些 x 和有些 y ，如果 x 是 F 并且 y 是 G ，那么 x 等于 y ”。全称量词“所有”和存在量词“存在”的单独或复合使用以使变项在句子中连接起来，被视为发展出一个有力的灵活的现代谓词逻辑系统的关键。量词在陈述中可以不止一次地出现，例如“所有的人都是一些先辈”。量词的应用称作量化，它使带有无约束变量的开语句变为闭语句，其中变量为量词所约束。关于量词是否能连接不同于个体变量的其他变量，如谓词、关系或句子变量，则仍有争议。

“对于这些不同意义的通常记号为 ' (x) ' 和 ' $(\exists x)$ '，方便地读作 '每一个 x 如何如何' 和 '有些 x 如何如何'。这些前缀出于不明显的但可探寻的理由，被称作量词，即全称量词或存在量词。”——奎因：《词与物》，1960年，第163页。

量子理论

由普朗克、波尔、海森堡和薛定谔提出和发展的现代物理学理论，研究微观粒子的行为和结构。按照量子理论，在微粒世界中，一个电子在任何时刻的位置和速度只能以相关的不确定性来认识。牛顿的因果性理论不能应用于微观世界。对于微观粒子，我们既不能精确地测定特定时刻的能量，也不能精确地测定特定位置的动量。然而，我们能预测一段时间内的能量或一个区间位置的动量。在基础物理学层次上缺乏确定性这件事情，建立了一幅新的实在图像并严重地破坏了粒子和物的古典概念。“一切事件都有原因”的原理不再是先天的真理。如果相对论是对传统的时间和空间概念的挑战，那么，量子力学就是对传统的物理因果性和决定论概念的挑战。虽然这个理论已经在经验上取得了巨大的成功，但对这个理论的解释和阐明它为什么成功一直处于激烈的论争之中。在传统上，一直存在着两个阵营。哥本哈根派的解释是以波尔和海森堡的观点为基础而发展起来的，它提

succeeds have been matters of fierce debate. Traditionally, there have been two camps. The Copenhagen interpretation, developed on the basis of the views of Bohr and Heisenberg, offers an anti-realist interpretation, which claims that quantum theory does not describe the way the world is. The rival realist interpretation, developed from Einstein's criticism of Bohr and defended by Popper and Putnam, argues that a quantum system is really fully determinate like classical systems, even though our knowledge of the system is indeterminate.

"Quantum theory gives us a highly workable algorithm for making prediction about the results of measurements, but philosophers and physicists are in total disagreement about what, . . . quantum theory tells us about the way the quantum world is." —Gibbins, *Particles and Paradoxes*, 1987, p. x.

Quasi-syntactical sentence, see pseudo-object sentence

Quaterno terminorum, the Latin name for the four-term fallacy

Quid facti, see deduction (Kant)

Quid juris, see deduction (Kant)

Quidditas

[from Latin: *quid*, what, and *quidditas*, whatness, quiddity]. The essential characteristic or nature of a thing, the nature which makes a thing the kind of thing it is. *Quidditas* serves as the content of definition and as the object of *intellectus*. It is a synonym of *essentia* (essence). To discover *quidditas* is to answer the question *quid est?* (What is it?). Duns Scotus contrasted *quidditas* to *haecceitas*, that is a unique essence or individual form which determines a thing's individuality.

"The proper object of the intellect is the whatness of things (*quidditas*)."—Aquinas, *Summa Theologiae*, 1a85, 6.

Quine-Duhem thesis, see Duhem-Quine thesis

出了反实在论的解释,认为量子理论并不描述世界存在的方式。与其对立的实在论的解释是从爱因斯坦对波尔的批评而发展起来的,由波普和普特南加以辩护,他们认为,量子体系实际上像古典体系一样是完全确定的,即使我们对这个体系的认识是不确定的。

“量子理论为对测量结果作出预测而给我们提供了高度可操作的计算方法,但哲学家和物理学家对此意见分歧,……量子理论告诉我们关于量子世界存在的方式。”——吉宾斯:《粒子和悖论》,1987年,第x页。

R

Racism

The claim that there is a biologically determined hierarchy of capacity or value among different races and that allegedly inferior races should be ruled by allegedly superior races. Racism is generally driven by fear and hatred and has led to major genocidal violence. Modern European racism can be traced to the eighteenth century, along with the emergence of anthropology as a discipline that compares and evaluates racial differences. This development, however, was preceded by similar patterns in the period of discovery and conquest of non-European peoples which began at the end of the fifteenth century. Racism has often been presented as a scientific enterprise, but its notion of race and its empirical claims about different peoples have repeatedly been shown to be unjustified and it is best understood as a pseudo-science. Racism has been particularly identified with the ideology and practice of slavery and other repressive control of African, Asian and indigenous American and Australian peoples. Historically, racism was employed to justify colonialism and imperialism and to destroy indigenous people and their culture. Racism is related to anti-semitism and in Germany was the intellectual foundation of Nazism. Theories attending to economic, cultural, historical, social or universal human factors have sought to explain the conditions under which racism arises and why it provides such deep and powerful motives for destructive action. Colonial studies and post-colonial studies place these questions in historical context. All forms of racism are dangerous in practice, for they tend to create the inequalities between people that they claim to discover. Some philosophers try to determine whether oppression based on class, race or gender is most fundamental to understanding modern society and culture.

"Most definitions of racism tend to be based on the concept of biologically determined superiority of one human population, group or race over another." - Castles, *Here for Good*, 1984, p. 194.

Radical empiricism

William James' characterisation of his empirical doctrine, which has three basic facets: a postulate that only things definable in terms drawn from experience are debatable; a statement of fact that the relations between things are as much matters of direct particular experience as the things themselves; and a generalised conclusion that the parts of ex-

种族主义

声称在不同种族中存在一种由生物学决定的能力或价值的等级, 所谓的劣等种族应由所谓的优等种族来统治。种族主义通常受恐惧和憎恨所驱使, 并造成了大规模的灭绝种族的暴力行为。现代欧洲种族主义可以追溯到 18 世纪, 随之出现的是作为一门比较和评价种族差异的学科的人类学。不过, 在这一发展之前在 15 世纪末开始的对非欧洲人的发现和征服期间已有类似模式。种族主义常常装扮成科学事业, 但它的种族概念和它对不同人民的经验论断已反复表明它是荒谬的, 它最好被理解为伪科学。种族主义特别是指对非洲、亚洲、土著美洲和澳大利亚各族人民的奴隶制的思想和行为以及其他高压控制。从历史上看, 种族主义被用于为殖民主义和帝国主义以及毁灭土著人及其文化做辩护。种族主义与反犹太主义相关, 在德国, 它是纳粹主义的思想基础。那些关注经济、文化、历史、社会或普遍人类因素的理论已在试图说明种族主义产生的条件, 以及为什么它为毁灭性的行为提供了如此深入和强有力的动机。殖民地研究和后殖民地研究将这些问题置于历史联系之中。所有形式的种族主义在实践中都是危险的, 因为它们倾向在它们声称发现的人民之间制造不平等。某些哲学家试图确定, 基于阶级、种族或性别的压制对于理解现代社会和文化是否是最根本的。

"大多数种族主义的定义倾向于以生物决定意义上的一种人、一个集团或一个种族对另一的优越性概念为基础。" —— 卡索斯: 《追求善》, 1984 年, 第 194 页。

彻底的经验主义

W. 詹姆斯对其经验主义学说的表述, 具有三个基本层面: 公设——只有可用得自于经验的语句来定义的事物才是可争辩的; 事实陈述——事物之间的关系如同事物自身一样是直接的特定经验的对象; 一般结论——经验的各部分由其自身也是经验部分的关系, 而得以彼

perience hold together from next to next by relations that are themselves parts of experience. Experience is pure and needs no trans-empirical support. The radical nature of this empiricism is in its conclusion which takes experience to be something neither mental nor physical. Instead experience becomes the ultimate constituent of the universe out of which material and mental things are constructed. This is a position developed later by Russell in his *Analysis of Mind* as neutral monism. Radical empiricism is distinguished from traditional empiricism through denying the distinction between our sensations and external objects. James tried to provide a new account of knowledge and a solution to the mind-body problem. He called his position "radical", not because it was extreme, but because it attempts to remedy the defects he saw in traditional empiricism, namely its failure to include the relations of experience within the basic contents of experience. He also tried to reconcile empiricism and rationalism using his distinction between rough-minded and tender-minded temperaments. James claimed that his radical empiricism and his pragmatism do not entail one another. However, commentators usually conclude that at least some features of pragmatism lend support to radical empiricism.

Feyerabend used the term radical empiricism for the position that science should employ a single set of mutually consistent theories and reject theoretical pluralism.

"I am interested in another doctrine in philosophy to which I give the name of radical empiricism, and it seems to me that the establishment of the pragmatist theory of truth is a step of first rate importance in making radical empiricism prevail." James, *The Meaning of Truth*, 1909, p. xii.

Radical feminism

The belief that dominant political and social systems are characterised by oppression and that male oppression of women has provided the model for all other forms of oppression, such as racial or class oppression. The material condition of the subjection of women lies in their role in reproduction. Women are always slaves or objects, and men are always masters or subjects. Radical feminists argue that rape, pornography, prostitution, marriage and heterosexuality are all imposed by male power over women, either directly or through a range of indirect stratagems. They claim that the relationship between male and female must always be conflictual. Radical feminism seeks to analyse the roots of the oppression of women by men and to uncover the various ways in which male power is exercised, with the desire that such understanding will lead to drastic political and social reforms. This position was initiated by de Beauvoir's *The Second Sex* (1949), which was influenced by Sartre's existentialism. Other influential works include Figs' *Patriarchal Attitude* (1978), Firestone's *The Dialectic of Sex* (1971), Greer's *The Female Eunuch* (1970), and Millett's *Sexual*

此结合为一体。经验是纯粹的,不需要超经验的支持。这种经验主义的彻底性,在于它的结论把经验看做既非心理的,也非物理的东西。相反,经验成为物的和心的东西得以构造的宇宙的终极要素。这一观点后来为罗素在其《心的分析》一书中发展为“中立一元论”。彻底的经验主义有别于传统经验主义之处,在于否认我们的感觉与外部对象之间的区别。詹姆斯试图提供一种新的知识说明和对心-身问题的解决。他称其立场为“彻底的”,并非因为它是极端的,而是因为它意在弥补他所认为的传统经验主义的缺陷,即没能把经验的关系也包括在经验的基本内容之中。他也试图用他所区分的讲究实际的和崇尚空想的这两种不同研究风格,来调和经验论与唯理论。詹姆斯宣称他的彻底经验主义与他的实用主义并不彼此蕴涵,但评论者一般认为实用主义的某些特征至少部分支持着彻底经验主义。

费耶阿本德用彻底的经验主义这一术语,指那种认为科学应当采用单一组彼此相一致的理论而反对理论多元化的立场。

“我感兴趣的是另一种我称之为彻底经验主义的哲学学说,依我看,实用主义真理论的确立是使彻底经验主义流行起来的具有头等重要性的一步。”——詹姆斯:《真理的意义》,1909年,第xii页。

激进的女性主义

认为占主导地位的政治和社会制度是以压迫为特征的,男人对妇女的压迫为所有其他形式的压迫,如种族和阶级压迫提供了模式。妇女从属地位的物质条件在于她们在生殖中的角色。妇女总是奴隶或客体,而男人则总是主人或主体。激进的女性主义者争论说,强奸、色情描写、卖淫、婚姻和异性爱都是由男人对妇女的权力所强加的,不管这种强加是直接的还是通过一系列间接的策略。她们认为男人和女人之间的关系必然总会发生冲突。激进的女性主义力图分析男人压迫女人的根源,揭示男人权力运用的各种方式,并期望这种理解将导致激烈的政治和社会变革。这一主张是由波伏娃在她的《第二性》(1949)一书中首先提出的,它受到萨特的存在主义的影响。其他有影响的著作包括费格斯的《家长的态度》(1978)、费尔斯通的《性辩证法》(1971)、格内尔的《女太监》(1970)和米勒特的《性政治学》(1985)。

“在《第二性》中论述广泛的主题为激进的女性主义主张开辟了道路,这些主张是:在所有

Politics (1985).

"The breadth of subjects treated in *The Second Sex* prepared the way for radical feminist claims that: Patriarchy is the universal constant in all political and economic systems, that sexism dates from the beginning of history, that society is a repertoire of manoeuvres in which male subjects establish power over female objects." — Nyre, *Feminist Theory and the Philosophy of Man*, 1988, p. 95.

Radical interpretation

A process of interpreting a language unknown to the interpreter without relying upon existing linguistic knowledge. It tries to answer the question how we can understand a particular utterance that is not antecedently given and cannot be helped by a translation manual. The theory is developed by D. Davidson, patterned on Quine's radical translation. While radical translation intends to establish a linking of synonyms, radical interpretation requires that we establish the truth conditions of the sentences of a foreign language. While Quine's radical translation avoids the use of psychological terms like belief and desire, radical interpretation requires the interpreter to specify the beliefs and desires of the speakers. This interpretation relies heavily on the principle of charity, that is the assumption that most of the utterances in the language express true beliefs.

"The term 'radical interpretation' is meant to suggest strong kinship with Quine's 'radical translation'. Kinship is not identity, and 'interpretation' in place of 'translation' marks one of the differences; a greater emphasis on the explicitly semantical in the former." — Davidson, *Inquiries into Truth and Interpretation*, 1984, p. 126.

Radical philosophy

A British philosophical movement that arose in the 1970s with the journal *Radical Philosophy* (1972-) as its main forum. Its aim has been to contest the philosophical predominance of analytical philosophy in British universities and intellectual life. In its early phase, it rejected Oxford philosophy, although many members of the radical philosophy group were educated in Oxford. It complained that analytical philosophy was narrow and complacent and that it ignored many crucial issues that require a philosophical response, including specific questions of culture, tradition, history and politics. It held that the dominant British philosophy was a specialised subject that had little to offer anyone outside a small circle of professional philosophers. Radical philosophy has attempted to change this situation by challenging and subverting linguistic philosophy. The journal did not lay down a philosophical line, although it paid a great deal of attention to traditions ignored by analytical philosophy, especially to European philosophical movements such as phenomenology and existentialism, contemporary Hegelian

的政治和经济制度中,父权制是普遍永恒的;性别歧视从历史一开始就存在;社会全部是对抗演习,在这些对抗演习中男性主体确立了对女性客体的权力。"——尼雷:《女性主义理论和男人的哲学》,1988年,第95页。

彻底的解释

无须依赖现存的语言知识而解释一种解释者未知语言的过程。它试图回答这样一个问题,我们如何能够理解一个先前并未见过而且无法得到翻译手册帮助的特殊句子。戴维森根据奎因的“彻底的翻译”提出了这个理论。彻底的翻译是要确立同义词之间的联系,而彻底的解释则需要我们确立一种外语句子的真值条件。奎因的彻底的翻译避免使用像信念和愿望这样的心理学术语,而彻底的解释则需要解释者详细地说明外语使用者的信念和愿望。这种解释强烈地依赖于“宽容原则”,即假定这种语言中的大多数话都表达着真的信念。

“所谓的‘彻底的解释’这个词,表明了它与奎因的‘彻底的翻译’有着强烈的血缘关系。这种血缘关系并不是两者相同,区分之一就是‘解释’替换了‘翻译’;即它更多地强调前者中语义的清晰性。”——戴维森:《真理与解释的探究》,1984年,第126页。

激进哲学

20世纪70年代在英国出现的一场哲学运动,以《激进哲学》(1972—)杂志为其主要论坛。它的目的是挑战分析哲学在英国大学和精神生活中的哲学上的优势。在它的早期阶段,它反对牛津哲学,尽管激进哲学群体中的很多成员都是在牛津接受的教育。它抱怨分析哲学领域狭窄而且自满自足,并且无视很多要求哲学做出反应的至关重要的问题,包括文化、传统、历史和政治方面的特殊问题。它认为,居支配地位的英国哲学是一个专门学科,不为职业哲学家小圈子以外的人提供任何东西。激进哲学试图通过挑战和推翻语言哲学来改变这一现状。它的杂志虽然对为分析哲学所忽视的传统,特别是欧洲哲学运动如现象学和存在主义、当代黑格尔主义和马克思主义哲学、结构主义、后结构主义和解构主义倾注了很大的心血,但却没有制定一条哲学路线。近些年来,它与女性主义和后现代主义有了更多的联系。它一直反对大学机构的局限,并批判了正统哲学得以维持

and Marxist philosophy, structuralism, post structuralism and deconstructionism. Recently, it has been more associated with feminism and post-modernism. It has been hostile to the constraints of university institutions and has criticised the academic and social environments in which orthodox philosophy is maintained. Radical philosophy should not be confused with philosophical radicals.

"What radical philosophy objects to is not the investigation of language and concepts but rather the assumption that for philosophers such study means professional isolation from the world of material reality and acceptance of the ordinary language criterion of meaningfulness."—Edgley and Osborne (eds), *Radical Philosophy Reader*, 1985, p. x.

Radical translation

The translation of an alien language which has no links to familiar ones, where the translator cannot appeal to any dictionary, compare other translations, or consult any studies of that language. The only place he can begin is with the sentences which seem to be directed immediately on to stimulus conditions. A rabbit runs by and the speaker says "gavagai". The translator guesses from observation that this might refer to the rabbit, and then he subjects his guess to tests relating to further cases. He tries to ascertain whether the native speaker assents, dissents or does neither. What he gets from this process is at best a working hypothesis, and he can never be sure that his translation is the only correct one. Radical translation is a device designed by Quine for his discussion of the indeterminacy of translation and is a model for all attempts to understand the language of another.

"What is relevant to our purposes is radical translation, i. e. translation of the language of a hitherto untouched people." —Quine, *Word and Object*, 1960, p. 28.

Ramsey sentence

Also called a Ramsey sentence of a theory. The Cambridge philosopher Frank Ramsey claimed that the whole empirical content of a theory can be cast in the form of one sentence by conjoining sentences expressing the content of theory and by replacing all theoretical terms in the sentence by existentially bound variables. By replacing theoretical terms with bound variables, theories cease to be committed to specific kinds of entities and are rendered neutral concerning what entities will turn out to satisfy them. This approach to theories can support an instrumentalist view about what a scientific theory should be. It suggests that only observational terms are cognitive, while theoretical terms, as formal and non-descriptive symbols, should be eliminated. This account of theory is close to Craig's theorem and drew much attention in the 1950s and 1960s when the distinction between theoretical terms and observation terms and their relationship became a major topic in the philosophy of science.

的学术和社会环境。激进哲学不应与哲学激进分子相混淆。

“哲学激进主义反对的不是对语言和概念的探究,而是这样一种假定:对哲学家而言,这种研究意味着与现实物质世界的专业性的脱离和承认富有意义的日常语言标准。”——埃德雷和奥斯本(编):《激进哲学读本》,1985年,第x页。

彻底的翻译

对一种完全无知的外国语的翻译,译者无法借助于词典、参照其他的翻译或者参考对这种语言的研究。他惟一可以着手的是当下直接指向刺激条件的句子。一只兔子跑过去,土著人会说“gavagai”。译者从这个现象中可以猜测,这可能是指“兔子”,然后,他把这种猜测用于证明其他相关的情形。他试图弄清土著人是否同意或不同意他的猜测。他从这个过程中得到的,最多是一种有效的假设,但他却无法肯定他的翻译就是惟一正确的。彻底的翻译是奎因在讨论“翻译的不确定性”时提出的方法,也是试图理解其他语言的一种模式。

“与我们的目的相关的是彻底的翻译,即翻译一种先前从未接触过的人们使用的语言。”——奎因:《词与物》,1960年,第28页。

拉姆塞语句

也称作“关于理论的拉姆塞语句”。剑桥哲学家F. 拉姆塞认为理论的全部经验内容可以用一个语句的形式来表示,即通过连接所有表达理论内容的句子,并用存在约束变量取代句中所有理论术语。通过以约束变量取代理论术语,理论便不再承诺于特定种类的实体,而对什么实体能满足它们持中立立场。这种对待理论的态度,能支持对于科学理论应当是什么这一问题上的工具主义观点。它认为,只有观察术语是认知的,而理论术语仅仅是形式的和非描述性的符号,应当被消除。这种理论观接近于“克雷格定理”,在理论术语和观察术语的区分及其二者的关系成为科学哲学主题的50年代和60年代,引起许多人的兴趣。

“一般而言,关于理论的拉姆塞语句是这样构成的:构成足以表达理论内容的一组陈述的合取,然后用适当内容的存在量词变量取代每

"In general, the Ramsey sentence of a theory is formed as follows: Form the conjunction of a set of statements sufficient to express the content of the theory, and then replace each theoretical term by an existentially quantified variable of appropriate type, making the scope of each quantifier the entire conjunction." —Maxwell, in *Minnesota Studies in the Philosophy of Science*, vol. iv, 1970, p. 187.

Range

The set of a formula, such that the members of the set are the values of the formula. The range of a quantifier is the collection of things from which values of the quantified variable can be drawn. In this case, range is synonymous with domain. The domain of a relation is a collection of things which stand in the relation to something else. The set of these related things constitutes the range or counterdomain of this relation. The domain and the range together constitute the field of the relation. A range of a function is the set of things that define the function, that is that serve as possible arguments for this function. A range or universe of discourse is the collection of things talked about during the discourse.

"We take the range of the formula E_i to be the class of those value-assignments at which E_i comes to be true. The class of all possible value-assignments for E_i (i.e. for the value-bearing signs that occurs in E_i) we call the total range of E_i ; the empty class of such value-assignments we call the null range." —Carnap, *Introduction to Symbolic Logic and its Applications*, 1958, p. 17.

Ratio

[Latin, corresponding to the Greek *logos*, and sharing the complicated and wide usage of the latter] *Ratio* can be used for the objective meaning of a thing (in a sense close to form), to the power to discern such meanings (in a sense close to mind), to the capacity to draw what is true from the premises when we pursue truth, and to the capacity to determine what to do when we plan action. In English, *ratio* can be translated by terms such as reason, argument or description. Generally, *ratio* is contrasted with emotion and appetite, which it is normally supposed to control in us. In the philosophy of Spinoza, *ratio* is the second way of knowing, in contrast to imagination (sense-perception) and scientific intuition. *Ratio* is exemplified in the thinking of scientists, who begin with common and evident truths and proceed to draw general conclusions from them. The model of this type of thinking is Euclidean geometry.

"The Ratio expressed in a word is something the intellect [*intellectus*] conceives from things and expressed in speech." —Aquinas, *Summa Theologiae*, Ia, 5, 2.

个理论术语,使每个量词的辖域覆盖整个合取”。——麦克斯威尔,见《明尼苏达科学哲学研究》,第4卷,1970年,第187页。

值域

值域为一公式的集,例如集的成员为这公式的值。一个量词的值域为物的聚合,从中可得出这个量词变量的值。在这种情况下,值域与“域”是同义的。关系的域为处于与他物关系中的各物的聚合。这些相关物的集合构成了这个关系的值域或“后域”。域和值域一起构成这个关系的“场”。一个函项的值域为定义这个函项的事物集,即它们作为对这函项的可能论证。话语的值域或论域,为这话语中所论及事物的聚合。

“我们把公式 E_i 的值域看做是那些其赋值使 E_i 为真的类。对 E_i 的所有可能的赋值的类(即所有使 E_i 有意义的记号值),我们称为 E_i 的总值域。这种赋值的空类我们称为空值域。”——卡尔纳普:《符号逻辑及其应用导论》,1958年,第17页。

理智

[拉丁词,相当于希腊语的“逻各斯”(logos),并同样具有后者复杂而广泛的用法]它能指一物的客观意义(在这层含义上,它接近“形式”),指发现这些意义的力量(在这层含义上,它接近“心智”),指在我们追求真理时从前提中引出真东西的能力,也指在我们计划行动时决定做什么的能力。在英语中,它能被译为“理性”、“论证”、“论述”等等。一般而言,理智与激情和欲望相对应,并被认为在正常情况下对我们起控制作用。在斯宾诺莎哲学中,理智是认识的第二种方式,对应于想像(感知)和科学的直觉。理智在科学家的思维中得到例证,他们从共同而明显的真理出发,层层推进,从中引出一一般结论。这种思维模式的典型是欧几里德几何学。

“用语词表达的理智是智力从事物中想出来并用言语表述的某种东西。”——阿奎那:《神学大全》,Ia, 5, 2。

Ratio decidendi

[Latin: the reason for deciding, a principle of judicial decision] A ruling on a point of law which a judge provides because he conceives it to be necessary to the justification of his particular decision. Such a ruling is the *ratio* of the case. It can be the rule of law laid down in a precedent or the rule of law which others regard as having binding authority. It can also be a material evidential fact. In contrast, an *obiter dictum* is any statement about the law made by the court which was not necessary to the decision. How to identify a *ratio decidendi* in a case is a fundamental issue. There is much debate about what the *ratio* is and about how to find it. Different judges in different courts are likely to hold different views so that a *ratio decidendi* in an original court will be considered as an *obiter dictum* in an appeal court or vice versa.

"The ratio decidendi of a case is any rule of law expressly or implicitly treated by the judge as a necessary step in reaching his conclusion, having regard to the line of reasoning adopted by him, or as a necessary part of his direction to the jury." —Cross, *Precedent in English Law*, 1977, p. 76.

Rational cosmology, see cosmology

Rational egoism, see egoism, ethical

Rational explanation

Also called rational reconstruction. Developed by Collingwood and William Dray as an alternative mode of historical explanation to the covering law model. It claims that historical explanation does not consist in bringing an event under a covering general causal law, but rather explains by establishing a relation between an action and the rationality of its agent. We should explain an action by reference to the reasons presented as contained in it. A historian should re-think and re-construct the rationality of the agent when the agent decided to do act. Among others, these factors include the agent's knowledge of the actual situation, the agent's purpose and the agent's deliberation concerning the means appropriate to his end. If we discover an agent's reason for performing an action, we achieve an understanding of that action. Certainly, if an agent is rational, the considerations issuing in action must have conformed to some general standards of rationality, but it does not follow that the action is caused or determined by those standards. Some critics argue that irrational and non rational behaviour, in which actors misunderstand their actions, are more important than rational action in understanding history.

"When the historian can see that the agent's beliefs, purposes, principles, etc., give him a reason for doing what he did, then he can claim to understand the action. The kind

判决理由

[拉丁文: 判决的理由, 司法判决的一个原则] 对法官提供的法律要点的裁定, 因为在法官看来, 法律要点对于证明他的特定判决的公正是必要的。这样的裁定是判案所依据的理由。它可以是在以前的案例中制定的法律规则, 或被其他人视为具有约束力的法律规则。它也可以是物证事实。相比之下, 附带意见是由法庭做出的与判决没有必然关系的有关法律的陈述。如何确认一个案件中的判决理由是一个根本性的问题。对于什么是理由以及如何发现它, 人们存在很大的争议。不同法庭的法官可能会持有不同的观点, 以致一个原判法庭中的判决理由可能被上诉法院视为附带意见, 反之亦然。

"一个案件的判决理由是被法官明确地或暗含地视为做出结论必经的一种法律规则, 判决理由与法官所接受的推理的方式有关, 或被视为他对陪审团的说明的一个必要部分。"——克罗斯:《英国法律中的判例》, 1977年, 第76页。

合理的说明

也称合理的重建。由柯林伍德和 W. 德莱发展的一种与覆盖律模式不同的历史说明模式。这一模式主张, 历史说明不在于把一个事件置于覆盖的一般因果律之下, 而在于通过确立行为和行为者的理性之间的关系做出的解释。〔由于理由包含在行为之中, 因而〕我们解释一个行为应联系呈现在其中的理由。历史学家应重新思考和重新建构一个行为者决定行动时的合理性。这种合理性还存在于其他因素中, 这些因素包括行为者对实际情况的了解, 行为者的目的和行为者对适合于其目的的手段的考虑。如果我们发现行为者采取行动的理由, 我们也就获得了对这一行动的理解。当然, 如果一个行为者是有理性的, 引起行为的那些考虑肯定要符合理性的某些一般规范, 但由此不能得出行为是由那些规范引发或决定的。一些批评家争论说, 在理解历史中, 行为者误解其行为的非理性和无理性行为比理性行为更为重要。

"当历史学家能够发现行为者的信念、目的、准则等等给其以行为的理由时, 他就可以说理解了这一行为。人们也许争辩说, 这样获得的理解在思想的形成上不同于以自然科学模型为基础的探索, ……前者——我们或许可以称之为‘合理的’说明, ——试图弄清行为的目的或

of understanding thus achieved, it might be argued, is different in *concept* from that sought on the scientific model... The former which we might perhaps call 'rational' explanation—tries to make clear its *point* or *rationale*." —William Dray, *Philosophy of History*, 1964, p. 12.

Rational number

A real number is any number which can be expressed as an infinite decimal. It can either rational or irrational. A rational number is any number which can be expressed as a ratio x/y , where x is a positive or negative integer or 0 and y is a positive integer, although the same rational number can often be represented by more than one ratio of integers. An irrational number is any real number which is not rational, such as π or the square root of 2.

"The irrational numbers, such as the square root of 2, were supposed to find their place among rational fractions, as being greater than some of them and less than the others, so that rational and irrational numbers could be taken together as one class, called 'real number'." —Russell, *Introduction to Mathematical Philosophy*, 1919, p. 63.

Rational psychology

In Christian Wolff's division of metaphysics, one branch of special metaphysics (along with cosmology and rational theology). Its subject matter is the soul or mind, and its major task to prove the immortality of the soul. In contrast to modern empirical psychology, which is based on observation and experiment, rational psychology is purely speculative. Rational psychology is also called pneumatology (from Greek; *pneuma*, spirit), a study of the spirit or soul.

"The second branch of the metaphysical system was rational psychology or pneumatology. It dealt with the metaphysical nature of the soul—that is, of the Mind regarded as a thing. It expected to find immortality in a sphere dominated by the law of composition, time, qualitative change, and qualitative increase or decrease." —Hegel, *Logic*, sect. 34.

Rational reconstruction, another expression for rational explanation

Rational self-interest, see self-interest

Rational theology, another expression for natural theology

Rationalism

In an epistemological sense, rationalism is a philosophical tradition developed during the seventeenth and eighteenth centuries in Europe, represented mainly by Descartes, Spinoza and Leibniz. Epistemological rationalism claimed

理性。”——德莱：《历史哲学》，1964年，第12页。

有理数

实数是能表示为无限小数的任何数。它可以是有理数，或是无理数。有理数是能表示为 x/y 的比的任何数，这里 x 是正整数，或负整数，或 0，而 y 是正整数，虽然同一个有理数能常常以大于 1 的整数比来表示。无理数是任何一个不是有理数的实数，如 π 或 2 的平方根。

“无理数，如 2 的平方根，通常也假定和有理分数排在一起，它大于一些有理分数，同时小于其他有理分数，这样，有理数和无理数可以合成一类，即所谓‘实数’。”——罗素：《数理哲学导论》，1919年，第63页。

理性心理学

按 C. 沃尔夫对形而上学的划分，它是特别形而上学的一个分支（与它一道的还有宇宙论和理性神学）。它的主题是灵魂或心智，它的主要任务是证明灵魂不朽。与建立在观察和实验基础之上的现代经验心理学不一样，理性心理学是纯粹思辨的。理性心理学也被称作“圣灵论”（pneumatology 源自希腊语 *pneuma*，意为精神、精气），即对精神或灵魂的研究。

“形而上学体系的第二个分支是理性心理学或圣灵论。它研究灵魂，即认作一物之心智的形而上学本性。它期待着在被合成、时间、质变、量的增减规律所支配的领域中发现不朽。”——黑格尔：《小逻辑》，第34节。

合理的重建

“合理的说明”的另一种说法。

合理的私利

见“自我利益”条。

理性神学

“自然神学”的另一种表述。

理性主义

在认识论的意义上，理性主义是 17、18 世纪在欧洲发展起来的一个哲学传统，主要以笛卡尔、斯宾诺莎和莱布尼茨为代表。认识论的理性主义断言，知识是由于运用理性或理智官能

that knowledge is due to the exercise of the faculty of reason or intellect and that sensory experience cannot establish certainty. The way of reason is the road to true knowledge. Rationalism took mathematics as the model of knowledge and admired the axiomatic method. It proposed that the method of philosophy should be the same as the method of mathematics. It held that all knowledge is connected and can be deduced from certain self-evident first principles. It also accepted the existence of *a priori* knowledge or truths of reason. Rationalism tried to construct a rational science of nature and attempted to solve certain metaphysical problems such as the general structure of the world, the relation of mind to body and immortality. As a tradition, it stood in contrast to the empiricism represented by the British philosophers Francis Bacon, Hobbes, Locke, Berkeley and Hume, which claimed that all knowledge is derived ultimately from experience. Kant synthesised rational and empirical traditions by giving both reason and experience crucial roles in the acquisition and justification of knowledge. Nevertheless, the tension between these two epistemological approaches can still be perceived in the contemporary philosophy of language and other areas. In the post-Kantian period, the continental rationalist tradition, while holding that reason is the supreme cognitive faculty, has held that its exercise should go beyond the scope of natural science. It has extended the exercise of reason to politics, history, art, religion, and in general to the *Geisteswissenschaften* (human sciences) and has tried to establish universal knowledge in these areas.

In its general sense, rationalism refers to all theories and practices which appeal to human rationality and rational principle, and is in contrast to positions which emphasise religious faith, moral sentiment, emotion and other irrational elements. In this sense, empiricism is also rationalism, and rationalism is in contrast to irrationalism.

"Traditional rationalism, observing that any principles which should serve as ultimate criteria or determine categorical interpretation must be prior to and independent of the experience to which it applies, has supposed that such principles must be innate and so discoverable by some sort of direct inspection." — C. I. Lewis, *Mind and the World-Order*, 1929, p. 25.

Rationality

The exercise of human reason, the ability exhibited in deduction, induction, calculation and other less formal intellectual processes. According to Plato's tripartite analysis of the human soul, rationality contrasts with emotion (passion) and the appetites. He held that persons must subject their emotion and appetites to the rule of reason in order to find truth and to have a happy and harmonious life. Aristotle put forward a function-based argument, claiming that reason is the peculiar function which distinguishes human beings from

带来的,感觉经验不能达到确定性。理性方法是通往真知之路。理性主义把数学当做知识的模型,赞赏公理化方法。它认为哲学方法应当与数学方法是一样的。它认为一切知识都是相联系的,可以从某个自明的第一原理推演出来。它还承认先天知识或理性真理的存在。理性主义试图构筑一个理性的自然科学,试图解决某些形而上学的问题,像关于世界的普遍结构、心身关系、灵魂不死等问题。作为一个传统,理性主义与以英国哲学家F. 培根、霍布斯、洛克、巴克莱、休谟所代表的经验主义相对。经验主义主张一切知识最终来自于经验。康德赋予理性和经验两者在知识的获得和正当性证明中至关重要的作用,以此将两个传统综合起来。不过在当代语言哲学和其他领域中仍然可以看到这两种认识论探讨的对立。在后康德时期,由于大陆理性主义传统认为理性是最高认识官能,所以它仍然认为理性的运用应当超出自然科学的范围之外。它将理性的运用扩展到政治、历史、艺术、宗教,并一般用于人文科学,试图在这些领域中建立普遍的知识。

一般而言,理性主义指诉诸于人类理性能力和理性原则的一切理论和实践,它与强调宗教信仰、道德情感和情绪以及其他非理性成分的见解相对立。在这个意义上,经验主义也是理性主义,理性主义是相对于非理性主义而言的。

"传统的理性主义看到,如果任何原则应当作为终极的标准,或者对范畴的解释有决定作用,那么它必定先于并独立于它所用于其上的经验,所以,理性主义料想这样的原则一定是天赋的,因而可以被某种直接的检查所发现。" — 刘易斯:《心灵和世界秩序》,1929年,第25页。

理性能力

人类理性的运用,人类在演绎、归纳、计算和其他较少形式要求的智力活动中显示出的能力。根据柏拉图对人类灵魂的三重分解,理性能力是与情绪(感情)和欲望相对立的。他认为,如果一个人想要发现真理,想要有幸福和谐的生活,他就必须将他的情绪和欲望服从于理性的规则。亚里士多德进一步提出了一个以功能为根据的证明,认为理性是使人类与其他种类的动物相区别的特殊功能。人类的长处就在于

other kinds of animals. Human virtue rests in the performance of this function. He even suggested on this basis that pure rational activity, that is contemplation, is the happiest life. Aristotle made practical reason and moral virtue interdependent, but also acknowledged the possibility of the weakness of the will, that is knowing what is right but doing the contrary. To be rational in this sense is opposed to being emotional or acting according to appetite and intuition, which he described as irrational. Both rationalism and empiricism support the values of rationality. Their difference lies only in the fact that rationalism emphasises the role of the faculty of reason, while empiricism places emphasis on observation and experiment.

Hume claimed that only deductive and mathematical reasoning is rationally sound and that induction is not rationally justified. This has given rise to the long-standing dispute about the nature of inductive reasoning and the problem of induction. Hume also denied that reason plays a fundamental role in moral life and hence denied the existence of practical reason except as reasoning about means to obtain ends given by the passions. This position is also controversial, and some philosophers consider ends and passions to be within the scope of rationality.

In another sense, to call something rational or reasonable means that it conforms to general rules, laws and acknowledged aims and also adheres to certain qualities of thinking such as consistency, coherence and completeness. Being rational in this sense means, for example, being appropriate, making sense or being understandable. This sense is concerned with the correct exercise of human reason, as opposed to its invalid exercise. Creative thought and activity that does not fall within the scope of formal systems can also be assessed for rationality.

"Rationality is a matter of seeking to do the very best we can (realistically) manage to do in the circumstances." — Rescher, *Rationality*, 1988, p. 87.

Rationes seminales

[Latin, from the Greek: *logoi spermatikoi*, germinal principles or original factors] A notion employed by the Stoics, Neo-platonists and Augustine. It is usually translated as seminal reason or seminal virtue. By this term Augustine meant the seeds, potential powers or causes of the subsequent developments in the physical order after God's creation. Change is simply the realisation of what already exists virtually. These seeds were themselves created by God when he created the world. The view was intended to reconcile the tension between the belief that God created all things and the evident fact that new things are constantly developing, for according to this view, the development of every new thing is simply the unfolding of what has been in the world from the beginning. It is a metaphor, derived from the growth of a

运用这个功能。他甚至在此基础上提出,纯粹的理性活动,即思辨,是最幸福的生活。亚里士多德虽然使实践理性和道德美德互相依赖,但也承认意志薄弱的可能性,即知道什么是对的,但却反其道而行之。在此意义上,有理性的与有情绪的、或根据欲望和直觉来行动是相反的,他把后者说成是非理性的。理性主义和经验主义都赞成理性能力的价值。它们的区别只在于如下事实:前者强调理性官能的作用,后者强调观察和实验。

休谟主张,只有演绎推理和数学推理具有理性的可靠性,归纳不能从理性上证明是正当的。这一观点引起了关于归纳推理的性质和归纳问题的长期争论。休谟还否认理性在道德生活中起重要作用,并因而否认实践理性的存在,但这里不包括对达到情感目的的方法的推理在内。这个观点也引起了争论,有些哲学家认为目的和情感也属于理性能力的范围。

在另一种意义上,说某物是有理性的或合理的是指,它与普遍的规则、规律和公认的目标相一致,而且它也坚持思维的某些性质,诸如一致性、连贯性、完整性等等。在此意义上,有理性的意味着(例如)恰当的、有道理的、可理解的等等。这个含义涉及到正确运用人类理性,反对理性的无效运用。不属于形式系统范围内的创造性思维和创造性活动也可以被看做是理性能力。

“理性能力是指力图尽最大能力做我们在该情况下(实际)能设法做到的。”——雷谢尔:《理性》,1988年,第87页。

种源理性

[拉丁词,源自希腊语 *logoi spermatikoi*,意为“初始原则”或“原始要素”] 斯多亚派、新柏拉图主义者及奥古斯丁的术语。通常译为“种源理性”或“种源德性”。奥古斯丁用这个术语,指上帝创世之后物理秩序中后续发展的种子、潜力或原因。变化只不过是已经实际存在着的东西的实现。这些种子本身是上帝在创造世界时一并创造的。该观点的意图在于,调和相信上帝创造了万物的信念和新事物不断发展起来这种明显事实之间的紧张关系,因为按照这个观点,每一新事物的发展,只不过是从一开始就已存在于世的东西的展现。它是一个比喻,源于植物的生长是种子潜伏状态的实现。这个术语也被认为是受了柏拉图回忆说的影响,按照这个

plant which is the realisation of the seed's latencies. The term is also believed to be influenced by Plato's theory of recollection according to which knowledge involves remembering what one already knew. This term was later developed by the Franciscans to oppose the Aristotelian naturalistic theory.

"Augustine aptly termed *rationes seminales* all those active and passive powers that are the originative sources of the coming into being of natural things and of their changing." — Aquinas, *Summa Theologiae*, Ia, 115, 2.

Ravens paradox, another expression for Hempel's paradox

Ready-to-hand

Heidegger's term for entities within-the-world which we make use of as equipment or as instruments. The Being possessed by this kind of entity is called readiness-to-hand, which Heidegger contrasts to presence-at-hand, that is the Being of the determinate and isolable entities investigated by science. The same entity can be ready-to-hand or present-at-hand, depending upon our attitude or relationship to it. The attitude which determines an entity as ready-at-hand is concern (German: *Besorgen*). Concern leads us to emphasise practical meaning and the use of an entity instead of focusing on the entity itself. Presence-at-hand is the object of a theoretical attitude, for which an entity is encountered in its own right, independent of its relations with other entities and with their purposes. Taking an entity as ready-to-hand is a pre-theoretical attitude; taking an entity as present-at-hand is a theoretical attitude. In contrast to both, the ontological attitude rejects taking *Dasein* as another object in the world.

"When we make use of the clock-equipment, which is proximally and inconspicuously ready-to-hand, the environment Nature is ready-to-hand along with it." — Heidegger, *Being and Time*, (tr. Macquarrie and Robinson), 1962, p. 161.

Real definition

A definition which reveals the meaning of a concept or the essence of the thing being defined, a definition based on the real property of the definiendum. A real definition involves some sort of a discovery. It is contrasted to nominal definition, which determines what a word means on the basis of arbitrary convention and which is popular when a new term or word is introduced. In this context, the word "real" (Latin, *reale*) means "to apply to a thing", while "nominal" (Latin, *nominales*) means "to apply to a word". Real definition is also called essentialist definition. All definitions *per genus et differentium* are real definitions.

"All definitions are either *nominales* or *reale* definitions.

学说,知识包含在对已知东西的回忆中。该术语后来被弗兰西斯科学派发展,与亚里士多德的自然主义理论相对立。

“奥古斯丁很机敏地把作为自然事物生成和变化原初根源的一切主动的和被动的力量称作种源理性。”——阿奎那:《神学大全》,Ia, 115, 2。

渡鸦悖论

“亨佩尔悖论”的另一种表述。

用得称手〔或译“应手”〕

海德格尔的一个词〔德文为 *zuhanden*〕,用来指我们当做仪器或工具来使用的那样一些世界内的存在者。这种存在者所具有的存在就被称为“用得称手状态”,海德格尔将其与“现成在手状态”相对而置;后一种状态指的是科学研究中的那种被确定和孤立的存在者的存在。同一个存在者既可以用得称手的,也可以是现成在手的,就看我们的态度和与它的关系如何了。使一个存在者处于用得称手状态的态度是牵念(德文为 *Besorgen*)。牵念使我们关注实践的意义和对一个存在者的使用,而不是只盯住此存在者本身。现成在手状态是理论态度中的对象,在这种态度中,一个存在者只就其自身被遭遇到,独立于它与其他存在者及其目的的关系。将一个存在者当做用得称手的是—种前理论的态度,而将之当做现成在手的则是一种理论的态度。与这两者相对,存在论的态度拒绝将缘在当做此世界之中的另一个对象。

“当我们使用钟表装置——它处于切近的、不显眼的用得称手的状态之中——时,这世俗化的自然就一同处于用得称手的状态之中了。”——海德格尔:《存在与时间》(马库阿里和罗宾逊英译),1962年,第101页。

真实定义

该定义揭示了概念的意义或被定义事物的本质,它基于被定义者的真实特性。真实定义包含了某种发现。与之相对的是“名义定义”,它决定了语词基于任意的约定而具有的意义。当一个新的术语或语词被引入时,名义定义就是很普遍的了。在这种语境中,“真实的”(拉丁文 *reale*)意味着“用于一个事物”,而“名义的”(拉丁文 *nominales*)意味着“用于一个词”。真实定义也被称作“本质主义定义”。所有种加属差定义都是真实定义。

“一切定义都或者是名义定义或者是真实定义。名义定义是这样一种定义,它包含了等于

Nominales definitions are ones that contain everything that is equal to the whole concept that we make for ourselves of the thing. *Reale* definitions, however, are ones that contain everything that belongs to the thing in itself."—Kant, *Lectures On Logic* (ed. by Young), p. 215.

Real distinction

For Descartes, a distinction between two things where each thing can exist without the other and we can conceive of one without being logically compelled to conceive of the other. Descartes claimed that such a distinction occurs between mind and body, for the doubt reveals that I have, on the one hand, a clear and distinct idea of myself as a thing that thinks and is not extended, and on the other hand, a clear and distinct idea of my body as a thing which is extended and does not think. Hence my mind is truly distinct for my body, and each can exist without the other. Such a real distinction is, besides the existence of God, the major claim that *Meditations* purports to prove. Real distinctions contrast with modal distinctions between a substance and its modes, for example between a body and its size. The size cannot exist apart from the relevant body.

"Two substances are said to be really distinct when each of them can exist apart from the other."—Descartes, *The Philosophical Writings* (tr. Cottingham et al.), II, p. 54.

Real essence

Locke distinguished between real essence and nominal essence. The real essence is the real but unknown constitution of each thing, upon which depends all the properties of the particulars that make up the world. The real essence perishes when the object ceases to exist or undergoes radical change. The nominal essence, on the other hand, is the set of qualities that we construct out of observed existing qualities, or collect under one idea or name, and is, in effect, a nominal definition provided by a description of the common properties of a thing. Nominal essence depends on real essence. Real essence individuates particulars, while nominal essence groups those particulars into a class for our use. For example, the nominal essence of Gold is a complex idea that the word "gold" stands for, including features such as being a body, yellow in colour, of a certain weight and malleable. The real essence is the constitution of the insensible parts of that body upon which those qualities and all other qualities of Gold depend. Locke believed that this distinction avoids Aristotle's mistake of confusing the meaning of an expression with the nature of the object which the expression characterises. This distinction is influential in modern philosophy, for it leads to phenomenalism which drops the unknown essence, and also leads to the characteristic emphasis on the study of meaning in contemporary philosophy.

是我们对事物所做的所有概念。然而,真实定义则是另一种定义,它包含了属于物自体的一切东西。"—康德:《逻辑讲义》(杨编辑),第215页。

实在的区别

在笛卡尔那里指两事物之间的这样一种区别:每个事物可以不需另一个事物而存在,而且我们可以构想一个事物而逻辑上没有必要去构想另一个事物。笛卡尔声称这样的区别存在于心灵和身体之间,因为怀疑向我揭示出,一方面我有一个清楚明晰的自我的观念,这个自我纯粹是思想而非广延的东西;另一方面,我有一个清楚明晰的我的身体的观念,这个身体是广延的而非思想的东西。因此,我的心灵确实与我的身体截然不同,它们可以各自不需对方而存在。除了上帝的存在以外,这一实在的区别是《沉思》一书要证明的主要之点。实在的区别与样式的区别相对照,后者存在于实体和它的样式之间,物体和它的大小之间的区别即是其例。物体大小不能离开相关的物体而存在。

"当两个实体中的一个可以离开另一个实体而存在,我们就说这两个实体有实在的区别。"—笛卡尔:《哲学著作集》(科庭汉姆等译),第二卷,第54页。

实在的本质

洛克区分了实在的本质和名义的本质。实在的本质是每一事物的实在的然而未知的结构,它们乃是构成世界的各种特殊物的全部特性的基础。当对象不再存在,或者发生了根本的改变时,实在的本质便消逝了。与此不同,名义的本质是一组性质,这组性质是我们从各种已观察到的现存性质中构造出来的,或者是在一个观念或名称之下收集来的;名义的本质实际是根据对一事物共同特性的描述作出的名义定义。名义的本质依赖于实在的本质。实在的本质使特殊的事物个体化,名义的本质将那些特殊的事物归集成我们所用的类。例如,金子的名义本质是"金子"一词所代表的复杂观念,它包括这样一些特征:它是一物体,它是黄色的,有一定重量,可以延展等等。实在的本质是那个物体各不可感部分的结构,金子的那些性质以及其他一切性质就依赖于这个结构。洛克相信,这个区分避免了亚里士多德将一个表达式的意义同这个表达式所刻画的对象性质混淆起来的错误。这个区分在近代哲学史上很有影响,因为它导致了放弃未知本质的现象论,还导致了当代哲学特有的对意义研究的重视。

"虽然我们所知道的、或者借以将各种自然实体区分为各个类的,都是自然实体的本质,但

"This, though it be all the essence of natural substances that we know, or by which we distinguish them into sorts, yet I call it by a peculiar name, the nominal essence, to distinguish it from that real constitution of substances, upon which depends this nominal essence, and all the properties of that sort; which, therefore, as has been said, may be called the real essence."—Locke, *An Essay Concerning Human Understanding*, III, vi, 2.

Real / logical opposition, see logical / real opposition

Real number, see rational number

Real variable, another term for free variable

Realism

Realism is a family resemblance notion, referring to the objective existence of various objects and properties, such as the external world, mathematical objects, universals, theoretical entities, causal relations, moral and aesthetic properties and other minds. The central idea of realism is that things of a certain problematic sort exist independent of our minds and whether or not we know or believe them to exist. In general terms, realism is opposed by anti-realism, another family resemblance notion which is expressed, for example, as nominalism, subjective idealism or semantic anti-realism. Hence, in different areas the opposition between realism and anti-realism is presented in different forms. It must be noted that the distinction between realism and anti-realism does not correspond to the distinction between materialism and idealism, for Platonic objective idealism and Hegelian absolute idealism are also forms of realism.

One of the most popular forms of realism concerns the ontological status of universals and claims that universals have real existence and are objects of knowledge. There are two major versions of this form of realism. First, Platonic realism argues that universals exist in a realm of their own and are more real than sensible objects which are never fully instantiated in everyday experience. Secondly, Aristotelian realism argues that a universal has no separate existence of its own, but is a structure embedded in things (a universal *in re*). Realism regarding universals contrasts both with nominalism, which claims that a universal is only a common name, and with conceptualism, which claims that a universal is concept produced by the mind.

See entries for different kinds of realism, such as naive realism, direct realism, critical realism, moral realism, legal realism, mathematical realism and quasi-realism.

"Realism is most compelling when we are forced to rec-

我仍用一个特殊的名称‘名义的本质’称呼它，以便将它同实体的实在结构区分开来；名义的本质和那类实体的全部性质都依靠于实在的结构，因此，如前所说，可以将实在的结构称作实在的本质。”——洛克：《人类理智论》，第三卷，第六章，第2节。

实在的/逻辑的对立

见“逻辑的/实在的对立”条。

实数

见“有理数”条。

真实变元

“自由变元”的另一术语。

实在论

实在论是一个家族相似的观念，指承认种种对象和属性的客观存在的各种理论。这些对象和属性包括外在世界、数学对象、共相、理论实体、因果关系、道德与美学属性、他人的心等。实在论的中心思想是，某些或全部这些事物存在，独立于我们的心灵，且不论我们是否知道或相信它们存在。一般而言，实在论与反实在论相对立。反实在论是另一个家族相似的观念，表达为（例如）唯名论、主观唯心主义和语义学上的反实在论。在不同的领域中，实在论与反实在论的对立表现为不同的形式。应当注意到，这一对立并不对应于唯物主义与唯心主义的对立。因为柏拉图的客观唯心主义与黑格尔的绝对唯心主义都是实在论的不同形式。

实在论的最为普通的形式之一是有关共相的本体论地位的。它认为，共相是真实的存在，是知识的对象。这一形式的实在论主要有两种类型。首先，柏拉图的实在论认为，共相存在于自身的领域之中。它们比可感对象更真实，但又绝对不会在日常经验中得到充分的展现。其次，亚里士多德的实在论认为，共相没有自己分离的存在，而是呈现于物中的结构（物中之共相）。关于共相的实在论既相对立于唯名论（它认为共相只是一个共名），又相对立于概念论（它把共相看做是由心灵产生的概念）。

请参见有关不同种类实在论的条目，如“素朴实在论”，“直接实在论”，“批判的实在论”，“道德实在论”，“法律现实主义”，“数学实在论”和“准实在论”。

“我们不能完全描绘或知道某些事物，因为它们处于语言、证明、证据或经验理解所能达到的范围之外。当我们被迫承认这种事物的存在时，实在论是最不可抗拒的。”——纳格尔：《出

ognize the existence of something which we cannot describe or know fully, because it lies beyond the reach of language, proof, evidence, or empirical understanding.” —T. Nagel, *The View from Nowhere*, 1986, p. 108.

Reality

A frequently used but ambiguous term. Sometimes it means what there is in contrast to appearance. One aspect of the realism and anti-realism debate concerns how much we can count as reality. Reality is a synonym for the world or the sum total of all that there is. Wittgenstein's claim that the world is a world of facts, not of things. Some philosophers distinguish between objective reality, to which our language and perception refer, and formal reality, which is the mode of our language or thought. Sometimes reality is used for objective existence which is independent of our consciousness and will. The question of reality arises also in a wide variety of realist doctrines.

“It will be enough, for our purposes, to define ‘reality’ as a quality appertaining to phenomena that we recognise as having a being independent of our own volition (we cannot ‘wish them away’).” —Berger and Luckmann, *The Social Construction of Reality*, 1969, p. 13.

Reason

An ability to move from the truth of some beliefs to the truth of others. Some philosophers consider this capacity to be more or less sufficient to determine a single correct and systematic account of reality, while others argue that such an account, if possible at all, must be based primarily upon experience. Kant, following Aristotle, saw reason divided into two parts: theoretical and practical, the latter issuing in actions rather than beliefs, but held that at a deep level the two capacities were the same. Hegel saw reason and much else altering at different stages of historical development. Hume restricted practical reason to finding means to obtain the ends set out by the passions, but others have rejected the means-ends account. Reason enters the account of institutions through models of the interaction of the choices of individuals and through the direct assessment of practices and societies.

“Reason is the faculty of the derivation of the particular from the universal or cognition a priori.” —Kant, *Lectures on Logic* (ed. by Young), 1992, p. 442.

Reason and understanding

[German: *Vernunft*, reason; *verstand*, understanding, associated with to stand] The distinction between reason and understanding was first discussed in Kant's philosophy. Kant claimed that understanding applies its own categories to experience and generates scientific knowledge, while reason goes beyond the limits of experience. Reason tries to apprehend the unconditional, but ends with antinomies, in which

自无处的观点》，1986年，第108页。

实在

一个经常使用但含义模糊的术语。有时，它指存在之所是，与“现象”对立。实在论和反实在论进行争论的一个方面是，我们能够算作实在的究竟有多少。有时，它用作世界的同义语，或指一切存在的总体。维特根斯坦就是在这个意义上断言，世界是事实的世界，而不是事物的世界。有些哲学家把我们的语言和感知所指涉的客观实在和意指我们的语言或思想模式的形式实在区别开来。有时，它也用来指独立于我们的意识和意志的客观存在。在各种各样的实在论学说中，也提出了关于实在的问题。

“就我们的目的而言，把‘实在’界定为与现象相关的一种性质就足够了，我们承认它独立存在于我们自己的意志之外（我们不能‘希望它们走掉’）。”—柏格和卢克曼：《实在的社会建构》，1969年，第13页。

理性

一种从一些信念的真达到另一些信念的真的能力。有些哲学家认为这种能力多少已足以确定对于实在的单一正确的和系统的描述，而其他人则论证这种描述如果是可能的，必须首先立足于经验。康德追随亚里士多德，把理性分为理论的和实践的两部分，后者是关于行动而非信念的，但认为在更深的层次上二者是同一的。黑格尔认为理性和其余许多东西在历史发展的不同阶段是变化着的。休谟把实践理性限于找到获得为激情所设定的目的之手段，而其他人则反对这种手段—目的的描述。理性通过个体选择的相互作用模型、通过实践和社会评价而进入对制度的表述。

“理性是从全称命题或先验认识推导特称命题的能力。”——康德：《逻辑学讲义》（杨编辑），1992年，第442页。

理性和知性

[德文: *Vernunft*, 理性; *verstand*, 知性, 与“站着”有关] 理性和知性之间的区别第一次在康德哲学中讨论。康德主张，知性把它自己的范畴应用于经验，产生了科学知识，而理性则超越经验的界限。理性企图理解无条件的东西，但导致二律背反，理性便陷入与自身的冲突中。黑格尔对理性和知性的区别作出不同的说明。他

reason falls into conflict with itself. Hegel offered a different account of the distinction. He considered understanding to be a fixed or mechanical way of thinking, which produces clear analysis and is in general the first stage of logic and science. But it isolates things from one another and is partial, finite and without fluidity. Reason stands in contrast to the absolute fixation of the understanding. It is associated with inference and argument and tries to discover connections among truths. Reason has two forms. Negative reason uncovers and collapses the contradictions implicit in the abstractions of understanding. Positive reason draws positive conclusions from the work of negative reason. The final purpose of reason is to resolve all conflicts and to grasp totality. For Hegel, reason and understanding are immanent in the absolute idea and govern its processes and hierarchies. Human reason and understanding can be genuine only by conforming to this inherent and objective reason and understanding.

"The abstract thinking of understanding is so far from being either ultimate or stable, that it shows a perpetual tendency to work its own dissolution and swing round into its opposite. Reasonableness, on the contrary, just consists in embracing within itself these opposites as unsubstantial elements." — Hegel, *Logic*, sect. 82.

Reason / cause

When a person performs an act, it is appropriate to seek an explanation or justification for it in terms of some reason. In the philosophy of action, this raises questions of continuing dispute whether a reason is a cause and whether an explanation by reason is a causal explanation. Some philosophers do not believe that a reason is a cause, on the grounds that a reason bears an internal relation to the action it explains and that the logical relation between reason and action differs from the external contingent relation between events or other items which are causally related. Others, represented by Davidson, reject the argument from internal relation: the descriptions "the cause of x" and "x" are also internally related without destroying the possibility of external contingent relations under different descriptions. Davidson also claims that many reasons are actually dispositional states such as wanting, believing and intending. Such states are causally connected with the actions they explain. Accordingly, they reject a clear-cut distinction between reasons and causes.

"Two ideas are built into the concept of acting on a reason (and hence, the concept of behaviour generally): the idea of cause and the idea of rationality. A reason is a rational cause." — Davidson, *Essays on Actions and Events*, 1980, p. 233.

Reasoning

The cognitive process, close to inferring, of arguing and giving reasons for or against a judgement or an act. It con-

把知性作为思维的固定的、机械的方式,它作出清晰的分析,一般是逻辑和科学的第一阶段。但它使事物相互分离隔绝,是部分的、有限的和没有流动性的。理性则与知性的绝对固定性相对比,它与推理和证明相关,努力揭示各真理之间的联系。理性有两种形式。否定的理性揭露知性的抽象所蕴含的矛盾并使之崩溃。肯定的理性从否定理性的工作中得出肯定的结论。理性的最终目的是要解决一切冲突和把握全体。对黑格尔来说,理性和知性是绝对理念中内在固有的,并支配它的过程和体系。人类理性和知性只有遵从这种内在的和客观的理性和知性才是真实的。

"知性的抽象思维并不是终极的,固定不变的东西,它表明了使自身融解的永恒趋向并过渡到它的对立面。反之,思辨理性在于把这种对立包含于自身之内,作为观念性环节,"——黑格尔:《小逻辑》,第82节。

理由/原因

当一个人完成一个行为时,往往要试图用某种理由来解释它或为它辩护。在行为哲学中,这就引出了这样一些争论不休的问题,即一个理由是否是一个原因以及一个通过理由的解释是否是一个因果解释。某些哲学家不相信理由就是原因,因为一个理由与它解释的行为之间有一种内在关系,而这种内在的逻辑关系不同于事件之间或其他有因果关联的东西之间的外在偶然的关系。以戴维森为代表的另一些哲学家则拒绝内在关系的论点。其理由是:摹状词"x的原因"和"x"也是内在相关的,同时并不破坏在不同的摹状词或描述式之间的外在偶然关系的可能。戴维森还认为许多理由实际上是一些倾向性的状态,比如需求、相信和意向。这些状态与它们所解释的行为之间就有因果关系。因此,持这第二种看法的哲学家们就不认为理性与原因之间有截然不同的区别。

"依理由而行动的概念,因此也就是一般的行为概念包含两个观念:原因的观念和理性的观念。一个理由就是一个合乎理性的原因。"——戴维森:《关于行动与事件的论文集》,1980年,第233页。

推理

为支持或反对一个观点或行为而作出论证或提供理由的认知过程,与推断(inferring)相

trasts to a direct appeal to experience or authority. Discursive reasoning proceeds from premises to a conclusion. It is either deductive (reasoning from the universal to the particular) or inductive (reasoning from the particular to the universal). Analogical reasoning argues by comparing similarities and dissimilarities of different things. If the conclusion of a piece of reasoning is about how things are, it is theoretical reasoning. If the conclusion is about what we ought to do, it is practical reasoning. Logic is the study of the rules of reasoning. If a piece of reasoning follows logical rules, it is good. Otherwise, it is bad or invalid in that the conclusion is not supported by the premises. Consistent reasoning is the essential feature of philosophising.

"Reasoning is a process in which the reasoner is conscious that a judgement, the conclusion, is determined by another judgement or judgements, the premises, according to a general habit of thought, which he may not be able precisely to formulate, but which he approaches as conclusive to true knowledge." —Peirce, *Collected Works*, 2 : 773.

Recognition statement

Dummett's term for a statement of the form "this is a" which identifies some concrete or ostensible object as the bearer of a proper name. Issuing such a statement depends on the recognition of the relevant criterion of identity.

"In general, the sense of any proper name 'a' of an ostensible object (an object that can be pointed to) will consist in the criterion for the truth of what we may call 'recognition statements' of the form 'that is a'." —Dummett, *Frege: Philosophy of Language*, p. 232.

Recollection

[Greek; *anamnesis*] Plato separated the Forms from the particulars. How can we acquire knowledge of the Forms if they are outside the particulars? The theory of recollection is one of Plato's answers to this question. The soul is eternal, and has seen the realm of Forms in heaven. But when the soul comes into a body, this knowledge is forgotten and needs to be recollected. Recollection is the process of learning, and because the particulars are imperfect copies of the Forms, they can only act as reminders. Since this doctrine depends on hypotheses about the immortality and transmigration of the soul which cannot be proven, Plato adopted it only in a few earlier middle dialogues (*Meno*, *Phaedo*, *Phaedrus*) and later quietly dispensed with it. However, he continued to hold that universal knowledge cannot come directly from experience and that there must be some inner functions that make knowledge possible. This belief was inherited and developed by the rationalists such as Descartes and Leibniz as well as by Kant and Chomsky.

"Seeking and learning are in fact nothing but recollection." —Plato *Meno*, 81d.

近。它不同于直接诉诸经验或权威。推论的推理是从前提出发进到结论。它不是演绎推理(从普遍到个别的推理)就是归纳推理(从个别到普遍的推理)。类比推理根据对不同事物的相似和不相似的比较来论证。如果一段推理的结论是关于事物是怎样的,它就是理论推理。如果一段推理的结论是关于我们应当做什么,它就是实践推理。逻辑是对推理规则的研究。如果一段推理遵循逻辑的规则,它就是恰当的,否则就是不恰当的或无效的,因为结论不被前提所支持。连贯一致的推理是哲学研究的本质特征。

"推理是一个过程,在这个过程中,推理者意识到,一个判断,即结论,是被另一个或一些判断,即前提,根据普遍的思想习惯所确定的,对于这个思想习惯,他可能无法精确地阐述,但他认为它对真知识具有决定意义。"——皮尔士:《文集》,第二卷,第773页。

认识陈述

达米特的术语,是指把某个具体的或可实指的对象确认为专名承担者的陈述,其形式为"这是a"。要得到这样的陈述,取决于对有关确认标准的认识。

"一般来说,一种可实指对象(即可以被指出的对象)的专名'a'的意义,就在于我们可以称作'认识陈述'的形式'那是a'的真值标准。"——达米特:《弗雷格:语言哲学》,第232页。

回忆

[源自希腊文 *anamnesis*] 柏拉图将形式与殊相相分离。可是,如果形式在殊相之外,我们怎能获得关于它们的知识?回忆说乃是柏拉图对这一问题的一种回答。灵魂是永恒的,在天上已经见过了形式世界。但当它进入身体时,这种知识被遗忘了,需要通过回忆恢复。回忆是一个学习的过程。因为殊相是对形式的不完善的摹仿,因而它们只能作为提醒物。由于这一学说必须依靠一个未被证明的假设,即灵魂不朽并且轮回,柏拉图只在中期对话中较早的少数几篇(也就是,《美诺篇》、《斐多篇》、《费德罗篇》)中采用了它,后来便悄悄地放弃了。不过,他仍然相信,普遍知识不能直接来自经验。我们必有一些内在功能使得知识成为可能。这种信念被理性主义者,如笛卡尔、莱布尼茨、康德以及今天的乔姆斯基所继承和发展。

"寻求和学习事实上只是回忆而已。"——柏拉图:《美诺篇》,81d。

Rectificatory justice

Also called corrective justice or remedial justification. A kind of justice which Aristotle contrasted to distributive justice. Injustice can arise in transactions between persons if one party gains at the expense of another. Such transactions include both those which are voluntary, such as buying, selling or lending, and those which are involuntary, such as stealing, bearing false witness or assaulting. In rectificatory justice, a judge redresses or rectifies this injustice by awarding compensation to the injured party. The compensation is not a punishment, although in modern times injuries caused by involuntary transactions might be subject to criminal prosecution. According to Aristotle, a judge must establish an arithmetic proportion to achieve justice through rectification. The two parties, A and B, are originally equal. If A unjustly takes a part C from B, they become $A+C$ and $B-C$ respectively. The judge restores the balance by taking C from A and giving it back to B.

"Rectificatory justice is what is intermediate between loss and profit."—Aristotle, *Nicomachean Ethics*, 1132a19.

Recursive definition

[from Latin: *recurrere*, run back] Recursion is a procedure applied to a first instance and then applied to the result of the first application and so on for each successive application. Recursive definition, or definition by induction, defines the result of an operation for 0 and then defines the result of the operation for any number $n+1$ in terms of the result of the operation for n . For classes, a recursive definition first defines one subclass of a term and then defines other subclasses in accordance with their relations to the first subclass. A typical example defines "Smith's ancestors" as follows (1) Smith's parents are Smith's ancestors and (2) any parents of Smith's parents are Smith's ancestors. In a recursive definition, the *definendum* appears in a sense in the *definiens*, but this does not entail a circularity. Recursive function theory, also called computability theory, is a branch of mathematical logic that studies functions in terms of recursive procedures. Recursive functions depend on recursive definitions. A recursively enumerable set has a recursive function which enumerates its members. This is equivalent to decidability or completeness. Hence if a set of theorems, like those of predicate calculus, is not recursively enumerable it is not decidable.

"The recursive definition comprises two sentential formulas; the first formula specifies the value at zero of the functor being defined (or the truth value at zero of the predicate being defined), and the second formula specifies the value at $x+1$ in terms of the value at x ."—Carnap, *Introduction to Symbolic Logic and its Applications*, 1958, p. 164.

矫正的正义

也称改正的正义或纠正的正义。它是亚里士多德相对于分配的正义而提出的一种正义。在人们之间的交往中如果一方在损害另一方的情况下获利,那不公平就会出现。这种交往既包括那些自愿的行为,如买卖或借出,也包括那些非自愿的行为,如偷盗、作伪证或攻击。在矫正的正义中,一个法官通过给受害一方以补偿来矫正或纠正这种不公平。这种补偿不是一种刑罚,虽然在近代由非自愿的交往引起的不公平也许常会受到刑事起诉。按照亚里士多德的主张,一个法官必须确立一种计算的比例以通过矫正来实现正义。A和B双方最初是平等的。如果A不公平地从B那里拿走了部分C,那他们的情况就分别成了 $A+C$ 和 $B-C$ 。法官通过从A那里取回C并把它还给B来恢复平衡。

"矫正的正义是损失与获益之间的调解人。"——亚里士多德:《尼各马可伦理学》,1132a19。

递归定义

[源自拉丁文 *recurrere* 一词,意为“回溯”]递归指这样一种程序,它应用于第一个实例,然后再应用于这第一次应用的结果,依此对每一接续应用如法炮制。递归定义,或归纳定义,定义对0的操作结果,然后按对 n 的操作结果定义对任意数 $n+1$ 的操作结果。对于类,递归定义,首先定义一个项的子类,然后再依据它们与第一个子类的关系来定义其他子类。一个典型的例子是如此来定义“史密斯的先辈”: (1) 史密斯的父母是史密斯的先辈,而 (2) 史密斯父母的任何父母是史密斯的先辈。在递归定义中,被定义项在某种意义上出现在定义项中,但这并不蕴涵着循环。“递归函数论”也称“可计算性理论”,是依据递归程序研究函数的一个数理逻辑分支。递归函数依赖于递归定义。一递归式可数集合有一种可计数其成员的递归函数。这等同于可决定性或完备性。因此,如一组定理,如谓词演算定理,不是递归式可数的,就不是可决定的。

"递归定义包含两个句式,第一式限定被定义的函子在零点的值(或被定义谓词零点处的真值),而第二式用 x 处的值限定 $x+1$ 处的值。"——卡尔纳普:《符号逻辑及其应用导论》,1958年,第164页。

Red herring fallacy

A fallacy in which one ignores the original topic of an argument and subtly changes the subject, but still claims that the conclusion concerning the original subject is reached although the argument actually has little to do to the conclusion. The fallacy gets its name by analogy to the procedure of training hunting dogs to follow a scent. In this procedure a red herring with a particular scent is used to mislead the dog. This fallacy is similar to *ignoratio elenchi* and occurs when a reasoner is led off track.

"The red herring fallacy is committed when the arguer diverts the attention of the reader or listener by addressing a number of extraneous issues and ends by presuming that some conclusion has been established." — Hurley, *Logic*, p. 117.

Reductio ad absurdum

[Latin: reduction to absurdity, also called *reductio ad impossibile*: reduction to the impossible] A form of argument which draws out conclusions or entailments from some statement or theory to show that these conclusions are absurd because, for example, they clash with unshakeable beliefs, involve an infinite regress or are self-contradictory. Since the conclusions are absurd, the premises from which they are derived are to be rejected. According to Ryle, this argument is the paradigm of philosophical analysis, for philosophy does not test a theory or statement by observation or experiment, but by showing whether it create paradoxes or give rise to other logically intolerable results. A *reductio ad absurdum* can reveal that there is a misunderstanding about the logical form of the relevant propositions, and the theory or statement in question must be rejected or revised. Philosophers should work back from these paradoxes to locate their sources, and find the true logical form of the statement or theory underlying the paradox. This argument can also be used to prove that a theory is true by arguing that its denial or negation will involve absurd consequences.

"A pattern of argument which is proper and even proprietary to philosophy is the *reductio as absurdum*. This argument moves by extracting contradictions or logical paradoxes from its material." — Ryle, *Collected Papers*, vol. 2, p. 197.

Reductio ad impossibile, see *reductio ad absurdum*

Reductionism

Also called reductivism. A position based on the assumption that apparently different kinds of entities or properties are identical and claiming that items of some types can be explained in terms of more fundamental types of entities or properties with which they are identical. Reductionism has

熏青鱼谬误

指将原来的论证题目置之不顾,巧妙地改变主题,虽然所作论证实际上与原主题的结论没有关系,仍声称得出了那个结论,由此而造成的谬误。该谬误因类比于训练猎狗追踪气味的过程而得到此名。在这个过程中,常用一条带有特殊气味的熏青鱼来误导猎狗。这个谬误类似于 *ignoratio elenchi* [混淆论题,用歪曲对方论点的方法进行辩论],发生在推理者偏离正题的时候。

“当辩论者提出一大堆局外的论点来转移读者或听者的注意,最后又假定确立了某个结论,这时,辩论者犯了熏青鱼谬误。”——赫尔利:《逻辑》,第117页。

归谬法

[拉丁文,还原为荒谬,亦称 *reductio ad impossibile*,还原为不可能] 一种论证形式,它从某个陈述或理论引出结论或推定来表明这些结论是荒谬的,因为(例如)它们与我们的不可动摇的信念相冲突,包含一个无穷后推或自相矛盾。由于结论是荒谬的,这些结论所由导出的前提也就被拒斥。根据赖尔的观点,这一论证是哲学分析的范例。因为哲学并不通过观察和实验,而是通过表明一个理论或陈述是否产生谬论或其他逻辑上不能忍受的结果,来检验这个理论或陈述。归谬法可以揭示对相关命题的逻辑形式的误解,这里的理论或陈述因而就一定要被拒斥或修正。哲学家们应当由这些谬论出发,定位其来源并找到支持这一谬误的陈述或理论真正的逻辑形式。这个论证也可以用来论证一个理论为真,那就是论证对于这一理论的否认或否定将包含荒谬的结果。

“哲学的一个正当甚至专有的一个论证模式就是归谬法。这个论证通过由其材料中抽出矛盾或逻辑谬论来运作。”——赖尔:《文集》,第二卷,第197页。

不可能论证

见“归谬法”条。

还原论

又称“还原主义”。这个观点是建立在这一假设之上的:表面上不同种类的存在物或特性是同一的。它声称某一种类的东西能够用与它们同一的更为基本的存在物或特性类型来解释。还原论在不同的领域有不同的形式。在心的

different forms in different areas. In the philosophy of mind, behaviourism is reductionist through accounting for all mental phenomena in terms of behaviours. The identity theory of mind explains mental phenomena in terms of type-type or token-token identities with states of the central nervous system. Reductionism can have linguistic versions, according to which predicates or sentences of different sorts are shown to be equivalent. In metaphysics, phenomenalism reduces sentences about physical objects to basic sentences about actual or possible immediate experiences. In philosophy of science, the program to establish the unity of science is based on the reductionist premise that the theories of one science can be systematically explained by the theories of another more basic science or that the laws of complexes can be reduced to the laws of the parts of the complexes.

"Modern empiricism has been conditioned in large part by two dogmas. One is a belief in some fundamental cleavage between truths which are *analytic*, ... and truths which are *synthetic*.... The other dogma is *reductionism*: the belief that each meaningful statement is equivalent to some logical construct upon terms which refer to immediate experience." — Quine, *From a Logical Point of View*, p. 20.

Reductivism, see reductionism

Redundancy theory of truth

A theory claiming that the predicate "true" is redundant, for to say that it is true that *p* is equivalent to saying that *p*. The assertion that a sentence is true is precisely the same as the assertion of that sentence. For instance, "It is true that grass is green" amounts to: "Grass is green". Hence "is true" or "is false" are predicates which matter only stylistically and rhetorically, and can be eliminated without semantic loss. The concept of truth is useless in giving a theory of meaning. Truth is essentially a shallow concept. The problem of truth is nothing but a linguistic muddle. This theory was developed by philosophers such as Frege, Ramsey, Wittgenstein, Prior, Ayer, Mackie and Grover. However, although the truth predicate is redundant, there are still many philosophical problems about the nature of truth. Asking what makes "It is true that grass is green" true will lead to admitting an extra-linguistic reality. The truth-predicate enables us to move from talk about language to talk about the world. Hence, the redundancy theory does not cover all meanings of truth. Nevertheless, this theory of truth is also a starting-point for Tarski's semantic theory of truth.

"The forms '*p*' and 'It is true that *p*' yield the same sense no matter what English sentence is substituted for '*p*'. This is appropriately referred to as 'the redundancy theory of truth'." — Horwich, *Truth*, 1990, p. 39.

哲学中,还原论的行为主义用行为来说明所有的心的现象。心的同一论用神经中枢系统状态与类型—类型的同一或殊型—殊型的同一起来解释心的现象。还原论还可以有语言学的形式,据此,不同种类的谓项或语句可以被表明是等价的。在形而上学中,现象论将关于物理对象的语句还原为关于实际的或可能的直接经验的基本语句。在科学哲学中,建立统一科学的纲领正是基于这样的还原论前提:一种科学的理论可以用另一种更为基本的科学的理论来进行系统的解释,或者复合体的定律可以还原为关于构成复合体的部分的定律。

“现代经验论大部分由两个教条所制约,其一是关于“分析”真与“综合”真之分野的信念,另一个教条则是“还原论”:相信每一个有意义的陈述都等同于某种基于直接经验术语的逻辑建构。”——奎因:《从逻辑的观点看》,第20页。

还原主义

见“还原论”条。

真理冗余论

这一理论断言,“真”谓词是多余的,因为说“*p*是真的”等于说“*p*”。“某语句是真的”这一断定与断定该语句完全是一回事。例如,“‘草是绿的’为真”等效于“草是绿的”,所以“是真的”或“是假的”只是在风格和修辞上起作用的谓词,去掉它们并不会造成语义损失。真概念在给出意义理论上是没有用处的。真本质上是一个肤浅的概念。真理问题只不过是一个语言泥潭。这一理论是由弗雷格、拉姆塞、维特根斯坦、普赖尔、艾耶尔、麦基、格罗弗等人所发展的,不过,尽管真谓词是多余的,仍然存在许多与真的本性相关的哲学问题。问是什么使得“‘草是绿色的’是真的”是真的,这将导致承认一个语言之外的实在。真谓词使我们从谈论语言进到谈论世界。所以,冗余论并没有包含真的所有意义。不过,这种真理论也是塔斯基的语义真理论的出发点。

“形式‘*p*’和‘*p*是真的’产生同样的意义,无论用什么样的英语句子替换‘*p*’。这被恰如其分地称之为‘真理冗余论’。”——霍维奇:《真理》,1990年,第39页。

Re-embodiment, see disembodiment

Reference

The relation between a name or other referring expression and its referent, although sometimes the term is used for the referent itself. Philosophical problems arise over how expressions can point beyond themselves to their referents or be about something. Traditionally, a term is a referring expression if it picks out a particular object and thereby enables the sentence in which it occurs to be true or false. Frege distinction between sense and reference initiated the modern examination of reference. According to Frege, two terms having the same reference or extension can differ in sense or intension. Sense and reference are related for Frege because the reference of an expression is determined by its sense. A name picks out a referent which the rest of a sentence describes to provide a claim to knowledge. Russell rejected Frege's distinction between sense and reference and replaced it by a single notion of "standing for" to explain reference. He distinguished sharply between logically proper names, which pick out objects of immediate experience, and definite descriptions. Definite descriptions are quantified expressions which can be intelligible even if they fail to pick out anything.

Strawson argued that Russell's account of definite descriptions wrongly conflates reference and assertion, leading to the mistaken claim that a sentence like "The present King of France is bald" upon analysis asserts that there is a present King of France and is therefore false. Strawson's positive account depends on distinguishing sentences or expressions, their use and their utterance.

Donnellan criticises both Russell and Strawson for ignoring a crucial distinction between referential and attributive uses of definite descriptions. A referential use picks out a particular individual even if the description is mistaken, whilst an attributive use fits whatever satisfies the description.

The Fregean tradition regarding names and referents has been recently challenged by Kripke in *Naming and Necessity*. Kripke accounts for names as rigid designators, that is designators which apply to the same individual in every possible world in which that individual exists. He argues against the use of descriptions as the way to determine a relation between names and their referents. Our current descriptions might be mistaken and other things might satisfy correct descriptions. There are similar problems with natural kind terms, such as water or gold. Kripke ties reference to the essence of individuals or kinds, even if these essences are unknown to us, and to a causal account which fixes reference by providing a chain from an initial use to the present. This is sometimes called the causal theory of reference.

再入壳

见“无壳”条。

指称

名称或其他指称表达式与其所指者的关系,有时也用于所指物本身。哲学问题就在于,表达式如何能够超越自身而指向它们的所指物或谈论某物。传统上,一个词是一个指称表达式,是由于它选择了一个特殊的对象,因而能够使它所在的句子为真或为假。弗雷格对意义与指称的区分,开创了对指称的现代考察。根据弗雷格的观点,具有相同指称或相同外延的两个词可能在意义或内涵上是不同的。在弗雷格看来,意义与指称相联系,是由于表达式的指称是由它的意义决定的。名称选出了一个指称物,而句子的其他部分则把它描述为对知识做出了陈述。罗素抛弃了弗雷格对意义与指称的区分,而代之以单个的“代表”概念去解释指称。他严格地区分了指向当下经验对象的逻辑专名与限定的摹状词。限定的摹状词是一些量化的表达式,即使它们并没有指向任何东西,也可以得到理解。

斯特劳森认为,罗素对限定摹状词的论述错误地混淆了指称与断定,导致了这样的错误推论,即认为如“当今法国国王是秃子”这个句子,经过分析可以断定为,存在一个法国国王,因而是假的。斯特劳森的正面论述是区分了句子或表达式、它们的用法与它们的说出。

唐纳兰批评了罗素与斯特劳森,认为他们都忽略了限定摹状词在指称性用法与归属性用法之间的关键区分。指称性用法是指向特殊的个体,即使这个摹状词是错误的,而归属性用法则适合于满足这个摹状词的东西。

弗雷格关于名称与指称的传统观点最近在克里普克的《命名与必然性》中受到了挑战。克里普克把名称看做严格的指示词,它在个体存在的每种可能世界中都用于指称相同的个体。他反对把摹状词用于确定名称与其所指的关系。我们眼下的摹状词可能是错的,而其他的東西则可以滿足正确的摹状词。这在自然种类的词中也有相似的问题,诸如水或金。克里普克把指称与个体或种类的本质联系起来,即使我们并不知道这些本质,他还把指称与一种因果描述联系起来,这种描述通过提供从最初用法到现在用法的链条而确定指称。有时这就被称作指称的因果理论。

“专名的指称就是我们用其名称所指的對象本身……”——弗雷格:《G. 弗雷格哲学著作文集》,吉奇和布莱克(编),第60页。

"The reference of a proper name is the object itself which we designate by its means..." - Frege, *Translations from the Philosophical Writings of Gottlob Frege*, P. Geach and M. Black, eds, p. 60.

Referent, see reference

Referential contradiction, see referential tautology

Referential tautology

David Pears' term in relation to the problem of whether "exists" is a predicate. If the subject term of a singular existential statement implies existence, then if the verb asserts existence, the resulting statement will be a referential tautology. If the statement denies existence, it is a referential contradiction. For example in the statement "This room exists", the subject "this room" implies that there is a room and adding "exists" reasserts the existence of the room. This is a tautology. The statement "This room does not exist" denies the existence of the room which is implied by the subject. This is a referential contradiction. Accordingly, "exists", although it says something about the subject, is not a genuine predicate, because it adds nothing new, especially nothing which has not been implied by the subject.

"So perhaps we could say that the thesis that existence is not a predicate at least means that the verb "to exist" produces referential tautologies and referential contradictions in this way." — D. F. Pears, in Strawson (ed.) *Philosophic Logic*, 1967, p. 98.

Referential theory of meaning

A theory that is based on the assumption that language is used to talk about things outside language and claims that the meaning of a word (except a syncategorematic word) is the object it denotes, and the meaning of a sentence is the proposition it expresses. Every meaningful expression has meaning because there is something which it refers to, designates, signifies or denotes. It is a symbol that stands for something other than itself. The theory is also called the denotative theory of meaning. A naive version of this theory claims simply that the meaning of an expression is that to which the expression refers. But a sense-reference distinction shows that two expressions can have different meanings but the same referent. A more sophisticated version of this theory, such as that developed by Russell, claims that meaning is a referring or denoting relation between a term and the object it picks out. This theory is the most influential one in the modern discussion of meaning and reference, but it has been challenged because of its metaphysical requirement that there is something or other to which a word refers. Such a meta-

所指物

指称矛盾式

见“指称重言式”条。

指称重言式

D. 皮尔斯的术语，与“存在”是不是一个谓词这个问题有关。如果单称存在陈述的主词蕴涵存在，那么，如果该动词断定了存在，由此导致的陈述将是一指称重言式。如果该陈述否定了存在，则它就是一指称矛盾式。例如，在“这个房间存在”这一陈述中，主词“这个房间”蕴涵着有一个房间，增加“存在”就是重新断定该房间的存在。这是同语反复（重言式）。陈述“这个房间不存在”，否定了在该主词中所蕴涵的该房间的存在，所以这是指称上的矛盾。相应地，尽管“存在”述说了有关它的主词的某种东西，但它并不是一真正的谓词，因为它并没有增加任何新东西，特别是未被其主词所蕴涵的东西。

“于是我们也许可以说，存在不是一个谓词这一论题至少意味着：‘存在’这一动词以这种方式产生指称重言式和指称矛盾式。”——皮尔斯，见斯特劳森编：《哲学逻辑》，1967年，第98页。

意义的指称论

这一理论基于下述假定：语言是用来谈论语言之外的事物的；它断言，词语（除“助范畴词”之外）的意义是它所指示的对象，语句的意义是它所表达的命题。每一个有意义的表达式有意义，是因为存在着某种它指称、命名、意谓、或指示的东西。它是一个代表它自身之外的某物的符号。这一理论亦称“意义的指示论”。这一理论的素朴形式简单地宣称，一表达式的意义就是该表达式所指称的对象。但意义一指称的区分表明，两个表达式可以有不同的意义却有同样的所指。这一理论的一个更精致的形式，如由罗素提出的形式，断言意义是一词项和它所指的对象之间的指称关系或指示关系。这一理论在现代关于意义和指称的讨论中是最有影响的，但由于它的下述形而上学断言而受到挑战，即存在着一词项所指称的某物或他物。这样一种形而上学总是有争议的，而且，并非所有有意义的表达式都指称某物。

“[意义的]指称论把表达式的意义等同于

physics is always controversial, and furthermore not all meaningful expressions refer to something.

"The referential theory [of meaning] identifies the meaning of an expression with that to which it refers or with the referential connection." —Alston, *Philosophy of Language*, 1964, p. 11.

Referentially opaque

Quine's term, in contrast to referentially transparent. If a context conforms to the principle of intersubstitutivity *salve veritate*, that is if two co-referential terms like "Shanghai" and "the largest city of China" are interchangeable without changing the truth value of the sentences formed by the terms and their context, then the context is referentially transparent or purely referential. For example, given the context, "— is beautiful", "Shanghai" and "The largest city of China" can be substituted for one another without changing the truth value of the sentences. Hence "— is beautiful" is a referentially transparent context.

However, if substituting co-referential terms for one another within a context can change the truth-value, the context is referentially opaque. Such opacity occurs in the contexts of quotation, propositional attitudes such as belief and modality. For example, "Tony believes that Shanghai is beautiful" need not have the same truth value as "Tony believes that the largest city of China is beautiful" because Tony might not know that Shanghai is the largest city in China.

"What is important is to appreciate that the contexts 'Necessarily...' and 'Possibly...' are, like quotation and 'is unaware that...' and 'believe that...', referentially opaque." —Quine, *From a Logical Point of View*, p. 144.

Referentially transparent, see referentially opaque

Referring expression, see reference

Reflect (Hegel)

[German: *Nachdenken*, literally after-think] An important term in Hegel's philosophy for thinking over what is immediately present to one's mind and producing thought about it. Hegel's notion differs from the notion of reflection used by empiricist philosophers such as Locke, for whom reflection is limited to what is present to the mind. For Hegel, reflection starts from the immediately given, such as a perception or feeling, but proceeds to find behind the given what is essential and what is significant. Hence, to reflect involves thinking of the thinking. The main principles by which a mind can reflect what is essential include the principles of identity, difference, non-contradiction and sufficient reason.

它所指称的某物，或等同于那种指称关系。”——阿尔斯通：《语言哲学》，1964年，第11页。

指称上的隐晦

奎因的术语，与“指称上的清晰”相对应。如果一个语境确实符合主体间性原则，即两个具有相同指称的词，如“上海”和“中国最大的城市”，它们可以相互交换而不会改变由这些词及其语境构成的句子真值，那么，这个语境就是在指称上清晰的，或纯指称。例如，给定一种语境，“……是美丽的”，“上海”和“中国最大的城市”可以相互替换而不会改变这些句子的真值。因而，“……是美丽的”就是在指称上清晰的语境。

然而，如果在一种语境中相互替换具有相同指称的词而会改变真值，那么这个语境就是在指称上隐晦的。这种隐晦出现在引语，诸如信念之类的命题态度以及样式的语境之中。例如，“托尼相信上海是美丽的”与“托尼相信中国最大的城市是美丽的”这两个句子并不需要具有相同的真值，因为托尼可能并不知道上海是中国最大的城市。

“重要的是要认识到，‘必然地……’和‘可能地……’这种语境，就像引语和‘没有意识到……’、‘相信……’一样，在指称上是隐晦的。”——奎因：《从逻辑的观点看》，第114页。

反思（黑格尔）

[德语词: *Nachdenken*, 字面的意义是“在……之后思考”] 黑格尔哲学的重要术语，指反复思考直接呈现在心灵中的东西，并产生关于它的思想。黑格尔的概念不同于经验论哲学家如洛克所使用的反思概念，对于经验论者来说，反思限于呈现于心灵的东西。对于黑格尔来说，反思从直接给予的东西如知觉或感觉开始，但进展到发现在给予的东西背后本质的东西和有意义的东西。因此，反思涉及对思维的思维。心灵按照它来反思本质的东西的主要原理包括同一性、差别、非矛盾和充足理由的原理。然而，反思是局部的，只提供关于对立面的知识，而非

However, reflection is partial and provides knowledge of the opposite, but not knowledge of origins. Reflection, for Hegel, is distinguished from speculation, which is holistic and can uncover the underlying unity of opposites.

"Those who insist on this separation of religion from thinking usually have before their minds the sort of thought that may be styled after-thought. They mean 'reflective' thinking, which has to deal with thoughts as thoughts." — Hegel, *Logic*, sect. 2.

Reflection (Locke)

For Locke, one of the two sources along with sensation of material for ideas and knowledge. Analogous to the perception of sensible objects, reflection is the perception of our own mental operations, the operations perceived and reflected on by our selves. Hence, Locke also called reflection inner sense. In today's terminology it is introspection. The difference between reflection and sensation arises mainly because reflection is not directly stimulated by objects external to us. Ideas provided by reflection include perceiving, thinking, doubting, believing, reasoning, knowing, willing, and all the various other actions of our own minds. Locke's account of reflection is criticised as over-simplified.

"By 'reflection' then, in the following part of this discourse, I would be understood to mean that notice which the mind takes of its own operations, and the manner of them, by reason whereof there come to be IDEAS of these operations in the understanding." — Locke, *An Essay Concerning Human Understanding*, II. 1, 4.

Reflective equilibrium

A method of reconciling judgements and principles in moral philosophy through a two-way accommodation between them. There is always the possibility of a discrepancy between general principles and judgements about particular cases. A rational response to these differences requires a process of mutual adjustment of principles and judgements. We revise principles to adjust to judgements or alter judgements to conform to principles until an equilibrium is reached with principles and judgements fitting together or coinciding. The equilibrium is reflective because it yields insight into the relations between our judgements and principles and into their rational grounds. The equilibrium is temporary and can be upset by further reflection or by new cases, but this difficulty also arises, although less transparently, if one tries to determine principles by other procedures. The term gained its currency from Rawls, who traced its origin to Goodman.

"This state of affairs I refer to as reflective equilibrium. It is an equilibrium because at last our principles and judgements coincide; and it is reflective since we know to what principles our judgements conform and the premises of their derivation." — Rawls, *A Theory of Justice*, 1971, p. 20.

本源的知识。对黑格尔来说,反思不同于思辨,思辨是整体的,能揭示对立的根本统一。

“那些坚持宗教和思维分离的人,心目中所习惯的那种思维,可表示为后思,即反思,它把思想本身作为它的内容。”——黑格尔:《小逻辑》,第2节。

反省(洛克)

在洛克那里,反省是观念的材料和知识的材料的两个来源之一(另一个来源是感觉)。类比于对可感对象的知觉,反省是对我们自己内心活动的知觉,我们的自我对这些活动进行知觉和反省。因此洛克也称反省为“内部的感觉”。用现在的术语说,它是内省。反省和感觉的差别主要在于,前者不是由我们之外的对象直接刺激起来的。反省所提供的观念的例子是知觉、思维、怀疑、相信、推理、认知、意愿,以及我们自己心灵的其他全部各种活动。洛克对反省的说明因过于简单化而遭到批评。

“所以,应当理解到,在下面的讨论中用到‘反省’一词时,我的意思是指心灵对它自己的活动和活动方式的注意,由于这种注意,这些活动的观念才出现在理智中。”——洛克:《人类理智论》,第二卷,第一章,第4节。

反思的平衡

道德哲学中通过判断与原则之间的双向适应使它们一致起来的方法。在一般原则和关于特殊情况的判断之间总会有不一致的可能。对这些差异的合理反应,要求一个原则和判断相互调整的过程。我们修正原则以适应判断或改变判断来符合原则,直到实现原则和判断彼此适合或一致的平衡。平衡是反思的,因为它洞察到我们的判断和原则之间的关系和它们这种关系的合理依据。这种平衡是暂时的,它可被进一步的反思或新的情况所打破,但如果一个人试图以其他的程序来决定原则,困难也会随之出现,虽然不那么明显。这一术语是从罗尔斯开始流行的,他把它的起源追溯到古德曼。

“我把这种情况称为反思的平衡。它是一种平衡,因为我们的原则和判断最后达到了和谐;它又是反思的,因为我们知道我们的判断符合什么样的原则和它们分离的前提。”——罗尔斯:《正义论》,1971年,第20页。

Reflective judgement, see *Critique of Judgement*

Reflexive

A relation is reflexive if and only if for all objects X , X can have the relation to itself. $(\forall x) Rxx$. For example, because X must be the same age as himself, "... the same age as ..." is a reflexive relation. A relation is irreflexive if and only if for all objects X , it is not the case that X can have the relation to itself. For example, X cannot be a father of himself. Hence "... is the father of ..." is an irreflexive relation. A relation is non-reflexive if it is neither reflexive nor irreflexive. For example, regarding "A loves B". We have no idea from the relation whether B loves A. Hence "... loves ..." is a non-reflexive relation.

"A relation is said to be reflexive if any individual a has that relation to itself if there is something b such that either Rab or Rba ." —Copi, *Symbolic Logic*, 1967, p. 153.

Reformer's paradox

A paradox raised by moral conventionalism concerning reform. Imagine that a reformer sees that his fellow citizens are lazy, selfish and leading meaningless lives. Because he believes that they are this way because of the morality they accept, he advocates the need to reform the existing morality. His motive is to elevate the moral consciousness of his fellow citizens. However, the reformer must begin his reforms in a world that he did not create, but which has shaped him. He is bound by the customs and conventions of the society in which he grew up. According to moral conventionalism, an act is morally right if and only if it conforms to the conventions of the society. Hence, if the reformer wants to change the conventions, he becomes immoral, yet if he keeps the conventions his fellows remain morally inadequate. The same problem applies to the reformer of the system of distribution.

"Justice limits utility at exactly the point of the 'reformer's paradox': Given an imperfect existing initial distribution, any redistribution in the interests of arriving, from the standpoint of justice, at a superior distribution runs headlong into the pattern of existing claims that cannot in the interests of the very justice that provides the rationale for the entire enterprise —be brushed aside as an irrelevant obstacle." —Rescher, *Distributive Justice*, 1966, p. 121.

Refutation, see conjecture

Regularity theory of causation

The causal theory generally held by phenomenalism in

反思的判断力

见“判断力批判”条。

自返的

一关系是自返的，当且仅当，对所有对象 X ， X 与自身能够有那种关系，即 $(\forall x) Rxx$ 。例如， X 必定是与他本人同龄的，所以“与……同龄”是一自返关系。一关系是反自返的，当且仅当，对所有对象 X ，并非 X 能与自身有那种关系。例如， X 不能是他自身的父亲，所以“是……的父亲”是一反自返关系。一关系是非自返的，如果它既不是自返的也不是反自返的。例如，关于“ A 爱 B ”，我们从该关系本身一点也不知道 B 是否爱 A 。所以“爱”是一非自返关系。

“一关系称作是自返的，如果对任意个体 a 都存在某物 b 使得或者 Rab 或者 Rba ，则 a 与它自身有这种关系。”——柯比：《符号逻辑》，1967年，第153页。

改革者的悖论

道德约定主义提出的关于改革的一个悖论。设想一个改革者看到他的同胞懒惰、自私并过着毫无意义的生活。由于他认为他们这样是因为他们所接受的道德所致，他提倡需要改革现存的道德。他的动机是提高他的人民的道德意识。然而，这个改革者必须从并非由他创造的而且是塑造他的世界开始他的改革。他被由以成长的社会的风俗习惯所束缚。按照道德约定主义，一个行为只要而且仅仅只要同社会习俗相适应，它在道德上就是正确的。因此，如果改革者想要改变这一习俗，他就是不道德的，然而，如果他保持这些习俗，那他的同胞在道德上就仍是不适宜的。同样的问题也适用于分配制度的改革者。

“正义恰恰在‘改革者的悖论’这一点上限制了功利：假设一种不完善的现存的初次分配，根据正义的观点，任何再分配为了达到优越的分配都会直接与现在所主张的模式发生冲突，而为了给整个事业提供基本原理的那种正义，这一模式不能作为一种不相干的障碍被扫除。”——雷谢尔：《分配上的公正》，1966年，第121页。

反驳

见“猜想”条。

因果规则论

现象主义一般持有的一种因果理论，是为

order to reject common sense realism about the existence of material things with causal properties. The theory is a sense-data version of Hume's theory of causation. It claims that when we say "A causes B", the statement can be analysed into sequences or correlations of sense-data. Since we observe that whenever A occurs, B occurs, and this succession is regular, we assert that this is a law. Beyond these sequences of sense-data, we have no reason to believe that the causes exert a compelling power or that there is a necessary but unobservable relation between cause and effect. The main difficulty is that it is hard to account for the fact that the causal regularity exists when unobserved by us without relying on a theoretical apparatus involving necessity. In order to account for this, phenomenologists usually appeal to the notion of possible sense-data.

"Above all, the suggested analysis of unobserved causes, even granted the Regularity Theory of Causation, makes actual effects depend on a cause whose existence is only possible." — Hirst, *The Problem of Perception*, 1959, p. 110.

Regulative principles, see constitutive principles

Reification, an alternative term for hypostatization

Reincarnation

The belief that the soul is immortal and that a person's life is reborn after the death of one body in another body. Death is thus merely the death of the body, and the soul can take residence in different bodies, either human or animal. In contemporary philosophy, reincarnation is not merely a topic of theology, but also an issue regarding personal identity. The problem concerns the conditions under which the reincarnated self would retain its former identity. If it does retain its identity, then according to what criterion of personal identity does it do so? If it does not, reincarnation does not seem to be a rebirth of the same life. Reincarnation is synonymous with transmigration or metempsychosis (from Greek; *meta*, beyond + *en*, in + *psyche*, soul), the term used by Pythagoras.

"The affirmation that there is life after death in another world or reincarnation on earth is wide-spread." — Swinburne, *The Coherence of Theism*, 1977, p. 123.

Reism

A term introduced by the Polish philosopher Tadeusz Kotarbinski in 1929 for the position that only things exist. All statements about abstract objects can be reduced to the statements about things. The term "things" covers both organic and inorganic things. There are no objects other than things. Propositions which appear to imply the existence of

了拒斥关于具有因果特性的物质东西存在的常识实在论。这个理论实际上是休谟的因果理论的感觉材料形式。它声称,当我们说"A导致B"时这一陈述可以被分析为感觉材料的序列或相互关联。因为我们总是观察到,每当A发生时,B就发生,而且这个相继顺序是规则的,所以我们就肯定这是一个定律。除了这些感觉材料的序列以外,我们没有理由相信原因实施一种强制性的力量或原因与结果之间存在必然而又看不到的关系。这一理论的主要困难在于,它难以说明这样一个事实:因果规则性在不依赖于包含必然性这样的理论装备的情况下而没有被我们观察到的时候也依然存在。为了说明这一点,现象主义者通常借助于可能的感觉材料这一概念。

"最重要的是,即便承认因果规则论,所提议的对于未观察到的原因的分析也使得实际结果依赖于其存在只是可能的原因。"——赫斯特:《知觉问题》,1959年,第110页。

规范性原理

见“构成性原理”条。

具体化

“实体化”的另一个词。

再生

一种信念,相信灵魂不朽,人的生命在一个肉体死后会在另一个肉体中再生。因此,死仅仅是肉体之死,灵魂能够留驻在人或动物的不同肉体中。在当代哲学中,再生不仅是个神学论题,也是关于人格同一的一个争论点。这个问题关涉到再生的自我保留它以前同一性的条件。如果保留它的同一性,是根据人格同一的什么标准才如此的?如果不保留,它就似乎不是同一个生命的再生。再生也是“轮回”或“灵魂转生”的同义语。“灵魂转生”(metempsychosis,源自希腊语 *meta* (在……之外) 和 *en* (在……之中) 和 *psyche* (灵魂)) 一词是毕达哥拉斯使用的。

“死后在另一个世界有生命,或在地上再生,这种主张散布很广。”——斯文布勒:《有神论的融贯性》,1977年,第123页。

实有论

这是由波兰哲学家T. 柯塔宾斯基于1929年引入的一个词,它是指只有事物存在的立场。一切关于抽象对象的陈述都可以还原为关于事物的陈述。这里的“事物”一词既包括了有机物,也包括了无机物。不存在不同于事物的对象。表面蕴涵了这种或那种抽象实体存在的命题,可

abstract entities of one kind or another either can be rephrased without any loss of relevant content or must be rejected as false. Since the term "reism" is easily confused with "realism", Kotarbinski proposed that it be replaced by "concretism".

Brentano was an earlier reist, for he claimed that only individuals (*entia realia*) exist and can be thought of, and that non-individuals (*entia irrelia*) such as possibilities, concepts and propositions do not exist. Kotarbinski held an even more radical view. He proposed that an entity can be a thing if and only if it is extended in time and space. Accordingly, nothing other than material things exist. This position is in sharp contrast to Platonism, which allows the existence of abstract objects. To distinguish his position from that of Brentano's, Kotarbinski calls his own doctrine somatism or panosomatism (from Greek: *pantos*, all + *soma*, body).

"So much for the reduction of categories of objects to the category of things. The stand taken in favour of such a reduction might be called reism." —Kotarbinski, "Franz Brentano as Reist", in McAlister (ed.) *The Philosophy of Brentano*, 1976, p. 194.

Relation

Although Aristotle classifies relation as one of his ten basic categories of being, it is not until Leibniz that relations become a major focus of metaphysics. Leibniz puzzles over the nature and location of relations, since they can be identified with neither one of the related terms nor with the void between them. In addition, propositions of a relational form cannot be reduced to those of single subject-predicate form. He claims that relations, in contrast to one-place properties, are unreal and hence declares that his basic entities, the monads, are windowless, with none of the features of one monad requiring a reference to other monads and their features. His view gives rise to many debates, one of which is whether relations are internal or external. Absolute Idealism believes that all relations are internal, that is, part of the essential nature of the related terms. Russell rejects this thesis and claims that all relations are external, that is, accidental to the related terms. Modern formal semantics considers relations to be predicates of *n* tuple individuals. A two-place predicate is a relation between two individuals, a three-place predicate is a relation among three individuals, and so on. The main kinds of relation include reflexive, symmetric, transitive, ordering and equivalent relations. Modern mathematics takes relations as classes of ordered pairs.

"Any entity which can occur in a complex, as 'precedes' occurs in 'A precedes B' will be called a relation." —Russell, *Collected Papers of Bertrand Russell*, vol. VI, p. 80.

Relation of ideas, see knowledge of relations of ideas

以得到重新解释而不会失去相关的内容,否则,它们就必定是假的,应该加以抛弃。由于“实有论”一词容易与“实在论”混淆,因此柯塔宾斯基建议把它替换为“具相论”。

布伦塔诺也是一个早期的实有论者,因为他认为只有个体(*entia realia*)存在和可以被思考,而非个体(*entia irrelia*)之物如可能性、概念、命题等等是不存在的。柯塔宾斯基采取了一种更为极端的看法。他提出,当且仅当实体在时空上得到扩延时,它才能是事物。因此,物质事物之外无物存在。这种立场与允许抽象对象存在的“柏拉图主义”针锋相对。为了与布伦塔诺的立场区分开来,柯塔宾斯基把他自己的主张称作“实物论”或“泛体论”(源自希腊文:*pantos* (全部)和 *soma* (身体))。

“完全是把对象范畴还原为事物范畴。赞成这种还原所采取的立场可以称作实有论。”——柯塔宾斯基:《实有论者F. 布伦塔诺》,载麦克阿里斯特(编):《布伦塔诺的哲学》,1976年,第194页。

关系

虽然亚里士多德把“关系”划分为存在的十个基本范畴之一,但是一直到莱布尼茨,关系才成为形而上学的焦点。莱布尼茨对于关系的性质和所处的位置感到困惑,因为它们既不等同于一个关系项,又不等同于关系项之间的空位。此外,关系形式的命题不能被还原为单一的主谓词形式的命题。他认为,关系与一位性质相反,是不真实的,并因此宣称,他的基本实体,既单子,是没有窗户的,单子决无这样的特性,即要与其他单子及其性质发生关系。他的观点引发了许多争论,其中之一是,关系是内在的还是外在的。绝对唯心主义认为一切关系都是内在的,即是说,是关系项本性的一部分。罗素驳斥了这种论点,认为所有的关系都是外在的,即是说,并不是关系项的本质属性。现代形式语义学认为关系是 *n* 元个体的谓词。二位谓词是两个个体之间的关系,三位谓词是三个个体之间的关系,等等。关系的主要种类包括自反、对称、传递、有序、等等关系。现代数学把关系当做有序对的类。

“任何能够出现于复合物中的东西,如像‘先于’出现在‘A先于B’中一样,将被称为关系。”——罗素:《罗素文集》,第七卷,第80页。

观念的联系

见“有关观念关系的知识”条。

Relations of production

In Marxist philosophy, relations between productive forces and their owners, in which the owner has power to use the productive forces, and between owners and others in the society. The power of the owners implies the exclusion or alienation of others from employing the same productive forces. Hence, relations of production are basically ownership relations. According to Marx, property relations are a legal expression of relations of production. He did not give a formal definition of this term, and there is controversy about how to use his various remarks to formulate a coherent account by which relations of production are explained as a social factor distinct from any item of the superstructure. For Stalin, relations of production defined ownership relations, relations of persons in production and relations of distribution. In Marxism, relations of production are called the form or base of all historical human society. They involve power rather than rights and hence are more basic than political and legal relations. Relations of production are related to the division of labour and is independent of the will of individuals. The totality of relations of production in a society forms its economic structure, also called its economic base, which is determined by productive forces but in turn determines the superstructure. The essential principle of the economic structure in a class society is the pattern of the ruling class, by which a small ruling class owns most of society's means of production, while the majority owns few or none of the means of production. According to Marx, relations of production vary from age to age, and their development corresponds to the development of the productive forces from primitive communism to a slave-owning system, feudalism and capitalism and will proceed to communism. Communism, it is claimed, will abolish private ownership and eliminate the alienated nature implied in capitalist relations of production. To assess Marx's concept of the relations of production it is necessary to assess the theoretical structure in which the concept plays a fundamental role.

"In the social production of their lives men enter into relations that are specific, necessary and independent of their will, relations of production which correspond to a specific stage of development of their material productive forces." -- Marx, *Preface to the Critique of Political Economy*.

Relative identity

The sentence "a is identical with b" is traditionally understood as equivalent to "a is the same as b". Peter Geach calls this notion absolute identity, but claims that it is incomplete. He argues that "a is identical with b" means "a is the same x as b", with "x" being an unstated kind term that is understood from the context of utterance. He calls this notion relative identity and believes that it fits into our ordinary

生产关系

在马克思主义哲学中,生产关系是指生产力和它们的所有者的关系,在此关系中所有者拥有使用生产力的权力;还指所有者与社会中的其他成员的关系。所有者的权力意味着他人被排除在或异化于使用同一个生产力之外。因此,生产关系基本上是所有权关系。按马克思的观点,财产关系是生产关系的法律表现。他没有对这个术语作出正式的定义,因而关于如何用他的各种说法来构成连贯的说明,从而把生产关系解释为不同于上层建筑的社会因素,对此存在着争论。在斯大林看来,生产关系规定所有权关系、人们在生产中的关系和分配关系。在马克思主义中,生产关系被称为一切历史的人类社会的基础或形式,它们所涉及的是权力而不是权利,因而比政治和法律的关系更为基本。生产关系与劳动分工有关,并独立于个人的意志。一个社会的生产关系的总和形成它的经济结构,也称为经济基础,它被生产力所决定,但它反过来又决定上层建筑。阶级社会中的经济结构的实质性原则就是统治阶级的模式,按照这种模式,一小撮统治阶级拥有绝大部分的社会生产资料,而大多数人拥有极少或根本没有生产资料。按马克思的观点,不同的时代有不同的生产关系,它们的发展适应于生产力的发展,它们经历了从原始社会到奴隶所有制、封建主义和资本主义,并将达到共产主义的发展。马克思主义主张,共产主义将废除私有制,根除包含于资本主义生产关系的异化本性。评价马克思的生产关系概念必须要评价这个概念在其中起着基本作用的理论结构。

"人们在自己生活的社会生产中发生一定的、必然的、不以他们的意志为转移的关系,即同他们的物质生产力的一定发展阶段相适合的生产关系。"——马克思:《〈政治经济学批判〉序言》。

相对同一性

语句"a同一于b"在传统上被理解为等同于"a与b相同"。P. 吉奇将此定义为"绝对同一性",但他声称这是不完全的。他论辩说,"a同一于b"意味着"a是与b相同的x",其中"x"是未明确说明的类型术语,需要根据说话的语境来理解。他将这一概念称为"相对同一性",并且相信它适合我们关于自然语言的日常

use of natural language. On his view, all identity is relative to a kind, and two things cannot be identical if there is not some kind term under which they both fall. Geach's position is disputed by others, including David Wiggins, who in *Sameness and Substance* defends absolute identity based on Leibniz' law. Some philosophers suggest that relative identity is a qualitative notion, while absolute identity is numerical identity.

"Identity statements in natural language come in two syntactic varieties. Some are of the form 'a is the same as b' or 'a is identical with b'. These are absolute identity statements. Others have the form 'a is the same so-and-so as b'. These are relative identity statement." — Griffin, *Relative Identity*, 1977, p. 12.

Relative product

The combination of two relations. Suppose there is a relation R such that xRy , and a relation S such that ySz , then we can combine these two relations R and S (called relative multiplication) and get a relation between x and z . The obtained relation is called the relation product of R and S . Russell symbolises it as R/S .

"By the relative product of the relation R by the Relation S is meant that relation which exists between x and y if and only if there is a u such that x bears the relation R to u and u bears the relation S to y ." — Carnap, *Introduction to Symbolic Logic and its Applications*, 1958, p. 114.

Relativity theory

The special theory of relativity is a modern physical theory proposed by Einstein in 1905, according to which neither space nor time has an independent absolute value or existence but is each relative to the other. Thus, the classical view of space and time is replaced by a theory in which the two are aspects of the same underlying reality: space-time. The general theory of relativity extended the special theory from considering frameworks in uniform relative motion to one another to considering frameworks in arbitrary relative motion to one another. The general theory resulted from combining the principle of relativity, that all laws of nature must have the same form in any relatively moving frame of reference, with Mach's principle, that the fundamental description of any realistic physical system must be closed. It replaced Newton's theory of universal gravitation and is currently the accepted basis for our theory of gravitation. Relativity theory introduced a revolution in twentieth century physics and greatly advanced our understanding of the structure of the universe. Its space-time theory gives rise to a variety of important methodological, metaphysical and epistemological problems.

"The theory of relativity takes the view that there are purely objective (non-relative) features of the world that are independent of any individual who might look in." — Sachs,

用法。根据他的观点,所有的同一都是相对于一个种类的,而两个事物之间如果没有它们共同具有的类型术语,它们就不可能是同一的。古奇的观点遭到其他人的反驳。D. 威金斯在其《同一与本体》一书中基于莱布尼茨定律来维护绝对同一性陈述。有的哲学家则提出,相对同一性是一个性质概念,而绝对同一性则是数的同一性。

"自然语言中的同一性陈述有两种句法形式。有些是'a与b相同'或'a同一于b'这样的形式,这些是绝对同一性陈述。另有一些则是'a是与b相同的某种东西'。这些是相对同一性陈述。"——格里芬:《相对同一性》,1977年,第12页。

关系积

两个关系的结合。假定有一关系 R , 即 xRy , 和一关系 S 即 ySz , 那么我们可以把这两个关系 R 和 S 结合起来(称为关系乘法)从而得出 x 和 z 的关系。所获得的关系称为 R 和 S 的关系积。罗素用符号表示为 R/S 。

"所谓关系 R 乘关系 S 的关系积是指那种存在于 x 和 y 之间的关系,当且仅当存在着 u , 即 x 具有 R 对 u 的关系,而 u 具有 S 对 y 的关系。"——卡尔纳普:《符号逻辑及其应用导论》,1958年,第114页。

相对论

狭义相对论是爱因斯坦在1905年提出的现代物理学理论,按照这种理论,空间和时间都没有独立的绝对价值或存在,相反,它们每一个相对于另一个而存在。这样,古典的空间时间观便由这种理论所取代,即这两者是同一基本实在的不同方面:空间—时间。广义相对论把从考察相互间的均匀相对运动机制的狭义相对论扩大到考察相互间的任意相对运动机制。广义相对论产生于把相对性原理与马赫的原理相结合,前者认为一切自然规律在任何相对运动的参照系框架中都具有同一的形式,而后者认为任何实在论的物理体系的基本描述都必定是封闭的。它取代了牛顿的万有引力理论,并成为我们的引力理论的广泛公认的基础。相对论引发了20世纪物理学的革命,极大地推进了我们对宇宙结构的理解。它的时空理论产生了许多方法论的、形而上学的和认识论的重大问题。

"相对论采取的观点是,存在着世界的纯粹客观的(非相对的)特征,它们独立于任何可随时进来观望的个人而存在。"——沙赫斯:《相对论的观念》,1974年,第2页。

Ideas of the Theory of Relativity, 1974, p. 2.

Relevance logic

A non-classical formal logic which proposes that the premises and conclusion of a valid argument must be relevant to one another. The notion of relevance is defined as the sharing of a variable (that is content) and dependency. This suggests a new conception of entailment or deducibility, according to which q is deducible from p only if p is used in the derivation of q . If q is deducible from p in this sense, p relevantly implies q . This puts a restriction upon classical logic, in which a contradiction entails any statement whatsoever, that is $(p \wedge \sim p)$ implies q , no matter whether or not q has anything to do with p . Such a notion of implication leads to the paradoxes of material implication and of strict implication. The avoidance of these paradoxes of implication is one of the most important reasons for the development of relevance logic. Relevance logic was first established by Wilhelm Ackermann in a paper of 1956, and was developed by A. Anderson and N. Belnap. It has not been widely accepted or applied.

"Someone who rejects the table as an account of the meaning of 'if ... then' therefore owes us a new account of 'if ... then' introduction, presumably involving a requirement that the antecedent be non-redundantly used in deriving the consequent. There is a branch of logic known as relevance logic which develops this approach." —Forbes, *Modern Logic*, p. 97.

Relevant implication, see relevance logic

Reliabilism

An externalist approach to epistemic justification with various forms. David Armstrong proposes that the truth of a justified belief is guaranteed by the lawlike connection in nature. The most influential version of reliabilism is called process reliabilism, claiming that a belief is justified if and only if it is produced by a reliable psychological process. In other words, a justified belief is one produced by an appropriate cognitive process, while an unjustified belief is produced by an inappropriate process. Such things as standard perception and good reasoning are reliable, while wishful thinking, emotional reaction and guesswork are unreliable. The reliability of such a cognitive process is linked to whether what is believed is true in the actual world. Hence knowledge is identified with true belief obtained as a result of law-like connection between us and the world. This form of reliabilism is associated with Alvin Goldman, and it has the advantage of connecting cognitive psychology with epistemology. It is open to counterexamples, for in some cases such as the brain-in-a-vat case, beliefs thus formed are unjustified, but

相干逻辑

一种非经典形式逻辑,它提出:有效论证的前提和结论必须是相互关联的。“相干”概念被定义为共享一个变元(即内容)和相互依赖性。这显示了一个新的“衍推”或“可演绎性”概念,根据这一概念,只有在推出 q 的过程中使用过 p , q 才可从 p 演绎得到。如果 q 在这种意义上可从 p 演绎得到,则 p 相干蕴涵 q 。这对经典逻辑施加了一个限制,后者承认矛盾衍推无论什么陈述,即 $(p \wedge \sim p)$ 蕴涵 q ,无论 q 是否与 p 有任何关联。这样一种蕴涵概念导致了“实质蕴涵悖论”和“严格蕴涵悖论”。避免这些蕴涵悖论是相干逻辑发展最重要的理由之一。相干逻辑最初是由W.阿克曼在1956年的一篇论文中创立的,并为A.安德森和N.伯尔纳普所发展。它们未被广泛承认或应用。

“某些人拒绝承认该表是对‘如果……则’的一种说明,所以给我们提出了有关‘如果……则’引入的一种新说明,后者预先包含一个要求:前件在推导出后件的过程中并非多余地被使用了。有一个以相干逻辑知名的逻辑分支从事这一探索。”——福布斯:《现代逻辑》,第97页。

相干蕴涵

见“相干逻辑”条。

可靠论

以各种形式探讨认知辨明的外在论方法。D.阿姆斯特朗提出,得到辨明的信念就是由自然界中类似法则的联系所认可的真理。最有影响的一种可靠论被称作过程的可靠论,它认为,一个信念得到阐明,当且仅当它是由可靠的心理过程产生的。换句话说,得到辨明的信念就是由恰当的认识过程产生的信念,而没有得到辨明的信念则是由不恰当的心理过程产生的信念。标准的知觉、恰当的推理等都是可靠的,而迫切的愿望、情绪的反应和猜想则是不可靠的。这种认知过程的可靠性,是与我们所相信的东西在现实世界中是否为真有关。这样,知识就被确定为包含了作为我们与世界之间类似法则的联系之结果的真信念。这种形式的可靠论与A.哥尔德曼有关,它的优点在于把认知心理学与认识论联系起来。但它仍然可能招致反对,因为在缸中之脑的情形中,这样构成的信念是没有得到辨明的,而根据可靠论,它们则是必须得到辨明的。

according to reliabilism they must be justified.

"The theory of epistemic justification that has received the most attention recently is reliabilism. Roughly speaking, this is the view that epistemologically justified beliefs are the ones that result from belief-forming processes that reliably lead to true beliefs."—Feldman and Conee, "Evidentialism", *Philosophical Studies*, 48, (1) 1985.

Religious experience

The feeling of powers of mystery, awe, wonder and fascination, generally occurring in a context of religious expectation, which is beyond ordinary rational explanation. Religious experience is claimed to be an inner self-attestation of supernatural reality. Theology claims that this sort of feeling is produced by the agency of God, and it generally describes this sort of experience as a sharing in eternal life or being in touch with the Holy, with a consequent sense of joyfulness. Various kinds of religious experience are recorded in the Bible. Many Theologians and metaphysicians try to prove the existence of God by appeal to religious experience, although the changes brought about in us by such experience should perhaps be understood in terms of conversion rather than of rational persuasion.

"We may now lay it down as certain that in the distinctively religious sphere of experience, many persons... possess the objects of their belief, not in the form of mere conceptions which their intellect accepts as true but rather in the form of quasi-realities directly apprehended."—James, *The Varieties of Religious Experience*, 1902, p. 63.

Religiousness A

Kierkegaard distinguished three stages of existence: aesthetic, ethical and religious. He further sub-divided the religious stage into Religiousness A and Religiousness B. In Religiousness A, God is thought to be immanent, and the eternal truth to be rationally accessible. The transition from the ethical level to Religiousness A is marked by resignation, suffering, guilt and humour. In this stage, conventional morality no longer appears as an adequate means of bringing the individual into harmony with the whole of existence. In seeking this harmony, the individual must have recourse to the Deity. Hence, a finite individual retains an essential relationship to the eternal. In Religiousness B, this relationship no longer holds. The individual ceases to believe that by virtue of some specific exercise of thought or action he is capable of realising some latent kinship with the eternal. The individual tries to relate himself in time to the eternal in time, that is to become the eternal itself. Religiousness B is Christianity, in which God is incarnated as a human being as an ethical example. This stage is to account of how to become a Christian. According to Kierkegaard, one can progress from overcoming objectivity, to achieving subjectivity

"近来得到极大关注的认知辨明理论是可靠论。大致地说,这种观点认为,在认识论上得到辨明的信念,就是来自能够可靠地达到真信念的信念构成之过程的信念。"—弗尔德曼和科尼:《证据主义》,载《哲学研究》,第48卷,第1期,1985年。

宗教体验

对神秘、敬畏、惊异和魅惑力量的感受,一般发生在宗教期待的满足中,超越于通常的理性解释之外。宗教体验被认为是对超自然实在的内在证明。神学断言,这类感受由上帝的作用产生。一般把这类体验描述为分有永恒生命,或伴随有快感的与神的接触。在《圣经》中,记载着不同种类的宗教体验。许多神学家和形而上学家企图诉诸宗教体验来证明上帝存在,尽管这种体验给我们造成的变化或许应根据皈依而非理性劝导来理解。

"现在,我们可以肯定地断言:在显而易见的宗教体验领域中,许多人……拥有的信仰对象,不是仅以他们的理智接受为真的概念形式获得,而是以对类似实在的东西直接领悟的形式获得。"—詹姆斯:《宗教经验种种》,1902年,第63页。

第一种宗教状态

克尔凯郭尔将人的生存分为三个阶段:美学阶段、伦理阶段和宗教阶段。他进一步将宗教阶段分为第一种宗教状态和第二种宗教状态。在第一种宗教状态中,上帝被看做是内在的,永恒的真理被认为是从理性上可接近的。从伦理层次向第一种宗教状态转变的标志是放弃、受苦、罪感和谦卑。在这个阶段中,传统的道德不再被当做使个人与整个生存取得和谐的充分途径。要达到这种合谐,个人必须求助于神。这样,一个有限的个人就与永恒者保持了一种根本的关系。在第二种宗教状态中,这样一种关系不再成立。个人不再相信,凭借某种特殊的思想或行为,他就能实现出与永恒者的潜在亲缘关系。个人试图将时间中的他自身与时间中的永恒者(它将成为永恒者本身)关联起来。第二种宗教状态就是基督教的状态,神在其中道成肉身而为人,以作为一个伦理的榜样。这个阶段说明了成为一个基督徒的途径。按照克尔凯郭尔的观点,人可以从克服客体性中取得进步,达到主体性(或真理),并在此基础上通过信仰的一跃而成为一个基督徒。

(or truth) and on that basis to become a Christian through a leap of faith.

"Religiousness A is the dialectic of inward deepening; it is the relation to an eternal happiness that is not conditioned by a something but is the dialectical inward deepening of the relation, consequently conditioned only by the inward deepening, which is dialectical." --Kierkegaard, *Concluding Unscientific Postscript to Philosophical Fragments* (trans. by Hong and Hong), 1992, I, p. 556.

Religiousness B, see Religiousness A

Reluctant desire, see embraced desire

Renaissance

[from French; rebirth] Historians dispute the distinctive characteristics and limits of the period of the Renaissance. A narrow sense was formulated by the Swiss art historian Jacob Burckhardt, who used the term for the revival or rebirth of learning and arts initiated in Italian Culture. In a wider sense, it concerns European history from the early fourteenth to the early seventeenth century, involving a disparagement of the Middle Ages, yet the chronological term is closely related to the development of culture and art. This period is also called the age of adventure, represented by voyages of exploration and the discovery of new lands. It witnessed the religious Reformation, sparked by Martin Luther and John Calvin. This period is admired because of the huge progress of science and technology, represented by the Copernican heliocentric theory.

This period was also notable for its achievements in classical learning, the arts and literature, which were products of its humanism. The humanist movement was stimulated by the discovery of large amounts of previously unknown literature from ancient Greece and Rome. Aristotelianism was still influential, but people read his work in Greek rather than in Latin translation. Platonism underwent a resurgence, especially in the Florentine school directed by Ficino, and Plato's complete works were translated into Latin for the first time. Stoicism, Epicureanism and Scepticism all exerted great influence. The revival of different schools of ancient philosophy created different schools in the humanist movement and became the major contents of Renaissance philosophy. The philosophy of nature also developed greatly in this period, and indeed philosophy at that time also covered many subjects which now belong to different areas of natural science. The major thinkers include Ficino, Pico, Nicholas of Cusa, Lorenzo Valla, Erasmus, More, Machiavelli, Giordano Bruno.

"By the 'Renaissance' I understand that period of West-

"第一种宗教状态是内在深化的辩证法,是与永恒至福的关系。这种关系并不受到某个东西的限制,而是此关系的辩证的内在深化,因此只以这辩证的内在深化为条件。"——克尔凯郭尔:《关于〈哲学片断〉的非科学的最后附言》,(洪夫妇英译),1992年,第1卷,第556页。

第二种宗教状态

见“第一种宗教状态”条。

不情愿欲求

见“情愿欲求”条。

文艺复兴

[源自法语,“再生”]对文艺复兴时期的明显特征和时间界限,历史学家们有争议。瑞士艺术史家J. 布克哈德特阐明了文艺复兴的狭义,指在意大利文化中肇始的学术和艺术的复兴或再生。在广义上,它则指从14世纪早期到17世纪早期的欧洲历史,涉及到对中世纪的轻蔑,但这个编年学上的术语依然与文化 and 艺术的发展密切相关。这个时期也被称为“冒险时代”,以探险航海和新大陆的发现为代表。它目睹了被M. 路德和J. 加尔文引发的宗教改革。这一时期由于科学和技术的巨大进步(以哥白尼的日心说为代表)而受人赞美。

这一时期之所以著名,也因为作为该时期人文主义的产物,在古典学术、艺术和文学中取得的成就。人文主义运动是由以前未知的古希腊罗马文献的大量发现而被激发起来的。亚里士多德主义依然有影响,但人们更愿读他的希腊原文著作,而不是拉丁译本。柏拉图主义获得了一次实实在在的复活,尤其是在费其诺领导的佛罗伦萨的柏拉图学园,他的全部著作第一次被译成拉丁文。斯多亚派、伊壁鸠鲁派和怀疑派,全都产生了很大影响。不同的古代哲学流派的复兴,在人文主义运动中产生出了不同的学派,并成为文艺复兴时期哲学的主要内容。在这一时期,自然哲学也有很大发展,况且在那个时代,哲学也的确涵盖了现在属于自然科学不同领域的许多主题。主要的思想家包括费其诺、皮科、库萨的尼古拉、L. 瓦拉、爱拉斯谟、莫尔、马基雅维利、G. 布鲁诺。

“所谓‘文艺复兴’,我理解为大约是从1300年延续到1600年的西欧的那一段历史,至于那个时期,或在它之前和之后的另一些时期的特征或功过,我不作任何假定。”——克里斯特勒尔:《文艺复兴思潮及其根源》,1979年,第17页。

ern European History which extends approximately from 1300 to 1600, without any presupposition as to the characteristics or merits of that period, or of those periods preceding and following it.” —Kristeller, *Renaissance Thought and its Sources*, 1979, p. 17.

Representation

In general, an item in the mind, picture, model, copy or other thing which stands for something else because of a likeness or on some other grounds. Kant distinguished between representation with consciousness and representation without consciousness. Under the heading of conscious representation, he placed all the elements of experience and knowledge. For Kant, representation is crucially involved in perception, which is divided into subjective perception or sensation and objective perception or cognition. The representations of cognition are further divided into intuitions and concepts, a duality which is fundamental to Kant's philosophy through his claim that knowledge requires both kinds of representation through the application of concepts to intuitions.

With the development of cognitive science, representation has become a prominent term in the philosophy of mind, but many philosophical problems relating to the notion of representation remain.

“We have representations in us, and can become conscious of them. But however far this consciousness may extend, and however careful and accurate it may be, they still remain mere representations, that is, inner determinations of our mind in this or that relation of time.” —Kant, *Critique of Pure Reason*, A197/B242.

Representational form

[German: *Form der Darstellung*] Wittgenstein's term, also called form of representation. These forms enable us to describe or represent reality and are a necessary condition for understanding and truth. For Wittgenstein, representational forms are determined by grammar, which lays down rules or norms of description and guides us in making intelligible statements about the world. The necessity involved in using these forms is logically or grammatically based and cannot be justified by the reality it represents.

“A picture represents its subject from a position outside it. (Its standpoint is its representational form).” —Wittgenstein, *Tractatus*, 2.173.

Representational theory, another expression for imitation theory

Representationalism

Also called the causal theory of perception, the representative theory of perception or the two world theory. A major theory of perception, which contrasts with direct or

表象

它通常指在心灵、图像、模型、复本等事物中的要素。它代表了由于相似性或基于其他理由而存在的他物。康德区分了有意识的表象和无意识的表象。他把经验和知识的一切要素都归属于意识表象。在康德看来,表象主要与知觉有关,而知觉又进而分为主观的知觉或感知,和客观的知觉或认识。认识表象又进一步分为直观和概念,这种二重性是康德哲学的基本特征,体现了他的这种主张:知识需要两类表象,即把概念应用于直观。

随着认识科学的发展,表象已成为心的哲学中的主要术语。但是许多有关表象概念的哲学问题依然存在。

“我们在自身内部具有表象,并能意识到它们。但不管这种意识所及范围有多么深广,它可能是多么地细致和准确,它们仍然只是表象,即我们心灵在这种或那种时间关系中的内部规定而已。”——康德:《纯粹理性批判》,A197/B242。

表现形式

[源自德文: *Form der Darstellung*] 维特根斯坦的术语,又叫表现的形式。这些形式使我们能够描述或表现实在,它们是理解和真理的必要条件。对维特根斯坦而言,表现形式由语法决定,它制定描述的规则或标准,并指引我们作出关于世界的可理解的陈述。使用这些形式所涉及的必要性是基于逻辑和语法,不能由它们所表现的实在证明为合理。

“图像从外面表现其对象。(它的观点就是它的表现形式)。”——维特根斯坦:《逻辑哲学论》,2.173。

再现说

“模仿说”的另一表述。

表征主义

又称知觉的因果理论,知觉的表征理论或两个世界理论,是关于知觉的一个主要理论,与朴素或直接实在论和现象论相对。直接实在论

naïve realism and phenomenalism. While direct realism takes what we immediately perceive to be physical objects, representationalism claims that perception is the result of the operation of nerves and brain and that we are directly aware of subjective private sensations, that is sense-data or ideas which cannot exist independent of perception. While phenomenalism holds that physical objects are constructions out of sense-data and cannot exist independently, representationalism claims that sense-data are representations or symbolisations of the physical objects, which are inferred as the causes of the sense-data. Thus, physical objects exist in their own right, and we may indirectly know them through sense-data. Such a theory is scientifically inspired and is widely held by neurophysiologists. The main difficulty faced by the theory is that if private sensations are the only things to which we can have direct access, it is not clear how we can compare them with the features of the physical world that they are supposed to represent. This problem gives rise to scepticism about the external world and leads to phenomenalism. Nevertheless, the representative theory is perhaps the best available explanation of the uniformity of sequences of sensations.

"Representationalism is the view that a percept is veridical only when it is caused by its correspondent object." — Danto, *Analytic Philosophy of Action*, 1973, p. 45.

Representative theory of mind

A theory holding that a proposition token is a token mental representation. Although there are no general type correlations between propositional attitudes and physical properties, there are token correlations. An organism having a propositional attitude bears a functional relation to a mental representation. Representations are real and physically realised entities. Mental processes are causal sequences of token mental representations. The properties of a belief are explained in terms of the properties of its associated representations. The only properties of a representation which could influence its causal behaviour are its syntactical properties. Hence, a representation's syntactic properties must mirror its semantic properties in order to preserve the match between the semantic content of a belief and its causal role. For Fodor, the representational theory is the same thing as the language of thought hypothesis, but others argue that one can believe in the representational theory of mind without believing in the language of thought hypothesis.

"What I am selling is the representational theory of mind ... At the heart of the theory is the postulation of a language of thought; an infinite set of 'mental representations' which function both as the immediate objects of propositional attitudes and as the domains of mental processes." Fodor, *Psychosemantics*, 1987, p. 11.

把我们直接知觉到的东西看做是物理对象,而表征主义则声称知觉是神经和大脑操作的结果,我们所直接意识的是主观的私人感觉,亦即不能独立于知觉而存在的感觉材料或观念。现象论认为物理对象是由感觉材料建构而成的,因而不能独立存在,而表征主义则认为,感觉材料是关于物理对象的表征或符号象征,这些物理对象被推断为感觉材料的原因。这样,物理对象是因其自身而存在,我们可以通过感觉材料而间接了解它们。这样一个理论受到了科学的启发,并为神经生理学家所广泛接受。这一理论所面临的主要困难在于,如果私人感觉是我们直接获知的惟一的東西,那么我们怎样将之与它们被假定表征的物理世界的特征相比较呢?这个问题引起关于外部世界的怀疑论并导致现象论。然而表征理论或许是迄今对感觉序列之一致性的最好说明。

"表征主义是这样一种观点:一个知觉只有当由相应的对象所引起时,才是真实的。"——丹托:《分析的行动哲学》,1973年,第45页。

心的表征理论

这一理论认为一个命题单例是一个单例的心的表征。尽管在命题态度和物理特性之间不存在普遍的类型关联,但却存在单例关联。具有一个命题态度的机体与一个心的表征具有一种功能关系。表征是真实的、以物理的方式实现的存在物。心的过程是心的表征单例的因果序列。一个信念的特性用与其相关联的表征的特性来解释。一个表征的惟一能够影响其因果行为的特性是其句法特性。因此,为了保持一个信念的语义内容与其因果作用之间的匹配,一个表征的句法特性必须反映其语义特性。对福多而言,表征理论就是思维语言假设。但另有其他人论辩说,一个人可以相信心的表征理论而不相信思维语言假设。

"我所兜售的是心的表征理论……这一理论的核心是思维语言假设:一个无限系列的'心的表征',既作为命题态度的直接对象,又作为心的过程的领域。"——福多:《心理语义学》,1987年,第11页。

Representative theory of perception, another term for representationalism

Repression

The term Freud used for the force or forces in the mind which are the causal factors of unconscious processes. Repression turns unacceptable or painful parts of reality or impulse away from consciousness and confines them to the unconscious system through a variety of mechanisms. According to Freud, the process of repression does not annihilate these ideas, but prevents them from becoming conscious. Repression is a species of psychic defence, and we can be aware of the repressive forces in the form of resistance, that is the patient's rejection of allegedly correct psychoanalytic interpretations. Sometimes "repression" is employed interchangeably with "suppression". However, repression is claimed to be an instinctual and unconscious denial, rather than a voluntary or conscious restraint upon unwanted desires. Freud claims that repressed instincts can turn to creative forces in sublimation. The basic goal of psychoanalysis is to make those repressed impulses conscious both for therapeutic benefit and for intellectual insight.

"The neuroses are the expressions of conflicts between the ego and such of the sexual impulses as seem to the ego incompatible with its integrity or with its ethical standards. Since these impulses are not ego-syntonic, the ego has repressed them: this is to say, it has withdrawn its interests from them and has shut them off from becoming conscious as well as from obtaining satisfaction by motor discharge." — Freud, *Standard Edition of the Complete Psychological Works of Sigmund Freud*, vol. 18, p. 248.

Republic

[Greek: *politeia*, the public and political life of a community, Latin: *res publica*, public business] The English translation of the title of Plato's most important dialogue. The translation comes from the Latin *res publica* which originally had the same meaning as *politeia* and only later came to be used for a particular form of constitution. For Plato, *politeia* was simply any constitution of a Greek *polis* (city-state), and Plato's book is about the state and society. *Politeia* might better be translated as political system. In the *Republic*, Plato set up an ideal state and within that context examined many topics such as the theory of Forms, the role of art, the structure of society, the parts of the soul, the best sort of education, the nature of morality and religion, and the place of women in society. The *Republic* is one of the great books in human history and has inspired and perplexed generations of its readers. Many western students began their philosophical education with the *Republic*.

In its modern sense, a republic is a form a society governed by the people, protecting rights and promoting civic

知觉的表征理论

“表征主义”的别名。

压抑

弗洛伊德使用的一个词，用来表示引起无意识过程的一种或多种心灵力量。压抑使得现实或冲动中的那些令人无法接受的或痛苦的部分从意识中隐退，并通过各种机制而将其限制在无意识的系统之中。按照弗洛伊德的想法，压抑过程并没有消灭这些观念，而只是使它们不被意识到。压抑是一种心理的防卫，我们能够感受到以抵抗形式出现的压抑力量，表现在病人对于被认为是正确的心理分析解释的拒绝之中。有时，“压抑”这个词与“压制”互换混用。然而，压抑被认为是本能的和无意识的拒斥，并非对于不想要的欲望的主动自觉的抑制。弗洛伊德认为被压抑的本能可以在升华中变为创造性的力量。心理分析的基本目标是使那些被压抑的冲动进入意识，既有益于治疗〔精神神经病〕，又可导致理智上的洞察。

“神经病是自我与某些性冲动之间冲突的表现，对于自我来说，这些性冲动危及到了人格的完整或伦理的规范。由于这些冲动与自我不协调，这自我就压抑了它们。这也就是说，它们不再有兴趣，将其关在意识之外，而且不通过自动的发泄去得到满足。”——弗洛伊德：《S. 弗洛伊德心理学著作全集标准版》，第十八卷，第248页。

《国家篇》

[希腊文: *politeia*, 一个社会的公共生活和政治生活, 拉丁文 *res publica*, 公共事务] 对柏拉图最重要对话的英译名, 译文来自拉丁文 *res publica*, 后者最初具有与 *politeia* 同样的含义, 只是到后来才被用于一种特殊的政体形式。在柏拉图看来, *politeia* 只是希腊 *polis* (城邦国家) 的政体, 柏拉图的书涉及的是国家和社会。 *Politeia* 也许被翻译为政治制度更好。在《国家篇》中, 柏拉图建立了一个理想城邦, 在此背景下考察了许多问题, 如形相论、艺术的作用、社会的结构、灵魂的组成部分、教育的最好类型、道德和宗教的本质以及妇女的社会地位。《国家篇》是人类历史上的伟大著作之一, 启发并困扰了它的代代读者。西方很多学生是以《国家篇》开始他们的哲学教育的。

就其现代意义而言, republic (共和政体) 是一种由人民管理、保护权利和提倡公民美德的社会形式。由于允许在政体内改换管理者, 共和政体既不同于世袭的君主政体, 也不同于独裁

virtue. By allowing change of rulers within the constitution, a republic contrasts with both a hereditary monarchy and a dictatorship.

"The Republic is the centre around which the other dialogues may be grouped; here philosophy reaches the highest point to which ancient thinkers ever attained." Jowett, *The Dialogues of Plato*, II, introduction, p. 1.

Republicanism

[from Latin: *res publica*, public business] The theory of the institutionally organised realm of public affairs in a commonwealth or state in which the people or citizens have a decisive say in its organisation and conduct. Republican theory and practice can be traced to the Roman republic and Renaissance Italian city states. Traditionally, republics have linked citizenship to property, and citizens have tried to arrange government to avoid domination by one individual or group and to provide institutions that would protect liberty. Contemporary republicanism criticises liberal democratic theory and society on the grounds of their juridical formalism, their emphasis on rights rather than on virtue and civic duty and their failure to provide the protections that a commonwealth should offer its citizens. As part of its attack on liberal democracy, it controversially reinterprets modern political history as developing initially from republican thought before being subverted by a democratic revolution.

"The opposition between liberalism and republicanism, which is a source of inspiration for the recent revival of the latter, is more an invention of this revival than ascertainable historical fact." —Haakonssen, "Republicanism" in Goodin and Pettit (eds), *A Companion to Contemporary Political Philosophy*, p. 571.

Res cogitans

[Latin: *res*, thing + *cogitan*, to think, thinking thing] Descartes' term for thinking substance, in contrast to *res extensa* (Latin: extended thing), Descartes' term for extended or corporeal substance. According to Descartes, I can doubt anything. But when I doubt, I am thinking, and as long as I am thinking, I exist. Thinking is inseparable from me. Thus I have a clear and distinct idea that I am a mind, or intelligence, and my nature is a thinking thing. On the other hand, I have also a clear idea of body as an extended and non-thinking thing. He concludes that *res cogitans* and *res extensa* are two independent entities. This dichotomy is the foundation of Descartes' dualism.

"For all that I am a thing that is real and which truly exists. But what kind of a thing? ... A thinking thing (*res cogitans*)." —Descartes, *The Philosophical Writings* (tr. Cottingham et al.), II, p. 18.

政体。

"《国家篇》是使其他对话能够汇集在一起的核心部分,在这里,哲学达到了古代思想家取得的最高成就。"——乔维特:《柏拉图的对话》, I, "导言", 第1页。

共和主义

[源自拉丁语: *res publica*, 公共事务] 关于共和政体或国家中制度组织上的公共事务的理论,在这样的共和政体或国家中,人民或公民对其组织与行为有决定性的发言权。共和主义的理论与实践可追溯到罗马共和国和文艺复兴时期的意大利城邦。从传统上看,共和政体已使公民权与财产相联,公民力图安排政府以避免为一个人或一个小集团所统治,并力图建立保卫自由的机构。当代共和主义批评自由主义的民主理论和社会,其理由是后者在司法上的形式主义、强调权利而不是德性和公民义务以及未能提供一个共和政体应提供其公民的保护。作为对自由主义民主的攻击,共和主义颇有争议地把当代政治史重新解释为最初始于未被民主革命破坏的共和主义思想的发展。

"自由主义与共和主义的对立是激励后者近来复兴的一个源泉,可这种对立更多地是这种复兴的创造,而不是可以弄清的历史事实。"——赫孔森:《共和主义》,见高定及彼底(编):《当代政治哲学指南》,第571页。

思维的东西

[拉丁文,由 *res* (东西) 和 *cogitan* (思维) 结合而成,字面意思是"思维的东西"] 笛卡尔用这个词指思维的实体,它与 *res extensa* (拉丁语,字面意思是"广延的东西") 相对,笛卡尔用后一个词指广延的或有形的实体。根据笛卡尔的观点,我可以怀疑任何东西,但是,当我怀疑的时候,我正在思维,而只要在思维,我就存在。思维与我是不可分的。于是我就有了我是一个心灵或理智的清晰明晰的观念,我的本质就是一个思维的东西。另一方面,我还有一个广延的非思维的身体的清晰观念。他作出结论说,思维的东西和广延的东西是两个独立的东西。这一两分法是笛卡尔二元论的基础。

"尽管我是实在的、真实存在的东西,但是,是何种东西呢?……是一个思维的东西 (*res cogitans*)."——笛卡尔:《哲学著作集》(科庭汉姆等译),第二卷,第18页。

Res extensa see, *res cogitans*

Research programme

Lakatos' term in the philosophy of science for a set of methodological rules for the conduct of research. These can be divided into two kinds; rules that prohibit certain kinds or methods of research, which are called the negative heuristic; rules which advocate certain kinds of research, which are called the positive heuristic. Each research programme has a hard core that is surrounded by a protective belt of auxiliary hypotheses. When the research programme encounters problems or needs to be revised, scientists characteristically change some part of the protective belt rather than its core. This explains the continuity in the growth of science. This account of science is related to Popper's falsificationism. Testing leads to the falsification of hard core and auxiliary hypotheses, but we alter the auxiliary hypotheses in order to protect the hard core. A research programme is the unit by which the nature and direction of scientific growth is analysed. If a programme can continue to anticipate and solve new problems and to determine new facts, it is progressive; and if it ceases to do this, it is degenerating. We can account for scientific progress in terms of the replacement of a degenerating programme with a progressive one, although these are relative notions and some degenerating programmes can become progressive. Such progress is not linear, but a complex process involving a proliferation of different theories at the same time. According to Lakatos, Newton's gravitational theory serves as a classic example of a research programme.

"A research programme is successful if all this leads to a progressive problem shift; unsuccessful it is leads to a degenerating problem shift." —Lakatos, in Lakatos and Musgrave (eds.), *Criticism and the Growth of Knowledge*, 1970, p. 133.

Resemblance, theory of, see resemblance nominalism

Resemblance nominalism

All things which fall under the same predicate resemble one another. Realists claim that they resemble one another because they are all instances of the same universal. According to resemblance nominalism or the theory of resemblance, however, the resemblance, instead of being derived from a universal, is itself ultimate or fundamental. The features by which things resemble one another have different degrees of intensity in the different individuals. The common character of things falling under the same predicate can be analysed simply in virtue of a resemblance among particulars. We might say that A has some property P if and only if A suit-

广延的东西

见“思维的东西”条。

研究纲领

拉卡托斯在科学哲学中用以指一组进行研究的方法论规则的术语。这些规则可分为两类：那种禁戒某种研究方法的规则，称作“反面助发现法”，那种提倡某些研究方法的规则，称为“正面助发现法”。每个研究纲领都有一个“硬核”，它为一条辅助假设的“保护带”所环绕。如果研究纲领遇到了问题或需要修改时，科学家总是改变“保护带”的某一部分而不是其硬核。这可以说明科学成长中的连续性。这种科学主张与波普的证伪主义相关。检验导致对硬核和辅助假说的证伪，但我们改变辅助假说以保护硬核。研究纲领是用以分析科学成长的性质和方向的单位。如果一个研究纲领能继续预期和解决新问题，确定新的事实，它就是进步的；如果它不再能这样，它就是退步的。我们可以用退步的纲领为进步纲领所取代来说明科学进步，当然这些概念都是相对的，某些退步的纲领也可以变成进步的。这种进步是非线性的、复杂的过程，包含着同一时刻不同理论的增殖。在拉卡托斯看来，牛顿引力理论可作为研究纲领的一个经典范例。

“如果所有这些导致进步的问题转换，则这个研究纲领是成功的；如果它导致退步的问题转换，则为不成功的。”——拉卡托斯，见拉卡托斯和马斯格雷夫(编)：《批判与知识的增长》，1970年，第133页。

相似理论

见“相似唯名论”条。

相似唯名论

所有从属于同一谓词的事物彼此相似。实在论者认为，它们彼此相似是因为它们都是同一共相的个例。但根据相似唯名论(也叫相似理论)，相似自身才是根本重要的，而不是派生于同一共相。那使得事物彼此相似的特征在不同个体中具有不同的强度。从属于同一谓词的事物的共同特征，其实就可以从殊相之间的相似去分析。我们可以说当且仅当A适当地相似于一个范例F时，A具有某一特性P。可是范例F是另一个殊相，因此F与A都具有P并不要求引入一个共相。我们不需要为红的事物设一个

ably resembles a paradigm case of F. But the paradigm F is another particular, and for F and A both to have P does not require the introduction of a universal. There need not be a universal "redness" for things to be red; all that is needed is a resemblance to a certain tomato. Resemblance nominalism can be traced back to Hume, and is articulated in detail by H. H. Price, *Thinking and Experience* and R. Carnap, *The Logical Structure of the World*. Wittgenstein's notion of "family resemblance" can be seen as a variant of resemblance nominalism. Resemblance nominalism faces some major difficulties. First, resemblance itself might be a universal. Secondly, two things might need an element in common in order to resemble each other. Both criticisms attempt to introduce items of a sort which resemblance nominalism tried to banish.

"Despite the many difficulties which can be raised against Resemblance Nominalism it is by far the most satisfactory version of Nominalism." — Armstrong, *Nominalism and Realism*, 1978, p. 57.

Resentment

A frustrated emotion or attitude in which one, for example, feels offended, injured, oppressed, humiliated or ignored in reaction to others or their actions. It is the emotion of victims toward their offenders. According to Nietzsche, resentment is related to revenge; as a mark of slave morality it is an essential feature of Judaeo-Christian morality. Rawls believes that resentment in contrast to envy is based on a sense of inequality and injustice. In *Freedom and Resentment*, Strawson examined situations in which we do or do not feel resentment toward others to provide a new perspective on freedom and determinism.

"Resentment, or what I have called resentment, is a reaction to injury or indifference." — Peter Strawson, *Freedom and Resentment*, 1974, p. 14.

Resolution, see partition

Responsibility

[from Latin: *respon-do*, I answer] The accountability of persons, primarily for actions and their consequences but sometimes for other items as well. A person who is held responsible or answerable for an action is subject to responses such as blame, praise, punishment or reward on account of the action. One is legally responsible if one is subject to a legal obligation and is morally responsible if one is subject to a moral obligation. Because of the difference between law and morality, moral responsibility and legal responsibility do not coincide. Normally, a person is responsible for an action because he does the action or brings it about either directly or indirectly. We are responsible for some, but not all, of the

共相的红;只要它们相似于某个西红柿就足够了。相似唯名论可溯追至休谟。H. H. 普赖斯在其《思想与经验》和卡尔纳普在其《世界的逻辑结构》中对这一理论作了详尽阐发。维特根斯坦的“家族相似”观念也可以看做是相似唯名论的一个变种。相似唯名论面临若干困难。首先,相似自身可能即是一个共相。其次,两件事物需要另一共同因素才会彼此相似。两种反对意见都力图引入相似唯名论希望排斥的类项的东西。

“尽管对相似唯名论可以提出许多疑难,迄今为此,它仍是唯名论的最令人满意的形式。”——阿姆斯特朗:《唯名论和唯实论》,1978年,第57页。

愤恨

一种受挫后的情感或态度,例如,一个人在对其他人或他们的行为的反应中感到受到冒犯、伤害、压抑、羞辱或忽视。这是对冒犯者的一种受害情感。按照尼采的说法,愤恨与报复相联系;作为奴隶道德的一个标志,它是犹太教—基督教道德的一个本质特征。罗尔斯认为愤恨与嫉妒不同,它是基于一种不平等、不公正的感觉。在《自由与忿恨》中,斯特劳森考察了我们对别人感到或不感到愤恨的境遇,对自由和决定论提出了一个新观点。

“愤恨,或我称之为愤恨的东西,是对伤害或不关心的一种反应。”——斯特劳森:《自由与忿恨》,1974年,第14页。

分解

见“划分”条。

责任

[源自拉丁文: *respon-do*, 我作答] 人们负有的责任,主要是对行为及其后果的责任,但有时也包括对其他问题的责任。一个对一种行为负有责任或应负责任的人,要因这一行为而承受诸如责备、赞扬、惩罚或奖赏等反应。如果一个人受法律义务束缚,他就负有法律责任,如果一个人受道德义务束缚,他就负有道德责任。因为法律与道德不同,道德责任和法律责任是不一致的。在正常情况下,一个人对一个行为负有责任是因为他直接或间接地做了这一行为或造成了这一行为。我们对我们行为的某些后果负有责任,而不是对全部后果负有责任。不能预先

consequences of our actions. Not all responsibilities presuppose a causal link. We are responsible for some of our omissions, and moral luck also play a role in ascribing responsibility to an agent. With important exceptions, the conditions of responsibility require that persons know what they are doing and that they have at least a certain degree of freedom to control the acts that they perform. Accordingly, freedom and responsibility are closely related, and responsibility is central to the question of freedom and determinism. The discussion of responsibility can be traced to Aristotle's consideration of voluntary and involuntary actions in the *Nicomachean Ethics*. It was carried forward through medieval discussions of human evil to investigations of action, deliberation, motivation, choice, intention, weakness of will and diminished responsibility in contemporary ethics, political philosophy and legal philosophy.

"The central core of the concept of responsibility is that I can be asked the question, 'why did you do it?' and be obliged to give an answer." —Lucas, *Responsibility*, 1993, p. 5.

Retributive justice, see justice

Retroduction, another name for abduction

Retrospection

The mental process of looking back or recalling one's own past items of consciousness or past actions, for example for the purpose of finding patterns amongst them. Such a process need not be private. It is more or less the same process as discerning such patterns in the behaviour of others. Retrospection is thus not as mysterious as introspection. Ryle, when attacking introspection, argues that since the operation of retrospection can provide whatever information we do have about our own mental states, we do not need to posit the existence of mysterious processes such as introspection and self-consciousness.

"Part, then, of what people have in mind, when they speak familiarly of introspecting, is this authentic process of retrospection." —Ryle, *The Concept of Mind*, 1949, p. 160.

Revealed theology

The positive justification of theistic beliefs from the contents of some supernatural revelation accepted by faith. A revelation is mediated through a sacred book, through the words of a prophet, or through the authoritative teachings of a church. Revealed theology is also called supernatural theology. It contrasts with natural theology, which employs the standard norms of reasoning and empirical data in attempting to prove the existence of God. Revealed theology claims that

假定所有的责任都有一种因果联系。我们对我们的某些疏忽负有责任，在把责任归咎于当事者时道德上的运气也起一定作用。除了重大的例外，负有责任的条件要求人们知道他们在做什么，要求他们至少有一定程度的自由去控制他们的所作所为。因此，自由和责任是紧密相联的，责任是自由与决定论问题的核心。对责任问题的探讨可以追溯到亚里士多德在《尼各马可伦理学》中对自愿和非自愿行为的思考。通过中世纪有关人的罪恶的讨论，对行为、慎思、动机的形成、选择、意图和意志的软弱等问题的研究得到推进，这种研究缩减了当代伦理学、政治哲学和法哲学中所讲的责任。

“责任概念的核心是，人们可以问我这样一个问题，‘你为什么要做它？’而且可以迫使我做出回答。”——鲁卡斯：《责任》，1993年，第5页。

惩罚的正义

见“正义”条。

再入

“假说推理”的另一个名称。

反省

回顾或回忆一个人自己的过去意识或活动的心的过程，例如，为了找到其中的模式。这样一个过程不需要是私人的。它多少是与在其他人的行为中察觉到这样的模式相同的过程。因此，反省并不像内省那样神秘。在对内省的攻击中，赖尔论辩说，因为反省操作可以提供关于我们的心的状态的所有信息，因此，就无须假设像内省和自我意识这样的神秘过程的存在。

“因此，当人们惯熟地说起内省时，他们心中所想的東西部分地是这个真正的反省过程。”——赖尔：《心的概念》，1949年，第160页。

启示神学

从信仰接受的某种超自然的启示内容出发，为有神论信条作肯定辩护，启示的传达或通过圣书，或通过先知者的言词，或通过教会的权威教义。启示神学亦称“超自然神论”。它与“自然神学”相对应，因为后者是用标准的推理规范和经验材料力图证明上帝存在。启示神学认为，为了推理，我们需要有前提，因为以它们为基础，推理才得以进行；但是，推理的前提不

to reason we need to have premises on the ground of which the reasoning proceeds. But the premises of reasoning cannot be obtained through reasoning and can only be found through revelation.

"In revealed theology, ... reason is confined to systematising and drawing conclusions from premises which natural reason cannot discover ... They have to be learned through revelation alone and held on faith." — Penelhum, *Problems of Religious Knowledge*, 1971, p. 10.

Revelation

In theology, the disclosure through the agency of God of fundamental truths which would be otherwise inaccessible to human beings. God is the agent who reveals, and human beings receive the revelation. While natural theology claims that human reason unaided by revelation can know God's nature, revealed theology insists that the eternal knowledge about God can only be acquired through revelation. It is through revelation that human beings learn about the existence, attributes and purposes of God, and about the moral and other directives that they have to follow. The revelation can be through nature, visions, dreams, in God's words and activity. Sometimes it needs to be communicated through prophets. It claims that in revelation the human being enters into a self manifesting encounter with God.

"We speak of revelation wherever the unconditional import of meaning breaks through the form of meaning. Faith is always based on revelation." — Tillich, *What is Religion*, 1969, p. 105.

Revenge

The deliberate infliction of a wrong in return for a wrong suffered by oneself, one's family or one's friends. In ancient Greek, justice and revenge were closely associated, with *dikaosunê* (justice) also meaning a fair deal. The *Old Testament* suggested that we should exact an eye for an eye. But Socrates argued that returning evil for evil is morally wrong, and the *New Testament* also advocates forgiveness. Mainstream Western philosophers generally argue that while retribution is rational and justified, revenge should be rejected as an emotional indulgence in which an individual usurps the role of the law. However, it is unclear that we can draw a clear-cut distinction between retribution and revenge.

"A man who has been injured by another and then revenges himself upon him is not authorised to act as he does. That is, he is not empowered by generally accepted rules, as a judge is empowered by the law to fix and enforce penalties." — Honderich, *Punishment*, 1989, pp. 14-5.

Reverse discrimination

A proposal or an actual policy in many Western countries which holds that members of oppressed groups in a soci-

能通过推理获得, 只有通过启示才能发现。

"在启示神学那里,……理性被限制在系统化和从前提得出结论的范围内,而这些前提,是自然理性不能发现的。……它们只有通过启示才能学到,也才能支撑信仰。"——培纳休姆:《宗教知识疑难》,1971年,第10页。

启示

神学中的根本真理是通过上帝的作用而对人类显露,否则难以达到。上帝是启示的动作者,人类接受启示。当自然神学主张人的理性无需启示相助就能知道上帝的本性时,启示神学则坚持,关于上帝的永恒知识只有通过启示才能获得。正是通过启示,人类才懂得上帝的存在、属性和目的,也才懂得他们必须遵守的道德和其他命令。启示存在于上帝的圣谕和活动中,能够通过自然、视觉和梦幻实现。有时,它也需要由先知者来传达。它主张,正是在启示中,人进入一种与上帝的自明的遭遇状态。

"无论在何处,只要我们谈到启示,意义的无条件性就突破意义的形式。信仰总是建立在启示的基础之上。"——蒂利希:《宗教是什么》,1969年,第105页。

报复

以一种错误的故意伤害解决本人、家庭或朋友受到的冤屈。在古希腊,正义和报复是密切联系的,*dikaosunê* (正义)也意味着公平的交易。《旧约全书》提出我们应以眼还眼。但苏格拉底争论说以罪恶回报罪恶在道德上是错误的,《新约全书》也提倡宽恕。主流的西方哲学家一般认为,虽然惩罚是合理的和正当的,但报复作为一种个人取代法律作用的情感上的放纵却应被拒绝。不管怎样,我们能否在惩罚和报复之间划一明确的界线还不清楚。

"一个人受到别人伤害,然后为自己而向别人报复,他这样行为是不允许的。这就是说,他没有得到为人们普遍接受的法规的授权,而法官是由法律授权去确定和执行惩罚的。"——洪德里奇:《惩罚》,1989年,第14-15页。

反向歧视

许多西方国家中的一种提议或实际政策,认为过去一直受到系统歧视的被压迫团体的成

ety which have suffered from systematic discrimination in the past should receive preferential treatment to correct the consequences of that discrimination. On this view, we should deliberately make policies to grant such groups privileges in areas such as employment, education, health care and housing. The policy aims to restore a fair balance in society and is called compensatory justice. However, opponents argue that this practice is unjust because reverse discrimination is still discriminatory. It does not conform to the principle of equal competition, but still treats people differently according to certain external features such as race or gender. Furthermore, it is also uncertain whether injustice regarding an earlier generation should be compensated by the treatment of a later generation.

"We may begin by defining reverse discrimination as preferential treatment for minority-group members or women in job hiring, school admissions or training-program policies." (Goldman, *Justice and Reverse Discrimination*, 1979, p. 4.

Revisionary metaphysics, see descriptive metaphysics

Revisionism, see Marxism

Rhetoric

[from Greek; *rhein*, to flow and *rhetor*, orator | The art of making elegant speeches in order effectively to persuade or influence an audience. In contrast, grammar is the art of using language correctly. Rhetoric was one of the main subjects taught in ancient Athens to the youth who were enthusiastic about politics. Plato attacked rhetoric as an art which is interested in victory in debate by appeal to emotion rather than being interested in truth. Aristotle's *Rhetoric* is a systematic examination of the argumentative form of rhetoric. This rendered rhetoric a part of logic in relation to dialectic and a suitable subject of philosophy. Rhetoric was one of the seven liberal arts in medieval universities. In the twentieth century, hermeneutics and post-modernism have led to a revival of interest in rhetoric.

"Rhetoric may be defined as the faculty of observing in any given case the available means of persuasion." - Aristotle, *Rhetoric*, 1355b26.

Right

[from Latin; *rectus*, straight, in contrast to Latin; *tortuos*, twisted, wrong] As an adjective, "right", like "good", has a wide application. We may say "right road" or "right answer". When it is applied to moral acts (the moral "right"), different moral theories, according to their understanding of morality, vary in their account of what a right act

员。现在应该受到优待，以纠正以往歧视的后果。根据这一观点，我们应该有意地制定政策来赞同这些团体的人在雇用、教育、医疗、住房等方面的优先权。这个政策是为了恢复社会的公正平衡，它被称为“补偿性正义”。不过，反对者认为，这个实践是不公正的，因为反向歧视仍然是歧视性的。它与平等竞争的原则不一致，仍然根据外在的特征如种族或性别来区别地对待人。此外，是否对上一代的不公正应由善待下一代来补偿，也是个问题。

“我们可以首先把反向歧视定义为在就业、入学或培训政策上偏向对待少数团体成员或妇女。”——哥尔德曼：《正义与反向歧视》，1979年，第4页。

修正形而上学

见“描述形而上学”条。

修正主义

见“马克思主义”条。

修辞术

[源自希腊语 *rhein* (流动) 和 *rhetor* (雄辩家)] 以优美的演说去有效地说服或影响听众的艺术。相比之下，语法学是正确运用语言的艺术。修辞术是在古代雅典教授青年人的主要学科之一，这些年轻人都对政治很热心。柏拉图抨击修辞术是一门对求助于感情的辩论的胜利感兴趣而不是对真理感兴趣的艺术。亚里士多德的《修辞学》一书系统地检验了修辞术的论证形式。这使得修辞术成为与辩证法相关的逻辑学的一部分，成为哲学的一个适宜的学科。在中世纪的大学中，修辞术是文科的七个学科之一。在20世纪，解释学和后现代主义导致了对修辞术兴趣的复活。

“修辞术可以定义为在每一给定的事例中发现可行的说服方式的能力。”——亚里士多德：《修辞学》，1355b26。

正当

[源自拉丁词 *rectus*，意为“身体直立”，相对的拉丁词是 *tortuos*，意为“弯曲的”、“错的”] 作为一个形容词，“正当”与“善”一样，有着广泛的运用。我们可以说“正确的路”或“正确的回答”。当它被运用于道德行为时（即道德上的正当），不同的道德理论，根据它们对于道德

is. For what is morally right is the same question as what is moral, and so the aim of ethics to find the right thing to do. The relation between the good and the right is complicated. Utilitarianism defines "good" in terms of utility, and then defines "right" as being that which maximises the good. Deontology, on the other hand, argues that the good consequences of an action do not guarantee that it is the right thing to do. It suggests that an action is right if it is something one ought to do or if it is a duty. For intuitionism, the right, like the good, is a primitive unanalysable concept.

"Most of the words in any language have a certain amount of ambiguity; and there is special danger of ambiguity in the case of a word like 'right', which does not stand for anything we can point out to one another or apprehend by one of the senses."—Ross, *The Right and the Good*, 1930, p. 2.

Right (Kant)

For Kant, right concerns the limitation of each person's action so that it is compatible with the freedom of everyone else. Although he distinguished various kinds of rights, his primary distinction is between innate rights and acquired rights, roughly corresponding to the distinction between natural and statutory rights. Innate rights, also called internal properties, belong to everyone by nature, independent of any juridical acts. Acquired rights, also called external properties, are established by legal acts. The notion of innate right is the ultimate basis of moral rights. Kant held that there is only one innate right, namely the right to lawful freedom, which is based on the harmony of one's freedom with the freedom of everyone else in accordance with universal law. Accordingly, human freedom is the supreme moral value. An action is right insofar as its freedom can subsist with the freedom of everyone.

"Rights, considered as (moral) capacities to bind others, provide the lawful ground for binding others." Kant, *Metaphysics of Morals*, I, Introduction.

Rights

The idea that a man can have certain natural, inalienable and infeasible rights emerged in the seventeenth century and played a crucial role in modern bourgeois revolutions and in the production of such documents as the French *Declaration of the Rights of Man*, and the American *Bill of Rights*. Rights are also a central ethical notion in contemporary moral theory. Many major arguments, especially those in applied ethics, are conducted in terms of rights and their violations. The chief characteristic of the rights approach to ethics is that it views questions from the point of view of victims or the oppressed, rather than from the perspective of those with power.

的各自理解,对于正当的行为是什么有多种多样的解释。因为什么在道德上是正当的等同于什么是道德的,因此,伦理学的目标在于发现什么是要做的正当的事情。善与正当的关系很复杂。功利主义依据功利定义“善”,然后,将“正当”定义为可把善最大化的东西;道义论则认为,一个行为的善的后果并不确保它就是可做的正当的事。它建议,如果一个行为是某人应当做的,或它是一种责任,这个行为就是正当的。对于直觉主义而言,正当与善一样,是一个原始的不可分析的概念。

“在任何语言中的大多数词汇有一定程度的模糊性,在类似于‘正当’这词的情形中,特别容易模糊,因这样的词并不代表我们能向他人指出的任何东西,或为某感官所把握的任何东西。”——罗斯:《正当与善良》,1930年,第2页。

权利(康德)

对于康德来说,权利是一个人行动的限度,所以它可与他人的自由形成对比。他区分了各种权利,首要的是天然的权利和获得的权利之间的区分;这一区分大略相当于自然的权利和法定的权利的区别。天然的权利又称为内在所有权,生来属于每一个人,独立于任何法律的行为。获得的权利也称为外在所有权,是由法律行为建立的。天然权利的概念是道德权利的最终基础。康德认为,只有一种天然的权利,即合法自由的权利;这是基于符合普遍法则而与一切他人的自由相和谐的。因此,人类自由是最高的道德价值。一种行为只有在它的自由与任何人的自由共存的范围内,才是正当的。

“权利被视为约束他人的(道德)能力,为约束他人提供了合法的基础。”——康德:《道德形而上学》,1,导言。

权利

认为一个人具有某些自然的、不可转让的和不可取消的权利。这个观念出现于17世纪,在现代资产阶级革命中,在诸如《法国人权宣言》和《美国权利法案》这种文献的产生中,起了关键性的作用。在当代道德理论中,权利也是一个中心的伦理概念。许多主要论证,尤其是在应用伦理学中,是依据权利和对权利的侵犯而进行的。伦理学中的权利方法论的主要特征是,它从受害者或被压迫者的观点,而不是从有权势者的观点提出问题。

对于权利概念已有许多精细的分析。最有影响的分析框架是W.E. 霍费尔德所提供的。

The notion of rights has been subjected to much subtle analysis. The most influential framework of analysis is provided by the jurist W. N. Hohfeld who classifies a fourfold distinction of rights: (1) as claim-rights which are enforceable claims to someone's action or inaction. If one has a right to X, then one can demand X as one's due; (2) as privileges or liberties which do not involve claims against others, but are simply an absence of an obligation on one's part; (3) as normative power, that is as a legal capacity for altering the juridical relations of another person; i. e. the power to make a will; (4) as immunities, which enable a person to be protected from the actions of another.

Of these (1) is the dominant sense. This sense of rights pairs with the notion of obligation or of duty. If one has a right to have or to do X, then another person, or group of persons, has a correlative duty or obligation to respect this entitlement. Claim-rights can be sub-classed in many ways. One way is to divide them into personal rights which one holds against determinate or special persons (for example, the right of the landlord to collect rent from his tenants) and *in rem* rights which one holds against people generally (for example, the right not to be killed). Another way is to divide claim-rights into positive rights, which demand other persons' positive actions, and negative rights, which merely require other persons' non-action or forbearance. Negative rights can further be divided into active rights to be free from the interference of others and passive rights which are claims not to have certain things done to us.

Rights are also categorised into natural rights, legal rights, moral rights and human rights, all of which have separate entries.

"We can locate the place of rights within the ethics of responsiveness to value, by noticing that (generally) a right is something for which one can demand or enforce compliance." — Nozick, *Philosophical Explanations*, 1981, p. 499.

Rights, absolute

Absolute rights are those rights that are universal and inherent. They cannot be overridden under any conceivable circumstances. They are imprescriptable, inalienable and are not subject to any rational constraint. Persons possessing such a right are justified in demanding and exercising it no matter what kind of situation they are in, while other moral agents must respect it. Human rights are generally regarded as absolute rights. Absolute rights are contrasted to *prima facie* rights, which a person possesses with respect to a given circumstance.

"For an absolute right is a right that human beings have qua human beings and not, as in the case of special rights, rights that they have only if certain conditions, which pertain to their social relations and the transactions in which they en-

他对权利进行了四重区分:(1)作为一种要求的权利,它是一种对某人的活动或不活动而言的可实行的要求。如果某人对X有一种权利,那么他能要求X做他所应得的。(2)作为不涉及到他人的特权或自由,只有自己这方面缺少某种义务。(3)作为规范权利,即改变与另一个人的法律关系的一种合法能力,例如立遗嘱的权利。(4)作为豁免权,即能使一个人免受他人行为伤害而得到保护的权力。

在这些权利中,(1)具有支配性的意义。权利的这种意义是与义务或职责的概念相配的。如果一个人有权拥有或做X,那么,另一个人或团体,就有尊重这种权利的相关职责或义务。要求的权利也可作多方面的区分。一是把它区分为个人权利和反对权利。个人权利是一个人所持有的针对确定的或具体的人的权利(例如地主所有的从他的佃户收租的权利),反对权利是一个人所持有的针对一般人的权利(例如不得被杀害的权利)。另一种是把它划分为积极的权利和消极的权利,积极的权利要求他人的积极行动,消极的权利只要求他人不做什么或自制。消极的权利可进一步划分为主动的权利或被动的权利,主动的权利是免于他人干涉的权利,被动的权利是要求不对我们做某事的权利。

权利也可类分为自然权利、法权、道德权利和人权,本辞典对每一个都分别列有条目。

"通过注意到(一般而言)一种权利是一个人能要求某种东西或迫使遵从的某种东西,我们可以把权利置于伦理学中价值相回应的位上。"——诺齐克:《哲学说明》,1981年,第499页。

绝对权利

绝对权利是那种具有普遍性和内在性的权利。它们在任何可想像的环境下都是不能被凌驾的。它们不可侵犯、不可让渡和不屈服于任何理性的约束。拥有这样一种权利的人,不论他身处哪种处境,都有资格要求和实施它,而其他的道德行为者都必须尊重他的这种权利。人权被普遍地看做是绝对权利。与绝对权利相对的是当下的权利,它是一种人们在一种既定的环境下拥有的权利。

"绝对权利是一种人作为人而具有的权利,与具体权利不同。具体权利只有当某种属于有关社会联系及人类所从事事务的条件得到满足时,人们才具有。"——米尔登:《权利与人》,1977年,第13页。

gage with one another, are satisfied." —Melden, *Rights and Persons*, 1977, p. 13.

Rights, animal

A notion appearing in the animal liberation movement, and articulated by Tom Regan in *The Case for Animal Rights*. Animals are, according to him, subjects-of-a-life which have inherent value, that is value independent of their usefulness to others. They therefore have rights related to the protection of this value. These rights are not legal rights, such as the right to vote, but moral rights to be respected as an ends in themselves. However, Regan explains that when the rights to life of humans and animals conflict, human rights have a heavier claim than animal rights, for animals rights are *prima facie* rather than absolute rights and can be justifiably overridden under certain circumstances. The notion of animal rights is part of an attempt to base animal ethics on an objective ground rather than merely as an expression of human decency. If the extension of rights to animals is justified, hunting, trapping, indifference towards endangered animals, the use of animals in scientific experiments and other human activities which treat animals merely a means for some human interests are all morally wrong. Yet it is much disputed whether animals have rights in a proper sense. Many philosophers argue that rights involve reciprocal relationships, and moral autonomy and that there is no reason to ascribe rights to animals. But this argument is challenged on the grounds that although children and mentally retarded persons lack these features, we never deny that they have rights.

"[A]nimals have certain basic moral rights including in particular the fundamental right to be treated with the respect that, as possessors of inherent value, they are due as a matter of strict justice." —Regan, *The Case for Animal Rights*, 1983, p. 329.

Rights, human

A conception of the necessary conditions which constitute the full dignity of a human being and which societies have obligations to accord. People possess these rights simply because they are people, regardless of such characteristics such as their race, gender, social position, culture, or customs. All people everywhere have these rights. Hence, human rights are generally regarded as universal. According to Kant, the fundamental right of a human being is to be treated as an end in oneself, not merely as a means. An extensive list of the basic rights which a human being should have is proposed by the United Nation's *Universal Declaration of Human Rights* (1948), and its core includes the recognised natural rights proposed by the eighteenth century political philosophers, such as the right to life, to freedom of expression, and to property, and the four freedoms asserted

动物的权利

这个概念是随着“动物解放运动”而出现的,并由里根在他的《动物权利问题》一书中得到详尽阐发。根据他的看法,动物是有着内在价值的“一种生命的主体”,即他们具有独立于他们对其他物类的用处的价值。所以他们有保护这种价值的权利。当然,这种权利不是像选举权那样的法权,而是应把他们自己作为目的而受到尊重的道德权利。不过,里根认为,当人类生命权和动物生命权发生冲突时,人权比动物的权利更有分量。因为动物的权利是一种当下的权利而不是绝对的权利,在一定的条件下能被合理地摒弃。动物权利的概念是力图把一种动物伦理学放在一客观基础上,而不希望只是把动物伦理学当做人类正当行为的一种表达。如果把权利扩展到对动物是正当的,那么,狩猎、捕捉、对待濒危动物漠不关心,在科学实验中使用动物,以及把动物仅仅作为某种人类利益工具的其他人类活动,在道德上都是错的。但对动物是否具有本来意义上的权利,一直就是很有争议的问题。许多哲学家争论道,权利涉及到交互关系、道德自主权。因此,没有理由把权利归之于动物。但这种论证受到如下理由的挑战,即儿童和有心智残障的人都缺乏理性,而我们决不否定他们有权利。

“动物有一定的基本道德权利,尤其包括被尊重对待的基本权利,作为内在价值的拥有者,他们应作为一种严格的正义问题来讨论。”——里根:《动物权利问题》,1983年,第329页。

人权

构成一个人的完整尊严并且社会有义务满足的必要条件。人们拥有这些权利仅仅因为他们是人,而无关乎他们的种族、性别、社会地位、文化、习俗等特征。任何地方的人都有这种权利。因此,人权一般被认为是普遍的。根据康德的观点,一个人的基本的权利是他应把自己尊为目的而不是手段。一个人应当有的基本权利的一览表为《联合国人权宣言》(1948年)所提出,核心人权包括:18世纪的政治哲学家所提出的公认的自然权利,诸如生命权、言论自由权、财产权,为罗斯福所主张的作为同盟国战争目的的、即在他1941年的演说中提出的四重自由:言论和表达的自由,每个人都有以自己的方式信仰上帝的自由(即宗教自由),免于匮乏的自由,免于恐惧的自由。人权的概念预定一个标

in 1941 by F. D. Roosevelt as the war aims of the Allied nations: freedom of speech and expression, freedom of every person to worship God in his own way, freedom from want, and freedom from fear. The conception of human rights presupposes a standard below which human beings lose their dignity, rendering their life intolerable.

There are various theoretical debates surrounding this notion. The central point is to justify the universal and absolute existence of rights of this kind. For philosophers who accept the notion of absolute rights, human rights are a conception related to the notion of an inner person independent of social context. But cultural relativists claim that it is improper to apply a fixed set of rights to diverse cultures and traditions. Another issue is whether human rights may ever be violated. While many philosophers insist that these rights are supreme and cannot be violated under any circumstances, others propose that they are *prima facie* rights and that sometimes a basic human right has to be sacrificed in a given context.

"They are 'human rights' in that they are rights that all humans have as human agents ... It is these rights that directly enter into the supreme principle of morality." — Gewirth, *Reason and Morality*, 1978, p. 64.

Rights, inalienable

The natural, innate rights, which cannot be relinquished, forfeited, or waived under any circumstances and which cannot be handed over or transferred to another person. Fundamental inalienable rights include rights such as the right to life and the right to liberty. These rights are essential for a human being as a human being. Inalienable rights in some cases can conflict with free will and hence render many practical moral problems difficult to solve. For instance, if the right to life is inalienable, it must be immoral to permit voluntary euthanasia, although it should be permitted if we have an obligation to respect the will of the patient.

"These rights are inalienable because, being necessary to all action, no agent could waive them or be deprived of them and still remain an agent." — Gewirth, *Reason and Morality*, 1978, p. 77.

Rights, legal

The rights which are ascribed by the law of a society and which vary from society to society. Within the limit of legal rights persons are free to do as they please. Correspondingly, the same legal system imposes a legal duty on others, to oblige them to act or to refrain from acting in some way with regard to the things about which a person possesses legal rights. Those violating this duty will be punished by law.

"To say that I have a legal right to do something is not to say I must do it. I am merely given a liberty to do so, if I wish." — Brandt, *Ethical Theory*, 1959, p. 435.

准,如处于这个标准之下,一个人失去了他的尊严,他的生活将变得无法忍受。

围绕着这个概念,有不少理论争论,中心点在于证明这种权利的普遍绝对存在。对于接受绝对权利概念的哲学家来说,人权是一个与独立于社会背景的内在的人的概念相关联的。但文化相对主义者宣称把一套固定的权利用于多样性的文化和传统,是不适当的。另一个问题是,是否人权可以被侵犯。当许多哲学家坚持说,权利是至上的,在任何情况下不能受到侵犯,其他人则主张,它们是当下的权利,有时在一定的背景条件下不得不牺牲某个基本的人权。

"它们是人权,是所拥有人作为人类行为者所拥有的权利……正是这些权利,直接进入道德的至上原则。"——杰沃斯,《理性与道德》,1978年,第64页。

不可让渡的权利

指自然、天赋的权利,它们在任何情况下都是不可让与、丧失、舍弃的,也不可移交、转让给他人。这种基本的不可让渡的权利包括诸如生命权和自由权。这些权利对一个人作为人来说是本质性的。在某些情况下,这个概念是与自由意志相冲突的,因此使得许多实际的道德问题难以解决。例如,如果生命权是不可让渡的,那允许自愿安乐死就是不道德的,即使如果我们义务尊重病人的意愿,它也是应该允许的。

"这些权利是不可让渡的,因为它们对于任何行为都是必要的,没有一个行为者能舍弃它们或为他人所剥夺而仍然作为一个行为者。"——杰沃斯,《理性与道德》,1978年,第77页。

法权

一个社会的法律所赋予的权利,并且从一个社会到另一个社会是不同的。在法权的范围内,一个人可自由地做他所高兴做的事。相应地,同一个法律制度也把一种合法的职责加于人们身上,要求他们在对一个人享有法权的那些事情上,有所行动或约制行动,否则,人们将受到法律的惩罚。

"我说我有法权要做某事,并不是说我非做它不可,我只是被赋予了一种如果我愿意便可做它的自由。"——布朗特,《伦理理论》,1959

Rights, moral

To have a moral right a person is entitled to perform certain acts which are supported by good moral arguments. Although there can be substantial overlap, legal rights and moral rights are distinct. This difference allows moral rights to be a platform for criticising the legal system. Generally, but not always, possession of a moral right entails that somebody else has a corresponding moral obligation or duty. Many legal positivists define a moral right as a right that one possesses if one's acts conform to the standard regulations of society and if its violation is sanctioned by public opinion rather than by law. But this is problematic, for slavery in Rome was a standard practice, but we can at least argue that slaves have a moral right to freedom.

"We can say, roughly, that to have a moral right to something is for someone else to be morally obligated (in the objective sense) to act or to refrain from acting in some way in respect to the thing to which I am said to have the right, if I want him to." —Brandt, *Ethical Theory*, 1959, p. 436.

Rights thesis

A theory about the nature of law developed by Ronald Dworkin. He argues that law is not merely a body of rules laid down by statute, for there are many hard cases, that is cases which cannot be solved by the application of valid rules. In these cases, judges must be guided to their decisions by non-rule standards such as policies and principles. Dworkin distinguishes between an argument of principle, which seeks to solve hard cases by appeal to the rights an individual possesses, and an argument of policy, which seeks to settle hard cases by taking into consideration the good of the community. It is generally believed that arguments of policy dictate the solutions to hard cases. But Dworkin argues that arguments of principle should govern the judges' decisions. This is what his right thesis means. Each person has an equal right to equal concern and respect. These rights originate from the need of members of society to protect certain interests which they collectively regard as valuable. They are political trumps which protect individuals from interference by society for the purpose of advancing social goods. They should have a certain threshold weight against the consideration of the welfare of the community. The specification and guarantee of these rights is a fundamental requirement for justice in society. Dworkin thus rejects the basic assumption of legal positivism that there is a sharp distinction between law and morality. He also claims that judges are not law-makers, for they need to find deeper moral principles embedded in written laws to solve hard cases. But Dworkin also concedes that the operation of certain rights may be restricted in situations where they conflict with cer-

年, 第 435 页。

道德权利

有一种道德权利意味着, 一个人有权从事某些为充分道德论证所支持的行为。虽然法权和道德权利有实质性的重叠, 但它们是不同的。这个差别使得道德权利成为批评法律制度的一个基点。握有一种道德权利一般不总是意味着他人也有相应的道德义务或职责。许多法学实证主义者把道德权利界定为这样一种权利: 如果一个人的活动与一个社会的标准规则一致, 他就握有这样一种权利, 而对它的侵犯则会受到公众舆论而不是法律的制裁。但这是有问题的, 奴隶制在罗马是一种通行的实践, 而我们至少认为奴隶也有自由的道德权利。

"大致上可以说, 对某事有道德权利, 在某种意义上考虑到我所说的那种有权利的事情, 也就是他人(在客观意义上)有道德义务去做某事或制止某事, 如果我要求他的话。"——布朗特:《伦理理论》, 1959 年, 第 436 页。

权利论

由 R. 德沃金提出的有关法的本质的理论。他论证说, 法律不仅仅是由法令制定的一组规则, 因为存在着很多疑难案件, 这就是说, 存在着不可能通过应用有效的规则而解决的案件。在这些案件中, 法官必须以非法律规则的准则, 如政策和原则为指导做出判决。德沃金对原则的理由和政策的理由做了区分, 认为前者试图通过求助于个人拥有的权利去解决疑难案件, 后者试图通过对共同体利益的考虑去解决疑难案件。一般认为, 政策的理由支配着疑难案件的解决。但德沃金争论法官的判决应以原则的理由为指导。这就是他的权利论的含义。每个人都拥有同样受到关怀和尊重的平等的权利。这些权利来源于社会成员保护某些他们共同认为是重要的利益的需要。它们是保护个人免受来自社会的、为促进社会利益而进行的干涉的政治保证。它们应具有某种最终的力量以对抗对共同体福利事业的照顾。对这些权利的详述和保证是社会正义的根本要求。因此, 德沃金拒绝法学实证主义提出的法律和道德是截然不同的基本假定。他还声称, 法官不是法律的制定者, 因为他们需要发现体现在成文法中的更深刻的道德原则以解决疑难案件。不过, 德沃金也承认, 在某些权利的作用与能为所有社会成员获得的某些重要利益发生冲突的情况下, 这些权利的作用也许会受到限制。法官是否应完全无视社会的或共同体的利益, 这是一个引起很大争议的问题。

"同任何一种赋予政策以更重要地位的理论

tain major benefits that can be acquired for all the members of the society. It is highly controversial whether judges should ignore completely social or community goods.

"The rights thesis ... provides a more satisfactory explanation of how judges use precedent in hard cases than the explanation provided by any theory that gives a more prominent place to policy." —Dworkin, *Taking Rights Seriously*, 1977, p. 87.

Rigid designator

Kripke's term. Names or descriptions are designators, but rigid designators are proper names which refer to the same individual in every possible world in which that individual exists. In contrast, accidental or nonrigid designators do not always designate the same thing. A proper name, such as "Socrates" simply designates a specific individual, and since it does not describe that individual, its designation is not in virtue of the individual having a certain nature, but simply because it is that individual. Whether or not the individual satisfies some list of commonly associated descriptions, the proper name will always designate that individual. All natural kinds terms are rigid designators. The conception is devised to challenge the traditional theory of proper names, such as Russell's view that a name designates a thing by describing properties usually attributed to it.

"Let's call something a rigid designator if in every possible world it designates the same object, a nonrigid or accidental designator if this is not the case." — Kripke, *Name and Necessity*, 1980, p. 48.

Role

A basic term in the theory of social behaviour and society. As a theatrical term, a role was originally related to persona, mask and character and was the prescribed pattern of behaviour for an actor in a given part in a play. Later, the notion of a role was extended by analogy to a social position that carries with it a repertoire of expected behavioural regularities. These regularities are normative and reflect the demands of the society, and hence any person occupying a given role is required to conform to them. Sanctions may be used to discipline a person who fails to satisfy the rules or norms constituting or regulating his role. Roles typically belong to patterns of role relations which determine the structure of society or its component groups. Roles govern human interactions in social relations and can be conceived without reference to particular persons. Roles can be described in relation to things such as family, occupation, nationality, class membership, gender, age or religion. Since a person may assume a multitude of roles, it is inevitable that sometimes his different roles will conflict with one another. Such conflicts may pose serious moral problems, especially for theories which have no moral standpoint beyond the fulfilment of the duties

论所提供的解释相比,权利论对法官在疑难案件中如何使用先例提供了一种更为令人满意的解释。”——德沃金:《认真对待权利》,1977年,第87页。

固定指示词

克里普克的术语。名称或摹状词都是指示词,但固定指示词是在一个体存在的每一个可能世界中都指示这同一个个体的专名。相反,偶然的或非固定的指示词并不总是指称同一事物。专名,如“苏格拉底”,简单地指称一特定的个体,并且由于它不描述那个个体,它指称该个体并不是根据后者具有何种性质,而只是因为它是那个个体。无论该个体是否满足通常与之关联的某些摹状词,专名都将总是指称那个个体。所有的自然种类词都是固定指示词。提出这一看法是为了向罗素等人所主张的传统的专名理论挑战,在后者看来,名称是通过描述具有通常归属于它的那些属性来指称这个事物。

“我们称某物为固定指示词,如果它在每一个可能世界中都指称同一对象;如果情况并非如此,则称它为非固定的或偶然的指示词。”——克里普克:《命名与必然性》,1980年,第48页。

角色

有关社会行为及社会的理论的一基本术语。作为一个理论术语,角色最初和人物、面具及剧中人物有关,是演员在剧中既定部分的规定的表演方式。后来,角色概念被类推扩展为具有各种预期行为规则的社会身分。这些行为规则是规范的,是社会要求的反映,因此,要求充当既定社会角色的人必须与它们一致。法令也许会用来惩戒一个没能达到构成或控制其角色的规定或标准的人。角色典型地属于那些决定社会结构或其组成集团的角色关系的方式。角色支配社会关系中人们的相互作用,它无须参照特殊的人也可想像得出。对角色可以联系这样一些事物如家庭、职业、民族、阶级关系、性别、年龄或宗教而加以描述。由于一个人可以承担大量的角色,因此有时他的不同角色的相互冲突是不可避免的。这样的冲突会造成严重的道德问题,特别是对于那些除了履行与一个人的角色相关的责任以外,不具任何道德标准的理论。角色必须是可变的和具有开放性结构的,从而使社会能够应付预想不到的环境并为个人留有余地。由于这些理由,一些理论家认为,无

attached to one's roles. Roles must be flexible or open-textured to allow a society to cope with unexpected circumstances and to leave room for individuality. For these reasons, some theorists hold that however important roles are for understanding social action, the explanations offered by roles have limits.

"Social roles, ... are bundles of expectations directed at the incumbents of positions in a given society." —Dahrendorf, *Essays in the Theory of Society*, 1968, p. 36.

Role-reversal test

A thought experiment, involving an imaginative or hypothetical identification of oneself with others in making ethical decisions. It requires that one think oneself into someone else's position and imagine how one would be affected if one were that person. Such a test is the basis for the universalizability of moral judgements, not only in the ethical positions of Kant and Hare, which emphasise in particular moral universality, but also generally.

"In doing this, I apply a 'role-reversal', and think what I would want or prefer if I were in their positions." —Williams, *Ethics and the Limits of Philosophy*, 1985, p. 82.

• **Rule of generalisation**, see generalisation

Rule of law

A technical term credited to A. V. Dicey's *An Introduction to the Study of the Law of the Constitution* (1885) for a system in which the powers of government and of state officials are limited by law. Rule of law contrasts with despotic or arbitrary rule. Under the rule of law, political power is generally divided into several branches, such as the legislative, executive and judicial, and its exercise in each branch is restrained in order to prevent it from being abused. The law lays down general standards of conduct, which are clear and are made known to all those to whom the law applies. The legislators themselves are subject to the law, which is reasonable and relatively stable. Civil liberty is guaranteed, and violations of legal rules are punished. The transference of political power is through fair elections. According to its proponents, the rule of law is a political ideal of liberalism and is an essential aspect of various forms of democracy.

"In a purely formal sense, the ideal of the rule of law is none other than what I have just described: the ideal of laws clearly delimiting citizens' duties and officials' powers, under which every abusive exercise of public or private power against the legal liberty of any person is suppressed or penalised, and with no one going in peril of coercion for anything other than breach of a pre-announced law." —Neil MacCormick, *Legal Right and Social Democracy*, 1982, pp.

论角色对理解社会行为有多重要, 角色提供的解释仍是有限的。

“社会角色……是在一既定社会中对担任各种职务的人的众多的期望。”——达伦多夫:《社会理论论文集》, 1968年, 第36页。

角色逆反试验

在作伦理决定时的一种思想试验, 一种想像性或假设性的自我与他人的等同。它要求, 一个人把他自己设想为处于他人的位置上, 想像如果我们处在他人的位置上, 将怎样受影响。这样一种试验是道德判断普遍化的基础, 不仅在专门强调特殊道德判断的普遍性的康德伦理学和黑尔的伦理学中是如此, 而且一般来说也是如此。

“在这样做时, 我运用了‘角色逆转’, 想像如果我处在他人的位置上, 我将想要什么或偏爱什么。”——威廉姆斯:《伦理学与哲学的限度》, 1985年, 第82页。

概括规则

见“概括”条。

法治

A. V. 迪斯的《宪法研究导论》(1885年)中的一个专门术语, 指一种政府和国家官员的权力受到法律限制的制度。法治与专制暴君的或专横的统治相对立。在法治下, 政治权力一般被划分为立法、行政、司法这样几个部门, 它在每一部门的运用都受到约束以防止被滥用。法律制定一般的行为规范, 这些规范是明确的, 并且为所有适用于法律人所了解。立法者本人要服从法律, 法律是合理的和相对稳定的。公民的自由受到保障, 违反法规要受到处罚。政治权力的转移通过公正的选举。在它的倡导者看来, 法治是自由主义的政治理想, 是各种形式的民主的一个本质方面。

“从纯粹形式意义上讲, 法治观念就如同我刚刚描述的那样: 法的观念明确地界定了公民的责任和官员的权力, 在此情况下, 每一滥用公共或私人权力以反对任何人的法定自由的行为都将受到禁止和处罚, 除非是违反事先宣布的法律, 否则没有人会因什么事而受到强制的危险。”——麦考密克:《法律权利与社会民主》, 1982年, 第46-47页。

46-7.

Rule of quality

Two rules for categorical syllogism which determine the valid inference of qualitative connection between premises and conclusion: (1) From two negative premises nothing can be inferred; (2) if one premise is negative, the conclusion must be negative; and to prove a negative conclusion, one of the premises must be negative. The first rule is sound because in the case where there are two negative premises, the middle term does not establish any connection between the major term and the minor term. Violation of this rule will lead to the fallacy of exclusive premises. The second rule is sound because one negative premise determines that the relation between the major term and the minor term must be exclusive. Violation of this rule will lead to the fallacy of drawing an affirmative conclusion from a negative premise. Only from two affirmative premises can one infer an affirmative conclusion.

"[They] are called rules of quality because they refer to the ways in which the negative quality of one or both premises restricts the kinds of conclusions that validly may be inferred." -Copi, *Introduction to Logic*, 1986, p. 220.

Rule of recognition

Hart claimed that a developed legal system is a union of primary rules and secondary rules. Primary rules are rules of obligation which regulate conduct and impose duties, while secondary rules are power-conferring rules to regulate the identification, modification and adjudication of primary rules. If a law has only primary rules, it has three major defects: (1) uncertainty, because all rules are merely a set of separate standards with no common identification; (2) inflexibility in rule-changing; (3) inefficiency in the face of the complex social situations. Hence, a set of secondary rules must be introduced to remedy these defects, and this is the step from the pre-legal to the legal world. For improving the defect of uncertainty, we need to introduce a set of rules which stipulate some identifying marks and criteria of the validity of primary rules and which decide their scopes. These are called rules of recognition. For improving the defect of inflexibility, we need to introduce rules of change which allow individuals or groups to introduce new primary rules and to eliminate old ones. Finally, for improving the defect of inefficiency, we need to introduce rules of adjudication which enable individuals to determine when a primary rule has been broken. This conception of law has provoked vigorous discussion in the philosophy of law. In particular, rules of recognition have provided a focus for debate, for they provide a new ground for legal validity in place of Austin's command of the sovereign.

"The simplest form of remedy for the uncertainty of the

质的规则

直言三段论中确定前提和结论之间质的联系的有效推理的两条规则:(1)从两个否定的前提不能得出结论;(2)如果一个前提是否定的,那么结论也必定是否定的;如果要证明否定的结论,两个前提之一必须是否定的。第一条规则是可靠的,因为在有两个否定前提的情况下,中项未在大项和小项之间建立任何联系。违反这个规则将导致“不相容前提”谬误。第二条规则是可靠的,因为一个否定的前提决定了大项和小项的关系必定是不相容的。违反这个规则将导致“从否定的前提引出肯定的结论”的谬误。只有从两个肯定的前提出发,才能推出肯定的结论。

“它们被称作质的规则,因为它们涉及到一个或两个前提的否定性对可以有效推出的结论种类的约束方式。”——柯比,《逻辑导论》,1986年,第220页。

承认规则

哈特认为,一个发达的法律体系是主要规则和次要规则的结合。主要规则是规范行为和强加责任的义务的规则,而次要规则是控制对主要规则的承认、修改和裁定的授予权力的规则。如果一种法律只有主要规则,它会有三个重大缺陷:(1)不确定性,因为全部规则都仅仅是一批没有得到公众承认的分散的准则;(2)规则改变中的滞后性;(3)面对复杂社会情况的无效性。因此,必须提出一套次要规则以弥补这些缺陷,这是由前法律社会走向法律社会的一步。为了改变不确定性的缺陷,我们需要提出一批规则,这批规则要规定一些承认主要规则的有效性的标志和标准,并决定其范围。这些规则被称为承认规则。为了改变滞后性的缺陷,我们需要提出允许个人和集团提出新的主要规则和取消旧的主要规则的修改规则。最后,为了改变失效性的缺陷,我们需要提出能使个人决定主要规则在何时被违反的裁定规则。这一法律观念在法哲学界引起了激烈的争论。尤其是承认规则已成为争论的一个焦点,因为它为在法律的有效性问题上取代奥斯汀的统治者的命令提供了一个新的论据。

“解决主要规则的不确定性的最简单的方式是提出我们所要说的‘承认规则’。这样做要列举出为一个已提出的规则所具有的某一或某些特征,这一规则被视为一个最后的确定的表示,即它是一个受它所产生的社会压力所支持

regime of primary rules is the introduction of what we shall call a 'rule of recognition'. This will specify some feature or features possession of which by a suggested rule is taken as a conclusive affirmative indication that it is a rule of the group to be supported by the social pressure it exerts." Hart, *The Concept of Law*, 1961, p. 92.

Rule utilitarianism

In contrast with act-utilitarianism, a version of utilitarianism in which general rules rather than acts are assessed for utility, thus shifting concern from individuals to practices and institutions. Acts are endorsed not in their own right, but because they accord with practices or institutions which meet the test of maximising utility. Rule can be explained as a possible (ideal) rule or an actual (existing) rule. The rule-utilitarianism which considers possible rules is a position not far from deontology. According to this version of rule-utilitarianism, a moral action should follow a rule which if generally followed would have the maximum utility. The rule-utilitarianism which deals with actual and existing rules is developed by Toulmin and many others. According to this version, a moral action should be in accord with the existing moral code. This moral code yields greatest utility if it is generally accepted or universally complied with. The basic difficulty of rule-utilitarianism is that in many cases the rule it prescribes is not the most beneficial to obey on every given individual occasion. Rule utilitarianism is thus inconsistent with the basic moral motivation of utilitarianism, namely, beneficence.

"For rule-utilitarianism rules are morally binding because general adherence to them maximises, or would maximise, welfare, individual acts being right or wrong in virtue of their conformity to such rules." — Sprigge, *The Rational Foundations of Ethics*, 1988, p. 25.

Rule-consequentialism, see act-consequentialism

Rule-following

An important notion in later Wittgenstein, rule following is subject to different interpretations. Wittgenstein claims that language comprises games governed by sets of rules. Though we do not commonly think of rules when talking and cannot usually specify rules governing our usage, rules exist which determine the conditions for the correct application of what we say. Wittgenstein does not offer a linguistic definition what a rule is, but illustrates rules through many examples. Following a rule is not a matter of interpretation. The ability to understand existing rules rests upon a brute reaction to training, that is on repetition. By this view Wittgenstein is suggesting that the meaning of a term is its use. Meaning something is following a definite rule, otherwise us-

的集团的规则。”——哈特：《法的概念》，1961年，第92页。

规则功利主义

与行为功利主义相对立的一种功利主义。在这一形式中，用来评价功利的是一般规则而不是行为，从而将所关注的问题由个人转向习惯和风俗。行为被认可不是因为它们本身的权利，而是因为它们与满足最大化功利检验的习惯和风俗相一致。规则可被解释为可能的（理想的）规则或实际的（现存的）规则。重视可能规则的规则功利主义是一种与义务论相差不大的主张。按照规则功利主义的这一看法，一种道德行为应遵从这样一种规则，即对它的普遍遵从将会产生最大的功利。涉及实际的或现存的规则的规则功利主义是由图尔敏及其他一些人提出的。按照这一主张，一种道德行为应与现存的道德准则相一致，如果这一准则被普遍接受或普遍遵从，它将产生最大的功利。规则功利主义的基本的困难是，在很多情况下，它规定要遵从的规则在每一既定的个别场合并不是最有益的。因而，规则功利主义与功利主义的基本道德动机即善行不一致。

“规则功利主义的规则在道德上是有约束力的，因为对它们的普遍信奉会或将会最大限度地增加福利，因而个人行为正确与否取决于他们对这些规则的遵守。”——斯普莱格：《伦理学的理性基础》，1988年，第25页。

规则效果论

见“行为效果论”条。

遵守规则

维特根斯坦后期的重要概念，遵守规则受到了各种不同的解释。维特根斯坦认为，语言由受各种规则支配的游戏组成。虽然我们在交谈时一般并没有想到规则，通常也不能对支配我们使用语言的规则作出说明，但规则存在着，它们决定了对我们所说的东西正确运用的条件。维特根斯坦并未提供规则是什么的语言学定义，但通过许多事例对规则作出了解释。遵守规则不是一个解释的问题。理解现存规则的能力在于对训练做出并非出自理性的反应，即重复。根据这种观点，维特根斯坦提出，语词的意义在于其用法。意谓某事就是遵守某一确定的规则，不然的话，用词来说出某些事情就会是无目的

ing words to say something would be to string words together aimlessly. On the other hand, rules do not carry their own interpretation, and "going on in the same way" is settled practically by the context in which rules are followed rather than by the rules themselves. Understanding is reacting correctly, on the basis of training, to the rule-following application of words. The notion of rule-following is also a major point in Wittgenstein's private language argument. Since in a private language there is no way to distinguish between thinking that one is following a rule and actually following it, there is no language at all.

"Following a rule is analogous to an order. We are trained to do so." —Wittgenstein, *Philosophical Investigation*, I. 206.

Rule-scepticism, another expression for legal realism

Russell's paradox

A paradox regarding the self-membership of classes formulated by Russell in *The Principles of Mathematics* (1903). Some classes or sets (for example the set of abstract objects) are members of themselves, while others (for example the set of cows) are not. Now consider the set which consists of all sets which are not members of themselves. Is this set a member of itself or not? If it is a member of itself, then it has the property which is shared by its members and is not a member of itself. If it is not a member of itself, then it is qualified as for membership in the set and is a member of itself. Either way involves self contradiction. This paradox is considered as a prime example of the set-theoretical paradoxes which are different in kind from the Liar paradox. Frege took Russell's paradox as a serious check for any arithmetic system. It undermined many axioms of set theory, especially the axiom of comprehension that for every property expressible in the notation of set theory, there is a set consisting of all and only those things which possess that property. Russell offered a formal solution for this paradox i.e. his theory of types, and a philosophical solution i.e. his vicious circle principle.

"Russell's paradox about classes, which he discovered in 1901, led to an enormous amount of work in the foundations of mathematics." —Sainsbury, *Paradoxes*, 1995, 2nd ed., p. 107.

地把语词串在一起。另一方面,规则并不连带其自身的解释,而“照样进行”是根据遵守规则的语境实践地解决的,而不是根据规则自身解决的。理解是基于训练对遵守用词规则的正确反应。遵守规则这个概念也是维特根斯坦私人语言论证中的要点。因为在私人语言中没有办法区分认为一个人在遵守规则和事实上遵守规则,所以就根本没有语言。

“遵守规则类似于服从命令。我们是被训练得这么做的。”——维特根斯坦:《哲学研究》,第一部分,第206节。

规则怀疑论

“法律现实主义”的另一表述。

罗素悖论

由罗素在其《数学原则》(1903)一书中表述的与类是否是自身的元素相关的悖论。有些类或集合(例如抽象对象的集合)是自身的元素,而其他的类或集合(如牛的集合)不是。现在考虑由所有不是自身的元素的集合所构成的集合,这个集合是不是自身的元素?如果它是,那么它具有为它的元素所共享的性质,即它不是它自身的元素;如果它不是自身的元素,则它具有成为该集合中元素的资格,它是其自身的元素。两种方式都导致自相矛盾。这一悖论被认为是“集合论悖论”的主要例证,属于与说谎者悖论不同的另一类型。弗雷格把这一悖论看成是对任何算术系统的严格检验。它使许多集合论公理不再成立,特别是概括公理,后者的内容是:对于每一个可用集合论记法表达的属性来说,都存在一个由并且只由具有该属性的那些事物组成的集合。对于这一悖论,罗素提供了一个形式的解决方案,即他的类型论,并且提供了一个哲学的解决方案,即他的恶性循环原则。

“罗素于1901年发现的关于类的悖论,导致了对于数学基础方面工作的大量讨论。”——塞斯伯里:《悖论》,1995年,第2版,第107页。

S

Sacred, see holy

Salva veritate

[Latin: saving the truth] A term in logic that means “preserving without losing the truth-value”, in relation to the intersubstitutivity of co-referring expressions, that is expressions having the same reference. For a wide range of contexts, if two expressions A and B have the same reference, then A can be substituted for B in a sentence in which B occurs without changing the truth-value of the sentence. Frege was concerned to develop an extensional logic. Accordingly, just as with names, atomic co-referring sentences can be substituted for one another in molecular sentences truth-functionally compounded out of them, without changing the truth-values of the molecular sentences. This feature is related to the principle of substitutivity. However, intersubstitution *salva veritate* is not possible in other contexts, such as those involving propositional attitudes or modal terms, contexts which Quine calls referentially opaque.

“A natural suggestion, deserving close examination, is that the synonymy of two linguistic forms consists simply in their interchangeability in all contexts without change of truth value—interchangeability, in Leibniz’s phrase, *salva veritate*,” — Quine, *From a Logical Point of View*, 1953, p. 27.

Salvation

In the *New Testament*, Jesus is regarded as our lord and saviour Jesus Christ, and the purpose of the incarnation is claimed to be for our purpose. It is one of the basic teachings of Christianity that human beings are sinful, and hence something must be done to heal or put right our sinful lives. Jesus was sent by God as the saviour of the world, to save people from their sins and to make the soul participate in all the glory of God. Christians believe that salvation cannot be won merely by human efforts and requires grace. It is the essential object of hope.

“For practical life at any rate, the chance of salvation is enough.” — James, *The Varieties of Religious Experience*, 1952, p. 63.

Sanctity of human life

A claim originating in the *Old Testament*, *Genesis* 1: 27:

至圣

见“神圣”条。

保留真值

[拉丁语:拯救真理] 逻辑中的术语,指“保留而不是失去真值”,与共指(即有相同指称)的表达式的相互替换有关。对于大范围的语境来说,如果A、B两个表达式有相同的指称,则在B出现的任何句子中可以用A替换B,而不会改变该句子的真值。弗雷格着眼于发展外延逻辑。相应地,正像名称一样,原子的共指语句可以在分子语句(后者是前者的真值函项复合物)中相互替换,而不会引起该分子语句中真值的任何改变。这个特征与置换原则相关联。不过,保留真值地相互替换不能在涉及命题态度、模态词等等的语境,也就是奎因所谓的指称隐晦的语境中进行。

“值得仔细考察的一个自然的意见便是:两个语言形式的同义性仅仅在于,它们在一切实境中可以互相替换而真值不变,用莱布尼茨的说法,就是保留真值的互相替换性。”——奎因:《从逻辑的观点看》,1953年,第27页。

拯救

在《新约全书》中,耶稣被认作“我们的主和救者耶稣基督”,道成肉身的目的被断言是为了我们。人类有罪,因此,必须做什么事情以求“医治”或矫正我们有罪的生活,这是基督教的基本教义之一。耶稣就是作为救世主而被上帝派来把人从他们的罪恶中拯救出来,并使其灵魂分有上帝的一切荣耀的。基督徒相信,拯救不能仅靠人的努力赢得,它需要恩典。它是希望的本质对象。

“无论如何,对于实际的生命来说,拯救的机会是足够的。”——詹姆斯:《宗教经验种种》,1952年,第63页。

人类生命的神圣性

它源自于《旧约·创世纪》(1:27):“上帝

"God created man in his own image" and claiming that human life is sacred and has a natural, inestimable, and transcendent worth or value. This value is equal for all of us, and is independent of any other values that can be ascribed to individual persons in virtue of such features as their efforts, accomplishments or talents. It implies that we have absolute duty to preserve and protect human life and that it is morally wrong to take human life as instrumental. The idea of the sanctity of life is the basis on which the right to life is established by Western philosophers and social theorists. However, this idea makes many moral phenomena, such as capital punishment, euthanasia and abortion, indefensible. It is therefore debatable whether this principle has paramount validity. Another issue of debate is whether this attitude implies that human life is superior to the lives of other species.

"... the view that it is always wrong to take an innocent human life. We may call this the 'sanctity of life' view." -- Singer, *Animal Liberation*, 1990, pp. 17-8.

Sapir-Whorf hypothesis

Also called linguistic determinism, a principle of linguistic relativity developed by the linguists Edward Sapir and Benjamin Lee Whorf. It claims that, in addition to being a technique of communication, language is even more significantly a device that gives its speakers habitual modes of analysing experience into significant categories. Language functions more as a way of defining the speaker's experiences than as a means for reporting experience. The grammatical structure of the language we speak determines our way of understanding or thinking about the world. Consequently, metaphysics or ontology relies on grammar. Whorf attempted to prove this principle empirically by comparing modern European languages with the native languages of the American Indians. For example, he claimed that Hopi Indians do not have a notion of time, because their language lacks means of marking temporal distinctions. The thesis can be traced to Aristotle's *Categories*, Vico's *New Science* and the philosophy of W. von Humboldt. The thesis is controversial, and there are methodological disputes about what would count as evidence for or against it.

"Sapir-Whorf hypothesis ... claims that the form of our languages in some way determines the fundamental beliefs that we hold." -- Bird, *Philosophical Tasks*, 1972, p. 142.

Satisfaction

In a technical sense first used by Tarski in defining "Truth", a relation between an open sentence and ordered n-tuples of objects. Open sentences like Fx or Gx are neither true nor false. They are sentential functions rather than sentences because they contain free variables marking gaps into which suitable terms or expressions have to be substituted. If an open sentence is true of the objects which are substitut-

以他自己的形象造人。”其基本意思是，人类的生命是神圣的，有一种天然的、不可估价的超验价值。这个价值对于我们所有人来说都是平等的，是与那由于个人自己的努力、成就、才能等而归之于他或她的任何价值不相干的。它意味着我们有着保存和保护人类生命的绝对责任，意味着把人的生命作为工具在道德上是错误的。生命神圣的观念是西方哲学家和社会理论家确立生存权利观念的基础。不过，这个观念使许多道德现象诸如死刑、安乐死和堕胎完全无从辩护。因此，是否这个原则有至上的正当性是受到争议的。另一个争论的问题是，是否这种态度隐含着人类生命高于其他物种的生命。

“……毁掉一个无辜的生命始终是错的，我们把这一论点称之为‘生命神圣’的论点。”——辛格：《动物解放》，1990年，第17—18页。

萨丕尔—沃尔夫假说

也被称为语言决定论，由语言学家 E. 萨丕尔和 B. L. 沃尔夫提出的语言相关性原理。它认为，除了作为一种交流的技能以外，语言更重要的是提供给它的讲话者把经验分解为有意义的范畴的惯常方式的一种手段。语言的功能更多地是作为定义讲话者经验的方法，而不仅是作为报告经验的手段。我们所讲的语言的语法结构，决定了我们理解或思考世界的方式。因而，形而上学或本体论都依赖语法。沃尔夫试图通过对现代欧洲语言与美洲印第安人的土语的比较从经验上证明这一原理。例如，他认为霍皮印第安人没有时间概念，因为他们的语言缺少表明时间区分的手段。这一论题可以追溯到亚里士多德的《范畴》、维柯的《新科学》和 W. von 洪堡的哲学。这一命题是有争议的，对于什么可看做是拥护它或反对它的证据，存在着方法论上的争论。

“萨丕尔—沃尔夫假说……认为，我们的语言形式在某种程度上决定我们所坚持的基本信念。”——博德：《哲学的任务》，1972年，第142页。

满足

塔斯基在定义“真”时第一次使用了这一概念的专门含义。它是一开语句和对象的有序 n 元组之间的关系。像 Fx 或 Gx 这样的开语句是既不真也不假的，它们不是语句而是语句函项，因为它们含有自由变元，后者代表着不得不用适当的词项或表达式替换的空位。如果一开语句对于用来替换它的变元的那些对象为真，则

ed for its variables, the objects satisfy the open sentence. "X taught Y who taught Z" is satisfied by (Socrates, Plato and Aristotle), for it is true that Socrates is the teacher of Plato, and that Plato is the teacher of Aristotle. An interpretation satisfies a formula if and only if that formula is true under the interpretation. On this basis Tarski defined a sentence as true just in case it is satisfied by all members in an infinite sequence, and false just in case it is satisfied by none. For this reason his semantical theory of truth is regarded as one version of the correspondence theory of truth.

"A function satisfies an unstructured n -place predicate with variables in its n places if the predicate is true of the entities (in order) that the function assigns to those variables." —Davidson, *Inquiries into Truth and Interpretation*, 1984, p. 47.

Satisficing

A term introduced by the economist Herbert A. Simon for a model of rational choice which seeks to find a satisfactory solution rather than best solution to a problem. The model can also be conceived in terms of seeking a good enough outcome rather than the best outcome. In contrast, the maximising/optimising model of rationality seeks to achieve one's greatest good. The notion has been borrowed by ethics and rational choice theory, especially to formulate versions of consequentialism. Accordingly, one should seek to achieve morally satisficing behaviour because under many circumstances an optimal moral choice or action is too difficult to determine or to achieve. The actor is constrained not only by the external environment, but also by a limited access to information and by uncertainty about the value and probability of each of the alternative courses of actions. Hence, each human actor is subject to the limits of his cognitive capacities. Positively, a satisficing choice represents a reasonable sense of when one has enough. It corresponds to the idea of moderation in Greek ethics.

"Defenders of satisficing claim that it sometimes makes sense not to pursue one's own greatest good or desire fulfilment, but I think it can also be shown that it sometimes makes sense deliberately to reject what is better for oneself in favour of what is good and sufficient for one's purposes." —Slote, *Beyond Optimising*, p. 1.

Saturated, see unsaturated

Saving the phenomena

A type of empirical methodology initiated by Aristotle. It requires that a scientific discipline should start from phenomena and then develop hypotheses to explain the ground of the phenomena, rather than being satisfied solely with discovering the nature of things. The term phenomena should

那些对象就满足该开语句。"X 教过 Y, 而 Y 教过 Z" 被 (苏格拉底, 柏拉图和亚里士多德) 所满足, 因为确实地苏格拉底是柏拉图的老师, 而柏拉图是亚里士多德的老师。一个解释满足一个公式, 当且仅当该公式在该解释下为真。在此基础上, 塔斯基把语句之真定义为它被一无穷序列中的所有元素所满足, 把语句之假定义为它不被该序列中的任何元素所满足。由于这个原因, 他的语义真理论被看做是符合真理论的一个翻版。

"一函项满足在其 n 个位置上带变元的无结构的 n 位谓词, 如果该谓词对于该函项 (按次序) 指派给那些变元的实体为真。" ——戴维森:《真理与解释的探究》, 1984 年, 第 47 页。

满意解决

由经济学家 H. A. 西蒙提出的术语, 指的是这样一种理性的选择方式, 即试图寻求一种满意的而不是最佳的解决问题的方法。这一方法也可被说成是试图寻求一个足够好的结果而不是最好的目标。相比之下, 最大化和最优化的合理性模式则试图取得一个人的最大利益。这一见解已为伦理学和理性选择理论所借鉴, 特别是对于系统提出后果主义的看法。因此, 一个人应力图达到道德上令人满意的行为, 因为在很多情况下最优化的道德选择或行为太难决定或取得。行为者受到的限制不仅是外部环境, 而且还包括他对信息的有限的获得, 以及每一可选择的行为过程的价值和可能性的不确定。因此, 只要是人, 每一行为者都受到其认识能力的局限。从积极的方面来看, 一个满意的选择代表了当时一种已足够的合理的感觉。它符合古希腊伦理学中的适度的观念。

"满意解决的辩护者认为, 有时不去追求一个人本身的最大利益或最大愿望的实现是有意义的, 但我认为还可以表明, 有时故意拒绝那种对他本人是更好的事情以有利于那些对其目的而言是好的和满意的事情, 也是有意义的。" ——斯洛特:《超越最优化》, 第 1 页。

饱和的

见“不饱和的”条。

拯救现象

一种始于亚里士多德的经验主义方法论。它要求一门科学学科应当从“现象”出发, 然后提出假说以说明现象的缘由, 而不是仅满足于发现事物的本性。“现象”一词应理解为既包括观察事实, 也包括有关论题的共同假定。这种方

be understood to include both observed facts and common assumptions about the subject-matter. The methodology may apply to both natural and social sciences.

In Greek philosophy, the term also concerns the ground of the world of appearance in discussion developing from Parmenides' metaphysical claim that only the One is real being and that there is no real motion.

"Originally in Aristotle and his immediate successors the task is to give an account of phenomena in terms of basic physics which in turn must be constructed in such a way that the phenomena can be accounted for. Later on basic physics is taken for granted and phenomena must be explained in its terms. This is how the idea of saving the phenomena (rather than giving an account of them) arises." —Feyerabend, *Problems of Empiricism*, 1981, p. 224.

Saying and showing

Wittgenstein's distinction, also presented as a contrast between what can be said and what can be shown. Something can be said only if it could be passed on to somebody as a piece of information. To say something without knowing its truth-conditions is not really saying in this sense. Anything that can be said at all can be said in a proposition. All factual propositions say something about the world, but all pseudo-propositions (including logical and metaphysical propositions) attempt to say what can only be shown and are not really saying anything. Instead of specifying the precise meaning of "showing", Wittgenstein makes a list of what can be shown but not said. The only common point linking them as things that can be shown is a negative one, namely that they are things that cannot be expressed in factual language. In his *Tractatus* Wittgenstein examines them one by one to see why they are excluded from factual language.

"What can be shown, cannot be said." —Wittgenstein, *Tractatus*, 4. 1212.

Scepticism

[from Greek; *skepsis*, investigation, enquiry] Also written skepticism, a critical philosophical attitude, questioning by systematic arguments the reliability of knowledge claims and our ability to establish objective truth. When ancient Greek philosophers called themselves sceptics, they probably meant that they were undogmatic investigators. The founder of Greek scepticism was Pyrrho of Elis, and scepticism is also called Pyrrhonism. Pyrrhonism is claimed to set up many modes of argument to show that the world of appearance is full of confrontations and that there is no guarantee that we apprehend things as they really are. Thus it is better to adopt an attitude of suspension of judgement and to achieve a state of tranquillity. Most arguments of Pyrrhonism are recorded in the writings of Sextus Empiricus. Various versions of modern scepticism can be found in figures

法论既可用于自然科学,也可用于社会科学。

在古希腊哲学中,这个术语也涉及由讨论巴门尼德关于只有一是真实的存在和没有真正的运动的形而上学主张而来的现象界的基础问题。

“起初,亚里士多德及其直接后继者的任务是用基础物理来描述现象,而基础物理的构造方式也必须使现象能被说明。其后基础物理被认为是理所当然的,从而现象必须按它的术语来说明。这就是拯救现象(而不是给出它们的描述)的观念何以产生的原因。”——费耶阿本德,《经验主义问题》,1981年,第224页。

说与显示

维特根斯坦作出的区分,也表示为可“说”的东西与可“显示”的东西之间的不同。仅当某事可作为一条信息传递给某人时,它才是可说的。说某事而不知其真值条件,在这种含义上并不真正是在说。任何完全可说的东西都能在命题中说出来。所有的事实命题都对世界有所言说,但一切假命题(包括逻辑命题和形而上学命题)企图说出只能显示的东西,因此并不真正是在说什么。维特根斯坦不是具体指明“显示”的精确含义,而是列出可显示而不可说的东西的清单。把它们连成可显示东西的惟一共同点是否定性的,即它们是不能以事实语言表达的东西。维特根斯坦在其《逻辑哲学论》中对它们逐一作了考察,看它们为何要被排除于事实语言之外。

“能够显示的东西,不能说出。”——维特根斯坦;《逻辑哲学论》,4.1212。

怀疑主义

「源自希腊语 *skepsis*, 意为“探究”或“质问”」也写成 skepticism。一种批判的哲学态度,通过系统的论证,审问知识主张的可靠性以及我们建构客观真理的能力。当古代希腊哲学家称他们自己是怀疑者时,他们的意思可能是,他们是非独断的探究者。希腊怀疑主义的创始人是爱利斯的皮浪,正因如此,怀疑主义也被称作“皮浪主义”。皮浪主义被认为提出了许多论式,表明现象世界充满着对反,没有任何东西可以担保我们理解的事物就如它们的实际所是。因此,最好的办法是对判断采取悬置态度,以获得宁静的状态。皮浪主义的绝大多数论证都记载于塞克斯都·恩披里柯的著作中。在蒙田、伽桑狄、笛卡尔、休谟和逻辑实证主义等人那里,能够发现现代怀疑主义的不同说法。古代怀疑主

such as Montaigne, Gassendi, Descartes, Hume and the logical positivists. While ancient scepticism attacked both knowledge and belief and was a philosophy of life, modern scepticism is a challenge to knowledge only. This is why some philosophers hold that ancient scepticism is more serious. There is also a distinction of subject-matter between ethics and science in modern scepticism, and ethical or moral scepticism, which claims that there are no objective values, has become a separate concern. Scepticism is a negative but dynamic force in the history of philosophy. In attempting to attack and overcome scepticism, philosophers sharpen the formulation of philosophical problems and their attempts to solve them.

"Scepticism is an ability which sets up antitheses among appearances and judgements in any way whatever." —Sextus Empiricus, *Outline of Pyrrhonism*, 1. 8.

Schema (Kant), see schematism

Schematism

An important section of Kant's *Critique of Pure Reason* dealing with a procedure of judgement which adapts the categories or pure concepts of understanding to experience. Kant held that schematism is necessary because the categories do not have their origin in experience. He argued that an application of the categories in experience is possible because each category has an empirical counterpart or schema. It is not an image, but a rule for production of images. Each schema is a transcendental determination in times. For example, the schema of substance is permanence of the real in time, and the schema of necessity is existence of an object at all times. In a sense, a schema is just the category itself with the condition of temporality added. As universal and a *priori*, the schema is homogeneous with the category, but it is also homogeneous with appearance because it involves imagination, time and the empirical representation of the manifold contained in time. With these characteristics, the schema can mediate between the concept and intuition, which are otherwise heterogeneous, and enable judgements to take place. Without the schema, the concepts are insignificant because only with the aid of schema can they be applied to phenomena. Some critics argue that the schematism restates rather than solves the problem of applying concepts, especially the categories.

"This schematism of our understanding, in its application to appearances and their mere form, is an art concealed in the depths of the human soul, whose real modes of activity nature is hardly likely ever to allow us to discover, and to have open to our gaze." —Kant, *Critique of Pure Reason*, B181.

义既抨击知识又抨击信念,是一种生活哲学,现代怀疑主义只对知识提出挑战。正因如此,许多哲学家认为,古代怀疑主义更为严重。在现代怀疑主义中,还存在着伦理学和科学之间的论题区别,而且,伦理的或道德的怀疑主义(它断言不存在任何客观价值)已成为一个特别受关注的领域。在哲学史上,怀疑主义是一种否定的但却是有推动作用的力量。在试图驳斥和克服怀疑主义的过程中,哲学家磨练了对哲学问题的公式化表述以及作出了解决它们的努力。

"怀疑主义是以任何方式在现象和判断中提出对反的能力。"——塞克斯都·恩披里柯,《皮浪主义纲要》,1.8。

图型 (康德)

见“图型论”条。

图型论

康德《纯粹理性批判》的重要部分,关于使范畴或纯粹知性概念适用于经验的判断过程。按照康德的观点,图型论是必需的,因为范畴没有它们的经验来源,他论证道,范畴在经验中的应用是可能的,因为每个范畴都有一个经验的对等物,即图型。概念的图型不是意象,而是产生意象的规则。每个图型都是时间的先验规定。例如,本体之图型是时间中实在的永恒性,必然性之图型是一对象在所有时间中的存在,如此等等。在某种意义上,图型只是加上了时间条件的范畴本身。因此它一方面是与范畴同质的,即是普遍的和先天的,另一方面又与现象同质,因为它包含想像力和时间以及包含于时间中的杂多的经验表象。图型由于具有这样的特性而成为本来是异质的概念和直观的中介,从而使判断产生。没有图型,概念就是无意义的,因为只有借助于图型,它们才能被应用于现象。有些批评者认为图型论只是重述而非解决了概念(尤其是范畴)应用的问题。

"我们知性的这种图型论,在其应用于现象和它们的单纯形式时,是潜藏于人心深处的一种技艺,其活动本性的实在方式,似乎永远使我们难以发现和窥测。"——康德:《纯粹理性批判》,B181。

Scholastic philosophy, see scholasticism

Scholasticism

Also called scholastic philosophy, the dominant philosophy in the medieval intellectual world. It started in the fifth century with the influential commentary of Aristotle's logical works by Boethius, and lasted until the middle of the seventeenth century. The heyday of scholasticism was from the eleventh to the thirteenth century when the universities of Paris and Oxford were founded and the Western philosophical tradition reproduced itself through a process of reading the works of ancient authors, in particular of Aristotle (at that time the bulk of Aristotle's works were first translated into Latin), and of commenting on them. The most celebrated exponent of scholastic philosophy, who was also the greatest commentator on Aristotle, was Thomas Aquinas. Other prominent scholastics included Abelard, Buridan, Duns Scotus, Ockham and Suárez. The major characteristic of scholasticism is the attempt to reconcile the conflict between reason and faith, that is to render Greek thought, especially Aristotle's doctrines, consistent with Christian theology, and so to employ philosophy in support of the theology. The conjunction of faith and knowledge started with Boethius, and Ockham argued that the prospects of a marriage between them were not hopeful. For this reason, Ockham is said to be the last of the scholastics. Scholasticism was characterised by its disputation of contested points of detail. These formal disputes were conducted according to well-recognised rules derived from Aristotle's logic. In this way it contributed greatly to logic.

Scholasticism is so called because it was philosophy done in the universities (Greek: *schola*, leisure, also the origin of the terms school and scholar), for only when one has leisure time can one learn and contemplate. Scholasticism has had a bad reputation since the Renaissance, and was the major target of attack for modern philosophers such as Descartes, Bacon, Hobbes and Locke. Modern philosophy and science were initiated in contrast to it. However, in this century philosophers have renewed their appreciation of the contributions of scholasticism to logic, linguistics and metaphysics.

"What defined the great age of scholasticism? The fact that its leading minds, Thomas and Bonaventura, say, carried out that co-ordination between believing acceptance of revealed and traditional truth on the one hand and rational argumentation on the other hand with unfailing resoluteness although they knew just where to draw the line between the claims of reason and the claims of faith." —Pieper, *Scholasticism*, 1960, p. 38.

经院哲学

见“经院学派”条。

经院学派

亦称经院哲学，是中世纪知识界的主导哲学。它始于5世纪时波埃修斯对亚里士多德逻辑学著作的深有影响的评注，终于17世纪中叶。经院学派的鼎盛期在11至13世纪，当时建立了巴黎大学和牛津大学，通过解读古代著者的著作，尤其是对亚里士多德著作（正是在这一时期，亚里士多德的大多数著作第一次被译成拉丁文）的阅读和注释过程，西方哲学传统得以再现自身。经院哲学最著名的代表是T. 阿奎那，他也是亚里士多德著作的最大注释家。其他杰出的经院学者包括阿布拉、布里丹、邓斯·司各脱、奥康和苏亚雷斯等人。经院学派的主要特征是力图调和理性与信仰之间的冲突，即力图使希腊思想，尤其是亚里士多德的学说与基督教神学协调一致，并力图达到用哲学来支撑神学的目的。信仰和知识的关联开始于波埃修斯，奥康则论证道，它们之间婚姻的前途是没有希望的。正因如此，奥康被说成是最后一位经院学者。经院学派以善于争论有争议之点的细节为特色。这些形式的争论按照源出于亚里士多德逻辑学的一些公认的规则进行。在这种意义上，它对逻辑学作出了很大贡献。

经院学派之所以得到如此称谓，乃因为它是在大学中做成的哲学（希腊语的 *schola* 意即“闲暇”，它也是“学校”和“学者”一词的起源），因为只有在一个人有闲暇时间时，他才能学习与沉思。从文艺复兴时期以来，经院学派的声誉不好，是诸如笛卡尔、培根、霍布斯、洛克等近现代哲学家抨击的主要靶子。近现代的哲学和科学是作为它的对立物而开始的。但是，在本世纪，哲学家们更新了他们的评价，意识到经院学派对逻辑学、语言学和形而上学作出的贡献。

“怎样界定经院学派这个大时代？事实是，它的领导性人物托马斯和鲍拉文多拉坚定不移地断言，完成了信仰接受的启示的传统真理和理性的论证这两个方面之间的和合，虽然他们确切地知道理性主张和信仰主张之间的界限该划在哪里。”——庇柏尔：《经院学派》，1960年，第38页。

薛定谔猫

假设一只猫和一个毒气瓶一起关在盒中，

sonous gas which will break if a device connected to it registers that an atom in a radioactive substance in the box decays. The chance of decaying in the next hour is fifty-fifty. If the bottle breaks, the cat will be killed. According to quantum mechanics, the cat, gas and device form an superposition of states that is indeterminate until a measurement or an observation is made. That means that the issue of the cat's being alive or being dead in the box is indeterminate until we look inside the box. Although it sounds paradoxical, before then it is not true that the cat is alive and it is not true that the cat is dead. This thought experiment was introduced in 1935 by one of the founders of quantum mechanics, Austrian physicist Erwin Schrödinger. It indicates how difficult it is to conceive quantum indeterminacy in terms of daily language.

"Schrödinger's cat thought experiment did not show that quantum mechanics is logically false, but it did show that it is wildly counter-intuitive, perhaps to the point of being absurd." - Brown, *The Laboratory of the Mind*, 1991, p. 67.

Scientia media, see middle knowledge

Scientific determinism

The success of Newtonian physics led many scientists and philosophers to believe that there is a natural order governed by the laws of nature. Given the initial state of a system, we can determine any future state by applying the laws of nature and the information about the initial state. Phenomena are necessary outcomes of the operation of laws in the situations which produce them. The future occurrence of an event is predictable. Chance is a name for our ignorance of the laws of nature or of the antecedent conditions of the event. The association of determinism and scientific predictability was established by Laplace and has been widely echoed. Determinism was widely accepted as a fundamental principle of science and as the very essence of scientific understanding. The truth of science seemed to prove that the whole universe must indeed be a vast and intricate mechanism. In spite of its great prestige, scientific determinism was challenged by the theory of relativity, chaos theory and quantum mechanics. As a result, the debate between determinism and indeterminism has generated major tensions in the philosophy of science. Traditionally, this debate has occurred mainly in physics, but biological determinists have gained support for the claim that the development of a person is determined by his genetic inheritance.

"Science is inconceivable without determinism, but the latter is taken in a purely phenomenalist sense; in order to formulate any laws at all, we have to assume that identical conditions produce identical phenomena." - Kolakowski, *The Alienation of Reason*, 1968, p. 74.

当与毒气瓶相连的一个装置记录到盒中放射性物质衰变的一个原子时,毒气瓶就被击碎。在下一小时中,衰变的几率为一半对一半。如果瓶被击碎,猫就会被毒死。按照“量子力学”,猫、气体和装置形成状态的迭加,它是不确定的,除非进行一次测量或观察。这意味着猫在盒中的是死是活问题是不确定的,直到我们打开盒子时才能确定。这听起来是悖理的,就是说在那之前,猫还活着不是真的,而猫死了也不是真的。这个思想实验由量子力学的奠基人之一、奥地利物理学家E. 薛定谔于1935年提出。它表明用日常语言来想像量子不确定性是多么困难。

“薛定谔猫思想实验并未证明量子力学在逻辑上是错误的,但它的确证明量子力学与人们的直觉是极不相符、甚至达到荒唐的地步。”——布朗:《心灵实验室》,1991年,第67页。

中间知识

见“中间知识 (middle knowledge)”条。

科学决定论

牛顿物理学的成功使很多科学家和哲学家相信存在着一个由自然规律统治的自然秩序。一个系统的初始状态给定后,我们可以通过应用自然规律和有关初始状态的信息而确定其未来的状态。现象是在产生它们的条件下规律起作用的必然结果。事件的未来出现是可以预见的。偶然性是我们对自然规律或事件的前提条件无知的一个说法。决定论和科学的可预见性之间的联系是由拉普拉斯确立的,并得到了广泛的赞同。决定论作为科学的基本原则和科学理解的真正本质被广泛接受。科学的真理似乎是要证明整个宇宙实际上很可能是一个庞大复杂的机械装置。尽管科学决定论有巨大的声望,它还是受到相对论、混沌论和量子力学的挑战。这导致科学哲学中决定论和非决定论之间的争论大幅升温。从传统上看,这一争论主要发生在物理学界,但生物决定论者得到了一个人的发展是由他的遗传因素决定的这种主张的支持。

“科学没有决定论是不可想像的,但后者只能从纯现象论意义上理解,即只是为了系统地提出规律,我们必须假定相同的条件引起相同的现象。”——科拉科夫斯基:《理性的异化》,1968年,第74页。

Scientific experience, see lived experience

Scientific image, see manifest image

Scientific method

A central concern of the philosophy of science. Various positions regarding method may be distinguished in terms of answers to the following questions: (1) How are scientific hypotheses formulated and how is scientific truth discovered? These questions focus on the nature of scientific reasoning, including the method of induction initiated by F. Bacon and J. S. Mill. (2) How is knowledge accepted as being scientific? This problem has been the subject of intensive debate, especially since Popper's criticism of verifiability and his proposal to use falsifiability as the criterion of demarcation between science and non-science. (3) How does science develop? Logical Positivism attempted to establish a unified method for all sciences, but its programme has been rejected by others. Traditionally, the method of physics has been accepted as the paradigm of scientific method, but this has been challenged by the development of biology. Thomas Kuhn's theory of scientific revolutions challenged the picture of science as developing smoothly within the framework of a single methodology in which all theories are commensurable and scientific change is rational. Imre Lakatos understood the progress of science in terms of the relative success of progressive research programmes in generating problems and their solutions. Some philosophers see science as a patchwork of different methods in which local successes do not depend on a coherent integrated system.

"The practice of scientific method is the persistent critique of arguments, in the light of canons for judging the reliability of the procedures by which evidential data are obtained, and for assessing the probative force of the evidence on which conclusions are based." — Ernest Nagel, *The Structure of Science*, 1961, p. 13.

Scientific realism

A position claiming that scientific postulates or theoretical entities, such as electrons and quarks, have real existence independent of our minds and that scientific universals are abstractions of the facts. It therefore represents the commonsensical view that there is a world that exists independent of our experiences. It holds that any scientific theory has ontological implications. Correct scientific theories describe and explain real features and objective structures of the external world. There is an intrinsic connection between how a theory depicts nature and its other features, including its power to explain. Scientific realism contrasts with many other positions in the philosophy of science such as operationism

科学的经验

见“活生生的体验”条。

科学的影像

见“明显的影像”条。

科学方法

科学哲学的主要领域之一。关于方法的不同立场依据对下述问题的回答而得以区分：(1) 科学假说是如何形成的，科学真理是如何发现的？这些问题集中在科学推理的性质，包括起始于 F. 培根和 J. S. 密尔的归纳方法上。(2) 知识如何被接受为是科学的？这个问题是集中争论的主题，尤其是自波普对可证实性的批评和提倡用可证伪性作为科学与非科学之间的分界标准以来。(3) 科学是如何发展的？逻辑实证主义试图确立一种对于所有科学的统一方法，但其纲领为许多哲学家所反对。物理学的方法曾被传统地认为是科学方法的典范，但却遭到了生物学发展的挑战。T. 库恩的科学革命理论挑战那种科学是在一单方法论框架中平和发展的科学图像，在其中一切理论都是可通约的，科学变化是理性的。拉卡托斯以进步性研究纲领在产生问题和找到答案方面的相对成功来理解科学的进步。有些哲学家把科学看做是不同方法的杂烩，其中局部的成功并不取决于一个一致整合的系统。

“科学方法的实践，就是对于准则的持久批判，这些准则用以判定获取证据资料的程序的可靠性及用以评估由此而得出结论的证据的检验力。”——内格尔：《科学的结构》，1961 年，第 13 页。

科学实在论

这个术语指这么一种立场，它主张科学假定或理论实体，例如电子、夸克等具有独立于人心的真实存在，科学的共相是对事实的抽象。因此，它代表了存在一个独立于我们经验世界的常识观点。它认为任何科学理论都有本体论意义。正确的科学理论描述和说明外部世界的真实特征和客观结构。在一个理论如何描述自然与它的其他特征（包括它的说明力）之间有着内在的联系。这种观点与科学哲学中的许多其他立场，如“操作主义”或“工具主义”等相对立，这些观点一般主张理论实体仅仅是虚构。

“科学实在论认为由正确理论所描述的实

or instrumentalism which commonly claim that theoretical entities are merely fictions.

"Scientific realism says that the entities, states and processes described by correct theories really do exist." --Hacking, *Representing and Intervening*, 1983, p. 21.

Scientism

The view that science is the only knowledge and that scientific methodology is the only proper method for obtaining knowledge. Everything should be understood and explained by the employment of scientific theories. Other fields of inquiry, including philosophy, art, history, religion, morality and the social sciences, either are assimilated to science or are excluded as a source of knowledge. Scientism denies that any of these fields has a distinct methodology and in many versions rejects claims that there is aesthetic, moral or religious knowledge. Philosophers who maintain that there is an autonomous field of humanistic knowledge to which scientific methodology is inapplicable reject scientism and often use the term pejoratively.

"Scientism is actually a special form of idealism, for it puts one type of human understanding in charge of the universe and what can be said about it." Thomas Nagel, *The View from Nowhere*, 1986, p. 9.

Scope

Scope is attributed to syntactical operators, and affects the part of a sentence upon which the operator has immediate effect. An operator is an expression which alters the logical properties of another expression to which it is attached. In the expression " $(A \wedge B) \supset C$ ", the scope of A is " $A \wedge B$ ". In ordinary language, it is often the case that the scope is not clearly demarcated. Hence the same sentence might be interpreted in alternative ways, depending on how one understands the context in which the sentence occurs. This gives rise to structural ambiguities, such as *de re / de dicto* ambiguities. For example, "I shall go to London and race if the weather is good". It means either "I shall go to London anyway, but race only when the weather is good" or "If the weather is not good, I will not go to London and race". Arguments proceeding on the basis of this sort of ambiguity are said to commit the fallacy of scope. Artificial languages have been invented with the aim of preventing scope ambiguity. The scope of the quantifier is generally the whole formula. An operator attached to a sentence to produce a new sentence is a sentential operator and has the original sentence as its scope. Brackets are conventionally used to indicate the scope of the scope of the various operators. Russell's theory of descriptions essentially gives an explicit indication of the scope of a definite description.

"The sentence to which an operator is attached is called a scope of the operator." —Quine, *Word and Object*, 1960.

体、状态和过程的确真实地存在着。” 哈金：《表征与干预》，1983年，第21页。

科学主义

指一种认为科学是惟一的知识，科学方法论是获取知识的惟一正确方法的观点。每一件事都应当用科学理论来理解和解释。其他研究领域，包括哲学、艺术、历史、宗教、道德和社会科学，要么被同化为科学，要么就作为知识的来源而被排除在外。科学主义否认这些领域具有独特的方法论，并且在许多形式中拒斥美学知识、道德知识或宗教知识的存在。那些坚持认为存在一个自主的人文知识领域，科学方法论不适用于这领域的哲学家反对科学主义并经常贬义地使用这一术语。

“科学主义实际上是一种特殊形式的理想主义，因为它把宇宙和关于它可说及的托付给一种类型的人类认识。”——内格尔：《出自无处的观点》，1986年，第9页。

范围

范围是被赋予句法算子的，影响着这个算子直接作用的句子的组成部分。算子这种表达式改变了它所依附的另一个表达式的逻辑属性。在“ $(A \wedge B) \supset C$ ”这个表达式中， A 的范围就是“ $A \wedge B$ ”。在日常语言中，范围往往并没有得到清楚地划定。因而，同一个句子可能会用不同的方式得到解释，这取决于人们如何理解这个句子出现的语境。这就产生了结构上的模糊性，譬如对象与事实的模糊性。例如，“如果天气好的话，我会去伦敦参加比赛”。这或者意味着“无论如何我都会去伦敦，但只有当天气好的时候才会参加比赛”，或者意味着“如果天气不好的话，我就不会去伦敦参加比赛了”。基于这种模糊性的论证被认为是犯了一种“范围错误”。人工语言的引入一直被看做是为了禁止这种范围的模糊性。量词的范围通常就是整个公式。把一个算子加在一个句子上而产生新的句子，这个算子就是语句算子，它把原来的句子作为其范围。括号通常被用做标明各种算子的范围。罗素的事状词理论实际上就是清楚地表明了限定摹状词的范围。

“算子所在的句子就被称作这个算子的范围。”——奎因：《词与物》，1960年，第165页。

p. 165.

Scotism

A form of scholastic philosophy and theology developed by Duns Scotus and his followers, especially among the Franciscans. Scotism was accepted by the Catholic Church as authoritative in 1633, and was taught widely in the universities around the world from the sixteenth century to the eighteenth century. Scotism and Thomism are two main trends in scholasticism. Other famous Scotists include Francis Mayron, John de Bassolis, Peter of Aquila, and Luke Wadding, who in 1639 edited the first edition of the complete works of Scotus.

Scotism accepted the Aristotelian view that metaphysics is concerned with being as being and with various connected transcendental conceptions, rather than with the essence of material things, as Aquinas maintained. The purpose of metaphysics is to demonstrate God as infinite and as the First Being. In demonstrating the existence of God, Duns Scotus developed several arguments of Thomas Aquinas. God created the world *ex nihilo*, and all created things are finite and contingent. Other than the common nature shared by particular things, there is also an individual form (*haecceitas*) which is peculiar to each particular. This doctrine differs from the doctrine of Aristotle and Aquinas because they believed that in a composite of matter and form, matter is the principle of individuation. Among various entities which are not really the same but which cannot be separated from one other, there is a formal distinction. Scotism opposed the Augustinian theory of divine illumination and claimed that being is the primary object of intellect. It also appealed to intellectual intuition in explaining our experience of God. In ethics, Duns Scotus attempted to reconcile the divine will with the rationality of moral law and claimed that human freedom lies in our ability to move from desire to justice. Scotism presented the most sophisticated metaphysics in later medieval philosophy, and has been admired by Heidegger and Peirce.

"If one looks on Scotism in its position as a stage in the development of medieval thought, it would be idle to deny that de facto it helped to stimulate the critical movement of the fourteenth century." - Copleston, *A History of Philosophy*, 1950, vol. II, p. 485.

Scottish philosophy

Education in Scotland has long placed great emphasis on the importance of philosophy. The earliest important Scottish philosophers were Duns Scotus and John Mair. The golden age of Scottish philosophy was the eighteenth century, which contained major figures such as Francis Hutcheson, David Hume, Adam Smith, Thomas Reid, Adam Ferguson and Dugald Stewart. These philosophers of the Scottish Enlightenment were commonly opposed to the orthodox

司各脱主义

由 D. 司各脱及其追随者, 尤其是在圣方济会徒中间发展起来的经院哲学和神学的一种形式。司各脱主义在 1633 年曾被天主教会接受为官方学说, 并从 16 至 18 世纪在周围世界的大学中被广泛讲授。司各脱主义和托马斯主义是经院学派中的两个主要倾向。其他著名的司各脱主义者有 F. 麦依农、J. 德·巴索里斯、阿库依那的彼得和在 1639 年编纂了司各脱全集第一个版本的 L. 瓦丁。

司各脱主义接受亚里士多德的形而上学观点, 即形而上学是研究作为“是”的“是”, 以及各种相关的超验概念, 而不是如阿奎那所主张的那样研究物质事物的本质。形而上学的目的是要论证作为无限的和“第一存在”的上帝。在论证上帝存在时, D. 司各脱发展了 T. 阿奎那的几个论证。上帝 *ex nihilo* (无中生有地) 创造了世界, 一切受造物都是有限的、偶然的。特殊事物除了分有共同的本性之外, 也有每一殊相固有的个体形式 (*haecceitas*)。这种学说既区别于亚里士多德, 也不同于阿奎那, 因为他们相信, 在一个质料和形式的合成物中, 质料是个体化的原则。在实质并不相同但又不能彼此分离的各种实体中, 存在着形式上的差异。司各脱主义反对奥古斯丁主义的神之光照理论, 主张存在是理智的第一对象。它也诉诸理智直觉来解释我们对上帝的体验。在伦理学中, D. 司各脱企图调和神圣意志与理性道德法则, 主张人的自由在于我们有能力从欲望过渡到公正。司各脱主义提出了中世纪晚期哲学中最成熟的形而上学, 得到了海德格尔和皮尔士的称赞。

“如果人们把司各脱主义作为中世纪思想发展的一个阶段来看它的见解, 那么, 要否认它事实上有助于刺激 14 世纪的批判运动就是没有根据的。”——柯普莱斯顿:《哲学史》, 1950 年, 第二卷, 第 485 页。

苏格兰哲学

苏格兰教育一直非常强调哲学的重要性。最早的重要哲学家是 D. 司各脱和 J. 梅尔。苏格兰哲学的黄金时代是 18 世纪, 这一时期包括的主要人物有 F. 哈奇森、D. 休谟、A. 斯密、T. 里德、A. 弗格森和 D. 斯图尔特。这些苏格兰启蒙运动的哲学家共同反对当时支配苏格兰教会和社会的正统的加尔文派。他们的工作促进了作为一个整体的欧洲启蒙运动的形成。哈

Calvinism which dominated Scottish church and society at that time. Their work helped to shape the European enlightenment as a whole. Hutcheson's account of 'moral sentiments', Hume's scepticism and Reid's philosophy of common sense have all influenced the later development of philosophy. Smith's philosophical work is valued as well as his foundation of modern economics in *Wealth of Nations*. Scottish philosophy has generally been empirical, anti-rationalistic and closely connected with psychology, as it reflected the fact that in Scottish universities the study of philosophy traditionally included logic (or general philosophy), moral philosophy, psychology and natural philosophy (or physics).

"The philosophy of common sense became 'the Scottish philosophy' and schooled several generations of Scotsmen."—Grave, *The Scottish Philosophy of Common Sense*, 1960, p. 1.

Sea-battle

Aristotle's example to illustrate the problem of future contingents in *De Interpretatione* ix. Either there will be or there will not be a sea-battle tomorrow; so the statement "There will be a sea-battle" is either true (and its negation false), or false (and its negation true). However, if the sea-battle has not yet happened, how can we claim that a statement about it is true or false? If it is already true or already false, what will happen happens of necessity. Aristotle concluded that statements in the future tense, though potentially either true or false, are actually neither. There has been much discussion about whether Aristotle's argument is sound and whether he pointed to a need to modify logic. Lukasiewicz developed Aristotle's thoughts on the sea-battle as the basis for three-valued logic.

"For example, it would be necessary that a sea-battle should neither take place nor fail to take place tomorrow."—Aristotle, *De Interpretatione*, 18b24-6

Secession

The dismemberment of a state into two or more new sovereign states, typically in response to problems of national, religious, ethnic or cultural conflict within the state. There are several different reasons for secessionist movements. For example, some attempt to restore a nation which was forcibly and unjustifiably annexed by a larger state, as in the case of some of the republics in the former Soviet Union. Some attempt to escape the consequences of discrimination and genocide, as in the formation of Israel. Although there are significant objections, many commentators argue that secession can be justified in these two cases. There have been attempts to justify other secessionist movements by distinct ethnic groups asserting a right to self-determination to protect their language, traditions, religion, culture or nationality or to avoid losing their majority in their own area through

奇森对道德情感主义的说明、休谟的怀疑主义和里德的常识哲学都对后来哲学发展产生了影响。斯密的哲学著作与其《国富论》中的现代经济学基本原则一样有价值。苏格兰哲学通常是经验主义的和反唯理论的，并与心理学联系密切，这反映了这样一个事实：在苏格兰大学中，哲学研究传统上包括逻辑学（或一般哲学）、道德哲学、心理学和自然哲学（或物理学）。

“常识哲学成为‘苏格兰哲学’并培养了几代苏格兰人。”——格雷夫：《苏格兰的常识哲学》，1960年，第1页。

海战

亚里士多德在《解释》第九章中用来说明未来偶然性问题的一个例子。明天或者将发生海战或者不会发生海战；于是“将发生海战”这一陈述或者为真（它的否定为假）或者为假（它的否定为真）。不过，如果海战并非已经发生，我们怎么能够断言有关它的一个陈述是真的还是假的呢？如果它已经是真的或已经是假的，则将要发生的事情就会是必然发生的。亚里士多德作结论说：将来时态的陈述，尽管潜在地或者为真或者为假，而实际上是既不真也不假。亚里士多德的论证是否可靠，他是否指出了需要修改逻辑，关于这些问题存在许多讨论。卢卡西维茨发展了亚里士多德关于海战的思想，并以此作为三值逻辑的基础。

“举例来说，明天海战将既不发生也不不发生，这是必然的。”——亚里士多德：《解释》，18b24-26。

脱离

一个国家肢解为两个或更多新的主权国家。它是对这一国家内民族、宗教、伦理或文化冲突问题的典型反应。脱离主义运动有各自不同的原因。例如，一些是以前被一个大国强行无理吞并的国家试图复国，前苏联一些共和国的情况就是这样。一些是试图避免受歧视和种族灭绝的后果，如以色列的形成。虽然存在重大的反对意见，但很多评论家认为在上述两种情况下脱离可以认为是正当的。还有一些人一直在为其他的脱离主义运动做辩护，其根据是独特的少数民族集团坚持自决权以保护他们的语言、传统、宗教、文化或民族性，或避免由于强行的人口再分配而失去他们在所在地区人口中的多数。这些支持脱离的理由是否是道义上的结论还不清楚，自决权没有政治上的完全独立

imposed population redistribution. It is unclear whether these reasons are morally conclusive in favour of secession. Self-determination is possible without full political independence and cannot justify secessionist claims to territory or sovereignty. Secession on this basis would undermine the existence of any state containing groups distinguished in terms of ethnicity, language, religion, culture or nationality and would lead to political fragmentation. As an alternative to secession, some political philosophers are exploring the possibilities of satisfying the legitimate demands of different groups within an altered conception of a sovereign state.

"The problem of secession arises only in cases where an established state houses two or more groups with distinct and irreconcilable national identities." —Miller, *On Nationality*, 1995, p. 1.

Seeing in

A term introduced by the British philosopher Richard Wollheim with regard to the nature of representation. There have been various attempts to understand the nature of the relation of representation. Different philosophers have claimed respectively that representation is an illusion; that it is the arousal of sensation; that it is a character of a symbol system satisfying certain formal requirements; that it is resemblance; or that it delivers the information found in what is represented. Wollheim finds that none of these accounts is satisfactory and instead argues that pictorial representation, at least, is best understood in terms of seeing in, according

也是可能的,它并不能表明脱离主义者对领土或主权的要求是正当的。对由在种族、语言、宗教、文化或民族方面相互区别的集团构成的国家而言,以此为根据的脱离会削弱这种国家继续存在的基础,并会导致政治上的分裂。作为对脱离的一种替代,一些政治哲学家正在探索在一个改变了的主权国家的概念内满足不同集团合法要求的可能性。

“只有在一个已建立的国家里存在两个或更多的、有独特的和势不两立的民族性集团的情况下,脱离的问题才会出现。”——米勒:《论民族》,1995年,第1页。

从中观出

该术语由英国哲学家 R. 沃尔海姆首创,旨在揭示表象的本质。为了搞清表象关系的本质,哲学家们进行了各种尝试。不同的哲学家分别提出不同的见解,有人认为表象是一种幻象;有人宣称表象旨在唤起感觉;有人断言表象是满足某些形式要求的符号系统的特征;有人坚信表象就是相似;也有人建议表象旨在传达包含在表象对象中的信息等等。而沃尔海姆则发现所有这些说法都不尽如人意,于是提出如下论点:最起码就绘画表象而言,依据“从中观出”的原理来理解是最好不过的,据此,x的表

to which a representation of x is a configuration in which x could be seen. As one and the same simultaneous perceptual experience, seeing in contains two aspects in virtue of our psychological capacity both to attend to the marks on painted surface present to the eyes and to see in them the figurative effects of those marks.

"I shall simply offer, in a necessarily crude version, what seems to me the best available theory of representation. . . . The theory is stated in terms of 'seeing-in'. For at least central cases of representation, a necessary condition of R representing x is that R is a configuration in which something or other can be seen and furthermore one in which x can be seen." —Wollheim, *The Mind and its Depths*, 1993, p. 165.

Self

The subject or bearer of mental attributes such as experience, consciousness, thoughts, beliefs, emotions, intentions and sensations. It is the human agent which deliberates and initiates actions, and which bears responsibility for one's action. It is the referent of the first-person pronoun. It is sometimes used as a synonym for person. However, person is associated in different ways with bodily form and with public or social role, while the self is more related to the inner part of a person. Sometimes the term is used interchangeably with terms such as the pure ego, unity of consciousness, subject and, in a loose sense, soul or mind. The self is a unity which integrates all experiences, beliefs and feelings of an individual and which enables an individual to have identity as the same person at different times. The self is characteristically taken to be the subject of self-consciousness, which includes itself or its states among the objects of its own consciousness. The nature of the self has been a contentious issue in the their history of philosophy, starting with the Greek injunction to know oneself. Many philosophers consider the self as an inner entity, but Hume objected to this, claiming that the self is nothing but a bundle of perceptions.

"It must be some one impression, that gives rise to every real idea. But self or person is not any one impression, but that to which our several impressions and ideas are supposed to have a reference. If any impression gives rise to the idea of self, that impression must continue invariably the same, throughout the whole course of our lives; since self is supposed to exist after that manner. But there is no impression constant and invariable." —Hume, *A Treatise on Human Nature*, Book 1, Part 4, Sect. vi.

Self-alienation, see alienation

Self-awareness, another expression for self-consciousness

象是一个可以从中观出 x 的构形。作为一种相同而共时的感知经验，从中观出过程包含着涉及我们心理能力的两个方面，一是注意眼前绘画表象上所有标志的心理能力，二是发觉这些标志之象征作用的心理能力。

“在一种肯定粗浅的论述中，我只是提出了在我看来是目前最佳的表象学说。……这一学说通过‘从中观出’予以表述。起码就表象的重要情况而言， R 表现 x 的必要条件在于 R 是一种构形，从中可以看出某物或他者，另外从中还可以看出 x 。”——沃尔海姆：《心智及其深处》，1993 年，第 165 页。

自我

像经验、意识、思维、信念、情绪、意向、感觉这样的心的属性的主体或所有者。它是思考和发起活动并对自己的活动负有责任的人类主体。它是第一人称代词所指的对象。它有时被用作个人的同义语。然而，个人以不同的方式与身体形式及公共的或社会的角色相联系，而自我却与一个人的内部有更多的联系。有时，它被与像纯自我、意识统一体、主体这样的术语互换使用，并在宽松的意义上，与灵魂或心通用。自我是一个整合个人所有经验、信念、感觉等的统一体，这使得一个人在不同的时间仍是同一个人。自我特别被认为是自我意识的主体，这包括自我意识的对象本身或状态。自我的本质在哲学史上从希腊人有关于认识自己的要求以来，就是一个持续不断的议题。许多哲学家将自我看做是一个内部的存在物，但休谟反对这样的看法，他声称自我只是一束知觉。

“它一定是引起每个真实观念的某一个印象。但自我或个人不是任何一个印象，而是我们的几个印象和观念所要指称的东西。如果某个印象引起关于自我的观念，那个印象一定要终生持续不变地存在下去，因为自我被认为是以那种方式存在的。但并不存在持续不变的印象。”——休谟：《人性论》，第一卷，第四部分，第六节。

自我异化

见“异化”条。

自我意识

“自我意识 (self-consciousness)”的另一个

Self-consciousness

Also called self-awareness, including the distinctive properties of the self; first, the subject's awareness of itself as a subject, expressed by the pronoun "I"; secondly, the awareness that one has consciousness, through experiencing the contents of one's consciousness, such as sensations, thoughts or feelings; and thirdly, the reflexivity of consciousness, which allows consciousness to be an object of knowledge. Different senses of self-consciousness raise various philosophical problems concerning the certainty and logical structure of our awareness of ourselves as an "I", introspection and the nature and character of self-knowledge.

"The expression 'self-consciousness' can be respectably explained as 'consciousness that such-and-such holds of oneself'." —Anscombe, in Guttenplan (ed.), *Mind and Language*, 1975, p. 50.

Self-contradiction

A proposition that states or implies a proposition of the form P and not P. If a proposition contains or implies its own negation and effectively asserts and denies the same thought, it is self-contradictory. Such a proposition cannot be true and must be false, because it involves self-refutation. Some self-refutation can be pragmatic. Descartes claimed that the proposition "I am not a thinking being" is self-contradictory because saying "I am not a thinking being" shows that one is a thinking being. In this case the content of the utterance does not imply its negation, but asserting the content ensures that the content is false. Self-contradiction is a crucial objection to any mathematical or logical principle or axiom. Philosophers are sometimes puzzled how one and the same proposition can contradict itself. The discussion of self-contradiction is related to the problem of self-deception, in which a person believes what he knows or believes to be false.

"The philosophical critic does not always restrict himself to pointing out inconsistencies or to showing that a certain theory leads to contradictions; he frequently alleges that certain propositions—propositions, often enough, which have been put forward by his fellow philosophers—are self-contradictory in themselves." —Passmore, *Philosophical Reasoning*, 1970, p. 59.

Self-control

[from Greek: *enkratia*, controlling or mastering oneself over irrational desires, as opposed to *akrasia*; incontinence or weakness of will, the lack of control] An ability enabling oneself to pursue what one believes to be right whilst resisting temptations to do something else. It is strength of will. In Plato's tripartite division of soul, self-control means the

名称,

自我意识

又称自我意识,包括自我的一种独特特性。首先主体将自己意识为一个用代词“我”来表达的主体;其次,通过意识到自己的像感觉、思维、感情这样的意识内容来意识自己具有意识;第三,意识的内省或反省,亦即,容许意识作为知识的一个对象。不同意义上的自我意识引起不同的哲学问题。这些问题是关于我们对于自己作为一个“我”的意识的确定性和逻辑结构、内省、自我知识的本质与特征的。

“‘自我意识’这一表达可以大致地解释为‘一个人对于自己如此这般的意识’。”——安斯康,见古顿普兰(编):《心与语言》,1975年,第50页。

自相矛盾

当一个命题陈述或蕴涵有形式为P和非P的命题时。如果一个命题包含或蕴涵着它自身的否定,及它实际上断言和否认同一思想,它就是自相矛盾的。这种命题不可能是真的且必然为假,因为它包含着自我反驳。有些自我反驳是实用的。笛卡尔认为命题“I am not a thinking being”(我不是一个思维着的存在)是自相矛盾的,因为说“我不是一个思维着的存在”表明他是一个思维着的存在。在这种情况下,说话的内容并不隐含着它的否定,而对内容的确定则肯定了其内容是假的。对于任何数学或逻辑的原理或公理而言,自相矛盾是一个很关键的缺陷。哲学家有时会困惑于同一个命题如何能与自身相矛盾。这个问题的讨论与自我欺骗有关,即一个人相信他所知道或相信的是假的事。

“哲学批评并非总限定自身于指出不一致,或表明某个理论导致矛盾;他经常断言某些命题——相当经常地是那些其同辈哲学家提出的命题——其本身就是自相矛盾的。”——帕斯摩尔:《哲学推理》,1970年,第59页。

自我控制

!源自希腊文 *enkratia*, 控制或驾驭自己的非理性欲求,与 *akrasia* (意志薄弱或缺乏控制)相反]一种使得一个人追求自己相信正确的东西并抵制做其他事情的诱惑的能力。它是意志的力量。在柏拉图关于灵魂的三分法中,自我控制意味着理性对于情绪和欲望的控制。一个

mastery of reason over the emotions and appetite. A self-controlled person can pursue greater and longer-term goals without being corrupted by immediate gratification, and can adhere to the principles he endorses in the face of temptation to deviate from them. Such a person, according to Plato, is a free man rather than a slave of his desires. Different from temperance which means not to have excessive desires, self-control is the capacity to overcome the influences of desires.

"This is so when we describe it as calling for a kind of self-mastery, which consists in reason ruling over desires, a self-control which contrasts to being dominated by one's appetites and passions." — Charles Taylor, *Sources of the Self*, 1989, p. 124.

Self-deception

Deliberate blindness to what is true or believing what one knows or believes to be false on the basis of a certain motivation. Sartre's account of self-deception as bad faith [French: *mauvaise foi*] is closely focused on his existentialist claim that we seek to evade our freedom by attempting to take on the character of a thing. He analyses self-deception in terms of lying to oneself on the model of deceiving others, but this gives rise to the so-called paradox of self-deception. In deceiving another, the deceiver knows the truth and conceals it from the one to be deceived. But how can deception occur if the deceiver and the one to be deceived are the same? A person deceiving himself must already know the truth. Hence a self-deceiver knows that he is deceiving and this seems to rule him out as a victim of his deception. A successful self-deceiver would believe both *p* and not-*p*, but this seems to be impossible. Various proposals concerning the structure of the mind, the scope of the will, the nature of knowledge and belief and their logic have been made to avoid the paradox, but each proposed solution is open to dispute. The analysis of self-deception is closely connected with the attempts to understand the problem of incontinence [Greek: *akrasia*, lack of self-control] or the weakness of will. The incontinent person does what he knows or believes to be wrong or fails to do what he knows or believes to be the best.

"The paradox of self-deception was formulated in the following way: 'how can the self-deceiver believe that something is not so and yet persuade himself that it is so'." — Pears, *Motivated Irrationality*, 1984, p. 31.

Self-determination

A moral characteristic by which a moral agent is the source or cause of his own actions. A self-determining agent can exercise rational will without being determined by anything else. Self-determination is viewed as synonymous with autonomy and opposed to the fatalism of determinism. In modern ethics, especially in Kant, Nietzsche, Sartre and

自我控制的人能够追求更大更长远的目标, 而不被眼前的满足所收买, 并且能够在相反的诱惑面前坚持他所认可的原则。在柏拉图看来, 这样的人就是一个自由的人, 而不是其欲求的奴隶。与意为不具有过多欲求的节制不同, 自我控制是克服欲求影响的能力。

"当我们将它描述为要求一种包含理性统治欲求的自我驾驭, 一种与为一个人的欲望和冲动所支配相反的自我控制时, 情况就是这样。"——泰勒:《自我的起源》, 1989年, 第124页。

自欺

由于某种动机对于真的东西, 或者相信某人知道或相信为假的东西故意装做不知。萨特把自欺解说为坏的相念[法语: *mauvaise foi*], 这与他的存在主义主张密切相关, 即我们力图通过接纳事物的特征而极力逃避我们的自由。他借助于欺骗他人的模式而把自欺分析为对自己说谎, 但这产生了所谓自欺的悖论。在欺骗他人时, 欺骗者知道真相并对被欺骗者掩盖真相。但如果欺骗者和被欺骗者是同一个人, 那么欺骗又如何能发生呢? 一个欺骗自己的人必定已经知道真相。因此自欺者知道他正在受骗, 这看来是把他作为他的欺骗的牺牲品而把他排除掉了。成功的自欺应当既相信 *p* 又相信非 *p*, 但看来这是不可能的。各种关于心的结构、意志的范围、知识和信念的本性及其逻辑的方案都提出来以避免这个悖论, 但每一种所提出的解决方案都仍有争论。对自欺的分析与理解意志软弱[希腊词: *akrasia*, 缺乏自制]问题之企图密切相关。意志软弱的人去干他知道或相信是错误的事情, 或未能做他知道或认为是最好的事情。

"自欺悖论以下列方式形成: '自欺者如何能相信某件事不是如此, 然而却劝说自己, 事情就是如此'。"——皮尔斯:《促动的非理性》, 1984年, 第31页。

自决

一种道德的特性, 据此, 道德行为者就是他自己行动的根源或原因。自决的行为者可以运用理性意志而不为任何其他东西所决定。自决被视为与自主同义, 而与决定论的宿命论相反。在近代伦理学中, 尤其是在康德、尼采、萨特和黑尔那里, 自决作用是作为我们尊重人的基础

Hare, self-determining agency is the principle that is basic to our respect for persons. Self-determination has been viewed as a basic moral right of persons and as the basis for human freedom.

In political theory, a right to self-determination allows a people to form and live under autonomous political institutions without undue outside interference.

"The balance or see-saw between self-determination and external determination is the form in which moral experience presents itself." —Hampshire, *Morality and Conflict*, 1983, p. 56.

Self-evident

That which is intuitively true, generally referring to the principles of logic and axioms of mathematics whose truth cannot be doubted and which do not require a proof. A proposition is self-evident if its truth can be derived from the meaning of the terms it includes, so that anyone who knows the meaning of the words knows that the proposition is true. Such a proposition must be analytic. Being self-evident is generally used as a synonym for *a priori*. But the discovery of logical paradoxes shows that faith in self-evidence of logical and mathematical axioms is not secure. Self-evidence is not the same as being obvious, for a thing might be obvious, but not true. On the other hand, a truth can be self-evident without being immediately obvious. Reasoning may still be required in order to grasp it.

"In calling anything self-evident we mean not that it is evident without need for understanding, but that we need consider nothing but the terms of the judgement, to see its necessity." —Joseph, *An Introduction to Logic*, 1916, p. 193.

Self-fulfilment

Also called self-realisation, fulfilment or actualisation of one's best capacities or potentialities. The capacity or potentiality must be defined to be good for a person as a rational being, and the fulfilment concerned must be linked with achievement. Self-fulfilment has been taken by many ethical systems to be the highest good, although these systems might differ over what is the best potentiality to realise. For Aristotle, the potentiality to realise is the human faculty of rationality, and in some texts he saw contemplation of eternal truth as the greatest happiness. Generally, the fulfilment or actualisation of one's best capacity is held to lead to of a successful life and the achievement of a true or real self.

"The goal of self management is often called self-fulfilment or self-actualisation." —Skinner, *About Behaviourism*, 1974, p. 178.

Self-identity, see personal identity

的原则。自决被视为人的基本道德权利,以及人类自由的基础。

在政治理论中,自决的权利使人可以形成自主的政治体制并生活于其下,而免受外界的非非法干涉。

“自决和外部决定之间的平衡或拉锯是道德经验呈现自己的一种形式。”——汉普舍:《道德和冲突》,1983年,第56页。

自明的

直观上为真的,一般涉及到逻辑原理和数学的公理,它们的真毋庸置疑且无需证明。一命题是自明的,如果它的真能够从它所含词语意义推出来,使得任何知道那些词语意义的人都知道该命题是真的。这样一个命题必定是分析的。自明的通常被用作是先验的同义语。但逻辑悖论的发现表明,相信逻辑和数学公理的自明性并不安全,自明的与明显的并不是一回事,因为一事物可以是明显的,却不是真的。另一方面,一真理能够是自明的却不是直接明显的,要掌握它可能仍然需要进行推理。

“当称任何东西为自明的时,我们并不是指它是显然的而无需领悟,而是指为了领悟其必然性,我们除了该判断的词项之外而无需考虑任何东西。”——约瑟福:《逻辑导论》,1916年,第193页。

自我实现

又称“自我完成”,指完成或实现一个人的最佳能力或潜力。这个能力或潜力必须被定义为有益于一个理性的人的东西,而且这个实现必须关乎成就。自我实现曾被许多伦理体系视为最高的善,尽管每一体系对于所要实现的最佳潜力是什么都有不同的理解。对于亚里士多德来说,要实现的潜力是人类的理性官能,而在某些论著中,他将思索永恒的真理视为最大的幸福。而人们通常认为,一个人的最佳能力的完成或实现会带来一个成功的生活并使人达到一个真的或现实的自我。

“自我管理的目标通常被称为自我完成或自我实现。”——斯金纳:《关于行为主义》,1974年,第178页。

自我等同

见“人格的同一性”条。

Self-interest

Interest in one's own well-being or in the advantages that one can gain for oneself. According to psychological egoism, everyone's actions are consciously or unconsciously motivated by the pursuit of self-interest. Even seemingly altruistic actions are held to be egoistic at their roots. Ethical egoism allows that actions can be motivated by factors other than self-interest, but advocates the pursuit of self-interest as morally leading to the best outcome. Because morality often seems to require sacrifice of one's own interests, moralists advocating the pursuit of self-interest try to harmonise moral considerations with self-interest. According to Adam Smith, the individual pursuit of self-interest promotes the common good through the mechanism of the invisible hand, which balances and reconciles interests in a more effective way than the commands of the state. Although extreme ethical egoism is widely rejected, many moral philosophers propose that we should pursue enlightened or rational self-interest, according to which altruism and benevolence are compatible with one's deeper self-interest over a longer term. They claim that people will satisfy their own interests through seeking the best interest of others.

"Since the time of Glaucon's challenge to Socrates, moral philosophers have attempted to show it is in our rational self-interest to act morally." —R. Nozick, *Philosophical Explanations*, 1981, p. 405.

Self-intimation

The truth of a self-intimating statement entails that it is known by someone. If there are any true self-intimating statements, they could exist either without further implications or as the foundation of a more extensive system of knowledge. Some philosophers hold that statements about some of my own mental states, such as my pain, are self-intimating because their truth entails that I know them to be true. Self-intimation is therefore offered as one major ground for our alleged first person authority.

"Philosophers have not distinguished carefully between incorrigibility and another supposed property of statements of a closely similar and related kind, self-intimation. By this I mean a statement's truth entailing its being known." —Anthony Quinton, *The Nature of Things*, 1973, p. 147.

Self-love

The desire to maximise one's own well-being. Aristotle distinguished two types of self-love. The noble type seeks to satisfy the rational part of one's soul by pursuing virtue. The base type seeks to satisfy the appetitive part of one's soul. The British philosopher Joseph Butler also drew a distinction between two kinds of self-love. Cool self-love, which is long-term, deep-seated and compatible with benevolent ac-

自我利益

关心自己的幸福或自己能得到的利益。根据心理学的利己主义,每个人的行为都自觉地或不自觉地受对自我利益的追求所驱使。即使看上去是利他主义的行为也被认为从根本上讲是利己的。伦理学的利己主义承认行为可以由不是私利的因素所驱使,但提倡在道德上导致最好结果的对自我利益的追求。由于道德似乎常常要求牺牲一个人的自我利益,倡导追求自我利益的道德学家便试图将道德的考虑与自我利益二者协调起来。在A. 斯密看来,通过看不见的手的机制,个人对自我利益的追求会促进共同利益,这一机制平衡和调解利益的方式比国家命令更有效。虽然极端的道德利己主义遭到普遍的反,很多道德哲学家仍提出我们应当追求开明的或合理的私利,按照这一主张,利他主义和慈善是与人长期的、深层的自我利益不一致的。他们声称,人们通过寻求他人最大利益将会满足他们自己的利益。

"从格劳孔非难苏格拉底那时起,道德哲学家一直试图表明道德的行为就在我们合理的自我利益之中。"——诺齐克:《哲学说明》,1981年,第405页。

自我告知

由一个自我告知的陈述为真可以推定它为某人所知。如果有任何为真的自我告知陈述,那么它们的存在或者没有另外的含意,或者是作为一个范围更为广泛的知识体系的基础。有的哲学家认为,关于我自己的像疼痛这样的心的状态的陈述是自我告知的,因为由其为真可以推定我知其为真。自我告知因此被作为我们所谓的第一人称权威的主要基础。

"哲学家没有仔细区分不可纠正和关于另一极为相似而密切相关的陈述的另一假定特性:自我告知。我用这个词汇来指一个陈述之为真推定其被知。"——奎因顿:《事物之本性》,1973年,第147页。

自爱

把个人幸福最大化的要求。亚里士多德区分了两种类型的自爱。崇高型通过追求美德而寻求对人的灵魂的理性部分的满足。基本型追求对人的灵魂的欲望部分的满足。英国哲学家J. 巴特勒也在两种类型的自爱之间做了区分。冷静的自爱是长期的和根深蒂固的,是与仁慈的行为相一致的,与它相对应的自爱则是肉欲

tions is contrasted with self love as sensual selfishness. Rousseau distinguished between *amour de soi* and *amour-propre*, but both can be translated as self-love. *Amour de soi* is the desire of a person in the state of nature to preserve himself, while *amour-propre* presupposes a comparison between oneself and others in civil society. It aims to achieve superiority over others and is the source of our desires and motivations.

"Conscience and self-love, if we understand our true happiness, always lead us the same way." — Butler, *Fifteen Sermons*, 1726, no. iii.

Self-ownership

The central libertarian principle that each person is the rightful owner of his own person and powers. Each person is therefore free to use these powers as he wishes, as long as he does not direct them to harm others. Other individuals and groups cannot restrict one's freedom without one's consent, and one may not use one's powers to force anyone else to supply products or services. Self-ownership is moral sovereignty, similar to human autonomy. This idea is proposed by Nozick in his influential book *Anarchy, State and Utopia*. It prohibits treating a person as a mere means rather than as a being of ultimate value and also prohibits reducing a person, in any particular, to the condition of a slave. A consequence of this view is that the action of the state to redistribute wealth in favour of badly off people violates the rights of individuals over themselves and represents a form of partial enslavement. These views are controversial, and other philosophers seek to reject the notion of self ownership or to show that it is compatible with concerns excluded by Nozick's argument.

"The libertarian principle of self-ownership says that each person enjoys, over herself and her powers, full and exclusive rights of control and use, and therefore owes no service or product to anyone else that she has not contracted to supply." —Cohen, *Self-Ownership, Freedom and Equality*, 1995, p. 12.

Self-predication, see third man argument

Self-presenting

A term introduced by Meinong for the capacity of mental states to present themselves directly to thought. Chisholm used this notion as a source of certainty. For him, a self-presenting state is self-justifying. A proposition is self-presenting if it constitutes its own justification. Certain first-person intentional mental states, such as believing, thinking and feeling, are justified by the fact that to be in these states is to be aware of being in them. Hence these mental states are

方面的自私。卢梭对 *amour de soi* 和 *amour-propre* 做了区分,两者都可译为“自爱”。*Amour de soi* 是自然状态下一个人保护自己的那种要求,而 *amour-propre* 则是以市民社会中自己与他人的比较为前提的。后者的目的是获取对他人的优势,它是我们的要求和动机的根源。

“如果我们懂得我们的真正幸福的话,良心和自爱总能引导我们走上同一路。”——巴勒特:《十五篇宣讲》,1726年,第三篇。

自我所有

自由主义的核心原则,即每个人都是其自身及其权力的合法所有者。因此,每个人都可依自己的意志自由运用这些权力,只要他不用这些权力去伤害别人。未经一个人同意,其他人和集团不得限制他的自由,一个人不可以运用自己的权力强迫其他任何人提供产品和服务。自我所有是道德主权,类似人的自律。这一思想是由诺齐克在他的颇有影响的著作《无政府状态、国家与乌托邦》一书中提出的。它禁止把人仅仅看做工具而不是看做具有终极价值的存在物,它还禁止在任何特殊情况下把人降至奴隶的境况。这一观点的一个结论是,有利于穷人的对财富再分配的国家行为,侵犯了个人对他们自身拥有的权利,并体现了一种不公平的奴役形式。这一观点是有争议的,其他哲学家力图拒绝自我所有的概念,或表明它是与为诺齐克所排斥的利害关系一致的。

“自由主义的自我所有原则提出,每个人都享有对她本人和她的权力的充分而惟一的控制和使用权利,因此,如果她没有与他人签订提供产品和服务的合同,她没有必要向他们提供这些东西。”——柯亨:《自我所有、自由和平等》,1995年,第12页。

自我主谓

见“第三人论证”条。

自我呈现

迈农所引进的术语,指心的状态直接向思维呈现其自身的能力。齐硕姆以它作为确定性的根源。在他看来,自我呈现意味着自明。一个命题如果构成了它的辩明,它就是自我呈现的。某些第一人称的意向状态,像相信、思维、感觉等等,是由这样的事实来辩护的:处于这些状态中就是意识到处于这些状态。因此这些心的状态是自我呈现的。当一个像“我在思想”这样的

self-presenting. When a proposition such as "I am thinking" is true for a person S at time t, S is justified in believing it at t. This proposition is self-presenting because it is evident to S even though the only things that make the proposition evident to S are things that entail it. But it is a matter of controversy whether self-presenting or evidence is enough for justification.

"H is self-presenting for S at t = def h is true at t; and necessarily, if h is true at t, then h is evident for S at t." — Chisholm, *Theory of Knowledge*, 1977, p. 22.

Self-realisation, another expression for self-fulfilment

Self-reference

The phenomenon whereby a sentence refers to itself, and hence leads to paradox. For example, a person says, "I am lying". If what he says is true, then he is lying and it is false. If what he says is false, then he is not lying and it is true. Russell devised the theory of types in order to rule out this kind of paradox. According to Russell's theory, we need to distinguish first-order sentences which represent objects, and second-order sentences which concern first-order sentences rather than objects. There have been other attempts to deal with this and other paradoxes involving self-reference.

"It is true that self-reference is a general feature of logically paradoxical utterances and if it is ruled out as senseless they cannot be formulated." — A. Quinton, *The Nature of Things*, 1973, p. 151.

Self-regarding

J. S. Mill drew a distinction between self-regarding actions, which involve only one's own interests, and other-regarding actions, which affect the interests of other people or of the community. Self-regarding actions are private and should be immune from interference by society. Other-regarding actions, on the other hand, are the stuff of morality and of social regulation. There is also a distinction between self-regarding virtues such as prudence, fortitude, elegance and other-regarding virtues such as generosity and consideration. Contemporary virtue ethics has criticised modern ethical theories for limiting their concern to other-regarding actions or virtues while ignoring self-regarding actions and virtues. The distinction between self-regarding and other-regarding actions or virtues is not always clear cut, and some actions or virtues can be both self-regarding and other-regarding in different perspectives.

"I am the last person to undervalue the self-regarding virtues; they are only second in importance, if even second, to the social." — Mill, *On Liberty*, IV.

命题对于一个人 S 在时间 t 为真时, S 就被辩护为在时间 t 相信它。这个命题是自我呈现的,因为它对于 S 是明显的,尽管使这一命题对于 S 明显的惟一的東西就是那个推定它的東西。但关于自我呈现或明显性对于辩明是否充分的问题还存在争议。

"H 在时刻 t 对于 S 是自我呈现的在定义上等同于 h 在时刻 t 为真;而且必然地,如果 h 在时刻 t 为真,那么 h 在时刻 t 对于 S 是明显的。"——齐硕姆:《知识论》,1977 年,第 22 页。

自我完成

“自我实现”的别名。

自我指称

一个句子指称自己因而产生悖论的现象。例如,一个人说:“我在撒谎。”如果他所说为真,则他在撒谎且此句为假。如果他所说为假,则他不在撒谎而此句为真。罗素设计出类型论以清除这种悖论。根据罗素的理论,我们需要区分表征对象的一阶语句和与一阶语句而不是对象有关的二阶语句,还曾有其他尝试来处理这种以及其他涉及自我指称的悖论。

“自我指称确实是在逻辑上悖谬的话语的一个普遍特征,而如果它们被作为无意义的东西而排除,它们就不能被系统地阐述。”——奎因顿:《事物之本性》,1973 年,第 151 页。

自我相关

J. S. 密尔区分了自我相关活动和他人相关活动。前者只涉及一个人自己的利益,而后者则影响他人或社会的利益。自我相关活动是私人的,因而应当不受社会的干预。而他人相关活动,则是道德和社会规则的东西。还存在像谨慎、坚忍、优雅这样的自我相关德性与慷慨、体贴这样的他人相关德性的区分。当代德性伦理学批评现代伦理学理论只关心他人相关活动或德性而忽视自我相关活动和德性。自我相关和他人相关活动或德性之间的区分并不总是清晰明确的,因为有的活动或德性从不同的角度看既是自我相关的又是他人相关的。

“我是轻视自我相关德性的最后一人;它们较之社会德性只是第二重要的,如果它们可以被看做是第二重要的话。”——密尔:《论自由》,IV。

Semantic ambiguity

Sometimes, different senses or references are associated with a single word, and it is not clear in the given context which is meant. The ambiguity of this sort arises from the multiplicity of senses of a word and is called lexical or semantic ambiguity. For example, the statement "I will wait for you at the bank in an hour", is ambiguous because the word "bank" can be understood either as a financial institution or as a place at the riverside.

"A constituent C is semantically ambiguous just in case the set of readings assigned to C contains two or more members." —Katz, *Semantic Theory*, 1972, p. 5.

Semantic anti-realism, see anti-realism

Semantic ascent

A term introduced by Quine for the shift in which the language we use to refer to the world becomes something we talk about in its own right. It is a shift from questions about objects to questions about words. For example, we can move from the proposition "Shanghai is a city" to the proposition "'Shanghai' is a name ascribed to a city", or from the proposition "Socrates is wise" to the proposition "'Socrates is wise' is true". This is actually a change from what Carnap called the material mode of speech to the formal mode. The shift is an ascent because at the new level expressions deal with the semantic properties of words or sentences in a language and thus become a higher meta-language. This strategy tends to reduce all questions of philosophy to questions about language.

"The strategy of semantic ascent is that it carries the discussion into a domain where both parties are better agreed on the objects (viz. words) and on the main terms concerning them." —Quine, *Word and Object*, 1960, p. 272.

Semantic holism

Also called meaning holism, the view that meaning is holistic rather than atomistic. The unit of meaning is not the word or the sentence, but rather the theory or language of which the word or sentence is a component. The meaning of an expression lies in its relations with other expressions of the language in which it is embedded. It is nonsense to speak of a linguistic component abstracted from the linguistic whole to which it belongs. It might be divided into content holism, in which the meaning or content of a sentence is determined by the meanings of all the other sentences in the language, and translation holism which claims that a translation of a sentence can preserve its meaning only if its associative or inferential relations with other sentences in the home language are preserved in the targeted language. The position is derived from epistemic holism, which claims that whole theo-

语义的模糊性

有时, 单个的词可能有着不同的意义或指称, 而在给定的语境中它究竟意味着什么也并不清楚。这种模糊性出自词义的多样性, 被称作词义的或语义的模糊性。例如, “我将于一个小时内**在 bank 等你**”, 这个陈述是模糊的, 因为“bank”这个词既可以理解为“银行”, 也可以理解为“河边”。

“一个组成部分 C 在语义上是模糊的, 这是因为在对 C 的各种理解中包括了两个或更多的成分。”——卡兹:《语义学理论》, 1972 年, 第 5 页。

语义学的反实在论

见“反实在论”条。

语义上行

奎因引入的词, 是指我们用于指称世界的语言转变为我们谈论的话题, 即从关于对象的问题转变为关于语词的问题。例如, 我们可以把“上海是一个城市”这个命题变为“‘上海’是一个城市的名称”, 或把命题“苏格拉底聪明”变为命题“‘苏格拉底聪明’是真的”。这实际上是像卡尔纳普所说的从“实质的方式”变为“形式的方式”。这个转变之所以被称作“上行”, 是因为语言表达式是在新的水平上讨论语言中句子或语词的语义属性, 因而成为更高一级的“元语言”。这种方法是试图把一切哲学问题都还原为关于语言的问题。

“语义上行的方法是, 它把讨论引入这样一个领域, 即讨论双方都在对象(即语词)以及关于它们的主要用语上达成了一致。”——奎因:《词与物》, 1960 年, 第 272 页。

语义整体论

也称作“意义整体论”, 这种观点认为, 意义是整体的, 而不是原子的。意义的单位不是语词或句子, 而是构成语词或句子的理论或语言。表达式的意义在于它与自身所在的语言中其他表达式的关系。脱离自身所属的语言整体抽象地谈论语言的成分, 是毫无意义的。这可以分为“内容的整体论”和“翻译的整体论”。根据前者观点, 一个句子的意义或内容是由这个语言中其他所有句子的意义决定的, 而后者认为, 对一个句子的翻译, 只有当这个翻译与母语中其他句子的连接或推论关系在对象语言中得到保存时, 它才能保存原句的意义。这种立场来自“认识的整体论”, 这种整体论声称, 只有整个理论才是确证的单位。语义整体论的主要倡导者包括了奎因、戴维森、普特南等人。这种观点引起

ries are units of confirmation. The leading advocates of semantic holism include Quine, Davidson and Putnam. The view is highly controversial, in part because we use sentences not theories to say things. Semantic holism does not say much about the meaning of any particular sentence.

"Semantic holism is a doctrine about the metaphysically necessary conditions for something to have meaning or content." — Fodor and Lepore, *Holism*, 1992, p. 1.

Semantic meaning, another term for descriptive meaning

Semantic paradox

Semantic paradoxes are represented by the Liar paradox, Berry's paradox, Richard's paradox and Grelling's paradox. These paradoxes cannot be explained in logical terms alone. They contain some empirical reference to thought, language or symbolism and arise as a result of a some peculiarity of semantic concepts such as truth, falsity and definability. Their occurrence shows that there must be flaws in our thought and language. Hence, semantic paradoxes are distinguished from logical paradoxes, which indicate that there must be something wrong with our logic and mathematics. The distinction between semantic and logical paradoxes was made by Ramsey, although he himself calls semantic paradoxes "epistemic paradoxes". The general approach to avoiding semantic paradoxes requires the distinction between object language and meta-language rather than appealing to Russell's ramified theory of types.

"It is our choice whether to keep our old familiar semantic concepts, and continue to live with the semantic paradoxes; or whether to search for a brave new world of stability, from which the savagery of contradiction is banished." — Read, *Thinking about Logic*, 1994, p. 150.

Semantic theory of truth

A theory developed by Tarski and originally intended to solve semantic paradoxes, especially the liar paradox. It suggests that a truth definition cannot be adequately provided in the object language, that is in the language that describes the world and does not contain the truth-predicate. It has to be formulated in a metalanguage, that is the language which talks about the object language. According to this theory, " 'p' is true if and only if p", where "p" is the name of the sentence and P is the sentence itself. For example, "Snow is white" is true if and only if snow is white. A sentence is true in a given language if its elements are so combined as to state what is the case. The theory has two parts: adequacy conditions on definitions of truth and a definition of truth in terms of satisfaction. Tarski thought that this complicated theory is only suitable for certain artificial and formal languages but not for natural languages. Donald Davidson has developed a

了极大的争议,这部分是因为我们是用句子而不是用理论去说事情。语义整体论对单个句子的意义并没有说出更多的东西。

"语义整体论是一种关于某物具有意义或内容的形而上学必然条件的主张。"——福多和拉普:《整体论》,1992年,第1页。

语意学意义

"描述意义"的另一个名称。

语义悖论

语义悖论以说谎者悖论、贝里悖论、理查德悖论、格里林悖论为代表。这些悖论不能仅由逻辑术语来解释。它们包含对思想、语言或符号系统的经验关联,并作为某些如真、假和可定义性等特殊的语义学概念的结果而出现。它们的发生表明在我们的思想和语言中必定存在缺陷。因此,语义悖论不同于逻辑悖论,后者表明在我们的逻辑和数学中必定出了某些差错。语义悖论和逻辑悖论之间的区别是由拉姆塞作出的,虽然他把语义悖论称为"认识的悖论"。避免语义悖论的一般方法需要区别对象语言和元语言,而不是诉诸于罗素的分支类型论。

"或者保持我们原本熟悉的语义学概念,并且与语义悖论一起继续存在;或者研究稳定性的美好新世界,从而抛弃矛盾的原始状态,这就是我们的选择。"——里德:《关于逻辑的思维》,1994年,第150页。

真理语义论

由塔斯基所发展的一种理论,本意是用来解决语义悖论特别是说谎者悖论的。它认为,在对象语言即描述世界且并不包含真谓词的语言内,不能提供适当的真定义,后者只能在元语言即谈论对象语言的语言内才能表述出来。根据这种理论," 'p' 是真的,当且仅当 p",这里 "p" 是该语句的名称, p 则是该语句本身。例如, "雪是白的" 是真的,当且仅当雪是白的。一语句在一给定的语言内真,如果它的元素是如此结合的以致于陈述了实际的情形。这一理论有两部分:真定义的"实质充分性"条件,以及根据"满足"作出的真定义。塔斯基认为,这一复杂理论只适用于某些人工的形式语言,而不适用于自然语言。D. 戴维森在这一理论的基础上发展了关于意义的真值条件探索,他试图把一特定语言内的语句与其"真值条件"关联起来。

truth-conditional approach to meaning on the basis of this theory by relating sentences in a particular language with their truth conditions. This theory has become very influential in contemporary philosophy.

"Tarski's so-called semantical theory of truth is essentially the view that 'S is true' assigns a property—truth—to the sentence named by 'S'." — Danto, *Analytical Philosophy of Knowledge*, 1963, p. 249.

Semantically closed language

A language containing not only its expected stock of expressions, but also the names of these expressions and semantic terms like "true" that refer to the sentences of the language. According to Tarski, the source of the semantic paradoxes lies in the self-reference of the sentences expressing the paradoxes. He held that the possibility of such self-reference belongs to semantically closed languages. Such a language has a tacit assumption that all sentences which determine the use of "true" can be asserted in the language itself. To avoid this fault, Tarski distinguished between an object language and a metalanguage.

"We have implicitly assumed that the language in which antinomy is constructed contains, in addition to its expressions, also the names of these expressions, as well as semantic terms such as the term 'true' referring to sentences of this language. A language with these properties will be called 'semantically closed'." — Tarski, *Logic, Semantics, and Metamathematics*, 1956.

Semantics

[from Greek: *sema*, sign] A term that pertains to the meaning of a sign or set of symbols. Semantics is a discipline dealing with the meaning of linguistics signs or symbols, that is, the words, expressions and sentences of a language. It belongs to semiotics, the study of signs, and contrasts with the other two branches of semiotics, that is syntax or syntactics (the study of logical or grammatical form) and pragmatics (the study of the contribution of contextual factors to the meaning of what is said). In semantics, the language whose meaning is discussed is called the object language, while the language which is used to talk about the object language is the metalanguage. For example, in the sentence " 'Snow is white' is true", "snow is white" is in the object language, while the whole sentence is in the metalanguage.

Formal semantics discusses the meaning of linguistic signs by appeal to formal and logic method. Its main representative is truth-conditional semantics, developed by Tarski and Davidson on the basis of Frege's logic, which ascribes semantic values to the basic symbols of the language, takes them as elements of structure, and then derives the semantic values of complex expressions from these elements in accordance with formation rules. In truth-conditional semantics,

这一理论在当代哲学中非常有影响。

"塔斯基所谓的语义真理论实质上是这一观点,即'S是真的'把真这一属性指派给由'S'所命名的那个语句。"——丹托:《分析的知识哲学》,1963年,第249页。

语义封闭的语言

指不仅包括它希望保存的表达式,而且包含这些表达式的名称,以及与它的语句有关的像“真的”这样的语义词项的语言。根据塔斯基的看法,语义悖论的根源在于表达悖论的语句的自我指称。他认为,这种自我指称的可能性属于语义封闭的语言。这种语言有一个暗含的假定:确定“真的”用法的所有语句都能在该语言本身内得到断定。为了避免这一缺陷,塔斯基作出了“对象语言”和“元语言”的区分。

"我们已暗中假定,其中构造出悖论的语言除了包含它的表达式之外,还包含这些表达式的名称,以及涉及该语言内的语句的像'真的'之类的语义词项。具有这些要素的语言将称作'语义封闭的'。"——塔斯基:《逻辑、语义学与元数学》,1956年。

语义学

[源自希腊文 *sema*, 意味“记号”] 这个词包含着关于一个记号或一套符号的意义。语义学是关于语言记号或符号,即语言的语词、表达式和句子的意义的一门学科。它属于“符号学”,即对记号的研究,与之相对的符号学另外两个分支是句法或句法学(研究逻辑形式或语法形式)和语用学(研究语境因素对语言使用者所说内容之意义的贡献)。在语义学中,被讨论其意义的语言称作“对象语言”,而用于谈论对象语言的 language 就是“元语言”。例如,在“‘雪是白的’是真的”这个句子中,“雪是白的”用的是对象语言,而这整个句子则用的是元语言。

形式语义学借助形式的或逻辑的方法讨论语言记号的意义。其主要代表是真值条件语义学,这是由塔斯基和戴维森基于弗雷格的逻辑发展起来的,它把语义值赋予语言的基本符号,把它们看做是结构的成分,并根据构成规则从这些成分中派生出复合表达式的语义值。根据真值条件语义学,每个句子的意义都是由其从句的真值条件决定的。

语义学与语言哲学密切相关,因为两者都使用了相同的核心概念,诸如“指称”、“论断”、

the meaning of every sentence is determined by the truth-conditions of its component sentences.

Semantics is closely related to the philosophy of language, for both employ the same central notions such as reference, predication, meaning, synonymy and truth. These key notions and their relations form the subject-matter of meta-semantics which can be treated as a part of the philosophy of language.

“Semantics is concerned with linguistic expressions in two respects: reference and meaning.” — Quine, *From Stimulus to Science*, 1995, p. 59.

Seminal reason, English translation of *rationes seminales*

Semiology, an alternative name for semiotics

Semiotics

[from Greek: *seme*, sign] The general study of signs, also called theory of signs or, by the Swiss linguist Saussure, semiology. Charles Morris takes semiotics as a study of linguistic signs, that is words, expressions and sentences. In his *Foundations of the theory of Signs*, he divides it into three subdisciplines: syntax, which deals with relations between linguistic signs or sentential structures; semantics which deals with relations between linguistic signs and the objects they are talking about; and pragmatics which deals with relations between linguistic signs and the ways they are used. More broadly, semiology can be viewed as a general inquiry into every sign, both verbal and non-verbal, both human and natural. The extension of “sign” is not confined to linguistic symbols. Peirce defined “sign” as, “something that stands for something in some respect or capacity”. This broad sense is preferred by French structuralists.

“The entire theory of an object language is called the semiotic of that language; this semiotic is formulated in the mental language” — Carnap, *Introduction to Symbolic Logic and its Applications*, 1958, p. 164.

Sensa

A term (singular: *sensum*) introduced by Broad to refer to things that are directly perceived, such as colour patches, sounds, shapes, smells and tactile feelings. As objects of perception, they are contrasted to material or physical objects. *Sensa* are usually taken to be private and known directly with a special certainty. Material objects are public and known indirectly with less certainty. The existence of *sensa* is mind-dependent. For Broad, they cannot exist independent of acts of sensing. They are objective constituents of sensations and are a part of a sensible field. Many names have be-

“意义”、“同义”、“真理”等等。这些关键概念以及它们的关系，构成了可以看做语言哲学组成部分的元语义学的主题。

“语义学关心语言表达式的两个方面：即指称和意义。”——奎因：《从刺激到科学》，1995年，第59页。

种源理性

对“种源理论 (*rationes seminales*)”的英语翻译。

记号学

“符号学”的另一个名称。

符号学

[源自希腊文 *seme* (记号)] 指对记号的一般研究，也称作“记号理论”，瑞士的语言学家索绪尔把它称作“记号学”。C. 莫里斯把它看做是对语言记号的研究，即语词、表达式和句子，所以他在《指号论基础》中把它分为三种子学科：讨论语言记号或句子结构之间关系的句法学；讨论语言记号与它们所谈论的对象之间关系的语义学；讨论语言记号与使用它们的方式之间关系的语用学。宽泛地说，记号学可以看做是对语言的或非语言的、人类的或自然的每种记号的一般性研究。“记号”一词的外延并不限于语言符号。皮尔士把“记号”定义为“在某些方面或能力上代表某种东西的某种东西”。这种宽泛的意义受到了法国结构主义的欢迎。

“关于对象语言的整个理论被称作这种语言的符号学；这种符号学是用心的语言构造起来的。”——卡尔纳普：《符号逻辑及其应用导论》，1958年，第164页。

感觉材料

布劳德提出的术语(单数为 *sensum*)，指直接被感知到的东西，诸如色斑、声音、形状、气味以及触觉。作为知觉的对象，它们与物质的或物理的对象不同，感觉材料一般被当做私人的，以特别的确定性直接为人所知。物质对象是公共的，以较小的确定性间接地为人所知。感觉材料的存在有赖于心灵。布劳德认为，它们不能独立于感知行动而独立存在。它们是感官知觉的客观构成成分，是可感域的一部分。对于布劳德所称为感觉材料的东西，人们给出了许多名称，

ing given to what Broad calls *sensa*, the commonest being sensations and sense-data. Others terms include ideas of sense (Locke), sensible qualities (Berkeley), impressions (Hume) and sense-contents (Ayer).

"Whenever I truly judge that X appears to me to have the sensible quality Q, what happens is that I am directly aware of a certain object Y, which (a) really does have the quality Q, and (b) stands in some particularly intimate relation, yet to be determined, to X. Such objects as Y I am going to call *sensa*." Broad, *Scientific Thought*, 1969, p. 240.

Sensation

[From Latin *sensatus*, gifted with sense] The mental state aroused in a subject in perceiving, a primitive level of mental existence. When we see something, visual sensations are produced in us; when we hear something, auditory sensations are produced. There are also sensations of taste, smell and touch. Sensations arise not only through senses, but also through the body, such as the bodily sensations of cold, pain and hunger. Sensations are generally distinguished from experiences and perceptions, but are part of these more complex states, which involve such additional capacities as judgement and inference and are subject to error. Sensations must be owned by some subject. However, it is generally believed that sensations are independent of the conceptual capacities of the subject and hence can also be possessed by animals and young children. A major question is whether sensations are purely private or can be known by others. This is related to the problem of private language and the problem of alleged first-person authority concerning accounts of what we experience. Another major problem concerns the relation between sensations and sense-data. Some philosophers identify them, which leads to the question of whether what we perceive directly are sensations or external objects. Others distinguish them by claiming that while sensations are the subjective aspect of perception as the experience itself, sense-data are the objects of experience or perception.

"Our senses, conversant about particular sensible objects, do convey into the mind several distinct perceptions of things, according to those various ways wherein those objects do affect them; ... This great source of most of the *Ideas* we have, depending wholly upon our senses, and derived by them to the understanding, I call sensation." — Locke, *An Essay Concerning Human Understanding*, II, 1, 3.

Sensationalism

A view which claims that sensations are the only sources of knowledge; that all ideas can be traced to an origin in sensation; that all statements can be reduced to statements concerning the relations between sensations and that nothing can

最普遍的有感官知觉和感觉材料。其他名称包括感觉观念(洛克)、可感性质(巴克莱)、印象(休谟)以及感觉内容(艾耶尔)。

"每当我正确地判断 X 对我显现为具有可感性质 Q 时,所发生的事情是我直接知道某个对象 Y, 它 (a) 确实具有性质 Q, 并且 (b) 处于与 X 的(尚待确定的)某种特别密切的关系中。我打算把像 Y 这样的对象称为感觉材料。"——布劳德:《科学思想》,1969 年,第 240 页。

感觉

[源自拉丁文: *sensatus*, 意为“感官得到的东西”] 一个主体在感知中唤起的心的状态,一种心的存在的原初层次。当我们看某物时,视觉在我们心中产生;当我们听某种东西时,听觉产生了。也有味、嗅及触摸等感觉。感觉不仅通过感官产生,而且通过身体,诸如冷、痛、饥饿等等身体的感觉。感觉一般与经验和知觉相区分,但却是这些更为复杂状态的内容,后者包括了诸如判断和推理这种附加的能力,而且容易出现错误。感觉必定是属于某个主体的。不过,一般认为,感觉是独立于主体的概念能力的,因此,它也为动物和幼儿所具有。关于感觉的另一个主要问题是,它是纯粹私有的还是能为他人知道的。与这相关的是私人语言问题和对我们的经验叙述的第一人称的权威问题。另一个主要问题是关于感觉与感觉材料的关系。一些哲学家把这两者等同起来,这导致了是否我们直接感知到的是感觉或外部对象的问题。另有人通过如下主张而区分它们:感觉是作为经验自身的感知的主观方面,而感觉材料则是经验或知觉对象。

"我们的感官,接触具体的可感觉的对象,依据对象影响感知的不同的方式,把对于事物的这些不同的感知传送至心灵,……我们所有的多数观念的这个最大来源,完全依赖于我们的感官,源自于它们而进入理解,我称为‘感觉’。"——洛克:《人类理智论》,第二卷,第 1 章,3。

感觉主义

指这样一种观点,主张感觉是知识的唯一源泉;所有的观念都可在感觉中找到根源;所有的陈述都可以还原为关于感觉之间关系的陈述,除了感觉之外,别无可说;感觉也是证实所

be said beyond sensations; and that sensations are also the ultimate criteria of verification of all knowledge. In all, sensationalism can be summarised into one sentence: "the world is my sensations". This view may be traced to Protagoras in ancient Greece, and is classically derived from the British empiricist tradition from the seventeenth to the nineteenth centuries. In this century, its major representation is Ernst Mach. Sensationalism is opposed to rationalism and the theory of innate ideas. A sensationalist theory of mind believes that all mental events can be analysed in terms of having of sensations. Sensationalism also draws a distinction between perception and sensation, according to which perception, unlike sensation, involves judgement and is open to error. However, its notion of sensation is very ambiguous, including not only sensible qualities, bodily affections, but also desires, emotions and the feelings such as anger and jealousy. It is difficult to see how science could be derived from such an ambiguous notion of sensation or from such an austere basis.

"Sensationalism is the theory that all ideas or concepts are derived from sense perception." --Arthur Pap, *Elements of Analytic Philosophy*, 1949, p. 92.

Sense and reference

For Frege, every complete sign expresses a sense (German: *sinn*) and designates something we call its reference (German: *Bedeutung*). Frege introduced this distinction by consideration of the statement "The morning star is identical with the evening star". While the two phrases "the morning star" and "the evening star" are designations of the same object, that is the planet Venus, they obviously have different senses. Hence the sentence "The morning star is the morning star" provides nothing new, while the sentence "the morning star is the evening star" is informative.

This distinction is closely related to the distinction between connotation and denotation and between intension and extension. It shows that the meaning or sense of an expression and its reference do not always vary together, a point which had considerably influenced the subsequent development of analytic philosophy. For Frege, a basic sentence consists of a referring expression as subject and a predicate as function or concept. Frege called the sense or meaning of a sentence, which is composed of the senses of the components of the sentence, a thought and said that the reference of a sentence is its truth value. Russell rejected Frege's two basic notions of sense and reference and proposed to deal with meaning using a single basic notion of standing for.

"A proper name (word, sign, sign combination, expression) expresses its sense, stands for or designates its reference. By means of a sign we express its sense and designate its reference." Frege, "On Sense and Reference", in his *Philosophical Writings* (ed. Geach and Black), 1966, p. 61.

有知识的最终标准。总而言之,感觉主义可以归结为一句话:"世界是我的感觉。"这种观点可以追溯到古希腊的普罗泰戈拉,按经典的方式说,得自于从17世纪到19世纪的英国经验主义传统。在本世纪,其主要代表为E. 马赫。感觉主义与理性主义及先天观念论相反。关于心的感觉主义理论认为,所有心的事件都可以用具有感觉来分析。感觉主义还区分了知觉和感觉,据此,知觉与感觉不同,它涉及到判断,有可能出错。但是,它关于感觉的概念是相当含混不清的,不仅包括可感性质、肉体感情,而且包括诸如愤怒和妒忌之类的愿望、激情和感触。很难看出科学何以能够从如此含混不清的感觉概念中或如此简约的基础上产生出来。

"感觉主义是这样的理论,它认为一切观念或概念都得自于感官知觉。"——帕普:《分析哲学原理》,1949年,第92页。

含义和指称

在弗雷格看来,每一个完全的记号表达一个含义(德语: *sinn*),并指涉我们称为它的指称的某物(德语: *Bedeutung*)。弗雷格通过考虑"晨星等于暮星"这一陈述而引入了这一区分。尽管两个短语"晨星"和"暮星"指称同一对象即金星,它们显然有不同的含义。所以,语句"晨星是晨星"没有提供任何新东西,而语句"晨星是暮星"却是有信息的。

这一区分是与内包(connotation)和所指(denotation)以及内涵(intension)和外延(extension)的区分紧密相关的。它表明,表达式的意义(涵义)和它的指称并不总是同时变化的,这一看法对分析哲学后来的发展造成了相当大的影响。对弗雷格来说,基本语句由一指称表达式(作为主词)和一个谓词(作为"函项"或"概念")组成。弗雷格把语句的含义或意义叫做"思想",后者是由该语句的各构成要素的含义复合而成的,并且说语句的指称是真值。罗素拒绝弗雷格的含义和指称这两个基本概念,并提议用单独一个基本概念"代表"(standing for)来处理意义。

"专名(词、记号,记号组合,表达式)表达它的含义,代表或指涉它的指称。凭借一个记号,我们表达它的含义并指涉它的指称。"——弗雷格:《论含义和指称》,见他的《哲学文集》(吉奇和布莱克编),1966年,第61页。

Sense field, see visual field

Sense/force

An influential distinction in modern philosophical semantics. Each sentence can be divided into a descriptive content and a force-indicator. The sense or descriptive content is the state of affairs the sentence is describing, and its meaning. It is the bearer of a truth-value. The force is the assertive, interrogative, or imperative or other way in which the content is conveyed. Force has nothing to do with the truth or falsity of a sentence. Sentences with the same sense can occur with different forces, and a force can be attached to any given sense. This distinction is generally believed to be based on Frege's distinction between assertion (judgement) and thought (content). It is on this basis that Austin develops his "speech-act theory", for it is the force which determines what speech-act is performed by an utterance of a sentence. It is also the basis for the emotivist distinction between descriptive meaning and evaluative meaning. R. M. Hare's distinction between phrastics and neustics corresponds to it as well. Dummett makes use of this distinction to criticise Wittgenstein's theory that philosophy of language is an investigation of how language is used in particular language games. The same linguistic expression certainly has different forces in different games, but that does not mean that the expression does not have a persistent sense. It is because of that sense that we can learn language.

"Adopting Frege's terminology, we may call this ingredient of meaning the sense of the expression; ... Force, or, more properly, the indication of force, is the significance possessed by a linguistic element which serves to indicate which type of linguistic act is being performed." —Dummett, *The Logical Basis of Metaphysics*, 1991, p. 114.

Sense qualia

[from Latin *qualia* (singular *quale*), quality, nature, state] Both the qualities of sensations considered in abstraction, such as redness or sweetness, and the qualities sensed in association with specific objects such as the redness of a red car or the sweetness of a sweet fruit. For many empiricists, the physical object is an idealisation of sense qualia, from which the object directly derives its perceptual properties. In this latter sense, the concept of sense qualia is similar to that of sense-data. Attempts to explain relations between qualia and objects quickly become complex.

"It is of course possible to designate a sense-quale and ask how it is related to the physical object to which it corresponds." —Ayer, *Philosophy in the Twentieth Century*, 1982, p. 67.

感觉域

见“视域”条。

意义/力量

现代哲学语义学中的一种有影响的区分。每个句子都可以被分为描述的内容和力量的表征。意义或描述的内容是句子正在描述的事态及其意义,是真值条件的承担者。而力量则是传递这个内容的方式(陈述句、疑问句或祈使句或其他类似的东西)。力量与句子的真假无关。具有相同意义的句子可以用不同的力量出现,而一种力量可以被赋予任何给定的意义。这种区分通常被认为是基于弗雷格对断定(判断)和思想(内容)的区分。正是在这个基础上,奥斯汀提出了他的“言语行为理论”,因为正是这种力量决定了说出一个句子是否完成了言语行为。这同样是情感主义者区分描述意义与评价意义的基础。与之对应,R. M. 黑尔也区分了“内含”与“语调”。达米特用这种区分来批评维特根斯坦的理论,即认为语言哲学是研究如何在特殊的语言游戏中使用语言。相同的语言表达式在不同的游戏中肯定具有不同的力量,但这并不意味着,它不具有某种连贯的意义。正是由于这种意义,我们才能学习语言。

“采纳弗雷格的术语,我们可以把意义的这种成分称作表达式的意义;……力量,或更恰当地说,力量的表征是语言成分所拥有的意义,它用于表明正在履行的究竟是哪一类言语行为。”——达米特:《形而上学的逻辑基础》,1991年,第114页。

感觉性质

[源自拉丁文 *qualia* (单数为 *quale*), 意为“性质”、“本性”、“状态”]既是抽象地考虑的性质,例如红或甜,也是与特定对象相关而被感知的性质,如红色小汽车的红或甜水果的甜。对许多经验主义者来说,物理对象是感觉性质的理想化,对象从它们之中直接获得自己的知觉性质。在这后一种含义上,感觉性质的概念与感觉材料的概念近似。说明性质和对象之间关系的企图很快就变成了复杂问题。

“当然有可能指明感觉性质,并问它如何与它所对应的物理对象相联系。”——艾耶尔:《20世纪的哲学》,1982年,第67页。

Sense-contents

Ayer's term which he introduces to replace the notion of idea used by Locke and Berkeley. For Locke, ideas are related to a single unobservable underlying substratum, and Berkeley insists that they are necessarily mental. Arguing that both Locke and Berkeley were mistaken, Ayer considers that "sense-contents" is a neutral word which is neither physical nor mental, and refer to sense data provided by both outer and introspective sensations. Following Berkeley, however, Ayer believes that material things are constituted out of actual and possible occurrences of sense contents and can be defined in terms of them. He also suggests that it is misleading to say that sense-contents exists, because this carries the danger of treating them as if they were material things. Instead we should say that they occur.

"We define a sense-contents not as the object, but as a part of a sense-experience." — Ayer, *Language, Truth and Logic*, 1946, p. 122.

Sense-impression, another term for *sensa*

Senseless

[German: *sinnlos*] Senseless propositions are tautologies and contradictions. A tautology is unconditionally true (true whatever way the world is), and a contradiction is unconditionally false (false whatever way the world is). Senseless propositions should be distinguished from nonsense (German, *Unsinn*). Like nonsensical propositions, senseless propositions say nothing about the world and can be neither confirmed nor rejected by how things are in the world. They do not give pictures of reality. But unlike nonsensical propositions, they show the logical or structural properties of their components. Since they do not say truly or falsely that the world is such-and-such, as genuine contingent propositions do, they are senseless, but are not nonsense because they show the logical structure of language and the world and do not violate any principles of logical syntax.

"Tautologies and contradictions are senseless." — Wittgenstein, *Tractatus*, 4. 461.

Sensibilia

Russell's term for entities which are exactly like sense data, but with which one is not acquainted. Once sensibilia enter into the relation of acquaintance, they become sense-data. Russell uses the notion of sensibilia to replace the notion of matter or physical objects, which he construes as logical constructions out of sensibilia, although the existence of sensibilia themselves is a mere metaphysical hypothesis.

"I shall give the name sensibilia to those objects which have the same metaphysical and physical status as sense-data, without necessarily being data to any mind." — Russell,

感觉内容

艾耶尔提出的术语,用以代替洛克和巴克莱使用的“观念”这个概念。对洛克来说,观念与单一而不可观察的根本基质相联系,而巴克莱坚持它们必定是精神性的。艾耶尔争辩说,洛克和巴克莱都错了,他认为“感觉内容”是一个中性词,它既不是物理的,也不是精神的,指由外部和内省感觉提供的感觉材料。但艾耶尔和巴克莱一样,认为物质事物是由感觉内容实际和可能的出现构成的,并可以用它们来定义。他还认为,说感觉内容存在是误导人的,因为这具有将其当做物质事物的危险。我们倒是应该说它们发生。

“我们不把感觉内容定义为对象,而定义为感觉经验的一部分。”——艾耶尔:《语言、真理和逻辑》,1946年,第122页。

感觉印象

“感觉材料”的别名。

无意义的

[源自德文 *sinnlos*] 无意义的命题是重言式和矛盾式。重言式是无条件地真(不论世界如何均为真),而矛盾式则为无条件地假(不论世界如何均为假)。无意义的命题应与胡说(德文为 *Unsinn*) 相区别。无意义的命题和胡说命题一样,对于世界无所言说,既不能从世界上的事物是怎么回事中得到证实,也不能得到否定。它们没有给出实在的图像。但与胡说命题不同,它们显示了其组成部分的逻辑的或结构的特性。因为它们没有正确地或错误地说出世界是如此这般,就像真正的偶然命题所作的那样,因此它们是无意义的,但它们不是胡说,因为它们显示了语言和世界的逻辑结构,没有违反逻辑句法的原则。

“重言式和矛盾式是无意义的。”——维特根斯坦:《逻辑哲学论》,4.461。

可感物

罗素用来说明这种东西的术语,它们完全和感觉材料一样,但人们尚未对其有亲知。一旦可感物进入亲知关系,它们就成了感觉材料。罗素用可感物这概念来代替物质或物理对象的概念,把它们解释为可感物的逻辑结构,虽然可感物本身的存在只是一种形而上学的假设。

“我将把可感物这名称用于这样一些对象,它们具有和感觉材料一样的形而上学与物理学的地位,而并不必然是任何心灵的材料。”——罗素:《神秘主义和逻辑》,1918年,第148页。

Mysticism and Logic, 1918, p. 148.

Sensibilism. see sensibilia, phenomenalism

Sensibility

Kant took sensibility and understanding to be two fundamental and related capacities of the human mind. Objects are given to us through sensibility but thought by understanding. Sensibility is the capacity to have representations through being affected by objects, and operates in two ways. As outer sense, sensibility produces sensory states of things outside us; as inner sense, sensibility produces sensory states of our own representations. For Kant, sensibility is receptive but not passive, for there is a formal aspect as well as a material aspect. The forms of sensibility are space and time, which are *a priori* intuitions, not derived from the independent properties of objects as they are in themselves. Space and time set the order for matter, and hence matter received in sensibility is spatially and temporally organised. Kant intended to reconcile rationalism and empiricism by emphasising both the rational character and the receptive character of sensibility. Sensibility must be supplemented by understanding if experience is to be possible. Traditional metaphysics is wrong because it used the concepts of understanding without any corresponding evidence of sensibility.

"Sensibility is the faculty of intuition; (a) sense, faculty of intuition in the present; (b) imagination, faculty of intuition in the absence of the object." - Kant, *Lectures on Logic* (ed. by Young), 1992, p. 443.

Sensory illusion

The perception of external objects which leads to a false belief about the world. Different persons perceiving the same object will sometimes see it differently. In some cases this will result from different perspectives or conditions of perception but not produce false beliefs. The perceptions are sensory illusions if they produce or tend to produce false beliefs. The existence of sensory illusion is cited as a proof of the existence of sense-data which are different from physical objects. It is a challenge for naive or direct realism, which holds that we perceive nothing but the physical object itself.

"To suffer sensory illusion is to acquire a false belief or inclination to a false belief in particular propositions about the physical world by means of our senses." - Armstrong, *Perception and the Physical World*, 1961, p. 106.

Sentence

A grouping of words (symbols, signs) in any natural or artificial language. A sentence must be well-formed grammatically, but not all sentences are meaningful. A sentence may have different meanings, and the same sentence may be

见“现象主义”条。

感性

康德把感性和知性作为人类心灵具有两种相关的基本能力。通过感性,对象“给予”我们,再由知性来“思想”。感性是由于我们被对象所作用而感知表象的能力。它以两种方式运行:作为外感,感性产生了对我们之外事物的感觉状态;作为内感,感性产生了关于我们自身表象的感觉状态。对于康德来说,感性是接受性的,但不是被动的,因为存在着形式的方面以及质料的方面。感性形式是空间和时间,它们是先天的直观,而不是来源于对象的独立的性质,正像它们在自身中一样。空间和时间为质料安排秩序,因此在感性中所接受的任何质料已经在空间和时间上被组织起来。以这种方式,康德的意图在于通过强调理性的特点和感性接受性的特点而把唯理论和经验论协调起来。如果经验要成为可能,感性必须由知性来补充。传统形而上学之所以是错误的就是因为使用了没有相应的感性证据的知性概念。

“感性是直观的官能:(a)感知,当下的直观官能;(b)想像力,对象不在当场的直观官能。”——康德:《逻辑学讲义》(杨编辑),1992年,第443页。

感觉错觉

引起关于世界的错误信念的关于外部对象的知觉。知觉同一对象的不同人有时会以不同的方式来看这个对象。在有些情况下,这只是视角不同或知觉条件不同的结果,但并不产生错误的信念。如果知觉产生和倾向于产生错误信念,它们就是感觉错觉。感觉错觉的存在被引用作存在不同于物理对象的感觉材料的证据。这是对朴素实在论或直接实在论的挑战,后者认为我们所知觉到的只是物理对象本身。

“体验感觉错觉是通过我们的感官获得一个用关于物理世界的特定命题来表达的错误信念或一个错误信念的倾向。”——阿姆斯特朗:《知觉与物理世界》,1961年,第106页。

语句

任意自然语言或人工语言内词语(符号,记号)的组合。语句必须是语法上合式的,但并非所有语句都是有意义的。一语句可以有不同的意义,同一语句可以以多种方式使用。于是,在

used in a variety of ways. Thus, a sentence is distinguished in modern logic from a proposition or statement. A proposition or a statement is what is expressed by a sentence that asserts or denies something, for example a sentence which states that some predicate holds of some subject or that certain items are related in a certain way. A proposition rather than a sentence is ordinarily recognised as the bearer of truth-value. Logical relations exist among propositions or statements, but not among sentences.

"So it will not do to identify the statement either with the sentence or with the meaning of the sentence." P. F. Strawson, *Introduction to Logical Theory*, 1952, p. 4.

Sentence-token

To apply the token/type distinction to sentence, we have the distinction between sentence-tokens and sentence-types. A sentence-type is grammatically complete, while a sentence token is a concrete and actually experienced occurrence, that is an actual inscription or utterance. "I am thirsty" is a sentence-type. However, this sentence can be uttered by particular people on particular occasions. These particular utterances of the same sentence-type are sentence-tokens. This distinction is philosophically meaningful because it is believed that only sentence-tokens can be either true or false.

"A sentence token is just the physical sentence resulting from someone's speaking or writing at a particular time; a sentence type, in contrast, is the abstract class of all such sentence utterances or inscriptions that, roughly speaking, have the same form."—Moser and Nat, *Human Knowledge*, 1987, p. 6.

Sentence type, see sentence-token

Sentential calculus, another term for propositional logic

Sentential function

An expression containing one or more free variables, such as "X is wise". This is also called an open sentence. Once the free variable is replaced by a constant, an actual or closed sentence is formed. For instance, if we substitute "Socrates" for "X" in the above sentential function, we get the closed sentence "Socrates is wise". Obviously, various sentences of the same type can be formed from such a function. A sentential function can be generalised both existentially ("There is at least one X such that X is wise") and universally ("For every X, X is wise"). A sentential function is sometimes distinguished from a propositional function, which is what a sentential function denotes, but more often these two expressions are treated as synonymous.

现代逻辑中语句被区别于命题或陈述。命题或陈述由肯定或否定某物的语句表达，也就是由陈述某个谓词对于某个主词成立或某些项以某种方式相互关联的语句表达。命题而不是语句通常被看做是真值载体。逻辑关系存在于命题或陈述之间，而不是存在于语句之间。

“因此把陈述等同于语句或等同于语句的意义，都将是不成立的。”——斯特劳森：《逻辑理论导论》，1952年，第4页。

殊型句子

当我们把殊型与类型的区分用于句子，我们就是在殊型句子与类型句子之间做出了区分。类型句子在语法上是复合的，而殊型句子则是具体的，是实际经验中的话语，例如一个实际的标题或一句话。“我渴了”就是一个类型句子。但是，这个句子是只能由某个具体的人在具体的场合中说出的。而具体说出相同类型句子的话就是殊型句子。这种区分在哲学上是有意义的，因为据信只有殊型句子才能或真或假。

“一个殊型句子只是某人在某个特殊的时间说出或写下的一个物理句子；相反，一个类型句子则是说出或写下所有这种句子的抽象的类，大致地说，被说出或写下的这种句子都具有相同的形式。”——莫泽和纳特：《人类知识》，1987年，第6页。

类型句子

见“殊型句子”条。

语句演算

表示“命题逻辑”的另一术语。

语句函项

含有一个或多个自由变元的表达式，如“X是聪明的”。这也叫做“开语句”。一旦其中的自由变元被常项所替代，一个实际的语句或闭语句就形成了。例如，如果我们用“苏格拉底”去替换上面语句函项中的X，我们就得到闭语句“苏格拉底是聪明的”。很明显，可以从这样一个函项形成同一类型的多个不同语句。对一语句函项既可以实施存在概括（“至少有一个X使得X是聪明的”），也可以实施全称概括（“对每一个X而言，X是聪明的”）。语句函项有时被区别于命题函项，后者被认为是一语句函项所指示的东西；但更为经常地这两个表达式被看做是同义的。

"A sentential function, as this technical term is used by logicians, is an expression containing a variable such that a sentence which is either true or false results when a constant is substituted for the variable." —Pap, *Elements of Analytic Philosophy*, 1949, p. 55.

Sentience

The capacity to experience pleasure and pain. Since the basic moral principle of utilitarianism is to maximise pleasure and minimise pain, Bentham suggests that the basis for moral consideration should be sentience rather than reason or language. In our moral considerations, we should ask whether the living entity has the ability to suffer. Since not only human beings but also animals are sentient, that is have the ability to suffer, Peter Singer argues in his animal ethics that we should extend moral consideration to animals. The suffering of animals should be a matter of ethical concern no less than that of our fellow human beings. Pain is an evil. If an animal feels pain, it has its own interests, and so we must treat it equally. Sentience hence becomes the passport to the moral community.

"The humane moralists, for their part, insist upon sentience as the only relevant capacity a being need possess to enjoy full moral standing." —Callicott, *In Defence of the Land Ethic*, 1989, p. 19.

Sentiment

The immediate reactive feeling and sense about other people and their actions. According to Hutcheson, Hume and Adam Smith, human sentiment is the ground of moral attitudes and moral actions. The rules of morality are formed because in a variety of instances one type of conduct constantly pleases in a certain manner, and because in a variety of instances another type of conduct constantly displeases in a certain manner. Sentiment is the basis of moral approval and disapproval. This is the notion that Hutcheson called moral sense, Hume called approbation or sympathy, and Adam Smith calls sympathy. By holding this position they were in opposition to the view that morality is a matter of reason or that moral action is determined by rational deliberation. Since their position grounds ethics on sentiment, it is also called sentimentalism. This is a type of non-cognitivism. While for Hutcheson, moral sense is a single moral faculty, Smith held that there are a plurality of moral feelings. Accordingly Smith referred to this type of moral theory as the theory of sentiments.

"All morality depends upon our sentiments; and when any action, or quality of the mind, pleases us *after a certain manner*, we say it is virtuous; and when the neglect, or non-performance of it, displeases us *after a like manner*, we say that we lie under an obligation to perform it." —Hume, *A Treatise of Human Nature*, III, ii, 5.

"语句函项,作为逻辑学家们所使用的的一个专门术语,是含有一个变元的表达式,当用常项替换这个变元之后,由此导致一个或真或假的语句。"——帕普:《分析哲学原理》,1949年,第55页。

感受性

是指体验快乐和痛苦的能力。由于功利主义的基本道德原则是将快乐最大化和将痛苦最小化,所以边沁建议,道德考虑的基础应是感受性而不是理性或语言。在我们的道德思考中,我们应该问生命体是否有能力受苦。由于不仅人类而且动物也有感受性,即有受苦的能力,P. 辛格在他的“动物伦理学”中主张,我们应该把道德考虑扩展至动物。动物受苦也同我们人类一样,是一个伦理问题。痛苦即是恶。如果一个动物感到痛苦,它就有它自己的利益,所以我们必须平等地对待它们。因此感受性成了一个通向道德共同体的通行证。

"仁慈的道德学家,坚持感受性是一个存在物享有完全的道德地位的惟一相关的能力。"——卡利科特:《为土地伦理学辩护》,1989年,第19页。

情感

对他人及其行为直接反应出的感受和感觉。根据哈奇森、休谟和A. 斯密的观点,人的情感是道德态度和道德行为的根据。在各种情况下,有一类行为总是以某种方式使人愉快,在各种情况下,另一类行为总是以某种方式使人不快,道德规则因此而形成了。情感是道德赞成和不赞成的基础。这就是哈奇森所说的“道德感”概念、休谟所说的“赞许”或“同情”概念、A. 斯密所说的“同情”概念。由于持有这种看法,他们反对道德是理性之事的观点,反对道德行为由理性的思考所决定的观点。由于他们的观点将伦理学建立在情感的基础之上,所以又被称作“情感主义”。它是非认知主义的一种类型。虽然在哈奇森看来道德感是单一的道德官能,但斯密认为有多种道德感受。据此斯密把这类道德理论称作“情感论”。

"一切道德都依赖于我们的情感;当任何行为或心灵的性质“以某种方式”使我们愉快时,我们就说它是善的;当忽略或未做那个行为“以同样方式”使我们不快时,我们就说我们有做那个行为的义务。”——休谟:《人性论》,第三卷,第二章,第5节。

Sentimentalism

see sentiment

Separation

[Greek: *chorismos*; *choristos*; separable] For Plato, separation was a mark of division, severance or disjunction. He held that Ideas or Forms are separated from the individuals participating in them. This separation is a symmetrical relationship; if Ideas are separated from individuals, individuals are separated from Ideas. Aristotle claimed that Socrates sought the definition of the universal but did not separate it from the individuals, while Plato did separate the universal from the individuals and as a consequence committed many errors in his Theory of Ideas, especially relating to the third man argument.

In Aristotle's own doctrine of substance in the *Metaphysics*, separation became a criterion for primary substance. Here, separation means independent existence and is an asymmetrical relationship. Separation applies to the relation between the category of substance and other categories. According to this relation, substance can exist separately from other categories, but other categories cannot exist independent of substance. Separation also applies to the relations among form, matter and the composite of form and matter, in which form satisfies the criterion of separation in the strongest sense and is therefore primary substance.

"The separation is the cause of the objections that arise with regard to the ideas." Aristotle, *Metaphysics*, 1086b6-7.

Serial theory of the mind, see bundle theory of mind

Set

A collection of distinct entities, classically determined by means of a property or principle which sharply distinguishes members from non-members. For many purposes sets and classes are the same, but restrictions were introduced on what is allowed to be a class in order to avoid logical paradoxes. Classes with infinite members may not be treated as completed totalities. Not all classes are capable of being members of sets. There are ultimate classes which cannot be members of a further class. However, set theory ignores these distinctions and covers all types of classes and sets. A fuzzy set does not have sharp boundaries between members and non-members and can allow different degrees of belonging to the set. There is disagreement between an account of classes and sets as real entities and the view that they are devices which lack ontological implications.

"Basically, 'set' is simply a synonym of 'class' that happens to have more currency than 'class' in mathematical con-

情感主义

见“情感”条。

分离

[源自希腊文: *chorismos*, 其形容词为 *choristos* (可分离的)] 在柏拉图哲学中, 分离表示区分、隔离、不相连。他认为形相或形式与分有它们的个别物相分离。这种分离是一种对称性的关系; 如果形相与个别物相分离, 则个别物也与形相相分离。亚里士多德认为, 苏格拉底寻求对共相的定义可未将其与个别物相分离, 而柏拉图则将它们相分离, 结果在其形相论中犯了许多错误, 尤其是关于第三人的论证。

根据亚里士多德《形而上学》中的本体学说, 分离变成了第一本体的一个标准。在这里, 分离意味独立存在, 是一种不对称的关系。分离应用于本体范畴与其他范畴间的关系。根据这种关系, 本体可与其他范畴相分离而存在, 而其他范畴则不能独立于本体而存在。分离也应用于形式、质料及形式与质料的复合物之间的关系。形式在最强的意义上符合分离标准, 故而是第一本体。

“分离是导致对形相提出种种反对意见的原因。”——亚里士多德:《形而上学》, 1086b6-7。

心的序列理论

见“心的捆束理论”条。

集合

集合是一些独特事物的汇聚, 这些事物由某一可将其成员与非成员明确区分开来的属性或原则在类上加以区分。在许多意义上, 集合与类是相同的, 但有时也将限制引入那可作为类的事物中, 以避免逻辑悖论。具有无穷成员的类不可以被看做是完全的整体。并非所有的类都可作为集合的成员。有一些最终的类不能作为更进一步类的成员。然而, 集合论忽略了这些区别而包含所有类型的类和集合。一个模糊集合在其成员与非成员间无明确界限, 也允许属于集合的不同程度。在把类与集合看做真实实体, 还是把它们看做缺乏本体论含义的工具, 在这两种观点之间存在分歧。

“‘集合’基本上完全同义于‘类’, 并且在数学语境中比‘类’更为通用。”——奎因:《集合论及其逻辑》, 1963年, 第3页。

texts.” —Quine, *Set Theory and its Logic*, 1963, p. 3.

Set theory

Classically, a set or class is a collection of things taken as a whole, with a determining property that distinguishes the collection from things in other sets, although this condition is relaxed in the theory of fuzzy sets. A set can be divided into subsets and subsets can in turn be divided into members. Set theory is the study of relationships within a set and among sets and the nature of sets themselves. Its pioneer is Cantor, and other major contributors include Zermelo, Russell, Fraenkel, Gödel, Skolem and von Neumann. Set theory is essential for mathematics, for many kinds of pure mathematics can be formulated within set theory. It is crucial for logical deduction. However, naive set theory often leads to paradoxes, such as Burali-Forti's paradox, Cantor's paradox and, most famously, Russell's paradox. Russell sought to avoid these paradoxes by formulating an axiomatic set system in which sets are arranged in a hierarchy of types. Various axiomatic set systems have been proposed, but each has some difficulties.

“Set theory is the mathematics of classes. Sets are classes.” —Quine, *Set Theory and its Logic*, 1969, p. 1.

Set-theoretical paradox, another term for logical paradox

Seven deadly sins, see sin

Sex, see gender

Sexism

The attitude holding that one's own sex is superior to the other and leading in practice to limited respect for the rights, needs and values of the other sex. The term is analogous to racism, which regards one's own race to be superior to others. Both sexism and racism are thought to be major social evils. In contemporary environmental ethics, speciesism, the claim that the human species should dominate other species, is controversially held to be a third evil of this sort. Men are more likely than women to be called sexist because historically women generally have been dominated by men. A main aim of feminism is to criticise sexism by revealing its root, showing the forms it takes in various areas and suggesting ways of correcting its practices and ideology. Some feminist theorists claim that overcoming sexism will change both women and men and establish social practices that are free from male dominated gender relations.

“The choice can only be whether animals benefit from our practices or are harmed by them. This is why speciesism

集合论

从经典上讲,一个集合或类是这样一些事物作为总体的聚合,这些事物带有使自己区别于其他集合中的事物的确定特征。尽管这一条件在模糊集合论中已不再那么严格了,一个集合可以划分为子集,而子集又依次可划分为成员。集合论是对于一个集合和多个集合之间的关系以及集合自身性质的研究,其先驱者是康托尔,其他作出过主要贡献的包括策梅罗,罗素,弗兰克尔,哥德尔,司寇伦,冯·纽曼等。集合论本质上是数学的,因为许多种纯数学可以在集合论中表述。它对于逻辑演绎是决定性的。然而,素朴的集合论经常导致悖论,例如“布拉里-福蒂悖论”、“康托尔悖论”和最著名的“罗素悖论”。罗素为了避免这些悖论,构制了一个集合论公理系统,集合在其中被安排于一类型等级中。人们已经提出了各种集合论公理系统,但每一种都有若干困难。

“集合论是关于类的数学。集合就是类。”——奎因:《集合论及其逻辑》,1969年,第1页。

集合论悖论

表示“逻辑悖论”的另一个名称。

七恶

见“罪恶”条。

性

见“性别”条。

性别主义

这种态度认为自己的性别优于另一性别,这导致在实际行动中有限地尊重另一性别的权利、需要和价值。这一术语与认为自己的种族优于其他种族的种族主义相类似。性别主义与种族主义都被视为主要的社会罪恶。在当代环境伦理学中,认为人类应当统治其他物种的物种主义,被有争议地视为这类问题的第三种罪恶。男人同女人相比更可能被称为性别主义者,因为从历史上看,女人一直普遍为男人所统治。女性主义的一个主要目的就是通过揭露性别主义的根源、表明它在各个领域采取的形式和提出纠正它的实践和思想的做法,来批判性别主义。

一些女性主义思想家提出,克服性别主义将使女人和男人都得到改造,并将确立不受男人统治的性别关系影响的社会习惯。

“选择只能是或者动物从我们的实践受益,或者受到我们的实践的伤害。这就是为什么物种主义者是对种族主义和性别主义的错误模仿

is falsely modelled on racism and sexism, which really are prejudices. To suppose that there is an ineliminable white or male understanding of the world, and to think that the only choice is whether blacks or women should benefit from 'our' (white, male) practices or be harmed by them; this is already to be prejudiced." — Williams, *Ethics and the Limits of Philosophy*, 1985, pp. 118-9.

Shame, see guilt

Shared name, another expression for sortal

Sheffer function

Also called a Sheffer stroke or stroke function. There are five primitive logical constants or functions, namely negation (\sim), conjunction (\wedge), disjunction (\vee), implication (\supset) and equivalence (\leftrightarrow). Logicians showed that they can be reduced to two, that is to negation and disjunction. In 1913, the American logician H. M. Sheffer proposed obtaining all of them from a single binary truth-function, which he symbolised by a vertical stroke ($|$). With this notation, $p|q$ is read as not both p and q . Accordingly, negation ($\sim p$) can be defined as $p|p$; disjunction ($p \vee q$) can be defined as $(p|p) | (q|q)$, and so on. The truth table for the Sheffer stroke function is:

p	q	$p q$
T	T	F
T	F	T
F	T	T
F	F	T

"A function from which all others may be obtained is called a Sheffer function, after the discoverer of the stroke function." — R. L. Goodstein, *Development of Mathematical Logic*, 1971, p. 7.

Sign and symbol

Both Peirce and Wittgenstein drew a distinction between sign and symbol. A sign is an expression perceptible by senses, while a symbol is an expression's meaningful use and the rules for its application. A sign is what can be perceived of a symbol, while a symbol is a mode of signification of a sign. The same sign may be used in different symbols, or, in other words, different symbols may have their sign in common. For example, the sign "bear" in English can be used either as a verb (to carry) or as a noun (a mammal). Wittgenstein makes use of this distinction to criticise Russell's theory of types. Other than this, the distinction is not always observed. Signs are widely taken to include their symbols.

"In order to recognise a symbol by its sign we must observe how it is used with a sense." — Wittgenstein, *Tracta-*

的原因,这种选择实际上是偏见。先假设白人或男人对世界的理解是不能消除的,然后设想惟一的选择是或者黑人或妇女从'我们'(白人,男人)的实践受益,或者他们(黑人,妇女)为我们的实践所伤害;这便已经有偏见了。"——威廉姆斯:《伦理学与哲学的限度》,1985年,第118—119页。

羞愧

见“负罪”条。

共名

“类”的另一种说法。

谢弗函项

亦称“谢弗竖”或“竖函项”。有五个初始的逻辑常项或函项,即否定(\sim),合取(\wedge),析取(\vee),蕴涵(\supset)和等值(\leftrightarrow)。逻辑学家们表明,它们能够归约为两个,即否定和析取。1913年,美国逻辑学家 H. M. 谢弗提出,所有这些函项可以从单独一个二元真值函项得到,他把这个二元函项符号化为垂直的一竖($|$)。 $p|q$ 读作“并非既 p 又 q ”。相应地,否定 $\sim p$ 可以用 $p|p$ 来定义;析取 ($p \vee q$) 可以用 $(p|p) | (q|q)$ 来定义等等。谢弗竖函项的真值表是:

p	q	$p q$
T	T	F
T	F	T
F	T	T
F	F	T

“所有其他函项由之得出的函项,根据竖函项的发现者的名字来命名,叫做谢弗函项。”——古德斯坦:《数理逻辑的发展》,1971年,第7页。

记号和符号

皮尔士和维特根斯坦都区分了记号和符号。记号是可由感官知觉到的表达式,而符号则是表达式的有意义的用法和运用它的规则。记号是一个符号可被知觉到的东西,而符号是记号含义的样式。同一记号可以用于不同的符号,或换句话说,不同的符号可以有其共同的记号。例如,英语中“bear”这个词既可用作动词(承担)也可用作名词(一种哺乳动物)。维特根斯坦用这种区分来批评罗素的类型论。除此之外,这种区分并非总是可见的。记号用得更广泛,包括了其符号。

“为了根据其记号来认识符号,我们必须观察是如何有意义地使用它的。”——维特根斯坦:《逻辑哲学论》,3.326。

tes, 3. 326.

Significant form

An elusive and abstract term introduced by the British art critic Clive Bell, referring to the formal structure or unity common and peculiar to all visual works of art. This formal structure is the source which provokes aesthetic emotion. For Bell, the existence of this form and its capacity to arouse aesthetic emotion are the only criteria for being a work of art. The artist sees objects as pure forms, distinct from any associations they may have or ends that they may serve. This form is independent of any everyday human significance of objects in the world and is an end in itself. We cannot recognise significant form in cognitive terms, and it is not open to empirical confirmation or falsification. But it can be felt, and it is refined and intensified by artists in their work. In seeing the significant form of things, the artist somehow glimpses 'ultimate reality'. The essence of artistic creation is to express the aesthetic emotion which the artist feels before such forms by re-creating them in a work of art. Correspondingly, to appreciate a work of art is to contemplate and feel this form.

"Line and colours combined in a particular way, certain forms and relations of form stir our aesthetic emotions. These relations are combinations of line and colours, these aesthetically moving forms, I call 'significant form'; and 'significant form' is the one quality common to all works of visual art." (Bell, *Art*, 1914, p. 6.

Simple nature

[Latin: *naturae simplices*] For Francis Bacon, the ultimate qualities, such as red, white and hard, out of which the whole natural world is constituted. For Descartes, simple natures were the starting-point for the constitution of knowable objects and also for human knowledge of these objects. Simple natures are all self-evident, never contain any falsity and are grasped by intuition or the natural light. These things are simple because they are known so clearly and distinctly that they cannot be divided by the mind into further items which can be known more clearly and distinctly. Descartes distinguished three kinds of simple nature: (1) pure material natures that are recognised to be present only in bodies, such as shape, extension and movement; (2) pure intellectual natures which the intellect recognises by means of a sort of innate light and which do not involve any corporeal substance, such as knowing and doubting; (3) common simple natures, including common concepts which can be ascribed both to the physical and to the mental, such as existence, duration, and the fundamental laws of logic that are called common notions. The first two kinds of simple natures are the building blocks of human knowledge and which can be

有意味的形式

这一难以捉摸和抽象的术语是由英国艺术批评家C. 贝尔提出的, 意指所有视觉艺术作品共有的和特有的形式结构或统一性。这种形式结构是激发审美情感的源泉。在贝尔看来, 这种形式的存在与其激发审美情感的能力是衡量艺术作品的惟一标准。艺术家将对象视为纯粹的形式, 有别于对象可能产生的种种联想或者可能达到的种种目的。这种形式与世界上各种对象的日常人生意义无关, 它就是目的本身。我们从认知的角度是认识不到有意味的形式的, 因为这种形式既不易受经验肯定的左右, 也不易受经验证伪的影响。但是, 人们能够感觉到这种形式, 而且艺术家在其作品中可以完善和强化这种形式。在观照事物之有意味的形式过程中, 艺术家在某种程度上也会窥视到“终极的实在”。艺术创造的本质就在于表现审美情感, 表现艺术家在艺术作品中再创造眼前那些形式时所感受到的审美情感。相应地, 欣赏一件艺术作品就是凝神观照和感受这一有意味的形式。

“线条与色彩以某种特殊的方式组合, 某些形式与形式关系唤起我们的审美情感。这些关系是线条与色彩的组合, 这些审美意义上感人的形式, 我称之为‘有意味的形式’, 而‘有意味的形式’是所有视觉艺术作品的共有特征。”——贝尔:《艺术》, 1914年, 第6页。

简单性质

[拉丁文 *naturae simplices*] 对F. 培根来说, 简单性质指最终的性质, 像“红”、“白”、“硬”之类, 整个自然界都是由这些性质构成的。在笛卡尔那里, 简单性质是构造可知对象的起点, 因而也是人类关于这些对象的知识起点。简单性质全都是自明的, 不包含任何虚假, 人通过直觉或自然之光来把握它们。这些性质被称作“简单的”, 是因为它们被非常清楚明白地认识到, 以致心灵无法把它们进一步分为可以更清楚明白认识到的内容。笛卡尔区分了三种简单性质: (1) 纯粹物质的性质, 它们被认为只出现在物体中, 如形状、广延、运动; (2) 纯粹理智的性质, 理智借助一种天赋之光而认得的性质, 而且这些性质不涉及任何有形的实体, 这些性质如认知、怀疑; (3) 共同的简单性质, 包括既可以划入物又可以划入心的那些共同概念, 像“存在”、“绵延”以及被称作“共同概念”的基本逻辑规律等。前两种简单性质是人类知识的建材, 它们可以反复结合成各种各样的复杂性质。共同的简单性质既适用于物理的东西, 又适用于心的东西, 是将两者结合在一起的粘合

combined again and again into various complex natures. The common simple natures, applicable to both the physical and the mental, are the cement which binds them together.

"These simple natures are all self-evident and never contain any falsity." —Descartes, *the Philosophical Writings* (tr. Cottingham *et al.*) 1985, 1, p. 45.

Simplicity, principle of

One theory is simpler than another if it postulates fewer entities and explanatory principles. The principle of simplicity generally means the same thing as the principle of parsimony, or Ockham's razor. Simplicity is generally taken as one, although not the only, criterion for determining the acceptability of rival theories. The competing theories might be chosen in terms of consistency, scope, precision and predictive power. However, everything else being equal, a simpler theory, that is, the theory which makes the fewest assumptions, is more acceptable than its complex rivals. The philosophical problem is whether it is possible to justify this preference for simplicity as something beyond a mere consideration of convenience. The traditional belief is that nature itself is simple. "Nature does nothing in vain". But the principle of the uniformity of nature itself is a problematic notion. Contemporary philosophy of science takes simplicity as a part of methodology. Quine connects it with high probability. Popper connects it with his criterion of falsifiability by claiming that simple statements are highly desirable because they have richer empirical content and because they are more testable. The dispute about the validity of the principle of simplicity as a sign of truth has yet to be resolved.

"The principle of simplicity (also referred to as the principle of parsimony) ... affirms that other things being equal, the simpler theory should be chosen." —Regan, *The Case for Animal Rights*, 1983, p. 146.

Simulation theory

An account of how we know about the propositional attitudes of others. It claims that our knowledge of other people's beliefs comes not from the application of a theory, but as a result of using our own psychological processes to simulate those of others. It is an extension of our capacity to know our own beliefs. We imagine that we are in someone else's position and then imagine what we would think or do in that situation. Simulation is used in explaining the meaning of intentional terms such as believe and desire. The proponents of this theory include Gordon, Goldman, Stich and Nichols.

"Simulation theory suggests an account of the mechanisms underlying our capacity to predict and explain people's behaviour, and that explanation makes no appeal to an internalised theory or knowledge structure." —Stich, *Deconstructing the Mind*, 1996, p. 134.

剂。

"这些简单性质全都是自明的,不包含任何虚假。"——笛卡尔:《哲学著作集》(科庭汉姆等译),1985年,第一卷,第45页。

简单性原则

如果一个理论假设了很少的实体和解释原则,那么这个理论就是比较简单的。"简单性原则"通常指的就是"节俭原则"或"奥康剃刀"。简单性通常被看做是决定接受相互竞争的理论的一个标准,尽管不是惟一的标准。选择某种理论是根据一致性、范围、精确度和预见能力。但对于在其他方面相同的每种理论而言,更简单的理论,即最少做出假设的理论,就比复杂的理论更能得到接受。哲学上的问题在于,如果不只是考虑便利的因素,那么是否还能够证明简单性对某个理论来说是优先的。传统的信念是,自然本身就是简单的。"自然不做徒劳之功"。但自然本身的齐一性原则是一个成问题的概念。当代科学哲学把简单性看做认识论的一部分。奎因把它与高度概率联系起来。波普则把它作为可证伪性的标准,认为简单陈述是完全有望得到的,因为它们具有丰富的经验内容,因为它们更能得到验证。关于把简单性原则看做真理标志的可靠性的争论,尚需得到解决。

"简单性原则(也指节俭原则).....断定,如果在其他方面相同,应该选择更简单的理论。"——里根:《动物权利问题》,1983年,第146页。

模拟论

一种关于我们如何知道他人的命题态度的理论。它声称,我们关于他人的信念的知识并非来自对于一个理论的应用,而是使用我们自己的心理过程来模拟他人的心理过程的结果。它是我们对于自己的信念的了解能力的延伸。我们想像自己处于其他某个人的位置,并想像自己在那样的情境下会怎么说或怎么做。模拟被用来解释像"相信"、"欲求"这样的意向语汇的意义。这一理论的支持者包括高顿、哥尔德曼、斯迪席、尼可尔斯。

"模拟论提议一种对于我们预测和解释他人行为的能力的说明,而这一说明并不借助于一个内化的理论或知识结构。"——斯迪席:《心的解构》,1996年,第134页。

Sin

A theological term for the severe wrongdoing or faults of moral character due to disobedience of a Divine command or a violation of natural law. A person's sense of sin is one paradigm of religious experience. According to the *New Testament*, all men are sinful, because we inherited original sin from Adam, the common father of humankind. Christians believe that the death of Jesus was a sacrifice for human sins. A person after death will be sent to hell if judged by God to be an unrepentant sinner. In a loose sense, sin is synonymous with evil, but strictly speaking, sin is an evil committed towards God, rather than to other persons. Only God may be asked to pardon sins. On some interpretations, sin results from our following of our sensory nature against our rational nature. It is committed when we do not do the good we know that God requires of us. Persons who believe that they have sinned often feel that they are cut off from God, the vision of God or God's grace. The origin of sin is generally ascribed to human free will, but this point is rather controversial. In medieval philosophy and theology, pride, covetousness, envy, gluttony, anger, sloth, and lust are listed as the seven deadly sins.

"By his sin a sinner cannot really injure God, and yet, for his own part, he acts contrary to God in two ways. First, he despises God and his commandments and secondly, he does in fact harm someone, either himself or someone else." — Aquinas, *Summa Theologiae*, Ia2, 147, 2.

Sincerity

Frankly and plainly presenting oneself to oneself and others, rather than hiding or adding something in order to present oneself as different from what one actually is. Sincere people say and do what they really believe. Insincerity to oneself is a form of self-deception, while insincerity to others is lying or hypocrisy. Sincerity has been regarded as a virtue, but it is controversial whether any form of insincerity counts as an evil. Academics who modify their views to avoid serious political consequences are only sometimes judged to have acted immorally. The sincerity of sceptics has been a matter of debate because such a person has difficulties in carrying out his belief in his daily life.

"Real sincerity implies that all the contradictory facets of the self are given free expression." — Elster, *Ulysses and the Sirens*, 1979, p. 175.

Sine qua non

[Latin; without which not, also written *conditio sine qua non*, a condition without which not, in law a necessary condition] If an event B would not have happened if a prior event A had not happened, then A is a *conditio sine qua non* of B. This is generally viewed as a factual cause independent

罪恶

一个神学术语,意指由于不服从神的命令或违背自然法则所犯的严重错误或道德品性的罪过。一个人有罪恶感是宗教体验的典型情形。根据《新约全书》,所有人都是有罪的,因为我们都从人类的共同祖先亚当那里承袭了原罪。基督徒相信耶稣之死就是为人的罪恶所作的牺牲。如果一个人被上帝判定是没有忏悔的罪人,死后就会被送入地狱。在宽泛的意义上,罪恶是邪恶的同义语,但严格说来,罪恶是对上帝,而不是对其他人犯下的邪恶。同样,也只有请求上帝,才可宽赦罪恶。按某些解释,罪恶是我们违背理智本性,放任感官本性的结果。如果我们不做我们知道上帝会要求我们做的善事,就是犯罪。相信自己已经犯了罪的人们经常感到他们被上帝、上帝的关注或上帝的恩典所抛弃。一般把罪恶的根源归咎于人的自由意志,但这一点是有相当争议的。在中世纪哲学和神学中,傲慢、贪婪、妒嫉、贪食、忿怒、懒惰和好色被列为“七恶”。

“虽然一个罪人的罪恶实际上并不能损伤上帝,但是,就他自己这方面而言,他在两种意义上与上帝背道而驰。首先,他藐视上帝和他的戒律;其次,他事实上伤害了某人,要么是他自己,要么是其他某人。”——阿奎那:《神学大全》,Ia2, 147, 2。

真诚

坦白而直率地展现自己于他人,而不是隐藏或添加某些东西以把自己展现为与实际情况不同的人。真诚之人的言行是他们真正相信的事情。对自己不真诚是一种形式的自欺,对别人不真诚是欺骗或虚伪。真诚一直被认为是一种美德,但对是否任何形式的不真诚都是罪恶这一问题存在争议。为避免严重的政治后果而不得不修改其观点的学者,只是在有些时候被认定其行为是道德的。怀疑论者的真诚始终是一个争论的问题,因为这样一个人在其日常生活中是很难贯彻他的信念的。

“真正的真诚意指的是对自身所有矛盾的方面予以自由的表达。”——爱尔斯特:《尤利西斯和海妖》,1979年,第175页。

绝对必需

[拉丁文:无它不行,也写作 *conditio sine qua non*, 无它不行的条件,指法律中一种必要的条件] 如果前一个事件 A 不发生,后一个事件 B 就不会发生,那么, A 就是 B 的必要条件。这通常被看做是独立于政策或法规的事实上的

of policy or rule. A detailed examination of the relationship between this kind of condition and causally relevant factors in human action can be found in Hart and Honoré, *Causation in the Law*.

"When a negative answer is forthcoming to the question 'Would Y have occurred if X had not?' X is referred to not merely as a 'necessary condition' or *sine qua non* of Y but as its 'cause in fact' or 'material cause'." —Hart and Honoré, *Causation in the Law*, 2nd ed., 1985, p. 110.

Singular term

The distinction between singular terms and general terms has been drawn since Mill, and receives much discussion in contemporary analytic philosophy. A singular term is a term which denotes or ostensively refers, under a given circumstance, to an individual object. Terms which belong to the categories of proper names, indexicals, definite descriptions and so on are all singular terms. A singular term can replace, or be replaced by, an individual variable in an open sentence. It can only be the grammatical subject of a subject-predicate sentence and can never be a predicate. In contrast, a general term introduces a kind or a type of individual thing. While a singular term can only be a subject, a general term can serve either as a subject or as a predicate. The distinction between singular and general terms is widely supported, but it has been criticised by Peter Strawson in *Individuals*.

"Semantically the distinction between singular and general term is vaguely that a single term names or purports to name just one object, though as complex or diffuse an object as you please; while a general term is true of each, severally, of any member of objects." —Quine, *Word and Object*, 1960, pp. 90-1.

Sittlichkeit, see ethical life

Situation ethics

A anti theoretical position that flourished among Christian religious moralists after the second world war, influenced by American pragmatism, and operated with the slogan: be loving and do as you please. It claims that ethics is essentially a matter of reacting to the contexts or situations one confronts and that moral choice must be situational, particular, determined by case-to-case analysis. It proposes that there is only one moral principle, that is *agape* or love. Other than this, there should be no packaged moral judgements for Christians. To build an ethical system is meaningless, and the rigid application of universal moral principles and rules should be rejected. The ethical maxims of the community in which one lives can serve as illuminators, but we should always be prepared to compromise in the situation where love seems better served by doing something else. The

原因。对这种条件和人的行为中的因果相关的因素之间的关系的详细考察可以在哈特与哈诺来合著的《法的因果性》中找到。

“当对‘如果X不发生Y会发生吗?’这一问题即将出现否定性的回答时，X指的就不仅仅是一种‘必要条件’或Y的必要条件，而是指Y的‘实际中的原因’或‘物质原因’。”——哈特和哈诺来，《法的因果性》，第二版，1985年，第110页。

单称词

“单个词”与“类词”自密尔以来就做了区分，这在当代分析哲学中得到了广泛的讨论。单称词是在给定的情况中指称或实际指向单个对象的词。属于“专名”、“索引词”、“限定摹状词”等等范畴的词都是单称词。单称词可以替换或被替换为开语句中的单个变元。它为主谓句子中只能作为语法主语，而决不能作为谓语。相反，类词引入了单个事物的类或种，单称词只能做主语，而类词则既可以做主语也可以做谓语。单称词与类词之间的这种区分已经得到普遍承认，但P. 斯特劳森在《个别物》中对此提出了批评。

“在语义学上，单称词与类词的区分是含混不清的，即认为单称词命名或试图命名单一的对象，尽管这个对象是你所能想像的那样复杂或庞大；而类词则适用于几个各种对象的总和。”——奎因：《词与物》，1960年，第90—91页。

伦理性

见“伦理生活”条。

情境伦理学

一种反神学的见解，流行于第二次世界大战后的基督教宗教道德主义者的圈子之内，受美国实用主义的影响，奉行的格言是“按你喜欢的去爱和行”。它认为，伦理学本质上是对人所遭遇的环境或情境的反应，道德选择必定是情境性的、特殊的，是由对相关情形的分析决定的。它提出，只有一条道德原则，即 *agape* 或爱。除此之外，不应有任何包装好的道德判断适于基督徒。建构道德体系毫无意义，硬性推行的普遍道德原则和规律应被废除。人生活于其中的社会伦理准则能作为照明器来使用，但我们总是准备着在情境中妥协，因为在情境中，通过做其他的事情，爱似乎有着更好的效用。这种伦理学的系统化代表人物是J. 弗莱特席，他指出，情境伦理学不是相对主义的，因为它主张大写

systematic exponent of this ethics is Joseph Fletcher who claims that situation ethics is not relativistic, for it holds that Love is the ultimate judge of the norm of action. Hence situation ethics is a middle approach between legalism, which emphasises systematic rules and regulations, and antinominism, which rejects all principles whatever. This position has similarities with act-utilitarianism and casuistry.

"Situation ethics goes part of the way with natural law, by accepting reason as the instrumentalist of moral judgements, while rejecting the notion that the good is 'given' in the nature of things, objectively. It goes part of way with Scriptural law by accepting revelation as the source of the norm while rejecting all 'revealed' norms or laws but the one command—to love God and thy neighbour."—Fletcher, *Situation Ethics*, 1966, p. 26.

Situational semantics

Developed in the late 1970s by J. Barwise and J. Perry and intended as an alternative to Tarski's formal truth-conditional semantics. A situation in this account is the part of reality that agents find themselves in and about which they exchange information. Situational semantics claims that the meaning of a sentence is not given merely through its truth-conditions, but should also be determined by the relations of the sentence to the situation in which it is uttered and information about its speaker. The meaning of an expression cannot be described independently of the use of the expression. It involves a relation between the circumstance that the expression describes and the circumstance in which it is uttered because rational speakers or agents must use information extracted from their situation in order to reason and communicate effectively.

"In this book I have been urging the development of a theory of meaning and information content, one rich enough to give a semantics for English that can account for the way language users handle information, and suggesting a shape for this general theory. We call this situation theory, and the applications to natural language situational semantics."—Barwise, *The Situation in Logic*, 1989, p. 177.

Skolem-Löwenheim theorem

Löwenheim and Skolem established that in set theory for any class of formulas of predicate calculus, if there is an interpretation which suits all of them, there is also an interpretation whose domain consists of natural numbers which suits all of them. This Löwenheim-Skolem theorem implies that if first-order set theory is consistent and has a model, it must also have a denumerable infinite model whose continuum is a countable set and is thus apparently non-standard. This result is called Skolem's paradox because it conflicts with Cantor's theorem according to which within set theory we can establish that there is a set of real number which is not

的爱是行为规范的终极判断。因此,情境伦理学是唯法主义和反法律废弃主义之间的中间道路,因为前者强调系统化的法则和规则,后者否认一切原则,无论这些原则是什么。这种见解与行为功利主义和决疑论相似。

“情境伦理学的路线与自然法则部分一致,因为它把理性当做道德判断的工具来接受,同时又否认善是在事物的本性中客观地‘给定的’观念。它的路线与圣经法则也是部分一致的,因为它把启示当做规范的源泉接受,但同时又否认这一条命令之外的其余一切‘启示的’规范或法则——爱上帝和邻人。”——弗莱特席:《情境伦理学》,1966年,第26页。

情景语义学

由J. 巴维希和J. 培里在20世纪70年代后期提出,旨在取代塔斯基的真值条件形式语义学。“情景”一词在这里意味着一种现实,即相关者在其中能够找到自己的处境,并且能够交换有关的信息。情景语义学声称,句子的意义不仅是通过其真值条件得到的,而且是用它与说出这个句子的情景和有关说话者的信息之关系加以定义的。我们无法独立于表达式的用法而描述表达式的意义。这涉及到这个表达式所描述的情况与在说出它时的情况之间的关系,因为理性的说者或相关者只能使用从他们的情景中得到的某个信息,以便能够有效地进行推理和交流。

“我在本书中一直在竭力推进一种关于意义和信息内容的理论,这种理论非常丰富,足以得到一种能够描述语言使用者掌握信息方式的英语语义学,而且我还为这种普遍的理论建立了一种形式。我们把这称作情景理论,而把它对自然语言的应用称作情景语义学。”——巴维希:《逻辑情景》,1989年,第177页。

司寇伦-勒文海姆定理

勒文海姆和司寇伦确立的定理,即在集合论中,对于任何类谓词演算公式,如果存在一个适合于它们全部的解释,则也存在一个其域由自然数组成的解释且也适合于它们全体。这个“勒文海姆-司寇伦定理”意味着,如果一阶集合论为一致的且有一模型,则它必然有一可枚举的无穷模型,其连续统为可数集,因而显然是非标准的。这一结论称作“司寇伦悖论”,因为它与康托尔定理相冲突,按照这个定理,在集合论系统中,我们可以确定存在一个不可枚举的实数集。为避免司寇伦悖论,我们应假设可枚举

denumerable. To avoid Skolem's paradox, we should suppose that the distinction between denumerable and non-denumerable models is relative to an axiom system rather than absolute. Others believe that the paradox indicates that standard first-order predicate calculus is not sufficient for revealing the structure of the continuum.

"There is a remarkable theorem in classical logic, the Skolem-Löwenheim theorem, which says that any consistent set of sentences (whether a finite or infinite set of sentences) has a model in the natural numbers." —Smart, *Our Place in the Universe*, 1989, p. 57.

Skolem's paradox, see Skolem-Löwenheim theorem

Slave / master, see master / slave

Slave morality, see master morality

Slave of the passions

Hume's term for the role of reason in action. The traditional ethical belief was that morality is a matter of rationality and that we act according to the dictates of reason. Hume claimed that this is wrong. Reason is useful and can direct our judgement concerning good and evil, but it is impotent with respect to motivating action. Reason is not a causal factor in promoting moral actions. What directly impels us to act is passion or emotion. In contrast to the traditional view that emotion should be subjected to reason, Hume believed that reason is the slave of the passions in the genesis of action. This does not mean that there is a conflict between reason and passion. For Hume, that which is opposed to reason can only be reason itself rather than passion.

"Reason is, and ought only to be the slave of the passions, and can never pretend to any other office than to serve and obey them." —Hume, *A Treatise of Human Nature*, II, iii, 3.

Slippery slope argument

An argument seeking to persuade an audience not to take the first step on the grounds that it will lead to further steps having disastrous consequences. The argument can be formulated in many ways, but its central version is the one that is also called the wedge argument. According to the argument, some actions are like the first step on a slippery slope. Although they can be justified, their performance will inevitably lead to further actions with bad consequences. Hence, it is better not to permit the first action. This argument has a wide application in moral discussions. For example, some argue that if active euthanasia is legalised terrible

和不可枚举模型之间的区别是相对于公理系统的而不是绝对的。另一些人认为这个悖论表明,标准的一阶谓词演算不足以揭示连续统的结构。

“古典逻辑中有一个引人注目的定理,司寇伦—勒文海姆定理,它认为任何无矛盾的语句集合(无论有限或无限的语句集合)都有一个自然数模型。”——斯马特:《我们在宇宙中的位置》,1989年,第57页。

司寇伦悖论

见“司寇伦—勒文海姆定理”条。

奴隶/主人

见“主人/奴隶”条。

奴隶的道德

见“主人的道德”条。

情感的奴隶

休谟的用语,指理性在行为中的作用。传统的伦理学相信,道德是理性能力的问题,我们根据理性的命令行动。休谟声称这个观点是错误的。虽然理性是有用的,它能够指导我们判断善恶,但是它对于激发行为是无能为力的。在引发道德行为时,理性不是原因因素。直接推动我们行动的是情感或情绪。与情绪应当服从于理性的传统观点相反,休谟认为,在行为的发生过程中,理性是情感的奴隶。这并不意味着理性和情感有冲突。在休谟看来,与理性相对的只能是理性本身,而不是情感。

“理性是,而且也只应是情感的奴隶,除了服务和服从于情感之外,它不能有任何其他的职务。”——休谟:《人性论》,第二卷,第三章,第3节。

滑坡论证

这一论证力图以采取第一步会导致其他具有灾难性后果的步骤为由劝阻听众不要采取第一步。这个论证以许多方式来表述,但这种论证是其中心说法,也称作“楔子论证”。据此,某些行为就如同是在滑坡上的第一步,虽然它们本身是合理的,可是它们将不可避免地导致一系列有着糟糕后果的行为。因此,最好不要允许有这第一步。这个论证在道德讨论中有着广泛的运用。例如,它被用来论证,如果把主动安乐死合法化,某些可怕的后果将随之而来。因为社会一旦公然允许在一定的条件下有意地杀人,

consequences will follow. For once societies openly allow deliberate killing under some circumstances, such as when dying persons are suffering intolerable pain, we will move to allow involuntary euthanasia and even the killing of old people who become a burden to society. Thus, we move from mercy killing to non-merciful killing and from justified killing to unjustified killing. Life, which should be valued, will become cheap. Slippery slope arguments are generally taken to be unconvincing, for there is no rational ground for claiming that we cannot firmly draw the line between justified and unjustified acts, although initial steps might alter the context in which subsequent steps are judged.

"A slippery slope argument is a kind of argument that warns you if you take the first step you will find yourself involved in a sticky sequence of consequences from which you will be unable to extricate yourself, and eventually you will wind up speeding faster and faster towards some disastrous outcome."—Walton, *Slippery Slope Arguments*, 1992, p. 1.

Social action

Actions of social groups, such as a rebellion, and actions conducted within a framework of social relations, such as marriage or holding a conversation. Social actions can be ritualised, with fixed sequences of correct behaviour, or flexible and diverse, so long as the action of one individual takes account of the behaviour of others. For methodological individualists, social action can be reduced to the actions of individuals, but this account is rejected by methodological holists, who claim that social actions have collectively determined meaning and intentions which cannot be analysed in terms of individual action. While all actions are contingent on the external world, social action is also contingent on the interdependency of choices and orientations among rational agents. This double contingency is a characteristic feature of social action. Any social action must follow rules represented, for example, by cultural frameworks, communication systems or value systems. A main task of sociology is to understand social action by understanding the social practices and the institutions that embody it.

"Action is 'social' insofar as its subjective meaning takes account of the behaviour of others and is thereby oriented in its course."—Max Weber, *Economy and Society*, vol. 1, 1978, p. 4.

Social choice, another expression for public choice

Social contract

A contract providing the legitimate basis of sovereignty and civil society and of the rights and duties constituting the role of citizen. According to the social contract theory that flourished in the seventeenth and eighteenth centuries, a so-

例如当垂死的人们正在遭受不可忍受的痛苦时,这就是具有决定性意义的第一步,我们将进一步地把不自愿安乐死合法化,甚至把成为社会负担的老人杀死合法化,等等。因此,我们从仁慈杀人到非仁慈杀人,从合理地杀人不合理地杀人,最后,应当得到重视的生命将变得很便宜。这个论证一般被认为不是令人信服的,因为主张我们不能确切地在合理杀人和不合理杀人之间划线,是没有任何合理根据的,尽管最初的步骤也许会改变对随后的步骤加以判断的背景。

"一个滑坡论证是这样一种论证:它警告你,如果你采取第一步,你将发现你自己陷入了一系列令人讨厌而你无法自拔的后果,最后你将越来越快地趋于某种灾难性的后果。"—沃尔顿:《滑坡论证》,1992年,第1页。

社会行为

社会群体的行为,如叛乱,以及在社会关系结构内进行的行为,如婚姻,或举行会谈。社会行为可以是仪式化的,具有恰当行为的固定程序,或者是灵活多样的,只要是一个人的行为考虑到其他人的行为。对方法论的个人主义而言,社会行为可以归结为个人的行为,但这一见解遭到方法论的整体主义的反对,后者认为社会行为具有集体决定的意义和目的,而这些意义和目的是不能根据个人行为来分析的。虽然所有行为都有赖于外部世界,但社会行为还有赖于理性的人的相互依存的选择和定向。这种双重偶然性是社会行为的一个特征。任何社会行为都必须遵循由例如文化结构、交往方式、价值体系所体现的规则。社会学的一个主要任务是通过理解社会实践和体现它的社会制度来理解社会行为。

"行为是'社会的',是就其主观意图考虑到其他人的行为并因而在过程中被调整而言。"—韦伯:《经济与社会》,第一卷,1978年,第4页。

社会选择

"公众选择"的另一种表述。

社会契约

为主权和市民社会,以及构成公民角色的权利和义务提供合法根据的契约。根据兴盛于17-18世纪的社会契约理论,以个人同意为基础的社会契约,允许人们从自然状态,无论是从

cial contract based on individual consent permits men to enter civil society from the state of nature, whether from the brutal world of Hobbes or the relatively self-sufficient world of Locke. The move to civic society was accomplished by giving up certain natural rights in return for the protection, rights and advantages offered by the state. For Hobbes, the contract is agreed between people and a proposed sovereign who received absolute authority. For Locke and Rousseau, the contract is agreed among the people themselves to vest power in a government. For Locke, persons in the state of nature are very much like ourselves, but for Rousseau they become persons by entry into civic society. In Rousseau's view, the social contract is the condition through which the will of all, the aggregation of individual wills, becomes the general will which wills the common good. It has been a matter of controversy whether classical accounts of the social contract are meant to present an actual or hypothetical contract. Some critics hold that before employing this theory to justify the legitimacy of political authority and the grounds of political obligation, we must provide independent justification for the theory itself. Social contract theory has been employed in his theory of justice by the contemporary political philosopher John Rawls. For Rawls, a contract between rational self-interested actors who are ignorant of their own positions in society determines principles of justice, but this hypothetical contract offers only one aspect of Rawls' justification of his theory.

"What man loses by the social contract... is his natural liberty and the absolute right to anything that tempts him and that he can take; what he gains by the social contracts is civil liberty and the legal right of property of what he possesses." --Rousseau, *The Social Contract*, I, VIII.

Social Darwinism

A theory resulting from the application of Darwinism to human society. By deducing norms of human conduct directly from evolutionary biology, it attempted to deal with ethical, economic and political problems on the assumption that society is a competitive arena and that the evolution of society fits the Darwinian paradigm in its most individualistic form. According to social Darwinism, the fittest climb to dominant social positions as a consequence of social selection, just as natural selection determines the survival of the fittest. Because on this view human possession of consciousness does not have any moral implications, social Darwinism held that social inequality and the exploitation of lower classes, suppressed races and conquered nations by the stronger were morally acceptable. It opposed any plan of social reform or welfare system to protect the weak or poor by claiming that such measures disturbed the natural order and hindered the progress of the human species. Altruism was held to be nothing more than hypocrisy. Social Darwinism flourished at

霍布斯的残忍的世界还是从洛克的相对自我满足的世界,进入市民社会。走向市民社会是通过放弃某些自然权利以换取国家提供的保护、权利和好处而完成的。在霍布斯看来,这种契约是由人民和--推选出的获得绝对权力的主权者之间商定的,而洛克和卢梭则认为,赋予政府权力是人民自己商定的。在洛克看来,自然状态中的人非常类似我们自己,但在卢梭看来,他们是由于进入市民社会才成为人的。卢梭认为,社会契约是一种条件,通过它众意、即个人意志的集合,变成了为了共同利益的公意。对社会契约的古典说明是否就是要提出一个实际的或假设的契约,这一直是个有争议的问题。一些批评家认为,在运用这一理论论证政治权力的合法性和政治义务的根据之前,我们必须对这一理论本身提供独立的辩护。社会契约理论被当代政治哲学家J. 罗尔斯运用于他的正义理论。在罗尔斯看来,对自己社会地位一无所知的、合理自利的行为者之间的契约,决定了正义原则,但这一假设的契约提供的只是罗尔斯为其理论辩护的一个方面。

"人类由于社会契约所丧失的,乃是他的天然的自由以及对于他所企图得到和所能得到的一切东西的那种绝对的权利;而他通过社会契约所获得的,则是市民的自由以及对他所拥有的财产的合法权利。"--卢梭:《社会契约论》,第一卷,第8章。

社会达尔文主义

这一理论是通过将达尔文主义应用于人类社会而产生的。通过直接从进化论生物学推出人的行为规范,它试图以社会是一个竞争的场所、以极端个人主义形式表现出的社会进化符合达尔文的范例这样的假设为基础,来论述道德、经济和政治问题。根据社会达尔文主义,最适合爬到社会统治地位的人是社会选择的结果,这就如同自然选择决定了适者的生存。根据这一观点,因为人拥有的意识没有任何道德含义,社会达尔文主义认为社会不公平以及对下层阶级的剥削、种族压迫和大国对弱小国家的征服在道德上都是可以接受的。它反对保护弱者和穷人的社会改革或福利制度的计划,认为这种做法会打乱自然的秩序并阻碍人种的进化。它认为利他主义不过是虚伪的。随着作为其最重要的理论表达的H. 斯宾塞的政治理论的问世,社会达尔文主义在19世纪末和20世纪初曾一度兴盛。人们现在对它的兴趣主要是历

the end of the nineteenth century and in the early twentieth century, with Herbert Spencer's political theory as its most important theoretical expression. It is now mainly of historic interest, with its science and its ethics both seen to be deeply flawed.

"A purely biological perspective will give no grounding to individual rights, and might tend to a sort of social Darwinism, in which individuals would be seen in terms of their contribution to the survival and improvement of the species or society." —O'Hear, *Experience, Explanation and Faith*, 1984, p. 77.

Social democracy

A term originally used for the Marxist approach to socialism, in contrast to revisionist forms of socialism. Since the Russian revolution, Marxist socialism has been called communism. The term social democracy has lost its relationship with Marxist socialism, and has been employed in revisionist and liberal thought. In contrast to classical market liberalism which emphasises the primacy of classical civil rights such as freedom of speech, freedom of association, freedom of religious and ideological beliefs, and freedom to pursuing one's own happiness, social democracy holds that these fundamental rights can be qualified to secure a fair and just distribution of resources and opportunities. Consequently, it allows or requires state agencies to play an active role in many areas of life in order to maintain a just society.

"After 1920, and up to the present, the term social democracy has had its strongest links with the related reformist socialism and social liberal tradition." —Vincent, *Modern Political Ideologies*, 1995, p. 222.

Social fact

A fact about a social institution or group of people such as a family, school, class or religious community. In contrast, individual facts concern individual agents and their psychological states. A social fact is unobservable, but can be determined through statistical generalisations about certain kinds of social interaction within a given society. Durkheim claimed that the existence of social facts enables the social sciences to conduct studies as objective as those of the natural sciences, which deals with things. For methodological holists, the existence of social facts must be presupposed in interpreting individual behaviour, whereas for methodological individualists, social facts can be reduced to individual behaviour.

"A social fact is every way of acting, fixed or not, capable of exercising on the individual an external constraint; or again, every way of acting which is general throughout a given society, while at the same time existing in its own rights independent of its individual manifestations." —Durkheim, *The Rules of Sociological Method*, 1939, p. 13.

史的, 因为它的科学性和道德观都被看做是很有问题的。

"纯粹的生物学看法不会为个人的权利提供根据, 而且会走向一种社会达尔文主义, 在这种看法中, 个人是以他们对物种或社会的生存和改善的贡献来理解的。"——奥赫尔:《经验、说明和信仰》, 1984年, 第77页。

社会民主主义

该术语最初用于马克思主义的社会主义, 以区别于修正主义的社会主义。自俄国革命以后, 马克思主义的社会主义就被称为共产主义。社会民主主义这一术语已同马克思主义的社会主义无关, 并被用于修正主义和自由主义的思潮中。与强调古典的公民权利, 如言论自由、结社自由、宗教和意识形态信仰自由和追求个人幸福的自由的首要性的古典市场自由主义不同, 社会民主主义认为, 这些基本权利都可说成是保证在资源和机会分配上的公平与公正。因而, 它允许或要求国家机构为维持一个公正的社会而在生活的众多领域里发挥积极的作用。

"从1920年以后到如今, 社会民主主义这一术语一直与相关的改良主义的社会主义和社会自由主义传统有着最为牢固的联系。"——文森特:《现代政治意识形态》, 1995年, 第222页。

社会事实

有关社会制度或人的群体如家庭、学校、阶级、宗教团体的事实。相比之下, 个人事实涉及的是个体行为者及他们的心理状态。社会事实是不可观察的, 但可通过对一定社会中某些社会方面的相互作用的统计概括加以确定。杜克海姆认为, 社会事实的存在使社会科学能够进行如同自然科学研究事物一样的客观研究。在方法论的整体主义看来, 社会事实的存在无疑是解释个人行为的先决条件, 而方法论的个人主义则认为, 社会事实可以归结为个人的行为。

"一个社会事实是在每一个方面都起作用的, 无论这种作用是固定的还是不固定的, 并能对个人施加一种外在的强制力, 或者说, 它在每一方面都起的作用是普遍贯穿一个既定社会的, 虽然它同时存在于不依它的个人表现形式为转移的自身的权利之中。"——杜克海姆:《社会学方法的规则》, 1939年, 第13页。

Social philosophy

The philosophical examination of substantive social issues, such as the relations between society and the state; the relations between society and its members; social equality; morality and law; and issues of health care and child protection. Social philosophy critically assesses political ideologies and societal arrangements and tries to discern clearly what a good society would be like, and how it might be achieved. Plato's *Republic*, Hobbes's *Leviathan*, and Rousseau's *Social Contract* can be regarded as classical works in the area of social philosophy. Social philosophy is normative in character and overlaps with political philosophy concerning many issues. It is distinguished from the neutral, methodologically orientated versions of the philosophy of social science, which are mainly concerned with the logic of justification of social scientific theories. It is closer to those versions of philosophy of social science which allow room for value and social criticism within social science.

"Social philosophy ... is concerned with the varying view about the nature of desirable social systems or societies, and sometimes it puts forward its own proposals about what constitutes a good or desirable society." —Rudner, *Philosophy of Social Science*, 1966, 2.

Sociobiology

A study inspired by Darwin's theory of natural-selection and attempting to explain human social behaviour by human biological features, particularly genes. Sociobiology focuses on the shared features of genetic design among human beings rather than on cultural and historical dimensions of human life. It claims that genes play a fundamental role in determining human behaviour and that like the social behaviour of animals human social behaviour is informed by its evolutionary purposes. The field emerged as a separate discipline with Edward O. Wilson's *Sociobiology: The New Synthesis* in 1975. Many of its claims provoke heated debates. Some critics reject sociobiology as a modernised version of social Darwinism, while others reject its genetic determinism and claim that much human behaviour is culturally formed and open to modification. Nevertheless, sociobiology has raised important questions with its emphasis on the evolutionarily determined genes and their role in human consciousness, behaviour and institutions. Sociobiologists believe that humans might recognise that cooperation is a better strategy than purely egoistic pursuits in the search for survival. Accordingly, biological evolution might lead to a type of altruism and form a biological basis for a social contract, because biological altruism suggests that we will more willingly cooperate with our close kin rather than with strangers. However, even at its most morally acceptable version sociobiology denies equality of obligation. Sociobiology suggests that biology and

社会哲学

对独立存在的社会问题的哲学探究, 如对社会和国家的关系、社会和其成员的关系、社会平等、道德和法律、医疗服务和儿童保护问题的探究。社会哲学批判地评估政治思想和社会安排, 并力图表明一个好的社会该是什么样和如何才能实现这样的社会。柏拉图的《国家篇》, 霍布斯的《利维坦》和卢梭的《社会契约论》可以认为是社会哲学这一领域的经典著作。社会哲学有规范性的特点, 并在不少问题上与政治哲学交叉。它区别于具有中性和方法论倾向的社会科学哲学的研究形式, 后者主要涉及的是社会科学理论的论证逻辑。它较接近那些为社会科学中的价值和社会批评留有余地的社会科学哲学的研究形式。

"社会哲学……涉及的是变化着的、有关合乎需要的社会制度或社会的本质的观点, 它有时还就如何组成一个好的或合乎需要的社会提出自己的建议。" ——冉德: 《社会科学哲学》, 1966年, 第2页。

社会生物学

受达尔文的自然选择理论的启发, 试图根据人的生物特征, 特别是基因解释人的社会行为的学科。社会生物学的兴趣所在是人类共同的基因设计而不是人类生活的文化和历史方面。它认为, 基因对决定人的行为起着根本的作用, 如同动物的社会行为一样, 人的社会行为是由其进化的目的传递的。随着 E. O. 威尔逊的《社会生物学: 一种新综合》于 1975 年的出版, 这一领域成为一门独立的学科。它的很多主张引发了激烈的争论。一些批评家否认社会生物学是社会达尔文主义的现代变种, 另一些人则拒绝它的基因决定论, 并认为人的很多行为是通过文化形成的, 并且是可以改变的。然而, 由于社会生物学强调由进化决定的基因及其在人的意识、行为和制度中的作用, 它引发了一些重要的问题。社会生物学家相信, 人们也许会认识到, 在寻求生存的活动中, 合作是比纯粹利己的追求更好的策略。因此, 生物的进化会导致一种利他主义, 并会构成社会契约的生物基础, 因为生物利他主义暗示我们将更愿意与我们的亲属而不是与陌生人合作。但是即使是它的在道德上最可接受的社会生物学理论也否认义务的平等。社会生物学提出生物学和道德密切相关, 尽管这些主张既是推测的又是有争议的。

"社会生物学是关于社会行为的起因和稳定性的进化理论。一旦得到充分发展, 它也许能

morality are closely related, although many of these claims are both speculative and contested.

"Sociobiology is the evolutionary theory of the origin and stability of social behaviour. When fully developed, it may account for the evolution of ethics." — von Schilcher and Tennant, *Philosophy, Evolution and Human Nature*, 1984.

Sociology of knowledge

On the assumption that knowledge is not merely the result of the meeting of the individual mind with the physical world, but is socially and historically conditioned, there is a discipline which studies the social facts or elements that shape and condition the acquisition, justification, change and growth of knowledge. Knowledge is more than the outcome of experimental procedures and hypothetico-deductive reasoning. This discipline is called the sociology of knowledge, and it is claimed to have enriched traditional epistemology by adding a social dimension to it. Although it appears as a separate discipline only in this century through Karl Mannheim's *Ideology And Utopia*, many of its ideas can be traced to Plato; and Max Scheler and Karl Marx are also among its advocates. Its basic assumption is that in every society there exists a fabric of meaning which is conveyed to us in childhood as a set of lore. The social elements considered include such things as the social status and the interests of the subject (either as a group or as an individual), tradition and convention and the process of socialisation. In its early stage, sociology of knowledge was confined to investigating the general conditions surrounding the emergence, modification and the shift of the body of institutionalised beliefs a group accepts and the social sources of prejudices and distortions. This is called the "weak programme". It presupposes that knowledge cannot be objectively valid but reflects the interests of a certain social class. Knowledge is historically relative. Nowadays this discipline also suggests that social factors can be adequate grounds for objective knowledge.

"We have witnessed the rebirth of the notion of the 'sociology of knowledge', which suggests that not only our methods but our conclusions and our reasons for believing them, in the entire realm of knowledge, can be shown to be wholly or largely determined by the stage reached in the development of our class or group, or nation or culture, or whatever other unit may be chosen." — Isaiah Berlin, "Determinism and Responsibility", in *Four Essays on Liberty*.

Socrates' question

A term that is used in two different ways. First, it is a question about how one ought to live or about what is a life worth living, which Socrates raised several times in the Platonic dialogues. Its classical expression is at *Gorgias*, 500b: "Do not either take what I say as if I were merely playing, for you see the subject of our discussion — and on what sub-

够说明道德的进化。”——冯·希谢尔和坦南特：《哲学、进化和人的本质》，1984年。

知识社会学

基于知识不仅仅是个人心灵遭遇物理世界的结果，而且是受到社会的和历史的条件限制这种假定，存在一个学科，专门研究形成和限制知识的获得、辨明、变化和增长的社会因素或成分。知识不只是实验步骤和假设与演绎推理的结果。这门学科就被称作知识社会学，它被认为是由于增加了社会方面而发展了传统认识论。虽然它只是在本世纪由于K. 曼海姆的《意识形态和乌托邦》一书才作为一门独立的学科出现，但它的许多观念却可以追溯到柏拉图，M. 舍勒和卡尔·马克思也是它的先驱者。它的基本假设是，每个社会都存在着一种意义的结构，它是作为一套学问而从孩提时代就传给我们的。这里所说的社会因素包括社会地位与主体的（团体的或个人的）兴趣，传统与约定，社会化的进程等等。在初级阶段，知识社会学还限于研究周遭环境的一般条件，团体所接受的组织化信念本身的修正和变化，以及偏见和歪曲的社会来源。这被称作是“弱的纲领”。它假定，知识在客观上不可能是可靠的，它只是反映了某种社会阶级的兴趣。知识在历史上是相对的。如今，这门学科也认为，社会因素可以为客观知识提供恰当的基础。

“我们已经证明了‘知识社会学’概念的再生，它认为，不仅我们在整个知识领域的方法，而且我们的结论和相信它们的推理，都表明完全是或大部分是由在我们这个阶级或团体，或国家或文化，或可以选择的其他任何单位的发展中所达到的阶段决定的。”——柏林：《决定论与责任》，载《自由四论》。

苏格拉底的问题

这一术语用于两种不同的方式。首先，它是指我们应当如何生活，或什么是值得过的生活这一问题。苏格拉底在柏拉图的对话中几次提出这一问题。其经典的表述见《高尔吉亚篇》，500b：“不要认为我是在说着玩，因为你明白我们讨论的主题是‘一个人应当过什么样的生

ject should even a man of slight intelligence be more serious? — namely, what kind of life one should live". It is a general question about what to do for one's whole life, not a question about whether to do this or that action. The question invites one to reflect about one's own life, for Socrates held that an unexamined life is not worth living. It provides an adequate starting-point for moral theories, and any serious moral theory must answer the question in some way.

The term is also used in relation to various questions posed by Socrates in the earlier Platonic dialogues in the form: "what is ...?", such as "what is piety?", "what is justice?", "what is courage?" and "what is temperance?". These questions sought to determine general conceptions which give what is the same in many different particulars. Socrates did not offer conclusive answers to these questions, but they led philosophers to deal with the problem of universals, the relation between the general and the particular and the nature of predication. The methodology implied by these questions, which was essential for the later development of Western philosophy, led directly to the birth of Plato's Theory of Forms.

"In Socrates' question the general as such is discovered." — Martin, *An Introduction to General Metaphysics*, 1961, p. 27.

Socratic elenchus

[from Greek; *elencheir*, to refute, to examine, to test] Although Socrates himself did not use this term, it is widely used for his characteristic method of inquiry and his central daily activity. Also called the Socratic method, *elenchus* involved Socrates in a cross-examination of an interlocutor through a sequence of questions by which Socrates sought to expose conflicts in the views held by the interlocutor and to reconstruct these beliefs as a result of reflections on the conflicts and on their possible resolution. The earlier Platonic dialogues, in which Socrates showed various *elenchi*, are called elenctic dialogues. Since this kind of cross-examination always ended without reaching any definite conclusion, these dialogues are also called aporetic dialogues. Socratic *elenchus* is neither purely negative nor merely for the purpose of exposing confusions in his interlocutors. It was thus distinguished both from Zeno's method and from sophistry, although it was similar in form to them. Socrates employed his *elenchus* in an attempt to get people to see things themselves. The questions by which he conducted his *elenchus* were not trivial, but rather had to do with the concepts and principles by which the Athenians lived. By this method Socrates questioned the morality of his time. Influenced by Vlastos' work, scholars have recently examined the logical form of *elenchus* and its implication for understanding Plato's earlier dialogues

"Socratic elenchus is a search for moral truth by adversary argument in which a thesis is debated only if asserted as

活'; 对于任何一个稍稍具有理智的人来说, 还有什么主题比这更为严肃呢?" 这是一个关于你的整个生活应当怎么办, 而不是如何做这个或那个行为的问题。这一问题邀请人去反思自己的生命, 因为苏格拉底相信一种未经考察的生活是不值得过的。它也为道德理论提供了适当的出发点。任何严肃的道德理论必须以某种方式回答这一问题。

这个术语还用于指苏格拉底在柏拉图早期对话中以“什么是……?” 的形式提出的种种问题, 例如, “什么是虔诚?” “什么是正义?” “什么是勇敢?” “什么是节制?” 等等。这些问题寻求得到一般的看法, 即众多不同殊相中的相同之物。苏格拉底并未为这些问题提供结论性答案, 但它们引导哲学家们去处理共相、一般与特殊的关系、主谓关系的性质等问题。隐含在这些问题中的方法论对以后的西方哲学的发展是至关重要的, 它直接导致柏拉图形式论的产生。

“在苏格拉底的问题中, 这种一般被发现了。”——马丁:《一般形而上学导论》, 1961年, 第27页。

苏格拉底问答法

[源自希腊词 *elencheir* (反驳、考察、测验)] 尽管苏格拉底本人并没有使用该词, 但它却被普遍用于指苏格拉底特色的研究方法以及他的主要日常活动。它也被称作“苏格拉底方法”。它是通过一系列问题与对话者进行相互质问, 苏格拉底由此寻求暴露对话者的各种观点中的冲突, 并在反思这些冲突及关于它们的可能答案的基础上重建这些信念。在许多柏拉图的早期对话中苏格拉底展现了众多的问答, 这些对话因而也叫做“问答性对话”。由于这类相互质问总是在结束时没有达到任何明确的结论, 这些对话也叫“疑难性对话”。苏格拉底问答法既不纯粹是否定的, 也不只是为了揭示他的对话者的观念混乱。它不同于芝诺的方法, 也不同于诡辩, 虽然它们在形式上彼此相似。苏格拉底采用问答法, 目的在于让人们看到事物的本身。他应用问答法的问题都不是琐碎的, 而是关涉到雅典人所据以生活的概念和原则。运用这一方法, 苏格拉底责问他那个时代的道德。受弗拉斯托斯著作的影响, 学者们近年来一直在争论问答法的逻辑形式和它对于我们理解柏拉图早期对话的意义。

“苏格拉底问答法是通过敌对论证来寻求道德真理, 在这一论证中, 一个命题只有在被断定为是回答者本人的信念时, 才会受到争论; 而当且仅当回答者的命题的反题从他自己的信仰

the answerer's own belief, who is regarded as refuted if and only if the negation of his thesis is deduced from his own beliefs." Vlastos, "The Socratic Elenchus", in *Oxford Studies in Ancient Philosophy*, 1 (1984), p. 30.

Socratic method, another term for Socratic *elenchus*

Soft data, see data

Solipsism

[from Latin: *solus*, alone — *ipse*, self] A metaphysical theory which claims that only I and my experience exist. The argument for solipsism asserts that every claim about what exists and what I know is grounded in experience and cannot transcend it, but that experience is immediate and private to me; therefore nothing beyond myself and my experience exists. The world is my presentation. Solipsism is closely associated with the claim of traditional British empiricism that immediate perception is the source of all knowledge, and also with Descartes's *cogito ergo sum*. Like scepticism, solipsism is criticised as logically incoherent and unintelligible, but a complete refutation is difficult to find. Russell believes that there is something true in it, though he himself chooses not to accept it. Wittgenstein in the *Tractatus* thinks that since the limit of language means the limit of my world, there is something correct about solipsism, although it cannot really be expressed in factual language. He sees the temptation to solipsism as related to the metaphysical subject.

"Here it can be seen that solipsism, when its implications are followed out strictly, coincides with pure realism. The self of solipsism shrinks to a point without extension, and there remains the reality co-ordinated with it." — Wittgenstein, *Tractatus*, 5.64.

Somatism, see reism

Sophia, Greek term for wisdom

Sophism, see fallacy of ambiguity

Sophist

[Greek: *sophistes*, from *sophos*, wise and *sophia*, wisdom] Initially, any wise man like a poet, seer or sage, but in fifth-century BC, a special term for a professional teacher who wandered from city to city to teach many non-traditional courses, including rhetoric and linguistics, which young Greeks needed to pursue political careers. Sophists charged

推得时,才被认为是驳倒了。”——弗拉斯托斯:《苏格拉底问答法》,载《牛津古代哲学研究》,第1卷(1984),第30页。

苏格拉底方法

“苏格拉底问答法”的另一名称。

软资料

唯我论

[源自拉丁文: *solus* (单独) 和 *ipse* (自我)] 一种形而上学理论,主张只有我和我的经验存在。支持唯我论的论证断言,每一种关于存在什么和我知道什么的主张都是基于经验,不能超越经验,但经验对我而言是直接和私有的;因此在我和我的经验之外别无他物存在。世界就是我的表象。唯我论与传统的英国经验主义的下述主张密切相关:当下知觉是一切知识的来源,也与笛卡尔的“我思故我在”密切相关。就像怀疑论一样,唯我论被批评为在逻辑上不一致和不可理解,但很难找到彻底的批驳。罗素认为其中含有正确的成分,虽然他自己的选择不接受它。维特根斯坦在《逻辑哲学论》中认为,既然语言的界限意味着我的世界的界限,因此唯我论中有正确的东西,虽然实际上它不能用事实语言表达出来。他把唯我论的诱惑看成是与形而上学的主体有关。

“这里可以看到,当唯我论的含义一贯到底时,它与纯粹的实在论是一致的,唯我论的自我缩至一个无广延的点,而仍然有与之相合的实在。”——维特根斯坦:《逻辑哲学论》,5.64。

智者

[源自希腊文 *sophistes*, 该词出自 *sophos* (智慧的) 和 *sophia* (智慧)] 起初是指任何聪明人,如诗人、先知、圣哲等,但在公元前5世纪的希腊,它变成了一个特别称呼,指这样一种专门教师,他们从一个城邦游到另一个,教许多非传统的课程,包括修辞学和语言学;这些课程是

their students for this service. At that time the term did not have a derogatory sense. The sophists did not form a sect or school, and many of them were not philosophers at all. Among the most famous sophists were Protagoras, Gorgias, Thrasymachus, Prodicus and Hippias. Only in the next generation did *sophist* acquire the unfavourable sense which it still bears today. This change largely resulted from the hostile propaganda of Plato and Aristotle, who accused the sophists of making money for their teaching and of neglecting higher values by teaching techniques aimed merely at winning debates. Many sophists are targets of irony in Plato's dialogues, where they are distinguished from the practitioners of serious intellectual pursuits. However, from the scant information we possess, it seems that the sophists together formed a loose movement which was sceptical in tradition and having some features of an enlightenment. They made important contributions to the history of thought in fields such as grammar and linguistic theory, moral and political doctrine, and the theory of the nature and origin of man and society. Because no writings survive from any of the sophists, it is difficult to correct the traditional prejudice against them.

"A sophistes writes or teaches because he has a special skill or knowledge to impart. His sophia is practical, whether in the fields of conduct and politics or in the technical arts." — Guthrie, *The Sophists*, 1971, p. 30.

Sorites paradox

[from Greek: *soros*, a heap and *sorites*: a heaper] Also the paradox of the heap, a paradox that concerns how a series of small changes does not affect the possession of a property when taken individually but does affect the possession of the property when the changes are taken together. One grain of sand does not make a heap. Adding a further grain does not make a heap. We can go on adding grains without making a heap, and there is no particular number of grains which will make a heap. Yet many grains of sand certainly do make a heap. If no addition of a single grain can turn a non-heap into a heap, it is difficult to understand how a heap can emerge. The problem can be stated conversely. Removing one grain of sand from a heap does not make the heap disappear. Nor does removing a second grain make the heap disappear, and so on. There seems no point at which the heap disappears, yet it does disappear. A variant of the sorites paradox is the bald man paradox. A man with a full head of hair will not become bald if he loses one hair. Nor will the loss of a second hair make him bald, and so on. There appears to be no point at which the removal of an additional hair will make him bald, but the man does become bald.

The problem for all versions of the sorites paradox is the same: how can a series of changes, each of which does not make a difference, make a difference eventually when taken together? Attempted solutions deny the claim that if the first

希腊青年在寻求政治生涯时所需要的。智者们向他们的学生收费。在那时这一名称并无贬义。智者们并不构成一个宗派或学派，他们有许多根本不是哲学家。比较有名的智者包括普罗泰戈拉、高尔吉亚、塞拉叙马库斯、普罗狄科斯及希庇亚斯。只是在大约一个世纪后，“智者”这一名字才获得了一种贬义，并一直延续至今。这种变化主要是由于柏拉图、亚里士多德的敌对宣传。他们指责智者从教书活动中赚钱，并只教那些可在论辩中取胜的技术而忽略更高的价值。许多智者在柏拉图对话中都是讥笑的对象，不被当做是从事严肃的理智探求事业的人。不过，从我们所拥有的不多的材料看，智者们似乎共同构成了一个松散的运动，其主要特征是怀疑传统，多少有点像启蒙运动。他们对思想史贡献良多，如在文法和语言理论方面，在道德和政治学说方面，关于人和社会的起源与性质等。由于没有一个智者的作品留传至今，这一事实使得我们很难纠正对他们的传统偏见。

“一个智者写作和教育，因为他有专门的技能和知识可以传授。他的智慧是实践的，无论是在行为和领域，还是在专门技术领域。”——格思里：《智者》，1971年，第30页。

累积悖论

[源自希腊文 *soros* (一堆) 和 *sorites* (一个堆者)] 也叫堆的悖论，该悖论是关于当单个考虑时不影响特性拥有的微小变化，何以当这些变化加在一起时确实影响到特性的拥有。一粒沙子不能成堆。再加一粒也不成堆。我们可以持续加下去而不成堆，没有哪一个特殊的沙粒由它而构成了堆。然而许多的沙粒确实组成了堆。如果没有一个单个沙粒的添加使非堆成为堆，那么堆何以出现的呢？这个问题也可以反过来说。从沙堆上取走一粒不会使堆消失，取走第二粒也不会使其消失，如此等等。似乎没有沙堆在此消失的那点，但它却的确消失了。另一种累积悖论称作秃顶人悖论。一个满头是发的人如果失去一根头发不会秃头，失去第二根也不会使他秃头，如此等等。似乎没有这么一点，再去掉一根他会成为秃头，然而他确实成了秃头。

对于各种形式的累积悖论，相同的问题是：一连串的变化中每一个都没有产生影响，何以最后加在一起就产生了影响？尝试的解决方法否认如下观点，即如果第一变化不能对属性拥有造成不同，则后面的变化也不会造成区别；它们使用关于该特性拥有的真理度概念，或是使用模糊逻辑处理属性，此种逻辑认识到谓项的可应用性程度。

“……累积悖论，古老的堆悖论，如果从一

change does not make a difference in the possession of the property, then no subsequent change makes a difference, use the notion of degrees of truth regarding the possession of the property, or deal with the property using fuzzy logic which recognises degrees of applicability of predicates.

"...the sorites paradox, the ancient paradox of the heap: If removal of a single grain from a heap always leaves a heap, then, by mathematical induction, removal of all the grains leaves a heap." — Quine, *Theories and Things*, 1981, p. 32.

Sortal

Although the idea can be traced to Aristotle's notion of secondary substance, the word "sortal" was introduced by John Locke from sort, on analogy with the derivation of "general" from genus. For Locke, a sortal was a type of abstract idea which denotes the essence of a sort or a kind. Frege introduced sortals into contemporary discussion for a type of predicate by which we know the sort of object to which it applies; sortals delimit that object from other objects. Terms such as "cat" and "person" are sortals. A sortal predicate contains a criterion of identification and distinction. It provides a principle of countability and can be used with a definite or indefinite article. A sortal predicate applies to an object but does not apply to the parts of that object because the object it applies to does not permit arbitrary division. The term "cat" does not apply to a part of a cat, because the part is not itself a cat. On the other hand, a general but non-sortal predicate such as "a red thing" may apply to both the object itself and its parts. For a part of a red thing might itself be red. The use of sortals in considering various topics of contemporary philosophy owes much to Peter Strawson's discussion in *Individuals* and to the views that all scientific laws require sortal predicates and that identity claims are sortal-relative. If a particular is an instance of a universal, it is said to be sortally tied to the universal. There are alternative expressions for "sortal". Strawson used the expression "individuate term" but later reverted to the standard term in his *Individuals*. Geach used the term "count noun", and Quine used the expression "divided reference". Sortals are also called shared names.

"A sortal universal supplies a principle for distinguishing and counting individual particulars which it collects." — Strawson, *Individuals*, 1959, p. 168.

Sortal predicate, see sortal

Soul

[Greek: *psyche* and Latin: *anima*, originally the breath of life] An entity, the presence of which in a body causes the body to possess life and in the absence of which the body is

堆中取走一粒剩下的总是一堆,那么按照数学归纳,取走所有的粒仍剩下一堆。”——奎因:《理论与事物》,1981年,第32页。

类

尽管这个词可以追溯到亚里士多德的“第二实体”概念,但“类”这个词却是由J. 洛克从“种类”一词中引入的,类似于“一般”来自“属”。在洛克看来,它是指一类指称种类本质的抽象观念。弗雷格把它引入当代的讨论中,指一类谓词,我们用这类谓词知道了它所适用的对象,确定了这个对象与其他对象的不同。像“猫”和“人”这样的词都是类。因而,一个类谓词就包含了一种确认和区分的标准。它提供了一种可数性原则,可以使用定冠词或不定冠词。一个类谓词可以用于对象,但不能用于这个对象的组成部分,因为它所应用的对象不允许随意地加以细分。“猫”这个词不是用于猫的某个部分,因为这个部分本身并不是一只猫。另一方面,一个普遍的但不是类的谓词,诸如“一个红色的东西”,就既可以用于对象本身,也可以用于它的组成部分。因为这个红色东西的一部分本身也可能是红色的。类的用法构成了当代哲学中的许多话题,这主要归功于P. 斯特劳森在《个别物》中的讨论,也归功于这样一种观点,即认为一切科学规律都需要类谓词,而同一性主张是相对于类的。如果一个殊相是一个共相的单例,那么它就会被说成是在类上与这个共相相联。对“类”有各种不同的说法。斯特劳森的说法是“个体化的词”,但他后来在《个别物》中又回到了标准的用法。吉奇称它为“可数名词”;而奎因用它指“分离的指称”。类也被称作“共名”。

“一种普遍类提供了区分和计算它所收集的单个殊相的原则。”——斯特劳森:《个别物》,1959年,第168页。

类谓词

见“类”条。

灵魂

[希腊语为 *psyche*, 拉丁语为 *anima*, 原本的意思指生命的气息]它是这样的实体:在躯体中时就使该躯体具有生命,不在时就意味着躯

dead. The soul gives the body the faculty of cognition and, in the case of man, thought. The soul gives body the power of self-motion. By analogy, the changing world is sometimes claimed to be a living thing and to have a world soul. Pythagoras introduced the notion that the soul is immortal and transmigrates between many bodies. This idea was reinforced by Plato and led to a perennial topic in philosophy covering identity, survival, resurrection and disembodiment. Materialists claim that the soul cannot exist independently of the body. Aristotle said that the soul is the actuality of an organic body and in this sense cannot be separate from body, but he also claimed that there is an imperishable and separate active soul or reason.

Plato made a tripartite division of the soul into rational, emotional and appetitive parts, and believed that only human beings have the rational part. He believed that these three parts are in a state of constant conflict, and that a just person should make use of his reason to control the appetitive part, with the aid of emotion. This tripartite division has framed much later discussion in the history of Western philosophy. Psychology, which studies the operations and relations of these three parts is derived from *psyche*, the Greek term for soul.

Descartes preferred to use the term mind (from Latin: *mens*) rather than soul. The mind is the consciousness or the thinking part of the soul, although there are difficulties in giving a conceptually unified account of all that might belong to thinking and the mind. Other philosophers, such as Locke, used mind as a synonym for understanding. Descartes argued that the mind is an independent and incorporeal substance. This thesis gives rise to the mind-body problem, which is the most fundamental problem of the philosophy of mind. Soul is also taken as a synonym of spirit.

"It is the soul by or with which primarily we live, perceive and think." Aristotle, *De Anima*, 414a12.

Sovereign

The agent with supreme power who is habitually obeyed in a political society, but who does not habitually obey others. In a monarchy, the sovereign is an individual person; in an aristocracy, the sovereign is a group of people; and in a democracy, the sovereign is the population of its majority. The sovereign has the power to inflict punishment. For Hobbes, a sovereign should have absolute power and be able to control all areas of life and behaviour. Its power is a unity and is irrevocable. John Austin maintained that the sovereign is a pre-legal political fact and must be assumed as a basis for explaining and defining all other legal concepts. In his legal philosophy, the command of the sovereign, like Kelsen's basic norm or Hart's rule of recognition, is the ground of legal validity.

"If, following Austin, we call such a supreme and inde-

体死亡。灵魂给人的躯体赋予认知力,尤其是思想。灵魂也给躯体赋予自我运动的力量。类比地讲,变化着的世界有时被认作是一个活生生的事物,具有世界灵魂。毕达戈拉斯引入了灵魂不死且在多个躯体之间转生的观念。这种观念经过柏拉图的补充,成为哲学的一个永久性论题,包括同一、生存、复活、解脱等问题。唯物主义者主张,灵魂不能独立于躯体而存在。亚里士多德说,灵魂是有机体的现实性,在这个意义上,它不能与躯体分离。但是,他又认为,存在着一种不灭的、分离的主动灵魂或理性。

柏拉图把灵魂三分为理性、激情和欲望,并坚信只有人类具有理性部分。他相信,这三个部分处于不断冲突的状态之中,公正的人应当在激情的帮助下,用理智控制欲望的部分。在西方哲学史上,这种三分构造出后来的许多讨论。研究这三个部分的作用及其相互关系的“心理学”,其名称就是源出于希腊文灵魂(*psyche*)一词的。

笛卡尔不爱用“灵魂”一词,更喜欢用“心灵”(源于拉丁语 *mens*)。心灵指灵魂中的意识或思维部分,虽然对于可能属于思维和心灵的一切东西,难以从概念上给予统一的说明。其他一些哲学家,譬如洛克,也把心灵用作理解的同义语。笛卡尔相信,心灵是独立的、非形体的实体。这个命题,引发了“心身问题”,而这正是心的哲学最主要的问题。灵魂也被当成“精神”的同义语。

“灵魂的首要意义,乃是我们据以或赖以生活、感觉和思维的东西。”——亚里士多德:《论灵魂》,414a12。

统治者

拥有最高权力的人,在一个政治社会中,他习惯被服从,但却不习惯服从别人。在君主政体中,统治者是一个个人;在贵族统治的政体中,统治者是一组人;在民主政体中,统治者是人口中的大多数人。统治者拥有实施处罚的权力。在霍布斯看来,统治应拥有绝对的权力,并能控制生活和行为的所有领域。统治者的权力是一个整体,而且是不可改变的。J. 奥斯汀坚持认为,统治者是一个先于法律的政治事实,并且必须被假定为说明和定义所有其他法律概念的基础。在他的法哲学中,统治者的命令,就如同凯尔逊的基本规范或哈特的承认规则一样,是法的有效性的根据。

“遵循奥斯汀的观点,如果我们把这种最高的和不受约束的人或人的群体称作统治者,那

pendent person or body of persons the sovereign, the laws of any country will be the general orders backed by threats which are issued either by the sovereign or subordinates in obedience to the sovereign." — H. L. A. Hart, *The Concept of Law*, p. 25.

Sovereignty

Supreme legal authority. A concept originating in the Medieval conflicts between church and state and now a feature of independent states, their people or their rulers. External sovereignty is the supreme authority of the state regarding its relations with other states or international authorities. It is a state's right to the integrity of its territory and its right to join or withdraw from any international treaty or organisation as an independent party. External sovereignty is a major factor in modern international relations and can be limited or augmented by international law. Internal sovereignty concerns the body of laws and rules by which a state conducts its affairs. Within its territory, a sovereign state has final legal authority, with which external forces may not legitimately interfere. Because law and morality differ, there can be tension between internal sovereignty and recognised individual rights. External sovereignty is threatened by foreign invasion and interference, while internal sovereignty is threatened by usurpation and secession.

"To say that the State is sovereign is to say that the State has supreme or final authority in a community, that its rules override the rule of any other association." — D. D. Raphael, *Problems of Political Philosophy*, 2nd edition, 1990, p. 52.

Space

The nature of space, along with the nature of time, is a fundamental question in philosophy. Space is viewed as a continuum which gives form to the possible relations in which things and events stand in the world. It is constituted by all spatially related places. In ancient Greece, the Eleatics denied the possibility of empty space. They also denied that space is material, for otherwise space itself would have to be in another kind of space. Atomists argued that a void exists which separates atoms. Zeno's paradoxes show the puzzling nature of space and time, especially with regard to the problem of infinity. Kant, echoing Zeno, claimed that antinomies result if we think of space and time as objectively real and argued that space and time are forms of intuition by which sensibility organises sensibly given materials into experience. Space is not a concept, because unlike the different instantiations of concepts, all spaces are parts of one space.

A major dispute about space concerns whether it is substantial or relational. Plato defined space as a receptacle which does not have any characteristic itself. Aristotle did not distinguish space from place, which he defined as the ad-

么任何国家的法律都是以威胁为支撑的普遍命令,而这种威胁是由统治者或顺从这一统治者的下属发出的。”——哈特:《法的概念》,第25页。

主权

最高的法律权力。一个起源于中世纪教会和国家之间冲突的概念,现在是独立的国家、它们的人民或统治者的一个特征。一个国家的对外主权是它与其他国家或国际组织关系的最高权力。它是一个国家对其领土完整和作为独立的一部分参加或退出任何国际条约或组织的权利。对外主权是当代国际关系中的一个主要因素,并能为国际法所限制或扩大。对内主权涉及一个国家据以处理其事务的法律和法规的主体。一个主权国家在其领土内拥有最终的法律权力,因此外部力量不能合法地加以干涉。由于对法律和道德的看法不同,在对内主权和所承认的个人权利之间会出现紧张的关系。对外主权受到外来侵略和干涉的威胁,对内主权受到篡夺和脱离的威胁。

“说这一国家是主权国家,也就是说这一国家在一个社会中有最高和最终的权力,它的规定超越任何其他团体的规定。”——拉菲尔:《政治哲学问题》,第二版,1990年,第52页。

空间

空间的性质与时间的性质一样,是哲学中的基本问题。空间被看做给出了事物和事件在世界中所处的可能关系之形式的连续,它由所有空间上相关的场所构成。在古希腊,埃利亚学者否认空的空间的可能性。他们也否认空间是物质的,因为否则空间自身也必须在另一种空间中。原子论者论证使原子相分离的虚空的存在。芝诺悖论表现了空间和时间令人困惑的性质,尤其是关于无限的问题。康德回应芝诺,宣称如果我们把空间和时间认为是客观实在的,就会导致二律背反,并论证空间和时间是直观形式,感性藉此把特定的可感材料组织为经验。空间不是概念,因为不像不同的概念的实例,所有的空间都是一个空间的部分。

关于空间的一个主要争论,涉及它是实体的还是关系的。柏拉图定义空间为自身不具有任何特性的容器。亚里士多德没有区分空间和他定义为容纳物体的相邻边界的处所。两人似乎都把空间看做为客观的容器。笛卡尔提出了把空间表述为实体的标准形式,他主张物质的

jacent boundary of a containing body. Both seem to take space as an objective container. A standard version of the account of space as substantial is offered by Descartes, who claimed that the essence of matter is extension and thus identified space with matter. In his account of absolute space, Newton insisted that space would remain similar and immovable even if it lacked relations to anything else. Radically opposed to Newton account is Leibniz's relational view of space. Leibniz argued that, rather than being a substance, space is a system of relations in which indivisible monads stand to one another. The power and attraction of the positions in the dispute are captured in the famous Leibniz-Clarke Correspondence, in which Samuel Clarke defended Newton. The dispute still goes on today, especially in light of the general theory of relativity and quantum mechanics.

"A space, in the literal sense of the term, is that in which material objects are situated, and move or remain still. They change their place by moving through space." Swinburne, *Space and Time*, 1968, p. 31.

Space, absolute

Newton maintained that space has its own nature, without dependence on anything else. The three-dimensionality of space is an intrinsic, essential property of space. Mathematicians can describe spaces having other dimensions, but these are not our space. If one part of space is different from another part, this is not because of differences in space itself, but because of the things that occupy space. Absolute space is also separate from time. In contrast to absolute space, relative space depends for its character upon the nature of the things it relates. It would vanish were there no spatially related entities, and in principle it is subject to change.

"Absolute space, in its own nature, without relation to anything external, remains always similar and immovable." —Newton, *Mathematical Principles of Natural Philosophy*.

Space-time

The theory of relativity uses a unified notion of space-time to replace the separate notion of space and time. Within its framework, space and time can be traded, like mass and energy. As a result, it has become common practice in physics to view the world as a manifold of four dimensions: length, width, height and interval. Space-time can also be considered a four-dimensional tenseless space in contrast to our ordinary conception of space as something which endures through time. Many issues, such as infinity, continuity and their absolute or relational nature are common to space and time and can be dealt with to our advantage in a unified theory. On the other hand, it is not clear in what contexts space-time replaces space and time in other aspects of our thought. Some philosophers argue that we could not have spatio-temporal

essence is extension, therefore, space is equivalent to matter. Newton in his account of absolute space,坚持空间应保持相似的和静止的,即使它缺乏与其他任何事物的联系。与牛顿的表述截然对立的是莱布尼茨关于空间的关系观。莱布尼茨论证空间不是实体,而是不可分的单子在其中彼此相对的关系系统。这种观点在争辩中的力量和吸引力在著名的莱布尼茨-克拉克通信中引起了人们的注意,克拉克在其中捍卫牛顿的观点。这种争论今天仍然在继续,尤其是随着广义相对论和量子力学的发现。

"空间从其字面意思上讲,就是物质对象处于其中、并在其中运动或保持静止的东西,对象由通过空间的运动而改变它们的位置。"——斯文布勒:《空间与时间》,1968年,第31页。

绝对空间

牛顿主张空间具有自己的性质,不依赖于任何其他事物。空间的三维性是空间固有的本质特质。数学家可以描述具有不同维度的空间,但那些不是我们的空间。如果空间的一部分不同于另一部分,那不是由于空间本身的不同,而是由于占据空间的事物。绝对空间也是与时间相分离的。与绝对空间相对立,相对空间的特性依赖于与其相关的事物的性质。如果不存在空间上相关的实体,它将会消失,它原则上是可以变化的。

"绝对空间,其自身性质与一切外在事物无关,处处均匀,永不移动。"——牛顿:《自然哲学的数学原理》。

空一时

相对论用统一的空一时定义取代空间和时间的独自定义。在这一框架中,空间和时间是可以交换的,就像质量和能量一样。其结果是,在物理学中通常把世界看做是一个具有长宽高和时间间隔的四维体。空一时也可以看做是一个四维无时态空间,以对比于我们日常的把空间看做持续于时间中的某种东西的观念。许多问题,例如无限性、连续性和绝对或相对性质等,对于空间和时间都是共同的,可以用一种我们所喜欢的统一理论来处理。另一方面,尚不清楚在什么条件下空一时可取代我们思想中其他方面的时间和空间。有些哲学家争辩说,我们不能有依据空一时而非依据空间与时间的关于世界的时空经验。其他人则认为我们的经验是依据

poral experience of the world in terms of space-time rather than in terms of space and time. Others reply that our experience is in terms of space-time or of any theory that proves to be true.

"We must not forget that space-time is a space in the mathematical sense of the word." — J. J. C. Smart (ed), *Problems of Space and Time*, p. 12.

Species, see genus, form

Species chauvinism, another term for speciesism

Speciesism

A term invented by the English writer Richard Ryder in *Victims of Science* (1975), but popularised by the Australian Philosopher, Peter Singer. It refers to the discrimination which human beings exercise over non-human animals. Racism is a prejudice on the basis of race. Sexism is a prejudice on the basis of sex. Speciesism, then, is a prejudice on the basis of species. Human beings have been using animals as means, and exploiting them ruthlessly on the assumption that human beings as rational beings are morally more valuable than animals. However, many members of the human species such as children and mentally retarded persons, although not rational, are still entitled to moral consideration, simply because of their membership of the human species. Singer contends that if racism and sexism are wrong, speciesism must also be wrong. The animal liberation movement which he helped to initiate has as its main goal the removal of speciesism. Speciesism is called by other authors, species chauvinism or human chauvinism.

"Speciesism—the word is not an attractive one, but I can think of no better term, —is a prejudice or attitude of bias in favour of the interests of members of one's own species and against those of members of other species." — Singer, *Animal Liberation*, 1990, p. 6.

Specious present

Our awareness of now or the present as a momentary time interval between past and future. E. R. Clay believed that this experience of a present is not real and is actually a period of time ending at the present. The concrete individual time that we perceive is not strictly instantaneous and is never co-present with our consciousness. It is rather a recent past instead of a real present. Clay called what we perceive the specious present. James borrowed this term and used it extensively to express his view that consciousness of time is indeed a stream or a continuant. Earlier events are temporally extended and are still present in our experience of later events. The specious present includes the recent past and

空一时或其他任何证明为真的理论的。

"我们必须记住空一时是在这个词的数学意义上的空间。"——斯马特(编):《空间和时间问题》,第12页。

属

见“种”、“形式”条。

物种沙文主义

“物种主义”的另一个名称。

物种主义

为英国作家 R. 莱德在他的《科学的受害者》(1975 年)中所造的一个名词,不过,是澳大利亚的哲学家 P. 辛格使它得以流行。它指的是人类对于非人类的动物的歧视。种族主义是基于种族的偏见,性别主义是基于性别的偏见,那么,物种主义是基于物种的偏见。人类把动物用作工具,野蛮地剥夺它们,这是基于人类有理性,所以在道德上比动物更有价值这一假定。然而,人类这一物种中的许多成员诸如儿童和有精神障碍的人,虽然没有理性,但仍享有道德考虑,仅是因为他们是人类这一物种的成员。辛格争辩说,如果种族主义和性别主义是错的,物种主义也必定是错的。他所帮助倡导的动物解放运动,其主要目标就是去掉物种主义。物种主义也被其他作者称为物种沙文主义或人类沙文主义。

“物种主义——这词不那么漂亮,但我想不到更好的词——是一种袒护自己的物种成员的利益,贬损其他物种成员的利益的意见或偏见态度。”——辛格:《动物解放》,1990 年,第 6 页。

似现在

我们对于作为过去与将来之间的瞬间的“现在”或“当前”的意识。E. R. 克雷认为,这个对于当前的体验是非真实的,实际上是中止于当前的一段时间。我们所知觉的具体单个时间并非是严格瞬间的,并且从不与我们的意识同时出现。它是一个最近的过去,而不是一个真正的当前。克雷将我们所知觉到的东西称为“似现在”。詹姆斯借用这一术语,并宽泛地用它来表达这样一个思想:对时间的意识实际上是一个流或连续。过去的事件在当前延伸并且仍然呈现于我们关于后来事件的经验中。似现在包括最近的过去甚至一点点将来。过去、现在和将

even a bit of future. Past, present and future are nothing but our conceptual ascription. The term specious present is also employed by Russell and Broad, but is criticised by H. J. Paton.

"The time-series, then, of which any part is perceived by me, is a time-series in which the future and the past are separated by a present which is a specious present." —Mc Taggart, *The Nature of Existence*, sect. 344.

Speculative philosophy

[from Latin: *speculatio*, contemplation, in turn derived from *specere*: to see, to look; equivalent to Greek: *theoria*, contemplation, derived from the verb to see] Etymologically, what is speculative is theoretical, in contrast to the practical and empirical. Kant connected speculative philosophy with metaphysics, and believed that it resulted from mistakenly applying concepts to things-in-themselves rather than to empirical objects. For Kant, speculative philosophy has a pejorative sense through being concerned with the transcendent and with reality as a whole in spite of lacking the proper support of sense experience. Hegel described speculative philosophy in this sense as dogmatism, but called his own system a speculative system in another sense because it dealt with conceptual process and not because it dealt with the supersensible. It is a dialectical process in which the opposition between objectivity and subjectivity is sublated, and in which all branches of human knowledge are systematically unified to reveal the true meaning of reality and of humankind. In general, speculative philosophy employs the results of various sciences and religious and ethical experiences to derive general conclusions regarding the nature of the universe and our position in it. Although its holism and sense of system have attractions, most analytic philosophers regard speculative philosophy as purely conjectural and as being close to poetry and mysticism.

"Speculative philosophy is the endeavour to frame a coherent, logical, necessary system of general ideas in terms of which every element of our experience can be interpreted." —Whitehead, *Process and Reality*, 1929, p. 5.

Speculative philosophy of history, see philosophy of history

Speech act

A sophisticated form of the use theory of meaning elaborated by Austin in *How to Do Things with Words*. In an account of the meaning of an expression, one main factor is what the expression is used to do, and this is the speech act aspect of language use. A speech act involves actually saying in contrast to merely thinking, and in this sense to say something is to do something, to perform a linguistic act. A speech act is hence also called a linguistic act. Austin divided

来只是我们的概念描述。“似现在”这一术语也为罗素和布劳德所使用，但遭到 H. J. 帕顿的批评。

“任何部分都被我所知觉的时间系列是一个将来和过去被一个似现在的现在所分割的时间系列。”——麦克塔加特：《存在的本性》，第 344 段。

思辨哲学

[源自拉丁词: *speculatio* (沉思), 是从 *specere* (看) 这个词引申出来的; 等同于希腊词: *theoria* (沉思), 由动词“看”引申而来] 从词源学来看, 思辨的东西就是理论的东西, 相对于实践的和经验的东西而言。康德把思辨哲学与形而上学相联系, 并认为它来源于把概念误用于物自身而不是经验对象。对于康德来说, 思辨哲学具有贬义, 因为它研究那些超验之物和整个实在, 虽然它们没有感觉经验的有力支持。黑格尔把这种意义的思辨哲学描述为独断论, 但在另一种意义上, 他又把自己的哲学称为思辨体系, 因为它论述概念的过程, 而不是因为它论述超感性之物。这是一个辩证的过程, 在此过程中客观性和主观性的对立被扬弃, 所有的人类知识部门都系统地统一起来以揭示实在和人类的真实意义。一般说来, 思辨哲学应用各种科学的成果和宗教的、伦理的经验来引出关于宇宙的本性和人类在宇宙中的地位的结论。虽然它的整体主义和体系感具有吸引力, 绝大多数分析哲学家仍把思辨哲学视为纯粹猜测的东西, 接近于诗和神秘主义。

“思辨哲学是一种构造连贯的、逻辑的、必然的一般观念体系的努力, 以此体系使我们经验的每一个元素都能得到解释。”——怀特海: 《过程与实在》, 1929 年, 第 5 页。

思辨的历史哲学

见“历史哲学”条。

言语行为

奥斯汀在《如何以言行事》中阐述的意义使用论的一种精致形式。在说明一表达式的意义时, 一个主要的因素就是看该表达式是用来做什么的, 这就是语言用法的言语行为方面。言语行为实际上包含说, 以区别于单纯的思, 在这种意义上说话就是做事, 就是从事某一语言行为。言语行为因此亦称“语言行为”。奥斯汀把言语行为分成三类: (1) 以言表意的行为, 即说出某

speech acts into three kinds. First, a locutionary act is an act of saying something, which is further divided into three kinds: the phonetic act which is merely the act of uttering certain noises, the phatic act which makes a grammatical sentence, and the rhetic act which utters something with a certain sense and with a certain reference. Secondly, an illocutionary act is an act done in saying something, for example promising, questioning, suggesting or ordering. Thirdly, a perlocutionary act is an act done by saying something, saying something which will produce certain consequential effects upon the feelings, thoughts, or actions of the audience. Austin claimed that by clearly distinguishing these acts we may get rid of many traditional philosophical problems. Searle has examined and developed this doctrine on the hypothesis that speaking a language is engaging in a rule-governed form of behaviour. Most studies of speech acts focus on illocutionary acts. Speech act theory characterises the nature of communicative intentions. It is opposed to an account of meaning exclusively based on semantics and can be seen to be a branch of pragmatics.

"The form that this hypothesis will take is that speaking a language is performing speech acts, acts such as making statements, giving commands, asking questions, making promises, and so on." —Searle, *Speech Acts*, 1969, p. 18.

Speech act fallacy

An analysis which reduces the basic meaning of a statement to what a speaker does in using it. For instance, it uses the speech acts of prescribing or commending to explain moral terms, the speech act of re-asserting to explain the meaning of the word "true", and the speech act of expressing belief or giving guidance or partial assurance to explain the meaning of "probable". According to John Searle, this is a fallacy because it ignores the locutionary speech act which must precede the illocutionary act. Many words have a literal occurrence in some sentences, and understanding their meaning need not require us to consider the performance of speech acts beyond locutionary acts. This fallacy, which is similar to what Peter Geach calls ascriptivism, is linked by some philosophers to the use theory of meaning.

"The general nature of the speech act fallacy can be stated as follows, using 'good' as our example. Calling something good is characteristically praising or commending or recommending it, etc. But it is a fallacy to infer from this that the meaning of good is explained by saying it is used to perform the act of commendation." —Searle, *Speech Act*, 1969, p. 139.

Sphere of existence, an alternative expression for stage of existence

种意思的行为, 它进一步被分成三类: 发音行为, 即仅仅发出某种声音的行为; 出语行为, 它造出合乎语法的句子; 表意行为, 它说出具有某种含义和某种所指的话语。(2) 以言行事的行为, 即在说某事时所做的行为, 例如允诺, 提问, 提建议, 发命令等。(3) 以言取效的行为, 通过说话而做的行为, 说话将对听众的感情、思想和行动产生某种间接的影响。奥斯汀宣称, 通过清楚地区分这些行为, 我们可以摆脱许多传统的哲学问题。塞尔考察和发展了这一学说, 他假定: 说一种语言就是在从事某种受规则支配的行为。关于言语行为的绝大多数研究集中在以言行事的行为。言语行为理论刻画了交际意图的性质, 它反对只根据语义学来说明意义, 可以把它看做语用学的一个分支。

"这一假设将要采取的形式是: 说一种语言就是在从事言语行为, 像作陈述, 发命令, 提问, 作承诺之类的行为。" —塞尔: 《言语行为》, 1969年, 第18页。

言语行为错误

一种把陈述的基本意义还原为说者在使用该陈述时所做事情的分析。譬如, 它用规定或命令的言语行为去解释道德用语, 用重述的言语行为去解释“真”这个词的意义, 用表达信念或提供指导或部分保证去解释“可能”的意义。根据约翰·塞尔的观点, 这是一种错误, 因为它忽略了必须在以言行事的行为之前出现的“以言表意的言语行为”。许多词只是在句子的字面上出现, 但理解它们的意义并不需要我们考虑完成以言表意行为之外的言语行为。这种错误类似于P. 吉奇所说的“归属主义”, 一些哲学家把它看做与“意义的用法理论”有关。

"言语行为错误的共性可以这样来表述: 我们用‘好的’做例子, 把某个东西说成是好的, 显然就是在赞扬它、夸奖它或推荐它等等。但由此推出, 好的意义可以解释为它是被用来完成赞扬的行为, 那就错了。" —塞尔: 《言语行为》, 1969年, 第139页。

生存境界〔或译“生存领域”〕

对“生存阶段”的另一表达。

Spirit, see soul

Spirit of seriousness

Sartre's term for the belief that there is something intrinsically good in itself, which is inherent in the world as absolute value and is discoverable by men. Such a belief leads to bad faith. According to Sartre, people fall into the spirit of seriousness because they forget that values are contingent and are chosen and assigned by our own subjectivity.

"The spirit of seriousness has two characteristics: it considers values as transcendent givens independent of human subjectivity, and it transfers the quality of 'desirable' from the ontological structure of things to their simple material constitution." —Sartre, *Being and Nothingness* (tr. Barnes), 1957, p. 626.

Spiritualism

Spiritualism claims that spirit or soul rather than matter is the ultimate substance of the world. Body has only a phenomenal existence and as an expression of the reality of spirit has spirit or mind as its sole ground. In this sense, spiritualism is a synonym for idealism and is opposed to materialism. Various versions of spiritualism differ regarding how they characterise the fundamental role of spirit in the world.

"Spiritualism says that mind not only witnesses and records things, but also runs and operates them." —James, *Pragmatism and Selections from the Meaning of Truth*, 1937, p. 93.

Spontaneity

In Kant's philosophy, the theoretical aspect of freedom, corresponding to autonomy which is the practical aspect of freedom. Spontaneity is reason's active capacity, in contrast to passive receptivity. It is the absence of external determination which legislates rules for itself to synthesise appearances. Pure forms of intuition and pure concepts of understanding are all produced by the spontaneity of human reason. Kant held that spontaneity and receptivity must be combined for knowledge to be possible. Fichte's and Schelling's development of Kant's idea of spontaneity into a conception of an absolute spontaneous subject was criticised by Hegel.

"Our knowledge springs from two fundamental sources of the mind; the first is the capacity of receiving representations (receptivity of impressions), the second is the power of knowing an object through these representations (spontaneity [in the production] of concepts)." —Kant, *Critique of Pure Reason*, A50/B74.

Spontaneity / indifference

A Scholastic dichotomy involving two kinds of liberty which was also employed by Locke and Hume in discussing

精神

见“灵魂”条。

严肃的精神〔或译“假正经”〕

萨特使用的一个词，用来表示这样一种信念，即有某些东西其本身就是内在善的，它作为绝对价值而内在于世界之中，可被人发现。这样一种信念就导致“自欺”〔伪劣信念〕。在萨特看来，人们之所以产生严肃的精神，是因为他们忘记了，价值是因事而变的，是被我们自己的主体性所选择和安排的。

“严肃的精神有两个特点：它将价值视为独立于人类主体性的超验的被给予者；此外，它转变了‘值得向往者’的性质，即从事物的存在论结构转变为单纯的物质构造。”——萨特：《存在与虚无》（巴奈斯英译），1957年，第626页。

唯灵论

唯灵论宣称，世界的最终本质是精神或灵魂而不是物质。肉体只是一种现象的存在，作为精神实在的一种表现，它把精神或思想作为它的惟一基础。从这种意义上讲，它是唯心主义的同义语，并且是反对唯物主义的。唯灵论各种形式的不同在于它们是如何刻画精神在世界中的根本性作用的。

“唯灵论认为，精神不仅证明和记录事情，而且还启动和操作它们。”——詹姆斯：《实用主义和真理的意义选辑》，1937年，第93页。

自发性

在康德哲学中，它指自由的理论方面，相应于作为自由的实践方面的自律。它是与被动的接受性相对立的理性的主动性能力，即没有外部的规定，并且它自为地立法以综合现象。直观的纯形式和知性的纯概念都是人类理性的自发性所产生的。康德认为，自发性必须与接受性相结合以使知识成为可能。费希特和谢林把康德的自发性观念发展为一个绝对自发性主体的概念，这一点受到黑格尔的非难。

“我们的知识发自心灵的两种根本源泉，第一是接受表象的能力（印象的接受性），第二是通过这些表象来认识对象的能力（概念〔产生的〕自发性）。”——康德：《纯粹理性批判》，A50/B74。

自发性和无差别性

经院哲学对两类自由的二分法，洛克和休谟在讨论自由意志问题时也采用了。自发性的

the problem of free will. Liberty of spontaneity is doing what one wants or chooses to do while free from the constraints and violence of others. Liberty of indifference is having the power to do A and the power not to do A, given that the necessary conditions of each is satisfied. It is generally believed that the contradictory of spontaneity is compulsion, while the contradictory of indifference is being determined. Spontaneity is therefore compatible with determinism and according to some philosophers is not real freedom. Indifference, on the other hand, can choose between alternative courses of action and is seen by critics of spontaneity as the basis for moral responsibility. Other philosophers, however, reject the liberty of indifference and argue for the compatibility of the liberty of spontaneity with freedom and responsibility.

"There are traditional names for these two contrasting concepts of freedom: freedom defined in terms of wanting is liberty of spontaneity; liberty defined in terms of power is liberty of indifference." —A. Kenny, *Will, Freedom and Power*, 1975, p. 122.

Square of opposition

In traditional logic there are four basic propositions; A (universal affirmative, "All X are Y"), E (universal negative, "All X are not Y"), I (particular affirmative, "Some X are Y"), and O (particular negative, "Some X are not Y"). There are various logical relationships among these propositions. (1) A and E are contraries; they cannot both be true, but can both be false. (2) I and O are subcontraries; they cannot both be false, but can both be true. (3) A and O are contradictories, and so are E and I; of each pair, if one is true, the other must be false. (4) A implies I; if A is true, I must be true. Also, E implies O. The relationship of implication is also called subalternation. All these logical relationships can be presented in terms of the following diagram which is called the "square of opposition":

"The formal relations of propositions with identical terms of four forms, A, E, I, O, were represented by traditional logicians by a diagram called the square of opposition." — Mitchell, *An Introduction to Logic*, 1962, p. 32.

St. Petersburg paradox

A paradox of probability theory. Imagine gambling on the toss of a coin. If heads appears first time, you win \$1. If it does not appear until your second toss, you win \$2.

自由是指一个人做他想要做或选择做的事情, 不受其他事情的制约或妨碍。无差别性的自由是指在做 A 和不做 A 的必要条件都得到满足的情况下, 一个人有能力做 A, 也有能力不做 A。一般认为, 与自发性相矛盾的是强迫; 与无差别性相矛盾的是被决定。因而自发性与决定论相容, 有些哲学家认为它不是真正的自由。而另一方面, 由于无差别性可以在两个行动方针中做出选择, 所以被自发性的批判者看成是道德责任的基础。不过, 另一些哲学家拒斥无差别性的自由这一概念, 认为自发性自由与自由和责任是相容的。

"这两个相对照的自由概念各有传统名称: 根据愿望来界定的自由是自发性的自由; 根据能力来界定的自由是无差别性的自由。"——肯尼:《意志、自由与力量》, 1975 年, 第 122 页。

对当方阵

传统逻辑中有四种基本命题: A (全称肯定, "所有 X 是 Y"), E (全称否定, "所有 X 不是 Y"), I (特称肯定, "有些 X 是 Y") 和 O (特称否定, "有些 X 不是 Y")。在这些命题之间存在不同的逻辑关系。(1) A 和 E 是反对关系: 它们不能同真, 但可以同假。(2) I 和 O 是下反对关系: 它们不能同假, 但可以同真。(3) A 和 O 是矛盾关系, E 和 I 也是如此: 对于每一对命题来说, 如果一个为真, 另一个必定为假。(4) A 蕴涵 I; 如果 A 真 I 必真。同样, E 蕴涵 O。蕴涵关系亦称差等关系。所有这些逻辑关系都可以用下述图解来表示, 这个图叫做"对当方阵":

"传统逻辑学家用一个叫做对当方阵的图来表示具有相同词项的四类命题 A, E, I, O 之间的形式关系。"——米切尔:《逻辑导论》, 1962 年, 第 32 页。

圣彼得堡悖论

概率论的一个悖论。猜测硬币抛掷的赌博。如果头像第一次出现, 你赢 1 美元。如果在你第二次抛掷时它又出现, 你赢 2 美元。除非反面向

Your potential winnings double each time tails turns up and you do not win. Your gamble will stop only when heads appears. How much should you expect to win by gambling according to these simple rules and how much should he be willing to pay for a chance to play? The surprising answer, an infinite amount, is derived from the series of $(1/2) + (2 \times 1/4) + (4 \times 1/8) \dots$ which has an infinite sum. But this expected return seems unreasonable and has been used to argue against using infinite utilities in decision theory. The paradox is so called because it first appeared in a memoir by Daniel Bernoulli in the *Commentarii of the St. Petersburg Academy*.

"The St. Petersburg paradox arises out of a game in which Peter engages to pay Paul one shilling if a head appears at the first toss of a coin, two shillings if it does appear until the second, and, in general, a $r-1$ shillings if no head appears until the r th toss."—Keynes, *A Treatise of Probability*, 1929, p. 316.

Stage of existence

Also called sphere of existence. A stage is generally a phase of development or a moment in an evolutionary process. But for Kierkegaard, a stage is a view about the possibility of life or of a way of life. He mainly distinguishes three kinds of stages: the aesthetic stage, in which one is self-centred and considers life to be a matter of sensuous pleasure; the ethical stage, in which one becomes conscious of being a part of a community; and the religious stage, in which one recognises that one's life has a relation to the absolute. The religious stage is in turn divided into Religiousness A and Religiousness B. Each stage is an enclosed world, an independent sphere of life. An aesthetic individual concentrates on enjoying life. An individual in the ethical stage takes a sense of responsibility and duty as the meaning of life. In Religiousness A, an individual assumes an essential relationship to the eternal, and in Religiousness B, the individual becomes eternal. Kierkegaard believed that in moving from the aesthetic stage to the ethical stage and from the ethical stage to the religious stage, there is an ascent. Each stage in turn aims at something higher in humanity. However, he did not think that one stage will inevitably develop into another stage, although it is possible for one to leap from one to another. The relationship between the aesthetic and ethical stages is discussed in *Either / Or*, while the relationship between the ethical and religious stages is most clearly explicated in *Fear and Trembling*.

"The different existence-stages rank according to their relation to the cosmic in proportion to their having the cosmic inside or outside themselves, yet not in the sense that the cosmic should be the highest."—Kierkegaard, *Concluding Unscientific Postscript to Philosophical Fragments* (trans. by Hong and Hong), 1992, I, p. 520.

上时你不赢,你可能的赢额每次都会是翻倍。而只有在头像出现时你才会停止赌博。那么,按照这些简单的规则,你期望通过赌博赢多少钱?应赢多少钱才足以胜算?答案是“一个无限的量”,这个惊人的结果来自 $(1/2) + (2 \times 1/4) + (4 \times 1/8) \dots$ 这样一个系列,这是一个无限的总量。但是,这种期望的赢额似乎是不合理的,而且也被用于反对在决定论中使用无穷功利。之所以如此称谓这个悖论,是因为它第一次出现在D.伯努利在《彼得堡学院评论》所写的一篇回忆录中。

“圣彼得堡悖论源出于一个游戏:彼得允诺,如果保罗第一次抛掷硬币时头像出现,就付他一先令,如果第二次出现就付两先令,总而言之,如果直到第 r 次抛掷时头像才不出现,就付 $r-1$ 先令。”——凯恩斯:《论概率》,1929年,第316页。

生存阶段

也叫作“生存境界”。一般说来,一个阶段指发展中的一个状态或进化过程中的一个时期。但对于克尔凯郭尔来说,一个阶段是对于生活可能性或生活方式的一种看法。他区分了三种主要的阶段:感性的(aesthetic,一些人译为“美学”的,在这里似乎欠妥)阶段,在其中人以自我为中心,将生活视为一桩追求感性快乐的事情;伦理的阶段,在其中人意识到自己是社团的一部分;宗教的阶段,在其中人认识到自己的生活与绝对者有关系。宗教阶段又被分为第一种宗教状态(Religiousness A)和第二种宗教状态(Religiousness B),每一个阶段都是一个封闭的世界和一个独立的生活境界。感性的个人只知享受生活。伦理阶段的个人则将责任与义务感作为生活的意义。在第一种宗教状态中,个人承担着与永恒者的根本关联,而在第二种宗教状态中,个人成为永恒的。克尔凯郭尔相信,从感性阶段到伦理阶段,从伦理阶段到宗教阶段,是在上升。每个阶段都各自以某种更高的人性为目标。然而,他并不认为一个阶段会不可避免地发展到另一个阶段,尽管人从一个阶段跳跃到另一个阶段是可能的。《非此即彼》讨论了感性与伦理阶段的关系,《恐惧与战栗》则最清楚地阐释了伦理与宗教阶段的关系。

“不同的生存阶段按其喜剧因素的关系而排成序列,即按它们本身的内部和外部所具有的喜剧因素的比例而排序;但这并不意味着喜剧形态是最高级的。”——克尔凯郭尔:《关于(哲学片断)的非科学的最后附言》(洪夫妇英译),1992年,第一卷,第520页。

Standing sentence, see occasion sentence

State

A set of organised institutions operating in a territory with a substantial population composed of its citizens or subjects. It has a legal system to regulate the activities of society and to reconcile conflicting claims of individuals and groups belonging to it. The legal system is backed by a monopoly of legitimate coercion. In its positive functions, a state promotes welfare and justice for its citizens. In its negative functions, a state defends the integrity of its territory from foreign invasion, keeps order and maintains the security of its citizens. A state recognises the equal sovereignty of other states and enters inter-state relations subject to international law. There are various theories about the origin and nature of the state. Anarchism denies the need for the coercive power of the state and argues for the limitation of the state's functions. Social contract theorists justify the state in terms of the benefits of security and freedom offered by civil society in contrast to the impotence and misery of an actual or hypothetical state of nature. Communitarians claim that individuals are moulded by the state. Individualists and holists disagree whether the existence, nature and actions of the state can be reduced to those of its individual members.

"We should say that a state is a group of persons who have supreme authority within a given territory or over a certain population."—Wolff, *In Defense of Anarchism*, 1970, p. 3.

State of affairs

[German: *Sachverhalt*] Wittgenstein's term for the combination of objects or things in a determinate way. Its structure is determined by the possible ways in which the objects can be combined. States of affairs are independent of one another, and facts comprise their existence or non-existence. The totality of states of affairs constitutes the world. States of affairs are on the side of the world rather than on the side of language. They are the fundamental picturable items corresponding to elementary propositions in language.

"In a state of affairs objects fit into one another like the links of a chain."—Wittgenstein, *Tractatus*, 2.03.

State of nature

In social contract theory, the actual or hypothetical natural human condition prior to entry into organised civil society. The concept has been a powerful analytical tool in modern political philosophy in justifying political authority and in explaining human rights. Different philosophers make different use of the state of nature. For Hobbes, it is a brutal state of continual of war of all against all. There is neither peace

标准句子

见“场合句子”条。

国家

在一拥有由它的公民或臣民构成大量人口的领土内运行的一套有组织的机构及其制度。它有一个法律体系控制社会的活动和调解属于它的个人和集团的冲突的要求。这一法律体系受到独占的合法强制的支持。就国家的积极功能而言,它为它的公民促进福利和公正。就国家的消极功能而言,它保卫其领土完整不受外来侵犯、维持秩序和维护它的公民的安全。一个国家承认其他国家的平等的主权,并加入受国际法约束的国与国的关系中。有关国家的起源和本质有各种理论。无政府主义否认需要国家强制的权力,并争论说要限制国家的功能。社会契约论者论证国家合理性的依据的是市民社会提供的安全和自由的益处,这种益处与实际或假设的自然状态的无能和苦难形成对照。社群主义者声称个人是由国家塑造的。个人主义和整体主义在国家的存在、本质和行为是否能归结为它的个体成员的存在、本质和行为这一问题上存在分歧。

“我们应该说,国家是在既定的领土内或对于一定的人口拥有最高权力的一群人。”——沃尔夫,《为无政府主义辩护》,1970年,第3页。

事态

[源自德文 *Sachverhalt*] 维特根斯坦用来说明对象或事物以一定方式结合的术语。它的结构由诸种可能将对象结合起来的方式确定。事态是彼此独立的。它们的存在或不存在构成了事实。事态的总体构成世界。事态处在世界的一边,而不是处在语言的一边,它们是对应于语言中基本命题的基础性的可描绘的东西。

“对象在事态中像链环一样相互连接。”——维特根斯坦:《逻辑哲学论》,2.03。

自然状态

在社会契约论中,实际或假设的人类的自然状况先于进入有组织的市民社会。在近代政治哲学中,自然状态这一概念一直是论证政治权力的合理性和解释人权的强有力的分析工具。不同的哲学家对自然状态有不同的用法。在霍布斯那里,它是连绵不断的、一切人反对一切人的战争的野蛮状态。既不存在和平,也不存在

nor any reasonable way of solving conflicts. To escape, human beings contract with an all-powerful sovereign to give up their natural right to whatever they want in return for stability and protection. For Locke, the state of nature is governed by the law of nature and is more inconvenient than brutal. It lacks established law and has neither impartial judges nor the use of legitimate force in enforcing the law. Our rational desire to seek better protection and impartial enforcement of natural rights leads human beings to form a political or civil society through a unanimous contract and to entrust a government with legislative, executive and judicial powers. Rousseau claimed that human beings in the state of nature are noble savages, whose nature is perfected, and possibly corrupted, by the formation of civic society. For Hegel, society constitutes the nature of human beings rather than human being constituting the nature of society.

"The state of nature has a law of nature to govern it, which obliges everyone. And reason, which is the law, teaches all mankind who will but consult it, that being all equal and independent, no one ought to harm another in his life, health, liberty, or permission."—Locke, *Two Treatises on Government*, II, 2, 5.

Statement / proposition

Statements are usually defined as sentences which state (that is assert or deny) something. "Statement" and "proposition" are widely treated as synonyms, with both distinguished from "sentence". But logical positivists draw a distinction between statements and propositions. Suppose that a proposition must be both meaningful and the bearer of truth and falsity and that the verification principle can only be used to test propositions (not sentences which are neither true nor false). There would be no point in employing the principle to distinguish meaningful from meaningless propositions because propositions are by definition verifiable and meaningful. To cope with this, Logical positivists claim that although all indicative sentences are statements, not all of them are propositions. Unlike propositions, indicative sentences might be meaningful or not meaningful. All indicative sentences are statements, but only those which are meaningful according to the verificationist theory of meaning are propositions. Thus, propositions become a sub-class of statements, namely, those statements which are meaningful. The principle of verification is a criterion for determining whether an indicative sentence expresses a propositional or a non-propositional statement.

"To say that indicative sentences mean propositions is indeed legitimate, just as it is legitimate to say that they express statements."—Ayer, *Language, Logic and Truth*, 1946, p. 9.

解决冲突的合理的方法。为了摆脱这种状态,人们与一个最强大的主权者订立契约,放弃他们想要的不管是什么样的自然权利以换取安定和保护。在洛克看来,自然状态由自然法所支配,它比野蛮状态更不方便,它缺少制定的法律,而且既没有公正的法官,也没有使用合法的力量来执行法律。我们寻求更好的保护和公正实施自然权利的理性要求,导致人们通过一致同意的契约形成一个政治的或市民的社会,并赋予政府以立法、行政和司法权。卢梭认为,自然状态下的人是高尚的未开化的人,其本性是完美的,并有可能被市民社会形态所腐蚀。在黑格尔看来,社会构成人的本质,而不是人构成社会的本质。

"自然状态有自然法支配它,自然法束缚着每一个人。而理性,也就是自然法,告诉所有意欲遵从而不是与它协商的人,所有的人都是平等和独立的,任何人都不应伤害他人的生命、健康、自由或意愿。"—洛克:《政府论两篇》, I, 2, 5。

陈述/命题

陈述通常被定义为陈述了(即肯定或否定了)某事的语句。"陈述"和"命题"被广泛地当成同义词,都与"语句"有区别。但逻辑实证主义者在陈述和命题之间作出了区分。假设一命题必须既是有意义的,又要承载真和假,证实原则只能用来检验命题(而不是语句,它们既非真又非假)。若要使用此原则来区分有意义和无意义的命题,那是不得要领的,因为命题按定义就是可证实和有意义的。与此相应,逻辑实证主义者认为,虽然所有的指示性语句都是陈述,但并非它们全都是命题。与命题不同,指示性语句可能是有意义的或无意义的。所有的指示性语句都是陈述,但只有那些根据意义的证实理论为有意义的陈述才是命题。因此,命题成了陈述的一个子集合,即是说,它们是有意义的陈述。证实原则是确定指示性语句表达了命题性陈述还是非命题性陈述的标准。

"说指示性语句意指命题确实是合理的,就像说它们表达了陈述是合理的一样。"—艾耶尔:《语言、逻辑和真理》, 1946年,第9页。

Stimulus meaning

For Quine, the stimulus meaning of a sentence is given when we describe the kind of stimulus which would prompt assent to it. If all speakers assent to a sentence in any circumstance in which it arises, that sentence is stimulus analytic; if two sentences are assented to in just the same circumstances, they are stimulus synonymous. Generally, the stimuli that prompt people's assent to an occasion sentence are the same, but they vary from person to person in the case of standing sentences. This is one major argument by which Quine claims that the facts about stimulus meaning do not determine a unique correct translation manual, and hence that translation is indeterminate.

"The stimulus meaning of a sentence for a subject sums up his disposition to assent to or dissent from the sentence in response to present stimulation."—Quine, *Word and Object*, 1960, p. 33.

Stipulative definition

A definition which gives a particular meaning to a new expression, or a new meaning to an established term. It is provided to indicate how one intends to use the term in order to improve clarity and precision of communication or discussion. It is generally expressed in something like the following form: "By the term X what I mean here is...". or "I shall use this word to mean so-and-so". It does not imply that the word has been used by anyone else to mean this, in contrast to lexical definition which reports what people in general mean by the word. Sometimes it is necessary for scholars and scientists to characterise the meanings of words suit the task at hand.

"By 'stipulative definition' I mean establishing or announcing or choosing one's own meaning for a word." —R. Robinson, *Definition*, 1950, p. 19.

Strategic action

For Habermas, a model of action, in contrast to communicative action, in which the participants direct their actions through egocentric calculation of utility. Each agent seeks appropriate means to achieve an end with a favourable outcome for himself. Strategic action is not reciprocal and is not performed on the basis of mutual understanding. In communicative action, participants harmonise their respective plans on the basis of having a common understanding of the situation and make claims that all concerned can accept as valid. The distinction between strategic action and communicative action provides the framework by reference to which Habermas seeks to explain a wide range of social phenomena.

"Strategic action is distinguished from communicative actions under common conditions by the characteristic that deciding between possible alternative choices can in principle be made monologically: that means, *ad hoc* without reaching a

刺激意义

在奎因看来,当我们描述一种赞同某个句子的刺激时,我们就得到了这个句子的刺激意义。如果所有的说者都同意在任何情况中出现的某个句子,那么这个句子就是分析性刺激;如果两个句子在同样的情况中得到了赞同,那么它们的刺激就是同义的。一般来说,促使人们赞同某个场合句子的刺激是相同的,但它们在标准句子的情况中却是因人而异的。这就是奎因提出的主要论证,他认为,有关刺激意义的事实并不能确定惟一正确的翻译手册,因而翻译是不确定的。

"句子对主体的刺激意义,根本在于他在对目前刺激的反应中赞同或不赞同这个句子的态度。"——奎因:《词与物》,1960年,第33页。

规定定义

给一新表达式以特定的意义,或给一已有词项以新意义的定义。它旨在表明:人们打算使用该词项以改善交流或讨论的明晰性和精确性。它通常以类似下述形式的方式表达:"所谓词项X,我这里是指……"或"我将用这个词意指如此这般的情形",这并不意味着该词已被任何其他入用来意指这一点。规定定义与字典定义形成对照,后者是对人们通常所理解的该词意义的报道。对于学者和科学家来说,有时有必要限定词语的意义以适应手边工作的需要。

"所谓'规定定义',我是指为一个词语确立或宣布或选定一个人自己的意义。"——罗宾逊:《定义》,1950年,第19页。

策略行为

哈贝马斯用来表示一种行为模式的词,与"交往行为"相对而言;在这种行为中,参与者通过以自我为中心的利益计算来指导其行为。每一个行为者都寻求达到某个目标的合适手段,以产生对自己的最大利益。策略行为不是相互需要的,也并不基于相互理解的基础之上。在交往行为中,参与者对于形势有共识,并在此基础上协调各自的计划,使所有相关者都能接受之。策略行为与交往行为的区别为哈贝马斯提供了一个解释广泛的社会现象的构架。

"在一般情况下,"策略行为"与"交往行为"的区别在于,面对不同的选择可能,前者的决定能够在原则上以独白的方式作出,即以无需取得一致的方式作出;实际上也只能以这种方式作出决定,因为选择规则和束缚每个个别参与者的准则已达到了先在的和谐。"——哈贝

greement, and indeed must be made so, because the rules of preference and the maxims binding on each individual partner have been brought into prior harmony.” —Habermas, *Theory and Practice* (tran. Viertel), 1974, p. 151.

Straw man fallacy

An argument against a position which substitutes another view for the opponent's actual stance and gives the impression that the actual position has been refuted. The position that is misleadingly ascribed generally sounds more unlikely than the actual position and is hence more easily exposed to criticism. Because the alleged position is not what the opponent holds and is weaker than the actual position, it is like a straw man that can be far more easily overcome than a real man.

“The best and purest cases of the straw man fallacy ... go like this. I argue for a certain position, ... you then try to refute me, not by arguing against my conclusion, but against an exaggeration.” —Richards, *The Language of Reasons*, 1978, p. 43.

Stream of consciousness

A metaphor introduced by William James to describe the character of consciousness. Consciousness is not made out of units, but is a streamlike process. Past, present and future are our conceptual ascription. Because any awareness of “present” is seen as an awareness of a recent past, the stream of consciousness is associated with the notion of a specious present.

“Consciousness ... does not appear to itself chopped up in bits. ... a ‘river’ or ‘stream’ are the metaphors by which it is most naturally described.” —W. James, *Principles of Psychology*, 1.9, 239.

Strict conditional, see strict implication

Strict identity

Butler initiated a distinction between two meanings of identity, that is, identity in the strict sense, and identity in a loose and popular sense. That A is strictly identical with B means that whatever can be said of one can be said of the other. That is, A and B are identical in all possible worlds. Identity or sameness in our daily conversation only requires that two things are identical in certain parts or aspects. A man yesterday is identical with this man today. But this is not a strict identity, for the man today has some characteristics which were not possessed by the same person yesterday. For instance, yesterday the person was sick, while today he is well; yesterday he was single, but today he is married.

“Strict identity is governed by a principle that is called the Indiscernibility of Identicals. This says that if a is strictly

马斯:《理论与实践》(菲尔泰英译), 1974年, 第151页。

稻草人谬误

反对某种见解的论证, 用该见解替换论敌实际主张的另一种见解, 并给人们留下印象, 似乎论敌的实际见解已被驳倒了。诱使人错误地归属于论敌的见解比论敌实际主张的见解通常听起来更不可能成立, 因此更易受到批评。既然所提到的见解并不是论敌所主张的, 并且比论敌的实际主张更弱, 于是该见解就像一个稻草人, 打倒它要比打倒一个真正的人容易得多。

“稻草人谬误最好和最纯粹的情形……是这样: 我论证某种见解, ……你然后试图反驳我, 但并不是反驳我的结论, 而是反驳某种言过其实的夸张说法。”——理查兹:《理性的语言》, 1978年, 第43页。

意识流

由W. 詹姆斯引入的一个隐喻, 用来描述意识的特点。意识并不由众多单位组成, 而是一个像流一样的过程。过去、现在和未来是我们的概念归类。由于任何对“现在”的意识都被看做是对最近过去的意识, 意识流就与一个似现在观念联系起来。

“意识……并不对自身呈现为被切开的碎片。……一条‘河流’或‘水流’能够最自然地描述意识的隐喻。”——詹姆斯:《心理学原理》, 第一卷, 第9章, 第239页。

严格条件句

见“严格蕴涵”条。

严格同一性

巴特勒区分了两种意义上的同一性, 亦即严格意义上的同一性和宽松或通俗意义上的同一性。A 严格同一于B 意味着可以对其中一个所说的东西, 也可以对另一个说。也就是说, A 与B 在所有的可能世界都是同一的。我们在日常谈话中所谈论的同一性或“相同性”只要求两个事物在某些部分或方面同一。昨天的一个人同一于今天的这个人。但这并不是一个严格同一性, 因为今天的这个人可能具有某些昨天的同样一个人所不具有的特征。例如, 昨天这个人可能生病了, 而今天他又好了; 昨天他是单身, 而今天他结婚了。

“严格同一性被一个称为等同物的不可分辨性原则所支配。这就是说, 如果a 严格同一于

identical with b, then a and b have exactly the same properties.” —Armstrong, *Universals*, 1989, p. 3.

Strict implication

In order to avoid the paradoxes of material implication, C. I. Lewis introduced the notion of strict implication. One proposition implies another (If p then q) in the strict sense of the word if and only if it is impossible that p should be true and q false, that is if the statement “p is true and q is false” is inconsistent. Lewis claimed that strict implication was the relation which justified inference from the premises to a conclusion in a deductive argument. Hence it can avoid the paradoxes of material implication and does justice to our ordinary notion of implication. He therefore developed a propositional calculus on the basis of the notion of strict implication in order to replace Russell's propositional calculus which was established on the basis of the notion of material implication. However his definition of strict implication also implies paradoxes; an impossible proposition implies every proposition; and a necessary proposition is implied by every proposition. Hence, just as the term material conditional was proposed to replace the term material implication, it has been suggested that strict conditional should replace strict implication.

“If p implies q, then it is not the case that p is true and q false... this is the main distinction between strict implication and material implication.” —Lewis and Langford, *Symbolic Logic*, 1932, p. 134.

Strife and love

[Greek: *neikos*, strife; *philia*, love or friendship] Two principles of movement in the cosmology of the Greek philosopher Empedocles. By analogy with human emotions, Strife is the power to dissolve or separate the four basic elements: fire, air, water and earth, and Love is the power to form and maintain their union. Both principles are eternal. They have no perceptible qualities of their own, but are detectable by their effects. They alternately dominate the cosmos as a whole, making the cosmic system a never-ending cycle. When Love is in control, all elements are fused uniformly, but when Strife rules, the elements are at war with each other. These two principles were meant not only to account for process and change in the natural world, but also to work in social relationships.

“These things never cease from continual shifting, at one time all coming together, through Love, at another each borne apart from the others through Strife.” —Simplicius, *Physics*, 158. 7.

Structural ambiguity

Also called syntactical ambiguity. The ambiguity arises from the grammatical structure of a language, that is, from the different ways in which words in a sentence of that lan-

b, 则 a 与 b 具有完全相同的特性。”——阿姆斯特朗:《普遍》, 1989 年, 第 3 页。

严格蕴涵

为了避免实质蕴涵悖论, C. I. 刘易斯引入了严格蕴涵概念。一命题在蕴涵一词的严格意义上蕴涵另一命题(如果 p 则 q), 当且仅当不可能 p 真而 q 假, 即陈述“p 真 q 假”是不一致的。刘易斯断言, 严格蕴涵是确证演绎论证中从前提到结论的推理合法的那种关系。所以它能避免实质蕴涵悖论, 并且公正对待我们日常的蕴涵概念。他由此发展了以严格蕴涵概念为基础的命题演算, 以便代替罗素建立在实质蕴涵概念基础上的命题演算。不过, 刘易斯的严格蕴涵定义也蕴涵着悖论: 不可能命题蕴涵每一个命题; 必然命题被每一命题所蕴涵。所以, 正像有人提议用“实质条件句”一词替换“实质蕴涵”一样, 一直有人认为应该用“严格条件句”去代替“严格蕴涵”。

“如果 p 蕴涵 q, 那么并非 p 真而 q 假……这是严格蕴涵与实质蕴涵之间的主要区别。”——刘易斯和兰根福特:《符号逻辑》, 1932 年, 第 134 页。

恨与爱

[源自希腊文 *neikos* (恨); *philia* (爱或友谊)] 希腊哲学家恩培多克勒宇宙论中的两个运动原则。与人类情感相似, 恨是分解或分离四元素(火, 气, 水, 土)的力量, 而爱则是构成和维持它们统一的力量。两个原则都是永恒的。它们自身并无可感的性质, 但可从它们作用的结果上去分别。它们交替主宰宇宙整体, 使宇宙系统成为一个永不停止的循环。当爱处于控制地位时, 一切元素都协调一致; 当恨统治时, 各元素彼此争斗。这两种元素不仅叙述了自然界的进程和变化, 而且也在社会关系中起作用。

“这些事物从未停止过变化, 某一时它们由于爱而走到一起, 另一时它们又通过恨而彼此分开。”——辛普里丘:《物理学》, 158. 7。

结构模糊性

也称作“句法的模糊性”。这种模糊性出自语言的语法结构, 即出自这种语言的句子中语词之间有意义地相互联系的不同方式。这种模

guage can be related meaningfully to each other. This sort of ambiguity is ascribed to a sentence or statement, and is in contrast to semantic or lexical ambiguity which is ascribed to a word and arises from the multiplicity of senses associated with a single word. The grammatical relations which most often produce structural or syntactical ambiguity include misplaced modifiers, loosely applied adverbs, elliptical constructions and omitted punctuation. For instance, the statement that "The fat businessman's son is nice" is structurally ambiguous for the adjective "fat" can be taken to modify either "businessman" or "the businessman's son"

"A denoting expression is called structurally ambiguous if there is a model with respect to which it is ambiguous." — Montague, *Formal Philosophy*, 1974, p. 209.

Structural linguistics

The school of modern linguistics which holds that language is a system or structure of elements that happen to occur in a single speech community at a particular time. Each language is a unique system without any presumption about other languages. The job of linguists is to describe the structure of a given language, namely, to analyse the relations between elements which compose the structure, such as phonemes, morphemes and phrases. The founder of structural linguistics was Ferdinand de Saussure, who had great influence through his posthumously published *Cours de Linguistique Generale*, although he used the word "system" rather than "structure". In criticising the diachronic perspective of nineteenth century comparative grammar, Saussure claimed that language has a systematic aspect. It embodies laws of equilibrium which operate on its elements and which yield a synchronic system. Structural linguistics separates linguistics from other disciplines and renders it a special science. Other major expositors of structural linguistics include Bloomfield (*Language*, 1931) and Zellig Harris (*Methods in Structural Linguistics*, 1952). Through criticism of structural linguistics, Chomsky developed his transformational-generative linguistics. Chomsky believes that the wholeness of linguistic structures is based on the laws of transformation. Hence, linguistics should study the "creative" aspect of language, together with its synchronic aspect.

"It is extremely interesting that, despite the very strong arguments for keeping linguistic structuralism within synchronic confines, present-day linguistic structuralism, as represented by the work of Zellig Harris, and above all, his pupil Noam Chomsky, has, as regards syntax, a clearly 'generative' orientation." — Piaget, *Structuralism*, 1971, p. 81.

Structural property

A property of a thing which results from the structure of the thing or a system. If a relation R is symmetric, then ev-

糊性与句子或陈述有关,这相对于“语义的”或“指示的”模糊性而言,后者与语词有关,出自与单个语词有关的意义的多样性。最常产生结构的或句法的模糊性的语法关系,包括误换修饰词,随意地运用副词,省略的结构,省去的标点符号等等。例如,“胖商人儿子很好”就是结构上模糊的,因为形容词“胖”既可以用于修饰“商人”也可以用于修饰“商人的儿子”。

“如果某个指称表达式在模型上是模糊的,那么这个表达式就被称作是在结构上模糊的。”——蒙塔古:《形式哲学》,1974年,第209页。

结构语言学

当代语言学的一派,它认为语言是由一些因素组成的系统或结构,这些因素碰巧在某个时间出现于一个单独的语言共同体之中。每一个语言都是一个独特的系统,并不预设其他的语言。语言学家们的工作就是去描述一个既定语言的结构,也就是去分析组成结构的众因素之间的关系,比如音素、词素和词组。结构语言学的创立者是F. de 索绪尔。他死后出版的《普通语言学教程》具有极大的影响,尽管他使用的是“系统”而不是“结构”这个词。在批判19世纪语法比较研究的历时性观点时,他提出语言具有系统的方面。语言体现了因素之间的平衡法则,而这些法则产生出了共时的系统。结构语言学把语言学家与其他学科区分开来,使语言学成为一门专门的科学。结构语言学的其他阐述者包括布龙菲尔德(《语言论》,1931年)和Z. 哈里斯(《结构语言学方法》,1952年)。通过对结构语言学的批判,N. 乔姆斯基发展出了他的转换—生成语言学。乔姆斯基相信整个语言结构基于转换或变形规则。因此,语言学应该研究语言的“创造性的”方面,当然也包括语言的共时的方面。

“极为有趣的是,尽管有将语言学的结构主义保持在共时性范围内的强有力的论证,当今以Z. 哈里斯、特别是他的学生N. 乔姆斯基为代表的语言学结构主义却在句法研究方面有了清晰可见的‘生成的’倾向。”——皮亚杰:《结构主义》,1971年,第81页。

结构特性

来自事物结构或系统的一种事物特性。如果一种关系R是对称的,那么每种具有与R相

ery relation having the same structure as R will also be symmetric. This property of being symmetric is a structural property because it relies only on the structure of the relation and is not affected by a change in the items within the structure. The structure itself is a structural property.

"In general we say a property of n -place relations is a (n -place) structural property provided it depends simply on the structure, i. e. provided it is preserved under isomorphism." —Carnap, *Introduction to Symbolic Logic and its Applications*, 1958, p. 141.

Structural violence

A term for social and institutional injustice, such as apartheid, rather than conflict and injury caused by force. Structural violence is exemplified by unfair laws or entrenched customs which deny certain groups in the community fair access to the available social, economic, political or cultural opportunities. Structural violence does not necessarily involve physical force. It is called violence, which ordinarily means the illegal use of physical force, to justify rebellion against it by appeal to the right to self-defence. Structural violence and institutional violence are sometimes used interchangeably, but the latter is more properly restricted to legal violence. Institutional violence has often been used to maintain structural violence.

"Structural violence is a name for what would more correctly be called social injustice." —Teichman, *Pacifism and the Just War*, 1986, p. 2.

Structuralism

The basic claim of structuralism is that all social phenomena, no matter how diverse their superficial appearance, are internally connected and organised according to some unconscious patterns. These internal relations and patterns constitute structures, and uncovering these structures is the object of human studies. Generally, a structure is characteristically whole, transformational, and self-regulatory. Structuralism is a methodology which emphasises structure rather than substance, and relation rather than things. It holds that things exist only as elements of a signifying system. Structural methodology originated in Saussure's structural linguistics, which describes language as a rule-governed social system of signs. In the 1960s, the French anthropologist Claude Lévi-Strauss extended this methodology not only to anthropology (anthropological structuralism), but indeed to all signifying systems. Lévi-Strauss is generally regarded to be the founder of modern structuralism. Through his work, structuralism became a major intellectual trend in Western Europe, especially France, and greatly influenced the study of the human sciences. Foucault was influenced by this methodology in his radical reconstruction of intellectual history. Lacan relied on both Saussure and Freud in his development of

同结构的关系,也同样是对称的。这种对称的特性就是结构特性,因为它只是依赖于这种关系的结构,并不受这个结构中内容变化的影响。这个结构本身就是一个结构特性。

"我们通常说,一种 n 位关系特性就是仅仅依赖于结构的 (n 位) 结构特性,即它保存着一种同型性。"——卡尔纳普,《符号逻辑及其应用导论》,1958年,第141页。

结构性暴力

这一术语指的是社会和制度的非正义,例如种族隔离,而不是指由暴力引起的冲突和伤害。结构性暴力是以不公正的法律或顽固的习俗为例证的,而它们否认社会中某些群体可以公平得到那些可以得到的社会、经济、政治或文化方面的机会。结构性暴力无须包括人身暴力。它被称为暴力(这通常意指非法使用人身暴力)是要表明以要求自卫权利去反抗它是正当的。结构性暴力有时与"制度性暴力"这一术语交替使用,但后者被更严格地限于法律方面的暴力。制度性暴力常常被用来维护结构性暴力。

"结构性暴力是一个应更正确地称之为社会非正义的名词。"——泰西曼,《和平主义和正义战争》,1986年,第2页。

结构主义

结构主义的基本主张是,所有的社会现象,不管其表面显得如何多样,它们都是内在相关联的,按照某些未被意识到的样式组织起来的。这些内在关系和样式构成了结构,而揭示这些结构就是人文研究的目的。一般说来,一个结构具有整体、转换和自身调整的特性。结构主义是一种方法论,强调结构而非实体、关系而非事物。它主张事物仅作为一个意指系统的元素而存在。结构主义的方法论源于索绪尔的结构主义语言学,这种语言学将语言描述为服从于规则的社会符号系统。60年代,法国人类学家C. 列维-斯特劳斯不仅将此方法运用到人类学(人类学的结构主义),而且延伸到所有的意指系统。列维-斯特劳斯被普遍看做是当代结构主义的创立者。通过他的工作,结构主义成为西欧、特别是法国的主要思潮,极大地影响了人文科学的研究。福柯彻底重建思想史的努力受到了这一方法论的影响。拉康在他对于心理分析的发展(心理结构主义)中既依据索绪尔,也依靠弗洛伊德。阿尔杜塞将这个方法论用于对马克思主义的分析(结构的马克思主义)。此方法也用于数学。相对于以分离化的方式来研究数学

psychoanalysis (psycho-structuralism). Althusser applied the methodology to the analysis of Marxism (structural Marxism). The method is also applied to mathematics. In contrast to the compartmentalisation characteristic of other approaches to mathematics, structuralism claims to recover unity through isomorphisms in different branches of mathematics. Structuralism became a major methodological movement, although its doctrines and interpretations of its crucial term "structure" varied in different fields. In many areas, structuralism has been superseded by post-structuralism.

"Structuralism is essentially a method, with all this term implies: it is technical, involves certain intellectual obligations of honesty, views progress in terms of gradual approximation." — Piaget, *Structuralism*, 1971, p. 137.

Structured violence

Bernard Williams drew a distinction between structured violence and unstructured violence among official violent acts in his paper "Politics and Moral Character". Only the state can be justified in performing acts of structured violence, such as judicial execution, regular military operations and the application of legal force by the police. No private citizen is lawfully allowed to do them, and it would not even make sense to say that a private person performed some of them. Acts of unstructured violence may be done by a political leader, but in accordance with law and for the sake of defending the national interest. Acts of this sort especially appear in international relations, which generally are less structured than relationships within a society. Unstructured violence is the topic of public morality.

"It may be said that structured violence constitutes acts which none but the state could even logically perform." — Williams, in Hampshire (ed.), *Public and Private Morality*, 1978, p. 71.

Style

The manner in which a thing is made or done. Style is generally ascribed only to artefacts rather than to nature. The style of a work of art is a complex consisting of ways of creating, modifying, selecting, and interpreting the material. Style manifests the peculiarity and personality of an artist, and directs the audience to the salient features of the work they are appreciating. The same content can be presented with different styles, and different artists are identified by their different styles. Styles can characterise works of a period, tradition or school as well as those of an individual artist. Some philosophers are puzzled why in some cases critics can articulate the complex character of a style only in retrospect.

"A style is a way of doing things; but what we have in nature is just the way things happen. The arts are means of expression, and style in art plays the part in expression that

的其他方法。结构主义要通过不同数学分支之间的同型性来重现其统一性。结构主义成为了一个重要的方法论运动, 尽管它的学说和对于关键词“结构”的解释依不同领域而不同。在许多领域中, 结构主义已被后结构主义顶替。

“结构主义从根本上讲是一种方法, 具有‘方法’这个词所包含的一切含义; 它是技术性的, 要求理智上的诚实负责, 通过逐步的接近来看进步。”——皮亚杰:《结构主义》, 1971年, 第137页。

有组织的暴力

B. 威廉姆斯在他的论文《政治与道德特性》中对官方暴力行为中有组织的暴力和无组织的暴力做了区分。只有国家执行的有组织的暴力, 例如, 司法的实施、常规的军事演习、警察对法律力量的运用, 才能是正当的。任何平民做这些事都是非法的, 而且说一个平民执行某些有组织的暴力甚至都是没有意义的。无组织的暴力行为也许是由一个政治领袖实施的, 但是是依法行事的, 并且是为了保护国家的利益。这类行为尤其是表现在国际关系中, 它同一般社会内的关系相比一般更少组织性。无组织的暴力是公共道德的一个论题。

“也许可以说, 有组织的暴力规定了只有国家才能合法执行的行为。”——威廉姆斯, 载汉普舍(编辑):《公共道德和个人道德》, 1978年, 第71页。

风格

一种制作东西或做事的方式。风格一般仅仅用于人工制品而非自然界。艺术作品的风格是由创造、修饰、选择和解释素材等方式构成的复合体。风格展现艺术家的独创性和人格, 同时还引导观众发现其鉴赏作品的突出特征。同一内容可用不同风格予以表现, 因此不同的艺术家是由他们不同的风格来辨别的。风格可以显示出某一时期、某一传统、某一流派与个体艺术家之作品的基本特征。令有些哲学家感到迷惑的是, 为什么批评家有时只能以回顾的方式阐述一种风格的复杂特征。

“风格是做事的一种方式; 然而, 我们在自然界所看到的東西是以其自发的方式出现的。艺术是表现的手段, 艺术风格在表现中发挥着作用, 而这种作用在交流沟通中是凭借语言来实现的。”——斯帕肖特:《美学的结构》, 1963

is played in communication by language.” —Sparshott, *The Structure of Aesthetics*, 1963, p. 99.

Subaltern

In traditional logic, a universal proposition implies a particular proposition of the same quality. Hence A (All S are P) implies I (Some S are P), and E (All S are not P) implies O (Some S are not P). Logicians call I the subaltern of A, and O the subaltern of E. Correspondingly, A is called the superaltern of I, and E the superaltern of O. The whole relationship between a universal proposition and its corresponding particular proposition (which has the same subject and predicate terms and the same quality as the universal) is subalternation and is represented in the square of opposition. A subaltern is also termed a subimplicit, while a superaltern is also termed a superimplicit. If the universal proposition is true, so is its corresponding particular proposition, but not vice versa.

“Subaltern ... is a particular proposition which follows by an immediate inference from its corresponding universal to which it is said to be subaltern.” —Peirce, *Collected Papers*, II, p. 459.

Subcontraries

If two propositions cannot both be false but may both be true, they are subcontraries. Hence we may infer from the falsity of one that the other is true, but cannot infer the truth-value of the other from the truth of one of them. In traditional logic this logical relationship occurs between the particular affirmative proposition I (Some S are P) and the particular negative proposition O (Some S are not P).

“Two propositions are said to be subcontraries if they cannot both be false, although they might both be true.” —Copi, *Introduction to Logic*, 1986, 7th ed., p. 179.

Subjective knowledge, see objective knowledge

Subjective-objective distinction

The subject contributes what is subjective to such things as perceptual, moral and aesthetic judgement and experience; the objects of such judgements and experience contribute what is objective. The subjective seems prone to variation among subjects, while the objective appears to provide a basis for universal agreement. There is disagreement over the contribution of the subject and the object to such judgements. The subjective view is also called the internal view, and is that in which the situation of the agent itself is involved. The objective view is also called the external view, and is that in which agent-related factors are abstracted or surpassed. The subjective is not always private, and the objective is not identical with what can be touched or sensed.

年, 第99页。

下位命题

在传统逻辑中, 全称命题蕴涵同质的特称命题。所以 A (“所有 S 是 P”) 蕴涵 I (“有些 S 是 P”), 并且 E (“所有 S 不是 P”) 蕴涵 O (“有些 S 不是 P”)。逻辑学家把 I 叫做 A 的下位命题, 把 O 叫做 E 的下位命题。相应地, A 叫做 I 的上位命题, E 叫做 O 的上位命题。全称命题和它相应的特称命题 (与全称命题有相同的主词和谓词以及相同的质) 之间的全部关系被称作“差等关系”, 并表示在对当方阵中。下位命题亦称“下涵命题”, 上位命题亦称“上涵命题”。如果全称命题是真的, 则相应的特称命题也是真的, 但反之不然。

“下位命题……是一特称命题, 它通过一直接推理从相应的全称命题推出, 正是相对于这一全称命题, 才说它是下位命题。” —皮尔士: 《文集》, 第二卷, 第459页。

下反对〔关系〕

如果两个命题不能同假却可以同真, 则它们是下反对关系。所以我们可以从一个的假推出另一个的真, 但不能从其中之一真推出另一个的真值。在传统逻辑中, 这种逻辑关系出现在特称肯定命题 I (“有些 S 是 P”) 和特称否定命题 O (“有些 S 不是 P”) 之间。

“如果两个命题虽可以同真但不能同假, 则称它们是下反对关系。”——柯比: 《逻辑导论》, 1986年, 第7版, 第179页。

主观知识

见“客观知识”条。

主客区分

主体对诸如知觉、道德和美学判断与经验提供主观的东西; 这种判断与经验的对象则提供客观的东西。主观的东西似乎倾向于各种主体的不同, 而客观的东西则表现为提供普遍一致的基础。关于主体与客体对这种判断的贡献, 还存在着一种分歧。主观的看法也被称作“内在的看法”, 即它涉及到了主体本身的状态。客观的看法也被称作“外在的看法”, 即抽去了或超越了与主体有关的因素。主观的东西并不总是私人的, 而客观的东西也并不等于可以接触或感觉的东西。不同的客观性概念可以适用于不同的领域。例如, 历史的判断可以是客观的, 只要做出这些判断的历史学家没有任何偏见, 而

Different notions of objectivity might be suitable in different domains. Historical judgements, for example, might be objective if the historian making them is unbiased and has not come to his conclusions as a result of having a favoured relation to the relevant objects.

"The distinction between subjective and objective is relative. A general human point of view is more objective than the view from what you happen to be, but less objective than the view point of physical science." — Thomas Nagel, *Mortal Questions*, 1979, p. 206.

Subjectivism, see objectivism

Subjectivity

A term correlated with objectivity. Ontologically, subjectivity is a mode of existence, in which a thing exists in virtue of being sensed or experienced by a subject. Epistemologically, a knowledge claim is subjective if determining its truth-value requires offering priority to someone having a first-person standpoint regarding the claim. Such priority, however, is unjustifiably claimed on behalf of personal opinions, biases and arbitrary preferences which are not related to objective facts. If a theory or a judgement is subjective in this sense, it obstructs the achievement of truth and validity, and should be rejected along with other forms of partiality, arbitrariness and bias. On the other hand, the priority of the subjective need not be restricted to individual experience and perhaps can be justified by the perspectives carried by a person as an historical and cultural being or as a result of special education and training. But it is difficult to determine how to treat the subjectivity of personal and social cultural horizons, social presuppositions, and moral, religious and aesthetic attitudes. Too great an emphasis on them will lead to relativism or extreme subjectivism, but eliminating them is impossible, for they are basic conditions for our inquiry. Admitting a place for subjectivity allows that there are alternative and reasonable views, perhaps by using subjective claims as a starting point which can then be incorporated into a structure of objective knowledge. Executing such a plan has been a central concern for many philosophers.

"We often speak of judgements as being 'subjective' when we mean that their truth or falsity cannot be settled 'objectively', because the truth or falsity is not a simple matter of fact but depends on certain attitudes, feelings, and points of view of the makers and the hearers of the judgements." — Searle, *The Construction of Social Reality*, 1995, p. 8.

Subject-of-a-life

A term introduced by Tom Regan for individuals who are more than merely alive and conscious. Subjects-of-a-life

他得出的结论并不是由于他与相关的对象具有某种偏好。

"主观与客观的区分是相对的。一种普遍的人类观点就比你偶然得到的观点更为客观, 但却没有物理学的观点那样客观。" —— 内格尔: 《人的主要问题》, 1979 年, 第 206 页。

主观主义

见“客观主义”条。

主观性

与客观性相关的术语。从本体论上讲, 主观性是一种存在的方式, 在这种方式中, 一个事物的存在是由于它为一个主体所感知或体验。从认识论上讲, 一种知识陈述, 如果确定其真值需给对这一见解具有第一人称观点的人以首要性, 它就是主观的。可是, 如果这种首要性代表的是与客观事实无关的个人的看法、偏见及专横的偏好, 那就被认为是不合理的。从这种意义上讲, 如果一种理论或一个判断是主观的, 它就阻碍对真理和效力的获得, 并应与其他形式的偏好、专断和偏见一起被抛弃。另一方面, 主观性的首要性不需限于个人的经验, 它也许能通过作为历史和文化人物或作为特定教育和训练的结果的个人的观点而得到证明。然而, 确定如何对待个人或社会文化的见识, 社会的希求及道德的、宗教的和审美的态度等方面的主观性却是困难的。过分强调它们会导致相对主义或极端个人主义, 而消除它们又是不可能的, 因为它们是我们进行探究的基本条件。承认主观性占有一席之地就是允许有其他合理的观点的存在。这种允许也许是通过使用作为出发点的主观性的断言, 这种断言而后又可合并到一种客观性的知识结构中。贯彻这样一种计划已成为许多哲学家关注的问题。

"我们常常把判断说成是‘主观的’, 这时我们是意指它们的对或错不能被‘客观地’决定, 因为对或错不是一个简单的关于事实的问题, 而是要取决于判断者和听判断的人的一定的态度、感觉和观点。" —— 塞尔: 《社会现实的构造》, 1995 年, 第 8 页。

生命主体

这词为 T. 里根首次采用, 指那种不仅仅活着的和有意识的个体。一个生命主体有一系

are characterised by a set of features including having beliefs, desires, memory, feelings, self consciousness, an emotional life, a sense of their own future, an ability to initiate action to pursue their goals, and an existence which is logically independent of being of utility to anyone else's interests. Such an individual has inherent value, that is the value it possesses independent of its utility for others. Because of this inherent value, a subject-of-a-life has rights to protect this value and the right not to be harmed. Other subjects have a duty to respect these rights. Regan then argues that all mature normal mammals fit the conditions for a subject-of-a-life; so they have inherent value and have rights. We have natural duties towards these animals, and should treat them equally and not interfere with their normal life course. Being a subject of-a-life is his criterion for inclusion of an individual in the moral community.

"Those who satisfy the subject-of-a-life criterion themselves have a distinctive kind of value- inherent value -and are not to be viewed or treated as mere receptacles." -Regan, *The Case for Animal Rights*, 1983, p. 243.

Sublation

[from Latin; *sublatus*, (1) to raise, to lift up or (2) to remove, to destroy. German: *aufheben*, has an additional meaning; (3) to keep, to preserve.] In Hegel's philosophy, the three senses of sublation are used together, rather than as three separate meanings. Sublation is the negation of the negation, a negation that has a positive consequence. What is sublated is not reduced to nothing, but has a result which originated in what has been negated. For Hegel, a thing is negated by its opposite, and both are removed from their immediacy but also preserved as items by a higher whole. This higher whole is an improvement over the original thing and its negation and an elevation of them, although the higher whole is itself open to further sublation. For Hegel both concepts and things can be sublated. The term is also translated as supersede, supersession and sublimate.

"To sublate has a twofold meaning in the language: on the one hand it means to preserve, to maintain, and equally it also means to cause to cease, to put an end to... Thus, what is sublated is at the same time preserved; it has only lost its immediacy but is not on that account annihilated." -Hegel, *Science of Logic*, I, i, 3.

Sublimation

[from Latin; *sublimare*, to elevate] For Freud, a process of adapting the libidinal instinct, directing it away from its sexual aim and discharging it in areas other than sexuality. Through sublimation, the claims of the ego can be met without repression and libidinal energy can fuel social and creative efforts. On Freud's account, sublimation is thus contrasted with repression.

列的特征, 包括有信念、有欲望、记忆、感觉、自我意识、一种情感生活、对自己未来的感知, 能够开始行动去追求自己的目标, 及在逻辑上独立于其他人的利益和功利的存在。这样一个有着内在价值, 即他所具有的价值独立于其他人的效用性。因为这个内在价值, 一个生命主体有保护这个价值的权利和不受伤害的权利。其他的主体有责任来尊重这些权利。里根认为, 所有成年的正常的哺乳动物都具有作为一个生命主体的条件, 故它们具有内在价值, 有权利, 我们对这些动物有自然的职责, 应该平等地对待他们, 不干涉他们的正常的生活过程。作为一个生命主体, 他是把一个个体包括进道德共同体中的标准。

"那些满足了生命主体标准的人和动物本身, 有一种与他物不同的价值——内在价值——他们不应被看做是或仅仅作为物件来对待。"——里根:《动物权利问题》, 1983年, 第243页。

扬弃

[源自拉丁词; *sublatus*, (1) 升起, 扬起, (2) 移走, 毁灭。德语词; *aufheben*, 有另外的意义; (3) 保持, 保留]在黑格尔哲学中, 扬弃的三种意义共同使用, 不是作为三种分开独立的意义。扬弃是否定之否定, 一种有肯定结果的否定。被扬弃的东西不是归结为虚无, 而是具有来源于被否定的东西的结果。对黑格尔来说, 一事物被它的对立面所否定, 两者都去掉了它们的直接性, 但也作为环节被更高的整体所保留。这个更高的整体对原初的事物和它的否定有所改变, 是对它们的提高, 虽然这个更高的整体自身也面向进一步的扬弃。在黑格尔看来, 概念和事物都可被扬弃。这个术语也翻译为“取代”、“接替”和“升华”。

"扬弃在语言中有双重意义: 它既意指保存、保持, 又意指停止、终结。……因此, 被扬弃的东西同时即是被保存的东西, 只是失去了直接性而已, 但它并不因此而化为无。"——黑格尔:《逻辑学》, I, i, 3。

升华

[源自拉丁词 *sublimare* (意味着“提升”)]对于弗洛伊德说来, 它指一个调整里比多本能、引导它脱开性的目的, 并在性之外的领域中得到发泄的过程。通过升华, 自我的要求能够不被压抑地得到满足, 里比多的能量也就可以用于趋动适应社会的和创造性的努力。因此, 在弗洛伊德的解释中, 升华是与压抑相对立的。

"The most important vicissitude which an instinct can undergo seems to be sublimation; here both object and aim are changed, so that what was originally a sexual instinct finds satisfaction in some achievement which is no longer sexual but has a higher social or ethical valuation." — Freud, *Standard Edition of the Complete Psychological Works of Sigmund Freud*, vol. 18, p. 256.

Sublime

The feeling of awe, respect, majesty, astonishment and even horror aroused by vastly great and overwhelmingly powerful objects, such as the starry sky at night, huge mountains, towering cliffs, volcanoes or raging seas. The concept can be traced to the Greek rhetorician Longinus. The Latin translation *De Sublimitate* (1674) of his book *Peri Hupsos* (*On the Impressiveness of Style*) made the sublime a central notion for eighteenth century aesthetics. J. Addison, E. Burke and Kant all distinguish sublimity from beauty as a basic species of artistic excellence. While the beautiful arouses pleasure and inspires love, the sublime commands respect and inspires the elevation of the soul. How, then, can we enjoy what causes us to feel horror and fear? Kant claimed that the sentiment of the sublime shows us that we are rational beings who transcend nature and legislate over sense. The sublime is the triumph of reason and is the bridge which enables us to turn from the vulgar and common to our real moral freedom. But others suggest that the feeling engendered by the vast spectacle of nature makes us feel that we are insignificant parts of nature. The post-modern aesthetics revives the distinction between the beautiful and the sublime and claims that while the beautiful is associated with the apprehension of form and rule, the sublime is associated with the formless and the resistance to rule.

"The sublime moves, the beautiful charms... The sublime must always be great; the beautiful can also be small. The sublime must be simple; the beautiful can be adorned and ornamented." — Kant, *Observations on the Feelings of the Beautiful and Sublime* (tr. by Goldthwait), 1960, pp. 48-9.

Substance (Aristotle)

[The usual translation of the Greek *ousia*. Like *on* (being), *ousia* comes from *ousa*, the singular feminine normative participle of *einai*, to be] Plato used *on* and *ousia* synonymously. Aristotle classifies different kinds of being, and substance is being in its first sense, namely, the ultimate reality. In the *Categories*, Aristotle defined substance as the ultimate subject which underlies everything else, and he also distinguished between primary substance (the sensible individual) and secondary substance (species and genus). In the *Metaphysics*, substance is the focal meaning of being. However the category of substance is divided into form, matter and the composite of matter and form. If substance is still

"本能可以经历的最重大变化似乎是升华。这里对象和目的都改变了,使得原本是性的本能在非性的、具有更高的社会和伦理价值的成就中找到了满足。"——弗洛伊德:《S. 弗洛伊德心理学著作全集标准版》,第十八卷,第256页。

崇高

由体积和力量巨大的对象激发的一种敬畏、崇敬、宏伟、惊讶、乃至恐惧的感受,此类对象有黑夜星空、崇山峻岭、悬崖、火山或怒海等等。崇高的概念可追溯到希腊修辞学家朗古努斯。其著作 *Peri Hupsos* (《论风格的表现性》) 的拉丁译文为《论崇高》(*De sublimitate*, 1674), 此书使崇高成为18世纪美学的重要概念。J. 阿狄森、E. 博克与康德等人都将崇高与美这个艺术美的基本种类加以区别。美的事物唤起愉悦并激发爱情,而崇高的对象则唤起崇敬和激发心灵的升华。那么,人们如何能够欣赏使人感到恐怖与可怕的东西呢?康德认为,崇高的情感向我们表明我们是理性的存在者,不仅能够超越自然,而且能够为我们的感觉立法。崇高的对象是压倒理性的,是让人们从庸俗普通走向真正的道德自由的桥梁。但是,其他有些人建议,由宏伟的自然景观所激发的这种崇高感受使人们觉得我们是自然界里无足轻重的组成部分。后现代美学重新探讨优美与崇高的区别,认为优美与人们对形式和法则的感悟有关,而崇高与无形式的对象以及抵制法则的做法有关。

"崇高的对象感人,优美的事物迷人……崇高的对象必须是大的;而优美的事物可能是小的。崇高的对象必须是单纯的;而优美的事物则是装饰过的。" 康德:《论美感与崇高感》(高德韦特译),1960年,第48—49页。

本体 (亚里士多德)

[希腊词 *ousia*, 也译作“实体”,与“是”(希腊词 *on*) 相似, *ousia* 来自于 *einai* (存在) 的阴性单数规范分词 *ousa*] 柏拉图把 *on* 和 *ousia* 用作同义。亚里士多德将存在分为不同的种类,本体是第一种意义上的存在,即终极的实在。在《范畴》中,亚里士多德把本体定义为支撑其他一切东西的终极主体,他还区分了第一本体(可感的个体)和第二本体(种和属)。在《形而上学》中,本体是存在的中心含义。不过,他将本体范畴又分为形式、质料以及质料和形式的合成体。如果本体仍然指主体,质料就将是第一本体。但是亚里士多德认为,如果本体是互相分开

subject, matter will be primary substance. But Aristotle held this to be impossible, with separation and *tode ti* (a this) presented as more important criteria to decide what is substance. According to these new criteria, form is substance in its primary sense, and the composite is substance in a derivative sense. Species and genus, which are secondary substances in the *Categories*, are rejected as substances. This has given rise to the problem of explaining the relation between form and the universal.

Substance as a translation of *ousia* gained its currency historically because of the medieval philosopher Boethius' influential commentary on the *Categories* in which substance and subject coincide, but the word 'substance' has no etymological connection with *ousia*, and is not a precise translation of the notion of *ousia* in the *Metaphysics*. Alternative English translations of *ousia* include essence, entity and reality.

"It follows, then, that 'substance' has two senses, (a) the ultimate substratum, which is no longer predicated of anything else, and (b) that which, being a 'this', is also separated—and of this nature is the shape or form of each thing" —Aristotle, *Metaphysics*, 1017b23-5.

Substance (Descartes)

Descartes' criterion for substance is virtually the same as Aristotle's subject criterion. He defined substance as that whose existence does not depend on other things and claimed that there is, strictly speaking, only one substance, namely God. However, although God is the only uncreated substance, created substances may be recognised because, although they need the concurrence of God in order to exist, they are independent of any other created things, such as accidents or modes. Instead, created substances are the bearers of properties, modes and accidents.

A created substance for Descartes can be a thinking thing (*res cogitans*) or mind or it can be an extended thing (*res extensa*) or body. All other modes are reducible to these two orders of existence. For thinking substance, thought is its principal attribute, because a thinking substance without thought is unintelligible. For corporeal substance, extension is its principal attribute, because a corporeal substance without extension is unintelligible. Thought and extension are the only two principal attributes which constitute, respectively, the essence of thinking and corporeal substances. Where there are two principal attributes there are two substances. This is to say, no existent substance can be a substance of more than one kind of attribute. This is the dualism of Descartes.

"By substance, we can understand nothing else than a thing which so exists that it needs no other thing in order to exist." —Descartes, *Principles of Philosophy*, 1.51.

的,而且“这一个”(*tode ti*)成为确定何者是本体的更重要的标准,那么,质料是第一本体是不可能的。按照这些新标准,形式在其原始意义上是本体,在派生的意义上是合成本体。在《范畴》中是第二本体的种和属,在此被拒绝当做本体。这就引出了如何说明形式和普遍概念之间关系的问题。

以“substance”去译 *ousia* 一词得到流行,从历史上看是由于中世纪哲学家波埃修斯对《范畴》的影响深远的评注,在这个评注中,本体和主体是一致的。但“substance”一词与 *ousia* 没有词源关系,而且不是《形而上学》中 *ousia* 概念的准确译法。*ousia* 的可选的英文译法包括“本质”、“存在的东西”、“实在”。

“于是得出,‘本体’有两个意义:(1)最终的基质,它不再用于断定其他任何东西;(2)由于是“这一个”,因而亦是被分离的东西——这一本质乃是每一物的形状或形式。”——亚里士多德:《形而上学》,1017b23—25。

实体〔或译“本体”〕(笛卡尔)

笛卡尔关于实体的标准实际上与亚里士多德关于主体的标准是一样的。笛卡尔把实体定义为其存在不依赖于其他东西的东西,并声称,严格而言,只有一个实体存在,即上帝。不过,虽然上帝是唯一非被造的实体,但我们仍可以承认各种被造的实体,这是因为,虽然这些实体需要上帝的同意才能存在,但是它们不依赖于任何其他的被造物,像偶性或样式之类。相反,被造的实体是这些性质、样式或偶性的承担者。

笛卡尔认为被造的实体有两类。一是思维的东西 (*res cogitans*),即心灵;另一是广延的东西 (*res extensa*),即物体。一切其他样式都可以归结为这两类存在。对于思维实体,思想是其主要属性,因为没有思想的思维实体是不可理解的。对于物质实体,广延是其主要属性,因为没有广延的物质实体是不可理解的。思想和广延分别是构成思维实体和物质实体之本质的唯一两种主要属性。凡是有两个主要属性之处,就有两个实体。这就是说,任何存在着的实体都不可能是具有一种以上属性的实体。这就是笛卡尔的二元论。

“对于实体,我们可以理解为无非是那样存在着的这个东西,以致它不需要任何其他东西就能存在。”——笛卡尔:《哲学原理》,第一部分,第51节。

Substance (Hegel)

Influenced by Spinoza, Hegel claimed that there is only one substance, that is the absolute. In contrast to Spinoza, Hegel's absolute as substance is also subject. For Descartes, individual subjects are thinking substances, and for Leibniz, monads as substances have self-consciousness. Hegel developed these ideas and held that substance as subject is the movement of positing itself and of developing into its contrary and is further unified by the movement to a higher unity. By repeating such a movement, substance generates and dissolves its attributes, that is its appearance. Substance and attributes are mutually inclusive, for substance can be substance only through revealing itself in its attributes. The development of substance is the reflection into self of the subject, and the subject makes itself what it becomes.

"Substance is accordingly the totality of the accidents, revealing itself in them as their absolute negativity (that is to say, as absolute power) and at the same time as the wealth of all content." — Hegel, *Logic*, sect. 151.

Substance (Leibniz)

Starting with the traditional Aristotelian claim that substance is the ultimate subject of predicates, Leibniz claimed that all the predicates of a given subject are contained within the concept of that subject, including every past and future state of that subject. He then proceeded to ask what it is for a substance to have an attribute, that is what is the foundation of and reason for all the predicates that can truly be asserted of that substance. In answering this question, he reverted in some sense to the pre-Cartesian view of hylomorphism, arguing that because a substance is a being which subsists in itself it has a principle of action within itself. It has a substantial form analogous to the soul which organises and systematises all the functions and activities. The essence of a substance is its primitive force of action. Later Leibniz called his substances monads. Since a substance as a subject contains all its predicates, changes in monads are not due to the effect of external causes but rather to the unfolding of their own internal natures. Each monad is completely self-contained, and perfect, although there is a pre-established harmony among monads giving the impression of interaction.

"This being promised, we can say it is the nature of an individual substance or complete being to have a concept so complete that it is sufficient to make us understand and deduce from it all the predicates of the subject to which the concept is attributed." — Leibniz, *Discourse of Metaphysics*, 8.

Substance (Locke)

The notion of substance that Locke inherited was the Aristotelian notion, from the *Categories*, of an underlying subject (substratum). Locke believed in the real existence of

实体〔或译“本体”〕(黑格尔)

受斯宾诺莎影响,黑格尔主张,只存在着一个实体,那就是绝对。与斯宾诺莎相对比,黑格尔的绝对作为实体也是主体。对笛卡尔来说,个人主体是思维的实体,而对于莱布尼茨来说,单子作为实体具有自我意识。黑格尔发展了这些思想,并极力主张,实体作为主体是设定自身的运动,并且是发展为它的对立面并被更高的统一运动所进一步联结的过程。通过这样的运动,实体产生和分化它的属性,那是它的现象。实体和属性是相互包含的,因为实体只有通过在其属性中显露自身才能作为实体。实体的发展就是主体对自身的反思并达到自身,主体使自身成为它所成为的东西。

“因此,实体是各个偶性的全体,它在诸偶性中启示自身而作为它们的绝对否定性(这就是说,作为绝对的力量),同时作为全部内容的丰富性。”——黑格尔:《小逻辑》,第151节。

实体〔或译“本体”〕(莱布尼茨)

传统的亚里士多德的主张,实体是属性的最终主体。莱布尼茨从这一观点出发,声称,“给定主体的一切属性,包括它过去和将来的每一个状态,都包含在那个主体的概念中。于是他进而问,使一个实体具有属性的东西是什么,也就是,对于能够真实用来给那个实体作断言的一切属性,它们的根据和理由是什么。他在回答这个问题时,在某种意义上回到了前笛卡尔的形式论的观点,他论证说,因为实体是自存的存在,所以它自身内具有活动的原则。它具有一个实体形式,这个形式与组织协调一切功能和活动的灵魂相似。实体的本质在于它原始的活动力。后来莱布尼茨将他的实体称作“单子”。既然作为主体的实体包含了它的一切属性,那么,单子的变化就不是由于外因的影响,而是由于它自己内因的显露。虽然各单子之间有前定和谐,给人一种它的相互作用的印象,但实际上每个单子都是完全自足和完善的。

“既然情况可以如此,于是我们可以说,——单个实体或完整存在物的性质是:它具有一个十分完整的概念,以致足以使我们理解它,并从它之中推出该概念所归属的那个主体的全部属性。”——莱布尼茨:《形而上学论》,第8节。

实体〔或译“本体”〕(洛克)

洛克所继承的实体概念是出自亚里士多德《范畴》中的基质(substratum)概念。洛克相信实体确实存在于世界中。我们所知觉到的性

substance in the world. For the perceived qualities and properties carry the supposition of a substratum and cannot be thought to exist by themselves. Hence, as a matter of necessity of thought we must infer a substance as the ground of the qualities. We find in nature certain groups of simple ideas in constant and uniform conjunction and tend to believe that there is a substratum behind them. As long as there is any sensible quality, substance cannot be dismissed. However, the real essence of such a substance is unclear. Our ideas are limited to sensation and reflection, and do not reach sufficiently far to provide knowledge of the nature of substance. The ideas we have of substance are complex ideas; they are nothing but the collection of simple ideas of qualities, products of our mental operations. In all, substance has no positive content but only a supposition that it supports qualities. We know nothing about this supposition itself. Locke's criticism of the concept of substance paves the way for Berkeley and Hume to deny the existence of material substance and was a crucial step in the development of empiricism.

"Because, as I have said, not imagining how these simple ideas can subsist by themselves, we accustom ourselves to suppose some substratum wherein they do exist, and from which they do result, which therefore we call substance." — Locke, *An Essay Concerning Human Understanding*, II, 23, 1.

Substance (Spinoza)

The standard definition Spinoza offered for substance is something which is "in itself" and "conceived through itself". The former part of this definition is similar to Aristotle's definition of substance as subject, and the determination of the latter part means that the concept of substance is formed without need to think about anything else. For otherwise the knowledge of substance would have to be dependent on the knowledge of something else, which would be another substance. Unlike Descartes, Spinoza did not refer to created things as substances. For him, substance was *causa sui*, its own cause. Extension and thought are attributes which constitute the essence of substance. But two attributes do not constitute two beings or two different substances. One substance can instantiate more than one attribute. There cannot be two distinct substances of the same nature. Substance is necessary, infinite, eternal, unique and all-inclusive. Spinoza called substance God or nature. Substance for Spinoza was therefore identical with a wholly self-sufficient, all-embracing reality. This notion of substance made Spinoza a pantheist and enabled him to challenge Descartes' dualism, although the relation between substance and attributes in Spinoza is much disputed.

"By substance I understand that which is in itself and is conceived through itself." — Spinoza, *Ethics*, 1, 3.

质和属性使我们设定有一个基质,而且我们无法想像这些属性和性质独自存在。于是,由于思想的必然,我们必定推出一个作为这些性质之基础的实体。我们发现某些简单观念在性质上总是恒常一贯地结合在一起,我们倾向于相信在它们后面有基质存在。只要有任何可感的性质存在,实体就不可能被消除。不过,这样一个实体的实在本质是不清楚的。我们的观念不超出感觉和反省,达不到足够深远的程度以提供关于实体本性的知识。我们所具有的实体观念是复杂观念;它们无非是各种性质的简单观念的集合,是我们内心活动的产物。总之,实体没有实证的内容,只是假定它支撑着各种性质。我们对于这个假定本身毫无所知。洛克对实体概念的批判为巴克莱和休谟否定物质实体的存在铺平了道路,并成为经验论发展中至关重要的一步。

"如我已说过,因为无法想像这些简单观念怎样能独自存在,于是我们就习惯于假定出某个基质,这些简单观念存在于它之中,而且确实由它所引起,因此我们称它为实体。"——洛克:《人类理智论》,第二卷,第二十三章,第1节。

实体〔或译“本体”〕(斯宾诺莎)

斯宾诺莎为实体提出的标准定义是:“在自身内”,并“通过自身被认识”的东西。这个定义的前面部分与亚里士多德关于实体是主体的定义相似,后面部分断定的意思是,实体概念的形成不需要对任何它物的思考。否则,实体的知识就不得不依赖于有关它物的知识,这个它物又会是另一个实体。与笛卡尔不同,斯宾诺莎不把被造的东西称作实体。在他看来,实体是自因,是它自己的原因。广延和思想是构成实体本质的属性。但是两个属性并不构成两个存在物或两个不同的实体。一个实体可以表现出不止一种属性。不可能有具有同样性质的两个不同的实体。实体是必然的、无限的、永恒的、独一无二的、包括一切的。斯宾诺莎将实体称作上帝或自然。因而斯宾诺莎的实体与完全自足、包括一切的实在等同。这一实体概念使斯宾诺莎成为泛神论者,也使他能够对笛卡尔的二元论发出挑战,尽管人们对斯宾诺莎所说的实体和属性的关系仍然有很多争论。

"我把实体理解为在自身内,通过自身被认识的东西。"——斯宾诺莎:《伦理学》,第一部分,定义3。

Substantial chain, see *vinculum substantiale*

Substantial form

A notion originating in Aristotle's metaphysics and fully developed by the Scholastics. It is the internal principle of a thing which accounts for its being a substance of that kind. The substantial form of a thing is the goal of its behaviour and its explanatory principle. The term became abused during the early period of modern philosophy when scientists and philosophers rejected it, preferring to explain the phenomena of nature in terms of size, figure and motion alone. However, Albinos believed that this mechanistic philosophy is not sufficient, for it fails to account for the inner action and the organic unity of a thing. Hence Leibniz rehabilitated the notion of substantial form, and took it as a principle of change and a principle of unity. It is the true unity or real entity. A corporeal substance is composed of indeterminate and passive matter and determining form which acts as the cause and explanation of its properties. This determining form is its substantial form, and it corresponds to the soul in human beings. Nevertheless, Leibniz differed from the Scholastics in his use of the term, for he claimed that this form is a general explanatory principle which supplies nature with organic activity and did not use it to account for particular natural phenomena. For Leibniz, a form is an activity or entelechy, while a substantial form is also called a primitive force and first entelechy.

"In order to find these real entities I was forced to have recourse to a formal atom, since a material thing cannot be both material and, at the same time, perfectly indivisible, that is, endowed with a true unity. Hence, it was necessary to restore, and, as it were, to rehabilitate the substantial forms which are in such disrepute today." —Leibniz, *Philosophical Essays* (tr. by Ariew and Garber), 1989, p. 139.

Substantive universal

A sort of linguistic universal which belongs to the description of the substantive universal properties of a language, in contrast to a formal universal which gives the abstract universal properties of language. Accordingly, substantive universals contribute to determining the vocabulary for the description of language. According to this notion, all languages must have certain substantive phonetic elements for phonetic representation, certain specific central features of syntax and certain semantic features to provide a universal framework for semantic description.

"A study of substantive universals claims that items of a particular kind in any language must be drawn from a fixed class of items." —Chomsky, *Aspects of the Theory of Syntax*, 1965, p. 28.

实体链

见“实体链 (*Vinculum substantiale*)”条。

实体形式

这个概念出自亚里士多德的形而上学, 经院学家对之作了充分的发展。它指一物的用以说明该物何以为该类实体的内在原则。一物的实体形式是该物的行为目标和说明原则。在近代哲学早期, 该词被滥用了。所以, 科学家和哲学家将这个词抛弃了, 代之以用大小、形状和运动来说明自然现象。不过, 阿尔宾诺认为这种机械论哲学是不充分的, 因为它不能说明一物的内在活动和有机统一。因此, 莱布尼茨复兴了实体形式的概念, 把它当做一个变化的原则, 一个统一的原则, 它是真正的统一体或实在的东西。一个有形实体是由不确定的、被动的物质和对它的性质起原因和说明作用的确定的形式构成的。这个确定的形式是它的实体形式, 它相当于人类的灵魂。不过, 莱布尼茨对这个词的使用与经院哲学家不同, 因为他主张, 这个形式是为自然提供有机能动性的普遍说明原则, 它不用于说明个别的自然现象。在莱布尼茨看来, 一个形式就是一个能动性或隐德来希, 而实体形式也被称作“原始的力”和“第一隐德来希”。

“为了发现这些真正的存在物, 我被迫求助于形式的原子, 因为一个物质的东西不可能既是物质的, 同时又是完全不可分、即具有真正统一性的。因此, 有必要也可以为当今名声不佳的实体形式恢复名誉。”——莱布尼茨:《哲学文集》(阿瑞和加伯编译), 1989年, 第139页。

实质共相

一种“语言共相”, 它描述了语言实质的普遍特性, 与之对应的是赋予语言抽象的普遍特性的“形式共相”。因此, 实质共相是用于确定描述语言的词汇。它认为, 一切语言都必定具有某些表现语音的实质性语音成分, 句法的某些特别核心的特征, 以及能够对语义描述提供一种普遍框架的某些语义特征。

“对实质共相的研究认为, 每种语言的个别词项都必定来自某类确定的词项。”——乔姆斯基:《句法理论的若干方面》, 1965年, 第28页。

Substitutional quantifier, see objectual quantifier

Substratum (Aristotle)

[Greek: *hypokeimenon*, that which underlies, hence the subject or bearer of properties] In the *Categories*, Aristotle defined substance as the substratum because it underlies the other categories, and he used substance and substratum virtually interchangeably. In the *Metaphysics*, he divided the category of substance into form, matter and the composite of form and matter. While the composite is the substratum of properties, matter is the substratum of form. If substance still meant mainly "that which underlies", matter would be the ultimate subject and therefore primary substance. But Aristotle now claimed that instead of being a substratum, (primary) substance is that which is separate and a this. Thus, although matter is the subject of form, this does not give matter a better claim than form to being substance.

"The substratum is that of which everything else is predicated, while it is itself not predicated of anything else." —Aristotle, *Metaphysics*, 1028b36-7.

Subsumption theory of explanation, another expression for covering law model

Success verbs, see achievement verbs

Such

[Greek: *toionde*] For Aristotle, a kind, common nature or common predicate. Form, as *toionde*, is a universal form. Such, which is general, contrasts with a this (*tode ti*), which is individual. Aristotle claimed that by separating an idea (*toionde*) from the things exemplifying it and thus making the idea a this, Plato made many mistakes in his Theory of Forms or Ideas. Aristotle tried to keep a clear distinction between a this and such by claiming that substance is a this and that an idea, as a universal, is not a substance.

"... no common predicate indicates a 'this', but rather a 'such'. If not, many difficulties follow and especially the 'third man'." —Aristotle, *Metaphysics*, 1038b36.

Sufficient and necessary condition, see necessary condition

Sufficient condition

A condition in the presence of which a specific thing must exist or a specific event must occur: if A, then B. The condition can also be stated at a formal level: if A is true,

替换量词

见“对象量词”条。

基质 (亚里士多德)

[出自希腊文: *hypokeimenon* (那躺在下面的东西), 意为属性的主体或承受者] 在《范畴》中, 亚里士多德把本体定义为基质, 因为它承受其他范畴。他把“本体”与“基质”几乎当做同义词使用。在《形而上学》中, 他把本体的范畴分作形式、质料和形式与质料的复合物。复合物是属性的基质, 而质料则是形式的基质。如果本体的主要意义仍为“那躺在下面的东西”, 质料便是终极主体, 并因而是第一本体。可亚里士多德现在认为, (第一) 本体更是那分离的东西, 是“这一个”, 而不是基质。这样, 尽管质料是形式的主体, 但它并不因此而比形式更有力量去声称具有第一本体的身份。

“基质是那其他一切事物都属于它, 而它自身却不述说于其他任何事物的东西。”——亚里士多德:《形而上学》, 1028b36-37。

说明的归类理论

“覆盖律模型”的另一种表述。

成功动词

见“成就动词”条。

这一类

[源自希腊文 *toionde*] 亚里士多德使用该词来指类、共同性质或共同谓词。作为“这一类”的形式是一个普遍形式。“这一类”是—般的, 相比较于“这一个” (*tode ti*), 即个别。亚里士多德认为, 柏拉图把作为“这一类”的形相与体现它的特殊事物相分离, 而使得形相变成“这一个”, 这使得柏拉图在他的形式论或形相论中犯了许多错误。而亚里士多德自己力图清楚地保持“这一个”和“这一类”之间的区分。他认为, 本体是“这一个”, 而形相作为共相不是本体。

“普通谓词都不表示‘这一个’, 而是表示‘这一类’。不然的话, 许多困难就会产生, 尤其是‘第三人’。”——亚里士多德:《形而上学》, 1038b36。

充分必要条件

见“必要条件”条。

充分条件

此条件出现将使得一特定的事物存在或一特定的事件发生: 如果 A, 则 B。这一条件也可以在形式的层次上陈述为: 假定 A 是真的, 那

then B is true. If one is seriously ill, then one will be weak. Hence, being ill is a sufficient condition for being weak. In contrast, a necessary condition must be present for a thing to exist or for an event to occur, but does not guarantee that the thing will exist or the event occur. If A is a sufficient condition of B, then B is a necessary condition for A. A condition can be necessary and sufficient, unnecessary and sufficient or necessary and insufficient. If it is unnecessary and insufficient, it is not a condition. Conditions can be parts of other conditions, so that as in Mackie's account of causation we can have an insufficient but necessary part of a necessary but insufficient condition.

"A sufficient condition for the occurrence of an event is a circumstance in whose presence the event must occur." — Copi, *Introduction to Logic*, 1986, p. 429.

Sufficient reason, the principle of

A law which can be traced to the medieval philosopher Abelard, but is usually associated with Leibniz. In its most common formulation, it is the proposition that there is nothing without a reason for being thus and not otherwise. Leibniz formulated the principle in a number of ways, and applied it freely, depending on how he defined sufficient reason at a given time. Sometimes he took it, together with the principle of non-contradiction, as one of the two great principles used in reasoning. Sometimes sufficient reason was a form of a *priori* proof founded on the nature of the subject and predicate terms in every true proposition, no matter whether it is necessary or contingent. Sometimes sufficient reason meant efficient cause and in particular final cause. In this case, the principle is not concerned with the logical relation between subject and predicate, but with the cause of events and the existence of things. It is the basis of Leibniz's rejection of Newtonian absolute space and time. Sometimes the principle of the best or perfection is also said to be a version of the principle of sufficient reason.

"The principle of sufficient reason, namely, that nothing happens without a reason why it should be so rather than otherwise." — Leibniz, *Philosophical Essays* (eds. and trans. Ariew and Garber), 1989, p. 321.

Suicide

Deliberately and voluntarily ending one's life with the aim of self-destruction. Suicide is distinguished from sacrificing one's life as a means to achieve another end and from engaging in actions or a way of life which risk one's life. From Plato and Aristotle, there has been controversy whether suicide is morally justified. On one view, suicide should be morally prohibited on the grounds that life is divine, that suicide causes harm to one's family and community and that suicide is an offence to God who created life. In contrast, suicide is claimed to be a self-regarding act that lies outside the

么 B 是真的。如果一个人得了重病, 则他将会很虚弱。所以, 生病是虚弱的充分条件。相比之下, 对于一事物存在或一事件发生来说, 其必要条件必须具备, 但这一点并不能保证该事物将存在或该事件将发生。如果 A 是 B 的充分条件, 则 B 是 A 的必要条件。一个条件可以是充分必要的、充分而不必要的或必要而不充分的。如果它是不必要而不充分的, 它就不是一个条件。条件可以成为其他条件的部分, 于是正像在麦基关于因果性的说明中指出的那样, 我们可以有一必要但不充分条件的不充分却必要的部分。

"一事件发生的充分条件是这样一种情形: 该条件的出现使得该事件必定发生。" —— 柯比: 《逻辑导论》, 1986 年, 第 429 页。

充足理由律

这条定律可以追溯到中世纪哲学家阿布拉, 不过一般与莱布尼茨相联系。对它的最通常的阐述是如下命题: 任何东西都有它之所以是此而非彼的理由。莱布尼茨以多种方式阐述这条规律, 依据在某一时候他对“充足理由”如何规定而随意运用它。有时他把它当做推理中使用的两个主要原理之一, 另一个原理是不矛盾律。有时充足理由指一个先天的证明形式, 该形式以每个真命题的主词和谓词的性质为根据, 不论该命题是必然的还是偶然的。有时充足理由指动力因, 尤其指终极因。在此情况下, 这个原理与主项和谓项的逻辑关系无关, 而与事件的原因和事物的存在有关。根据这个原理, 莱布尼茨驳斥了牛顿的绝对时空。有时最好世界或最完善世界的原理也被说成是充足理由律的翻版。

"充足理由律, 即任何事情发生都有它为什么应当这样而不是那样的理由。" —— 莱布尼茨: 《哲学文集》(阿瑞和加伯编译), 1989 年, 第 321 页。

自杀

以自我毁灭为目的而故意地、自愿地结束自己的生命。自杀不同于作为实现另一目的的手段而牺牲自己的生命, 也不同于从事冒生命危险的活动或生活方式。从柏拉图和亚里士多德起, 就一直存在自杀在道德上是否是正当的争论。一种观点认为, 自杀在道德上应被禁止, 其根据是生命是神圣的, 自杀对一个人的家庭和公众造成伤害, 自杀是对创造生命的神的冒犯。相对立的观点则提出, 自杀应被认为是一种自尊的行为, 它不违反禁止伤害他人的禁令。有

prohibition on harming others. It is claimed that without stronger objections, the right should be recognised to determine when to terminate one's own life. Aquinas and Kant argued against suicide, while Hume argued in favour of tolerating it. These different attitudes lead to controversy whether we should intervene if somebody has the intention of committing suicide. If suicide is immoral, then we are obliged to prevent it. If suicide is morally justifiable, the intervention beyond advice will be paternalistic interference which violates the agent's rights. Suicide has become a frequently discussed topic in contemporary applied ethics through its relations with the issues of euthanasia and assisted suicide.

"Let us here endeavour to restore men to their native liberty, by examining all the common arguments against suicide, and showing that that action may be free from every imputation of guilt or blame, according to the sentiments of all the ancient philosophers." —Hume, *On Suicide*.

Summum bonum

[Latin: the highest or supreme good] A good without any qualification and an absolute end in itself. All other goods are pursued for its sake, for they are good because of this supreme good. Hence, the concept of a supreme end unites all other ends and is the crown for any system of ends. Ethically, the *summum bonum* is the moral ideal of a possible state of affairs in which a morally perfect being is supremely happy and also worthy of being supremely happy. Different moral theories offer different accounts of what constitutes the *summum bonum*, such as pleasure, happiness, self actualisation, contemplation, a good will, fulfilment of duty or obedience to God. Metaphysically it is regarded as the ultimate principle and the source of value and being. Critics question whether a system of ends requires a highest good to be intelligible.

"And I wish to point out certain conclusions which appear to follow, with regard to the nature of the Summum Bonum, or the state of things which would be the most perfect we can conceive." —G. E. Moore, *Principia Ethica*, p. 205.

Sun, simile of the

A device used by Plato in the *Republic* to illuminate the nature of the Form of the Good, knowledge of which the Guardians must attain. The simile is based on the distinction between the visible world and the world of the Forms. As the source of light in the visible world, the sun enables both the eye to see and the object of sight to be seen. Furthermore, it causes the process of generation and growth. The roles played by the Good in relation to the world of the Forms correspond to the roles played by the sun in relation to the visible world. The Good enables both the mind to know and the Forms to be known. Furthermore, it is the cause of

人主张,在没有强烈反对意见的情况下,决定什么时候结束自己生命的权利应当被承认。阿奎那和康德都反对自杀,而休谟则赞同容忍自杀。这些不同的态度导致了如果有人有自杀的企图我们是否应干涉的争论。如果自杀是不道德的,我们就有责任去阻止它。如果自杀在道德上是正当的,那超出建议范围之外的干涉将是侵犯自杀者权利的家长式的干预。由于自杀与安乐死和协助自杀的争论相关,自杀已成为当代应用伦理学中的一个热门问题。

"通过检验所有通常的反对自杀的论据,并表明按照所有古代哲学家的意见这种行为可以解脱每一有罪或有责任的非难,现在让我们尽力归还给人们他们生来的自由。"——休谟:《论自杀》。

至善

[拉丁文:最高的或至上的善]它是没有任何条件的善,是绝对目的自身。一切其他的善都是为了它而被追求,因为它们之所以是善,是因为这个至善。因此它是一个联结了所有其他目的的最高目的,是任何目的体系的顶点。在伦理学上,这是道德的理想;一种这样的可能状态,在此状态中一个道德上完满的存在者极其幸福,也配得上享有这极度的幸福。不同的道德理论对什么是至善作出不同的回答,诸如:愉快,幸福,自我实现,静观,善良意志,履行职责或服从上帝。在形而上学中,它被作为最终的原理、价值和存在的源泉。批评家们提出,一个目的体系要求最高的善是否合理是有疑问的。

"我希望能指出一些似乎可以得出的结论:它们是关于至善的本性,或我们能设想的最完满的事情的状态。"——摩尔:《伦理学原理》,第205页。

太阳之喻

柏拉图在《国家篇》中所用的方法,旨在说明善的形式的性质。对善的知识是护卫者必须获得的。这一比喻是在可见世界与形相世界的区分的基础上作出的。在可见世界中,太阳作为光的源泉使得眼睛可以看,使得视觉对象能够被看见。进一步,它还引起生成和成长的过程。善在与形式世界的关系中所起的作用相应于太阳在与可见世界的关系中所起的作用。善使得心灵能知,使得形式能够被知。而且,善也是形式的存在和实在的原因。如同太阳在力量上超越了视力、光和过程,善也在力量和尊严上高于

being and reality of the Forms. As the Sun is beyond sight, light and process in its power, the Good is beyond truth, knowledge and being in its power and dignity. The sovereignty of the Good illustrated in this simile is obscure and its interpretation remains a subject of dispute, but as a metaphysical attempt to establish a fundamental principle for any explanation, the simile has exerted a great influence on many subsequent metaphysical systems. In the *Republic*, the simile of the Sun is complemented by the simile of the Line and the simile of the Cave.

"What the Good itself is in the world of thought in relation to the intelligence and things known, the sun is in the visible world, in relation to sight and things seen." Plato, *Republic*, 508b.

Superego, see ego

Supererogation

[from Latin *super*, beyond + *erogare*, to pay out.] The category of good actions which go beyond the requirements of common morality, such as risking one's own life to save another. Supererogatory deeds are often arduous and costly. They are encouraged by morality as meritorious and are worthy of praise or honour. Nevertheless, one is not obliged to do them, and their omission is neither morally wrong nor subject to moral blame. Supererogation aims at a moral ideal rather than the standard of common morality. Chisholm classifies supererogation as one of five kinds of morally appraised actions, along with actions which are morally obligatory, in different, forbidden and offensive. Some versions of utilitarianism eliminate the possibility of supererogatory acts, because the need to maximise happiness leaves no room to distinguish between the requirements of ordinary morality and acts which go beyond them. Some claim that such positions demand too much from ordinary moral agents, who do not aspire to the moral lives of saints or heroes.

"Supererogatory virtue is shown by acts of exceptional sacrifice for the benefit of others. Such acts are praiseworthy and not regarded as irrational, but they are not thought either morally nor rationally required." —Nagel, *The View from Nowhere*, 1986, p. 203.

Superman, see übermensch

Supernatural theology, another name for revealed theology

Socratic elenchus

真理、知识和存在。在这一比喻中提出的善的主宰是含混的，对它的解释一直有争议，但作为一个形而上学尝试，它力图为一切实解释建立一个根本原则。它对后来的许多形而上学系统都有巨大的影响。在《国家篇》中，太阳之喻为线段之喻和洞穴之喻所补充。

“善在思想世界中与理智和已知物的联系，正是太阳在可见世界中与视力和所见物的联系。”——柏拉图：《国家篇》，508b。

超我

见“自我”条。

分外之事

[源自拉丁文 *super* (超出) 和 *erogare* (付出)] 指超出通常道德要求的好行为的范畴，例如冒着自己的生命危险去救另一个人。分外之事常常是费力的而且代价很高。作为值得称赞的行为，它们应在道德上受到鼓励，并值得表扬或尊敬。然而，一个人不是非做它们不可，即使他没有做，那也不是道德上的错误，也不会受到道德上的谴责。分外之事的目的在于一种道德理想而不在于通常的道德水准。齐硕姆把分外之事与道德上必须履行的行为、道德上无关紧要的行为、道德上被禁止的行为和道德上令人厌恶的行为一起并列为道德评价的五种行为之一。一些功利主义的看法排除了分外之事的可能性，因为最大快乐的需要没有给区分普通道德要求和超出它们以外的行为留有余地。一些人认为分外之事对普通的道德主体要求过高，这些人并不渴望过圣人或英雄的道德生活。

“分外之事的美德是通过为了他人利益的特殊的牺牲行为表现出来的。这种行为值得赞扬，而且不被视为是非理性的，但它们既不被看做是道德所要求的，也不被看做是理性所要求的。”——内格尔：《出自无处的观点》，1986年，第203页。

超人

见“超人 (*Übermensch*)”条。

超自然神论

对“启示神学”的另一种称呼。

Superstructure

The metaphor of base and superstructure or the foundation and superstructure is of fundamental importance to the methodology of historical materialism. The economic structure is said to be the foundation on which the state, including the police, army, courts and bureaucracy, and ideology are built. The state is called legal and political superstructure, while the ideology is called the ideological superstructure. The superstructure arises because of the conflict of interests of different classes inherent in the economical base and is thus determined by the base. The function of the superstructure is to keep the base intact by keeping the collective interests of the ruling class intact. This is accomplished by the sanctioned and coercive regulation of the legal/political superstructure and by the persuasive force of the ideological superstructure. When the development of the productive forces brings changes in the relations of production, Marx claims that the superstructure will consequentially be transformed. The distinction between base and superstructure depends on there being an explanatory priority given to the base in its relations with the superstructure, but this priority need not be absolute. Writers disagree concerning the autonomy of the superstructure in its own affairs and the power it has in shaping the base.

"The totality of these relations of production forms the economic structure of society, the real basis from which rises a legal and political superstructure, and to which correspond specific forms of social consciousness." —Marx, *Preface to the Critique of Political Economy*.

Supervenience

A term which can be traced to G. E. Moore, but which gained wider use through the work of R. M. Hare. Hare used it for the claim that moral or evaluative properties such as goodness must supervene upon natural properties such as intelligence, health and kindness. If something has the moral property in virtue of having the natural property and if anything having the natural property would in virtue of having it also have the moral property, then the moral property supervenes upon the natural property. If two things are alike in all descriptive respects, the same evaluative properties must be applied to both of them. On this view, good is supervenient upon underlying natural properties, although it is not reducible to them. Davidson extended this notion to the philosophy of mind, and claims that mental properties are supervenient upon physical properties. If two things are alike in all physical properties, they cannot differ in mental properties, but the mental cannot be reduced to the physical. Supervenient physicalism offers an alternative to reductionist identity theory. Supervenience is an irreducible relation of dependence upon base properties by supervenient properties. The term has a wide application. In ontology, mereological su-

上层建筑

基础和上层建筑的比喻对于历史唯物主义的方法论具有头等的重要性。经济结构被说成是基础，而国家（包括警察、军队、法庭和官僚）和意识形态建立于其上。国家被称为法律的和政治的上层建筑，同时意识形态被称为意识形态上层建筑。上层建筑的产生是由于经济基础所固有的不同阶级利益的冲突，因而被经济基础所决定。上层建筑的作用就是要通过保持统治阶级的共同利益不受损害而使经济基础保持完好无损。这要通过法律的和政治的上层建筑的确认的和强制的规章制度，以及意识形态上层建筑的说服力量才能实现。马克思认为，当生产力的发展促使生产关系发生变化时，上层建筑就随之而发生变革。基础和上层建筑的区别主要在于基础对于上层建筑而言具有解释的优先性，但这种优先性不必是绝对的。作家们对于上层建筑在它自己事务上的自主性和在形成基础中所具有的力量，意见不一。

“这些生产关系的总和构成社会的经济基础，即有法律的和政治的上层建筑竖立于其上并有一定的社会意识形式与之相适应的现实基础。”——马克思：《〈政治经济学批判〉序言》。

伴随性

这一术语可以追溯至 G. E. 摩尔，但通过 R. 黑尔而被更为广泛地使用。黑尔使用它来指这样一种主张：像“好”这样的道德的或评价的特性一定依赖于自然的特性，诸如智力、健康和善意。如果某物由于拥有一自然属性而具有一个道德属性，如果具有该自然属性的任何事物都会由于这一自然属性而具有该道德属性，则该道德属性伴随于该自然属性。如果两个事物在所有的描述方面都是一样的，那么同样的评价特性也一定对它们都适用。因此，好伴随于支持它的自然特性，尽管并不还原于它们。戴维森将这一概念延伸至心的哲学，声称心的特性伴随于物理特性。如果两个事物在所有的物理特性上都一样，它们在心的特性上就不会有所不同。但心的东西不能被还原为物的东西。伴随物理主义提供了还原论的同一论之外的另一选择。伴随性是伴随特性对于基础特性的非还原的依赖关系。这一术语具有广泛的应用。在本体论中，部分论的伴随性可以用来描述部分与整体的关系。在认识论中，像“可辩护的”、“合理的”这样的特性被认为是伴随性的。最近，基姆

pervenience can be used to describe the relation between part and whole. In epistemology, properties such as being justifiable or reasonable are said to be supervenient properties. Recently, weak, strong and global supervenience have been introduced by J. Kim. For the actual world or a given possible world, property A weakly supervenes on property B, if anything in that world having B also has A. Across different possible worlds, A strongly supervenes on B if any individual having B will also have A across all of those worlds. For global supervenience, if the histories of two worlds agree in all of their subvening respects, the worlds will also be indiscernible in their supervening respects. Supervenient properties are also called consequential characteristics or tertiary qualities. The latter notion was introduced by Bonsanquet for the aspects of beauty and sublimity which we recognise in nature but which are not features of nature at all.

"Entity Q supervenes on entity P if and only if every possible world that contains P contains Q." — Armstrong, *Universals*, 1989, p. 56.

Supposition

[from Latin: *suppositio* and the verb *supponere*, to put something under] The signification of a term in a proposition. The doctrine of *suppositio*, one of the most significant parts of medieval logic, was developed in the thirteenth and fourteenth centuries. Through recognition of the ambiguity of a term, medieval logicians devoted themselves to classifying the various types of *suppositio* a term may have in the context of a proposition. A distinction between simple supposition (*suppositio simplex*) and personal supposition (*suppositio personalis*) was drawn. The former signifies a common nature, and the latter signifies an individual. This corresponds somewhat to the distinction between *suppositio discreta*, which directly refers to an individual, and *suppositio communis*, which refers to many. *Suppositio personalis* was further divided by Ockham into *suppositio determinata*, which can be explained by reference to one individual, and *suppositio confusa*, which involves all or many individuals of the species. *Suppositio confusa* has two main types: *mobile* and *distributiva*. There is also a kind of material supposition, *suppositio materialis*, by which a word refers to itself. Different logicians vary about the types and the relations among the types. This difficult doctrine is of contemporary interest through its relevance to issues of meaning and reference.

"Supposition is the signification that a certain kind of term has in the context of a proposition." — Broadie, *Introduction to Medieval Logic*, p. 28.

Surface structure. see deep structure

又将伴随性分为不同的种类：弱、强与完全的。对于真实世界或一个给定的可能世界，特性 A 弱伴随于特性 B，如果在那个世界中，任何具有 B 的事物都具有 A。跨越不同的可能世界，A 强伴随于 B，如果在所有那些世界里，所有具有 B 的个体也会具有 A。对于完全伴随性而言，如果两个世界的历史在所有的支持方面都相同，那么它们在其伴随的方面也将是不可区分的。伴随特性也被称为“结果特性”或“第三特性”。其中后一个概念由鲍桑葵引进用以指我们在自然中认识到的“美”和“庄严”这样的事实上并非自然的特征的方面。

“当且仅当每个包含 P 的世界都包含 Q 时，存在物 Q 伴随于存在物 P。”——阿姆斯特朗：《普遍》，1989 年，第 56 页。

指代

[源于拉丁语 *suppositio*，动词是 *supponere*，意为“把什么放在下面”] 指一个术语在命题中的意思。指代学说是中世纪逻辑学最有意义的部分之一，在 13 至 14 世纪得到发展。通过对术语歧义的认识，中世纪逻辑学家们致力于区分术语在命题语境中可能具有的不同类型的指代。于是，抽引出了“单一的指代”和“个人的指代”之间的区别，前者表示共同的本性，后者表示个别的本性。在某种意义上，这相当于直接指个体的具体指代和指众多的共同指代之间的区别。个人指代被奥康进一步划分为规定的指代（它能被论及的一个个体所解释）和混同的指称（它涉及的是该种之内的所有个体或许多个体）。混同的指代有两种主要类型：运动的和分布性的。还有一类实质指代，意为语词指它自身。不同的逻辑学家对指代的类型以及类型之间的关系看法不同。这个学说是困难的，但当代人对它有兴趣，因为它与意义和指称的争论有关。

“指代是某类术语在命题语境中所具有的意思。”——波罗德：《中世纪逻辑学导论》，第 28 页。

表层结构

见“深层结构”条。

Surprise examination paradox

A semantic paradox, also called the examination paradox or prediction paradox. A teacher announces that there will be a surprise examination next week. Then a student claims that such an examination cannot occur. The examination cannot be on Friday (the last working day of the week), for at that time it would not be a surprise at all. It cannot be on Thursday. For if there is no examination given on Wednesday, we will know that it will come either on Thursday or Friday, but since Friday has been ruled out, Thursday will be the only day left, and then the examination will not be a surprise. The other days can also be eliminated in the same manner. Hence there can be no surprise test next week. Some critics argue that if the student calculates that the surprise examination cannot take place on Friday (or any other given day), it would be a surprise if it were to take place then and that it therefore could take place on any day of the week. The paradox was originally observed by a mathematics teacher in Stockholm during the second world war, when he heard a declaration from the authorities that, as an exercise, there would be a surprise air-raid alarm some day during the next week during which people should go to an air-raid shelter.

"The class's argument falls into two parts; one applies to whether there can be an unexpected examination on the last day, Friday; the other takes forward the negative conclusion on this issue, and purports to extend it to the other days" Sainsbury, *Paradoxes*, 1988, p. 94.

Survival, problem of

Traditionally the problem of immortality, concerning whether the self or soul can survive bodily death and also concerning the form that survival might take. Some philosophers argue that the soul could exist on its own after death, with a continuation of its earthly identity and with mental capacities very much like those of its embodied state. Others argue that preserving one's identity and capacities would require either the resurrection of one's earthly body or its replacement by a special body. Others argue that survival is unintelligible without a continuing relationship with a living body and that survival of bodily death is therefore impossible.

A different problem of survival is extensively discussed by Derek Parfit and distinguished by him from the problem of personal identity. Imagine that my brain is divided into two halves and that each half is transplanted into the skull of a new body. If character and memories were related to both sides of the brain, the result of successful transplantation would be that two persons would have my character and my apparent memories. To which of them am I identical? Not to one of them alone, because the other would have equally good claim to be me. Not to both of them, because then two

意外考试悖论

一个语义学悖论, 亦称“考试悖论”或“预告悖论”。一位老师预告, 下星期将有一次意外的考试。这时, 有位学生断言, 这样的考试不能发生。考试不能在星期五(即该星期的最后一个工作日), 因为若在此时, 完全不是意外的事情。它也不能在星期四, 因为如果星期三还没有进行既定的考试, 我们将知道, 它会在星期四或星期五来临, 但是, 既然星期五已被排除, 星期四就成了所剩的唯一一天, 那么, 考试也就不意外了。以同样的方式, 也能逐一排除其他几天。因此, 下星期能有一次毫无意外的考试。有些批评家认为, 如果这位学生推算出意外的考试不能在星期五(或给定的另外某天)发生, 那么, 假如它在那时发生了, 就会是意外的, 所以, 它能在下周的某一天发生。这个悖论最初是由二次世界大战期间斯德哥尔摩的一位数学教师发现的。当时, 他听到官方发布的一则告示, 声称: 作为演习, 下星期的某一天将有一次意外的防空警报, 在警报期间, 人们应该躲到防空所里去。

“这类论证分成两个部分: 一部分用于是否能有一次意料不到的考试发生在最后一天, 即星期五; 另一部分提出关于这个争论的否定结论, 并意欲将其扩展到其余各天。”——塞斯伯里: 《悖论》, 1988年, 第94页。

续存问题

是传统上的不朽问题, 关乎自我或灵魂能否在身体死后继续存在的问题, 也关乎那种存活所可能采取的形式。有些哲学家论辩说, 灵魂在身体死后自己仍然能够存在, 继续其尘世的同一性, 并有与其有躯壳状态十分相似的心的能力。另有人论辩说, 保持一个人的同一性和能力要求其尘世躯体或者复活, 或者为另一个特定的躯体所代替。还有人论辩说, 离开与一个有生命的躯体的持续关系的存活是不可理解的, 因此躯体死后灵魂的续存是不可能的。

关于续存的另一个问题由D. 帕菲特作了广泛的讨论, 他并且将这一问题与个人同一性问题相区分。想像我的大脑被分为两半, 每一半都被植入一个新的身体的脑壳中。如果性格和记忆与大脑的两个半球都有关系, 成功移植的结果就将是两个具有我的性格和明显记忆的人。我究竟同一于他们中的哪一个? 不是单单与他们当中的一个, 因为另一个也同样可以声称是我。但也不是与他们都同一, 那样的话, 存在于同一时间的两个不同的个体就会彼此同一, 而我们的同一性概念使这成为不可能。然而我却的确活着。有赖于此, 帕菲特论辩说, 续存

distinct individuals existing at the same time would be identical to each another, and our notion of identity makes this impossible. Nevertheless I do survive. On this basis Parfit argues that the problem of survival and the problem of identity should be distinguished. While identity cannot be settled in this case, we can answer the question of survival. Identity is a one-one relation, while survival can be a one-many relation. While identity is an all-or-nothing relation, that is, either X and Y are identical or X and Y are completely distinct, most of the relations which matter in survival are relations of degree. I can survive as two persons who share a common past in me without being either or both of them. If survival is what matters to me, I can give up my concern for identity. Parfit's separation of these two problems attempts to end the long-standing debate about personal identity, and it also has moral consequence regarding how I conceive of myself and how I value my future happiness as compared to the happiness of others. Since what matters in our continued existence is constituted mainly by relations of degree, Parfit believes that we have reason to diminish our self-absorption and our self concern.

"'Will I survive?' seems... equivalent to 'Will there be some person alive who is the same person as me?.'" —D. Parfit, "Personal Identity", in *Philosophical Review*, 1971, p. 9.

Survival of the fittest

The central idea of social Darwinism. A trait is fitting if it helps its species to survive. Fitness is a key concept in Darwin's explanation of differential reproduction. According to his theory of evolution, the various species evolved as the result of the action of an environment that favoured the survival of some organisms while destroying others. Social Darwinism applies this idea to the explanation of the development of society and claims that economic competition produces human progress. The idea is fully expressed by Herbert Spencer, who claimed in *Social Statistics* that just as competition in the natural world ensures that only the fittest survive, so free competition in the economic world ensures that only the most capable individuals survive and rise to the top. Society favours those who both understand the conditions of existence and are able to meet their requirements. He thought that competition and its outcome are necessary for the development of the human race. Social Darwinism and the notion of the survival of the fittest are now widely rejected on the grounds that they are bad science and bad morality.

"The phrase 'survival of the fittest' has been used, even since Herbert Spencer first coined it, to describe an individualistic law showing such... as co-operation, love and altruism to be unreal, a law which (somewhat mysteriously) both demands and predicts that they should always give way to self-interest." —Midgley, *Evolution as a Religion*, 1985, p. 2.

问题和同一性问题应当加以区分。在这一案例中,同一性问题不能得到解决,但我们却可以回答续存问题。同一性是一一对应的关系,而续存则可以是一对多的关系。同一性是一个全或无的关系,亦即,或者X与Y是同一的,或者X与Y是完全不同的,而续存中的大多数关系则是一个程度问题。我可以作为共有—一个共同的过去的两个人而续存却并不是他们中的任何一个或是他们两个。如果续存是对我重要的东西,我就可以不关心同一性问题。帕菲特将这两个问题分离是试图结束关于个人同一性的长期争论,并且它对于我如何想像我自己以及我如何相对于他人的幸福来评价我自己将来的幸福,都具有道德后果。由于我们的持续存在主要是一个程度问题,所以帕菲特认为我们有理由降低自我专注和自我关心。

"'我会存活吗?'似乎……等同于'会有一个与我完全相同的人活着吗?'"——帕菲特:《个人同一性》,载《哲学评论》,1971年,第9页。

适者生存

社会达尔文主义的核心思想。一种特性如果有助于其物种的生存,它就是适合的。适合是达尔文解释各种不同繁殖的关键概念。根据他的进化理论,各类物种的进化是环境作用的结果,因为环境有利于某些有机体的生存,同时毁灭另一些有机体。社会达尔文主义运用这一思想解释社会的发展,认为是经济的竞争导致了人类进步。H. 斯宾塞对这一思想做了充分说明,他在其《社会统计学》一书中声称,正如自然界的竞争使得只有适者才能生存一样,经济世界的自由竞争使得只有最具能力的人才能生存并升至最高职位。社会偏爱那些既了解生存条件又能满足其需求的人。他认为竞争及其结果对人类发展是必需的。社会达尔文主义及适者生存的观念现在普遍受到拒斥,因为它们是错误的科学和道德。

"自从H. 斯宾塞首创'适者生存'这一用语,它就一直被用来描述一种个人主义的法则,这一法则表明诸如合作、爱及利他主义都是假的,它(多少有点神秘地)要求并且预言它们将总是让位于自我利益。"——米古勒:《作为一种信仰的进化》,1985年,第2页。

Suspension of judgement

[Greek: *epoche*, also translated as suspension of belief] A key term in ancient scepticism for the epistemological stance which does not deny or affirm anything. It is an attitude of indifference to the nature of a thing, arising from the modes of scepticism. Since our sensations tell us neither truth nor falsehood, we should be uncommitted and resist any temptation to hazard opinions. According to the sceptics, suspension of judgement may lead to tranquillity and therefore to happiness.

"Broadly speaking, suspension of judgement comes about because of the setting of things in opposition" Sextus Empiricus, *Outline of Pyrrhonism*, 1, 31.

Syllogism

[from Greek: *sullogismos*, argument] Aristotle's famous logical achievement, described in his *Prior Analytics* and *Posterior Analytics*. A syllogism is a formally valid inference to a conclusion from two premises (a major premise and a minor premise). The premises and the conclusion all have subject-predicate forms. The premise containing the predicate of the conclusion is the major premise, and the premise containing the subject of the conclusion is the minor premise. The term which appears in both premises but does not appear in the conclusion is the middle term. The subject-predicate relation is either affirmative or negative and is either universal or particular, yielding four kinds of propositions in syllogism: all X is Y, no X is Y, some X is Y and some X is not Y, symbolised in traditional logic by the letters A, E, I, O respectively. Syllogisms can be divided into four figures according to the different positions of the middle term in the premises, although Aristotle only describes the first three, with the fourth figure added by medieval logicians. In each figure the different possible combinations of forms of premise result in different moods, but not all moods are valid. An example of the first mood of the first figure (called Barbara) is: All men are mortal. Socrates is a man, therefore Socrates is mortal. Syllogism was the core of the first abstract and rigorous system of logic, and dominated logic until the nineteenth century. However, since it only deals with subject-predicate relations, its scope of application is limited, and even as an account of predication it has been superseded by modern predicate calculus.

"A syllogism is discourse in which, certain things being stated, something other than what is stated follows of necessity from their being so." --Aristotle, *Prior Analytics*, 24b18-20.

Symbol, see sign and symbol

中止判断

[源自希腊词 *epoche*, 也认作“中止信念”] 古代怀疑论的主要术语, 指一种既不否定也不肯定任何事物的认识论立场。它是一种从怀疑论的模式中产生的对事物性质的漠然态度。由于我们的感觉并没有向我们表明真理和错误, 我们不应投入到某一方, 应当克服任何作出轻易结论的欲望。对于怀疑论者而言, 中止判断会导向心灵平静, 从而获得幸福。

“大略地说, 中止判断是在事物中建立对立面的结果。” 塞克斯都·恩披里柯:《皮浪主义纲要》, 1, 31。

三段论

[源自希腊语 *sullogismos*, 意为“论证”] 亚里士多德的著名逻辑学成就, 其系统阐述在他的《前分析》和《后分析》中。三段论是从两个前提(一个为大前提, 一个为小前提)得出结论的形式上有效的推论。前提和结论全都具有主语—谓语形式。包含结论谓语的那个前提是大前提, 包含结论主语的那个前提是小前提。在两个前提中都出现但在结论中不出现的那个词是中项。主语—谓语的关系或是肯定的或是否定的, 或是全称的或是特称的, 由此形成三段论中的四类判断, 即: 所有 X 是 Y, 没有 X 是 Y, 有些 X 是 Y, 有些 X 不是 Y, 在传统逻辑中, 用字母 A、E、I、O 来分别表示。根据中项在前提中的不同位置, 三段论能被分成四个格, 虽然亚里士多德只阐述了前三个, 第四格是由中世纪的逻辑学家们添加的。在每个格中, 前提的不同可能组合形式导致不同的式, 但是, 并非所有的式都有效。第一格第一式(称为 Barbara)的例证是: 所有人都有死, 苏格拉底是人, 所以, 苏格拉底有死。三段论是第一个抽象的、严密的逻辑体系的核心, 它支配着逻辑学一直到 19 世纪。然而, 既然它仅仅处理主语—谓语的关系, 其适用范围必定是有限的, 即使是对谓语的说明, 它也被现代的谓词演算所替代。

“三段论是一种论证, 其中, 某些论断只要被确定, 另一个不同于它们的论断就可以必然地从如此确定的论断中推出。” ——亚里士多德:《前分析》, 24b18-20。

符号

见“记号和符号”条。

Symbolic logic, another term for mathematical logic

Symmetric relation

A relation R between two terms, x and y , is symmetric if and only if xRy entails yRx . For example, from Smith is the brother of John, we can infer that John is the brother of Smith. A relation R is asymmetric if xRy entails $\neg yRx$. For example, from Smith is the father of Peter, we can infer that Peter is not the father of Smith. "The brother of ..." is symmetric, while "the father of ..." is asymmetric. A relation R between two terms can also be non-symmetric, that is, neither symmetric nor asymmetric. For example, from John likes Jane, we cannot tell whether or not Jane likes John.

"What all cases of equivalence have in common, is mainly the mark of a symmetrical relation, namely, the two axioms: If $A = B$, then $B = A$; If $A = B$, and $B = C$, then $A = C$." — Russell, *The Collected Papers of Bertrand Russell*, II, p. 191.

Sympathy

[from Greek *sym*, together — *pathos*, passion] A general disposition or propensity to feel what others around us are feeling and to be affected or moved by this feeling. We are delighted if we observe others who are delighted, and feel sorrow if we observe others in pain. For Hume, sympathy is a part of human nature. In contrast to reason, it is the basis for forming what we regard to be virtues and vices. According to Adam Smith's further development of Hume's idea in *The Theory of Moral Sentiments*, sympathy is an analogous emotion which arises in spectators from imaginatively putting themselves in the situation which causes the feeling in the agent. Sympathy is what Hutcheson called moral sense and what Hume called approbation. All of these are different expressions for sentiment. For British theorists of moral sentiments, sympathy is our ground for making moral judgements and moral rules.

"Pity and compassion are words appropriated to signify our fellow feeling with the sorrow of others. Sympathy, though its meaning was, perhaps originally the same, may now, however, without much impropriety, be made use of to denote our fellow-feeling with any passion whatever." — Smith, *The Theory of Moral Sentiments*, 1976, p. 10.

Syncategorematic

[from Greek: *syn*, with — *kategoria*, category] A term introduced by medieval logicians. Categorematic terms were originally those falling under Aristotle's ten categories to denote entities of ten different kinds, with each forming an independent meaningful unit as an expression. Later any term which stands for something and which can serve as a subject

符号逻辑

“数量逻辑”的另一个名称。

对称关系

两个项 x 和 y 之间的关系 R 是对称的, 当且仅当 xRy 衍推 yRx , 例如, 从“史密斯是约翰的兄弟”, 我们可以推出“约翰是史密斯的兄弟”。关系 R 是反对称的, 如果 xRy 衍推并非 yRx 。例如, 从“史密斯是彼得的父亲”, 我们能够推出“彼得不是史密斯的父亲”。因此“是……的兄弟”是对称的, 而“是……的父亲”则是反对称的。两项之间的关系 R 还可以是非对称的, 即是说, 既不对称也不反对称。例如, 从“史密斯喜欢珍妮”, 我们不能分辨珍妮是否喜欢史密斯。

“所有等值的情形所共同具有的东西, 主要是对称关系的标记, 即两个公理: 如果 $A=B$, 则 $B=A$; 如果 $A=B$ 并且 $B=C$, 则 $A=C$ 。”——罗素:《罗素文集》, 第二卷, 第191页。

同情

[源自希腊文: *sym* (共同) 和 *pathos* (感情)] 指的是一种普遍的性情或性格上的倾向, 即感觉到我们周围其他人在感觉什么并为这种感觉所影响或感动。如果我们看到其他人高兴我们会高兴, 如果我们看到其他人疼痛我们会难过。休谟认为, 同情是人的本性的一部分。与理性不同, 它是形成我们把什么看做善和恶的基础。A. 斯密在《道德情感论》进一步发展了休谟的思想, 在他看来, 同情是在旁观者身上产生的一种类似的感情, 这种感情来自他们想象地把自己置身于引起当事者感表的处境中。同情也是哈奇森所说的道德感受和休谟所说的认可。所有这些都是思想感情的不同表示。在英国道德情操论者看来, 同情是我们做出道德判断和制定道德规范的根据。

“怜悯和同情是适于表示我们为其他人感到遗憾的两个词。尽管同情的含义最初可能是指相同的内容, 但现在可被用来表示我们对无论什么样的感情的同情, 这没有什么不合适的。”——斯密:《道德情感论》, 1976年, 第10页。

助范畴词

[源自希腊语 *syn* (随着) 和 *kategoria* (范畴)] 由中世纪逻辑学家引入的术语。范畴词本来是指亚里士多德的十范畴, 后者指十种不同类型的实体, 所以其中每一个都作为一个表达式构成一个独立的意义单位。后来, 代表某物或能在直言命题中用作主词或谓词的任何词项都

or predicate in a categorical proposition was considered to be categorematic. In contrast, syncategorematic terms are those words which cannot function to refer to anything but have to be used together with categorematic terms. They are words such as and, or, not, if, every, some, only and except. Because they do not stand for anything, they do not have meaning in isolation. Although they need other terms to make a meaningful unit of language, they have special logical importance because they show the form of a statement. The notion of a syncategorematic term has now been replaced in modern logic by the notion of a logical constant or topic-neutral expression.

"Such words are called syncategorematic because they are only capable of being used along with others in predication" —Joseph, *An Introduction to Logic*, 1916, p. 19.

Syndicalism

[from French; *syndicat*, trade union] A socialist theory based on the experiences of the French trade union movement. Syndicalism claimed that the working-class should adopt direct action against capitalism through trade unions or other working-class organisations. The general strike was regarded as the most important weapon. Militant syndicalism advocated class war and the destruction of capitalism by armed violence. Classical syndicalism distrusted political and state activity and rejected all state-orientated politics. It envisaged the reconstruction of society according to a federal formation of local workers' units after the abolition of the state.

"The term 'syndicalism' has two meanings. It can denote simply trade unionism in a neutral sense. On the other hand, it signifies revolutionary or militant trade unionism, devoted to the overthrow of capitalism and the state. The usually mechanism of overthrow was the general strike."

Plant, *Modern Political Thought*, 1991, p. 87.

Synonym

A relation between things or expressions. Two things are synonymous if they share the same expression, and the expression applies to them for the same reason. For instance, both a man and a horse are called "animal", in the sense that both of them are living things which can move themselves. Thus both a man and a horse are synonymous with regard to the expression "animal". Synonymity today is more likely to be ascribed to expressions than to things. Two expressions are synonymous if they have the same meaning. Usually, an expression in a proposition can be replaced with its synonym without affecting the truth value of the whole sentence, although this does not apply to propositional attitudes or other opaque or non-extensional contexts.

"A word is synonymous to a word or phrase if the substitution of the one for the other in a sentence always yields

被认作范畴词。相比之下,助范畴词是不能作为指称某物的词起作用、而不得不与范畴词共同使用的词语。它们是像“并且”,“或者”,“并非”,“如果”,“每一个”,“有些”,“仅有”和“除……外”之类的词语;因为它们并不代表任何东西,孤立起来看没有意义。尽管它们需要其他词项才能成为有意义的语言单位,但它们具有特殊的逻辑重要性,因为它们显示了陈述的形式。在现代逻辑中,助范畴词这一概念已被“逻辑常项”或“题材中立的表达式”概念所代替。

“这些词语叫作助范畴词,因为它们只能与谓述中的其他成分一道使用。”——约瑟福:《逻辑导论》,1916年,第19页。

工联主义

[源自法文 *syndicat*, 工会] 一种以法国工会运动的经验为基础的社会主义理论。工联主义主张工人阶级应通过工会或其他工人阶级的组织采取直接反对资本主义的行动。总罢工被认为是最重要的武器。富于战斗性的工联主义提倡阶级斗争和用武装的暴力消灭资本主义。传统的工联主义不相信政治的和国家的能动性,拒绝所有适应于国家的政治活动,它设想在废除国家后依照地方工人组织的联邦形态重建社会。

“‘工联主义’这一术语有两个含义。它可以仅指中性意义上的工联主义。它也可表示致力于推翻资本主义和国家的革命的或战斗的工联主义。通常的推翻的途径是总罢工。”——普朗特:《当代政治思想》,1991年,第87页。

同义词

事物之词或表述之间的一种关系。如果两个事物分有相同的表述,而这个表述又是由于相同的理由而适于它们,那么,它们就是同义的。例如,人和马都被称作“动物”,是在它们两者都是能自我运动的生物这个意义上。因此,就“动物”这个表述而言,人和马是同义的。在当今,同义词更被归于表述,而不是归于事物。如果两个表述具有相同的意思,它们就是同义的。在通常情况下,命题中的表述能被它的同义中替换,不影响整个句子的真值,尽管这并不适于命题态度或其他不明确的或非存在性的语境。

“如果一个词被另一个词或短语替换,总能产生出一个等值句,那么,该词与另一个词或短语就是同义的。”——奎因:《理论与事物》,1981年,第71页。

an equivalent sentence." - Quine, *Theories and Things*, 1981, p. 71.

Syntactical ambiguity, an alternative expression for structural ambiguity

Syntactical sentence, see pseudo-object sentence

Syntax

[from Greek *syn*, together + *taxis*, order or arrangement] The rules of sentence construction, which indicate how sentences may be formed out of diverse kinds of words. The syntactic rules for each language distinguish those combinations of words which are acceptable from those which unacceptable. Syntactics is the study concerned with the formal aspects of sentence-formation, that is the structural relationships among symbols in a language, in contrast to semantics which studies questions of meaning or truth in a language. According to Russell, Wittgenstein and the Logical Positivists, the syntax or grammar of ordinary languages like English is ambiguous and allows the same grammatical form to be used for both meaningful and meaningless utterances. For instance, "Caesar is a prime number" is grammatical correct but logically meaningless. On this view, the grammar of ordinary language becomes a central source of metaphysical nonsense masquerading as intelligible discourse. Consequently, these philosophers suggest that a major task of philosophy is to construct a logical syntax in which grammatical and logical structures coincide.

Syntax is also discussed in recent philosophy as a result of the work of N. Chomsky. He argues for the existence of an innate universal grammar in part from the impossibility of children acquiring the complex syntax of natural language on empiricist principles.

"If grammatical syntax corresponds exactly to logical syntax, pseudo-statements could not arise." - Carnap, "The Elimination of Metaphysics Through Logical Analysis of Language", in Ayer (ed.) *Logical Positivism*, 1959, p. 68.

Syntax words see object words

Synthesis

[from Greek: *syn*, with, together + *tithenai*, put, place, literally, putting together] A mental process of drawing together separate items or ideas and combining them in some way as a whole. In general, it is a process which moves from the simple to the complex, in contrast to analysis which breaks up a whole into its constituents and its manner of combination. Kant made sophisticated use of the notions of *synthesis and analysis* in *The Critique of Pure Reason*. In

句法上的模糊性

“结构模糊性”的另一种说法。

句法语句

见“伪对象语句”条。

句法

[源自希腊文 *syn* (一起) 和 *taxis* (顺序或排列)] 语句结构的规则, 指明语句如何可以由多种不同的语词构成。每种语言的句法规则把可接受的和不可接受的语词的结合区别开来。句法学研究有关语句形成的形式方面, 即一种语言中符号之间的形式关系, 这与语义学不同, 后者研究语言中的意义和真理问题。在罗素、维特根斯坦和逻辑实证主义看来, 像英语这种日常语言的句法或语法是含混不清的, 允许同一语法形式既用于有意义的说话, 也用于无意义的说话。例如, “凯撒是个质数”在语法上正确, 但在逻辑上无意义。照这种观点, 日常语言的语法成了伪装成可理解话语的形而上学胡说的主要来源。因此, 这些哲学家认为, 哲学的主要任务是建构一种逻辑句法, 在它那里语法结构和逻辑结构是一致的。

由于 N. 乔姆斯基的工作, 句法在当代哲学中得到讨论。乔姆斯基主张存在先天普遍语法, 部分理由是, 按照经验主义原则, 儿童不可能获得关于自然语言的复杂句法。

“如果语法句法严格对应逻辑句法, 伪陈述就不会出现。” - 卡尔纳普: 《通过语言的逻辑分析清除形而上学》, 载于艾耶尔编: 《逻辑实证主义》, 1959 年, 第 68 页。

句法词

见“对象词”条。

综合

[源自拉丁文: *syn* (与……一起, 共同) 和 *tithenai* (置、放), 从字面上说, 即是“放在一起”] 一种将分散的东西或观念聚集在一起, 以某种方式将它们结合为一个整体的理智过程。一般而言, 这是个从简单到复杂运动的过程, 分析则与此相反, 它将整体分解为其组成部分及其结合的方式。康德在《纯粹理性批判》中对综合和分析的概念作了精致复杂的使用。在黑格

Hegel's dialectics, synthesis is the third stage of a triadic process of thesis, antithesis and synthesis. It reconciles both thesis and antithesis by preserving what is rational in them and rejecting what is irrational through what Hegel calls sublation. Synthesis also means the outcome of such a mental process.

"Synthesis may be defined as the discovery of a complex consisting of given constituents combined in a given manner." — Russell, *Collected Papers of Bertrand Russell*, VII, p. 119.

Synthesis (Kant)

The act of unifying or combining the manifold representations in intuition into one consciousness or one cognition. It is the act of combining intuition and concepts. The forms of sensible intuition, space and time, organise appearances in experience to a certain extent, but this is not enough. The intuited manifold still needs to be connected and put together. This is the job of synthesis, which is the main act of the understanding or the unity of apperception. Since this act is logical, not physical, Kant calls it intellectual synthesis. Since acts of synthesis take place *a priori*, not in the empirical time-series but rather added to experience, Kant also calls it transcendental synthesis. Synthesis plays an essential role in knowledge by allowing intuition to enter into concepts and providing them with contents that they would otherwise lack. Without synthesis, nothing can be thought or known. Some critics argue that Kant's elaborate account of synthesis provides an unnecessary transcendental psychology to deal with important logical or metaphysical problems.

"By synthesis, in its most general sense, I understand the act of putting together different representations, and of grasping what is manifold in them in one knowledge" — Kant, *Critique of Pure Reason*, B103.

Synthetic *a priori* judgement

Judgements may be divided into analytic judgements, in which the predicate adds nothing new to the subject, and synthetic judgements, in which the predicate cannot be extracted from the analysis of the subject. *A priori* judgements are independent of experience and are hence universal, necessary and immune to rejection by experience, while *a posteriori* judgements require empirical justification. Kant claimed that there is a kind of judgement that is at once synthetic and *a priori*. Such judgements do not derive their truth solely from the meanings of the words in the sentences expressing them, but express something that cannot be refuted by experience. They are universally agreed by reason and apodictically certain. Kant argued that not all *a priori* truths are analytical and that certain fundamental truths of mathematics, science and philosophy are synthetic *a priori*. He then pro-

尔的辩证法中,综合是正、反、合三过程的第三阶段。通过黑格尔所谓的否定,它保留正题和反题中合理的东西,抛弃其中不合理的东西,将二者调和起来。综合也意味着这种精神过程的结果。

“综合可以定义为发现一个复合物,它由按特定方式结合的特定构成成分组成。”——罗素:《罗素文集》,第七卷,第119页。

综合(康德)

综合在康德那里是把直观中的杂多表象统一或结合为一个意识或一种认识的活动。简言之,它是把直观和概念结合起来的活动。感性直观形式、空间和时间,在经验中把现象组织到某种程度,但这是不够的。直观杂多的需要联系起来并且结合在一起。这就是综合的工作,它是知性的主要活动或统觉的统一。既然这种活动是逻辑的而非物理的,康德也用它来意指“理智的综合”。因为它是先天地发生的,不存在于经验的时间系列,而是添加到经验之中的,康德也把它标作“先验的综合”。综合在知识中起着根本性的作用,因为它清楚地表明直观如何进入到概念,并把内容提供给概念,否则概念就是空的。没有综合,就没有任何事物可思想或认识。某些批评家争辩说,康德对综合的精心论述提供了一个不必要的先验心理学来讨论重要的逻辑问题或形而上学问题。

“所谓综合,在它的最广泛意义上,我理解为这样一种活动,它联结种种不同表象,并将它们的所有杂多把握为一种知识。——康德:《纯粹理性批判》,B103。

先天综合判断

判断可划分为分析判断和综合判断,在分析判断中,谓词没有给主词增加什么新内容,在综合判断中,谓词不能从对主词的分析而推导出来。判断也可划分为先天和后天判断。先天判断独立于经验,因而是普遍的、必然的,并不会为经验所否决;后天判断则要求经验的证实。康德注意到有一种判断,它同时既是综合的又是先天的。这样的判断不能单独从句子中的词的意义而推断它们的真,但又表达了某种不能由经验所否定的东西。它们是由理性所普遍同意和必然地确定的。康德的观点是,并非所有的先天真理都是分析的;而数学、科学和哲学的某些基本真理都属于先天综合判断。接着他开始探究“先天综合判断如何可能”这个问题,这将同时决定“形而上学如何可能”这个问题的解决。

ceeded to ask how synthetic *a priori* judgements are possible and through their possibility how metaphysics is possible. He saw this question as setting the central task of the *Critique of Pure Reason*. In order to answer this question, he established the existence of *a priori* intuitions (space and time) and *a priori* concepts (the categories) and related them to possible empirical knowledge.

The notion of synthetic *a priori* judgement was held to be self-contradictory by logical positivists, who argued that the analytic-synthetic distinction and the *a priori*-*a posteriori* distinction are identical. Quine has also rejected this notion on the grounds that we cannot draw the analytic-synthetic distinction without circularity. Kripke has accepted Kant's distinctions, but has introduced the notion of the necessary *a posteriori* in his essentialism. Some critics argue that the achievements of the first *Critique* can be detached from Kant's account of synthetic *a priori* judgements.

"We can confidently say that certain pure synthetic knowledge *a priori* is real and given, namely, pure mathematics and pure natural science; for both contain propositions which are everywhere recognised, partly as apodictically certain by mere reason, partly by universal agreement from experience, and yet as independent of experience" — Kant, *Prolegomena*, preamble, sec. 3.

Systematic ambiguity

A term introduced in Russell's theory of types. An expression is systematically ambiguous if it seems to be applicable to objects of different types. It is similar to the way that a common noun may be used to label either a thing of a given kind or a picture of such a thing or the way that a word may be used to refer to itself. Such an expression has to be differently interpreted according to the order of the propositions in which it occurs. But without the theory of type, the different meanings would not have been noticed. The word "class" is systematically ambiguous because it has different meanings when used at different levels in the hierarchy of types. This is the case for all existential propositions with the expression "there are". The expression has come to refer to a property which a term has if it means different things in different applications. We need special signs such as particular modifying words or quotation marks to remove this sort of ambiguity.

"The word 'there is' is a word having 'systematic ambiguity', i. e., having a strictly infinite number of different meanings which it is important to distinguish" — Russell, *Logic and Knowledge*, 1956, p. 268.

他把这个问题看做《纯粹理性批判》的中心任务。为了解答它,康德证明了先天直观(空间和时间)和先天概念(范畴)的存在,并把它们与可能的经验知识相联系。

先天综合判断这个概念被逻辑实证主义认为是自相矛盾的,因为他们相信分析判断和综合判断的二分对立与先天判断及后天判断的二分对立是相等的。奎因也抛弃了这个概念,因为我们无法做出分析与综合的区分而不陷入循环论证。而克里普克接受康德的区分,但他在他的本质主义中引入了后天必然判断的概念。有些评论者则认为第一批判的成就可与康德对先天综合判断的论述区分开来。

"我们能自信地说,某种纯粹先天的综合知识是实在的和给予的,即纯粹数学和纯粹自然科学;因为两者包含任何地方都可认识的命题,部分是由于理性本身的必然确定性,部分是按照普遍地与经验一致,可又独立于经验。"——康德:《未来形而上学导论》,绪论,第三部分。

系统模糊性

罗素类型论中引入的词。如果一个表达式似乎可以用于不同类型的对象,那么这个表达式就是在体系上模糊的。这类似于一个普通名词,既可以用来标志某个种类的事物,也可以用来标志这种事物的图像,或者类似于一个词可以用来指这个词本身。根据这种表达式所在的命题排列,这种表达式可以得到不同的解释。但没有类型论,这些不同的意义就不会被注意到。"类"这个词在体系上是模糊的,因为当它用于结构的不同层次时具有不同的意义。带有"存在着"这个表达式的所有存在命题就是这种情况。如果它在不同的用法中意味着不同的事物,那么它最终是指一个词具有的一种特性。我们需要诸如特殊的修饰词或引号等这种专门的记号来避免这类模糊性。

"'存在着'这个词带有'系统模糊性',即具有必须做出重要区分的无限多的不同意义。"——罗素:《逻辑和知识》,1956年,第268页。

T

Tabula rasa

[Latin: blank tablet] A metaphor for the soul or mind as a blank or empty tablet at birth. The phrase comes from the Latin translation of Aristotle's *De Anima* 429b30-430a3 where Aristotle said that the soul is like a writing tablet which is potentially whatever is thinkable, though actually it is nothing until it has thought. The phrase was widely used in Scholasticism to express the basic idea that there is nothing in intellect which was not first in the senses. The phrase has been especially associated with Locke, although he adopted this expression not in his *Essay*, but in other works. Instead Locke used some associated metaphors: mind is a white paper, a dark room or an empty cabinet. His point is that there are no innate moral and logical principles inscribed on the mind before birth and that at the beginning of cognition the mind is a void and passive entity, a receptacle awaiting ideas from experience. The mind, however, has the potential to acquire ideas and knowledge. This is the cornerstone of his empiricism.

"There is the question whether the soul in itself is completely blank like a writing tablet on which nothing has as yet been written—a tabula rasa—as Aristotle and the author of the *Essay* maintain." —Leibniz, *New Essays on Human Understanding*, Preface, p. 48.

Tacit belief

A person may have an unlimited number of beliefs at any time. Some of them he explicitly assents to. Others figure in his internal soliloquy. These can be called his explicit beliefs. But there are many others that are implied by these explicit beliefs but which are not themselves explicit because, for example, he has not drawn the necessary inferences at that moment. These are called tacit beliefs. Some tacit beliefs play a causal role in behaviour. It has become a major problem in the philosophy of mind how to distinguish tacit beliefs that have a real causal role from tacit beliefs that do not have a causal role.

"Call 'tacit' any belief that one really has but has not explicitly entertained." —Patricia Churchland, *Neurophilosophy*, 1988, p. 390.

Tacit knowledge

In addition to explicit knowledge-how and knowledge-that, Chomsky introduced another sort of knowledge, that is

白板

[拉丁语: 白板] 一个比喻, 把灵魂或心灵比作天生的白板。这个用语来自亚里士多德的《论灵魂》429b30—430a3 的拉丁译文, 在那里亚里士多德说, 灵魂像一块写字板, 虽然它潜在地是可想像的任何东西, 但是在它有了思想之前, 它实际上什么也不是。经院哲学广泛用这个用语来表达“理智中的东西无不首先在感觉中”这一基本思想。这个用语特别与洛克联系在一起, 尽管他本人在《人类理智论》(除其他一些著作外)中实际并未采用这个表述。他使用了其他一些相关的隐喻: 心灵是一张白纸, 或一间黑屋, 或一间空室。他的观点是: 心灵在生前并没有任何天赋的道德原则和逻辑原则印在上面, 在认识开始时, 心灵是一个空的、被动的东西, 一个容器, 它等待着由经验而来的观念。不过, 心灵仍然有获得观念和知识的潜力。这个观点是洛克的经验主义的基石。

“问题是, 灵魂本身是否像亚里士多德和《人类理智论》的作者所主张的那样, 是完全空白的, 好像一块尚未写上任何字迹的写字板 (a tabula rasa)。”——莱布尼茨: 《人类理智新论》, “前言”, 第 48 页。

静默信念

在任意时刻, 一个人的心中可能有无数的信念。有些是他明确认可的, 另有一些出现于他内部的自言自语中。这些可以被称为他的明确信念。但还有许多信念为这些明确信念所暗示但其本身却是不明确的, 因为(例如)他在那一刻没有作必要的推理。这些被称为静默信念。有些静默信念在其行为中起因果作用。心的哲学中的一个主要问题是, 如何区分有真正的因果效应的静默信念和没有因果效应的静默信念。

“一个人真正具有却未曾明确持有的任何信念可称为‘静默的’。”——丘奇兰德: 《神经哲学》, 1988 年, 第 390 页。

静默知识

在明确的知道如何和知道如此之外, 乔姆斯基又引入了另一种知识, 亦即, 说话者关于其

the speaker's unconscious knowledge of the grammatical rules of his language. This type of tacit knowledge is the basis for linguistic competence. Chomsky argues that a child does not know the rules, but he can easily master the intricate set of specific rules that distinguish what is grammatical from what is not grammatical. This suggests that the child already has a knowledge of the language, knowledge which is not learnt and which cannot be explained in empiricist terms such as stimulus control, conditioning or analogy. He claims that tacit knowledge must belong to an innate faculty and that the study of language should provide insight into human psychology. The idea of tacit knowledge is the core of Chomsky's Cartesian linguistics.

"Chomsky suggested that we might have tacit knowledge—propositional knowledge which we are unaware of having and cannot report having, which nevertheless guides our behaviours." —D'Agustino, *Chomsky's System of Ideas*, 1986, p. 69.

Taste

Sensitivity to the aesthetic properties of objects and the aesthetic intuition and response which enable one to tell, for example, what is beautiful or elegant. Taste is a major conception of eighteenth century aesthetics. Shaftesbury and Hutcheson regarded taste as a quasi-perceptual inner sense, akin to "moral sense", but for Kant it is simply a special operation of our normal cognitive faculties. There exist vast differences of taste among different cultures and different individuals. This makes taste appear to be purely subjective and a matter of personal preference. However, for some aesthetic objects there seems to be widespread—even cross-cultural and timeless—agreement in taste. Hence, Hume sought to ascertain the grounds of this intersubjective agreement. For Kant, the "judgement of taste" is subjective, but since it addresses the formal features of an object rather than its content, it is universally valid. Others believe that taste is a product of cultivation, demanding training and upbringing. People with the same social and educational background are more likely than people with diverse backgrounds to have shared taste regarding the same objects.

"Taste is the ability to judge an object, or a way of presenting it, by means of a liking or a disliking devoid of all interest. The Object of such a liking is called beautiful." —Kant, *Critique of Judgement*, Part 1, division 1, book 1, sect. 5.

Tautology

[from Greek, *tauto*, the selfsame — *logos*, word or expression, literally, repetition of what has been said] A logical formula which is true whatever the truth-possibilities of its constituent propositional variables. Thus, a tautology

语言的语法规则的无意识知识。这种静默知识是语言能力的基础。乔姆斯基论辩说,一个孩子并不知道这些规则,但他可以轻易地掌握一系列复杂的规则来区分合乎语法的和不合乎语法的。这表明那个孩子已经具有了关于这个语言的一种知识,一种非习得的、且不能用像刺激控制、条件反射、类比等等这样的经验主义语言来解释的知识。乔姆斯基声称静默知识一定属于一个先天的官能,而且语言研究应当有助于理解人类心理学。关于静默知识的思想是乔姆斯基的笛卡尔式语言学的核心。

"乔姆斯基提出我们可能具有静默知识——我们没有意识到自己具有并且也不能报告自己具有但却指引我们的行为的命题知识。"——德阿斯廷诺:《乔姆斯基的思想系统》,1986年,第69页。

鉴赏力

欣赏对象审美特性的敏感性,能使人识别譬如优美或优雅对象的审美直觉与审美反应。鉴赏力(或趣味)是18世纪美学的主要概念。沙夫茨伯利与哈奇森认为,鉴赏力是一种半感性的内在感觉,近似于"道德感",但在康德看来,鉴赏力只是我们正常认知感官的特殊运作形式。在不同的文化之中与不同的个体身上,鉴赏力有着天壤之别。这便使鉴赏力显现为一种纯然主观的或个人爱好的东西。尽管如此,对有些审美对象来说,在鉴赏力方面依然存在着广为流传的——甚至是跨文化的与超越时间的——共同认识。因此,休谟试图确定这些主体间认同的基础。康德认为,"鉴赏力判断"是主观的,然而,由于这种判断强调的是某一对象的形式特征而非其内容,所以是普遍有效的。另一些人认为,鉴赏力是文化修养的产物,需要训练和培育。具有同样社会和教育背景的人,要比背景不同的人更有可能在观照相同对象时享有共同的鉴赏力。

"鉴赏力是凭借没有任何利害关系的好恶情绪来判断一个对象的能力或表现一个对象的方式。令人喜爱的对象便是美的。"——康德:《判断力批判》,第一卷,第一部,第一部分,第五节。

重言式

[源自希腊文, *tauto* (自我相同) 和 *logos* (语词或表达),从字面上说,意为"重复已经说过的东西"] 一个逻辑公式,不论其组成部分的命题变项为真的可能性怎么样,它总是为真。这

takes the truth-value "true" for every truth-combination in a truth-table. Its truth cannot be established by experience and need not be so established. The denial of a tautology will be a contradiction. A tautology is not concerned with any subject-matter, and "says nothing" about the world, but exhibits the logical properties of genuine propositions or restates the same idea in different words. The study of tautology is of great importance in logic.

"In one of these cases the proposition is true for all the truth-possibilities of the elementary propositions. We say that the truth-conditions are tautological." —Wittgenstein, *Tractatus*, 4.46.

Techné

[Greek: craft or art, normally meaning skill] A skill in contrast to a natural capacity. Plato regularly asked whether virtue is *techné* and so teachable. Aristotle took *techné* to be a rational discipline concerned with production (*poiesis*). He held that as productive science it contrasts both to demonstrative science (*theoretikos*) and to practical reason (*phronesis*), which is concerned with action. In this sense, *techné* is skill in producing plus knowledge of the nature of relevant things. Despite Aristotle's distinction between practical reason and *techné*, his examples of practical reason often turn out to be illustrations of *techné*.

"A *techné* is the same as a state involving true reason concerned with production." —Aristotle, *Nicomachean Ethics*, 1140a10.

Teleological argument for the existence of God

[from Greek; *telos*, end] Also called the argument from design, an argument seeking to derive the existence of God from the teleological order of the world, resting on an analogy with the relation between an intelligent craftsman and human artefacts. Aquinas' fifth way of proving God's existence is a teleological argument. According to this argument, since everything in the world shows some order, regularity or purpose in its behaviour, there must be a supreme intelligence, namely God, outside the universe and directing natural things toward their ends. A classical version of the argument from design was formulated by William Paley. The various parts of a watch cooperate in complex ways to produce the result of keeping time because the watch is designed by a watch-maker. The universe resembles a watch in the sense that it is a system of adaptations of means to ends. The only way to explain the complex and pervasive adaptation to ends in the universe is to postulate a supernatural designer. For the teleological argument, what is at stake is not merely that the universe displays order or regularity, but also that the order and regularity is directed toward ends. In *Dialogues Concerning Natural Religion*, Hume formulated a similar version of the argument by comparing the world to a ma-

样,对真值表上每一真值的结合,重言式所取的真值都为“真”。它之为真不能得自于经验,也毋须得自于经验。对重言式的否定将会是一矛盾式。重言式不关心任何主题,对于世界“无所言说”,但展现了真正命题的逻辑性质,或对同一观念以不同的语词作了重述。研究重言式在逻辑中有极大的重要性。

“在这些情况之一中,命题对于基本命题的所有为真的可能性均为真。我们说这样的真值条件是重言式的。”——维特根斯坦:《逻辑哲学论》,4.46。

技艺

[希腊词,指“技艺”或“艺术”,一般意思为“技能”]一种与自然能力相对的技能。柏拉图经常问,德性是否是技艺,是否因此而可教。亚里士多德把“技艺”看做是一种理性学科,关注于创制(*poiesis*)。他认为,它作为创制科学,既与证明科学(*theoretikos*)相对,又与实践理性(*phronesis*)相对,后者关心的是行为。在这种意义上,技艺是创制的技艺加关于有关事物的本性的知识。不过,虽然亚里士多德区分了实践理性与技艺,他为实践理性所举的例子常常就是技艺的例子。

“技艺等同于一种表现关于创制的真实理性的状态。”——亚里士多德:《尼各马可伦理学》,1140a10。

上帝存在的目的论论证

[源自希腊语 *telos*, 即“目的”]亦称设计论证。这个论证以智慧工匠和人工制品之间的关系类比为依据,试图从世界的目的论秩序推导出上帝的存在。阿奎那证明上帝存在的“第五法”就是目的论论证。根据这个论证的说法,既然世上的每一事物在其行为中都表现出某种秩序、规整或目的,那么,就必定有一个至上的智慧,即上帝,他存在于宇宙之外,并把自然事物引向它们的目的。设计论证的经典说法是由W. 培里系统论述的。钟表的不同部件之所以能以复杂的方式合力产生记时的结果,是因为它由钟表制造者设计。在它们都是手段适合目的的系统这个意义上,宇宙与钟表相似。要解释宇宙中复杂的、扩大了适合目的的情形,唯一的办法是假定一位超自然的设计者。对目的论论证来说,关键的问题不仅是宇宙呈现出秩序或规整,而且是秩序和规整被引向目的。在《自然宗教对话录》中,休谟通过比较世界和机器,系统阐述了与该论证相似的主张。但是,在这本书中,休谟把大量篇幅放在对该论证的批判上,他的依据是,设计论证试图解释的东西,能够以两种互不相容的方式加以解释,所以,目的论论

chine. However, Hume devoted much of this work to criticising this argument on the grounds that what the argument from design seeks to explain can be explained in alternative ways and that the teleological argument cannot conclusively show the existence of God. Kant held that adaptation of things to the needs of other things in nature can suggest but cannot prove the existence of a designer. Hume's view is supported by the development of the Darwinian theory of evolution, which provides natural explanations of purposiveness in the world.

"Linked with the notion of design and order is that of purpose (hence the name Teleological Argument — from *telos*, 'end')."—T. McPherson, *The Philosophy of Religion*, 1965, p. 75.

Teleological ethics, see consequentialism

Teleological explanation

To explain a property or a behaviour in terms of purpose (Greek: *telos*). This sort of explanation was initiated by Socrates, and fully developed by Aristotle with his notion of final cause (Greek: *to ou heneka*, for the sake of which a thing comes about). In medieval philosophy, teleological explanation presupposed a Divine and omniscient designer. Everything operates for a goal and the goal is predetermined by God. Because of this, teleological explanation was vehemently criticised when modern science began. However, Aristotle mainly applied his final cause interpretation to living or organic things, and accounts for the function of each part of an organism by appeal to its contribution to the perfect state of the organism as a whole. This sort of teleological functionalism is still applicable in contemporary biology and social science, although some philosophers try to reduce such explanations to efficient causality.

"The teleological form of explanation [is] an explanation in terms of reason rather than in terms of causes."—Ayer, *The Concept of a Person and Other Essays*, 1963, p. 259.

Teleological functionalism, see functionalism

Teleology

[from Greek: *telos*, the end or aim of a thing — *logos*, study] Aristotle assumed that everything that happens in the universe must be understood as the striving of something towards an end promoting its well-being or helping it to survive. He ascribes *telos* to plants and animals, believing that their behaviour serves their needs and preserves their life. In view of the regularity in the natural world, he claims that nature itself must have an internal end or purpose.

Aristotle did not admit a conscious, rational agent in his

证不能确切地表明上帝的存在。康德认为,在自然中,事物对其他事物需要的适合能够提议但不能证明设计者的存在。休谟的观点得到了达尔文进化论的支持,因为该理论对世界的目的性提出了自然的解释。

“把设计观念和秩序连结起来的是目的观念(因此,‘目的论论证’这个名称源于 *telos*, 即‘目的’)。”——麦克斐尔逊:《宗教哲学》,1965年,第75页。

目的论的伦理学

见“效果论”条。

目的论解释

以目的(希腊语 *telos*)为依据解释特性或行为。这种解释方式肇始于苏格拉底,充分发展于亚里士多德及其“目的因”(希腊语是 *to ou heneka*, 直译为“一物所为的东西”)观念。在中世纪哲学中,目的论解释预设一位神和全知的设计者。每物的行为都为—目标,而这目标被上帝预定。正因如此,当近代科学兴起时,目的论解释受到了猛烈批判。但是,亚里士多德主要是把他的“目的因”解释用于生命物或有机物,并通过论述有机体各部分对作为整体的有机体的完善状态的贡献,来说明各部分的功能。这种目的论功能主义,在当代生物学和社会科学中,依然是适用的,尽管有些哲学家力图把这样的解释归结为作用因果性。

“目的论形式的解释,与其说是依据原因,不如说是依据理性的一种解释。”——艾耶尔:《人的概念及其他论文》,1963年,第259页。

目的论功能主义

见“功能主义”条。

目的论

[源自希腊语 *telos* (—物的目的或目标)和 *logos* (研究)] 亚里士多德假定,必须把宇宙中发生的一切事物现象理解为努力追求激发其幸福或有助其生存的某种趋于目的的东西。他认为植物和动物也有 *telos*, 相信它们的行为是为它们的需要服务的,并维持自身的生命。由于自然世界是规整有序的,所以他主张,自然本身必定有一内在的终点或目的。

在亚里士多德的目的论解释中,他不承认

teleological explanation, but the Christian tradition infers from the regularity in nature that there is a supernatural designer and claims that everything in the world has been designed by God to be of service to man (The Teleological Argument or Argument from Design). The theory of evolution denies the existence of a purposive designer, but confirms that an adaptation serves a purpose of survival in natural selection. Since purposive and functional activities are observed universally, teleology is much discussed in the philosophy of science. Whether functional or teleological explanation is a distinctive kind of explanation or can be reduced to causal explanation is a matter of controversy.

"Questions about teleology are, broadly, to do with whether a thing has a purpose or is acting for the sake of a purpose, and if so, what that purpose is." —Woodfield, *Teleology*, 1976, p. 1.

Telishment

A term proposed by John Rawls to indicate a crucial problem of the utilitarian view of punishment. Utilitarianism claims that punishment is justifiable only by reference to its probable consequences with regard to promoting public good or preventing crime, rather than because the wrong-doing itself merits punishment. Rawls suggests that we can imagine a situation in which the authority knows that a suspected criminal is innocent, but it still imposes a harsh punishment on him because such an action can produce better social consequences. This practice should not be termed punishment, because the subject of suffering is not a wrongdoer. Rawls names it telishment. Telishment is intuitively wrong but seems to be justifiable according to the utilitarian view of punishment.

"Try to imagine, then, an institution (which we may call 'telishment') which is such that the officials set up by it have authority to arrange a trial for the condemnation of an innocent man whenever they are of the opinion that doing so would be in the best interests of society." —Rawls, "Two concepts of rules", in Acton (ed.), *Philosophy of Punishment*, 1969, p. 113.

Telos

[Greek: end, aim or goal] For Aristotle, one of the four causes: the final cause for the sake of which a process occurs or something is done. According to Aristotle's distinction between activity (*energeia*) and motion (*kinesis*), every action has an end, either an internal end in itself or an external end outside itself. By appealing to the *telos*, which is associated with the formal cause or even identical to it, Aristotle explained the generation of things and natural movement. He also called the characteristic function of a thing its end, because the benefit brought about by this function accounts for the existence of the thing and its aim. Thus out-

有意识的、理智的行为者。但是，基督教传统却从自然的规整有序出发，推出一位超自然的设计者存在，并断言，世上的每一事物都是上帝设计出来为人服务的（“目的论论证”或“设计论证”）。进化论否定了有意设计者的存在，但却确认了自然选择中的适者生存。因为有目的的、功能的活动是普遍可见的，所以，目的论在科学哲学中讨论颇多。功能的或目的论的解释是一种不同类型的解释，还是能被归结为因果解释，这是一个有争议的问题。

“大致说来，目的论所要研究的问题是，事物是否有目的，或是否为了追求目的而行动，如果是，那目的是什么。”——伍德菲尔德：《目的论》，1976年，第1页。

滥罚

J. 罗尔斯提出的一个术语，以表明功利主义处罚观的一个关键问题。功利主义主张，处罚之所以是正当的，只是由于涉及关于促进公共利益或防止犯罪这一可能的结果，而不是因为坏事本身应受处罚。罗尔斯提出，我们可以设想这样一种情况，在这种情况下，当权者知道嫌疑犯是无罪的，但仍对他处以重罚，因为这样做能产生更好的社会后果。这种做法不应称为处罚，因为受害的主体不是做坏事的人。罗尔斯把这叫做是“滥罚”。滥罚从直观上看是错误的，但根据功利主义处罚观来看似乎又是有道理的。

“尝试设想这样一种制度（我们可以把它称为‘滥罚’），由它任命的官员有权为了宣告一个无罪的人有罪而安排一次审判，无论何时他们都认为这样做是为了社会的最大利益。”——罗尔斯：《两种规则概念》，载于阿克顿（编辑）：《处罚哲学》，1969年，第113页。

目的

[希腊词，意为“终端”、“目的”或“目标”] 在亚里士多德看来，目的是四因之一，即一个过程为之发生或一件事情为之而作的最终因。按照亚里士多德关于现实（*energeia*）与运动（*kinesis*）的区分，每一活动都有一个目的，或者在自身之中（内在的），或者在自身之外（外在的）。通过诉诸于与形式因相连甚至等同于它的目的，亚里士多德解释了事物的生成及自然运动。他也把事物的特有的功能称作其目的，因为由这一功能引起的益处说明了该物的存在及其目的。这样，切割便是一把刀的目的。在他的

ting is the end of a knife. In his ethics, Aristotle connected *telos* with good, happiness and virtue. Every action is for an end, but happiness is the complete end (*telos*). *Telos* as function is a major, if controversial, conception in contemporary science, especially biology and social science. It is further discussed in the entry on teleology.

"It is for the sake of the end (*telos*) that everyone does the other things." -- Aristotle, *Nicomachean Ethics*, 1097a22.

Temperance

[Greek: *sophrosune*, self control or moderation in the satisfaction of bodily desire, from *phronēin*, sound mind] A virtue discussed by both Plato and Aristotle. A temperate man has a mind sufficiently sound to control desires. He knows his own limitations and practices restraint in action. Plato's dialogue *Charmides* sought a definition of temperance. In the *Republic*, temperance was described as a harmony between different classes in the ideal city and between different parts of the soul. In this harmony, the higher part controls the inferior part, with the consent of the latter. Aristotle understood temperance to be a mean state with regard to such desires such as eating, drinking and sex.

"Temperance is understood not to be carried away by the desires, but preserving a decent indifference toward them." -- Plato, *Phaedo*, 68c.

Temporal logic, another term for tense logic

Temporality

For Heidegger, *Dasein* exists in relation to three temporal dimensions at once. Its Being is constituted by taking the past with it, by being concerned with the present and by being the projection of the future. Hence, its Being is necessarily temporal. Temporality makes up the primordial meaning of *Dasein's* Being. The fundamental structures of *Dasein*, existentiality, facticity and fallingness, are modes of the temporalizing of temporality. They respectively correspond to three ecstasis of temporality: the past, the present and the future. Ecstasy literally means standing out, indicating that at each ecstasy *Dasein* stands out from the general flow of time and existence. Philosophers traditionally focus on the present and conceive time as a series of happenings or the occurrence of actual facts. In contrast, Heidegger claimed that temporality is an ecstatic unity which is independent of any chronological relations. Among the three ecstasis, the future is the primary phenomenon of the primordial authenticity of temporality. This ecstatic unity is also called the transcendence of time or the transcendence of *Dasein*.

"This phenomenon has the unity of a future which makes present in the process of having been; we designate it

伦理学中,亚里士多德也把目的与善、幸福或德性相连结。每一行动都是为了一个目的,而幸福是完满的目的 (*telos*)。在当代科学,尤其是生物学和社会科学中,目的作为功能是一个虽有争议但却重要的概念。进一步的讨论请见“目的论”条。

“每一个人都是为了某一目的而做其他事情。” -- 亚里士多德:《尼各马可伦理学》,1097a22。

节制

[希腊词为 *sophrosune*, 出自 *phronēin* (健全的心灵), 一般是指在满足身体欲望方面的自我控制或节制] 由柏拉图和亚里士多德讨论的一种美德。一个有节制的人有足够的心智控制自己的欲望。他知道他的界限,并在行动中约束自己。柏拉图的对话《查米德斯》是关于节制的定义的。在《国家篇》中,节制被描绘为理想国中各阶层间的和谐,是灵魂中不同部分间的和谐。在这种和谐中,较高的部分控制较低的部分,而较低的部分同意这种控制。亚里士多德把节制看做是跟诸如吃、喝、性等欲望有关的中庸状态。

“节制应被理解成是,不为欲望牵着鼻子走,而是对它们保持一种正直的冷漠。” -- 柏拉图:《斐多篇》, 68c。

时间逻辑

“时态逻辑”的另一术语。

时间性

对于海德格尔,缘在 [*Dasein*, 此在] 的生存同时与三个时间向度相关。它的存在由承担着过去、牵念着现在和是其未来的投射所构成。因此,它的存在必然是时间性的。时间性构成了缘在之存在的原初意义。缘在的基本结构,即生存状态、实际状态和沉沦状态,就是时间性进行时机化 (temporalizing, *Zeitigung*, 时间化) 的方式。它们相应于时间性的三种逸出状态或逸出态 (ecstasis, 出神态): 将来、过去和现在。逸出态从字面上意味着“站出去”,表示在每个逸出态中缘在从时间和生存的普遍之流中站出去。传统的哲学家们关注于现在,将时间当做一系列事件或实在事实的出现。与此相反,海德格尔认为时间性是逸出态的统一体,独立于任何年代学的关系。在这三个逸出态中,将来是时间性的真正切己的原初现象。这种逸出态的统一也被称作“时间的超越性”或“缘在的超越性”。

“我们称这样一个统一的现象,即在已经存在中当前化着的将来,为‘时间性’。” -- 海德格尔:《存在与时间》(马库阿里和罗宾逊英译), 1962年,第437页。

as 'temporality'." —Heidegger, *Being and Time* (tr. Macquarrie and Robinson), 1962, p. 437.

Temporally neutral term, see past-referring term

Tender-mindedness, see tough-mindedness

Tense logic

A formal logic about tense and temporality, concerned with the systematisation of inference involving propositions containing tensed verbs or notions of change, process and time. This area is not covered by standard logic which presupposes that the relations of predicate expressions to their subjects is timeless and static. Tense logic holds that the world changes and that it is possible that the same thing has and has not a given property at different times. The truth-values of tensed statements about the past, present and future vary at different times. This part of logic holds that terms such as before, after, now, next, always and sometimes should match the formal patterns of modal logic. It introduces the operators P to stand for the past tense ("it was the case that"), T for the present tense ("it is now the case that") and F for the future tense ("it will be the case that"). It can also be presented as a many-valued system. The logic is said to have been heralded by J. N. Findley, but the first system was provided by A. N. Prior in *Time and Modalities* (1957) and was conceived as an alternative solution to the problem of future contingents. Rescher and von Wright are also important contributors to the development of tense logic. The logic is also called temporal logic, chronological logic and the logic of change.

"The object of chronological logic— 'tense logic', or 'change logic', as it has also been called by various logicians— is to systematise reasoning with propositions that have a temporal copula." —Rescher, *Topics in Philosophical Logic*, 1968, p. 196.

Term

Any word or phrase that denotes an individual or a class and functions as a single unit in expressing meaning. In Russell's theory of meaning, a term is also an object which is referred to by a word or expression. He divides terms into two kinds: terms as things indicated by proper names and terms as concepts indicated by all other words. Hence, a man, a moment, a number, a class, a relation, a chimera and anything else that can be mentioned are all terms. In a broad sense, a word which does not have its own meaning but determines the meaning of the proposition containing it is also a term, and hence we have the concept of a syncategorematic term.

时间中立的用语

喜爱空想

见“讲究实际”条。

时态逻辑

关于时态和时间性的形式逻辑, 研究包含时态动词或变化、过程、时间等概念的命题推理的系统化。标准逻辑预设了谓词表达式与其主词的关系是无时间性的和稳定的, 因而它未涉足这一领域。时态逻辑认为, 世界是变化的, 同一事物在不同时间内可能有并且没有一给定属性。关于过去、现在、未来的时态陈述的真值随时间的不同而变化。这部分逻辑认为, 由“在……之前”, “在……之后”, “现在”, “紧接”, “总是”, “有时”之类的词语所表示的概念应该适合模态逻辑的形式模式。它引入算子 P 代表过去时态 (“过去的情形是……”), T 代表现在时态 (“现在的情形是……”), 用 F 代表将来时态 (“情形将会是……”)。时态逻辑还可以展示为一个多值系统。据说 J. N. 费德利预示了这一逻辑的来临, 但它的第一个系统是由 A. N. 普赖尔在他的《时间与模态》(1957) 一书中提出的, 设想为有关未来偶然性问题的另一种解决方案。N. 雷谢尔和冯·赖特对时态逻辑的发展域也作出了重要贡献。这一逻辑亦称“时间逻辑”, “时序逻辑”或“变化逻辑”。

“时序逻辑——‘时态逻辑’或‘变化逻辑’, 如不同的逻辑学家所称呼的——的目标是把有关含时间系词的命题的推理系统化。”——雷谢尔:《哲学逻辑论集》, 1968年, 第196页。

词项

任何语词或词组, 它指示一个体或一类, 其作用是表达意义的单一单位。在罗素的意义理论中, 词项也是一语词或一表达式所指称的对象。他把词项划分为两类: 作为事物的词项, 由专名来指示, 以及作为概念的词项, 由所有其他语词来指示。因此, 一个人、一个时刻、一个数、一个类、一种关系、一怪物或任何其他可以提及的东西, 它们全是词项。在更宽泛的意义上, 一个没有自己的意义, 但决定了包含它的命题的意义的语词也是一词项, 我们因此而有“助范畴词”这个概念。

“让我们说, 任何由一表达式引入, 或能够

"Let us say that anything which is introduced, or can be introduced, into a remark by an expression is a term." — Strawson, *Individuals*, 1959, p. 146.

Tertiary quality, see supervenience

Tertium non datur

[Latin: there is no third] A way of expressing the law of excluded middle, that is the law that every proposition is either true or false and that there is no third possibility. In contrast, *tertium quid* means that there is some third.

"Either one might, or one might not, have been otherwise. *Tertium non datur*." — Hartshorne, *Creative Synthesis and Philosophical Method*, 1970, p. 153.

Tertium quid, see *Tertium non datur*

Tertullian's paradox, see *fideism*

Thanatos, another expression for death instinct

Theism

[from Greek: *theos*, god] In opposition to atheism, the belief in the existence of God (monotheism) or gods (polytheism) as a personal being or beings. In contrast to deism, the belief that God transcends the world but is also immanent within it or within us; that God is perfect and is therefore omnipotent, omniscient and perfectly good; and that God is the loving creator of the world who manifests himself to human beings through caring for us and communicating with us. In contrast to pantheism, theism claims that God exists independent of the world. Theism is the central feature in the monotheistic religious tradition of Judaism, Christianity and Islam. Various arguments concerning the existence of God seek to establish theism, although critical responses are raised against each of its major claims.

"Theism, common to traditional Judaism, Christianity, and Islam, is the view that the cosmos is created and kept in existence by an omnipresent, omniscient, omnipotent, supremely good being. It preserves some distinction between God and the creation, according to which the two are not identical however interwoven." — C. Taliaferro, in Bunnin and Tsui-James (eds), *Blackwell Companion to Philosophy*, 1996, p. 446.

Theodicy

[from Greek: *theos*, god + *dike*, justice, right, the jus

被引入谈论中的东西都是一词项。"——斯特劳森：《个别物》，1959年，第146页。

第三特性

见“伴随性”条。

无第三

[拉丁语，“没有第三”]表述排中律的一种方式。排中律是指：每一命题要么真，要么假，没有第三种可能性。与此对应的是 *tertium quid*，意为“有第三”。

“要么可能，要么不可能，没有其他选择。‘无第三’。”——哈特肖恩：《创造性综合与哲学的方法》，1970年，第153页。

有第三

见“无第三”条。

德尔图良悖论

见“信仰主义”条。

死亡

“死亡本能”的另一表达。

有神论

[源自希腊语 *theos* (神)]与无神论相对立，相信作为人格的上帝（一神论）或诸神（多神论）的存在。与自然神论不同，有神论认为，上帝超然于世界之上，但也内在于世界或我们之中；上帝是完满的，所以也是全能、全知和全善的；上帝是世界的仁慈创造者，他通过对我们的关心和与我们的沟通而将自己显现给人类。与泛神论不同，有神论主张，上帝独立于世界而存在。有神论是犹太教、基督教和伊斯兰教的一神论宗教传统中的核心特征。关于上帝存在的各种论证，意在建立有神论，虽然对于它的每个主要观点，都有人提出批判性应答。

“作为传统的犹太教、基督教和伊斯兰教共同特征的有神论，指这样的观点：宇宙是由一位全在、全知、全能、至善的存在者创造出来并保持其存在的。它坚持上帝和造物之间的某种区别，根据这种见解，二者不同——但又是交织着的。”——塔里亚斐洛，见布宁和崔-詹姆斯（编）：《布莱克韦尔哲学指南》，1996年，第446页。

神正论

[源自希腊语 *theos* (神) 和 *dike* (公正、正

tification of God.] A term introduced by Leibniz in *Theodicy: Essays on God's Goodness, Man's Freedom and the Origin of Evil* (1710), but the basic problem was formulated by Boethius: *Si Deus justus-unde malum* (If God is righteous, why evil)? It is the part of theology that focuses on the reconciliation of the existence of God, as an omnipotent, omniscient, perfectly good and loving absolute being, with the existence of evil in the world. The human experience of suffering and guilt makes faith in God's justice a problem. Either God is able to stop evil but he does not want to, in which case he is omnipotent but not good or just; or he wishes to prevent evil but fails to achieve this, in which case he is good but not omnipotent. The main task of theodicy is to provide positive reasons to justify God's permission of the existence of moral and natural evil and for seeking to prove that our world is the best of all possible worlds.

"A response must explain God's action, or lack of action, by presenting a suitable reason for the existence of the evil. This kind of response is traditionally called a theodicy, a vindication of God's goodness." —Prevost, *Probability and Theistic Explanation*, 1990, p. 26.

Theological determinism

A position initiated by St. Augustine holding that God is omnipotent and has determined everything that will occur. As a consequence, everything in this world depends on God for existence. In addition, God is omniscient and knows all truths from the beginning of time. All actions that men are going to perform are known by him in advance. One version also claims that because of God's absolute goodness, this world is the best possible world. Theological determinism faces major difficulties in reconciling God's foreknowledge with human self-determination and in reconciling God's goodness with the existence of evil.

"Theological determinism argues that since God is omniscient, he knows everything, the future included." —Lucas, *The Freedom of the Will*, 1970, p. 65.

Theological virtues, see charity

Theology

[from Greek: *theos*, god + *logos*, theory, study] For Aristotle, first philosophy as the contemplation of the fundamental principle or ultimate substance. In general, theology is a discipline which deals with the explanation and justification of the teachings, doctrines and practices that constitute a religion. Each religion has its own theology, but in European thought, Christian theology has the greatest historical prominence as the rational account of Christian faith, although Jewish and Islamic theological writings have also had great influence. Christian theology is divided into many sub-

确), 从字面上讲, 指神的公正] 这个术语由莱布尼茨在他 1710 年的著作《神正论: 论神的善、人的自由和恶的起源》中引入, 但是, 基本的问题却是由波埃修斯提出的: *Si Deus justus-unde malum* (如果神是公正的, 为什么有恶)? 它是神学的一个部分, 集中于协调作为全能、全知、全善和爱而绝对存在的上帝存在与世上邪恶存在的关系。人遭难与犯罪的经历使得对上帝公正的信仰成了一个问题。要么是上帝能够阻止邪恶但却不想阻止, 要么是他愿意阻止邪恶但却无力实现; 在前一情形下, 他是全能的但却不善, 或不公正, 在后一情形下, 他是善的但却不是全能的。神正论的主要任务, 是要提供肯定的理由来为上帝允许道德和自然邪恶的存在作辩护, 并试图证明我们的世界是一切可能世界中最好的。

“通过对邪恶的存在提出充足的理由, 解释上帝的行为或无行为, 这种类型的应答传统上称之为神正论, 即对上帝之善的一种辩护。”——波列沃斯特:《或然性与有神论解释》, 1990 年, 第 26 页。

神学决定论

这一观点始于圣·奥古斯丁, 认为上帝是全能的并决定了将要发生的一切事物。因而, 世上的一切事物都依赖上帝而存在。此外, 上帝是无所不知的, 知道从创世以来的全部真理。人们所要进行的所有活动上帝预先都知道。它的一个变种还声称, 由于上帝的绝对仁慈, 这个世界是最好的世界。神学决定论面临的主要困难在于调和上帝的先知与人的自决, 以及调和上帝的仁慈与罪恶的存在。

“神学决定论论证说, 由于上帝是无所不知的, 他知道一切, 包括将来。”——鲁卡斯:《意志的自由》, 1970 年, 第 65 页。

神学德性

见“慈爱”条。

神学

[源自希腊语 *theos* (神) 和 *logos* (理论、研究)] 在亚里士多德那里, 它是沉思第一本原或终极实体的第一哲学。在一般意义上, 神学指一门学科, 即涉及对建构一个宗教的那些教义、学说和实践活动的解释和辩护。每个宗教都有自己的神学, 但在欧洲思想中, 作为对基督教信仰作出理性说明的基督教神学具有最重要的历史地位, 虽然犹太教和伊斯兰教的神学著作也有很大影响。基督教神学进一步分成多个二级学科, 譬如: 企图提供包含在不同的圣经文献中的

disciplines, such as biblical theology, which tries to provide the precise ideas contained in the various Biblical documents; historical theology, which traces the historical development of Christianity and the Christian Church; systematic theology, which aims at integrating into a coherent whole a wide array of fundamental religious beliefs; practical theology, which deals with the interaction of belief and behaviour; and philosophical theology, which applies philosophical methods in order to clarify religious concepts and presuppositions. While the philosophy of religion exists to criticise these doctrines and to assess their philosophical implications, theology assesses a religion from within and acts as a spokesman rather than as a critic. There are nevertheless various debates among theologians about how to explain certain religious elements. Theology presupposes faith and tries to acquire a knowledge of God by employing scholarly methods. It is faith seeking to understand itself. In Christianity, its goal is to serve salvation.

"Theology is 'the science of God'." —T. McPherson, *The Philosophy of Religion*, 1965, p. 142.

Theoretical construct

Also theoretical term, a term for something which is unobservable and postulated, such as force, atoms, field or electrons. According to logical positivism, these postulated items do not really exist, and these concepts are merely economical devices or constructs that are used to explain observable phenomena. It has been a matter of dispute in the philosophy of science whether they can be eliminated or replaced by observational terms. Scientific realists reject the notion of a theoretical construct as an interpretation of theoretical terms and accept that theoretical entities in true theories really exist.

"... [T]heoretical constructs'... cannot be mentioned in observation statements." —Pap, *An Introduction to the Philosophy of Science*, 1963, p. 26.

Theoretical entity, see theoretical term

Theoretical language, see observation language

Theoretical pluralism, see anarchism (scientific)

Theoretical sentence

In contrast to an observation sentence, a theoretical sentence is one whose meaning cannot be determined by itself as a single sentence. It has meaning only within a theory to which it belongs. It makes sense only together with its theo-

恰当观念的“圣经神学”；追溯基督教及基督教教会历史发展的“历史神学”；以把内容广泛的一系列基本的宗教信条整合成连贯整体为目标的“系统神学”；涉及信条与行止相互作用的“实践神学”；运用哲学方法以澄明宗教概念和假定的“哲学神学”。如果说宗教哲学的存在是批评这些学说，并评估它们的哲学意蕴，那么，神学则是从内部评判宗教，但扮演的角色与其说是评判者，不如说是发言人。然而，在如何解释某些宗教成分的问题上，神学家们存在着各种争论。神学以信仰为前提，并力图通过运用学术研究方法，获得对上帝的知识。它是寻求理解自身的信仰。在基督教中，它的目标是服务于拯救。

“神学是‘神的科学’。”——麦克斐尔逊：《宗教哲学》，1965年，第142页。

理论构造

也叫“理论术语”，指不可观察的和假定的事物，如力、原子、场、电子等等。依照逻辑实证主义，这些设定的东西并不真实存在，这些概念不过是用来说明可观察现象的经济的手段或构造。它们是否可以被消除或为观察术语所取代，成为科学哲学中争论的话题。科学实在论者否认作为理论术语解释的理论构造的观念，并接受理论实体在真的理论中是确实存在的。

“所谓‘理论构造’……在观察陈述中不能提及。”——帕普：《科学哲学导论》，1963年，第26页。

理论实体

见“理论术语”条。

理论语言

见“观察语言”条。

理论多元论

见“无政府主义（科学的）”条。

理论句子

与观察句子相反，理论句子是这样一种句子，它的意义不能由自身作为单个句子来决定。它只能在它所属的理论中才有意义。它只有与理论语境在一起时才能产生意义。除了观察句

retical context. Most sentences, apart from observation sentences, are theoretical. This term is central for Quine's epistemological holism.

"Theoretical sentences in general are defensible only pragmatically; we can but assess the structural merits of the theory which embraces them along with sentences directly conditioned to multifarious stimulations." — Quine, *Word and Object*, 1960, p. 271.

Theoretical term

Carl Gustav Hempel divided the vocabulary of empirical sciences into two classes: observational terms which denote an observable entity or property and theoretical terms which denote an unobservable entity or property. Observational terms are terms such as long and red, whose applicability to a given situation can be determined through direct observation. Theoretical terms are terms such as electron and quark, which are intended to establish an explanatory connection among observables and to construct a scientific system. Theoretical terms denote theoretical entities, which are postulated hypothetically by a theory. It is not clear where to draw the distinction between the theoretical and observational, for the term "observable" can refer either to what can be observed merely by the unaided senses or to what can be observed by using sophisticated scientific instruments, the operation of which is understood in terms of a theory. In addition, there have been challenges to the empiricist account of theory and observation underpinning Hempel's distinction and his claim that the principal role of theories is to explain empirical generalisations. There are important disputes concerning the real existence of theoretical entities.

"Theoretical terms, ... usually purport to refer to not directly observable entities and their characteristics; they function ... in scientific theories intended to explain empirical generalisations." — Hempel, *Aspects of Scientific Explanation*, 1965, p. 179.

Theoretician's dilemma

A dilemma formulated by Hempel, involving the ontological status of theoretical terms. It reflects the empirical tradition that the theoretical terms of modern sciences such as atom, field and force are merely "convenient myths". Theoretical terms either serve their purpose or do not. If they serve their purpose, they are unnecessary, because that purpose is to organise experiential data, and that can be done by laws that link observational antecedents to observational consequents without theoretical terms. If they do not serve their purpose, they are obviously unnecessary. Therefore theoretical terms are unnecessary. To escape this dilemma and avoid eliminating theoretical terms, philosophers normally reject or modify the first branch of the dilemma. Theoretical terms can have other functions which cannot be reduced

了之外的大多数句子都是理论句子。这个词是奎因认识论整体论中的核心概念。

“理论句子通常只有在实际使用中才能得到捍卫：我们只能评价这个理论所包含的结构优点，而这个理论只是伴随着直接规定了各种刺激的句子。”——奎因：《词与物》，1960年，第271页。

理论术语

C. G. 亨佩尔将经验科学的词汇分成两类：表示可观察的实体或性质的观察术语和表示不可观察的实体或性质的理论术语。观察术语是指诸如长、红这样的术语，其对特定情况的适用性可通过直接观察而确定。理论术语则是指电子、夸克这样的术语，它们是用在可观察的事物之间建立一种说明性联系和构建科学体系。理论术语表示理论实体，而这些实体是由理论假设提出的。理论术语和观察术语二者之间的界线并不清楚，因为“可观察的”这一术语既可指仅凭无助的感官本身观察到的东西，也可指用复杂的科学仪器观察的东西，观察进行的方式是根据理论来理解的。此外，对理论和观察的经验主义的说明，始终存在着挑战，这种说明支持亨佩尔的上述划分及他的这个主张，即认为理论的首要作用是解释经验的概括。在关于理论实体的真实存在问题上人们有着重大的分歧。

“理论术语……通常是指非直接观察得到的实体及其特性；它们在科学理论中的功能……是要解释经验的概括。”——亨佩尔：《科学说明的诸方面》，1965年，第179页。

理论家困境

一个由亨佩尔提出的困境，涉及理论术语的本体论地位。它反映经验主义的传统，即认为近代科学的理论术语，例如原子、场、力只不过是“方便的神话”。理论术语或者能达到其效用，或者不能。如果它们能起到其效用，则它们是不必要的，因为这个效用是组织经验材料，而这可由连接观察前提和观察结论的定律所完成，无需理论术语。如果它们起不到其效用，则显然是不必要的。因此理论术语是不必要的。为了摆脱这一困境，避免排除理论术语，哲学家们通常拒斥或修改困境中的第一支。理论术语具有不能被还原为观察术语功能的其他功能。这些被提出的功能包括说明、对结果的观察和经济的概括。理论术语被认为是科学成长的必要条件，是

to those of observational terms. These proposed functions include explanation, observation of results and economical summary. It is claimed that theoretical terms are a prerequisite of scientific growth and of certain forms of inductive reasoning.

"If the terms and principles of a theory serve their purpose they are unnecessary, as just pointed out, and if they don't serve their purpose, they are surely unnecessary. But given any theory, its terms and principles either serve their purpose or they don't. Hence, the terms and principles of any theory are not necessary. This argument ... will be called the theoretician's dilemma." —Hempel, in *Minnesota Studies in the Philosophy of Science*, vol. ii, 1958, p. 49.

Theoria

[Greek: vision of the real in the mind, hence contemplation or speculation, from *theorein*: to contemplate and *theasthai*: to gaze on, giving contemplation visual associations] In Aristotle's *Metaphysics*, *theoria* is the activity that involves no change. It can provide the eternally and supremely happy life which is ascribed to the unmoved mover or God and is available only occasionally to men.

In Aristotle's ethics, *theoria* is distinguished from practical activities. This is the origin of the contrast between theory and practice, though *theoria* does not actually mean theory. *Theoria* is about eternal and unchanging objects and is the highest and best activity of which a human being is capable. A man engages in contemplation not *qua* man but in virtue of the divine intellect (*nous*) in him. Contemplation is higher than practical reason and is the supremely valuable life, providing complete human happiness. A tension between Aristotle's claim that contemplation is the highest good and his commendation of practical virtue has been the subject of much dispute.

Aristotle also distinguished between theoretical or contemplative sciences, including theology, physics and mathematics, from practical and productive sciences. Theoretical sciences have their end in themselves and are not pursued for practical purposes or utility.

All of those senses of *theoria* are connected, but they are not in complete harmony with one another.

"Complete happiness will be its activity expressing its proper virtue; and we have said that this activity is activity of contemplation." —Aristotle, *Nicomachean Ethics*, 1177a17-8.

Theory of knowledge, another name for epistemology

Theory of sentiments, see sentiment

某种形式的归纳推理。

“如果理论的术语和原理起到作用,它们是不必要的,如刚才所指出的,而如果它们起不到作用,则它们无疑是不必要的。然而给定任何理论,其术语和原理或者能起到其效用,或者不能。因此任何理论的术语和原理是不必要的。这一论证……被称作理论家困境。”——亨佩尔,见《明尼苏达科学哲学研究》,第2卷,1958年,第49页。

思辨

[希腊词,心灵中关于真实的影像,得自 *theorein* (沉思或思辨) 和 *theasthai* (注视),赋予沉思以视觉上的联系]在亚里士多德的《形而上学》中,思辨是一种不涉及变化的活动。它可以提供永恒的和至高的幸福生活;这种生活属于不动的推动者或神,只是偶然地为人所具有。

在亚里士多德的伦理学中,思辨与实践活动相区分。这乃是理论与实践这一对立的起源,虽然思辨实际上并不等同于理论。思辨是关于永恒不变的事物,是一个人所能做的最高级最好的活动。当一个人从事思辨时,他不是作为人,而是由于在他之中的神圣的理智(*nous*)。思辨高于实践理性,是最有价值的生活,它提供了完满的人类幸福。可是,亚里士多德一方面认为思辨是最高的善,另一方面又推荐实践德性;这构成了一对一直被争论不已的矛盾。

亚里士多德也区分了理论的或思辨的科学(包括神学、物理学和数学)与实践的或创制的科学。理论科学的目的在于自身,而不是为了实践的目的或功用。

思辨的所有这些意义都是互相联系的,但彼此间并不完全相一致。

“完满的幸福是表现其适当德性的活动;而我们已经说过,这种活动是思辨的活动。”——亚里士多德:《尼各马可伦理学》,1177a17-18。

知识论

“认识论”的另一个名称。

情感论

见“情感”条。

Theory of value, see axiology

Theory-laden

A term introduced by Hanson in 1959. A concept, term or statement which is theory-laden makes sense only in the light of a particular theory or set of principles. Even experience is always shaped by theoretical traditions and expectations. Every observational term and sentence is alleged to carry a theoretical load. This position challenges the view of logical positivism that a protocol statement is a theoretically neutral report of experience and denies reducibility of theory-laden terms to a purely factual level of knowledge. The term implies a rejection of the influential dichotomy of theoretical terms and observational terms.

"There is a sense, then, in which seeing is a 'theory laden' undertaking. Observation of *x* is shaped by prior knowledge of *x*." — Hanson, *The Patterns Of Discovery*, 1959, p. 19.

Theory-theory

A theory of mind concerning how we come to know about the propositional attitudes of others. It tries to explain the nature of ascribing certain thoughts, beliefs or intentions to other persons in order to explain their actions. The theory-theory holds that in ascribing beliefs to others we are tacitly applying a theory which enables us to make inferences about the beliefs behind the actions of others. The theory which is applied is a set of rules embedded in folk psychology. Hence, to anticipate and predict the behaviour of others, one engages in an intellectual process moving by inference from one set of beliefs to another. This position contrasts with another theory of mind, the simulation theory, which holds that we need to make use of our own motivational and emotional resources and capacities for practical reasoning in explaining actions of the others.

"So called 'theory-theorists' maintain that the ability to explain and predict behaviour is underpinned by a folk-psychological theory of the structure and functioning of the mind—where the theory in question may be innate and modularised, learned individually, or acquired through a process of enculturation." — Carruthers and Smith (eds), *Theories of Theories of Mind*, 1996, p. 1.

Theosophy

[from Greek *theos*, god — *sophia*, wisdom, wisdom about God] A term first employed by the Neo-platonists for their own doctrine which emphasises the unity of religion and philosophy and for one's mystical acquaintance with the nature of God. The term was later used for several trends in German religious thought after the Renaissance, in particular

价值理论

见“价值论”条。

载有理论的

最初由汉森于1959年引入的术语。说一个概念、一个术语或一个陈述是载有理论的,是说它只在特定的理论中或某一系列原理中才是有意义的。甚至经验也总是由理论传统和期望来塑造的。每个观察术语和句子都被假定是载有理论的。这是对逻辑实证主义的挑战。后者认为一个记录句子是一个关于经验的理论中性的报告。这也否认了载有理论的术语可以被还原为纯粹事实水平的知识。这一术语因此意味着对颇有影响的理论术语与观察术语之区分的拒斥。

“因此在某种意义上,看见是一个‘载有理论’的任务。对于*x*的观察由关于*x*的先前知识所塑造。”——汉森:《发现的模式》,1959年,第19页。

理论论

一个关于我们如何知道他人的命题态度的心的理论。它试图解释将某些思维、信念或意向归于他人的本质,以便解释他人的行动。理论论认为,将信念归于他人实际上是静默地应用一个理论,这一理论能使我们就隐藏在他人活动之后的信念作出推理。所应用的理论是潜藏在常识心理学中的一系列规则。因此,要预测他人的行为,一个人就要从事一个智力过程,由一系列信念推导出其他的信念。这与另一心的理论——模拟论——相对。后者认为,我们必须以我们自己的动机和情绪为源泉,依靠我们实际的推理能力来解释他人的行动。

“所谓的‘理论论’认为,解释和预测行为的能力由一个关于心的结构和功能的常识心理学的理论来支持——这个理论可能是先天的和组件的、个别学习的或通过社会化过程习得的。”——克拉塞斯和司密斯(编):《关于心的理论的理论》,1996年,第1页。

神智学

[源自希腊语 *theos* (神) 和 *sophia* (智慧), 意为关于神的智慧] 这个术语被新柏拉图主义者第一次使用,用以指称他们自己的学说,即强调宗教和哲学的统一以及对神的本性的神秘相识。后来,这个术语用于指文艺复兴时期之后德国宗教思想中的几种倾向,尤其指瑞典自然哲

the thinking of the Swedish natural philosopher Emanuel Swedenborg, which tended to blend the natural and the spiritual world and to combine rationalistic cosmology and biblical revelation. The term was also associated with the Theosophical Society, a movement initiated in 1875 by Helena Blavatsky, which aimed to introduce Eastern religions and metaphysics into Western thought.

"[Theosophy] is the appropriate term for a theoretical cognition of divine nature and (God's) existence that would suffice to explain both the character of the world and the vocation of the moral laws." —Kant, *Critique of Judgement*, Part II, General Conclusion on Theology.

Theseus' ship

After the hero Theseus accomplished his mission to sail to Crete to kill the Minotaur, his ship (Ship 1) was put on display in Athens. As time went by, its original planks and other parts were replaced one by one with new materials until one day all of its parts were new, with none of its original parts remaining. Do we want to say that the completely rebuilt ship (Ship 2) is the same as the original or that it is a different ship? The case is further complicated. If all the original materials were kept and eventually used to construct a ship (Ship 3), would this ship be the same as the original? This example has inspired much discussion concerning the problem of identity and of individuation.

"To be something later is to be its closest continuer. Let us apply this view to one traditional puzzle about identity over time: the puzzle of the ship of Theseus." —Nozick, *Philosophical Explanation*, 1981, p. 33.

Thin theory of the good

For Rawls, primary goods are essential for pursuing any rational plan of life and are used to determine a thin conception of good. A thin theory of the good explains why these primary goods are what any rational person would desire and also gives insight into the notion of rationality which leads from these goods to the choice of principles of justice. Such an account is necessary to understand the motives and choices of participants in the original position. Once principles of justice are derived from the original position, we may develop a full conception of the good and therefore a full theory of the good.

"We need what I have called the thin theory of the good to explain the rational preference for primary goods and to explicate the notion of rationality underlying the choice of principles in the original position." —Rawls, *A Theory of Justice*, 1971, p. 397.

Thing

In a general sense, a thing is any item which can be referred to or named. It can be any constituent of a metaphysi-

学家 E. 威斯登伯格的思想, 它倾向于把自然世界和精神世界混合在一起, 把理性主义宇宙论和圣经启示结合起来。这个术语也与“神智会”有关联, 该会是由 H. 布拉瓦茨基发起的一场运动, 其宗旨是把东方宗教和形而上学引入西方思想中。

“[神智学] 是对神的本性和(上帝的)存在的理论认识的恰当称谓, 它足以解释世界的特征和道德规律的命令。”——康德:《判断力批判》, 第二部分, “神学的一般结论”。

忒修斯之船

在英雄忒修斯完成他的航行到克里特岛杀死怪物米诺托的壮举后, 他的船(船1)在雅典展出。随着时间的推移, 这船原来的木板和其他部分逐一被新材料所取代; 直到有一天, 它的所有的部分都是新的, 没有旧的部分留存。我们说这一完全新建的船(船2)是与原来的一样, 还是一条不同的船? 事情还可以变得更复杂。如果原来的材料都被保存下来, 并最后被用来造了另一条船(船3), 这条船与原来的船(船1)是一样的吗? 这一事例促进了许多关于同一性和个体性等问题的讨论。

“一物的后来者乃是其最接近的继续者。我们可把这一观点应用于一个有关时间推移中的等同的传统疑难, 即忒修斯的船之谜。”——诺齐克:《哲学说明》, 1981年, 第33页。

善的弱理论

在罗尔斯看来, 基本善对于寻求合理的生活计划是至关重要的, 并被用来确定善的弱概念。善的弱理论解释为什么这些基本善是理性的人所要求的东西, 并且还深入说明了导致从这些善到选择正义原则的合理性概念。这样的说明对于理解原初状态中参加者的动机和选择是很有必要的。一旦正义原则从原初状态中得出, 我们就可得出善的强概念, 并因而得出善的强理论。

“我们需要我称之为善的弱理论去解释人们对于基本善的合理的偏爱, 需要这种理论去说明原初状态下构成原则的选择基础的合理性这一概念。”——罗尔斯:《正义论》, 1971年, 第397页。

物

在一般意义上, 一件是指任何一项可以表示或命名的东西。它可以是形而上世界的组成

cal world, including substances and properties, essences and accidents, particulars and universals, concrete and abstract objects. A material body is a thing, and so is a number, a relation and an illusion. In this sense, "thing" is synonymous with "being" or "entity". Along with other questions about things, metaphysicians have asked why there are things ("Why is there something rather than nothing?") and what kinds of thing are fundamental.

In a narrower and more technical sense, things have their own identity and possess qualities and relations. This concept of a thing is close to the concept of a substance or of an object. In sentences, things are designated by subjects rather than by predicates, which in turn introduce properties ascribed to things. In different theoretical contexts, a thing is what Frege calls an object of a proper name, what Quine calls "the value of a bound variable", and what Strawson calls an individual. It is the nature of things in this latter sense which preoccupies contemporary metaphysicians.

"In its widest sense 'thing' can be applied to any object of reference whatever, to any possible subject of discourse... The kind of thing we are concerned with here is much more narrowly circumscribed. It is, essentially, an observable, spatio-temporal entity, a concrete object of perception." — Anthony Quinton, *The Nature of Things*, 1973, p. 41.

Thing-in-itself

[German *Ding an sich*] Kant's term, used interchangeably with *noumenon*, for things as they are independent of the conditions of possible experience and outside the legitimate application of the categories. A thing-in-itself contrasts with an appearance or *phenomenon*, which is a thing as it appears to us. Since the world of appearance is the only possible object of knowledge, the thing-in-itself is thinkable, but unknown. In using this term, Kant emphasised his claim that the thing-in-itself is the true correlate of sensibility. The central thesis of transcendental idealism holds that the objects given to us in experience are only appearances of things in themselves. Although things in themselves cannot be known through the representations of our sensibility, we must postulate them because there cannot be an appearance without anything that appears. This is a dogmatic point in Kant's philosophy which has been criticised by later philosophers. Other philosophers have asked whether appearances and things in themselves are meant to be the same objects taken differently or different objects. There are problems with both answers.

"The transcendental concept of appearances in space, on the other hand, is a critical reminder that nothing in space is a thing in itself, that space is not a form inhering in things in themselves as their intrinsic property, that objects in themselves are unknown to us." — Kant, *Critique of Pure Reason*, A30.

部分,包括本体与属性、本质与偶性、殊相与共相、具体与抽象的对象。一个物质性的物体是一件物,一个数、一种关系或者一幅幻象也是物。在此意义上,“物”与“存在”或“实体”同义。连同有关物的其他问题,形而上学家提出了“为什么有物存在?”(“为什么存在有而不是无?”)和“何种物是根本的?”这类问题。

在狭义和专门意义上,物具有自身的同一性,具有性质和关系。物的这种概念近似于实体或对象的概念。在句子中,物与其说是由谓语来表示,毋宁说是由主语来表示,这反过来又引导出赋予物的种种属性。在不同的理论语境中,物或是指弗雷格所谓的专名的对象,或是指奎因所谓的“约束变量的值”,或是指斯特劳森所谓的个体。后一种意义上的物之本性,正是当代形而上学家主要思考的对象。

“广义上的‘物’可以应用于指称对象,或者任何可能的话语主题。……我们此处所关注的这种物主要是指狭义上的物。从本质上说,这种物是可见的时空实体,是具体的感知对象。”——奎因顿:《事物之本性》,1973年,第44页。

物自体

[德文 *Ding an sich*] 康德的术语,可与“本体”交替使用,是指独立于可能经验的条件并超越合法地运用范畴的事物。物自体相对于表象或现象,后者是向我们呈现出的事物。既然现象世界是唯一可能的知识对象,物自体是可思维的,但不可知。康德在使用这个词时特别强调要把它作为感性的真实相关物。先验唯心主义的中心论题是:在经验中给予我们的对象只是物自体的现象。尽管物自体不能通过我们的感性表象而认识,但我们必须设定它们,因为如果没有东西在显现,也就没有现象。这是康德哲学的一个独断的论点,因此为后来的哲学家所批判。其他哲学家也问现象与物自体是否是同一事物,但受到不同处理,或者它们确实是不同事物。两种回答都有问题。

“空间现象之先验概念批判性地提醒我们,在空间中没有任何东西是物自体;空间不是属于物自体,作为其固有属性;对象自身对于我们是不可知的。”——康德:《纯粹理性批判》,A30。

Thing-language

Carnap's term for the language that we use in speaking about the properties of observable things, such as "hot", "cold", "small", "large" "red" and "blue". It is the language to which all psychological statements and scientific statements are reducible. By introducing this term, Carnap intends to distinguish between the language of scientific theory and the language of ordinary things, and between a language requiring the use of instruments and a language not requiring it. He also claims that all statements in the thing-language about material objects can be reduced to statements about sense-experience.

"Terms like 'hot' and 'cold' may be regarded as belonging to the thing-language, but not 'temperature' because its determination requires the application of a technical instrument." —Carnap, in Hanfling (ed), *Essential Readings in Logical Positivism*, p. 121.

Thinking

A mental activity displaying a person's rationality, including theoretical contemplation and reasoning and practical deliberation. Traditionally, thinking is conceived to be an inner and conscious activity that is closely related to speech. For Plato and Aristotle, thinking (Greek; *noesis* or *dianoia*) inherently involves cognitive consciousness of a universal object and the application of the universal to the particular. For Descartes, thinking (Latin; *cogitatio*) comprises mental phenomena in general, and is the main attribute of the substance of mind. Along with many later rationalists and empiricists, Descartes considered that thinking is a process which brings concepts or ideas before the mind. For Hobbes, it is a dialogue in the soul involving the use of verbal images. For Berkeley and Hume, thinking is a sequential series of ideas or images in the mind. For Kant, thinking (German; *Denken*) is cognition by means of concepts, although it is empty if it does not also involve sensory intuition. Ryle initiated a new approach to the notion of thinking. He argued that thinking is a disposition rather than something that must be done silently in the soul. In his later period Ryle puts forward an adverbial account of thinking, claiming that it is an adverbial modification of activities and not itself an activity. Ryle's approach has given rise to much debate. Some critics claim that developing an adequate account of thinking requires a richer body of theory about the mind. Price suggested that cognition in absence is another distinguishing feature of thinking. Thinking is usually distinguished from sense-perception, imagination and emotion.

"We can all agree that thinking is rightly described as conceptual cognition." —Price, *Thinking and Experience*, 1969, p. 313.

事物语言

卡尔纳普用于这种语言的术语,即我们用它来谈论可观察事物的特性,诸如“热”、“凉”、“小”、“大”、“红”、“蓝”。这是所有的心理学陈述和科学陈述都可以向之还原的语言。在提出这个术语时,卡尔纳普是要区分科学理论的语言和日常事物的语言,要求使用工具的语言和不要求使用工具的语言。他还主张,事物语言中关于物质对象的全部陈述都可以还原为关于感觉经验的陈述。

“可以认为像‘热’和‘冷’这样的语词属于事物语言,但‘温度’则不属于,因为对它的确定要求使用技术性工具。”——卡尔纳普,载于汉弗林编:《逻辑实证主义基本读物》,第121页。

思维

表现一个人的理性(包括理论思辨、推理和实际策划)的心的活动。在传统上,思维被设想成一个与语言密切相关的内部意识活动。对于柏拉图和亚里士多德而言,思维(希腊文, *noesis* 或 *dianoia*)内在地包含着对普遍对象的认知意识以及共相之应用于殊相。对于笛卡尔,思维(拉丁文 *cogitatio*)包括一般的心的现象,并且是心的实体的主要属性。他和许多唯理论者和经验论者一样,将思维视为一个将概念或观念带到心的面前的过程。对于霍布斯而言,它是使用言语映象的灵魂对话。对于巴克莱和休谟而言,思维是心中的观念和映象的序列。对于康德来说,思维(德文, *Denken*)是借助于概念的认知,尽管没有感觉直觉的思维是空洞的。赖尔对于思维概念有一个新的提法。他认为思维是一个倾向性,而不是在灵魂中悄悄进行的活动。赖尔在后期又提出思维的副词主张,声称它是活动的一个副词修饰而本身并不是一个活动。赖尔的提法引起很多争论。有的批评认为,需要一个更为丰富的心的理论才能充分解释思维。普赖斯提出“认知缺场”是思维的另一独有特征。思维通常与感官知觉、想像和情绪相区别。

“我们都可以同意思维正确地描述为概念认知。”——普赖斯:《思想与经验》,1969年,第313页。

Thinking substance

The mind, Descartes' term, in contrast to extended substance or corporeal substance, that is body. This division is the main characteristic of Descartes' dualism. While the principal attribute of extended substance is extension, that of thinking substance is thinking. Descartes further divided thinking substances into those which possess and use a body and those which do not possess or use bodies. The former include animal and human minds, while the latter include God and angels. Thinking substance is also called thinking thing (*res cogitans*), while extended substance is also called extended thing (*res extensa*).

"A thinking substance is one which understands or wills or doubts or dreams or imagines or has sensory perceptions." — Descartes, *The Philosophical Writings* (tr. Cottingham et al.), II, p. 344.

Thinking thing, the English translation of *res cogitans*

Third man argument

Plato's argument in *Parmenides* 132a-b to show that his own Theory of Forms involves an infinite regress. Plato's own example concerns largeness, but following Aristotle scholars generally state the problem in terms of man. The basic principle to establish a Form is that when one sees a number of similar particulars, one will think that there must be something common to them all, and that thing is a Form. If, however, we consider the Form of man along with other particular men, there must also be something common to all of them, and that thing would be a third man in addition to particular men and the Form of man. But the process of adding something in common, begun with particular men, the Form of man and the third man, would go on indefinitely, leading to an infinite regress.

There has been much debate whether this is a valid argument, whether it is a valid objection to the Theory of Forms, and whether Plato himself believed it to be valid. Gregory Vlastos has argued that two implicit premises are needed for the Third Man Argument to succeed. The first premise, concerning self-predication, requires that what is predicated is itself a subject of that same predicate. The other premise, concerning non-identity, requires that what is predicated is something different from the subject of which it is predicated. The discussion that arose out of this interpretation has contributed greatly to our understanding of Plato and his relation to contemporary philosophy. It has also helped our understanding of Aristotle, who diagnosed the root of the problem of the Third Man as the separation of the Form from the particulars and Plato's confusion of *toionde* (such) and *tode ti* (a this), that is his confusion of the uni-

思维实体

即心灵。笛卡尔的用语,与“广延实体”或“有形实体”即身体相对应。这个划分是笛卡尔二元论的主要特征。广延实体的主要属性是广延,思维实体的主要属性是思维。笛卡尔进一步将思维实体分为拥有和使用身体的思维实体和不拥有或使用身体的思维实体。前者包括动物和人的心灵,后者包括上帝和天使。思维实体也称作“思维的东西”(*res cogitans*),广延实体也称作“广延的东西”(*res extensa*)。

“思维实体是从事理解、发生意愿、进行怀疑、做梦、形成影像、具有感性知觉的实体。”——笛卡尔:《哲学著作集》(科庭汉姆等译),第二卷,第344页。

思维的东西

“思维的东西”(*res cogitans*)的英译。

第三人论证

这是柏拉图在其对话《巴门尼德篇》132a—b中提出的一个论证,旨在说明他自己的形式论涉及到一种无穷后退。柏拉图自己的例证是“大”;可亚里士多德以后的学者们一般则以“人”来陈述这个问题。确立一个形式存在的基本原则是,当某人看到许多相似的殊相,他会想到必定有某物为它们所共有,那就是形式。但是,如果我们把人的形式与许多特殊的人放在一起考察,它们之间亦必有某种共同的东西,那就一定是特殊的人和人的形式之外的第三个“人”。但这种加上某个共同东西的过程(即始于特殊的人,然后是人的形式,最后是第三人)可不断重复,以至无穷。

学者们一直在争论,这是否是一个有效的论证,是否是对柏拉图形式论的一个有效反驳,柏拉图自己是否相信它有效等等。G. 弗拉斯托斯论证说,要得出“第三人”,必定要有两个隐含的前提。第一个是关于自我主谓关系,它需要作为谓词的事物本身就是同一谓词的主词。另一个前提是关于非等同性,它需要作为谓词的事物不同于它所述说的主词。从这一解释所引起的讨论极大地促进了我们对柏拉图本人及其他与当代哲学关系的理解。它也有助于我们对亚里士多德的理解。亚里士多德诊断说,“第三人”问题的根源在于形式与殊相的分离以及柏拉图混淆了“这一类”与“这一个”,也就是混淆了共相和殊相。

“普遍谓词都不表示‘这一个’,而是表示‘这一类’。不然的话,许多困难就会产生,尤其是‘第三人’。”——亚里士多德:《形而上学》,

versal and the particular.

"No common predicate indicates a this, but rather a such. If not, many difficulties follow and especially the 'Third Man'." —Aristotle, *Metaphysics*, 1038b36.

Third realm

Frege's term. Traditionally, philosophers contrast the realm of ideas or mental entities with the realm of material objects. Frege called mental entities the first realm and material objects the second realm. Based on his distinction between sense and reference, he claimed that there is a third realm of sense or thought. It is different from the realm of ideas because any idea needs a bearer (they are yours or mine), but the senses of words we use in communication exist independently of us. A true proposition is true no matter whether anyone takes it to be true or even entertains it. It is accessible to all in common, but its contents are immutable and immaterial. The third realm is also different from the realm of objective things we talk about or the realm of reference, for many names may have sense but lack reference. Thus senses or thoughts form a third realm between us and objects, and this realm leads us from the inner world of sense-impressions to the outer world of perceptible things.

"So the results seems to be: thoughts are neither things of the outer world nor ideas. A third realm must be recognised. What belongs to this corresponds with ideas, in that it cannot be perceived by the senses, but with things, in that it needs no bearer to the contents of whose consciousness to belong." —Frege, "The Thought: A Logical Inquiry", in Strawson (ed.) *Philosophical Logic*, 1967, p. 29.

Thirdness, see firstness

Third-person perspective, see first-person perspective

Thisness, another expression for a this

Thomism

The philosophical tradition founded by Thomas Aquinas and developed by his followers in the Catholic tradition. It tried to combine Aristotle's philosophy with Christian teaching and claimed that all created things are a composition of existence and essence. It extensively applied the Aristotelian distinctions between form and matter and between actuality and potentiality to explain various relationships. Form is necessary being and matter is contingent being. God contains both essential being and contingent being. The soul is viewed as the substantial form of the body whilst also being regarded as immortal. Thomism represents a valuable contribution to

1038b36.

第三领域

弗雷格的术语。在传统上,哲学家们把观念或精神实体领域与物质对象领域相对应。弗雷格把前者称为“第一领域”,把后者称为“第二领域”。基于他对意义与指称的区分,他认为,还存在着一个意义或思想的第三领域。它与观念的领域不同,因为任何观念都需要承担者(即它们或者是你的或者是我的),但我们在交流中使用的语词的意义却是独立于我们而存在的。一个真命题之所以为真,是与人们把它看做为真或承认它无关的。这适用于一切具有共性的东西,而其内容是不可改变的,是非物质的。第三领域同样不同于我们所谈论的客观事物领域或指称领域,因为许多名称可能具有意义但没有指称。因而,意义或思想构成了我们与对象之间的第三领域。这个领域引导我们从内在的感官印象世界达到了外在的可知事物的世界。

“所以结果似乎是这样,思想既不是外在世界的事物,也不是观念。第三领域必须得到承认。属于这个领域的东西在它们不能被感官感觉到这一点上是与观念一致的,而在它们不需要属于其意识内容的承担者这一点上却又是与事物一致的。”——弗雷格:《思想:逻辑的探究》,载斯特劳森(编):《哲学逻辑》,1967年,第29页。

“这一个(a this)”的另一表述。

托马斯主义

由T.阿奎那建立,并由他的追随者在天主教传统中发展起来的哲学传统。它力图把亚里士多德哲学和基督教教义结合起来,宣称一切受造物都是存在与本质的合成。它广泛运用亚里士多德关于形式和质料、现实和潜能之间区别的思想,解释各种不同的关系。形式是必然存在的,质料是偶然存在的。上帝既包含本质存在,又包含偶然存在。灵魂被认作躯体的实体形式,同时又被当成是不朽的。托马斯主义对理性和信仰以及自由选择 and 决定论之间关系的分析,作出了有价值的贡献。我们是自由的,但这

the analyses of the relationship between reason and faith and the relationship between free choice and determinism. We are free not in spite of God's power, but because of it. Aquinas' doctrine was condemned after his death, but was soon rehabilitated and he was canonised in 1323. Since the thirteenth century, Aquinas has been the Common Doctor for all Catholic schools of thought. Hence, it is not merely a partial school in scholasticism. It is often used as a synonym of scholasticism. In the neo-Thomist movement of the nineteenth century, the Catholic authorities declared again that the philosophy of Aquinas must be studied by all Catholic clergy. Thomism is recommended as the norm for theological teaching. In the twentieth century there is a loose intellectual trend which applies the general framework of contemporary analytical philosophy to the issues and concepts of Thomism such as intentionality, action, freedom, being and essence, causation, virtue theory and so forth. This is sometimes called analytical Thomism, and is represented by figures such as Peter Geach and Anthony Kenny.

"The foundation of Thomism was that reason supplemented faith, not denied it." —Leff, *Medieval Thought*, 1958, p. 212.

Thought

Normally, what we are aware of within our mind. For Frege, a thought is the sense of a sentence which can be used to make an assertion or to ask a question that is answerable 'Yes' or 'No'. The contents of thoughts can be true or false. Thoughts in this sense are logical or conceptual rather than a matter of individual psychology. Different individuals may share the same thought, although they cannot share the same act of thinking. Thus, Frege called thought the third realm (the others being the physical and the psychological). If we take thought psychologically, the central tenet of traditional analytical philosophy is that the analysis of thought presupposes the analysis of language and that language is prior to thought. In contrast, philosophy of thought argues that this priority in the order of analysis should be reversed. Fodor's language of thought hypothesis holds that thought is a form of symbol manipulation with its own syntax and semantic properties.

"The thought, in itself immaterial, cloths itself in the material garment of a sentence and thereby becomes comprehensible to us. We say a sentence expresses a thought." —Frege, "The Thought: A Logical Inquiry", in Strawson (ed.), *Philosophical Logic*, 1967, p. 20.

Thought experiment

An attempt to test an hypothesis through an imagined situation when an actual experiment is impossible in practice or perhaps even in theory. It conceives of the consequences of an intervention in the world without actually intervening.

不是无视上帝的权力，而恰恰是由于上帝的缘故。阿奎那的学说在他死后被判有罪，但不久就恢复了名誉，他也于1323年被追授为圣徒。从13世纪以来，阿奎那是一切天主教思想派别的“共同博士”。因此，在经院学派中，托马斯主义并不仅仅是一个分支流派。它经常被用作经院学派的同义语。在19世纪的新托马斯主义者运动中，天主教官方再次宣布，阿奎那的哲学必须被所有天主教牧师研究。托马斯主义被推荐为理论教旨的规范。在20世纪，有一种松散的思想倾向，即把当代分析哲学的一般框架运用于托马斯主义的论点和概念上，譬如意向、行为、自由、存在与本质、因果关系、德性理论等等。有时，把这种倾向称为分析的托马斯主义，其代表人物有P. 吉奇、A. 肯尼等人。

“托马斯主义的基础是：理性补充信仰，而不是否定它。”——列夫：《中世纪思想》，1958年，第212页。

思想

思想通常指我们心中意识到的东西。弗雷格认为，思想是一个句子的意义，这个句子可以用来作断定，或者用来问一个可以用“是”或“不”回答的问题。思想的内容可以是真的或假的。思想在此意义上是逻辑的或概念的，而不是个人心理的事情。不同的个人可以有共同的思想，尽管他们不可能有同样的思维活动。于是，弗雷格称思想是“第三领域”（其他两个领域是物理领域和心理领域）。如果我们对思想做心理学的理解，那么，传统分析哲学的中心原则是：思想的分析以语言的分析为先决条件，而且语言先于思想。与这一原则相对，思想哲学认为，分析的这个先后顺序应当倒过来。福多的“思想语言”假设认为，思想是符号操作的形式，具有自己的句法和语义特性。

“思想本身是非物质的，穿着句子的物质外衣，因此成为我们可理解的。我们说，一个句子表达了一个思想。”——弗雷格：《思想：逻辑的探究》，载于斯特劳森（编）：《哲学逻辑》，1967年，第20页。

思想实验

当真正的实验在实践上甚至理论上是不可能的时候，试图提供想像一个情境来检验一个假设。它设想对世界作出某种干预会产生什么结果，但并不真正实施这种干预。这一工具被哲

This device is employed widely by philosophers and theoretical scientists. It exercises the imagination in order to show what is possible or impossible. Thought experiments can be used either destructively or constructively. A destructive use is directed against a theory, typically through a *reductio ad absurdum* argument to show that a theory is internally inconsistent or conflicts with some well-entrenched belief. Constructive thought experiments proceed either from some unproblematic phenomena to a well-articulated theory or from a given background theory to a new conclusion.

"A thought experiment is an experiment that purports to achieve its aim without the benefit of execution." —Sorenson, *Thought Experiment*, 1992, p. 205.

Three-valued logic

The earliest presentation of a three-valued system was elaborated by Łukasiewicz in the 1920s, motivated by providing a solution to the problem of future contingents. This problem was put forward by Aristotle in his example of the sea-battle tomorrow. Łukasiewicz reasoned: my presence in Warsaw at a certain time in the future is not settled at the present moment either positively nor negatively; it is therefore possible but not necessary that I shall be present in Warsaw at the stated future time; according to this presupposition, that I shall be present in Warsaw in that future time is neither true nor false at the present time; to say either that this is true or that this is false will be contradictory to the presupposition; so we need to deny the principle of bivalence, that is that every statement is either true or false. He then argued that the possible should be an additional truth-value. If 1 is used to represent truth, 0 to represent falsity, the third value possible can be represented by 1/2. Hence we have more possible combinations of truth values from two component propositions. For instance, the truth-table of not P in three-valued logic is:

P	~P
1	0
1/2	1/2
0	1

Some logicians argue that bivalence does not necessarily entail determinism and that three-valued logic should have another basis, but this part of logic has been adopted and developed by Reichenbach, Putnam, Bochvar and others. It has been a model for many-valued logic in general.

"With a view to the future-contingency proposition of the third truth-value, Łukasiewicz introduced a modal operator of possibilities into his three-valued logic." —Rescher, *Topics in Philosophical Logic*, 1968, p. 65.

Ti esti, Greek term for what-it-is

学家和理论科学家所广泛使用。它发挥想像来表明什么是可能的、什么是不可能的。思想实验既可以是摧毁性的也可以是建设性的。摧毁性的思想实验用来反对一个理论。其主要工具是采用归谬法。也就是说,表明一个理论存在内部的不一致或与其他有根据的信念相冲突。建设性的思想实验或者从一个没有问题的现象出发得出一个表述清楚的理论,或者从一个给定的背景理论得出一个新的结论。

"一个思想实验是一个无须实施就达到其目标的实验。"——索伦森:《思想实验》,1992年,第205页。

三值逻辑

三值系统的最早展示是由卢卡西维茨在20世纪20年代精心制作的,目的在于给未来偶然性问题提供一个解决方案。未来偶然性问题是亚里士多德在明天的海战例子中提出来的。卢卡西维茨推理说,我在未来的某个时间出现在华沙,这在目前既不能肯定地确定也不能否定地确定;所以,我在所提到的那个未来的时间出现在华沙只是可能的而不是必然的;根据这一预设,我将在那个未来的时间出现在华沙,在目前既不真也不假;说这个命题或者真或者假将与那个预设相矛盾;所以我们需要否定二值原则,即每一陈述是或真或假的。他随后论证说:"可能的"应该是另外一个真值。如果用1表示真,用0表示假,则第三值"可能的"可以用1/2来表示。所以我们从两个支命题可以有多个可能的真值组合。例如,非P在三值逻辑中的真值表是:

P	~P
1	0
1/2	1/2
0	1

虽然某些逻辑学家争辩说:二值原则并不必然导致决定论,三值逻辑应该有另外的根据,但这部分逻辑还是为赖兴巴赫、普特南、鲍契瓦等人所采用和发展,并已成为一般多值逻辑的典范。

"由于注意到未来偶然命题具有第三真值,卢卡西维茨把可能性的模态算子引入到他的三值逻辑中。"——雷谢尔:《哲学逻辑论集》,1968年,第65页。

是什么

"是什么(what-it-is)"的希腊词。

Time

One of the most mysterious philosophical topics, but also one of the most richly discussed. Time concerns the progression and ordering of events in terms of before and after or in terms of past, present and future. Time is commonly conceived to be a passage or a flowing stream, but this gives rise to the criticism of the myth of passage. Time is generally thought to have one dimension and an irreversible direction, but it is unclear what gives time its direction, whether there can be a backward temporal order or how to account for the asymmetry between the past and the future. Zeno's paradoxes raise fundamental questions about time as an infinite continuum and similar problems arise concerning space. Even with contemporary developments in mathematics, it remains disputable whether time is infinitely divisible. Plato claimed that time is created and is the moving image of eternity. Philosophers continue to debate whether time has a beginning and whether we can make sense of a timeless existence. Aristotle in *Physics* expressed many puzzles about the existence of time. Kant argued that time, like space, is a form of intuition and understood mathematical knowledge to be determined in relation to these forms. Kant gave time a crucial role in his account of the categories and their application to experience. Bergson distinguished between intellectualised physical time and duration, which as the time of consciousness is the real essence of time. The validity of McTaggart's attack on the reality of time is still under debate. Another enduring dispute concerns whether time is absolute or relational. Heidegger's account of temporality is fundamental to his account of human being. In existentialism, time is more subjectively conceived through its connection with the problem of human experience.

"What then is time? If no one asks me, I know. If I wish to explain it to one that asks, I do not know."—Augustine, *Confessions*, XI, xiv.

Time, absolute

Newton maintained that time is absolute in virtue of being independent of physical events and having its own nature, flowing uniformly without regard and without relation to any external thing. Absolute time is mathematical time in contrast to the relative or external clock time in common use. Absolute time is real, and relative time is only apparent. Newton represents one radical position in a lasting dispute whether time and space are absolute or relational.

"Absolute, true, and mathematical time, of itself, and from its own nature, flows equably without relation to anything external, and by another term is called duration." — Newton, *Mathematical Principles of Natural Philosophy*.

Time travel

Time is normally thought to be directed from the past

时间

最难以理解也讨论得最充分的哲学论题之一。时间牵涉到用以前和之后、或是用过去、现在和未来来谈论事件的进展和排序。时间通常被想像为一种迁移或流淌着的溪流，但是这引来了迁移神话的批评。时间一般被认为是一维的并且有不可逆的方向，但不清楚的是，究竟是什么给时间以方向，是否能有反向时序，或何以说明过去和未来的不对称性。芝诺悖论引发了关于时间作为无穷连续统的根本问题，以及关于空间的类似问题。即使数学发展到了今天，时间是否是无限可分的仍然是可争论的问题。柏拉图宣称时间是被创造出来的，是永恒的运动映象，哲学家们不断地争论，时间是否有一开端和我们是否能理解永恒的存在。亚里士多德在《物理学》中表达了许多关于时间存在的困惑。康德论证时间像空间一样，也是一种直观形式，认为我们的数学知识取决于与这些形式的关系。康德在他对范畴及其经验应用的论述中，给时间以一种关键的作用。柏格森区分了理智化的物理时间和绵延，后者作为意识时间是时间的真实本质。麦克塔加特对于时间实在性的著名攻击的有效性话题依然是争论的话题。另一个持久的争论涉及时间是绝对的还是关系的。海德格尔对于时间性的论述对他关于人类的论述是基本的。在存在主义中，时间通过其与人类经验问题的联系，被设想成更为主观的东西。

"那么何为时间？倘若无人问起，我还知道，如想向问者解释，我全不知晓。"—奥古斯丁：《忏悔录》，第十一卷，xiv。

绝对时间

牛顿坚持时间是绝对的，因为它独立于物理事件，具有自身的特性，均匀地流逝，与一切外部事物无关。绝对时间是数学的时间，对比日常使用的相对的或外部的钟表时间。绝对时间是真实的，而相对时间只是表象的。在时间和空间是绝对的还是相对的持续争论中，牛顿代表着一种激进的立场。

"绝对的、真实的和数学的时间，由其自身特性决定，均匀地流逝，与一切外部事物无关，又名持续。"—牛顿：《自然哲学的数学原理》。

时间旅行

时间通常被认为是从过去指向未来的，但

towards the future, but we can raise the question whether it is logically possible to travel backwards in time or to ascribe more than one direction to time. Travel into the past would necessarily involve backwards causation, with some later events causally affecting earlier events. Some claim that if this were true a traveller could travel back to murder his ancestors and prevent his own birth, but David Lewis argues that backward travel does not imply that the traveller could change the past.

We are normally thought to move at the same rate with everything else through time. The time elapsed from a traveller's departure to his arrival is the same as the duration of the journey. But it might be logically possible for a traveller to move from his departure to his arrival with the time spent on his journey not equal to the clock time from departure to arrival. Would there, then, be two unequal lengths of time depending upon how we measure the same journey? Would this allow us to travel into the future in the way that backward time travel would allow us to move into the past? In general, time travel is a thought experiment for inquiring into the nature of time.

"What is time travel? Inevitably, it involves a discrepancy between time and time."—David Lewis, *Philosophical Papers*, vol. 1, 1983, p. 67.

Time-gap argument, another term for time-lag argument

Time-lag argument

Also called the time-gap argument, an argument, put forward by Russell in *Human Knowledge* against the naive realist assumption that perception, such as seeing or hearing, is a matter of direct awareness. Science proves that light travels at a finite speed, with a time-gap between the transmission of light from an external object and the perception of the object. The light of the sun that strikes our eyes has taken a long time to reach us, so the sun that we see now is actually the sun that existed some time ago and that may have ceased to exist. Although its current non-existence would not affect the fact that we see it now, the immediate object of our visual experience is not actually identical with the sun which is being seen. The same case is applied to the hearing. If a gun is fired some distance from us, we first see the flash with a small time-lag and then hear the sound with a greater time-lag. Because there is time-lag in all perceptions, perception is not a direct confrontation, but a process. The object of experience is always internal. This denial of the immediacy of perception poses a threat to direct or naive realism which claims that perception is concerned only with immediate objects in the present and raises many problems about the nature of perception.

"I have in mind the famous 'time-lag' argument. Some

我们可以提出这样的问题：逻辑上是否可能在时间中反向旅行，或赋予时间以不止一个方向？去往过去的旅行必然包含逆向因果，随之以一些较迟的事件因果地影响较早的事件。一些人提出如果这是真的，旅行者就可以回到过去而去谋害其先辈以阻止他自己的出生，但 D. 刘易斯论证反向旅行并不意味着旅行者可以改变过去。

我们通常被认为以同样速率与其他一切事物通过时间运动。从一个旅行者出发到他到达所消逝的时间与旅行的持续一样长。但或许在逻辑上可能的是，旅行者从出发到抵达，他花在旅途上的时间不等于从出发到抵达的钟表时间。那么，会存在两个不相等的长度，它们有赖于我们如何度量同一旅程吗？这会像逆向时间旅行允许我们去往过去一样，允许我们去将来旅行吗？时间旅行一般作为探索时间本性的思想实验。

“什么是时间旅行？它不可避免地牵涉到对时间与时间之间的辨别。”——刘易斯《哲学文集》，第 1 卷，1983 年，第 67 页。

时间沟论证

“时间滞后论证”的别名。

时间滞后论证

又称“时间沟论证”，由罗素在其《人类的知识》一书中所提出的论证，用以反对朴素实在论关于知觉的如下假设：像听见和看见这样的知觉是一个直接意识。科学证明，光线以一定的速度传播，所以在外部对象发出光线与对对象的知觉之间有一个时间沟。射入我们眼睛的阳光花了好长时间才到达我们这里，所以我们现在看到的太阳是某个时间以前的太阳，可能现在已经不存在了。尽管其当前的不存在不会妨碍我们现在看到它这一事实，但我们视觉经验的直接对象与正被看到的太阳并不是同一个东西。这同样也适用于听觉。如果一支枪在远处开火，我们先以较短的时间滞后看到火光，然后以较长的时间滞后听到声音。由于在所有的知觉中都存在时间滞后，所以知觉不是一个直接的面对，而是一个过程。经验的对象永远是内部的。对于知觉直接性的这一否定对声称知觉只与当前的直接对象相关的直接实在论或朴素实在论构成威胁，也对知觉的本质提出许多问题。

“我所想的是著名的‘时间滞后论证’。有些哲学家……声称经验上的当前与时间上的当前之间的联系只是表面的。星球爆炸案例……表明，事物（事件）可以在停止存在以后呈现于经

philosophers ... claim that the connection between experiential and temporal presence is only apparent. The case of stellar explosions, ... shows that things (events) can be present in experience, after they cease to exist. "—Valberg, *The Puzzle of Experience*, 1992, p. 19.

Time-preference, another expression for principle of fractional prudence

Timocracy

[from Greek: *timo*, honour + *kratia*, strength, power, rule by those valuing honour] A type of state that Plato described in the *Republic* in contrast to the Ideal State. Because the rulers of a timocratic state value honour, the state is ruled by the spirited element instead of the rational element that governs the Ideal State. Consequently the unity of the state is undermined by timocratic rule. Parallel to the city, the timocratic man is also dominated by the spirited element in the soul. Self-interest diverts him from impartial ideals and causes inner instability. According to Plato, timocracy is the first stage in the degeneration of the Ideal State.

"There is only one thing which appears in timocracy most clearly under the rule of the spirited part, namely the love of victory and of honours." —Plato, *Republic*, 548c.

To be, see is or being

To be is to be perceived, see *esse est percipi*

To ti en einai, Greek term for essence

Tode ti, Greek term for a this

Toionde, Greek term for such

Token

Together with type, a pair of terms that was introduced by C. S. Peirce to classify different signs. A token is "an actual existent thing or event which is a sign", and type is "a law that is a sign" or "a definitely significant form". A token shares the feature that identifies a type but is an instance or example of that type. A type is instantiated by different tokens. Different tokens resemble one another if they belong to the same type. In a sense, a token of a type is an instance of the type. Walking is a type, and this particular act of walking is a token. Strawson's book *Individuals* is a type, while this copy of *Individuals* is a token. In a sense this distinction

验中。”——瓦尔伯格：《经验的难题》，1992年，第19页。

时间偏好

“分段审慎原则”的另一名称。

荣誉政体

[源自希腊语 *timo* (荣誉) 和 *kratia*, 由那些对荣誉的重视而产生的力量、权力和统治] 柏拉图在其《国家篇》中描述的与理想国形成对照的一类国家。由于荣誉城邦的统治者重视荣誉，这种国家是被勇敢因素所统治，而不是被支配理想国的理性因素所统治。其结果是国家的统一基础被荣誉统治所削弱。与城邦相应，以荣誉至上为原则的人也是由其灵魂中的勇敢因素所支配。自我利益驱使他离开公正的理想并造成其内心的不稳定。在柏拉图看来，荣誉政体是理想国退化的第一阶段。

“在勇敢要素统治下，荣誉政体中只有一种东西显现得最清楚，那就是好胜和爱荣誉。”——柏拉图：《国家篇》，548c。

是

见“是 (is)”或“是 (being)”条。

存在就是被感知

见“存在就是被感知 (*esse est percipi*)”条。

本质

“本质 (essence)”的希腊词。

这一个

“这一个 (a this)”的希腊词。

这一类

“这一类 (such)”的希腊词。

殊型

对应于“类型”。这对术语是由 C. S. 皮尔士引入的，用于划分不同的记号。殊型是“作为记号的一个实际存在物或事件”，而类型则是“作为记号的一种规则”或“确定的有意义的形式”。所有的殊型都具有确定一个类型的特征，但每一个殊型却又是这个类型的一个实例或例证。类型具体化为不同的殊型，而属于相同类型的不同殊型相互类似。在某种意义上，一个类型的殊型就是这个类型的一个实例。散步是一个类型，而具体的一个散步就是一个殊型。斯特劳森的《个别物》是一个类型，而一本《个别物》

is close to the distinction between the particular and the general. It has gained a wide currency in the philosophy of language, especially in the discussion of the relationship between a linguistic expression and an actual use of that expression, and also in the philosophy of mind. The identity theory of mind has been developed in two versions, respectively called type-type identity theory and token-token identity theory.

"A single event which happens once and whose identity is limited to that one happening or a single place at any one instant of time. Such event or thing being significant only as occurring just when and where it does, ... I will venture to call a token." — *Collected Papers of Charles Sanders Peirce*, 1933, 4: 537.

Token-reflexive

Also called indexical expressions, Hans Reichenbach's term for expressions involving a reference back, reflexively, to their own token utterance, that is to the speaker, place, time or context of utterance. For example, to say that A is past amounts to saying that A is earlier than this utterance. An understanding of such an expression involves understanding all the features of an utterance mentioned above and an ability to identify the utterance itself. Token-reflexive expressions indicate our confusions in talking of events as changing in respect of being past, present and future.

"A token-reflexive expression is one like 'I', 'here', 'now' whose essential occurrence in a sentence renders that sentence capable of bearing different truth-values according to the circumstances of its utterance — by whom, when, and where it is uttered, to whom it is addressed, with what gestures it is accompanied, and so forth." — M. Dummett, *Truth and Other Enigmas*, p. 353.

Token-token identity theory

One version of the identity theory of mind, according to which there is a token-token identity between mental and physical states or events. Each token instance of a mental event is as a matter of fact the same as some token instance of a physical event. The mental event is simply the physical event seen from the inside. This theory contrasts with another version of the identity theory, the type-type identity theory, which suggests that there is a type-type identity between mental states or events and bodily states or events. It is difficult to specify and prove this token-token identity, and the importance of the theory is questionable because it seems to exclude the provision of theoretical basis of mental-physical identity promised by the type-type theory.

"The thesis that for every token instance of a mental state, there will be some token neurophysiological event with which that token instance is identical. Such views were called 'token-token identity theory'." — Searle, *The Rediscovery of*

则是一个殊型。在某种意义上,这种区别与个别和一般的区别密切相关。这在语言哲学中得到了广泛的流传,特别是表现在讨论语言表达式与这个表达式的实际使用之间的关系上,也表现在心的哲学中。关于心的同一论发展为两种观点,分别称为“类型与类型的同一论”和“殊型与殊型的同一论”。

“只发生过一次的单一事件,它的同一性就限定在那个发生的事件或瞬间的单一地点。这种事件或事物只有在此时此刻出现时才有意义,……我贸然地把它称作殊型。”——《C. S. 皮尔士文集》,1933年,第4卷,第537页。

反身殊型

也称作索引式表达式。H. 赖兴巴赫的术语,表示涉及到转身指称到自身说出殊型的表达式,即回到说者说出的时间、地点或内容的指称表达式。例如,说A是过去的,等于是说A早于说出这个句子。理解这样一个表达式,就是理解上面提到的这个句子的所有特征以及确定这句话本身的能力。反身殊型的表达式表明我们在谈论事件的过去、现在与未来的变化时是混乱的。

“反身殊型的表达式就是像‘我’、‘这里’、‘现在’这样的表达式,它们真正出现在句子中,使得这个句子能够根据说出的不同情况——说者、说出的时间和地点以及它所强调的对象、它所伴随的手势等等——具有不同的真值。”——达米特:《真理与其他谜》,第353页。

殊型—殊型同一论

“心的同一论”的一种形式。根据这种观点,在心的和物的状态或事件之间,存在殊型—殊型同一性。任何一个心的状态的殊型或事例事实上都是一个物理事件的殊型或事例。心的事件只是从内部看到的物理事件。这一理论与同一论的另一形式“类型—类型同一论”相对,后者认为在心的状态或事件与身体状态或事件之间存在类型—类型的同一性。要详细说明并证明这种殊型—殊型同一论是很困难的,而且这一理论的重要性也是值得怀疑的,因为它似乎排斥了类型—类型同一论所允诺的心—物同一的理论基础的假定。

“任意心的状态的殊型都同一于一个神经生理事件的殊型,这样的观点被称为‘殊型—殊型同一论’。”——塞尔:《心的再发现》,1992年,第40页。

the Mind, 1992, p. 40.

Toleration

Refraining from acting against persons or things of which one disapproves for religious or political reasons, on the grounds that all persons have the right to their own religious beliefs and other opinions. Toleration has been a touchstone of a democratic state and society. Locke's *A Letter on Toleration* is the classic text on questions of toleration, especially with regard to religious toleration. Locke advocated extending toleration to all things lawful in the constitution, although his own tolerance did not extend to atheists. Locke's arguments for toleration included his view that a church has no right to persecute people and, more importantly, that human knowledge is so limited and open to error that we can never be sure that one religious opinion is right and another is wrong. Toleration supports a notion of liberty which is equal and impartial. It has, however, its own dilemma concerning tolerating the intolerant: if we tolerate an individual or group which lacks the spirit of tolerance, toleration will lead to its own destruction; if we refuse to tolerate the intolerant, we will sacrifice the principle of tolerance to expediency.

"The toleration of those that differ from others in matters of religion, is so agreeable to the gospel of Jesus Christ, and to the genuine reason of mankind, that it seems monstrous for men to be so blind, as not to perceive the necessity and advantage of it, in so clear a light."—Locke, *A Letter on Toleration*, in *The Works of John Locke*, 1824, Vol. 5, p. 55.

Topic-neutral

Originally, Ryle's term for the logical constants such as "of" "not", "every". They are not endowed with special meanings, and are applicable to discourse about any subject-matter. They do not refer to any external object but function to organise meaningful discourse. J. J. C. Smart calls a term topic-neutral if it is noncommittal about designating something mental or something physical. Instead, it simply describes an event without judging the question of its intrinsic nature. In his central-state theory of mind, Smart develops a topic-neutral analysis of mental expressions to the effect that it is possible to account for the situations described by mental concepts in purely physical and topic-neutral terms.

"In this respect, statements like "I am thinking now" are, as J. J. C. Smart puts it, topic-neutral, they say that something is going on within us, something apt for the causing of certain sorts of behaviour, but they say nothing of the nature of this process."—Armstrong, *A Materialist Theory of the Mind*, 1968, p. 84.

宽容

根据每个人都有权采纳自己的宗教信念和其他观点,对出于宗教的或政治的原因而不赞成的那些人或事,容忍不加反对。宽容已经成为民主国家和民主社会的试金石。洛克的《论宽容》是宽容问题上的经典文献,尤其在宗教宽容方面。洛克提倡将宽容扩大到合乎宪法的一切事情上去,尽管他并未将自己的宽容推广到无神论者。洛克提出宽容时所依据的论证包括:教会无权迫害人民;更重要的是,人类的知识十分有限而易错,以至我们无法确定一个宗教观点是对的或另一个是错的。宽容与平等和无偏颇的自由相一致。不过,在是否宽容不宽容者问题上,宽容也有它自己的两难之处:如果我们对缺乏宽容精神的个人或团体实行宽容,宽容就会导致自身瓦解;如果我们拒绝对不宽容者实行宽容,我们就为权宜之计而牺牲了宽容原则。

"对那些在宗教事情上与其他人不同的人实行宽容,非常符合耶稣基督的福音,非常符合真正的人类理性,人们要是对于宽容的如此明显的必要性和益处视而不见,那似乎是极其荒谬的。"—洛克:《论宽容》,载《J. 洛克著作集》,1824年,第五卷,第55页。

话题中性的

从起源上讲,这是赖尔用来表示逻辑常项的词,比如“的”(of)、“不”(not)、“每个”(every)。这些逻辑常项并没有被给予特殊的意义,而是可以运用到关于任何题目的谈话中去。它们并不指谓任何外在的对象,而只发挥着组织有意义的谈话的功能。J. J. C. 斯马特称这样的词为话题中性的,即它不牵扯到对于某种心的或物的东西的指称,它只描述一个事件,而不对其内在本质是什么作出判断。在他关于心的中心状态的理论中,斯马特发展出了对于心的表达式的话题中性的分析,其结果就是可以用纯粹物质(或身体)的和话题中性的语词来说明那些由心的概念描述的情景。

"在这方面,如J. J. C. 斯马特所说,像‘我现在正在思考’这样的陈述就是话题中性的。它们说到有某个事情正在我们里边进行,它可能引起某种行为,但却丝毫未说到这个过程的本质。"—阿姆斯特朗:《唯物主义的心的理论》,1968年,第84页。

Topos

[Greek; place] For Aristotle, "a place in which arguments are to be found". A *topos* is a standard procedure, pattern or strategy for an argument, whatever its subject-matter. The logical work in which Aristotle deals with various *topoi* is accordingly called the *Topics*. This is a handbook for conducting arguments in disputes.

"One *topos* is to look and see if a man has described as an accident what belongs in another way." —Aristotle, *Topics*, 109a34.

Totalitarianism

[from Italian; *totalitario*: absolute, complete, all-embracing] A form of rule originally associated with Italian fascism which places every politically significant element under the control of a highly centralised government. A totalitarian state generally has an official ideology and suppresses the plurality of thought and opinion. It has one dominant party, typically under a single leader, and co-opts or destroys any opposition. Competitive interest groups and other previously independent organisations are either suppressed or brought into a corporatist structure to express populist support. The whole society is hierarchically and cohesively organised. The economy, military and mass media are tightly controlled, with a focus on alleged enemies used to maintain discipline and enthusiasm. There is no strict distinction between public and private or between party and state. Totalitarian rulers appear to organise their population into a disciplinary unity and can mobilise their resources to achieve one goal over a short time, but unacknowledged political conflicts beneath the surface and repression of public debate can have heavy costs, with some achievements more a matter of propaganda than efficiency. In the West, especially after the outbreak of World War II, totalitarianism became a pejorative term. Unlike authoritarian rule, a totalitarian regime not only denies individual freedom and human rights and requires order and stability, but also seeks to realise a specific ideology. As a doctrine, totalitarianism derives from older patterns of tyranny and despotism, but transforms them under the conditions of modernity. It is unclear to what extent a single theory of totalitarian rule can apply to regimes with different origins, formations and ideologies.

"Totalitarianism is a new form of dictatorship... It was characterised by the predominance of the leader of the victorious movement, who, with the aid of his subordinate elite and a manipulated ideology, aimed at total control over state, society and the individual." —Schapiro, *Totalitarianism*, 1972, p. 119.

Tough-mindedness

William James claimed that philosophy is first of all a kind of aesthetics for expressing some temperament or atti-

正位

「希腊词，指位置」在亚里士多德看来，是指“能找到论证的地方”。*Topos* 是论证（不管其主题是什么）的标准程序、模式或策略。亚里士多德在其中讨论各种 *topoi* 的逻辑著作因而被叫做《正位篇》。此书是一部如何在争论中构建论证的手册。

“一个正位是去看看，搞明白是否他人把本是以另一种方式归属的东西描绘为是偶性。”——亚里士多德：《正位篇》，109a34。

极权主义

「源自意大利文；*totalitario*，绝对的、完全的、无所不包的」一种最初与意大利的法西斯主义相联系的统治形式，这种法西斯主义把每一重要的政治因素都置于高度集中的政府控制之下。一个极权主义的国家一般有一种官方的意识形态并压制众多的思想和观点。它有一个占统治地位的政党，其典型的形式是在一个人的领导下，并且同化或摧毁任何反对派。竞争的利益集团和其他先前的独立的组织或者受到压制，或者被置于一个组合的结构中去表示大众的支持。整个社会是以等级制的形式严密地组织起来的。经济、军事和大众传媒被严格控制，集中注意力于所谓的敌人常被用来维持纪律和热情。在公众与私人之间、政党和国家之间不存在严格的区别。极权主义的统治者看上去是把他们的人口组织为一个有纪律的整体，并能调动他们的资源在短期内达到一个目的，但对深层政治冲突的否认和对公众争论的压制会带来沉重的代价，因为一些成就更是一种宣传而非实效。在西方，特别是在第二次世界大战爆发以后，极权主义已成为一个贬义词。与权威主义的统治不同，极权主义的政权不仅否认个人的自由和人权并要求秩序和稳定，而且还力图实现一种特定的意识形态。作为一种学说，极权主义起源于先前的暴政和专制，但对它们做了现代条件下的改造。单一的极权主义的统治理论在多大程度上可以应用于那些有着不同起源、不同形态和不同意识形态的政权，这个问题现在还不清楚。

“极权主义是一种新的专政形式，……它过去是以胜利的运动的领导者的支配地位为特征，这一领导者在他属下的精英和所操纵的意识形态的帮助下，来实现对国家、社会 and 个人的完全控制。”——夏皮罗：《极权主义》，1972年，第119页。

讲究实际

W. 詹姆斯主张哲学首先是一种用以表达对于世界的某种气质或态度的美学，而不是用

tude towards the world rather than a kind of logic for seeking solutions to a set of problems. Philosophy is decided by the temperament of the philosopher. He further suggested that the history of philosophy is to a great extent a clash of two kinds of human temperaments, namely tough-minded and tender-minded temperaments. Tough-minded philosophers hold on to facts and declare that everything else is false, while tender-minded philosophers set value on certain principles rather than on facts. This distinction can be seen in the conflict of empiricists like Hume and rationalists like Hegel. The tension between tender-minded and tough-minded philosophers is further represented through tensions between intellectualistic and sensationalistic views, idealistic and materialistic views, optimistic and pessimistic views, religious and irreligious views, belief in free-will and fatalism, monism and pluralism and dogmatism and scepticism. James himself attempts to reconcile both temperaments in his radical empiricism.

"The tough-minded are the men whose alpha and omega are facts." — James, *Pragmatism*, 1955, p. 170.

Tradition

The existing social customs, institutions, patterns of belief and codes of behaviour which are accepted by a community and form its culture. Every person belongs to at least one tradition and grows up through emulating or rebelling against what his traditions indicate. Tradition is inherited from previous generations and is transmitted, perhaps in an altered form, to future generations. It is the bond and continuity of a nationality, culture or religion. In political philosophy, liberal individualism stresses rationality and personal rights and rejects tradition as a force that hampers social progress and personal freedom. Conservatism, on the other hand, believes that we should respect tradition, and that large scale change, especially violent revolution, can only lead to calamity. This conservative view is shared by contemporary communitarian theory. In ethics, modern utilitarianism and deontology focus on interests, rights and duties, but virtue ethics respects the role of tradition in the cultivation of virtues. A general criticism of modern morality is that it isolates rationality from tradition.

"Self-contained traditions rarely raise questions of existence and reality. A member of such a tradition may ask whether a particular event has occurred and he may doubt a particular tale, but hardly anybody considers the 'ontological implications' of all terms, statements, and stories in a certain domain." — Feyerabend, *Problems of Empiricism*, 1981, p. 1.

Traditional logic

The logic in Aristotle's works, especially his syllogistic logic, including also contributions made by the Stoics to what

来寻求一组问题解答的逻辑。哲学取决于哲学家的气质。他进而提出哲学史在很大程度上是两种人类气质,即讲究实际的与喜爱空想的之间的冲突。讲究实际的哲学家立足于事实,宣布其余的一切都是虚假的,而喜爱空想的哲学家重视某些原理而不是事实。这种区别在像休谟这样的经验论者和像黑格尔这样的唯理论者之间的冲突中可以看到。这种讲究实际与喜爱空想之间的张力,可以进一步表现在理智主义与感觉主义、唯心论与唯物论、乐观主义与悲观主义、宗教的与不信教的观点、自由意志与宿命论、一元论与多元论、独断论与怀疑论等等之间。詹姆斯自己试图在他的彻底经验主义中协调这二者。

"讲究实际的就是把事实作为第一位的那些人。"——詹姆斯:《实用主义》,1955年,第170页。

传统

为一个社会所接受并形成其文化的现有的社会习俗、制度、信仰方式和行为准则。每个人都至少从属于一个传统,并通过对他的传统所指示的东西的效仿或反抗而成长。传统是从前代继承下来的并可能以一种改变了的形式传到后代。它体现了一种民族、文化或宗教的凝聚力和连续性。在政治哲学中,自由个人主义强调理性和个人的权利,并把传统作为阻碍社会进步和个人自由的力量而加以反对。保守主义则相反,它认为我们应当尊重传统,并认为大规模的变革,特别是暴力革命,只能导致灾难。当代社群主义也持有这种保守主义的观点。在伦理学中,现代功利主义和义务论关注的是利益、权利和责任,而德性伦理学则重视传统在德性培养方面的作用。对现代道德的总的批评是它使理性脱离传统。

"自我封闭的传统很少提出关于存在和现实的问题。这一传统的某一信奉者也许会问某一特定事件是否已发生,也许会怀疑一个特别的传说,但很少有人考虑某一领域的所有术语、陈述和故事的'本体论含义'。"——费耶阿本德:《经验主义问题》,1981年,第1页。

传统逻辑

亚里士多德著作中的逻辑,特别是他的三段论,也包括斯多亚派对目前所谓的命题演算

would now be called the propositional calculus, and the contributions by medieval logicians to problems such as reference and modality. It is also called Aristotelian Logic. Traditional logic has been superseded by modern symbolic or mathematical logic initiated in Frege's work, and is retained as a part of predicate logic. Modern logic holds that several basic assumptions in traditional logic, such as the claims that propositions are restricted to the subject-predicate form and that we must accept the principle of bivalence, are problematic. The core of traditional logic is the syllogism.

"The doctrine of the syllogism is the main achievement of traditional logic."—P. F. Strawson, *Introduction to Logical Theory*, 1952, p. 158.

Tranquillity

[Greek: *ataraxia*, non-disturbance] A key term in ancient scepticism for a state which is free from disturbance and remains untroubled, both intellectually and in ordinary life. Tranquillity is both the outcome and reward of suspension of judgement. It emerges from a negative response to claims concerning the objectivity of values and accessibility of truth. Tranquillity is what scepticism calls happiness.

"As end the Sceptics name suspension of judgement, upon which tranquillity follows like a shadow."—Diogenes Laertius, *Lives of the Eminent Philosophers*, 9, 107.

Transcendent

[from Latin: *trans*, over, beyond + *scandere*, climb, being superior to, surpassing or separated from certain limits, in contrast to immanent] That which lies beyond certain crucial limits. In medieval philosophy, God was said to be transcendent because he goes beyond all the finite limits of this world and even beyond the scope of conceptual thinking. The scholastics also employed the term *transcendentia* for ontological predicates which go beyond Aristotle's classification of ten categories and which are coextensive with the whole world of being, such as things, one, true, good.

In Kant's philosophy, transcendence has two different senses. First, there are principles which go beyond the limits of possible experience, including the psychological, cosmological and theological ideas discussed in the Transcendental Dialectic. Secondly, things in themselves which exist beyond the limits of possible experience are transcendent. Kant also called this transcendent reality. When transcendental ideas are thought to be transcendent realities, we have what Kant calls transcendental illusions. However, the use of transcendental in these contexts is confusing, because the transcendent is carefully distinguished by Kant from the transcendental, which concerns the conditions for the possibility of experience. Husserl claimed that intentional acts have an immanent transcendence, by which they are related to objects of our awareness which are not parts of consciousness. Heideg-

所作出的贡献,以及中世纪逻辑学家对指称和模态等问题作出的贡献。它亦称“亚里士多德逻辑”。传统逻辑已被弗雷格所开创的现代符号逻辑或数理逻辑所取代,并作为谓词逻辑的一部分得以保留。现代逻辑宣称,传统逻辑中的几个基本假定,如命题局限于主谓式的,我们必须接受二值原则,都是成问题的。传统逻辑的核心内容是三段论。

“三段论学说是传统逻辑的主要成就。”——斯特劳森:《逻辑理论导论》,1952年,第158页。

宁静

[源自希腊词 *ataraxia* (不受打扰)] 这是古代怀疑论的一个中心术语,是指一种在理智上和日常生活中都不受打扰,无忧无虑的状态。宁静是中止判断的结果和所获得的回报。它产生于对客观价值及获得真理的可能性持完全否定的立场。宁静正是怀疑论称为幸福的东西。

“怀疑论者把中止判断名为终端,而宁静则如同影子一般追随它。”——第欧根尼·拉尔修:《名哲言行录》,9,107。

超验的

[源自拉丁文 *trans* (超越) 和 *scandere* (攀登,上升),字义为胜过、超越,或与某种界限分离,相对于“内在的”] 超越某种决定性界限而存在的东西。在中世纪哲学中,上帝据说是超验的,因为他超越了这个世界的一切有限性,甚至超越了概念思维的范围。经院哲学家也用“超验”这个词来指那超出了亚里士多德十大范畴的分类和与整个世界的存在同样深远广阔的本体论谓词,诸如事物、一、真、善。

在康德哲学中,超验存在有两种不同的意义。一是指那些超越可能经验界限的原理,包括在“先验辩证论”中所讨论的心理学的、宇宙论的和神学的观念。另一个意义是指超越可能经验界限而存在的物自体。康德也把它称为“超验实在”。当先验观念被认作是超验实在时,我们就得到康德所说的“先验幻象”的东西。然而,“先验的”用法在这些行文中是含混的,因为“超验的”是康德精心地用来与“先验的”相区别,后者关心的是经验可能性的条件。胡塞尔主张,意向性活动具有“内在的超验性”,这些活动由此就与并非作为意识内容的我们的意识对象联系起来了。海德格尔使用超验概念来指人们对于整体作为整体的经验,相对于自身的和对整体的部分的经验。

“我们把那些其应用完全限于可能经验界

ger employed the notion of transcendence for man's experience of the whole as a whole, in contrast to the experience of oneself and parts of the whole.

"We shall entitle the principles whose application is confined entirely within the limits of possible experience, immanent; and those, on the other hand, which profess to pass beyond these limits, transcendent." — Kant, *Critique of Pure Reason*, A296.

Transcendental

Kant contrasted the transcendental with the transcendent. Something transcendent goes beyond the limits of experience, while the transcendental is related to the conditions of the possibility of experience. It is the form of knowledge which is concerned not with objects themselves, but with the modes in which we are able to know these objects, namely, with the conditions of possible experience. Generally, the transcendental is distinguished from the empirical and is associated with the *a priori*. Thus a system of *a priori* concepts might be called transcendental philosophy. Kant used the term transcendental to qualify many other terms, such as logic, aesthetic, analytic, dialectic and deduction, in order to show that these topics are considered in terms of their role in establishing the conditions of the possibility of experience. These discussions use a type of reasoning which Strawson calls transcendental argument, the prime example of which is Kant's transcendental deduction of the pure concepts of the understanding.

"I entitle *transcendental* all knowledge which is occupied not so much with objects as with the modes of our knowledge of objects in so far as this mode of knowledge is to be possible *a priori*." — Kant, *Critique of Pure Reason*, A11/B25.

Transcendental aesthetic

[from Greek: *aisthesis*, sensibility] The first part of Kant's *Critique of Pure Reason*. Aesthetics is now associated with problems of art. Kant used the term in its root meaning concerning sensibility. The transcendental aesthetic is Kant's view of sensory knowledge and deals chiefly with space, time and mathematics. In contrast, the transcendental logic is concerned with the intellect. According to the traditional aesthetic, sensibility is passive receptivity, but Kant held that sensible perception has its own form and matter. In terms of his metaphysical exposition and transcendental exposition, he argued that space and time are *a priori* intuitions by which we structure the sensory. As *a priori* forms of sensible intuition, they are the forms of our sensibility and are not determinations that attach to the objects themselves. In other words, they are subjective conditions of sensibility. Through its account of the *a priori* construction of mathematical concepts in space and time, the transcendental aesthetic gives a preliminary answer to Kant's central question of how syn-

限内的原理命为‘内在的’，另外把那些宣称超越这些界限的原理命之为‘超验的’。”——康德：《纯粹理性批判》，A296。

先验的

对于康德来说，“先验的”相对于“超验的”而言。某种超验之物是超越经验界限的东西，而“先验的”概念与经验可能性的条件相关。它指这种形式的知识：它不涉及对象自身，而是涉及我们据此能认识这些对象的方式，即可能经验的条件。一般地说，它与“经验的”相区分，而与“先天的”相关联。故一个先天概念的体系可称为先验哲学。康德使用“先验的”一词来限定许多名词，如逻辑、感性论、分析论、辩证论和演绎等，旨在表明所讨论的论题是按照它们在确定经验可能性的条件中的作用来考察的。这些讨论使用一种被斯特劳森称为先验论证的推理，它的典型例子就是康德的纯粹知性概念的先验演绎。

“所有知识，如果不是与对象相关，而仅仅与我们对对象的知识方式相关，就这种知识方式是先天地可能的范围内而言，我称这样的知识为‘先验的’。”——康德：《纯粹理性批判》，A11/B25。

先验感性论

[源自希腊文, *aisthesis*, 感性] 康德《纯粹理性批判》的第一部分。感性论通常与艺术问题相关，在这里，康德是在这个词的字根意义上使用的。先验感性论是康德关于感性知识的学说，主要论及空间、时间和数学。这一部分相对于涉及理智的先验逻辑。按照传统的感性论，感性是被动的接受性。但康德认为，感知有它自己的形式和质料。他借助于他的形而上学阐明和先验阐明来证明：空间和时间是先天的直观，我们以它们来构造感知。作为感性直观的先形式，它们是我们感性的形式，而不是属于对象本身的规定。换言之，它们是感性的主观条件。通过论述数学概念在时空中的先天构造，先验感性论对康德的“先天综合判断如何可能”这个中心问题给出了初步的回答。这一直是此后对这一核心论题的许多论述的基础。

“一切先天的感性原理之学，我名之为先验感性论。”——康德：《纯粹理性批判》，A21。

thetic *a priori* judgement is possible. It has been the basis for many later accounts of its central topics.

"The science of all principles of *a priori* sensibility I call transcendental aesthetic." —Kant, *Critique of Pure Reason*, A21.

Transcendental analytic

A division of the transcendental logic of Kant's *Critique of Pure Reason*, the other division being the transcendental dialectic. In the analytic, Kant sought to discover by analysis the concepts and principles of pure reason. The transcendental analytic contains the central arguments of the *Critique*. It is divided into the analytic of concepts and the analytic of principles. The analytic of concepts includes the metaphysical deduction, which shows the number and character of the categories, and the transcendental deduction, which seeks to justify the objective validity of the categories. The analytic of principles presents the principles under which the categories may legitimately be related to sensibility in general and includes discussions of the schematism of the pure concepts of the understanding, the system of all principles of pure understanding and the distinction of all objects into phenomena and noumena. The transcendental analytic is the central part of Kant's critical philosophy and the core of his Copernican revolution.

"Transcendental analytic consists in the dissection of all our *a priori* knowledge into the elements that pure understanding by itself yields." —Kant, *Critique of Pure Reason*, A64/B89.

Transcendental apperception

The term apperception was introduced by Leibniz for consciousness or reflective knowledge of an inner state which represents external things, but Kant argued that Leibniz's understanding of apperception was empirical and diverse, without relation to the identity of the subject. In contrast, Kant called his own version transcendental apperception, pure apperception or original apperception and used this notion as a crucial factor in the transcendental deduction. Transcendental apperception is the power to combine concept and intuition in knowledge, that is to introduce order and regularity in appearances and thus to achieve a synthetic unity in accordance with the categories. This involves the transcendental unity of apperception or unity of consciousness as a purely formal notion of the unity of the subject of experience. Apperception is different from intuition, for while intuition is receptive, transcendental apperception is a spontaneous act which brings intuitions to a subject and enables them to be combined into a judgement. The transcendental unity of apperception has the form of "I think", which can accompany all of one's representations, and has synthesis as its main function. In unifying appearances, it must act in ac-

先验分析论

康德《纯粹理性批判》中先验逻辑的一部分,另一部分是“先验辩证论”。康德在分析论中努力通过分析来发现纯粹理性的概念和原理。先验分析论包含《纯粹理性批判》的主要证明,它进一步划分为概念分析论和原理分析论。概念分析论包括表明范畴的数量和特点的形而上学演绎以及论证范畴的客观有效性的先验演绎。原理分析论提出了范畴可合法地联系于感性一般的原理,包括讨论纯粹知性概念的图型论、一切纯粹知性原理的体系和把一切对象分为现象与本体的区别。先验分析论是康德批判哲学的中心部分,是他的哥白尼革命的核心。

“先验分析论在于把我们一切先天知识分解为纯粹知性自身所产生的种种要素。”——康德:《纯粹理性批判》,A64/B89。

先验统觉

“统觉”一词首先为莱布尼茨所采用,是指意识,或表象外部事物的内部状态的反思知识。但康德认为莱布尼茨对统觉的理解是经验性的、多样化的,与主体的同一性无关。与此不同,康德把自己对统觉的说法称为“先验统觉”、“纯粹统觉”或“本源的统觉”,并在先验演绎中用作关键的因素。它是把概念和直观结合为知识的能力,即把秩序和规则带入现象,按照范畴获得综合统一。因此它也称为“统觉的先验统一”或作为统一经验主体的纯形式概念的“意识的统一”。统觉不同于直观,因为直观是接受性的,先验统觉是自发的活动,它把直观带给主体,使它们能被结合为判断。统觉的先验统一具有“我思”的形式。“我思”伴随着我的一切表象而起作用,并以综合作为它的主要功能。在统一现象时,它必须按照范畴而进行。然而,它自身先于范畴,并且确实是范畴的源泉。先验统觉自身不能被进一步地规定,它是人类知识范围的最高原理。这个概念是费希特哲学的直接来源,并且对后来的德国唯心主义的发展产生了重大影响。在解释和证明康德对这个困难的概念的用

cord with the categories, but it is prior to the categories and is indeed their source. Transcendental apperception cannot be further determined and is the highest principle in the sphere of human knowledge. This notion is the direct source of Fichte's philosophy and exerted great influence on the later development of German idealism. There are many important problems in expounding and justifying Kant's use of this difficult notion.

"This pure original unchangeable consciousness I shall name *transcendental apperception* . . . The numerical unity of this apperception is thus the a priori ground of all concepts, just as the manifoldness of space and time is the a priori ground of the intuitions of sensibility." Kant, *Critique of Pure Reason*, A 107.

Transcendental argument

An argument which starts from some accepted experience or fact to prove that there must be something which is beyond experience but which is a necessary condition for making the accepted experience or fact possible. The goal of a transcendental argument is to establish the truth of this precondition. If there is something X of which Y is a necessary condition, then Y must be true. This form of argument became prominent in Kant's *Critique of Pure Reason*, where he argued that the existence of some fundamental *a priori* concepts, namely the categories, and of space and time as pure form of sensibility is necessary for making experience possible. In contemporary philosophy transcendental arguments are widely proposed as a way of refuting scepticism. Wittgenstein used this form of argument to reject the possibility of a private language which only the speaker could understand. Peter Strawson employs a transcendental argument to prove the perception-independent existence of material particulars and to reject a sceptical attitude toward the existence of other minds. There is disagreement about the kind of necessity involved in transcendental arguments, and Barry Stroud has raised important questions about the possibility of transcendental arguments succeeding.

"A transcendental argument attempts to prove q by proving it is part of any correct explanation of p, by proving it a precondition of p's possibility." —R. Nozick *Philosophical Explanations*, 1981, p. 15.

Transcendental deduction

For Kant, the argument to prove that certain *a priori* concepts are legitimately, universally, necessarily and exclusively applicable to objects of experience. Kant employed this form of argument to establish the legitimacy of space and time as the forms of intuition, of the claims of the moral law in the second *Critique* and of the claims of the aesthetic judgement of taste in the third *Critique*. However, the most influential example of this form of argument appeared in the

法中存在许多重要问题。

“这种纯粹的本源的不变意识我称之为,先验统觉,……这个统觉的数的统一因而是一切概念的先天根据,正如空间和时间的杂多性是感性直观的先天根据一样。”——康德:《纯粹理性批判》,A107.

先验论证

这一论证始于某个公认的经验或事实,来证明必定存在某种超越了经验的东西,而这种东西是使这个公认的经验或事实得以可能的必然条件。它的目的在于确立这种先决条件的真。如果存在一个X,而Y是它的必然条件,那么,Y就必定为真。这种论证形式始于康德的《纯粹理性批判》,他认为,存在某些根本的先天概念亦即范畴,以及作为纯粹感性形式的时空概念,它们对于使经验成为可能是必然的。这在当代哲学中被普遍看做是反对怀疑论的一种形式。维特根斯坦用这种论证形式来证明只为说者理解的私人语言是不可能的。P. 斯特劳森用它证明物质个体独立于知觉而存在,反对怀疑他人心灵存在的态度。至于在先验论证中所涉及到的必然性是什么,人们有不同看法,B. 斯特罗德对先验论证成功的可能性提出了重要的问题。

“先验论证试图证明q,表明它是对p的正确说明,是使p成为可能的先决条件。”——诺齐克:《哲学说明》,1981年,第15页。

先验演绎

康德的术语,指证明某些先天概念可合法地、普遍地、必然地和唯一地应用于经验对象的论证。康德采用这种形式的论证来建立直观形式(空间和时间)的合法性,建立第二“批判”中的道德法则主张的合法性以及第三“批判”中鉴赏力的审美判断主张的合法性。但它最具影响的形式是在《纯粹理性批判》中的范畴的先验演绎。形而上学演绎确立了范畴的本源和特性,

Critique of Pure Reason as the transcendental deduction of the categories. The metaphysical deduction set out the origin and character of the categories, and the task of the transcendental deduction was to demonstrate that these *a priori* concepts do apply to objects of experience and hence to prove the objective validity of the categories. The strategy of the proof is to show that objects can be thought of only by means of the categories. In sensibility, objects are subject to the forms of space and time. In understanding, experienced objects must stand under the conditions of the transcendental unity of apperception. Because these conditions require the determination of objects by the pure concepts of the understanding, there can be no experience that is not subject to the categories. The categories, therefore, are justified in their application to appearances as conditions of the possibility of experience.

In the second edition of the *Critique of Pure Reason* (1787), Kant extensively rewrote the transcendental deduction, although he held that the result remained the same. The first version emphasised the subjective unity of consciousness, while the second version stressed the objective character of the unity, and it is therefore possible to distinguish between a subjective and objective deduction. The second version was meant to clarify the argument, but remained extremely difficult to interpret and assess. The presence of the two versions of this fundamental argument makes interpretation even more demanding. Generally speaking, European philosophers prefer the subjective version, while Anglo-American philosophers prefer the objective version.

The transcendental deduction of the categories was a revolutionary development in modern philosophy. It was the main device by which Kant sought to overcome the errors and limitations of both rationalism and empiricism and propelled philosophy into a new phase.

"The explanation of the manner in which concepts can thus relate *a priori* to objects I entitle their transcendental deduction." — Kant, *Critique of Pure Reason*, A85.

Transcendental dialectic

In Kant's *Critique of Pure Reason*, the part of the transcendental logic that is concerned with reason, especially with certain kinds of malfunction of reason. In contrast, the other part of transcendental logic, the transcendental analytic, is concerned with understanding. For Kant, dialectic means "pertaining to error or illusion" or "uncovering judgments which bear a semblance of truth but are in fact illusory". These errors of human reason are natural, inevitable and incurable, for they are rooted in the human demand for completeness and unity. Pure reason commits these errors when it mistakenly applies the categories to things in themselves, that is things beyond the limits of experience, and mistakenly takes the Ideas of Reason to characterise

先验演绎的任务是论证这些先天概念确实可应用于经验对象,因而证明范畴的客观有效性。证明的目的旨在表明,对象只有借助于范畴才能被思维。在感性中,对象从属于空间和时间。在知性中,经验的对象必须合乎统觉的先验统一的条件。因为这些条件需要以纯粹知性概念确定对象,不可能存在任何不从属于范畴的经验。因此,范畴可以正当地应用于作为经验可能性条件的表象。

在第二版《纯粹理性批判》(1787)中,康德扩充地重写了先验演绎的论证,尽管他认为结果仍然相同。第一版强调意识的主观统一,第二版着重统一的客观性质。因而前者通常称为“主观演绎”,后者称为“客观演绎”。第二版的意图是想把观点表达得清楚些,但要解释和评价它依然极为困难。一般地说,欧洲大陆哲学家偏向于主观演绎的版本,而英美哲学家偏向于客观演绎的版本。

范畴的先验演绎是近代哲学的革命。它是康德用来克服唯理论和经验论的缺点的主要手段,并把哲学推向了新的阶段。

“对概念借以先天地联结对象的方式的说明,我名之为概念的先验演绎。”——康德:《纯粹理性批判》,A85。

先验辩证论

在康德的《纯粹理性批判》中,它是先验逻辑的一部分,论述理性,或更准确地说,论述理性的某些失常机能,相对于先验逻辑的另一部分,即研究知性的先验分析论。在康德看来,“辩证论”在这里的意思是“关于谬误或幻象”,或“揭露那些貌似真理,实为幻象的判断”。这种人类理性的错误是自然的、不可避免的和不可救药的,因为它们植根于人类对完满性和统一性的要求中。纯粹理性犯下这些错误,是由于它把范畴误用于物自身,即超越经验的事物,并且误用理性观念,来刻画在经验中给予的事物。这些错误是传统形而上学的根源。因此,先验辩证法是康德对传统本体论、特别是沃尔夫讨论

something that is given in experience. These errors are the source of traditional metaphysics. The transcendental dialectic is Kant's criticism of traditional ontology, especially as discussed by Wolff. It chiefly addresses three metaphysical disciplines: rational psychology, which discusses the soul or thinking subject as an empirical entity and leads to paralogisms; rational cosmology, which discusses appearance as a whole and leads to antinomies; and rational theology, which attempts to prove the existence of God and leads to the ideal of pure reason.

"The transcendental dialectic will therefore content itself with exposing the illusion of transcendental judgements, and at the same time taking precautions that we be not deceived by it." —Kant, *Critique of Pure Reason*, B354.

Transcendental ego

For Husserl, the phenomenological reduction leads to the discovery that whatever is in the world is only as object of our pure consciousness, that is an object of the transcendental ego. This ego is the unity of the empirical ego's stream of consciousness. It cannot be bracketed because it is essentially entailed by the *Cogito*. It is transcendental because it precedes the being of the world. This ego constitutes itself through its acts. It is self aware and announces itself in its conscious acts. The transcendental ego, according to Husserl, is also one's "ultimately constitutive subjectivity", "ego in its full concreteness", a "monad" and "the active subject of consciousness". It is the source of all mental operations and plays crucial roles in the organisation of experience and in the production of intentionality. This notion is intended to provide a starting-point for phenomenological reflection and to distinguish phenomenology from empirical sciences.

"As transcendental ego I am thus the absolutely responsible subject of whatever has existential validity for me. Aware of myself as this ego, thanks to the transcendental reduction, I stand now above all worldly existence, above my own human life and existence as man." —Husserl, *Shorter Works* (McCormick and Elliston, eds), 1981, p. 320.

Transcendental exposition

An argument in the transcendental aesthetic of Kant's *Critique of Pure Reason*. According to the transcendental exposition of the concept of space, it is necessary for space to be an *a priori* intuition if synthetic *a priori* knowledge in geometry is possible. Although there is no mathematical discipline that is related to time as geometry is related to space, Kant claimed that it is necessary for time to be an *a priori* intuition if the body of *a priori* synthetic knowledge exhibited in the general doctrine of motion is possible.

"I understand by a transcendental exposition the explanation of a concept, as a principle from which the possibility of other *a priori* synthetic knowledge can be understood." —

的本体论的批判。它主要讨论了三门主要的形而上学学科:理性心理学,它研讨了作为经验存在物的灵魂或思维主体,因而导致了谬误推理;理性宇宙学,它研讨了现象整体,因而导致二律背反;理性神学,它企图证明上帝的存在,因而导向纯粹理性的理想。

"先验辩证论满足于揭示先验判断的幻象,同时采取预防措施以不受其欺骗。"——康德:《纯粹理性批判》,B354。

先验自我

对于胡塞尔说来,现象学的还原使人得以发现,世界上所有的东西都只是我们纯粹意识的对象,也就是先验自我的对象。这个自我是经验自我的意识流的统一所在。它不能被置于括弧之中〔即被悬置或还原掉〕,因为它是“我思”的必然产物。它是先验的,因为它先于这世界的存在。这自我通过其行为而构成自身。它是自我意识的,并在它的诸意识行为中表达出自身。按照胡塞尔的观点,先验自我也是人的“终极的构成主体性”、“具有充分具体性的自我”、“单子”和“意识的主动主体”。它是所有心智活动的源头,在组织经验和产生意向性方面起着关键作用。提出这个观念,是为了给现象学反思提供一个起点,并将现象学与经验科学区别开来。

“作为先验自我,我就是对任何在我这里有存在可靠性的东西都绝对负责的主体。凭借先验的还原,我意识到我自身就是此自我;因此,我就站在了一切世间存在之上,站在了我自己的人类生活和作为人的生存状态之上。”——胡塞尔:《短篇著作》(麦考密克和埃利斯頓编辑),1981年,第320页。

先验阐明

这种论证是康德《纯粹理性批判》中先验感性论的一部分。空间概念的先验阐明把“空间是先天直观”作为“几何学中先天综合知识是可能的”这个论点的必要条件。尽管并不存在像几何学与空间相关那样的、与时间相关的数学学科,康德仍然主张,如果一般运动学说所展示的先天综合知识是可能的,那么“时间是先天的直观”就是必要条件。

“所谓先验阐明,我理解为是对一概念的解释,作为原理,其他先天综合知识的可能性由之而能理解。”——康德:《纯粹理性批判》,B40。

Transcendental ideas, see ideas (Kant)

Transcendental illusion

Traditional metaphysics usually started from empirical or sensory illusions in order to show that the senses sometimes deceive us and that appearance is illusory. Kant claimed that traditional metaphysics was itself permeated by illusions, which arise from the deceptive extension of the concepts of pure understanding beyond the limits of experience or appearance to things in themselves. It takes regulative principles as knowledge of objects. These are transcendental illusions which are not generated by appearance, but are in contrast with it. They cheat us not by the senses, but by reason. Kant claimed that these illusions are natural and inevitable and result from the natural quest of reason for the absolute condition. The task of his critical philosophy was to determine the limits of human reason and to guard against the illegitimate transgression of these limits. His *Critique of Pure Reason* is divided into two parts: one is analytic and seeks to determine the legitimate sphere of pure reason; and the other is dialectic and seeks to show how transcendental illusions result once reason does not observe its proper limit.

"Transcendental illusion, on the other hand, does not cease even after it has been detected and its invalidity clearly revealed by transcendental criticism." — Kant, *Critique of Pure Reason*, A297/B353.

Transcendental logic

The main part of Kant's *Critique of Pure Reason*, including both the transcendental analytic and the transcendental dialectic. Breaking from the pattern of general or traditional logic, which dealt strictly with the form of thoughts, transcendental logic not only excluded modes of knowledge which have empirical roots, but also sought to trace the origin of *a priori* knowledge. Transcendental logic used the table of judgements of traditional logic as a clue to determine the pure concepts of understanding or categories and proceeded to determine how these *a priori* concepts have objective reference. Transcendental logic also sought to explain the inevitable illusions of reason by its tendency to employ the categories beyond the limits of experience.

"Such a science, which should determine the origin, the scope, and the objective validity of such knowledge, would have to be called transcendental logic." — Kant, *Critique of Pure Reason*, A57.

先验的理想

见“理想(康德)”条。

先验观念

见“观念(康德)”条。

先验幻象

传统形而上学通常从经验的或感觉的幻象开始,目的在于表明,感觉有时在欺骗我们,现象就是幻象。康德主张,传统形而上学自身充满了幻象,它从纯粹知性概念欺骗性地扩大到超越了经验或现象的界限,上升到物自体,即把范导性原理作为对象的知识。它们不是由现象产生的先验幻象,而是相对于现象而言的,在这种先验幻象中我们不是受感官的欺骗,而是受理性的欺骗。然而,康德主张,这些幻象是自然的和不可避免的,产生于理性对绝对条件的自然追求。因此,他的批判哲学的任务是要规定人类理性的界限和要防止理性的不合法的越界行为。他的《纯粹理性批判》划分为两个部分,一部分是分析论,试图确定纯粹理性的合法范围,另一部分是辩证论,意在表明,一旦理性不遵守它的严格界限,先验幻象将如何产生出来。

“先验幻象甚至在它已被发觉,以及它的无效性清楚地由先验的批判所揭示后,仍不会终止或消失。”——康德:《纯粹理性批判》,A297/B353。

先验逻辑

康德《纯粹理性批判》的主要部分,包括先验分析论和先验辩证论。与严格地处理思维形式的一般或传统逻辑不同,先验逻辑不仅排斥具有经验来源的知识方式,它也追溯先天知识的来源。然而,先验逻辑利用传统逻辑的判断表作为确定纯粹知性概念或范畴的线索,并进而确定这些先天概念如何具有客观的指称。先验逻辑也力图通过理性应用范畴于经验界限之外的倾向来解释理性的不可避免的幻觉。

“规定这种知识的起源、范围和客观有效性的这种学问,应当称为先验逻辑。”——康德:《纯粹理性批判》,A57。

Transcendental object

A concept which, like *noumenon* or thing-in-itself, seems to designate an unknown object outside the limits of experience. The concept is adopted to show that there is something which lies at the basis of appearances and is the intelligible cause of the latter. The transcendental object is the intelligible correlate of sensible appearances. The postulation of its existence is the theoretical consequence of Kant's belief that there can be no appearance without anything that appears. Although the transcendental object can be confused with the thing-in-itself, the two concepts have different functions.

"This transcendental object cannot be separated from the sensible data, for nothing is then left through which it might be thought." —Kant, *Critique of Pure Reason*, A251.

Transcendental paralogism, see paralogism

Transcendental philosophy

Kant's term for an exhaustive and systematic analysis of the whole of *a priori* knowledge. In this philosophy, he sought to answer the question of how synthetic *a priori* judgements are possible and, more specifically, how the sciences are possible. Transcendental philosophy is distinguished from ontology because it is concerned only with the concepts and principles of understanding and reason and takes objects as something given and not in need of a philosophical account, although his actual discussion of objects is complex and puzzling. According to Kant, the *Critique of Pure Reason* was to lay down the fundamentals for the whole system of transcendental philosophy, but because the *Critique* was an essential but incomplete examination of synthetic *a priori* knowledge it was not the whole system itself.

"The critique of pure reason therefore will contain all that is essential in transcendental philosophy." —Kant, *Critique of Pure Reason*, A14/B28.

Transcendental place, see transcendental reflection

Transcendental reflection

An operation of mind prior to the construction of any objective judgement which synthesises concepts and intuitions. This operation has the purpose of reflecting on or comparing the character of representations in order to decide whether they belong to understanding or to sensible intuitions. The act of comparison employs a list of so-called concepts of reflection or concepts of comparison, which have no reference to an object but are merely means for orienting judgement. These concepts include identity and difference, agreement and opposition, inner and outer, matter and

先验对象

一个与本体或物自体具有相同含义的概念,指超越经验界限的不可知的对象。这个概念被用来表明,有某种东西存在作为现象的基础,并且是使现象变得可以理解的原因。它是可感现象的理智相关物。关于先验对象存在的设定是康德的这种信念的理论结果:如没有东西在显现,就不可能有现象。虽然先验对象这一概念与“物自体”概念可以相混使用,但这两个概念有着不同的功能。

“这种先验对象不能与感性资料相分离,否则,就没有任何可通过它而思维此对象的东西。”——康德:《纯粹理性批判》,A251。

先验谬误推理

见“谬误推理”条。

先验哲学

康德的术语,是对整个先天知识的彻底的和系统的分析。在这种哲学中,他试图回答这个问题:先天综合判断如何可能?更具体地说,科学是如何可能的?先验哲学区别于本体论,因为它只涉及知性和理性的概念和原理,并把对象作为某种给予的东西,而不需要哲学上的说明,虽然他对于对象的实际讨论是复杂而令人困惑的。按康德的观点,《纯粹理性批判》的工作为先验哲学的整个体系打下了基础,但并不等于先验哲学,因为它是对先天综合知识的本质的而非完全的考察。

“因此纯粹理性批判包含先验哲学中一切本质的东西。”——康德:《纯粹理性批判》,A14/B28。

先验的位置

见“先验的反思”条。

先验的反思

先于建构任何综合了概念和直观的客观判断的一种心灵活动,其意图是反思或比较种种表象的特性以决定它们是否属于知性或感性直观。在进行比较时,它应用一系列被称为是反思的概念或比较概念来进行。这些概念并不指称对象而仅是给判断定位的手段。这些概念包括,同一与差别,一致与相反,内部和外部,质料与形式。这些概念极易混淆,因为它们既被用于概念也用于直观。如果我们把它们作为对象的特性,就会产生本体论的错误。这些反思概念也称

form. These concepts are prone to amphiboly because they are applied both to concepts and intuitions. If we take them to be properties of objects, then ontological errors occur. These concepts of reflection are also called transcendental topics. According to the employment of these concepts in sensibility or in understanding, transcendental reflection assigns a place to a representation. This place is called the transcendental place.

"The act by which I confront the comparison of representations with the cognitive faculty to which it belongs, and by means of which I distinguish whether it is as belonging to the pure understanding or to sensible intuition that they are to be compared with each other, I call transcendental reflection." Kant, *Critique of Pure Reason*, A261/B317.

Transcendental synthesis, see synthesis (Kant)

Transcendental topic, see transcendental reflection

Transcendental unity of apperception, see transcendental apperception

Transcendentalism

Also called New England transcendentalism, an early nineteenth century spiritual and philosophical movement in the United States, represented by Ralph Waldo Emerson and Henry David Thoreau. It was centred in the so-called Transcendental Club in Boston, and published a quarterly journal *The Dial*. Influenced by German idealism and Romanticism, it claimed that there is a spirit of the whole, the over soul, which is beyond the space and time of the everyday world but at the same time is immanent in it, and which forms a higher spiritual reality. It advocated an ascetic lifestyle, emphasised self-reliance and communal living and rejected contemporary civilisation. The eventual goal of life is to achieve a mystical unity with this spiritual reality, that is, with nature. Transcendentalism is viewed as a mixture of speculative philosophy and semi-religious faith. This philosophical movement had a deep influence upon existentialism, James' pragmatism and contemporary environmental philosophy.

In a broad sense, transcendentalism is any doctrine that emphasises the transcendental, and is taken as a synonym of transcendental philosophy. In this sense, all types of absolute philosophy, especially those idealist systems which emphasise the transcendence of the Absolute over the finite world, are considered examples of transcendentalism. Thus, transcendentalists had aims which differ from those of Kant's transcendental philosophy, which criticised those who wished to extend knowledge beyond experience and instead sought to use a transcendental argument to establish the conditions for

为“先验正位”。按照这些概念或在感性中或在知性中的应用,先验的反思确定表象的位置,这种位置称为“先验的位置”。

“通过它我把表象比较与表象所属的认知官能相对比,通过它我辨别那些要相互比较的表象是否属于纯粹知性或属于感性直观,这样的活动我称为先验的反思。”——康德:《纯粹理性批判》,A261/B317。

先验的综合

先验正位

见“先验的反思”条。

统觉的先验统一

见“先验统觉”条。

超验主义

19世纪早期发生在美国的一场精神的和哲学的运动,代表人物是R.W.爱默生和H.D.西奥鲁,也被称为“新英格兰超验主义”。它以设在波士顿的所谓“超验俱乐部”为中心,并出版季刊《日规》(*The Dial*)。由于深受德国唯心主义和浪漫主义的影响,它宣称,存在着一个整体的、超灵魂的精神,这精神处于日常世界的空间和时间范围之外,但同时又内在于世界之中,构成更高的精神实在。它倡导禁欲的生活方式,强调自我信赖和公共生活,拒绝当代文明。生命的最终目标是实现与这种精神实在,即与本性的神秘统一。超验主义被认作是思辨哲学和半宗教信仰的混合。这场哲学运动对存在主义、詹姆斯的实用主义和当代环境哲学都有很深影响。

从广义上讲,超验主义指强调超验性的任何学说,并被当做超验哲学的同义语。在这种意义上,一切类型的绝对哲学,尤其是那些强调在有限世界之上的绝对的超验性的唯心主义者们的体系,均被视为超验主义的范例。这样,超验主义者的目的便不同于康德超验哲学的目的。后者批评那些力图把知识伸展到经验之外的人,并寻求使用超验论证来建立经验可能性的条件。

“超验主义者相信,人有能力把握绝对的真理、绝对的正义、绝对的公正和绝对的善。他们把权力、真理和美说成是人在世界上所能发现

the possibility of experience.

"The transcendentalists believed in man's ability to apprehend absolute Truth, absolute Justice, absolute Rectitude, absolute Goodness. They spoke of the Right, the True, the Beautiful as eternal realities which man can discover in the world and which he can incorporate into his life. And they were convinced of the unlimited perfectibility of man." — Werkmeister, *A History of Philosophical Ideas in America*, 1949, p. 42.

Transformational grammar

The most powerful of the three kinds of grammar distinguished by Chomsky. The other two are finite-state grammar and phrase-structure grammar. Transformational grammar is a replacement for phrase structure grammar, which 1) analyses only the constituents in the structure of a sentence; 2) provides a set of phrase-structure rules which generate abstract phrase structure representations; and 3) holds that the simplest sentences are produced according to these rules. Transformational grammar provides a further set of transformational rules to show that all complex sentences are formed from simple elements. These rules manipulate elements and otherwise rearrange structures to give the surface structures of sentences. Whereas phrase-structure rules change only from one symbol to another in one sentence, transformational rules show that items of a given grammatical form can be transformed into items of a different grammatical form. For example, they can show the transformation of negative sentences into positive ones, question sentences into affirmative ones and passive sentences into active ones. Transformational grammar is presented as an improvement over other forms of grammar. It also provides a model for accounting for the ability of a speaker to generate new sentences on the basis of limited data.

"The central idea of transformational grammar is determined by repeated application of certain formal operations called 'grammatical transformations' to objects of a more elementary sort." — Chomsky, *Aspects of the Theory of Syntax*, 1965, p. 17.

Translation holism

A type of semantic holism which claims that since the meaning of an expression is determined by its relations to many other expressions in its language, To translate the expression into another language can preserve its meaning only if its associative or inferential relations with other expressions in the home language are preserved in the expressions of the targeted language. To translate one sentence in isolation into another language will result in the distortion of its meaning. The thesis of translation holism puts a constraint on the expressive power of language.

"What we will call translation holism is the claim that

并能融入他生活的永恒实在。他们确信人的无限可完满性。"——韦克美斯特：《美国哲学观念史》，1949年，第42页。

转换语法

由乔姆斯基区分的三种语法中最重要的的一种（其他两种语法是“有限状态语法”和“短语结构语法”）。转换语法是短语结构语法的替代物，后者1）只是分析了句子结构的组成部分；2）提供了一系列短语结构的规则，它们产生了抽象的短语结构的表达方式；3）它认为，最简单的句子是根据这些规则产生出来的。转换语法提供了一套进一步的转换规则，用于表明一切复杂的句子都是由简单的成分构成的。这些规则变换着成分，进而重新调整结构，以达到句子的表层结构。短语结构规则只是从句子的一个符号变为另一个符号，而转换规则则表明，任何不同的语法形式都可以转换为某种给定的语法形式。例如，它们可以表明把否定句转换为肯定句，把疑问句转换为陈述句，把被动句转换为主动句。转换语法被看做是对其他语法形式的改进，它也提供了一种模式去说明说者根据有限的材料生成新句子的能力。

“确定转换语法的核心观念，在于把某些被称作‘语法转换’的形式操作，反复地用于某种更为基本的对象。”——乔姆斯基：《句法理论的若干方面》，1965年，第17页。

翻译的整体论

一种语义学的整体论，它主张，由于一个表达式的意义是由它与其所在的语言中其他许多表达式的关系确定的，因而，要把它翻译为另一种语言，就只能当把母语中与之相关的或有推论关系的其他表达式保留在所翻译的语言表达式时，才能保留这个表达式自身的意义。孤立地把一个句子译为另一种语言，就会产生意义的歪曲。这种翻译的整体论主张强化了语言的表达力量。

“我们称作的翻译的整体论是这样一种主张，它认为，像意义这种特性与L的某些公式

properties like meaning the same as some formula or another of L , are holistic in the sense that nothing can translate a formula of L , unless it belongs to a language containing many (nonsynonymous) formulas that translate formulas of L ." — Fodor and Lepore, *Holism*, 1992, p. 6.

Transmigration of the soul

A doctrine introduced into the western tradition by Pythagoras, who might have been influenced by oriental mysticism. It claims that soul, which has an essential kinship with the divine and immortal, is a temporary sojourner in the body and may live through successive incarnations in various animal and human bodies. If it keeps itself pure, not being polluted by bodily passions, it may eventually return to its true or godlike state. If it sins, it will be punished by prolonged suffering in more miserable incarnations. A soul must therefore do its best to keep apart from body. Plato's famous doctrine of Recollection is based on the transmigration of the soul. The transmigration of the soul is also called metempsychosis (Greek: *meta*, among, in company with + *en*, in + *psyche*, soul).

"First, that he [Pythagoras] maintains that the soul is immortal; next, that it changes into other kinds of living things, ... Pythagoras seems to have been the first to bring these beliefs into Greece." — Diels and Kranz, *Die Fragmente Der Vorsokratiker*, 14, 8a.

Transworld identity

Since Leibniz, it has been believed that each object exists in just one world. This is supported by the idealist doctrine of internal relations. Contemporary discussion of possible worlds is divided over this issue. Some philosophers insist that the same object cannot exist in more than one possible world, and is confined to only one world. Thus, each individual is a worldbound individual. Other philosophers claim that each individual exists in more than one world, not only in the actual world, but in a plurality of possible worlds. Accordingly, each individual, instead of being worldbound, becomes a transworld individual. A problem arises about how to identify such an individual. A thing X is thought to exist in more than one world, W_n and W_m . Since only when W_n differs in at least one aspect from W_m are they two worlds, X in- W_n has at least some properties distinct from X in- W_m . If this is so, X in- W_n and X in- W_m are discernible, and according to the principle of indiscernibility of identicals, they are not identical. Some philosophers deny the existence of this problem, on the ground that each individual has its essence and is hence identifiable no matter how many worlds it is in. Other philosophers reject the idea of transworld identity as unintelligible. David Lewis developed a counterpart theory which claims that there is nothing that inhabits more than one world, but any inhabitant of this world might have

或其他特性一样,都是整体性的,也就是说,没有什么东西可以翻译 L 的公式,除非它属于一种包含了许多翻译 L 公式的(非同义的)公式的语言。”——福多和拉普:《整体论》,1992年,第6页。

灵魂轮回

由毕达戈拉斯引入西方传统的一种学说,而他又可能是受到了东方神秘主义的影响。这种学说主张,灵魂与神圣和不朽有着本质的亲缘关系,它只是暂时寄居在躯体中,可以在不同的动物和人的躯体内继续显现活力。如果灵魂保持自身的纯洁,没被躯体的激情玷污,最后就可以回到它的本真或似神的状态。相反,如果它犯了罪,就会在较为悲惨的肉身中受延长痛苦的惩罚。所以,灵魂必须尽力保持与躯体的分离。柏拉图著名的回忆说就是建立在灵魂轮回基础之上的。灵魂轮回也被称作“灵魂转生”[metempsychosis, 源自希腊语 *meta* (在……之后,与……相伴)、*en* (在……之中)和 *psyche* (灵魂)]。

“首先,他[指毕达戈拉斯]主张灵魂是不朽的;其次,它变成其他种类的生物,……毕达戈拉斯似乎是把这些信念引入希腊的第一人。”——第尔斯和克兰兹:《前苏格拉底哲学残篇》,14,8a。

跨世界的同一性

自莱布尼茨以来,人们相信每个对象只存在于一个世界中。这种观点得到了为唯心论所坚持的内在关系说的支持。当代关于可能世界的讨论在这个问题上产生分歧。有些哲学家坚持同一对象不可能存在于不止一个可能世界,而只能限定于一个世界中。这样,每个个体都是束缚于世界中的个体。然而,另一些哲学家认为每个个体存在于不止一个世界中,不仅在现实世界中,而且在多个可能世界中。相应地,每个个体并非束缚于世界中,而是跨世界的个体。这样,就产生了关于如何鉴别这种个体的问题。一事物 X 被认为存在于不止一个世界,即 W_n 和 W_m 中。由于 W_n 至少有一个方面不同于 W_m ,它们才是两个世界, W_n 中的 X 至少有某些性质区别于 W_m 中的 X 。如果这样, W_n 中的 X 和 W_m 的 X 就是可辨别的,而按照“等同物的不可辨别性”原理,它们就是不同一的。有些哲学家否认这个问题的存在,理由是每个个体都有其本质,因此无论它在多少个世界中都是可同一的。但是更多的哲学家则反对跨世界同一性观念,认为它是不可理解的。D. 刘易斯提出一种“对应物理论”,认为任何事物都不能居住于多于一个世界,但是这个世界的任何居住者都可能在其他世界有对应物。在重要的内在性质和

counterparts in other worlds which resemble it closely enough in important respects of intrinsic quality and extrinsic relations. He thus replaces transworld identity with transworld resemblance.

"What comes from trans-world resemblance is not trans-world identity, but a substitute for trans-world identity; the counterpart relation." -- Lewis, *Counterfactuals*, 1973, p. 39.

Trial and error

A method of scientific invention and thought. A scientist formulates a hypothesis or a theory and then uses it to attempt to solve some definite problem. This is the step of testing or trial. If the hypothesis fails the trial and is confronted by counter examples, it is generally rejected as erroneous. All theories are tentative hypotheses and trials. All experiments are performed in order to see whether theories work and to find where they go wrong. Then we formulate a new theory and test it by new observations and experiments. Popper viewed the development of empirical science as a continuous process of trial and error, which he calls conjecture and refutation. By utilizing this method, we learn from our mistakes and achieve progress. He believed that conjecture and refutation is also the basic method of philosophy.

"We must have a question before we can hope that observation or experiment may help us in any way to provide an answer or put in terms of the method of trial and error, the trial must come before the error." -- K. Popper, *The Poverty of Historicism*, 1957, p. 98.

Trinity

A Christian theological doctrine that God is one substance (Latin: *substantia*, Greek: *ousia*) consisting of three persons (Latin: *personae*, Greek: *hypostaseis*): Father, Son (Jesus Christ) and Holy Spirit. Each of them is God, but there are not three Gods but one. The doctrine is based remarks in the *New Testament* at 1 Epistles, 5: 7; "There be three that bear witnesses in heaven, the father, the word, and the Holy Spirit; and these Three are one". Such an idea was influenced by Plotinus's three hypostaseis. The knowledge of the existence of three persons is through revelation. In the Christian tradition, each person is ascribed one peculiar attribute: paternity to the Father, filiation to the Son, and procession to the Holy Spirit. Procession is explained in two ways: either the Holy Spirit proceeds from the Father through the Son, or it proceeds from the Father and from the Son. This difference of interpretation leads to the division between Eastern Orthodox Christianity and Western Christianity.

There are also puzzles concerning the different persons of the Trinity. For example, the early Church also divided over the question of the nature of Jesus Christ. The monophysites

held that Christ's nature was too closely related to God's nature to be distinguished from it. He therefore used transworld similarity to replace transworld identity.

"来自于跨世界相似的不是跨世界同一性,而是跨世界同一性的替代物:对应物关系." -- 刘易斯:《反事实句》,1973年,第39页。

试错法

一种科学发明和思考的方法。科学家构思出一个假说或理论,然后用它来尝试解决某些确定的问题。这是检验或试验的一步。如果它不能通过试验,遇到了反例,一般就被看做是错误的而被抛弃。所有的理论都是试探性假说和试验。所有实验的操作都是为了看这些理论是否奏效,发现它们在哪儿出错。然后我们构造新的理论并用新的观察和实验检验它。波普把经验科学的发展看做是一种持续的试错过程。他称之为猜想与反驳。通过采用这种方法,我们能从错误中学习,从而取得进步。他认为猜想与反驳也是哲学的基本方法。

"在我们能希望观察和实验以任何方式帮助我们提供一个答案以前,我们必须先有一个问题,或者用试错法的方式来说,试验必须在错误之前。" -- 波普:《历史主义的贫困》,1957年,第98页。

三位一体

基督教神学的一种学说:上帝是由三个位格(拉丁词 *personae*, 希腊词 *hypostaseis*) 圣父、圣子(即耶稣基督)和圣灵构成的一个实体(拉丁词 *substantia*, 希腊词 *ousia*)。它们每一个都是上帝,但不是有三个上帝,而是只有一个。这种学说的依据是《新约全书》中《使徒一书》5:7的话:"作见证的原来有三,即父亲、儿子和圣灵;这三者也都归于一。"这种观念受了普罗提诺"三本在"的影响。只有通过启示,才能得到三位格存在的知识。在基督教传统中,每个位格都被说成有一种特定的属性:圣父是父道,圣子是嫡裔,圣灵是显现。显现有两种解释方式:或者是圣灵源于圣父经由圣子出现,或者是圣灵源于圣父也源于圣子。这种不同的解释导致了东正教和西方基督教之间的差异。

对三位一体中的三个不同的位格有种种疑问。例如,早期教会对耶稣基督的本性问题便有争议。单性论者认为,只有一个性质,既是人的,又是神的,而双性论者认为有两个分别的性质。单性论学说为东正教会支持,被批评为不可理喻。双性论学说为罗马教会所采用,也受到了批

held that there was one nature, which was both human and divine, and the dyophysites held that there were two separate natures. The monophysite doctrine, supported by Eastern Churches, was criticised for being unintelligible. The dyophysite doctrine, adopted by the Roman Church, was criticised because it allowed only the human Jesus to suffer. Without divine suffering, Christian narrative about salvation becomes incoherent.

"God, who has been represented (that is, personated) thrice, may properly enough be said to be three persons; though neither the word person, nor Trinity be ascribed to him in the *Bible*." ---Hobbes, *Leviathan*, IV, 42.

Tripartite definition of knowledge

The traditional and also standard analysis of propositional knowledge, initiated by Plato's claim in *Theaetetus* (210c-292d) that knowledge is true belief plus *a logos*. It holds that knowledge is justified true belief and obtains when the following three conditions apply: A knows P if and only if (1) P is true, (2) A believes P and (3) A is justified in believing P. The definition shows that knowledge consists of truth, belief and justification. This definition is seriously challenged by the Gettier problem.

"Because there are three parts to this definition it is called the tripartite definition or the tripartite account." ---J. Dancy, *Introduction to Contemporary Epistemology*, p. 23.

Trivium, see *quadrivium*

Trolley problem

An ethical problem put forward by Philippa Foot in her 1967 paper "The Problem of Abortion and the Doctrine of the Double Effect". Suppose that it is possible to steer a runaway trolley only to move it from one track to another. One man is working on the first track, and five men are working on the other. Anyone working on the track the trolley enters will be killed. Most people would accept that the driver should steer the trolley to the track on which only one person is working because the death of five persons is worse than the death of one person. Now suppose that the trolley, left to itself, will enter the track on which five men are working and kill them. If you are a bystander who can change the course of the trolley, would it be morally required or morally permissible to interfere to switch the trolley to other track on which only one person would be killed? According to utilitarianism, you should switch the trolley. However, if you do not interfere, you have not done anything to make you responsible for the five deaths, while if you do interfere your act does make you responsible for one death. Your own integrity or moral rules about how to act might lead you to reject the utilitarian conclusion. The trolley problem touches

评,因为它只允许人的耶稣受难。没有神圣的受难,基督教关于拯救的叙述便不一致。

“被描述(即被表现)为三样的上帝,可以非常充分地被说成三位;虽然在《圣经》中,并没把位格这个词和三位一体这个词归于他。”——霍布斯:《利维坦》,IV,42。

知识的三分法定义

传统的也是标准的对命题知识的分析,最初由柏拉图在《泰阿泰德篇》中提出,他认为,知识是加上逻各斯的真信念。这个定义认为,知识是得到辨明的真信念,满足了以下三个条件就可以得到它:A知道P,当且仅当(1)P是真的,(2)A相信P,(3)A有充分的理由相信P。这个定义表明,知识是由真理、信念和辨明构成的。这个定义受到了盖梯尔问题的严峻挑战。

“由于这个定义有三部分,所以它被称作三分法定义或三分法主张。”——丹西:《当代认识论导论》,第23页。

三艺

见“四艺”条。

查道车问题

由P. 福特在她1967年的论文《堕胎问题和双重影响学说》中提出的一个伦理学问题。假设这样一种可能:对一失去控制的查道车只能将其从一条轨道转向驶入另一条轨道。有一个人正在第一条轨道上工作,有五个人正在另一条轨道上工作。任何一个在轨道上工作的人在查道车驶入时都将被轧死。绝大多数的人都会同意驾驶者应把查道车驶入只有一个人在工作的那条轨道,因为死五个人比死一个人更糟糕。现在假设这辆查道车没有人操纵,它将驶入有五个人工作的轨道并把他们轧死。假如你是一个能够改变查道车方向的旁观者,那你强行使查道车驶入另一条只有一个人会被轧死的轨道是道德所要求或道德所允许的吗?按照功利主义的观点,你应当使查道车转向。可是,如果你没这样做,你就没做对这五个人的死负有任何责任的事,而如果你这样做了,你的行为就使你对这一个人的死负有责任。你自己的正直或如何行为的道德准则也许会使你拒绝功利主义的结论。查道车问题既涉及到道德的本质,也涉及到具体的道德困惑。如果驾驶者将查道车驶入

both the nature of morality and concrete moral perplexity. If the driver is right to steer the trolley onto the track with one person in order to save the lives of five persons, why is it wrong to execute an innocent man to stop a riot in which five innocent people will be killed? Or why is it morally wrong to save five patients who would die without transplants at the cost of killing one healthy man for his organs? In dealing with the trolley problem and these related questions, some philosophers turn to the principle of double effect, according to which a moral distinction between the intended and unintended consequences of an action can help to decide when bad consequences of an action are acceptable.

"If what people who say 'killing is worse than letting die' mean by it is true, how is it that [the driver] may choose to turn that trolley? ... I like to call this the trolley problem, in honour of Mrs Foot's example." — Thomson, *Rights, Restitution and Risk*, 1986, p. 81.

Truth

While science seeks to determine what is true, philosophy asks what is the nature of truth. Traditionally, truth is contrasted with falsity. It is viewed as a property which has a bearer, although it is disputed what the bearer is. Some ascribe truth to sentences, others to propositions, statements or utterances. Consequently, some ask what renders a proposition true, while others ask what renders a sentence or an utterance of a sentence true. What then does truth consist in? Since truth involves a relation to features of reality, a natural answer is that if a belief corresponds to reality it is true. This correspondence theory is the most widely held account of truth. However, this theory has many difficulties and the attempts to remove them have led to many alternative theories of truth, including the coherence theory of truth and the pragmatic theory of truth. A new tendency in contemporary philosophy is to challenge the traditional assumption that truth is a property of something and to claim that truth neither has a bearer nor describes a proposition. This deflationary theory of truth has various versions. The best-known is the redundancy theory of truth, but there are other versions. The disquotational theory of truth claims that "p is true" means the same as "p". The performative theory of truth suggests that to say "p is true" amounts to performing a speech act of agreeing or repeating. Because it is like saying "ditto" after someone says that p, it is also called the ditto theory of truth. The minimalist theory of truth argues that saying "it is true that p" is necessarily equivalent to saying "p". The semantic theory of truth also belongs to this group, although it tends to defend the traditional notion of correspondence. Nowadays, a theory of truth can have various orientations. It can be a theory of truth itself, a theory of the meaning of the word "true", or a theory of the function of the truth predicate. Some theories might deal with all

有·一个人的轨道以拯救五个人的生命是正确的,那为什么处死一个无辜的人以制止会有五个无辜的人将被杀死的暴乱就是错的呢?或者说,为什么杀死一个健康的人以取其器官去救五个不做器官移植手术就会死的人在道德上是错的?在解决查道车问题及这些相关问题的过程中,一些哲学家转而求助双重影响原则,按照这一原则,一个行为有意的和无意的后果之间的道德区分,可有助于确定在什么时候一个行为的坏的结果是可以接受的。

"如果有人说是'杀人比让其去死更糟'这话是正确的,那[驾驶者]又怎能选择让那辆查道车转向呢?……我愿把这一问题称为查道车问题,以纪念福特女士的例子。"——汤姆逊:《权利、赔偿和风险》,1986年,第81页。

真理

科学寻求确定什么东西是真的,而哲学却在追问“什么是真理的本性”。传统上,真是与假相对而言的,它被视为一种性质,有一个载体。至于载体是什么,则是有争议的。有些人把真归属于语句,另一些人把真归属于命题、陈述或话语。结果,有些人问“是什么使得一命题为真?”而另一些人却问“是什么使得一语句或说出一语句为真?”那么真究竟在于何处?既然真涉及到与实在的特征的关系,自然的回答是:如果一信念符合于实在,则它是真的。这是大多数人所主张的对真理的符合论说明。不过,这一理论有许多困难。克服这些困难的尝试导致了許多供选择的真理论,包括“真理融贯论”和“真理实用论”。当代哲学中的一个新趋势是挑战下述传统假定:真是某种东西的性质,并断言真既没有一个载体,也不描述命题。这叫做“真理紧缩理论”,它有不同的形式。最著名的是真理冗余论,但还有其他形式。真理的去引号理论宣称,“p是真的”其意思与“p”相同;真的履行论认为,说“p是真的”等于做一个同意或重复的言语行为。这类似于在某人说p之后说ditto(即表示同意),所以这一理论又叫做“真的ditto理论”。真的最小理论认为,说“p是真的”必然等价于说“p”。“真理语义论”也属于这一组,尽管它倾向于捍卫传统的符合论观点。目前,真理论可以有不同的取向。它可以是关于真本身的理论,关于“真的”这个词的意义的理论,或者是关于真谓词的功能的理论。某些理论可能处理所有这些方面。

“真理为所有诚实的人所关注:他们试图只展示真的断定、断言、理论等等。这是真的外延方面。哲学家们还关注着真的内涵方面——也就是说,关注着真理概念或‘真’这个词的意

of these aspects.

"Truth is the concern of all honest men; they try to expound only true assertions, claims, theories, and so on. This is truth in extension. Philosophers worry also about truth in intension—that is about the concept of truth or the meaning of the term 'truth'." —Pitcher (ed.), *Truth*, 1964, p. 1.

Truth (Heidegger)

Truth is traditionally conceived to be an agreement between understanding and things. It is seen as a relationship between objects and judgements and to be located in judgements. However, the etymological sense of the Greek word for truth, *aletheia*, is unconcealment or unhiddenness. On this ground, Heidegger claims that truth in its most primordial sense is *Dasein's* disclosedness or uncoveredness, that is *Dasein's* openness to its possibilities. Being true means being uncovered. At this primordial level, untruth is the fallingness of *Dasein* being closed off. Truth is the basic constitution of *Dasein* and its *existential*. Truth in this sense is prior to language and judgement and is the ground of truth in the traditional sense. Heidegger held that it is possible to compare whether there is an agreement between understanding and things only after *Dasein* has shown itself.

"The Being-true (truth) of the assertion must be understood as Being-uncovering." —Heidegger, *Being and Time* (tr. Macquarrie and Robinson), 1962, p. 261.

Truth conditions

More fully expressed as truth and falsity conditions, the conditions under which a statement is true or false. In standard logic, the truth conditions of a composite formula are determined by the truth conditions of its components and by the truth-functional connectives linking its components. This can be shown in a truth table. Many philosophers hold to know the truth condition of a statement amounts to knowing its meaning. For extensional contexts, if a statement in an argument is replaced by another statement with the same truth conditions, the validity of the original argument will not be altered.

"The truth conditions of a truth-functional formula are the ways in which the truth-value of any statement of the form of that formula is determined by the truth-values of its constituent statements." —P. F. Strawson, *Introduction to Logical Theory*, p. 70.

Truth of fact, see truth of reason

Truth of reason

Leibniz established a contrast between truths of reason and truths of fact. Truths of reason, which he used inter-

义。”——皮切尔(编):《真理》,1964年,第1页。

真理(海德格尔)

在传统的看法中,真理被看做是理解与事物的一致。它被视为对象与判断之间的关系,承载于判断之中。然而,希腊文中“真理”,也即 *aletheia* 这个词的词源学含义是除去蔽障或去掉遮蔽。在这个基础上,海德格尔认为真理的最原本的意义是缘在(*Dasein*)的开封或去蔽,也就是缘在向其可能性的开敞。真就意味着被揭开蔽障。在这个原发的层次上,不真(untruth)就是被封闭着的缘在的沉沦。真理是缘在的基本构成及其生存方式。在这个意义上,真理先于语言和判断,并且是传统意义上的真理的基础。海德格尔认为只有当缘在已经显现出自身之后,才可能去比较理解与事物之间的一致与否。

“陈述的‘是真’(又可译作‘在真理之中’‘真在’)(真理)必须被理解为在揭开蔽障之中。”——海德格尔:《存在与时间》(马库阿里和罗宾逊英译),1962年,第261页。

真值条件

更完整的表述是“真假条件”,即一陈述成真或成假的条件。在标准的逻辑中,复合公式的真值条件是由其支命题的真值条件以及联结这些支命题的真值函项联结词决定的,并且能显示在真值表中。许多哲学家认为,知道了陈述的真值条件就等于知道了该陈述的意义。在外延语境中,如果论证中的某个陈述被具有相同真值条件的另一陈述所代替,则原论证的有效性将不会改变。

“真值函项公式的真值条件是这样一些方式,具有该公式形式的任何陈述的真值都是由其成分陈述的真值所决定的。”——斯特劳森:《逻辑理论导论》,第70页。

事实的真理

见“理性的真理”条。

理性的真理

莱布尼茨将理性的真理与事实的真理相对照,他把理性的真理同必然真理互相换用,理性

changeably with necessary truths, are primary principles which themselves require no proof and propositions that can be established by analysis from primary principles. They are not established on the basis of empirical investigations, but are necessary and true in all actual and possible worlds, so that not even God can change them. Truths of fact, in contrast, are propositions that are established through experience. They are not necessarily and universally true, but just happen to be true of something. They are capable of change, and their contradictories are possible. According to Leibniz, truths of reason are engraved in our mind and only need to be discovered by reason, while truths of fact or contingent truths are gained through the senses.

"Truths of reason are necessary, and those of fact are contingent. The primary truths of reason are the ones to which I give the general names 'identities', because they seem to do nothing but repeat the same thing without telling us anything." -Leibniz, *New Essays on Human Understanding*, IV, ii, 361.

Truth-function

A relationship that holds if the truth or falsity of a compound depends on the truth or falsity of its components. A compound of this sort, composed of propositional variables and truth-functional connectives, is a truth-functional formula. If propositions are substituted for the propositional variables in a truth-functional formula, we obtain a truth-functional statement, and its truth and falsity is determined entirely by the truth or falsity of its constituent statements and by the way in which the constituent statements are combined by truth functional connectives. If all of its constants are truth-functional, a system of logic is truth-functional.

"The whole meaning of a truth-function is exhausted by the statement of the circumstances under which it is true or false." - Russell, *Introduction to Mathematical Philosophy*, 1919, p. 24.

Truth-functional connective

Also called a truth-functional operator or truth-functional constant. These connectives are special signs for the various relations between propositions in a truth-functional system. They cannot be used in isolation. Truth-functional connectives include: \sim (negation), \wedge (conjunction), \vee (disjunction), \supset or \rightarrow (implication) and \equiv or \leftrightarrow (equivalence). The role of these connectives is to determine the truth-value (the truth or falsity) of a truth-functional statement by the truth or falsity of its constituent statements. In daily language \sim is expressed by not, \wedge by and, \vee by either ... or, \supset or \rightarrow by if ... then and \equiv or \leftrightarrow by if and only if. However, the logical connectives and their ordinary language counterparts can differ in implicature or even in meaning.

的真理是本身不需要证明的第一原理，是可以从第一原理出发进行的分析而建立起来的命题。它们不是建立在经验研究的基础上，而是在一切实际和可能的世界中都是必然和真实的，甚至上帝也无法改变它们。反之，事实的真理是根据经验确立的命题。它们不是必然和普遍真的，而只是碰巧适合于某事。它们是可以改变的，它们的矛盾是可能的。依莱布尼茨之见，理性的真理铭刻在我们的心中，只需用理性将它们发现出来，而事实的真理或偶然的真理是通过感觉得到的。

“理性的真理是必然的，事实的真理是偶然的。原始的理性真理是我们以‘同一性’这个普遍名词称呼的真理，因为它们似乎只重复同一件事情，而未告诉我们任何其他事情。”——莱布尼茨：《人类理智新论》，第四卷，第二章，第361页。

真值函项

如果复合命题的真假取决于它的支命题的真假，这种关系就成立。这类复合命题是由命题变元和真值函项联结词构成的，叫做“真值函项公式”。如果用命题替换真值函项公式中的命题变元，我们就得到真值函项陈述，它的真假完全由其成分陈述的真假以及用真值函项联结词联结各支陈述的方式所决定。如果它的所有常项都是真值函项性的，则该逻辑系统也是真值函项性的。

“将一真值函项真或假的各种情况叙述出来，就已穷尽该真值函项的全部意义。”——罗素：《数理哲学导论》，1919年，第24页。

真值函项联结词

亦称“真值函项算子”或“真值函项常项”。这些联结词是表示真值函项系统内命题之间各种关系的特殊记号，不能孤立使用。真值函项联结词包括： \sim （否定）， \wedge （合取）， \vee （析取）， \supset 或 \rightarrow （蕴涵）以及 \equiv 或 \leftrightarrow （等值）。这些联结词的作用是根据其成分陈述的真或假来确定真值函项陈述的真值（真或假）。在日常语言中， \sim 由“并非”表达， \wedge 由“并且”表达， \vee 由“或者……或者……”表达， \supset 或 \rightarrow 由“如果……则……”表达， \equiv 或 \leftrightarrow 由“当且仅当”表达。不过，逻辑联结词和它们的日常语言对应物在隐涵甚至在意义方面是有差别的。

“任何其意义可以用真值表来把握的语句

"Any sentential connective whose meaning can be captured in a truth-table is called a truth-functional connective and is said to express a truth-function." —Forbes, *Modern Logic*, 1994, p. 46.

Truth-functional constant, another term for truth-value connective

Truth-functional operator, another term for truth-functional connective

Truth-table

In the propositional calculus, the truth-value of a formula as a whole is determined by its components. This can be shown by a table which is called a truth-table. The application of a truth table to a logical problem is called the truth-table or matrix method. If p and q are propositional variables representing two constituent statements, the truth-tables of the formulae, $\sim p$ (not p), $p \vee q$ (p or q), $p \wedge q$ (p and q), $p \rightarrow q$ (if p then q) and $p \leftrightarrow q$ (p if and only if q) can be shown in the following matrix:

p	q	$\sim p$	$p \vee q$	$p \wedge q$	$p \rightarrow q$	$p \leftrightarrow q$
T	T	F	T	T	T	T
T	F	F	T	F	F	F
F	T	T	T	F	T	F
F	F	T	F	F	T	T

These are the basic formulae, and the truth-conditions of the more complicated truth-functional propositions can be decided by the systematic applications of these. The truth table lays down the truth-conditions of a truth-functional formula, and states the rule for the use of truth-functional constants. The truth table method is an easy way of establishing whether formulae are tautologies (logically necessary), self-contradictory (logically impossible) or contingent.

"... truth table ... determines the truth or falsity of the function for each combination of the truth values of the elements." —Lewis and Langford, *Symbolic Logic*, 1932, p. 201.

Truth-table method, see truth-table

Truth-value

Classical logic assumes that every statement must be either true or false, and its truth or falsity is its truth-value. If the statement is true, its truth-value is truth; if it is false, its truth-value is falsity. That "Coal is white" is false, so we say that the sentence has the truth-value falsity. That "Snow is white" is true, so we say that the sentence has the truth-value truth. If two statements are identical, they have the same truth-value. The truth-value of a composite statement is calculated through the use of a truth-table. While the prin-

联结词叫做真值函项联结词, 并说它们表达了真值函项。"——福布斯:《现代逻辑》, 1994 年, 第 46 页。

真值函项常项

“真值函项联结词”的另一名称。

真值函项算子

“真值函项联结词”的另一个名称。

真值表

在命题演算中, 整个公式的真值是由其子公式决定的。这可以用所谓的“真值表”表示出来。把真值表应用于逻辑问题叫做真值表方法, 亦称矩阵方法。假设 p 和 q 是命题变元, 代表两个成分陈述, 公式 $\sim p$ (非 p), $p \vee q$ (p 或 q), $p \wedge q$ (p 且 q), $p \rightarrow q$ (如果 p 则 q) 和 $p \leftrightarrow q$ (p 当且仅当 q) 的真值表可以显示在下列矩阵中:

p	q	$\sim p$	$p \vee q$	$p \wedge q$	$p \rightarrow q$	$p \leftrightarrow q$
T	T	F	T	T	T	T
T	F	F	T	F	F	F
F	T	T	T	F	T	F
F	F	T	F	F	T	T

这些是基本公式, 更复杂的真值函项命题的真值条件可以由这些表的系统应用来判定。真值表规定了真值函项公式的真值条件, 并陈述了使用真值函项常项的规则。使用真值表方法容易确定公式是否是重言式(逻辑必然的)、自相矛盾式(逻辑不可能的)或偶真式。

"……真值表……对于其元素的真值的每一种组合, 确定该函项的真或假。"——刘易斯和三根福特:《符号逻辑》, 1932 年, 第 201 页。

真值表方法

见“真值表”条。

真值

经典逻辑假定, 每一陈述必定或者真或者假, 真或假就是它的真值。如果一陈述是真的, 它的真值就是真; 如果它是假的, 它的真值就是假。“煤是白的”是假的, 于是我们说该语句有真值假。“雪是白的”是真的, 于是我们说该语句有真值真。如果两个陈述是等值的, 则它们有同样的真值。复合陈述的真值可以用真值表计算出来。经典逻辑的二值原则只承认两个真值, 而某些形式的现代逻辑则否认这一假定, 引入

principle of bivalence in classical logic admits only two truth-values, some forms of modern logic deny this assumption and introduce three-valued or many-valued logic. Strawson argues that there can be statements which are truth-valueless, that is statements which are neither true nor false and for which there is a truth-value gap.

"The truth-value of a proposition is its truth if it is true, and its falsehood if it is false."—Russell, *Collected Papers of Bertrand Russell*, VI, p. 26.

Truth-value gap

The lack of truth-value of a sentence containing an expression which lacks reference. On some views, such a sentence is neither true nor false. This phenomenon arises because the truth-value of a sentence relies on the success or failure of the application to objects of the general terms it contains. But these general terms would be deprived of success or failure if a singular term in the sentence failed to have a reference. Other reasons that a sentence could lack a truth value include category mistakes, unsatisfied presuppositions, ambiguity and vagueness. The existence of truth-value gaps makes deductive reasoning unreliable. There is controversy whether this phenomenon counts as a defect of natural language.

"The claim that the radical failure of a definite singular term results in a truth-gap is in some cases more intuitively satisfactory, and in others less intuitively satisfactory, than the claim that it results in falsity."—Strawson, in Davidson and Hintikka (eds), *Words and Objections*, 1969, p. 107.

T-sentence

The basis of Tarski's proposal for an adequacy condition on definitions of truth. A theory of truth for a language is adequate if every instance of the schema "X is true if and only if P" can be derived within it. In this schema, "P" can be replaced by any sentence of the object language and "X" is replaced by a name of the sentence which replaces "P". "X" is in a metalanguage, that is a language for talking about the object language. The general form of the schema is "(T) X is true if and only if P". An instance of (T) would be " 'Snow is white' is true in English if and only if snow is white" where the object language sentence on the right-hand side is referred to by its "quotation-mark name" in the metalanguage on the left-hand side. According to Tarski, the T-sentence fixes the extension of the term "true" rather than its intension or meaning. The T-sentence is not a definition of truth, but any instance of it is a partial truth. Truth in general for a language will be a logical conjunction of all these partial definitions.

"A theory of truth entails a T-truth for each sentence of the object language, and a T-sentence gives truth conditions."—Davidson, *Inquiries into Truth and Interpretation*,

了三值或多值的逻辑。斯特劳森论辩说,可以有真无真值的陈述,即是说它们既不真也不假。对于这些陈述来说,存在真值空缺。

"如果一个命题是真的,则它的真值是它的真;如果是假的,则它的真值是它的假。"——罗素:《罗素文集》,第六卷,第26页。

真值空缺

指一个语句由于包含了一个无指称的表达式而无真值可言。按照某些观点,这种句子既非真亦非假。这种现象的出现是由于一个句子的真值依能否成功地应用到它包含的普遍语词的对象而定。但是,如果句子中有一个单数词没有指称,这些普遍词也就无应用的成功与失败的可能。一个句子可以缺少真值的其他理由包括:范畴错误、前提未满足、歧义和含混。真值空缺的存在使得演绎推理成为不可靠的。关于这种现象是否应被视为自然语言的缺陷,还存在着争论。

"认为一个明确的单数词的根本失效导致真值空缺,这种看法在某种情况下从直观上看令人较为满意,在另一些情况下则从直观上看不那么令人满意;于是,在后一类情况中,有了这样的看法,即认为这种根本失效导致的是虚假。"——斯特劳森,载戴维森与辛提卡(编):《词与异议》,1969年,第107页。

T 语句

塔斯基对真值定义的合适条件的主张的基础。一种语言的真理理论是合适的,如果"X是真当且仅当P"这个格的一切事例都能从它之中推导出来。在这个格中,"P"能被对象语言的任何语句所代替,并且"X"被那代替"P"的语句的名称所代替。"X"存在于元语言中,元语言是谈论对象语言的语言。这个格的一般形式是"(T) X是真当且仅当P"。(T)的一个事例是" '雪是白的' 在英语中是真当且仅当雪是白的"在这里,右边的对象语言语句被它左边元语言中的"引号名称"所指称。按照塔斯基的观点,T语句确定"真"这个语词的外延而不是它的内涵或意义。T语句不是真值的定义,但它的任何事例都是部分的真值。一种语言的真理一般都是所有这些部分定义的逻辑合取式。

"真值理论蕴含对象语言的每个语句的T-真值,而T语句提供真值条件。"——戴维森:《真理与解释的探究》,1984年,第138页。

1984, p. 138.

Tu quoque fallacy

[from Latin: you are another or you too] An argument of the form “if I face this charge, you face it equally”. In logic textbooks this is considered a variant of the *ad hominem* fallacy, for it does not establish its conclusion according to relevant facts or rational arguments, but instead attacks one’s opponent. This sort of argument is especially popular in political debates. For instance, A says to B who accuses him of accepting illegal money in his election campaign: “If I use illegal money in my campaign, how about you? Your campaign money is illegal as well”.

“The *tu quoque* fallacy is committed when one tries to reply to a charge made by an opponent by making the same or a similar charge against him.” —Carney and Scheer, *Fundamentals of Logic*, 2nd edition, 1974, p. 24.

Turing machine

An imagined computer described by the British logician and mathematician Alan Turing. This computer would have a finite number of states $S_1, S_2, S_3, \dots, S_n$, and would operate by changing periodically from one state to another. In doing this it would interact with a paper tape of infinite length marked off into small squares. The machine would scan one square at a time and could “read” or “write” something. It could also erase what had been written. Furthermore, it could move the tape one square at a time to the left or right. When it reached a certain point and completed its task, it would stop itself. It would therefore be possible to give a complete description of each step of the machine. This is called a machine table. This result shows that the machine could do whatever other automata can. If a machine of this sort could fool us into believing that it was a human being in a Turing test (see Turing test), there would be no grounds for distinguishing between the mental attributes we ascribe to the machine and those we ascribe to ourselves. This idea has had a great influence on the philosophy of mind, especially on artificial intelligence, and in the philosophy of language.

“According to Turing, a Turing machine can carry out certain elementary operations ... It is controlled by a program of instructions and each instruction specifies a condition and an action to be carried out if the condition is satisfied.” —Searle, *The Rediscovery of the Mind*, 1992, p. 205.

Turing Test

A thought experiment proposed by the British logician and mathematician Alan Turing, who called it the imitation game, for showing that the abilities of digital computers are in principle indistinguishable from human intellectual capacities. In this test, a Turing machine and a human being are in

你也一样的错误

[源自拉丁文“你是另一个”或“你也一样”] 这种形式的论证“如果我面对指控，你也同样面对它”。在逻辑教科书中，这被看做是人身攻击谬误的变种，因为它并没有根据有关的事实或理性的论证建立它的结论，相反，而是攻击它的对手本人。这种论证在政治论战中特别普遍。例如，A 说 B 谴责他在选举活动中受贿：“如果我在选举中受贿，那么你又怎样呢？你用于选举的钱同样是不干净的。”

“当某人试图以牙还牙地回答对手对他的指控时，这就是犯了这种你也一样的错误。”——卡雷和施尔：《逻辑基础》，第 2 版，1974 年，第 24 页。

图灵机

由英国逻辑学家和数学家 A. 图灵所描绘的一个想像的计算机。这个计算机具有一定数量的状态 $S_1, S_2, S_3, \dots, S_n$ ，通过周期性地由一个状态转入另一个状态来操作。在操作过程中，它与一个划分成小方块的无限长的纸带相互作用。机器一次扫描一个方块并且可以“读”或“写”某些东西。它还可以把所写的东西擦掉。而且，它还可以一次将纸带向左或向右移动一个方块。当它达到某一点并完成其任务时，它会自己停下来。因此有可能对于机器的每一步给出一个完整的描述。这被称为一个机器表格。这一结果表明，一个机器能够做其他的自动机所能做的所有事情。如果这样的一个机器能够在图灵测验（见“图灵测验”条）中骗得我们相信它是一个人，那就没有理由把我们归结于机器的心属性与归结于我们自己的心的属性区别开来。这一思想已对心的哲学特别是人工智能和语言哲学产生了极大的影响。

“根据图灵的观点，一个图灵机可以进行某种初步的操作……它由一个指导程序所控制而且每个指示都确定一个条件以及如果这个条件得到满足要进行的活动。”——塞尔：《心的再发现》，1992 年，第 205 页

图灵测验

一个由英国逻辑学家和数学家 A. 图灵所提出的思想实验，他称之为“模拟游戏”，用以表明数字计算机的能力在原则上与人类的智能不可区分。在这个测验中，一个图灵机和一个人在一个关闭的屋子里，他们可以通过一个电传

a closed room but able to communicate with a human questioner outside the room via a teleprinter. Both the Turing machine and the human being answer the questions sent in by the questioner, who attempts to judge which answer is from the machine and which is from the man. Turing claimed that given a limited time for questioning the questioners would experience difficulty in distinguishing between the computer answers and the human answers. He predicted that at some point we will accept that machines can think. But critics argue that passing such a test is not a sufficient proof of intelligence.

"Consider how a zimbo might perform in the Turing test, Alan Turing's famous proposal (1950) of an operational test for thinking in a computer." D. C. Dennett, *Consciousness Explained*, 1991, p. 310.

Twin earth

A thought experiment concerning meaning and mental content, introduced by Putnam in his paper "The meaning of 'meaning'" (1975). Imagine that elsewhere in space there is a duplicate of our planet which is exactly like it, except that the chemical composition of what we call water is H_2O , but the chemical composition of what people on twin-earth call water is XYZ. Hence, although inner states of the inhabitants of twin-earth are like ours, when they utter the word "water", they are referring to a substance composed of XYZ, while when we utter the word "water", we are referring to a substance composed of H_2O . If meaning were determined by inner states, our word "water" and their word "water" would have the same meaning. But the two words do not have the same meaning because our word applies to H_2O and their word applies to XYZ. Thus the meanings of words in a language are not merely "in our head" but at least partly depend upon facts of the external world. This is to reject the traditional conception of meaning according to which meanings are "in the head" and the intension of a word determines its extension.

"One might hold that water is H_2O in all worlds (the stuff called 'water' in W2 is not water) but 'water' does not have the same meaning in W1 and W2. If what was said before about the Twin Earth case was correct, then [this] is clearly the correct theory." —Putnam, *Mind, Language and Reality*, 1975, p. 237.

Two principles of justice

Rawls argues that the participants in the original position behind the veil of ignorance would choose two principles of justice to determine the permanent basic structure of their society, whatever their position in society turns out to be. The two principles assign rights and duties and regulate the distribution of social and economical goods. The first principle calls for equal systems of basic liberties for all. The sec-

打印机来与屋子外面的提问者对话。图灵机和人都回答提问者送进的问题，而提问者则试图判断哪一个回答来自机器以及哪一个回答来自人。图灵声称，在一个限定时间内，提问者会难以区分机器的回答和人的回答。他预测有一天我们将承认机器能够思维。但有人论辩说通过这样一个测验不足以证明智力的存在。

“想一想一个自动机在图灵测验中会怎样表现，图灵测验是 A. 图灵关于计算机思维的操作性测验的著名提议。”——丹奈特：《解释意识》，1991 年，第 310 页。

孪生地球

在关于意义和心的内容的理论中的一个思想实验，由普特南在其著名的《意义的“意义”》(1975) 一文中提出。想像在空间的另外一个地方有我们的行星的一个复制品，它与我们的地球在其他方面完全相同，只是我们称之为水的东西的化学成分是 H_2O ，而孪生地球上的人称之为水的东西的化学成分却是 XYZ。因此，尽管孪生地球上居民的内部状态是跟我们一样的，但当他们说出“水”这一词语时，他们指的是成分为 XYZ 的物质，而当我们说出“水”这一词语时，我们指的是成分为 H_2O 的物质。如果意义取决于内部状态，那么我们的词语“水”和他们的词语“水”应当具有相同的意义。但是这两个词语不具有相同的意义，因为我们的词语应用于 H_2O 而他们的词语应用于 XYZ。因此一种语言的语词的意义不仅仅“在头脑中”，而是至少部分地取决于外部世界的事实。这就否认了传统的意义观念。根据传统的观念，意义是“在头脑中”的，语词的内涵决定其外延。

“一个人可能认为，水在所有的世界都是 H_2O (世界 2 中被称为‘水’的东西不是水)，但‘水’在世界 1 和世界 2 中具有不同的意义。如果前面关于孪生地球的情形所说的那些是正确的，那么这显然是正确的理论。”——普特南：《心智、语言与实在》，1975 年，第 237 页。

正义的两条原则

罗尔斯论证说，原初状态中处在无知之幕后参加者会选择两条正义原则以确定他们社会的永久性的基本结构，而不管他们的社会地位结果将会如何。这两条原则分派权利和义务，并调整社会和经济利益的分配。第一条原则要求适于所有人的基本自由的平等制度。第二条原则应用于社会和经济利益的分配。与第一

ond principle applies to the distribution of social and economic goods. Unlike the first principle, it allows inequality, but this inequality is constrained by fair equality of opportunity and must benefit the least well off. Together these two principles form one conception of justice.

The two principles, according to Rawls, have a lexical order, in which the first principle has an absolute priority over the second in a just or nearly just society. If one situation P is better than another situation S according to the first principle, then P must be preferred even if S would be better than P according to the second principle. In a just society it would be irrational to trade basic liberties for social and economical gains. However, this priority applies only to societies with a highly developed civilisation and economy. Within the second principle, fair equality of opportunity has lexical priority over the difference principle concerning benefit to the least advantaged.

Critics claim that the rational actors of the original position would choose other principles of justice or that they could not choose any principles in the conditions specified. They also argue that Rawls' principles would come into conflict with one another, for example because the inequality of the second principle would undermine the worth of the equal liberty of the first principle for the least advantaged. Much useful debate has emerged from such criticism.

"I now wish to give the final statement of the two principles of justice for institutions. ... First principle: Each person is to have an equal right to the most extensive total system of equal basic liberties compatible with a similar system of liberty for all. Second principle: Social and economical inequalities are to be arranged so that they are both: (a) to the greatest benefit of the least advantaged, consistent with the just saving principle, and (b) attached to offices and positions open to all under conditions of fair equalities of opportunity." ---Rawls, *A Theory of Justice*, 1971, p. 302.

Two space myth

Space is ordinarily seen to be a unique individual. All real things are contained in one and the same space, and all spaces are part of the one space. In principle, every place can be reached from every other place by travelling through intermediate places. The spatial relation is symmetrical. Anthony Quinton devised a thought experiment to challenge this picture. Suppose that we have richly coherent and connected experience in our dreams just as have in waking life, so that it becomes arbitrary to claim that our dream experience is not of an objectively existing world like the world of our waking experience. If the space of my waking world and my dream world are not mutually accessible, it is unlikely that we are justified in claiming to be living in a single spatially isolated world. Hence, space is not essentially singular. In assessing this account, we might distinguish between systematic and

条原则不同,它允许不平等,但这种不平等是受机会的公正平等所限制的,并且必须使最小受益者也受益。这两条原则合起来形成正义的观念。

按照罗尔斯的观点,这两条原则有一个词典式次序,在一个正义的或接近正义的社会里,第一条原则对第二条原则有绝对优先性。如果根据第一条原则情况P优于另一情况S,那么,即使根据第二条原则情况S将会优于情况P,也必须选择P。在一个正义的社会里,用基本的自由来交换社会和经济的利益是荒谬的,可是,这一优先性只能应用于文明和经济高度发达的社会。在第二条原则中,公正平等的机会比关系到有益于最小受惠者的差别原则具有词典次序上的优先性。

批评家们认为,原初状态的理性的行为者会选择其他的正义原则,或在特定的条件下不选择任何原则。他们还争论说,罗尔斯的原则会相互冲突,因为,例如,第二条原则的不平等会破坏适用于最小受益者的第一条原则的平等自由的价值基础。从这种批评中涌现出不少有益的争论。

"我现在要给出关于制度的两个正义原则的最后陈述。……第一个原则:每个人都对最广泛而完整的平等的基本自由体系拥有平等的权利,这一基本自由体系是与适于所有人的类似的自由体系相容的。第二条原则:社会和经济的平等应这样安排,使它们:(a)在与正义的储存原则一致的情况下,适合于最少受益者的最大利益,并且(b)与在机会公正平等条件下的职务和地位向所有的人开放联系在一起。"——罗尔斯:《正义论》,1971年,第302页。

两种空间神话

空间一般认为是独一无二的个体。所有真实事物都包容在同一个空间中,所有的空间都是一个空间的部分。每一处所原则上都能为其他任何处所经由相邻处所而到达。空间关系是对称的。A. 奎因顿设计了一个思想实验来改变这一图画。设想我们在梦中有跟醒着生活同样丰富的一致相联的经验。这样,说我们的梦的经验不是关于如同我们醒着的经验世界一样的客观现存世界,这便变得独断了。如果我醒着的世界空间与梦世界不是互相可达到的,则说我们生活在一个单一的空间上隔绝的世界中就是不对的。因而,空间在本质上不是单一的。在评价这一学说时,我们必须区分系统的和公共的物理空间以及局部的、私人的经验空间。两种空间神话提出了我们如何能说明从经验空间运动

public physical space and fragmentary and private experiential space. The two space myth raises questions about how we can justify moving from experiential space to objective space in the world as it is.

"We can at least conceive circumstances in which we should have good reason to say that we know of real things located in two distinct spaces." —Quinton, "Spaces and Times", *Philosophy*, 37 (1962), p. 147.

Two-factor theory

A theory of meaning based on Putnam's distinction between narrow content, which is entirely "in the head" of a subject, and wide content, which is at least partly individuated by the subject's environment. On this theory, the two kinds of content are components or aspects of meaning. The narrow contents or internal states of the subject contribute to the meanings of psychological states and remain constant across changes in the environment. Hence, we may develop a theory of cognition which focuses on the same cognitive system amidst radically different environments.

"This suggests a 'two-factor' semantic theory of psychological states; one factor, narrow content, is to be determined solely by nonrelational properties of the subject; the other factor, the truth condition, is to be determined in part by the subject's environment." —Baker, *Saving Belief*, 1987, p. 87.

Two-place predicate, see predicate

Two-valued logic, another term for traditional logic

Two-world theory, see representative theory of perception

Type and token

A distinction drawn by Peirce, corresponding to the distinction between a species and an individual which is a member of this species. A token is a particular and individual sign or a single object or event. A type is a pattern which similar tokens exemplify or a class of similar tokens. A type is not a single thing or event and can only exist through the tokens by which it is embodied. A sentence token is a series of marks on paper or sound waves constituting an inscribed or spoken sentence, occurring at a definite space or existing for a definite period. A sentence type is a class to which different sentence tokens belong or the class of the many sayings of the same sentence. For example if one writes or utters "Socrates is a snub-nosed philosopher", and again "Socrates is a snub-nosed philosopher", these are two sentence tokens, but one sentence type. However, the criteria of identity for a

至世界本来的客观空间的问题。

"我们至少可以想像这种情形,我们在其中有很好的理由说真实的事物处于两种不同的空间中。"——奎因顿:《空间与时间》,《哲学》,1962年第37期,第147页。

二因素理论

建立在普特南的主体“头脑中”的狭内容与至少部分地由主体的环境所区分的广内容之区分基础上的意义理论。根据这一理论,这两种内容构成意义的组成部分或方面,狭内容或主体的内部状态也决定心理状态的意义,并且它们不因环境的变化而改变。因此我们可以发展一个认知理论,专门研究完全不同的环境中的相同认知系统。

“这提示一个关于心理状态的‘二因素’语义理论:一个因素是狭内容,仅仅由主体的非关系特性所决定;另一个因素是真值条件,部分地由主体的环境所决定。”——贝克尔:《拯救信念》,1987年,第87页。

二位谓词

见“谓词”条。

二值逻辑

“传统逻辑”的另一术语。

两个世界理论

见“知觉的表征理论”条。

类型和殊型

由皮尔士作出的区分,相应于种类和个体之间的区分,这里个体是种类的元素。殊型是一个特殊的和个别的记号,一个单独的对象或事件。类型是相似殊型所体现的那个模式,或者是由相似殊型组成的类。类型不是单个的事物或事件,只能通过体现它的殊型才能存在。一个语句殊型是纸上的一系列笔画或声波,它们分别构成书写语句或口语语句,在确定的空间内出现或在确定的时期内存在。一语句类型是不同语句殊型所属于的那个类,或者是同一语句的许多说法构成的类。例如,如果人们写下或说出“苏格拉底是一位扁鼻子的哲学家”,再写或说一次“苏格拉底是一位扁鼻子的哲学家”,这是两个语句殊型,却是同一个语句类型。不过,把什么当做语句类型的同一标准是有争议的。某

sentence type are a matter of dispute. Some philosophers require typographical or auditory similarity, while others require sameness of meaning.

"In order that a Type may be used, it has to be embodied in a Token which shall be a sign of the Type, and thereby of the object the Type signifies. I propose to call such a Token of a Type an instance of the Type." — Peirce, *Collected Papers*, IV, p. 537.

Type-type identity theory

One version of the identity theory of mind, according to which every type of mental state or event is identical with some type of physical state or event. There are many views about what exactly is the correlation between the mental and the physical. The theory contrasts with another version of the identity theory, the token-token identity theory, which claims that each token mental event is identical with a token physical event. A problem for the type-type identity theory is that different people might have the same beliefs, but lack the same neural states. In addition, it is conceivable that non-humans have the same mental states as humans, but have different neural states. In spite of these difficulties, type-type identity might be needed if theoretical insight into the identity is to be achieved.

"Most advocates of a dual aspect theory assert a type-type identity between the mental and the physical; that the identity of mental events and physical events is associated with systematic correlations between types of mental events and types of physical events." — Hodgson, *The Mind Matters*, 1991, p. 61.

Types, theory of

Russell's influential solution to the problem of logical paradoxes. The theory was developed in particular to overcome Russell's paradox, which seemed to destroy the possibility of Frege's logical programme. Suppose we ask whether the set of all sets which are not members of themselves is a member of itself. If it is, then it is not, but if it is not, then it is.

The theory of types suggests classifying objects, properties, relations and sets into a hierarchy of types. For example, a class of type 0 has members which are ordinary objects; type 1 has members which are properties of items of objects of type 0; type 2 has members which are properties of the properties in type 1; and so on. What can be true or false of items of one type cannot significantly be said about those of another type and is simply nonsense. If we observe the prohibitions against classes containing members of different types, Russell's paradox and similar paradoxes can be avoided.

The theory of types has two variants. The simple theory of types classifies different objects and properties, while the

些哲学家要求字形或声音的相似性, 其他哲学家则要求意义的同一。

“为了类型可被使用, 它不得不体现在殊型中, 殊型将是类型的记号, 所以是类型所意谓的对象的记号。我提议把类型的这种殊型叫做类型的例证。”——皮尔士:《文集》, 第四卷, 第537页。

类型—类型同一论

“心的同一论”的一种形式, 认为每一类心的状态或事件都同一于某一类物理状态或事件。关于心的东西与物的东西之间的确切关联有许多不同的观点。这一理论与同一论的另一形式即“殊型—殊型同一论”相对, 后者声称一个殊型的心事件同一于一个殊型的物理事件。类型—类型同一论的问题在于, 具有相同信念的不同的人并不总是具有相同的神经状态。而且可以想像, 非人类与人类具有相同的心状态, 但却具有不同的神经状态。尽管有这些困难, 若要在理论上理解同一性, 可能还是需要类型—类型同一论的。

“大多数双面理论的支持者肯定心的东西与物的东西之间的类型—类型同一性: 心的事件与物的事件的同一与心的事件类型与物的事件类型之间的系统关联相联系。”——霍奇逊:《心的作用》, 1991年, 第61页。

类型论

罗素对于逻辑悖论问题的很有影响的解决办法。这个理论的提出特别是用以克服罗素悖论, 这个悖论好像要清除弗雷格的逻辑计划的可能性。假如我们问所有不是自身成员的那些集合组成的集合是不是自身的成员。如果它是, 则它不是, 但如果它不是, 则它是。

类型论主张把对象、性质、关系和集合划分为一个类型的等级系统。例如, 0类的成员是日常对象; 1类的成员是0类对象诸项目的性质; 2类的成员是1类性质的性质; 如此等等。对一个类型的项目可以为真或为假的说法说到另一类的项目就不能有意义, 而只能是胡说。如果我们遵守对于包含不同类型成员的类的禁令, 罗素悖论及其他类似悖论就可以避免。

类型论有两个变种。简单类型论对不同的对象和性质分类, 而分歧类型论进一步把类型分为层次, 对类型的等级系统添加上层次的等级系统。在诸项目自身的类型中, 有些项目与次一类型或次一层次的项目有关, 通过对它们的谓词作出限制, 引起悖论的谓词就被排除了。简

ramified theory of types further sorts types into levels and adds a hierarchy of levels to that of types. By restricting predicates to those which relate to items of lower types or lower levels within their own type, predicates giving rise to paradox are excluded. The simple theory of types is sufficient for solving logical paradoxes, while the ramified theory of type is introduced to solve semantic paradoxes (those depending on such notions as reference and truth).

"Any expression containing an apparent variable is of higher type than that variable. This is the fundamental principles of the doctrines of types." —Russell, *Logic and Knowledge*, 1956, p. 102.

单类型论对于解决逻辑悖论是充分的，而分歧类型论是用来解决语义悖论的（有赖于诸如指称和真理之类概念的悖论）。

“任何包含约束变项的表达式属于高于那个变项的类型。这是类型论的基本原则。”——罗素：《逻辑和知识》，1956年，第102页。

U

Übermensch

Nietzsche's superman or overman, the ideal of life he offers as a goal to human beings when their former ideal, namely God, is dead. *Übermensch* is a worldly antithesis of God, a union of the strongest mind and strongest body. For Nietzsche, it is the realisation of the profoundest human potentialities and gifts, the overcoming or negation of the mediocrities of the merely human. *Übermensch* involves no bifurcation of humanity. It is the creator of meaning of life and the full affirmation of life. It affirms the eternal recurrence, and in it the will to power attains its zenith. Human beings should transcend themselves and become supermen. They would thus be saved not by a divine Saviour, but by the glorification of the human species. The aim of culture should be to produce supermen. For Nietzsche, any culture which generates a multitude of mediocrities must be sick and should be condemned. Human life, which has value only as a means of producing supermen, stands between beast and superman. Superman is the ideal man. Nietzsche does not mention any single example, but denies that either he or Zarathustra is a superman.

"Behold, I teach you the *Übermensch*, the *Übermensch* is the meaning of earth. Let your will say, the *Übermensch* shall be the meaning of the earth." — Nietzsche, *Thus Spoke Zarathustra*, Prologue, 3.

Ugliness

As beauty is a general term representing positive aesthetic value, ugliness is a general term representing negative aesthetic value or aesthetic disvalue. Ugliness is the property of an object of eliciting distaste and unappealing feeling. Corresponding to different modes of beauty, there are various modes of ugliness, such as the deformed, ill placed or disharmonious. Aesthetic evaluation of an object assesses its beauty and ugliness. Artists, however, can make beautiful depictions of ugly objects, thus using ugliness to reinforce the aesthetic value of the whole.

"Beauty, or ugliness, was defined as the character of an object which is such that, in aesthetic contemplation, it yields to the contemplation feelings that are pleasant, or, respectively, unpleasant." — Ducasse, *The Philosophy of Art*, 1929, p. 234.

超人

指尼采讲的“超人”，是尼采在人类先前的理想即上帝死后提供给人类的一种生活理想。超人是上帝的世间对应者，是最强壮的心灵和最强壮的身体的统一。对于尼采，它实现了最深刻的人类潜能和天赋，克服或否定了一般人类的平庸性。超人没有人性的分裂。它是生命意义的创造者和对生命的充分肯定。它肯定了永恒的轮回，在其中对于力量的意愿达到其最高点。人类应该超越其自身而成为超人。他们的拯救，将不来自神圣的救主，而是来自人类种群的荣耀。文化的目的应该是去产生超人。对尼采而言，任何产生一大帮平庸之辈的文化必定是病态的，应受到谴责。人类生活处于野兽与超人之间，其价值就在于去产生超人。超人是理想的人。尼采没举出任何一个超人的例子，只是否认他或查拉图斯特拉是超人。

“注意！我来教你们超人；这超人是这世界的意义。让你们的意志说：超人将是这世界的意义。”——尼采：《查拉图斯特拉如是说》，前言，第3页。

丑

美是表现正面审美价值的普通词，而丑则是表现负面审美价值或审美反面价值的普通词。丑是令人憎恶或反感之对象的特性。与各种美的模式相对应的是，也存在各种丑的模式，譬如畸形、误置与不和谐等等。对某一对象的审美评价就是对美与丑的评价。然而，艺术家可以对丑的对象进行美的描绘，藉此用丑来强化整体的审美价值。

“美或丑被界定为对象的特征，因此，在审美的凝神观照中，会产生诸如愉快或者不愉快的不同感受。”——杜卡锡：《艺术哲学》，1929年，第234页。

Unconscious

For Leibniz the unconscious comprises the appetitive intentions of a transcendental nature in the self, which subsequent German idealists called the blind will or the desire of which the mind is ignorant. Freud took over this term for a fundamental concept of his psychology. The unconscious is any mental item or process of which we are unaware, but which we must assume due to its indirect effect. A wide range of experience influences what we think and do although we are not conscious of it. The unconscious is dynamic in the sense that it is active in the determination of behaviour. According to Freud, its contents are repressed and could not become conscious. The unconscious contrasts with the preconscious, which comprises latent elements of mind waiting to be discovered. The preconscious is sometimes loosely equated with the unconscious. According to Freud, what is conscious is only a small part of the mind, with most mental contents in the unconscious. Unconsciousness is a wider concept than the repressed, for while everything that is repressed is unconscious, it is not the case that everything unconscious is repressed. In his early writing, Freud considered the opposition between the unconscious and the conscious to be a mental conflict. The unconscious has no organisation, lacks differentiation, has no sense of morality and is impersonal. Yet it is the fertile source of culture and civilisation. The dynamic unconscious is the defining preoccupation of psychoanalysis. In Freud's later writing, the id takes over the attributes of the unconscious, although the ego also has an unconscious part. The theory of the unconscious was further developed by Jung and Lacan.

"For the time being we possess no better name for psychological processes which behave actively but nevertheless do not reach the consciousness of the person concerned and that is all we mean by our 'unconsciousness'." — Freud, *Standard Edition of the Complete Psychological Works of Sigmund Freud*, Vol. 9, p. 47.

Understanding (Heidegger)

[German: *Verstehen*] Traditional philosophy takes understanding to be one of the major cognitive abilities of the subject or mind and subordinates the question of the understanding to the problem of knowledge. Heidegger breaks with this tradition by claiming that understanding is a basic mode of *Dasein's* being. Rather than discovering or making assertions about the particular facts of the world, understanding is the awareness of possibilities, that is the disclosedness (*Erschlossenheit*) of the for-the-sake-of-which of *Dasein's* being-in-the-world. Understanding operates in terms of projecting those possibilities which are tied to *Dasein's* worldly situation. It has a three-fold "fore" structure, that is fore-having, fore-sight, and fore-conception. In this way understanding is *Dasein's* self-understanding. While

无意识的

对于莱布尼茨,无意识由自我的先验本质的诸欲望意向组成。后来的德国唯心论者 (Idealists, 理念论者) 称之为盲目的意愿或心灵所不知的欲望。弗洛伊德采用了这个词,作为他的心理学的一个基本概念。这种无意识是我们所没有意识到的任何心灵内容或过程,但由于其间接的效应而不得不承认其存在。许多经验影响到我们所思考的东西,但我们却不意识到它们。这无意识是动态的,因为它在决定行为时是主动活跃的。按照弗洛伊德的观点,它的内容被压抑着,不能进入意识。无意识与前意识很不同,前意识由心灵等待被发现的潜在因素构成。有时,前意识也在不严格的意义上被等同于无意识。照弗洛伊德看来,所谓意识只是心灵的一小部分;心灵的大多数内容都在无意识之中。“无意识”是一个比“被压抑者”更广的概念,因为虽然所有被压抑者都是无意识的,但并非所有无意识者都是被压抑的。在他早期的作品中,弗洛伊德将无意识与意识之间的对立看做是一种心灵的争斗。这无意识没有组织,缺少区别,没有道德感,而且是无人格可言的。但它却是文化和文明的丰沛源泉。这种动态的无意识是心理分析的明确前提。在弗洛伊德的后期作品中,伊底具有了无意识的各种属性,尽管自我也有无意识的部分。无意识的理论在荣格和拉康那里得到了进一步发展。

“眼下,我们对于那些活跃地起着作用但却达不到当事人的意识的心理过程还没有更好的名字,因而只能以‘无意识状态’来意指之。”——弗洛伊德:《S. 弗洛伊德心理学著作全集标准版》,第九卷,第47页。

领会 (海德格尔)

[德文为 *Verstehen* (又可译为“理解”)] 传统哲学将领会或理解当做主体或心灵的主要认知能力之一,并使领会或理解的问题从属于知识问题。海德格尔打破了这个传统,主张领会是缘在 (*Dasein*) 之存在的一个基本方式。领会并非指发现和形成关于世界中特定事实的判断,它是对于诸种可能性的意识,也就是对于缘在的“在此世界中存在”的缘故 (所为之故) 的开启。领会通过投射出 (筹划) 那些系于缘在的世间形势的可能性而运作。它有三重“先”结构,即先有、先见和先掌握。以这种方式,领会就是缘在的自身领会。缘在的另一个存在方式“处境情境”揭示出“实际性”,即缘在被抛投于世界的状态,而领会则是缘在对于它的不可逃避的

the state of mind, another mode of *Dasein's* being, discloses facticity, that is *Dasein's* thrownness into this world, understanding becomes aware of its inevitable freedom. For Heidegger, the traditional conception of the understanding is derived from the understanding as the existential awareness of possibilities. Working out the possibilities projected in understanding is interpretation. Heidegger's theory of understanding establishes the basis for the so-called hermeneutic turn.

"With the term 'understanding' we have in mind a fundamental existentials, which is neither a definite species of cognition distinguished, let us say, from explaining and conceiving, nor any cognition at all in the sense of grasping something thematically." —Heidegger, *Being and Time* (tr. Macquarrie and Robinson), 1962, p. 385.

Understanding (Kant)

[German: *Verstand*, corresponding to Greek: *dianoia* and Latin: *intellection*] Kant distinguished understanding from sensibility and reason. While sensibility is receptive, understanding is spontaneous. While understanding is concerned with the range of phenomena and is empty without intuition, reason is directed beyond the limit of experience and generates many fallacious inferences. Kant claimed that the main act of understanding is judgement and called it a faculty of judgement. He claimed that there is an *a priori* concept or category corresponding to each kind of judgement as its logical function and that understanding is constituted by twelve categories. Hence understanding is also a faculty of concepts. Understanding gives the synthetic unity of appearance through the categories. It thus brings together intuitions and concepts and makes experience possible. It is a lawgiver of nature. Herder criticised Kant for separating sensibility and understanding. Fichte and Hegel criticised him for separating understanding and reason. Some neo-Kantians criticised him for deriving the structure of understanding from the act of judgement.

"Now we can reduce all acts of the understanding to judgements, and the understanding may therefore be represented as a faculty of judgement." —Kant, *Critique of Pure Reason*, B94.

Understanding (Locke)

The fact that one of Locke's two main works is entitled *An Essay Concerning Human Understanding* indicates that understanding is one of Locke's chief areas of philosophical thinking. Understanding was taken by him to be a faculty of the mind and is called the most elevated faculty of the soul and a faculty that searches after truth. Understanding has a more fundamental importance than the other faculties, such as sensation, reasoning or memory. Locke divided the actions of the mind into two main parts; the power of thinking,

自由意识。对于海德格尔,传统的领会或理解的概念是从作为生存论的可能性意识的领会中衍生出来的。将被投射于领会之中的可能性整理出来就是解释。海德格尔关于领会或理解的理论为所谓“解释学的转向”奠定了基础。

“‘领会’这个词在我们这里意味着一个基本的生存方式;它既不是认知的一个特定种类,与(比如)解释和知觉相区别,又不是任何从主题上把握某物的认知。”——海德格尔:《存在与时间》(马库阿里和罗宾逊英译),1962年,第385页。

知性(康德)

[德文 *Verstand*, 相对应于希腊词 *dianoia* 和拉丁词 *intellection*, 又译为“悟性”] 康德把它区别于感性和理性。感性是接受性的,而知性则是自发性的。知性关涉现象领域,并且无直观则空,理性倾向于超越经验的界限,并产生许多谬误推理。康德主张,知性的主要活动是判断,因此也称它为“判断的官能”。他认为,由于存在着相应于每类判断的先天概念(范畴)作为它的逻辑功能,所以知性由十二个范畴构成。因此知性也是概念的官能。它按照范畴对现象给予综合统一。这样它把直观和概念结合在一起,并使经验成为可能。它是自然的立法者。后来,某些哲学家(如赫尔德)批评康德把感性和知性分离开,某些哲学家(如费希特和黑格尔)批评他把知性和理性分离开,其他哲学家(如新康德主义者)批评他把知性的结构从判断的活动中推导出来。

“现在我们能将知性的一切活动归结为判断,因此知性可视为判断的官能。”——康德:《纯粹理性批判》,B94。

理智(洛克)

洛克的两部主要著作之一的标题是《人类理智论》,这个事实表明,理智是洛克的哲学思维的主要领域之一。他把理智理解为心灵的官能,把它称作灵魂的最高级官能,把它称作追求真理的官能。理智比其他官能如感觉、推理或记忆等有更根本的重要意义。洛克把心灵的活动分为两个主要部分:被称作理智的思维能力和被称作意志的意志力。因而,他往往将理智与认知的心灵换用,而不只是作为后者的官能之一。

which is called understanding, and the power of volition, which is called the will. He often used understanding interchangeably with the cognitive mind, rather than as just one of its faculties. The purpose of his *Essay on human understanding* is to "inquire into the original, certainty, and extent of human knowledge, together with the grounds and degrees of belief, opinion, and assent".

"Since it is the *understanding* that sets man above the rest of sensible beings, and gives him all the advantage and dominion which he has over them, it is certainly a subject, even for its nobleness, worth our labour to inquire into."

Locke, *An Essay Concerning Human Understanding*, I, 1, 1.

Understanding / explanation

[German: *Verstehen*, understanding and *Erklären*, explanation] Ordinarily, the distinction between explanation and understanding is blurred, in part because explanation furthers our understanding. Yet in German philosophy of history and the social sciences and hermeneutics, the two terms are sharply distinguished. Explanation is the subsumption of individual cases under hypothetically assumed general laws of nature and is the method characteristic of the natural sciences. In contrast, understanding is a cognitive mode peculiar to the social sciences. It is an empathic or participatory understanding of a given subject's point of view by imaginatively putting oneself into the place of the subject. It is the reconstruction of the subject's purposes, values and meaning. The distinction was first drawn by Droysen, although he actually puts forward a trichotomy: philosophical method (knowledge), physical method (explanation), and historical method (understanding). Dilthey fully elaborated the distinction between *Verstehen* and *Erklärung*, claiming that it forms the fundamental difference between the social sciences (*Geisteswissenschaften*) and the natural sciences (*Naturwissenschaften*) and the distinction is the basis for the claim that the social sciences have a distinctive methodology. Max Weber believed that both *Verstehen* and *Erklärung* are necessary in the social sciences.

"The German historian-philosopher Droysen appears to have been the first to introduce a methodological dichotomy which has had great influence. He coined for it the names explanation and understanding, in German *Erklären* and *Verstehen*." — von Wright, *Explanation and Understanding*, 1971.

Undistributed middle

A logical fallacy in traditional syllogistic logic, resulting from the violation of the rule that the middle term (the term which appears twice in premises) must be distributed at least once in the premises. Any syllogism which commits this error is invalid. Consider "All philosophers are persons", and "Some persons are bad". No conclusion follows from these

Locke's *Human Understanding* is about human understanding, its purpose is "to examine the origin, certainty and extent, and the grounds and degrees of belief, opinion, and assent".

"It is understanding that sets man above the rest of sensible beings, and gives him all the advantage and dominion which he has over them, it is certainly a subject, even for its nobleness, worth our labour to inquire into." — Locke, *Human Understanding*, I, 1, 1.

理解/解释

[德文: *Verstehen* (理解) 和 *Erklären* (解释)] 在日常用语中, 解释和理解之间的区分并不清楚, 这部分地因为解释促进我们对事物的理解。然而在德国的历史哲学、社会科学和解释学中, 这两个概念是截然不同的。解释是在假定的一般自然规律的前提下对个别事实的归类, 具有自然科学方法的特征。相比之下, 理解是社会科学特有的一种认识方式。它通过将自己想像地置身于一个主体所处的位置对这一特定主体的观点做强调性的或分享性的理解。它是对主体的目的、价值和意图的重建。这一区分首先是由德罗伊森提出的, 尽管他实际上提出了一种三分法: 哲学的方法(认识), 物理学的方法(解释)和历史学的方法(理解)。狄尔泰对 *Verstehen* 和 *Erklärung* 之间的区别做了充分而详细的说明, 认为它构成了社会科学 (*Geisteswissenschaften*) 和自然科学 (*Naturwissenschaften*) 之间的根本的差异, 这一区分是社会科学有独特的方法这一主张的基础。M. 韦伯认为, *Verstehen* 和 *Erklärung* 在社会科学中都是不可缺少的。

"德国历史哲学家德罗伊森看来是第一个采用这一颇具影响的方法论的三分法的人。为此他创造了解释和理解这两个词, 即德语中的 *Erklären* 和 *Verstehen*。" — 冯·赖特: 《解释与理解》, 1971 年。

中项不周延

传统三段论逻辑中的逻辑谬误, 由于违反了中项(该项在前提中出现两次)在前提中至少必须周延一次的规则而引起。任何犯此错误的三段论都是无效的。让我们考虑如下例子: "所有的哲学家都是人", "有些人是坏人"。从这两个前提中得不出任何结论, 因为第一个前提中

two premises because "persons" in the first premise is the predicate of an affirmative proposition, and in the second is the subject of a particular proposition. Neither of them is distributed.

"If in a syllogism the middle term is distributed in neither premise, we are said to have a fallacy of undistributed middle." — Keynes, *Formal Logic*, 1906, p. 288.

Unexpected examination paradox, another name for surprise examination paradox

Unhappy consciousness

Hegel's term for a consciousness which desires complete knowledge of itself but cannot obtain it. Hegel believed that self-consciousness proceeded in history from pre-history (the struggle for recognition) to Greece and Rome (Stoicism and scepticism) and medieval Christianity (unhappy consciousness). At the stage of scepticism, consciousness claims that all knowledge is relative to the subjective point of view. However, to make this claim meaningful, it must be assured that there is a universal point of view to see that all knowledge is thus relative. As a result, a sceptic has to admit that he is unable to justify these beliefs outside of his own contingently held point of view. He has a divided form of consciousness, with a tension between its subjective and objective points of view. Here scepticism gave way to the stage of unhappy consciousness. Such a consciousness is internally divided, for it has to assume both points of view. It is the consciousness of separation between man and nature and between man and man. Christianity's message is a call to men to restore the lost unity of consciousness by bringing their subjective points of view into line with the impersonal eye of God. In general, the unhappy consciousness describes a form of life in which people's conception of themselves and of what they claim to know involves an enduring state of crisis. Such a mental state is later called by Kierkegaard "despair".

"Hence the unhappy consciousness, the Alienated Soul which is the consciousness of self as a divided nature, a doubled and merely contradictory being." — Hegel, *Phenomenology of Spirit*, B, iv, b.

Unified science

[German; *Einheitswissenschaft*] Logical Positivism believes that no essential differences in aim and method exist between the various branches of science. The scientists of all disciplines should collaborate closely with each other, and should unify the vocabulary of sciences by logical analysis. According to this view, there is no sharp demarcation between natural sciences and social sciences. In particular, to establish universal laws in the social sciences may be difficult in practice, but it is not impossible in principle. Through Otto Neurath, this ideal of scientific unity became a programme

的“人”是一肯定命题的谓词，第二个前提中的“人”是一特称命题的主词。两者都不周延。

“如果在一个三段论中，两个前提中的中项都不周延，我们就被认为犯了中项不周延的错误。”——凯恩斯：《形式逻辑》，1906年，第288页。

意外的考试悖论

“意外考试悖论”的另一个名称。

苦恼的意识

黑格尔的术语，指的是渴望对自身的完备的知识但又得不到的那种意识。黑格尔认为，自我意识在历史中的发展经历了由史前（为认识而斗争）到希腊与罗马（斯多亚哲学和怀疑论）和中世纪基督教（苦恼的意识）的历程。在怀疑论阶段，意识宣称所有的知识都相对于主观的观点。然而，要使这一说法富有意义，就必须保证有一种普遍的观点从而能看出所有的知识都是相对的。其结果是怀疑论者不得不承认，超出他自己偶然持有的观点，他无法证明这些信念。他有一个分裂的意识形式，其主观观点和客观观点之间处于对立之中。到这里，怀疑主义就让位于苦恼的意识阶段。这种意识是内在地分裂的，因为它必须假定那两种观点的存在。它是将人与自然和人与人分离开来的那种意识。基督教的启示是要人通过使他们的主观的观点与上帝的非人的眼光相一致来恢复失去的意识的统一。一般说来，苦恼的意识描绘了一种生活方式，在这种方式中人们对自身以及对他们宣称所了解的事物的想法陷入了持久的危机状态。这种精神状态后来被克尔凯郭尔称为“绝望”。

“因此，苦恼的意识，就是意识到自身作为一种分裂的本质，一种双重的并且仅是矛盾的存在物的那种异化了的精神。”——黑格尔：《精神现象学》，B, iv, b.

统一科学

[德文为 *Einheitswissenschaft*] 逻辑实证主义认为，在科学的各个分支之间不存在目标和方法上的差别。所有学科的科学都应该密切地相互合作，应该用逻辑分析的方法把科学词汇统一起来。按照这种观点，在自然科学和社会科学之间没有明确的分界线。特别是，在社会科学中要确立普遍定律可能在实际上有困难，但在原则上并不是不可能的。这种科学统一的理想通过 O. 纽拉特成了逻辑实证主义者的纲领。他们在维也纳以《统一科学》为标题出版了

for logical positivists, who published a series of books in Vienna under the heading *Unified Science*. After the dissolution of the Vienna Circle, Neurath renamed the official journal *Erkenntnis* as *The Journal of Unified Science*, and planned to continue in the United States publication of a series of works under the general title *The International Encyclopedia of Unified Science*. He thought that the work would be similar in historical importance to the eighteenth century French *Encyclopedie* under the direction of Diderot. Unfortunately, this work was never completed, although some volumes originally prepared for it were published by Carnap and Morris under the title *Foundations of the Unity of Science*.

"We have repeatedly pointed out that the formation of the constructional system as a whole is the task of unified science." —Carnap, *The Logical Structure of the World*, 1967, p. 288.

Uniformity of Nature

A principle claiming that nature is uniform and that consequently the future will resemble the past and generalisations holding for observed cases will continue to be applicable to unobserved future cases as long as the background conditions remain sufficiently similar. In traditional epistemology, Francis Bacon and J. S. Mill assumed the principle to be the ground for the validity of inductive reasoning and scientific predictions. The aim of science is to find uniformity. But Hume argued that the principle can only be justified by induction and thus that justifying induction by appeal to it involves vicious circularity or question-begging. Popper also claimed that the uniformity of nature is a matter of faith.

"The belief in the uniformity of nature is the belief that everything that has happened or will happen is an instance of some general law to which there are no exceptions." — Russell, *The Problems of Philosophy*, 1912, p. 63.

Unity of consciousness, see transcendental apperception

Universal

"Universal" can be used as an adjective, meaning pertaining to all members of a class, unlimited or all-reaching, such as a universal law. In logic, universal statements (A and E statements in traditional logic) are contrasted with particular statements (I and O statements). As nouns, universals express abstract features, such as justice, beauty, wisdom and goodness. "Universal" used as a noun gives rise to many major and persisting problems in the history of philosophy.

The concept of a universal can be traced to Plato's idea and form (*eidos*) and Aristotle's *katholou*. Ideas or forms are the common characteristics which many particulars share and which are the object of knowledge. *Katholou* [Greek: *kata*,

一系列书籍。在维也纳小组解散之后,纽拉特把他们的代表性刊物《认识》重新命名为《统一科学杂志》,并计划在美国继续出版一系列著作,其总名称为《统一科学国际百科全书》。他认为这些著作在历史上的重要性会类似于18世纪在狄德罗指导下编纂的法国百科全书。不幸的是,这套著作并未完成,虽然原来为它准备的几卷由卡尔纳普和莫里斯以《科学统一的基础》为名出版了。

"我们一直反复指出,形成作为整体的建构性体系是统一科学的任务。"——卡尔纳普:《世界的逻辑结构》,1967年,第288页。

自然的齐一性

该原理主张自然是齐一的,因此未来将类似于过去,适用于观察到的事例的概括,将继续适用于未观察到的未来事例,只要背景条件保持足够相似。在传统认识论中,这被F. 培根和J. S. 密尔设定为归纳推理和科学预言的有效性的基础。科学的目的是发现齐一性。但是休谟论证了这个原理本身也只能由归纳来辩护,这样求助于它来给归纳辩护就包含着一种循环论证或窃取论题。K. 波普也认为自然的齐一性是个信仰问题。

"自然齐一性信念是这么一种信念,任何已发生或将发生的,都是某些普遍规律的事例,概莫能外。"——罗素:《哲学问题》,1912年,第63页。

意识的统一

见“先验统觉”条。

共相

“普遍的”作为形容词,意为“属于一个类中的所有成员的”,“无限制的”或“容包一切的”,如普遍法则。在逻辑中,普遍陈述(传统逻辑中的A与E陈述)相对于特殊陈述(I与O陈述)。作为名词,共相表示抽象特征,如正义、美、智慧和善。用作名词的共相在哲学史上引起了许多重大持久性的问题。

共相概念可追溯到柏拉图的形相和形式(*eidos*),以及亚里士多德的 *katholou*。形相或形式是许多殊相分有的共同特征,是知识的对象。*Katholou* [希腊语, *kata* (属于)和 *olou* (全部)]被定义作“述说于许多”,一个殊相则不述说于其他任何事物。柏拉图和亚里士多德都把

belonging to $\tau\alpha\lambda\lambda\alpha\iota$, the whole] is defined as being predicated of many, while a particular is predicated of nothing else. Both Plato and Aristotle contrasted universals with particulars. Plato's theory of ideas is regarded as the first and most penetrating discussion of the problems of the universal. Aristotle's treatment of the problem of universals from the point of view of predication is currently widely followed.

Since Plato and Aristotle, the debate about the nature and status of universals has run through the whole history of philosophy. Many rival theories have been proposed, the most important of which include realism, nominalism and conceptualism. Realism claims that universals are mind-independent objective entities, which can in principle be exemplified or instantiated by a number of different things. On the basis of this objective entity, predicate-expressions can be applied to many subjects. Nominalism holds that a universal is not an objective entity but is only a general name or word. Our ability to apply these general words is based on their linguistic function established by convention. The major representatives of nominalism include William of Ockham and Thomas Hobbes. Conceptualism, usually associated with the British Empiricists, suggests that universals are mind-dependent concepts or thoughts, constructed by the mind after experiencing particular things. Each position has its strength as well as famous weaknesses. There are many further versions under each general heading. Plato and Aristotle, for instance, are realists, but their doctrines have striking differences. Wittgenstein in his later philosophy proposed an account of family-resemblance as complicated networks of overlapping similarities to replace our false demand for properties which are common to all members of a class.

"By the term 'universal' I mean that which is of such a nature as to be predicated of many subjects, by 'individual' that which is not thus predicated. Thus, 'man' is a universal, 'Callias' an individual."— Aristotle, *De Interpretatione*, 17a39-40.

Universal characteristic, another expression for universal symbolistic

Universal grammar

Also called general grammar or philosophical grammar. In contrast to particular grammar, which is the grammar peculiar to a particular language, universal grammar refers to the deep-seated regularities in linguistic categories, rules and processes which underlie the diversity of natural languages. It consists of a set of genetically determined rules and principles common to all natural languages. Universal grammar is rooted in human linguistic capacity and is the necessary and sufficient natural condition for any language to be possible. It is a basic biological endowment of the initial state of the human mind. Because of universal grammar, a child can ef-

共相与殊相相比较。柏拉图的形相论〔旧译作：理念论〕被认为是对共相问题的最初的最深入的讨论。而亚里士多德从主—谓关系角度讨论共相问题，这在现代有众多追随者。

在柏拉图和亚里士多德之后，关于共相的性质和地位的争论贯穿整部哲学史。哲学家们提出了各种互不相同的理论。其中最重要的包括唯实论、唯名论和概念论。唯实论认为，共相是独立于心灵的客观实在，在原则上能体现于或个体化于许多不同的事物中。根据这种客观实在，谓词表述可应用于许多主体。唯名论主张，共相不是客观实在，而只是一个通名或语词。我们应用这些一般语词的能力是基于它们为习俗所约定的语言功能。唯名论的主要代表包括奥康的威廉和 T. 霍布斯。概念论一般与英国经验论者相联。它主张共相是由心灵产生的概念或思想，是心灵在经验了特殊事物后构建出来的。每一立场都有其长处和短处。每一总立场下又有许多不同形式的理论。例如，柏拉图和亚里士多德都是实在论者，可他们的学说有着巨大的差异。维特根斯坦在其后期哲学中把家族相似描述为各种相似性相互重叠的复杂网络，以此来取代我们对一种相同于一个类中的任何成员的属性的虚假要求。

“所谓‘共相’，我是指有着这样性质的东西，即它可述说于许多主体；所谓‘殊相’，乃是指不能这样述说的东西。因而‘人’是一个共相，而‘加里阿斯’则是一个殊相。”——亚里士多德：《解释》，17a39-40。

普遍语言

“普遍符号语言”的另一表述。

普遍语法

也称作“一般语法”或“哲学语法”。与专门用于个别语言的个别语法相对，普遍语法是指在各种不同的自然语言背后的语言范畴、规则和过程等更深层次的规则。它是由一系列最初确定的、为一切自然语言共有的规则和原理构成的。普遍语法根植于人类的语言能力，是使语言成为可能的必要充分条件，它是人类心灵最初状态的基本生物学因素。由于拥有这种普遍语法，儿童才能毫不费力地学习语言。根据乔姆斯基的观点，普遍语法的观念在18世纪的语言学家诸如贝蒂和杜·玛萨等人那里是共同的

fortlessly acquire language. According to Chomsky, the idea of a universal grammar was common for eighteenth century linguists such as Beattie and Du Marsa, but was ignored by modern linguistics. He revived the notion and believes that without being supplemented by a universal grammar, a grammar of a particular language cannot provide a full account of the speaker-hearer's competence. The natural necessity of universal grammar as a condition of the possibility of language can be compared with the *a priori* intuitions and categories that are the transcendently necessary conditions for the possibility of experience in Kant.

"Such a 'universal grammar' (to modify slightly a traditional usage) prescribes a schema that defines implicitly the indefinite class of 'attainable grammars'; it formulates principles that determines how each such system relates sound and meaning; it provides a procedure of evaluation for grammars of the appropriate form"—Chomsky, *Studies on Semantics in Generative Grammar*, 1972, p. 11.

Universal proposition

In traditional logic, propositions of the form "all S are P" or "all S are not P" are called universal propositions, in contrast to particular propositions, which have the form "some S are P" or "some S are not P". The form "all S are P", which is equivalent to "every S is P", is the form of a universal affirmative proposition and is symbolised as "A". The form "all S are not P", which is equivalent to "no S is P", is the form of a universal negative proposition and is symbolised as "E".

In the predicate calculus, a universal affirmative proposition "all S are P" is analysed as "for all x, if x is S then x is P". Unlike particular propositions, universal propositions do not contain referring expressions and therefore lack existential import.

"The grammatical subjects of universal propositions, however expressed, are not referring expressions." — Mitchell, *An Introduction to Logic*, 1962, p. 82.

Universal quantifier

Frege suggests that the universal categorical statements of traditional logic, that is, "All s are p", and "All s are not p", can be read respectively as "For all x, if x is s, then x is p", and "For all x, if x is s, then x is not p". The former can be symbolised as " $(x)(sx \supset px)$ ", and the latter as " $(x)(sx \supset \sim px)$ ". (x) is called the "universal quantifier" and means that "For all x..." or "For every x...". The universal quantifier and the existential quantifier (There exists an x...) have been crucial in the development of modern predicate logic and the philosophy dependent upon it. The universal quantifier is also symbolised as " $\forall(x)$ ".

"The universal quantifier (x) may be read 'each object x is such that...'. " — Quine, *Theories and Things*, 1981.

看法,但却被现代语言学家忽略了。他重新提出这个观念,并且相信,没有这样一种普遍语法的补充说明,任何具体语言的语法都无法全面地说明说者与听者的能力。把普遍语法看做是使语言成为可能的必要条件,就相当于康德把先天的直觉和范畴看做是使经验成为可能的先验必要条件。

"这种'普遍语法'(略微改变了一下传统的用法)提供了一种图式,它明确地定义了这类非限定的'可得到的语法';它所形成的原理,确定了每个这样的系统是如何与声音和意义联系起来的;它为恰当形式的语法提供了一种评价步骤。"——乔姆斯基:《生成语法的语义学研究》,1972年,第11页。

全称命题

在传统逻辑中,"所有S是P"或"所有S不是P"形式的命题叫做全称命题,以与特称命题相区别,后者具有形式"有些S是P"和"有些S不是P"。形式"所有S是P"等值于"每一个S是P",是全称肯定命题的形式,用符号表示为"A"。形式"所有S不是P"等值于"没有S是P",是全称否定命题的形式,用符号表示为"E"。

在谓词演算中,全称肯定命题"所有S是P"被分析为"对于所有x,如果x是S则x是P"。与特称命题不同,全称命题并不含有指称表达式,因此缺少存在含义。

"全称命题的语法主词,无论怎样表达,都不是指称表达式。"——米切尔:《逻辑导论》,1962年,第82页

全称量词

弗雷格提出,传统逻辑的全称直言陈述,即是"所有的s是p"和"所有的s不是p",可以分别读作"对于所有的x,如果x是s,那么x是p"和"对于所有的x,如果x是s,那么x不是p"。前者可用符号表示为" $(x)(sx \rightarrow px)$ ",后者可表示为" $(x)(sx \rightarrow \sim px)$ "。(x)叫做"全称量词",意为"对于所有的x……"或"对于每一个x……"。全称量词和存在量词(存在一个x……)在现代谓词逻辑的发展中以及依赖于它的哲学中是至关重要的。全称量词也用符号表示为" $\forall(x)$ "。

"全称量词(x)可以读作'每个对象x是这样的……'。"——奎因:《理论与事物》,1981

Universal symbolistic

Also called universal characteristic, Leibniz's project for providing a system of symbols or an artificial language for overcoming the deficiencies of natural language and for representing rational thought more accurately and effectively. For Leibniz it is a universal system of writing and an "alphabet of human thought". Through the combination of the letters of this alphabet and through the analysis of the words produced from them, we can discover and judge everything. To establish a universal language for communication among different languages was not a new idea, but Leibniz attempted to extend the notion of such a language to form an art of discovery and an art of judgement. He believed that it would be one of the greatest inventions if it succeeded. There is much dispute among scholars about the scope, nature and significance of this project. On one reading, the universal symbolistic is intended to be a type of ideal language, a language composed of real characters capable of expressing symbolically the contents of thought. On this reading, it is the predecessor of the ideal language proposed by some modern analytical philosophers. On another reading, this project is concerned only with the form, not the content, of rational thought. It is a plan for a general science of form and for expressing the logical relations among concepts and propositions. On this reading, the universal characteristic is a precursor of modern symbolic logic. On a further reading, Leibniz's thought developed from the ambitious project of constructing a system representing content to a less ambitious project which was only concerned with the form of logical reasoning.

"I should still hope to create a kind of universal symbolistic in which all truths of reason would be reduced to a kind of calculus." Leibniz, *Philosophical Papers and Letters* (ed Loemker), 1969, p. 654.

Universalia, ante rem, see universalia, in rebus

Universalia, in rebus

[Latin: universals existing within particular things, also called *in rebus universalia*]. A position held by the Aristotelians about the ontological status of universals. It contrasts with the Platonist position *universalia, ante rem* [Latin: universals existing prior to or independently of the particular things that instantiate them, also called *ante res universalia*]. It is also contrasted with *post rem universalia* [Latin: universals existing after or derived from particulars things, also called *post res universalia*], a view held by both nominalism and conceptualism.

"We can adopt the view whose Latin tag is *universalia in rebus*, 'universals in things'. We can think of a thing's

年。

普遍符号语言

也称“普遍语言”，是莱布尼茨的一个方案，该方案为了克服自然语言的缺陷，为了更准确有效地描述理性思想，提出了一个符号体系，或者说，一套人工语言。莱布尼茨认为它是一个通用的书写体系，一个“人类思想的字母表”。通过对该字母表中的字母的结合，通过对这些字母造出的词的分析，我们就可以发现和判断一切事情。为了在不同语言中进行交流而建立一个普遍语言并不是一个新思想，只是莱布尼茨试图将这样一个语言概念推广开来，以形成一种发现术和判断术。他相信，如果这件事真能成功，那将是最伟大的发明之一。对于这一方案的范围、性质和意义，学者中有许多争论。一种看法是，莱布尼茨打算使普遍符号语言成为理想语言的一个类型，一个由能以符号表达思想内容的“真正文字”构成的语言。根据这种看法，这个语言是现代一些分析哲学家提出的理想语言的前驱。另一种看法是，这个方案只与理性思想的形式有关，与内容无关。它是为普遍的形式科学，为表达概念和命题的逻辑关系而制定的一个规划。根据这种看法，普遍语言是现代符号逻辑的先导。还有一种看法是，莱布尼茨的思想有一个发展过程，开始他有一个宏大规划，要构造一个内容表述体系，后来这个规划缩小为只与逻辑推理的形式相关。

“我仍然希望创造一种普遍的符号语言，在此语言中，一切理性真理都被还原为一种演算。”——莱布尼茨：《哲学论文和书信》（莱姆克编），1969年，第654页。

在物之先的共相

见“在物之中的共相”条。

在物之中的共相

「拉丁文，意为“存在于特殊物之中的共相”（也写作 *in rebus universalia*）」亚里士多德主义者所持有的关于共相的本体论地位的立场。这相对于柏拉图主义的在物之先的共相[拉丁文，意为先于或独立于体现它们的特殊物的共相，也写作 *ante res universalia*]。它也相对于在物之后的共相[拉丁文，意为存在于特殊物之后或从它们中得出的共相，也写作 *post res universalia*]。后一观点为唯名论和概念论所持有。

“我们可采用一种观点，其拉丁标签是 *universalia in rebus*，‘在物之中的共相’。当我们可以把事物的属性看做事物的组成部分，也

properties as constituents of the thing and think of the properties as universals. This may have been the position of Aristotle." — Armstrong, *Universals*, 1989, p. 77.

Universalia, post rem, see *universalia, in rebus*

Universalizability

The idea that moral judgements should be universalizable can be traced to the Golden Rule and Kant's ethics. In this century it was elaborated by Hare and became a major thesis of his prescriptivism. The principle states that all moral judgements are universalizable in the sense that if it is right for a particular person A to do an action X, then it must likewise be right to do X for any person exactly like A, or like A in the relevant respects. Furthermore, if A is right in doing X in this situation, then it must be right for A to do X in other relevantly similar situations. Hare takes this feature to be an essential feature of moral judgements. An ethical statement is the issuance of a universal prescription. Universalizability is not the same as generality, for a moral judgement can be highly specific and detailed and need not be general or simple. The universalizability principle enables Hare to avoid the charge of irrationality which is usually lodged against noncognitivism to which his prescriptivism belongs, and his theory is thus a great improvement on emotivism.

"I have been maintaining that the meaning of the word 'ought' and other moral words is such that a person who uses them commits himself thereby to a universal rule. This is the thesis of universalizability." — Hare, *Freedom and Reason*, 1963, p. 30.

Universals of language, another expression for linguistic universals

Unknown entities, another term for metaphysical entities

Unmoved mover

The substance which initiates movement without itself being moved, also called the prime mover. In the later part of the *Physics* and *Metaphysics* XII, Aristotle developed a cosmological argument attempting to show that there must be an unmoved mover. Because time is eternal, without beginning and end, change, which is a concomitant of time, must also be eternal. The eternal and continuous change is the circular movement of the outer heavenly sphere. What produces this eternal motion? On analogy with our desires and thoughts and the intentional movements of our bodies for which they account, Aristotle inferred that there must be some ultimate object of desire and thought in the universe, a

可以把属性看做共相。这可能一直是亚里士多德的观点。”——阿姆斯特朗：《普遍》，1989年，第77页。

在物之后的共相

见“在物之中的共相”条。

可普遍化

道德判断应是可普遍化的这一观念可追溯至“金规”和康德伦理学。在20世纪，得到黑尔的阐发并成为他的“规定主义”的主要论点。这个原则所说的是，所有的道德判断在如下意义上是可普遍化的：如果某个人A有行为X是正当的，那么对于另一完全像A或在某些方面像A一样的人来说必定同样是正确的；或者如果A在这种情形下做了X是正当的，那么在另外的极相类似的环境条件下也必定是正当的。黑尔把这看做是道德判断的本质特征。一种伦理陈述是做出一种普遍的规定。可普遍化与一般化不是等同的，一个道德判断可以是很具体很详细的，不必非得要是抽象的、一般的。可普遍化原则能使黑尔避免非理性的指责，而非理性一般被用来攻击他的规定主义所属的非认知主义，因而他的理论是对于情感主义的很大的改进。

“我一直坚持，‘应当’和其他伦理词汇的意义使得一个使用它们的人因此而承诺起一种普遍规则，这就是可普遍化的论点。”——黑尔：《自由与理性》，1963年，30页。

语言的共相

“语言共相”的另一个名称。

未知实体

“形而上学实体”的另一说法。

不动的推动者

引起运动而自身不被推动的本体，也叫“第一推动者”。在《物理学》的后半部分和《形而上学》卷十二中，亚里士多德建立了一类宇宙论论证，力图表明必定存在一个不动的推动者。因为时间是永恒的，没有开端和终点，所以变化作为时间的伴随物也一定是永恒的。永恒的和连续的变化是外层天体的圆周运动。是什么产生了这种永恒运动？根据我们的欲望和思想以及它们所表明的我们身体的意向动作这一事实，亚里士多德类推说，宇宙中必有一欲望和思想的终极对象，一种作用于外在空间并间接作用于整个宇宙秩序的本体。这种本体运动不是因

substance which acts on the outer sphere and then indirectly on the order of the whole universe. This substance moves not because it intends, but because it is loved and thought. Thus it is an unmoved mover, which is immune to change and thus has no matter or potentiality. It is pure actuality, pure contemplation of itself as its object and the thought of thought. The unmoved mover is also called God. But the Aristotelian God itself does not care or think about changes in the world, although the harmony and order of the world are due to the imitation of the unmoved mover. While Aristotle's God is a passive object of admiration, medieval philosophers, especially Thomas Aquinas, attempted to transform it into a conscious agent.

"And since that which is moved and moves is intermediate, there is something, which moves without being moved, being eternal, substance and actuality." — Aristotle, *Metaphysics*, 1072a24.

Unqualified good, see qualified good

Unsaturated

Frege's distinction between saturated expressions and unsaturated expressions corresponds to the distinction between objects and concepts. A saturated expression refers to an object or argument and has a complete sense in itself, while an unsaturated expression refers to a concept or function and does not have a complete sense. For example, in the sentence "Socrates is the teacher of Plato", "Socrates" and "Plato" are proper names and are saturated, while "— is the teacher of —" is unsaturated, for it has empty spaces that must be filled with saturated expressions before it gains a complete sense.

"Statements in general, ... can be imagined to be split up into two parts; one complete in itself, and the other in need of supplementation, or 'unsaturated'." — Frege, "Function and Concept", in P. Geach and M. Black (eds), *Philosophical Writings of Gottlob Frege*, 1966, p. 31.

Unwritten doctrines

Doctrines ascribed to Plato, which he is said not to have written down but only to have taught to his pupils orally. Remarks by Aristotle are our chief source for these doctrines. The ideas are difficult and even impossible to reconstruct, but they are roughly like this. There are two ultimate principles, the one and the indefinite dyad, which generate the Forms, and through the Forms become the causes of everything. Forms are numbers, and between Forms and particulars there are indeterminate mathematical entities. While most Platonic scholars do not pay much attention to these ideas, the Tübingen school, headed by K. Gaiser and H. Kramer claim that the unwritten doctrines represent the real

of it intent thus, but because it is loved and thought. Thus it is an unmoved mover, which is immune to change and thus has no matter or potentiality. It is pure actuality, pure contemplation of itself as its object and the thought of thought. The unmoved mover is also called God. But the Aristotelian God itself does not care or think about changes in the world, although the harmony and order of the world are due to the imitation of the unmoved mover. While Aristotle's God is a passive object of admiration, medieval philosophers, especially Thomas Aquinas, attempted to transform it into a conscious agent.

"由于那既被推动又推动它物的事物是居间的, 故必有不动的推动者、永恒的本体和现实。" ——亚里士多德:《形而上学》, 1072a24.

无条件的善

见“有条件的善”条。

不饱和的

弗雷格提出的与对象和概念之间的区分相应的饱和的表达式和不饱和的表达式之间的区分。一个饱和的表达式指的是一个对象或一个自变量并且本身具有完整意思, 而一个不饱和的表达式指的是一个概念或一个函项并且不具有完整的意思。例如, 在“苏格拉底是柏拉图的老师”这个句子中, “苏格拉底”和“柏拉图”是专有名词, 是饱和的, 而“是……的老师”则是不饱和的, 因为它有一个空位, 这一空位必须以饱和表达式填补, 而后它才具有完整的意思。

“一般说来, 陈述……可被设想分成两部分, 一部分本身是完整的, 另一部分需要补充, 或者说是‘不饱和的’。”——弗雷格:《函项和概念》, 载吉奇和布莱克(编):《G. 弗雷格哲学文集》, 1966年, 第31页。

未著文字的学说

据说是柏拉图没有写下来而只是口头教他的学生的学说。亚里士多德的有关言论是我们关于这些学说的主要来源。要重构这些学说相当困难, 甚至是完全不可能的。大致的纲要是这样的: 有两条终极的原则, 一与不定之二, 它们产生了形式, 并通过形式而成为一切事物的原因。形式是数, 在形式与殊相之间存有居间的数理本体。大多数柏拉图学者对这些学说并不很注意, 而以 K. 盖塞和 H. 克拉麦尔为首的图宾根学派却认为, 未著文字的学说代表了柏拉图哲学的真正本质, 而对话只不过是通往这一严肃哲学的初级阶段。

essence of Plato's philosophy and the dialogues are only a preliminary stage towards this serious philosophy.

"It is true, indeed, that the account he gives in the *Timaeus* of the participant is different from what he says in his so-called 'unwritten doctrines'." —Aristotle, *Physics*, 209b.

Use theory of meaning

The later Wittgenstein criticised the view that language has a single function which explains meaning and observed that language has a variety of uses. He claimed that the meaning of a word has to be understood in terms of its employment in the context of different language games. To give the meaning of an expression is to show how that expression enters into the language games in which it functions. He held that the meaning of a word is its use in a language. Instead of asking what a word means, we should ask how the word is used. An expression's role in language determines its sense, and the sense of a sentence is its employment. Accordingly, to determine the meaning of an expression one must invoke the conditions under which it is appropriate to use it, including the states of mind of speakers or hearers in a given context. This account, which contrasts with Wittgenstein's earlier picture theory of meaning, has been widely influential and has developed into many versions after Wittgenstein. Critics suggest that while a use account of meaning helps our understanding of the various roles of linguistic expressions, it is preliminary to a theory of meaning rather than a theory in its own right.

"As a tool of analysis, the use theory of meaning can provide us only with certain data, i. e. raw material for philosophical analysis." —John Searle, *Speech Act*, 1969, p. 148.

Utilitarianism

A major modern ethical theory, advanced by Bentham, J. S. Mill, Sidgwick, and many others, which suggests, broadly speaking, that the rightness or wrongness of an action is determined by its utility, that is the good (pleasant or happy) or bad (painful or evil) consequences it produces. The morally right action which one should choose is the one which will provide the greatest pleasure and least pain of all the alternatives. Because utilitarianism judges actions in terms of their consequences, it is a major representative of consequentialism.

There are many species of utilitarianism, based on different understandings of action and consequences. There is a distinction between act-utilitarianism and rule-utilitarianism; the former judges in terms of the consequences of particular actions, and the latter in terms of the consequence of adopting some general rules for sorts of actions. There is a distinction between egoistic and universalistic utilitarianism; the

"他〔柏拉图〕在《蒂迈欧篇》中所给出的关于参与者的叙述，确实不同于他在他所谓的‘未著文字的学说’中的论述。”——亚里士多德：《物理学》，209b。

意义的用法理论

后期维特根斯坦批判这样一种观点：语言具有一种可以解释意义的单一功能。维特根斯坦看到，语言具有多种不同的用法。他声称一个语词的意义必须依其在不同语言游戏语境中的用法来理解。给出一个表达式的意义就是表明那一表达式如何进入它行使功能的语言游戏中。他主张语词的意义就是其在语言中的用法。我们所要问的不是一个语词意味着什么而是一个语词是怎样被使用的。一个表达式在语言中的作用决定其意义，而句子的意义是其使用。因此，要决定一个表达式的意义，一个人必须援引它被适当使用的条件，包括听者与说者在一定语境中的心的状态。这与维特根斯坦早期主张的“意义的图像论”相对，它具有广泛的影响并在维特根斯坦以后被发展为多种不同形式。但有人批评说，尽管意义的用法描述有助于我们理解语言表达式的各种作用，但它只是一种意义理论的开端，而不是该理论本身。

“作为一个分析工具，意义的用法理论只能为我们提供某些材料，即供哲学分析的原材料。”——塞尔：《言语行为》，1969年，第148页。

功利主义

为边沁、密尔、西奇威克和其他许多人所发展的一种主要的现代伦理学理论。宽泛地说，这个理论认为，一个行为的正当与错误是为它所产生的善的、好的（快乐、幸福）或坏的、恶的（痛苦、罪恶）后果所决定的。一个人应该选择的道德上正当的行为，是在所有能选择物中可产生最大的愉快最少的痛苦的行为。由于功利主义判断道德行为依据它们的后果，因而它是效果论的典型代表。

基于对“行为”和“效果”的不同理解，有多种形式的功利主义。行为功利主义和规则功利主义就有所不同：前者依据具体行为的后果加以判断，后者则依据某种行为采用某种一般原则的后果。利己主义的功利主义和普遍主义的功利主义之间也有所不同：前者考虑后果对行为者而言的善与恶，后者则考虑行为所涉及的所有人，也有快乐的功利主义和理想的功

former considers the goodness or badness of the consequences for the agent himself, and the latter for all individuals involved. There is also a distinction between hedonistic and ideal utilitarianism; the former takes the goodness or badness of a consequence to depend only on its pleasure or pain, and the latter (represented by G. E. Moore) takes into account things other than pleasure, such as intellectual and aesthetic qualities. There is also a distinction between normative and descriptive utilitarianism. These various distinctions cut across one another. A recent version, called motive utilitarianism, defines the morality of actions in terms of the motives which give rise to them.

Utilitarianism has played a great role in modern English and American society as the basic principle of morality and legislation. However, it has also been a subject of criticism in moral and political philosophy. The various versions of utilitarianism have weaknesses. Concentrating on its consequentialism, the main objections are: first, it is difficult to determine what consequences various possible actions would have; secondly, the action which will produce the greatest happiness is often not the morally right action; thirdly, utilitarianism focuses on the consequences of actions, but ignores the integrity of moral agents. All these and other criticisms suggest that utilitarianism should be employed together with other moral principles, although its fundamental viewpoint is unlikely to be completely removed.

"The chief reason for adopting the name 'Utilitarianism' was, indeed, merely to emphasise the fact that right and wrong conduct must be judged by its results." — Moore, *Principia Ethica*, 1903, p. 106.

Utilitarianism, act

Act-utilitarianism judges the validity of a moral action in terms of the good or bad consequences that the action itself can produce. We should pursue the action which will produce the greatest happiness in every circumstance. It contrasts to rule-utilitarianism which judges the validity of a moral action in terms of the good or bad consequences which ensue from following general moral rules of conduct, such as "keep promises" and "never lie", rather than from a particular action. According to rule-utilitarianism, we should pursue the action which conforms to a set of moral rules whose general observance would maximise utility. Classical utilitarians such as Bentham, Mill and Sidgwick are generally considered as act utilitarians, though they themselves were not aware of this distinction. Act-utilitarianism can also be defined in terms of expectable utility rather than the utility of actual consequences. The basic difficulty for act-utilitarianism is how to assess with certainty the consequences of an action considered in itself. It is also criticised for ignoring the agent's integrity or desires. Sometimes it is disputed whether the distinction between act-utilitarianism and rule-utilitarian-

ism之间的区分:前者把后果的善与恶看做是仅仅取决于它带来的愉快或不愉快,后者(以 G. E. 摩尔为代表)则把与快乐不同的诸如各种理智的或审美的质量考虑进去。在规范的和描述的功利主义之间也有区分。这些区分是相互交叉的。一个最近的形式是动机功利主义,它依据产生这些行为的动机来界定道德行为。

在现代英国和美国社会中,功利主义作为道德和立法的基本原则起了重大作用。不过,它一直是道德哲学和政治哲学的批评对象。不同的功利主义学说各有不同的弱点。集中于它的效果论的特征而言,主要的反对意见是:第一,很难确定各种可能的行为各有什么后果;第二,在许多情况下,产生最大快乐的行为不是在道德上正当的行为;第三,功利主义集中注意于行为的后果上,但忽视了道德行为者的整合性。所有这些及其他的批评隐含着,功利主义应该与其他的道德原则相协调,虽然它的基本原则不太可能完全丢掉。

"采用'功利主义'名称的主要理由,只是要强调这个事实,正当与错误的行为是为它的结果来判别的。"——摩尔:《伦理学原理》,1903年,第106页。

行为功利主义

行为功利主义依据行为本身所产生的后果的善(好)与恶(坏)来判断道德行为的有效性,所以我们应该追求在每一种环境条件下能产生最大快乐(幸福)的行为。这是与规则功利主义相对的,后者判断一个道德行为的正当性依据的是那行为遵循的普遍道德规则,诸如"遵守诺言"、"从不撒谎"等,而不是根据一个具体行为所能产生的好或坏的后果。根据规则功利主义,我们应该追求的行为是那对规则的遵从可产生最大功利的行为。古典的功利主义者如边沁、密尔、西奇威克一般被认为是行为功利主义者,虽然他们自己没有意识到这个区分。行为功利主义也能依据可期望的功利而不是实际功利后果来界定。行为功利主义的难题在于怎样确切地评估行为本身的后果。它也因忽视行为者的整合性或欲求而受到批评。有时人们也争议,是否行为功利主义和规则功利主义的区分是有道理的。道德理论家例如黑尔相信,如果有某种行为是正当的,那么,任何在相关方面类似于它的行为也将是正当的。

ism is sound. Moral theorists such as Hare believe that if a certain action is right, it must be the case that any action just like it in relevant aspects will also be right.

"Assuming that the objections to act-utilitarianism are conclusive, the choice of a general theory of obligation seems to lie between some kind of formalism and at least something like rule-utilitarianism."—Brandt, *Ethical Theory*, 1959, p. 400.

Utilitarianism, ideal

W. D. Ross' term, for the type of utilitarianism initiated by Moore. In contrast to classical or hedonistic utilitarianism, which claims that consequences are good or bad depending only on pleasure or pain, Moore claims that things other than pleasure, such as knowledge and the enjoyment of beautiful objects, also determine the goodness of consequences.

"In fact the theory of 'Ideal utilitarianism', if I may for brevity refer so to the theory of Professor Moore, seems to simplify unduly our relations to our fellows."—Ross, *The Right and the Good*, 1930, p. 19.

Utility

What is useful or good and leads to pleasure or happiness. Utility is the property which generates happiness or felicity, but more often it is directly identified with happiness. Utility has been an important consideration in ethics since the ancient Greeks. Hume believed that it is the measure of all virtues. Since Bentham advanced the principle of utility, there has been a specific ethical theory called utilitarianism. For utilitarianism, utility is the sole criterion for judging whether an act is right or wrong. If an act produces utility, it is right; otherwise, it is wrong. Bentham also proposed a calculus of felicity to determine the amount of utility or happiness produced by an action and to allow comparisons between actions. In many circumstances, however, an act which brings about the greatest utility is not the act which we morally approve. Furthermore, there are many problems in measuring and comparing different kinds of utilities. Attempts to identify happiness and utility might involve a misunderstanding of happiness. Problems also arise because utilitarians seek to maximise utility without regard to its distribution among people or among different periods in an individual life.

"By utility is meant that property in any object whereby it tends to produce benefit, advantage, pleasure, good, or happiness, . . . or . . . to prevent the happening of mischief, pain, evil, or unhappiness to the party whose interest is considered."—Bentham, *An Introduction to the Principles of Morals and Legislation*, 1, 3.

"假定对于行为功利主义的拒斥是决定性的,那么,对于一种有关义务的一般理论的选择似乎就在某种形式主义和某种至少是类似于规则功利主义的东西之间。"——布朗特,《伦理理论》,1959年,第400页。

理想的功利主义

W. D. 罗斯的词汇,指为摩尔所倡导的一种功利主义。与主张后果的善(好)或恶(坏)的性质取决于愉快或痛苦的古典的或快乐主义的功利主义相对照,摩尔不是把快乐,而是把诸如知识和对美的对象的享受等看做是对后果的善具有决定性的事情。

"事实上,理想的功利主义的理论,如果我可以以此简明地指称摩尔教授的理论,似乎是把我们与邻人的关系过分简单化了。"——罗斯:《正当与善良》,1930年,第19页。

功利

有用的或好的并带来快乐或幸福的东西。功利是产生幸福或幸运的性质,但它更多地被直接等同于幸福。从古希腊起,功利在伦理学中就一直受到重视。休谟认为它是所有德性的尺度。自从边沁提出功利原则以来,就出现了一种被称之为功利主义的独特的伦理学理论。对功利主义而言,功利是判断一个行为正确与否的惟一标准。如果一个行为产生了功利,它就是正确的,否则,它就是错误的。边沁还提出了对幸福的计算方法以确定一个行为产生的功利或幸福的数量和在行为之间进行比较。可是,在很多情况下,一个带来最大功利的行为并不是我们在道德上赞同的行为。此外,计算和比较不同的功利也还存在很多问题。试图将幸福与功利等同起来可能包含着对幸福的一种误解。还有一些问题的出现是因为功利主义者只追求最大的功利而没有考虑它在不同人之中和在个人生活的不同时期的分配。

"就功利而言,它指的是这样一种性质,靠它能在任何问题上给利益相关的当事人带来利益、好处、快乐、好事或幸福,……或……阻止损害、痛苦、邪恶或不幸福的发生。"——边沁:《道德与立法原则导论》,1, 3。

Utility calculus, see hedonistic calculus

Utopia

[from Greek: *ou*, not + *topos*, place, literally, a place that does not exist] A word first used in Sir Thomas More's book *Utopia*, in which he depicts an ideal state that has perfect economic, social, political, legal and religious structures. Similar descriptions of an imaginary ideal state can be found in such works as Plato's *Republic*, Tommaso Campanella, *The City of the Sun* (1612), Francis Bacon, *New Atlantis* (1627), Edward Bellamy, *Looking Backward* (1888), William Morris, *News from Nowhere* (1890) and H. G. Wells, *A Modern Utopia* (1905). Utopia is generally conceived to be an unrealisable, impractical and purely imaginary ideal state. Unrealistic political and social theories are described as utopian, especially those proposing fanciful schemes of education to change human nature or placing the hope of realizing the ideal state upon the character of great rulers. Utopian theories are often criticised as being based on something going beyond human experience. Nevertheless they represent human aspirations and have always served as an instrument for political criticism. Marx called the work of his predecessors utopian socialism, in contrast to his own scientific socialism, which was grounded on analysis of the existing class conflicts in capitalism.

"The ideal of utopia, the perfect society, has long exerted a powerful influence upon the thinking, feeling, and action of human beings."—Richter (ed), *Utopias*, 1971, p. 1.

Utopian engineering

Popper's term for a methodological approach to bringing about social and political change. Utopian engineers draw up an initial blueprint of society as a whole and then attempt to realise this ideal state by deciding the best means to achieve the predetermined ends. This approach entails large-scale social revolution and is represented by the programme for society in Plato's *Republic*. In contrast, piecemeal engineering focuses on existing social problems and practices to propose a series of relatively modest individual changes. According to Popper, piecemeal engineering is a rational means of pursuing change, while utopian engineering, because it aims at a perfect state, will demand centralised rule and lead to dictatorship. Although utopian engineering starts with an apparently good plan, it can lead to disaster because of the complex realities of human nature and of social life. All change produces unintended as well as intended consequences. With piecemeal engineering it is easier to recognise when unintended consequences are negative and to trace these consequences to their origins in order to eliminate or to control them.

"The Platonic approach I have in mind can be described

功利演算

见“快乐主义的演算”条。

乌托邦

[源自希腊词: *ou* (没有) 和 *topos* (地方), 字面的意思是, 并不存在的地方] T. 莫尔在其《乌托邦》一书中首先使用的一个词。在该书中, 他描绘了那具有完善的经济、社会、政治、法律和宗教结构的理想国家。在柏拉图的《国家篇》、T. 康帕内拉的《太阳城》(1612)、F. 培根的《新大西岛》(1627)、E. 贝拉米的《向后看》(1888)、W. 莫里斯的《来自乌有之乡的消息》(1890) 和 H.G. 威尔斯的《现代乌托邦》(1905) 这些著作中都能发现对想像的理想国家的类似描述。乌托邦一般被设想为不可实现的、不切实际的和纯粹想像的理想状态。非现实的政治的和社会的理论都被说成是乌托邦, 特别是那些提出改变人类本性的幻想的教育方案或把实现理想国家的希望寄托在伟大统治者性格上的计划。乌托邦理论常常被批评为是一种建立于某种超越人类经验的东西的基础上的空想。但是它们仍然体现了人类的渴求, 并且总是作为政治批判的工具。马克思把他的先驱者的工作成果称为乌托邦式的社会主义, 以对比于他自己的科学社会主义, 它根基于对资本主义中现存阶级冲突的分析。

“乌托邦的理想、完善的社会, 对人类的思想、感情和行为已产生了长远的、强有力的影响。”——里希特(编):《乌托邦》, 1971年, 第1页。

乌托邦工程

波普的术语, 用来表示一种带来社会和政治变革的方法论意义上的方法。乌托邦工程先为整个社会勾画一幅最初的蓝图, 然后再通过确定达到预定目的的最好方法来实现这种理想的状态。这种方法需要大范围的社会革命, 并且以柏拉图《国家篇》中的社会方案为代表。相比之下, 渐进工程着眼于现存的社会问题, 经常提出一系列相对温和的个别的变革。按照波普的意见, 渐进的工程是一种追求变革的理性方法, 而乌托邦工程则要求集权的统治并会导致专政, 因为它的目标是一个完美的社会。虽然乌托邦工程始于一个貌似美好的计划, 但由于人的本质和社会生活的复杂的现实情况, 它能导致灾难。所有的变革都产生无意及有意的后果。当无意的后果是消极的时候, 采用渐进工程就比较容易识别它们, 并且比较容易查出这些后果的根源以便消除或控制它们。

“我想到的柏拉图式的思考方法可以描述为乌托邦工程的思考方法, 这种乌托邦工程与另一种在我看来是惟一合理的社会工程相对

as that of utopian engineering, as opposed to another kind of social engineering which I consider as the only rational one, and which may be described by the name of piecemeal engineering." — Popper, *The Open Society and Its Enemies*, vol. 1, 1945, p. 157.

立,后者可以名之为渐进工程。”——波普:《开放的社会及其敌人》,1945年,第一卷,第157页。

V

Vacuous occurrence

If replacing a descriptive term t in a proposition p by other grammatically appropriate constants does not affect the truth-value of p , then t occurs vacuously in p . If a change of meaning of a term in an argument α does not affect the validity of the argument, then the term occurs vacuously in α . In a tautology or a self-contradictory proposition, the occurrence of all descriptive terms are vacuous. Vacuous occurrence contrasts with "essential occurrence". With essential occurrence, the replacement of a term t will affect the truth-value of the proposition in which it occurs, and a change of meaning of a term in an argument will affect the validity of the argument.

"By vacuous occurrence of a descriptive constant (i. e. either individual constant or predicate constant) is meant that the truth-value of the sentence does not change if any other admissible descriptive constant is substituted." —Pap, *Elements of Analytic Philosophy*, 1949, p. 365.

Vagueness

The indeterminacy of the field of application of a term, in contrast to precision. For instance, the expression "young man" is vague since the points at which its appropriate application to a person begins and ends cannot be precisely defined. Vagueness should be distinguished from ambiguity, by which a term has more than one meaning. That a term is vague is due to a semantic feature of the term itself, rather than to the subjective conditions of its user. Vagueness gives rise to borderline cases, and propositions with vague terms lack a definite truth-value. In light of this consequence, Frege rejected the possibility of vague concepts, although they are tolerated in recent work in vague or fuzzy logic. Various paradoxes arise due to the vagueness of words, including the ancient sorites paradox. It is because of its intrinsic vagueness that some philosophers seek to replace ordinary language with an ideal language. But ordinary language philosophers hold that this proposal creates a false promise of eliminating vagueness. Wittgenstein's notion of family resemblance in part is a model of meaning which tolerates vagueness. As a property of expressions, vagueness extends to all sorts of cognitive representations. Some philosophers hold that there can be vagueness in things as well as in the representation of things.

"A representation is vague when the relation of the rep-

空现

如果在命题 p 中用一语法上合适的常项代替一摹状词项 t 而不影响 p 的真值, 那么 t 在 p 中就是空现。如果在一论证 α 中改变一词项的意义而不影响论证的有效性, 那么该词项在 α 中就是空现。在重言式或自相矛盾的命题中, 所有的摹状词项都是空现。空现与“实现”相反。对实现来说, 对词项 t 的替换将影响它出现于其中的命题的真值, 改变一论证中词项的意义要影响论证的有效性。

“一个摹状常项 (即要么是个体常项, 要么是谓词常项) 的空现指的是, 如果其他合适的摹状常项被替换, 句子的真值不变。”——帕普: 《分析哲学原理》, 1949 年, 第 365 页。

含糊性

一个词的应用范围的不确定性, 与“精确性”相对。例如, 表达式“年轻人”是含糊的, 因为我们无法精确规定将这个表达式恰当地用于一个人时的起止点在何处。含糊性一词应当与“歧义性”一词相区别, 后者指一个词不止有一种意义。一个词是含糊的是由于这个词本身的语义特征, 而非由于该词使用者的主观条件。含糊性造成了一种两可情况, 而且带有模糊词项的命题是没有确切真值的。由于这一结果, 弗雷格拒斥含糊概念的可能性, 尽管这些概念为近来的含糊逻辑或模糊逻辑所容忍。由于词的含糊性, 产生了各种各样的悖论, 其中包括古代的累积悖论。正因为日常语言固有的含糊性, 所以某些哲学家力图用一种理想语言取代它。然而在日常语言哲学家看来, 这个建议所提出的关于排除含糊性的允诺是错误的。维特根斯坦所说的“家族相似”概念在某种程度上就是一个样板, 它意味着对含糊性的容忍。作为表达式的一个特性, 含糊性扩展到各种认知表征上。有些哲学家认为含糊性既可以出现在对事物的表征上, 也可以包含在事物本身。

“一个表征是含糊的, 当表征系统和被表征系统的关系不是一一对应, 而是一多对应的。”——罗素: 《罗素文集》, 第九卷, 第 153 页。

representing system to the represented system is not one-one, but one-many." —Russell, *Collected Papers of Bertrand Russell*, IX, p. 153.

Validity

A property attributed to an inference or an argument, which can be defined both syntactically in terms of the axioms or rules of the system and semantically in terms of interpretations or models. Suppose that A_1, A_2, A_3, \dots are premises, and A_0 is a conclusion. Syntactic validity means that A_0 is derivable from A_1, A_2, A_3, \dots , that is the inference complies with the rules of logic. Semantic validity means that A_0 is true if according to interpretations or models in non-logical language A_1, A_2, A_3, \dots are true. The task of traditional logic is to establish the rules of syntactic validity. Validity is not the same as truth, for truth is a property ascribed to propositions or statements rather than to inferences or arguments.

"An argument is valid if and only if it is logically impossible for all the premises to be true yet the conclusion false." —Sainsbury, *Logical Form*, 1991, p. 15.

Value

[from Latin: *valere*, to have worth, to be strong] Its original sense, the worth of a thing, is mainly in economics. In the nineteenth century German philosophers such as the neo-Kantians, Schopenhauer and Nietzsche expanded the sense of value and used it as a major technical notion in their philosophy. Marx's distinction between use-value and exchange-value was a basic feature of his account of economy and society. The conception of value can be traced to the idea of Good in Socrates and Plato. Its use has become increasingly widespread with the recognition of the distinction between value and fact, between what ought to be and what is, in modern philosophy. The general study of value is called axiology.

"Value" has the same range of application as "good" or "worthwhile", and is used as a philosophical equivalent of goodness. Generally speaking, value means the quality of a thing that makes it desirable, useful or an object of interest. Value has been understood in terms of the subjective appreciation by a subject or as something projected onto objects by a subject. In this sense "value" amounts to "being judged to have value". On this view, objects can have different values for different individuals, groups or nations. However, it has also been debated whether there is objective value, that is value independent of the appreciation by a subject. If there is objective value, philosophers ask in what sense and in what way it is objective.

There are various classifications of value. Most commonly, there is a division between extrinsic or instrumental value, which is not itself good but is good as a means for

有效性

有效性属于推理或论证的性质。它既可以从语法上根据该系统的公理或规则加以确定,也可以从语义上根据该系统的解释或模型加以确定。假设 A_1, A_2, A_3, \dots 是前提, A_0 是结论,语法有效性意味着 A_0 可从 A_1, A_2, A_3, \dots 中推出,并且推理遵守了逻辑规则。语义有效性意味着,若根据非逻辑的语言中的解释或模型 A_1, A_2, A_3, \dots 为真,则 A_0 亦真。传统逻辑的任务是确立语法有效性的规则。有效性与真不是一回事,因为真归属于命题或陈述的性质,而不是推理或论证的性质。

"一论证是有效的,当且仅当,它的所有前提真而结论假在逻辑上是不可能的。"—塞斯伯里:《逻辑形式》,1991年,第15页。

价值

[源自拉丁词 *valere*, 意为“值得的”、“有力量的”]它的原始意义是一件事物的价值,并主要是在经济学中使用。在19世纪,德国哲学家诸如新康德主义者、叔本华、尼采扩展了价值的意义,在他们的哲学中把它用作一个主要的专门概念。马克思关于使用价值与交换价值的区分是其经济社会学说的一个基本特征。这个概念可以追溯到苏格拉底和柏拉图的善的理念。由于在现代哲学中对事实与价值的区分、应当是什么和是什么的区分的承认,它的使用变得越来越广泛。对于价值的一般性研究叫做“价值论”。

“价值”一词与“善的”或“值得”有着同样范围的应用,实际上被用作“善”这词的哲学上的等同词。一般而言,价值意味着那使一东西成为值得欲求的、有用的或成为兴趣的目标的性质。价值也被看做是主体的主观欣赏或是主体投射入客体的东西。在这个意义上,“价值”等同于“被判定为有价值”。据此,同一对象对不同的个体、群体及国家有不同的价值。不过,对是否有客观价值,即与主体的偏好无关的价值这个问题,是有争议的。如果有客观价值,哲学家要问的是在什么意义上,在什么方面它是客观的。

价值分为不同类型。最通行的一种是把价值分为内在价值、内含价值和外在或工具价值。工具价值本身不是善的,只是就其作为某种目的的工具而言是善的;内在价值是作为目的或其本身就是善的;内含价值是我们把某物看做

some ends; intrinsic value, which is good as an end in itself; and inherent value, which is the basis for our seeing something as desirable.

In logic, value is the result of applying a function to an argument. For instance, "7" is the value of applying the function " $x + y$ " to the arguments "3" and "4". See function and argument.

"Values express the objective will. Ethical values in particular result from the combination of many lives and sets of interests in a single set of judgements." —Nagel, *The View from Nowhere*, 1986, p. 136.

Value, instrumental, see extrinsic value

Value, intrinsic

In its ordinary sense, intrinsic value is the value a thing has to most people in normal circumstances, in contrast to the value which the same thing has for special persons in special circumstances. This latter might be called sentimental value. For instance, a lover's gift might have little intrinsic value, but great sentimental value to the loved one.

In another sense, intrinsic value is objective value, that is the value a thing has independent of anything else, so that it would have its value even if it were the only thing that existed. This sense seems to be proposed by Moore.

In its standard wider use, which can be traced to Aristotle's notion of final good, intrinsic value is synonymous with what is intrinsically desirable or intrinsically good. This value is desirable for its own sake and worth pursuing in itself without reference to any other objects. In this sense, intrinsic value contrasts to extrinsic or instrumental value, which is not pursued for itself.

"To say that a kind of value is 'intrinsic' means merely that the question whether a thing possesses it, and in what degree it possesses it, depends solely on the intrinsic nature of the thing in question." —Moore, *Philosophical Studies*, 1922, p. 260.

Value, theory of, see axiology

Value of a variable

A variable ranges over the members of a set. Any entity which falls within the range of the variable as a member of the set and can hence be substituted for the variable is a value of the variable. In the sentential function " x is wise", x is a variable, and "Socrates" is a member of its range and hence one of its values. We may substitute "Socrates" for x , and get the true closed sentence or proposition "Socrates is wise".

"Specific terms within the range of meaning of a variable

是所欲求的东西的基础。

在逻辑上,“值”是把一个函项运用于一个主目的结果。例如,“7”是把函项“ $X \cdot Y$ ”应用于主目“3”和“4”的值。见“函项与主目”条。

“价值表达着客观的意愿。伦理价值尤其是来自于在一种单—的判断中把许多生命和多种利益结合在一起。”——内格尔:《出自无处的观点》,1986年,第136页。

工具价值

见“外在价值”条。

内在价值

在它的一般意义上,内在价值指的是一个事物在正常情况下对于多数人具有的价值,与此相对的是,同一事物对于特定的人们在特定条件下具有的价值,后者也许可称为情感价值。例如,一个情人的礼物也许没有什么内在价值,但对于被爱的人来说,则有巨大的情感价值。

在另一种意义上,内在价值是客观价值,即一个事物所有的独立于其他任何事物的价值,以至于即使只有这一个事物存在,它仍将有价值。价值的这种意义似乎是摩尔阐发的。

在对它的标准的宽泛用法中,“内在价值”的概念可追溯到亚里士多德的终极善,是与“内在所欲求的”或“内在的善”同义的。这一价值就它本身而言即是所欲求的,它本身就是值得追求的,而不需参照任何他物。在这种意义上,内在价值相对立于外在价值或工具价值,后者不是因它自身的缘故人们才去追求。

“说一种价值是内在的,仅仅意味着一个事物是否具有它,在什么程度上具有它这样的问题,只取决于所谈及的事物的内在性质。”——摩尔:《哲学研究》,1922年,第260页。

价值理论

见“价值论”条。

变元的值

变元以—集合中的元素为值。任何作为该集合的元素处于该变元的值域内,并因此能用来替换该变元的实体,都是此变元的值。在语句函项“ x 是聪明的”中, x 是变元,“苏格拉底”是其值域内的元素,因此是它的值。我们可以用“苏格拉底”替换 x ,得到真的闭语句或命题“苏格拉底是聪明的”。

“处在一函项中变元的意义域内的特定的项,叫做该变元的值。”——奎因:《集合论及其

in a function are called 'values' of that variable." —Quine, *Set Theory and its Logic*, 1963.

Value words

The words which are used to express taste and preferences, to express decisions and choices, to criticise and evaluate, to advise, warn, persuade, to praise and encourage. Their function is to guide our own choices and those of other people by commending or prescribing. Typical examples are "good", "right" and "ought", but any word, if used evaluatively might count as a value word. Value words can be negative or positive. The judgements which contain value-words are value judgements. Value words form the web of moral discourse, and the analysis of their implications and connections is one of the main jobs of moral philosophers, especially those concerned with meta-ethic.

"The words with which moral philosophers have especially to do, which are usually called 'value-words', play many important parts." —Nowell-Smith, *Ethics*, 1954, p. 98.

Variable

In predicate logic, x is called a variable in a general statement like " x is white" because it ranges over a domain of objects and can be replaced by anything to which the predicate is applied. Generally, " x, y, z, \dots " are used in predicate logic as individual variables representing individuals. The domain of objects a variable ranges over is called the range of the variable. Any member within this range can replace or substitute for the variable to produce a sentence. Variables can be divided into bound variables and free variables (Russell and Whitehead called them respectively real and apparent variables). A variable inside the scope of a quantifier is said to be bound, for example " x " in $(\exists x)Fx$ is bound by the quantifier " \exists " (some). A variable not bound by any quantifier is free, for example " x " in Fx . In propositional logic, " p, q, r, \dots " are used as propositional variables, representing propositions.

"Those expressions in formulae, the replacement of which by a word or phrase would result in a sentence, are called free variables, or simply, variables." —P. F. Strawson, *Introduction to Logical Theory*, p. 28.

Veganism, see vegetarianism

Vegetarianism

The moral attitude that we should not eat the meat of animals. Vegetarianism has existed for a long time in some religious traditions, but the term "vegetarian" did not become popular until the foundation of the Vegetarian Society in England in 1847. The issue of vegetarianism became more

逻辑》，1963年。

价值词汇

被用来表达爱好、偏好、表达决定和选择、批评和评价、告诫、劝说、警告、赞扬、鼓励的词汇；它们的功能在于通过称赞或规定来指导我们的和其他人的选择。价值词汇的典型例子是“善”〔好〕、“正当”和“应当”，但任何词汇，如果作评价性使用，也可算作价值词。价值词汇可以是否定的或肯定的。包含着价值词汇的判断是价值判断。所以，这些词汇构成了一个道德语言的体系。对它们的蕴含意义和关联的分析是道德哲学家、尤其是元伦理学家的主要工作之一。

“尤其需要道德哲学家处理的词汇，一般被称为‘价值词汇’，起了许多重要的作用。”——诺威尔·史密斯：《伦理学》，1954年，第98页。

变元

在谓词逻辑中，“ x 是白的”这样一个一般陈述中的 x 叫做变元，因为它以对象域为值域，能够被该谓词适用的任何事物所替换。一般来说，“ x, y, z, \dots ”在谓词逻辑中用作个体变元，表示个体。变元所涉及的对象域叫做变元的值域。此值域内的任何元素都可以替换或代换该变元以生成一语句。变元能够分为约束变元和自由变元（罗素和怀特海分别称它们为真实变元和表面变元）。处于量词辖域内的变元被说成是约束的，例如 $(\exists x)Fx$ 中的 x 被量词 \exists （有些）所约束。不被任何量词约束的变元是自由的，例如 Fx 中的 “ x ”。在命题逻辑中，“ p, q, r, \dots ”用作命题变元，表示命题。

“公式中的这样一些表达式，若用词或短语替换它们后生成语句，叫做自由变元，或者简单地叫做变元。”——斯特劳森：《逻辑理论导论》，第28页。

严格素食论

见“素食主义”条。

素食主义

我们不应食用动物肉的一种道德态度。在某些宗教传统中，素食主义的存在已有很长时间了，但“素食者”这个词汇直到1847年英国的“素食者协会”成立才流行。这个问题因动物解放运动的兴起而成为热门话题。素食主义者

prominent with the rise of the animal liberation movement. Vegetarians argue that eating meat takes animals as a means to an end, and thus fails to respect them as beings with inherent value or with a right to respect. Different theorists provide different sorts of a moral basis for vegetarianism. Some argue that animals have interests, others emphasise that they have rights. All of these are controversial views. Vegetarian arguments depend on the criterion one takes as the basis of moral consideration. Tom Regan claims that an animal is a subject-of-a-life and that one is not permitted to eat anything that is a subject-of-a-life. Peter Singer considers that sentience is the basis of moral thinking and that no sentient being can be used as food. For the animal liberation movement, the vegetarian lifestyle is fundamental as a personal means for shifting our moral consciousness towards animals. Generally vegetarianism prohibits meat eating, but not animal products such as milk and eggs. An extreme form of vegetarianism which advocates the avoidance of all animal products is called veganism.

"Killing animals for food normally means not only that the animals die but that they must be exploited throughout their lives in order to reduce the costs of production. Thus, the case for vegetarianism is strong whatever view we take of the value of animal life." —Singer, in Regan (ed.), *Matters of Life and Death*, 1993, p. 316.

Veil of appearance, see veil of perception

Veil of ignorance

The major condition that Rawls imposes in his original position on participants who are to determine the principles of justice governing the basic structure of society. All participants are situated behind a veil of ignorance, where they have no knowledge of their particular characteristics, abilities, religious beliefs and personal histories. They do not know the economic condition or political situation of their society or their own social status or class position. They have general theoretical knowledge about society and know that they are rational and will pursue primary goods whatever their circumstances and plan of life. The veil of ignorance is meant to guarantee that the choice made by the participants will not be biased by their specific interests or advantage and to oblige them to determine principles impartially and objectively. It is not clear that persons behind the veil of ignorance would have enough knowledge to choose any conception of justice. If they know more about themselves and their society, the demand that they are unanimous in their conception of justice is at risk. It is also possible that individuals can be biased by their history even if they are ignorant of that history.

"The veil of ignorance makes possible a unanimous

认为,把动物作为餐桌上的食物就是把它们作为一种目的的工具,就没有把它们作为具有内在价值的存在物、或具有权利的存在物来尊重。不同的理论家对于素食主义提供了不同种类的道德基础。有人主张动物有利益,其他人则强调它们有权利。所有这些都是有争议的观点。素食主义的论证取决于把什么当做是道德考虑基础的标准。T. 里根把动物看做是生命的主体,所以一个人不能被允许吃任何是生命主体的东西。P. 辛格把感受性看做是道德思考的基础,所以没有任何具有感受性的存在物能被用作食物。对于动物解放运动来说,素食主义的生活方式是基本的,也是转换我们的道德意识的个人性的工具。一般而言,素食主义禁止食用肉类,而不是动物的产品,诸如牛奶和蛋。提倡避开所有的动物产品的素食主义的极端形式称作严格素食论。

"杀死动物作为食物,一般不仅是指动物之死,而且还意味着它们终身都要受剥削,以减少生产费用。因此,不论我们对于动物生命的价值持有什么观点,在这里,素食主义就是强有力的。"——辛格,见里根编:《生命与死亡的问题》,1993年,第316页。

外观之幕

见“知觉之幕”条。

无知之幕

罗尔斯强加给原初状态下的参加者的主要条件。这些参加者要确定支配社会基本结构的正义原则。所有的参加者都处在无知之幕背后,他们对他们的特性、能力、宗教信仰及个人的历史一无所知。他们不知道他们所处社会的经济条件和政治状况,不知道他们的社会身份或阶级地位。他们有对社会的一般的理论知识,也知道他们是理性的,并且不管他们的环境和生活计划如何都将追求基本的善。无知之幕意味着可以保证参加者做出的选择不被他们的特殊利益和好处所歪曲,可以使他们公正客观地确定原则。无知之幕背后的人是否有足够的知识选择正义的观念,这一问题还不清楚。如果他们对自己和他们的社会了解得更多,那要求他们在正义观念上取得一致就有风险。个人会因为他们的历史、甚至因为对他们的历史的无知而产生偏见,这也是可能的。

"无知之幕使对一特殊正义观念的一致选择成为可能。"——罗尔斯:《正义论》,1971年,第140页。

choice of a particular conception of justice.”—Rawls, *A Theory of Justice*, 1971, p. 140.

Veil of perception

Also called the veil of appearance. Locke and many later empiricists have claimed that what we perceive are not external objects themselves, but are sensory ideas or sense-data which are produced in our minds by external things. These ideas, like a veil, stand as intermediaries between the conscious subjects and external objects. Our senses can only show us sense-data or appearances. Such a theory is different from Platonism, which claims that perception and appearance are unreliable and that reality can be known only through the intellect. The view also differs from naive realism, which holds that what we sense is the object itself rather than its appearance, and from phenomenism, which holds that external objects are constructed out of actual and possible sense-data. Because appearances can hide the real nature of things and prevent us from knowing reality as it is, the theory of the veil of perception has led to sceptical challenges to our knowledge of the external world.

“We are restricted to the passing show on the veil of perception, with no possibility of extending our knowledge to the world beyond.”—Stroud, *The Significance of Philosophical Scepticism*, 1984, p. 33.

Verification theory of meaning

The theory of meaning advocated by the Logical Positivists and associated with the criterion of verifiability. The latter provides a criterion of meaningfulness for sentences, while the verification theory of meaning specifies the nature of meaning. According to the criterion, a sentence is cognitively meaningful if and only if it is logically possible for it to be verified. The meaning of a sentence is its method of verification, that is, the way in which it can be verified or falsified, particularly by experience. The theory has been challenged because the best formulations still exclude meaningful sentences and allow meaningless sentences. Critics also claim that the theory is a test for meaningfulness rather than a theory of meaning proper. Further, they claim that it fails to take into account the interconnectedness of language.

“The verification theory of meaning, which dominated the Vienna Circle, was concerned with the meaning and meaningfulness of sentences rather than words.”—Quine, *Theories and Things*, 1981, p. 70.

Verificationism

A position fundamental to logical positivism claiming that the meaning of a statement is its method of verification. Accordingly, apparent statements lacking a method of verification, such as those of religion and metaphysics, are meaningless. Theoretical terms can be defined in terms of the phe-

知觉之幕

又称“外观之幕”。洛克以及许多后来的经验论者声称,我们所知觉到的并非对象本身,而是外部的东西在我们心中所产生的感觉观念或感觉材料。这些观念像屏幕一样作为中介物竖立在意识主体和外部客体之间。我们的感官只能向我们显示感觉材料或表象。这一理论与柏拉图主义不同,后者认为知觉和表象是不可靠的,现实只能通过智力来了解。这一观点也不同于朴素实在论,后者认为我们所感觉到的就是对象本身而不是其表象。它也不同于现象论,后者主张外部对象建构于实际的或可能的感觉材料。由于表象会隐藏事物的真实本质而使得我们不能知道事物本来的样子,知觉之幕理论便导致对我们关于外部世界知识的怀疑论的挑战。

“我们被局限于知觉之幕的短暂显示,不可能将知识扩展到这以外的世界。”——斯特罗德:《哲学怀疑论的意义》,1984年,第33页。

意义的证实论

这是逻辑实证主义者所提倡的意义理论,与可证实性标准密切相关。后者提供了语句有意义性的标准,而意义证实论则规定了意义的本性。根据可证实性标准,一语句是认知上有意义的,当且仅当它被证实是逻辑上可能的。语句的意义就是它的证实方法,也就是它能被(特别是经验)证实或证伪的方式。这一理论已受到挑战,因为即使是它的最好的表述也排除有意义语句并允许无意义语句。批评家们还断言,该理论是对有意义性的检验,而不是意义理论本身。而且,他们断言它没有考虑到语言的内部联系。

“支配着维也纳学派的意义证实论,所关注的是语句而不是语词的意义和有意义性。”——奎因:《理论与事物》,1981年,第70页。

证实主义

一种逻辑实证主义中的基本立场,主张一个陈述的意义在于其证实方法。相应地,那些显然缺乏证实方法的断言,如宗教的和形而上学的断言,则是没有意义的。理论名词只能用这样的现象条件来定义,采用了这些现象条件的断

nomenal conditions by means of which assertions employing them can be verified. In the philosophy of mind, behaviourism, which tries to reduce unobserved inner states to patterns of behaviour turns out to be a version of verificationism. Some philosophers require conclusive verification for a statement to be meaningful, while others allow any positive evidence to confer meaning. There are disputes whether every statement must be verified separately or theories can be verified as a whole even if some of their statements cannot be verified separately. Attempts to offer a rigorous account of verification have run into difficulties because statements which should be excluded as meaningless nevertheless pass the test of verification.

"For over a hundred years, one of the dominant tendencies in the philosophy of science has been verificationism, that is, the doctrine that to know the meaning of a scientific proposition... is to know what would be evidence for that proposition." —Putnam, *Mind, Language and Reality*, 1975, vii.

Verisimilitude

[from Latin: *verisimilar*, like the truth] The degree of approximation or closeness to truth of a statement or a theory. Popper defined it in terms of the difference resulting from truth-content minus falsity-content. The truth-content of a statement is all of its true consequences, while the falsity-content of a statement is all of its false consequences. The aim of science is to find better verisimilitude. One theory has a better verisimilitude if it can explain the success of competing theories and can also explain cases where other theories fail. Popper emphasised that verisimilitude is different from probability. Probability is the degree of logical certainty abstracted from content, while verisimilitude is degree of likeness to truth and combines truth and content.

"This suggests that we combine here the ideas of truth and content into one: the idea of a degree of better (or worse) correspondence to truth or of greater (or less) likeness or similarity to truth; or to use a term already mentioned above (in contradistinction to probability) the idea of (degrees of) verisimilitude." —Popper, *Conjectures and Refutations*, 1972, pp. 232-3.

Verstehen

[German: understanding] Because understanding is a general notion, many English translations and philosophers leave the theoretical term *Verstehen* untranslated. In German philosophy of history, *Verstehen* is used for a cognitive mode peculiar to the social sciences. It is an empathic or participatory understanding of a subject's point of view by imaginatively putting oneself into the place of the subject. It is a reconstruction of the subject's purposes, values and meaning. In contrast, explanation (German: *Erklären*), which seeks

言藉此是可证实的。在心的哲学中,行为主义试图把未观察到的内在状态还原为行为模式,这表明其为证实主义的一种形式。有些哲学家要求完整的证实才使一个陈述有意义,而其他人则认为任何肯定证据都可授予意义。关于是否每个命题必须分别证实,或是一个理论即使其某些陈述不能分别证实,它作为整体也是能证实的,依然存在分歧。力图对证实提供一严格的叙述会产生种种困难,因为应作为无意义而排斥的陈述,也可以通过证实检验。

"一个世纪以来,科学哲学中的一种支配性倾向是证实主义,即这么一种学说:要知道一个科学命题的意义,就是去认识这个命题的证据是什么。"——普特南:《心智、语言与实在》,1975年,vii。

逼真性

[源自拉丁文 *verisimilar*, "像真", "似真性"] 指对一个陈述或理论的真的近似或接近程度。波普用真内容减假内容的差来定义它。一个陈述的真内容为其所有的真结论,而其假内容为其所有的假结论。科学的目的是发现更好的逼真性。一个理论如果既能说明其竞争理论成功的事例,也能说明其他理论不能说明的事例,它就有更好的逼真性。波普强调,逼真性不同于概然性。概然性是从内容中抽象出的逻辑确定性程度,而逼真性则是把真与内容结合起来的似真性程度。

"这表明我们在这里把真与内容合而为一,即合为更加(或更不)符合真理的观念,与真理更为(或更不)相像或相似的观念;或者用前已提及的术语说,即与概然性相反的逼真性(程度)的观念。"——波普:《猜想与反驳》,1972年,第232—233页。

理解

[德文:理解]由于理解是一个普通的概念,很多英文翻译和英国哲学家对理论术语 *Verstehen* 没有做翻译。在德国历史哲学中,它常被用来表示社会科学特有的一种认识方式。它是通过将自己想像地置身于一个主体所处的位置而对这一主体的观点做强调性的或分享的理解。它是对主体的目的、价值和意图的一种重建。相比之下,寻求因果关系和求助普遍法则的解释(德文: *Erklären*) 则具有自然科学特有的

causal relations and appeals to general laws, is the method characteristic of the natural sciences. Proponents of classical *Verstehen* theory rejected the claim that the social sciences should follow the natural sciences by searching for the objective meaning of the social world. The claims of *Verstehen* are opposed to scientism and positivism, although Max Weber argued that both *Verstehen* and *Erklären* belong to the methodology of social science. The notion of *Verstehen* can be traced to Giambattista Vico and J. G. von Herder, but it was fully elaborated by Dilthey in order to demonstrate that the human sciences have a distinct methodology. Heidegger and Gadamer, however, view *Verstehen* not as a cognitive mode but as the essential feature of human beings situated in a world that projects infinite possibilities.

"A *Verstehen* approach to the study of human beings is any which assumes that the inquiry cannot be modelled on natural sciences; any 'humanistic' or 'non-scientist' approach, to use other terms in common employment; an *Erklären* approach is one which makes the contrary assumption." —Macdonald and Pettit, *Semantics and Social Science*, 1981, P. 55.

Via antiqua, see *via moderna*

Via moderna

[Latin: the modern way] A term for the nominalist movement that arose in the fourteenth century, influenced by the writings of William of Ockham. It was opposed to the *via antiqua* (the old way), that is the realist schools which were dominant in the twelfth-thirteenth centuries, including Thomism, Scotism, and Augustinianism. The movement emphasised logic and direct experience and rejected empty speculation and abstraction. Ockham's razor, the principle that plurality is never to be posited without need, was the basic spirit of the movement. The advocates of the *via moderna* believed in the principle of the uniformity of nature, and engaged actively in scientific research. The *via moderna* exerted a great impact on the later development of modern physics.

"Ockham's teachings had, rather, a stimulating effect. They awakened many somewhat independent thinkers who were united at least against the realism of the older scholastics. These 'nominales' (in the medieval sense) constituted the *via moderna*, which was not so much a school as a trend of thought." —Boehner (ed.), *Ockham: Philosophic Writing*, 1959, introduction li.

Via negativa

A way of describing God who transcends human experience by denying limited qualities to God by the use of such adjectives as incorporeal and uncreated. It is claimed that we

方法。经典的理解理论的倡导者反对这样一种主张，即社会科学应通过探究社会领域的客观意义去效仿自然科学。*Verstehen* 的主张是与科学主义和实证主义相对立的，尽管 M. 韦伯论证说 *Verstehen* 和 *Erklären* 都属于社会科学的方法。对 *Verstehen* 的见解可追溯到 G. 维柯和 J. G. 冯·赫尔德，但对它做详尽阐述的是狄尔泰，其目的是为了论证人文科学有独特的方法。不过，海德格尔和伽达默尔把 *Verstehen* 不仅视为一种认识方式，而且视为处在呈现无数可能性的世界中的人类的本质特征。

“对人类研究而言，*Verstehen* 的方法就是任何假定探究不能模仿自然科学的方法，用其他通常使用的术语讲就是那些‘人本主义的’或‘非科学主义的’的方法；*Erklären* 的方法是一种做出相反假定的方法。”——麦克唐纳和彼特：《语义学和社会科学》，1981 年，第 55 页。

古路

见“新路”条。

新路

[拉丁语，新近之路] 这个词指在奥康的威廉的著作影响下，兴起于 14 世纪的唯名论运动。它与在 12 至 13 世纪占统治地位的“*via antiqua*”（古路），包括托马斯主义、司各脱主义和奥古斯丁主义的唯实论学派相对立。该运动强调逻辑和直接经验，拒绝空洞的玄思和抽象。所谓“奥康剃刀”，即“如无必要，不应设置复数”的原则，是这个运动的基本精神。“新路”的拥护者们相信自然的齐一原则，并积极投身于科学研究。“新路”对近代物理学的后来发展产生了很大影响。

“奥康的教导多少具有一种刺激作用。它们唤醒了许多稍微有些独立的思想家，至少使得他们联合起来，反对老经院学者们的唯实论。这些‘唯名论者’（中世纪意义上的）建构了新路，但这与其说是一个学派，还不如说是一种思想倾向。”——伯霍尔（编）：《奥康：哲学著作》，1959 年，“绪论” li。

否定方法

否认用有限的性质指称上帝，通过使用诸如“无形的”、“非创造的”等形容词来描述超越于人类经验的上帝的一种方法。这种方法主张，

can come to know God by knowing what he is not. *Via negativa* is contrasted to *via positiva*, which ascribes to God positive attributes, such as omnipotence, omniscience and absolute goodness.

"The idea of God can be approached through the use of imagination (the *via imaginative*) and varies to the extent that it employs positive attributions (the *via positiva*) or negative (the *via negativa*). " — C. Taliaferro, in N. Bunnin and E. P. Tsui-James (eds) *The Blackwell Companion to Philosophy*, 1995, P. 452.

Via positiva, see *via negativa*

Vicious circle

Circular reasoning, also called begging the question or *petitio principii*, makes use of the conclusion to be proved as a premise, and hence renders the argument invalid. A circular definition explains the *definiens* in terms of the *definiendum* and renders the definition empty. Circularity in these cases is vicious. According to Russell, paradoxes in the foundations of mathematics are due to vicious circularity, for they violate the vicious circle principle that "whatever involves all of a collection must not be one of the collection". His theory of types is established on the basis of this principle and attempts to avoid all paradoxes of this sort.

Not all circularities in argument or definition, however, are vicious. All deductions mean to derive the conclusion from the premises and hence the conclusion must have been implied in the premises. If the circle is large enough, and the argument or definition can still provide new knowledge, it is considered to be a virtuous circle.

"The vicious circles in question all arise from supposing that a collection of objects may contain members which can only be defined by means of the collection as a whole." — Russell, *Collected Papers of Bertrand Russell*, VI, P. 4.

Vicious circle principle

Before Russell, Poincaré noticed that many paradoxes stem from viciously circular definitions, which he called impredicative definitions. Russell formulates a vicious circle principle to solve the various paradoxes at the foundation of mathematics. It has several versions, including "whatever involves all of a collection must not be one of the collection", "if, provided a certain collection had a total, it would have a member only definable in terms of that total, then the said collection is not total" or "whatever contains an apparent variable must not be a possible value of that variable". For Russell, all set theories which violate this principle are unintelligible and unsound. Corresponding to this principle, Russell established his theory of the hierarchy of types, according to which, whatever contains an apparent variable belongs

我们只有通过知道上帝不是什么, 才能最后认识他。否定方法与用诸如全能、全知、绝对的善等肯定属性来描述上帝的肯定方法相对应。

"上帝的观念能够通过想像(the *via imaginative*) 的使用来把握, 至于达到这个观念的途径, 则因使用肯定方法 (the *via positiva*) 还是否定方法 (the *via negativa*) 而有所不同。" ——塔里亚斐洛, 见布宁和崔-詹姆斯编:《布莱克韦尔哲学指南》, 1995 年, 第 452 页。

肯定方法

见“否定方法”条。

恶性循环

循环推理, 亦称“窃取论题”或 *petitio principii*, 即用待证的结论作为前提, 因而使证明无效。循环定义用“被定义项”说明“定义项”, 使定义变得空洞。这些情况下的循环都是恶的。根据罗素所说, 数学基础中的悖论是由恶性循环造成的, 因为它们违反了恶性循环原理, 即“凡是包含一个集合的全部元素者, 不得为该集合中的一个元素”。他的类型论是建立在这个原则的基础上的, 并试图避免所有这类悖论。

不过, 并非所有证明或定义中的循环都是恶性的。一切演绎都意味着从前提中引出结论, 因而结论必定已经蕴涵在前提中。如果循环足够大, 证明或定义仍然可以提供新知识的话, 那么, 这个循环可以被定义为“良性循环”。

“这里所说的恶性循环都出自如下假定: 一个对象的集合可以包含只能用整个集合来规定的元素。”——罗素:《罗素文集》, 第六卷, 第 4 页。

恶性循环原理

在罗素之前, 彭加勒注意到, 许多悖论起源于恶性循环定义, 他称之为非直谓定义。罗素制定了一个恶性循环原理, 以解决数学基础上的各种悖论。这个原理有几种说法, 包括如下: “凡是包含一个集合的全部元素者, 不得为该集合中的一个元素”; “如果假定某个集合有整体, 它就本应有一个只能根据那个整体来定义的元素, 这样一来, 所说的这个集合就不是完整的”; “凡是包含一个显变元的集合, 不得为该变元的一个可能值”。在罗素看来, 所有违反这条原理的集合论都是难以理解的和靠不住的。与这条原理相一致, 罗素建立了他的类型分级理论, 根据这个理论, 凡是包含一个显变元的集合都属于与该变元的可能值不同的类型。因此, 没有任

to a different type from the possible values of that variable. Hence no paradox will arise.

"These fallacies, ... are to be avoided by what may be called the 'vicious circle principle'; that is 'no totality can contain members defined in terms of itself'."—Russell, *Logic and Knowledge*, 1956, P. 75.

Vienna Circle

A philosophical and scientific movement originated in the 1920s under the leadership of Professor Moritz Schlick of the University of Vienna by a group of philosophers and scientists who shared many basic ideas. The name derived from the manifesto of the movement "The Scientific Conception of the World: The Vienna Circle", published in 1929. Leading members of the circle included M. Schlick, R. Carnap, O. Neurath, F. Waismann, H. Feigl and K. Gödel. Its philosophy, which is called "Logical Positivism" or "Logical Empiricism", was introduced to English readers by A. J. Ayer's book *Language, Truth and Logic* (1936). The Vienna Circle's journal *Erkenntnis* was its main medium of publicity, but it also published a series of monographs under the general title "Unified Science" (*Einheitswissenschaft*, German), and organised many international congresses. The Vienna Circle disintegrated after the death in 1936 of Schlick, who was shot by an insane student, and with the German invasion of Austria. Many members emigrated to United States, England and the Scandinavian countries, and exerted great influence in their new countries. Neurath made great effort to keep the movement going. He changed the title of *Erkenntnis* into *The Journal of Unified Science*. Together with Carnap he initiated publication of a series of works at the University of Chicago under the general title *The Encyclopedia of Unified Science*. In spite of these efforts, the Vienna Circle was no longer a school.

"The philosophers with whom I am in the closest agreement are those who compose the 'Viennese circle', under the leadership of Moritz Schlick, and are commonly known as logical positivists."—Ayer, *Language, Truth and Logic*, 1946, P. 32.

Vinculum substantiale

[Latin: substantial bond or chain] A controversial doctrine in Leibniz's later thought. Only monads are real in nature, and everything else is composed of them. A plurality of monads constitutes a corporeal substance if and only if they are united by a *vinculum substantiale* (a substantial chain); otherwise things would be mere phenomena. Thus, *vinculum substantiale* is necessary for the substantiality and unity of corporeal substance. It is itself a substantial thing, but not a monad or an accident. Leibniz introduced this doctrine in order to account for the miracle of transubstantiation, but it was criticised by Russell and others as being inconsistent

何悖论会出现。

"这些谬误……可以用所谓的'恶性循环原理'来避免,这个原理即'任何整体都不能包含由该整体本身规定的元素'。"——罗素:《逻辑和知识》,1956年,第75页。

维也纳小组

起源于20世纪20年代,由维也纳大学的M. 石里克教授领导,由一群共同有着许多基本看法的哲学家和科学家发起的哲学和科学运动。此名称得自于1929年发表的运动宣言“科学的世界观,维也纳小组”。该小组的主要成员包括M. 石里克、R. 卡尔纳普、O. 纽拉特、F. 魏斯曼、H. 费格尔和K. 哥德尔。该小组的哲学——叫做“逻辑实证主义”或“逻辑经验主义”——由A. J. 艾耶尔的《语言、真理和逻辑》(1936)介绍给英国读者。维也纳小组的杂志《认识》是其主要的公共媒介,但它还出版了一系列冠以总名称“统一科学”(德文为 *Einheitswissenschaft*)的专著,还组织了很多学术会议。在石里克于1936年死后(他为一个神经不正常的学生所枪杀),以及随着德国入侵奥地利,维也纳小组解散了。很多成员移居到了美国、英国和斯堪的纳维亚国家,并在这些新的国家产生了极大的影响。纽拉特作出巨大努力来使运动继续前进。他把《认识》的名称改为《统一科学杂志》,他和卡尔纳普一道共同发起在芝加哥大学出版总题目为《统一科学百科全书》的系列著作。尽管有这些努力,维也纳小组不再是一个学派。

“我与之观点密切一致的哲学家是在石里克领导之下组成‘维也纳小组’的那些人,他们以逻辑实证主义者而广为人知。”——艾耶尔:《语言、真理和逻辑》,1946年,第32页。

实体链

[拉丁文,实体纽带或实体链] 莱布尼茨晚期思想中颇有争议的一个学说。只有单子在性质上是实在的,一切事物都由单子构成。许多单子构成一个物质实体,当且仅当这些单子是由 *vinculum substantiale* 联结起来的;否则事物就只是现象。因而, *vinculum substantiale* 对于物质实体的实体性和统一性是必不可少的。它本身是实体性的东西,但不是单子,也不是偶性。莱布尼茨提出这个学说是为了说明基督教的化体奇迹,但遭到了罗素等人的批判,认为这个学说与他的单子论的基本原则不一致,在单子论

with the general tenet of his theory of monads within which monads themselves are responsible for the unity of corporeal substances.

"If that substantial chain (*vinculum substantiale*) for monads did not exist, all bodies, together with all of their qualities, would be nothing but well-founded phenomena."—Leibniz, *Philosophical Essays* (eds. and trans. Aricew and Garber), 1989, p. 198.

Virtue

[Greek: *arete*, also translated as excellence. In English, virtue is a transliteration from Latin; *virtus*, manliness.] In Greece, virtue was not only human excellence or moral virtue, but also the excellence of anything in performing its essential function. Excellence at cutting is the virtue of a knife; excellence at seeing is the virtue of eyes. The traditional Greek human virtues are generally thought to include courage, temperance, piety, justice and wisdom, but there were conflicting beliefs about them. Socrates devoted all of his life to clarifying the meaning of these virtues, claiming crucially that virtue is knowledge. One main aspect of Plato's theory of ideas was to establish the metaphysical foundation for moral virtues and to determine how a man should live.

Aristotle inferred on the basis of its original meaning that virtue is a thing's good performance of its functions that human virtue is the excellence of man in performing his rational function. A good man performs well activities involving thought. Since a man not only has the ability to think, but also has the ability to control his desire and conduct by reason, Aristotle divides virtue into intellectual virtue, including, among others, practical wisdom (*phronesis*) and theoretical wisdom (*theoria* or contemplation), and moral or ethical virtues (excellence of character). These latter are internalised dispositions of action, desire and feeling closely connected with practical wisdom. Aristotle's ethics is essentially a theory of virtue.

For Epicurus, virtue is necessary for happiness not because it is an essential ingredient, but because it is a means to its attainment. For Stoicism, virtue is a pattern of behaviour that follows from a disposition perfectly in tune with Nature's rationality, and it is the only choiceworthy good. In its later development, moral virtue is understood differently in different cultures. The seven Christian cardinal virtues include Plato's four virtues in the *Republic* (courage, temperance, wisdom and justice), plus faith, hope and love.

In addition to the nature of virtues, philosophers have explored relations among the virtues themselves, relations between virtues and non-virtuous states, the place of virtues in our psychology and their role in achieving happiness. Virtues offer a basis for ethical life rivalling those provided by Kantian principles or utilitarian calculation of happiness,

中, 单子本身对物质实体的统一性负责。

“如果用于各种单子的实体链 (*vinculum substantiale*) 不存在, 那么, 一切物体, 连同它们的全部性质都不过是有可靠根据的现象。”——莱布尼茨:《哲学文集》(阿瑞和加伯编译), 1989年, 第198页。

德性

[希腊词 *arete*, 也可译为“卓越”。在英语中, “德性”是对拉丁词 *virtus* (意为“男子气概”) 的字母直译。在希腊, 德性不仅指人的卓越或道德德性, 也指任何东西在履行它的本质功能中的卓越。在切割上的卓越是刀子的德性, 在观看上的卓越是眼睛的德性。传统希腊人所认定的人类德性一般被认为包括勇敢、节制、虔敬、正义和智慧。但对于这些德性有着冲突性的信念。苏格拉底终身致力于澄清这些德性的意义, 庄重地宣称德性就是知识。柏拉图理念论的一个主要方面就在于为道德德性确立形上学的基础和确定一个人应怎样生活。

德性的原来意义是一物在履行其功能时的卓越, 依此为基础, 亚里士多德推论道, 人类的德性是履行其理性的功能的卓越。一个好的人出色地从事一切需要思想的活动。既然一个人不仅有思想的能力, 也有通过理性控制自己的欲望和引导行为的能力, 亚里士多德把德性划分为理智的德性(包括实践智慧 *phronesis* 和理论智慧 *theoria* 或沉思)和道德的或伦理的德性(性格的卓越)。这后者是与实践智慧密切相关的内在化的行为、欲望和感情的性情。亚里士多德的伦理学在本质上是一种德性论。

对于伊壁鸠鲁, 德性对于幸福是必要的, 不是因为它是—一个实质性的组成成分, 而是因为它是达到幸福的一个工具。对于斯多亚派来说, 德性是行为的范式, 它来自于与自然理性完善地和谐的一种性情, 并且它是惟一可选择的善。在它的后来的发展中, 道德德性在不同的文化中有不同理解。七种基督教的主要德性包括柏拉图在《国家篇》中的四种德性(勇敢、节制、智慧和正义), 加上信、望、爱。

在德性的性质之外, 哲学家们也研究了诸德性之间的关系, 德性与非德性的状态的关系, 德性在我们的心理学中的位置以及在获得幸福中的作用。德性为伦理生活提供了一个基础, 可与康德主义原则所提供的基础或为功利主义的对幸福的计算所提供的东西所媲美, 虽然对于伦理的说明也许应合理地包括原则、后果和德性。德性伦理学在近来的复苏, 部分原因是出于对其他主要伦理观点的抽象普遍性质的不满, 并打算通过强调在具体的个人那里培育德性来

although an account of ethics might reasonably include principles, consequences and virtues. A recent revival of virtue ethics has been motivated in part by dissatisfaction with the abstract universal nature of the main alternative views and is intended to correct this through the emphasis on cultivating virtues in concrete human individuals.

"Virtue, then, is a state that decides, [consisting] in a mean, the mean relative to us, which is defined by reference to reason, i. e., to the reason by reference to which the intelligent person could define it. It is a mean between two vices, one of excess and one of deficiency." —Aristotle, *Nicomachean Ethics*, 1107a1-4.

Virtue (Kant)

In contrast to the Aristotelian tradition which defined virtue as a settled habit or disposition, Kant defined virtue as a struggle and as a moral strength of will in overcoming temptation to transgress the law, that is in resisting urges and inclination opposed to the demands of duty. A virtuous person has a strong sense of duty or a strong reverence for the moral law. Kant claimed that the traditional virtues are valuable only as a means to the ends of a good will, but he also ascribed to virtue an important place in his moral theory. He divided his *Metaphysics of Morals* into two parts: the doctrine of rights, which is a doctrine of morality in general, and the doctrine of virtue, which concerns duties that do not come under external laws. The doctrine of virtue is also divided into two parts. The first deals with duties of virtues to oneself as both an animal being and as a moral being, and the second deals with the duties of virtues to others.

"The capacity and considered resolve to withstand a strong but unjust opponent is fortitude, and with respect to what opposes the moral disposition within us, virtue (moral fortitude)." —Kant, *Metaphysics of Morals*, II, introduction.

Virtue ethics

An ethical theory which takes virtue as primary and asserts that the central question of ethics, "how should I live?", can be construed as "what kind of person should I be?". Its goal is to describe types of character which are admired within a certain culture or society. For the ancient Greeks, ethics was something concerned with character (*ethos*), and hence ethics was understood as virtue ethics. Most Socratic dialogues examine the common beliefs about what virtue is. Plato in his *Republic* discussed four cardinal virtues and connected them to different parts of the soul. Aristotle's *Nicomachean Ethics* is the most celebrated system of virtue ethics. He connected virtue with human function and *telos*, divided virtue into intellectual and moral virtues, and argued that a full virtue is a disposition to choose and act and is the mean state between deficiency and excess relative

修正它。

“德性因而是一种决定状态,是一种相对我们的中道,是为理性所界定,即参照那据此明智的人能够界定它的理性。它是两恶——一个是过度,一个是不足之间的中道。”——亚里士多德:《尼各马可伦理学》,1107a1-4。

德性(康德)

与亚里士多德把德性定义为稳定的习惯或性情的传统不同,康德把德性定义为意志的一种斗争和道德力量,表现于在克服那些违反法则的诱惑,也就是在对抗那种与职责相对立的冲动和偏向中。一个有德性的人是有强烈职责感的人,或对道德法则高度尊重的人。一方面,康德主张,传统德性之所以有价值只是由于作为善良意志这个目的的手段。另一方面,他也在他的道德理论中对德性赋予重要地位。他把他的《道德形而上学》分为两个部分:作为道德一般学说的权利学说,和关于不受外部法则支配的责任的德性学说。德性学说依次划分为两个部分:一是论述对于自己既作为一动物存在又作为一道德存在的德性职责,另一部分论述对于他人的德性职责。

“反抗一个强大而不公正的对手的能力和有意识的决心是坚忍,如果与我们之中的道德倾向相关,则是德性(道德坚忍)。”——康德:《道德形而上学》,II,导言。

德性伦理学

把德性看成是主要的伦理理论,它提出伦理学的中心问题“我应该怎样生活”可以建构为“我应该是哪一种人?”它的目的在于描述在一定的文化或社会之中受到敬重的品格类型。因为在古希腊,伦理学是与品格相关的,因此,伦理学被建构为德性伦理学。大多数的苏格拉底对话考察了对德性的一般信念。柏拉图在他的《国家篇》中讨论了四种主要的德性,并把它们与灵魂的不同部分连接起来。亚里士多德的《尼各马可伦理学》是德性伦理学的最著名的体系。他把德性与人的功能和目的连接起来,把德性分为理智的和道德的德性,并且主张一种完备的德性是一种选择和行动的性情(品质),是为实践理性所规定的相对于人的过度与缺失之间的中道。对于斯多亚派而言,德性在于与自然一

to a person that is prescribed by practical reason. For the Stoics, virtue lay in conformity to nature and the virtuous life was self-sufficient. Virtue ethics continued to develop in the medieval era, especially in Aquinas, but declined with the rise of modern ethical theories, in particular utilitarianism and deontology, which take it that morality must be determined by the calculation of utility of the consequences of action or by the rules and principles governing moral actions. In this century there has been a revival of virtue ethics, represented by Anscombe, MacIntyre, Williams, Foot, von Wright, and Annette Baier. It claims that modern ethical theories cannot help us to deal with many moral problems and that the focus of ethical consideration must shift from the agent's action to the agents themselves and to their ambitions and projects. Virtue ethics is essentially a neo-Aristotelian position. However, while some virtue theorists tend to give up all modern principle based ethics, others argue that Aristotelian ethics fails to deal with the moral problems regarding the relationship among human beings and must be revised.

The major issues discussed in virtue ethics include the formation of characters, practical reason, moral education, connections between character and friendship, and the analysis of specific traits such as courage, loyalty, shame, guilt and many traditional vices. This is a newly exploited area and much discussion is still going on. Although such an approach cannot do all the work of ethics, it is valuable for uncovering the character-forming area of life which has long been ignored by other moral theories.

"Whether criticisms will emerge that eventually undercut virtue-ethics only time will tell. But the problems of other views and the richness and distinctiveness of an ethics of virtue that discards moral notions without falling into egoism may at least assure us that virtue ethics must be taken seriously as a theoretical option." —Michael Slote, *From Morality to Virtue*, 1994, P. 263.

Virtuous circle, see vicious circle

Visual field

The totality of a person's visual sense-impressions or immediate perceptions at a given time. This field includes all true or false visual data immediately acquired without any element of inference. It is a mental field of vision, rather than the range of external spatial things that are available to a person's eye. Parallel notions include other sensory fields connected with touch, hearing, taste and smell. All these together form the notion of a sense-field.

"Whenever I open my eyes I am aware of a coloured field of view, which I will call a 'visual field'." —Broad, *Scientific Thought*, 1969, P. 285.

致,而有德的生活就是自足的生活。在中世纪,德性伦理学继续发展,特别是在阿奎那那里,但它随着现代伦理理论的兴起而衰落,特别是功利主义和道义论的兴起而衰落。在这两者里,道德为对行为后果的功利计算所确定,或为支配道德行为的原则或规则所确定。在20世纪,德性伦理学得到复兴,代表人物有:安斯康、麦金太尔、威廉姆斯、福特、冯·赖特、A. 培尔等。它认为现代伦理理论不能帮助我们解决许多道德问题,伦理考虑的焦点应当从行为者的行为转到行为者本身,转到行为者的志向和规划。德性伦理学实质上是一种新亚里士多德主义的观点。不过,当某些德性伦理学家倾向于放弃所有的现代以原则为基础的伦理学时,有人则认为,亚里士多德的伦理学不能处理涉及到人们之间关系的道德问题,所以必须被修正。

德性伦理学讨论的主要问题包括,品格的建构、实践理性、道德教育、品格与友谊的连接,具体品质诸如勇敢、忠诚、羞愧、负罪以及传统的恶的多种形式。这是一个全新的探讨领域,许多讨论仍在进行。虽然这样一种伦理方式不能做所有的伦理研究,但对于揭示生活的品格形成领域——这一长期被其他道德理论所忽视的领域——是有价值的。

"是否会出现一些批评,最终将把德性伦理学彻底推翻,那只有时间能告诉我们。但是其他观点所存在的问题以及德性伦理学的明显长处,即它摒弃道德观念而不落入利己主义,就至少使我们应严肃地把德性伦理学看做一种理论选择。"——斯洛特:《从道德到德性》,1994年,第263页。

良性循环

见“恶性循环”条。

视域

一个人在特定时刻的全部视觉印象或直接知觉。它包括所有直接获得的没有任何推理成分的或真或伪的视觉材料。它是一个心的视觉域,而不只是一个人的眼睛能够看到的外部空间范围。与之平行的概念包括与触觉、听觉、味觉和嗅觉相连的感觉域,所有这些一起构成感觉域概念。

"每当我睁开眼睛,我就看到一个有色彩的视觉领域,我将称之为'视域'。"——布劳德:《科学思想》,1969年,第285页。

Vitalism

The doctrine which holds that living organisms owe their characteristics to some special vital principle, which is subject to different laws from those governing physical matter, so the behaviour of living things cannot be sufficiently explained in mechanistic or materialistic terms. Thus this doctrine, in opposition to mechanistic explanations of life, insists on a fundamental distinction between organic and inorganic phenomena. Aristotle, as the ancestor of vitalism, claims that the life of an animal consists in a *psyche* (Greek, soul) which by teleological causation accounts for the morphological development of the organism. In modern times, the French philosopher Bergson forcefully argued for vitalism, using the concept of *élan vital* (life force). Vitalism is challenged by the development of molecular genetics which tends to support the view that physiological processes also follow the laws of physics and chemistry.

"Aristotle thought that there was a vegetable soul in every plant or animal, and something similar has been widely believed by vitalists." —Russell, *Human Knowledge*, 1948, p. 46.

Void

A term introduced by the Greek atomists Leucippus and Democritus for empty space. Earlier Greek thinkers held that what is must have a bodily form, but the atomists argued that what has no bodily form also really exists, and that is the void. On Aristotle's interpretation, the void is not a continuous space, but is rather what occurs in between bodies, while Epicurus described the void simply as the space that bodies may and may not occupy. The conception of the void enabled atomism to explain how plurality and movement are possible and in this way reacted to the Eleatic challenge which denied the possibility of plurality and movement. It was also the first abstract conception of passive and empty space, which was indispensable to classical physics, although discarded by quantum mechanics.

"Democritus ... calls space by these names - 'the void', 'nothing' and 'the infinite', while each individual atom he calls 'hing' ('nothing' without 'not'), the compact and being." - Aristotle, *On Democritus* (fragments).

Volition

The act of will which precedes a bodily movement, sometimes used as a synonym for choosing, determining or preferring. Volition is presented as the ground of the distinction between intentional or voluntary action and mere behaviour. On this basis, we infer that many actions are voluntary, willed or caused by volition. According to the Cartesian tradition, the will is an entity which acts to translate our ideas into voluntary actions. This doctrine came under fire from Ryle who claimed that there is neither direct nor indi-

活力论

这种学说主张活的有机体应将其特性归之于某种特殊的活力原理,它隶属于与支配物质的定律不同的定律,因此生物的行为不能用机械论的或唯物论的术语来作充分说明。因此,这一学说与对生命的机械论说明相反,坚持在有机现象和无机现象之间作出根本的区分。亚里士多德是活力论的开山祖师,他认为动物的生命在于 *psyche* (希腊文,灵魂),它根据目的论的因果性说明有机体形态学的发展。在现代,法国哲学家柏格森竭力主张活力论,他使用了 *élan vital* (生命力) 这个概念。活力论受到分子遗传学发展的挑战,它倾向于支持这样的观点:生理过程也遵循物理和化学定律。

"亚里士多德认为,在每一植物或动物之中都有一植物性灵魂,活力论者一直广泛地相信某种类似的观点。"——罗素:《人类的知识》,1948年,第46页。

虚空

由希腊原子论者留基波和德谟克利特引入的术语,指无内容的空间。古希腊早期思想家认为,一切存在物必定有一物体形式,可原子论者认为,无物体形式的东西也是真实存在的,那便是虚空。根据亚里士多德的解释,虚空不是连续的空间,而是出现在物体之间的东西。伊壁鸠鲁则把虚空描绘成物体可能占有也可能不占有的空间。虚空的概念使原子论能够解释多样性与运动是如何可能的,因而是对埃里亚学派挑战的一种回应。埃里亚学派否认多样性与运动的可能性。虚空也是第一个关于被动的和无内容的空间的抽象概念。后者对于经典物理学是不可或缺的,虽然为量子力学所否决。

"德谟克利特以这些名称来称呼空间: '虚空'、'无'和'无定',而把每个单个原子叫做'hing' (将'无'(nothing)去掉前缀'not')、凝聚物则是(存在)。"——亚里士多德:《论德谟克利特》(残篇)。

意志

在身体运动之前的意愿活动,有时与选择、决定和偏爱通用。意志被认为是意向活动或自愿活动与纯粹的行为之间的区分的基础。在此基础上,我们推断许多活动是主动的、意愿的或由意志所引起的。在笛卡尔的传统中,意愿是一个存在物,它将我们的观念转译为意志活动。这一学说遭到赖尔的攻击,赖尔声称既没有直接的证据也没有间接的证据表明意志的存在。而且,如果意志被说成是一个心的活动并且是意

rect evidence to prove the existence of volitions. Furthermore, if volitions are said to be mental acts and are the basis of voluntary actions, we may ask whether volitions are voluntary or involuntary. If they are voluntary, then the voluntary acts are themselves preceded by a voluntary act, and we enter an infinite regress; if they are involuntary, there will be an absurd result that voluntary acts are based on involuntary mental acts. There are various attempts to solve this dilemma, but none has gained general approval. The later Wittgenstein also claimed that if we view volitions as acts of willing, we will be confronted with the consequence that one could will willing. It is uncertain whether new theoretical approaches to the mind and mental states will revive interest in volitions and the will.

"Volitions have been postulated as special acts, or operations, 'in the mind', by means of which a mind gets its ideas translated into facts." —Ryle, *The Concept of Mind*, 1949, p. 62.

Voluntarism

[from Latin *voluntas*, will] Any philosophical position which holds the concept of will as the central explanatory principle. Will is the origin of all order of essence and moral laws. To be meaningful is to be willed. In contrast, reason is subordinate to will and is even rejected as idle. Will is a higher faculty than the intellect. The tradition of voluntarism in Western philosophy is associated with the tradition of irrationalism. It was a predominant aspect of fourteenth-century and fifteenth-century medieval thought and has been a trend in modern and contemporary philosophy. In different fields, it is presented in different forms, including doxastic voluntarism, which claims that believing is willing; ethical voluntarism, which proposes that the will is the ultimate source of moral value; metaphysical voluntarism, which claims that the will is the ultimate principle of reality and rejects determinism and intellectualism; and theological or theistic voluntarism, which holds that religious beliefs are not determined by reason and claims that God's will is the moral law.

"This term [of voluntarism], classical but in need of clarification, was applied to both man and God. We know it in its application to man — that is, in terms of the problem of beatitude, one asks by what power of the intellect or the will the soul enters into the possession of the absolute good, into the enjoyment of the divine trinity." —Vignaux, *Philosophy in the Middle Ages*, 1959, p. 204.

Voluntary-involuntary

[Greek: *hekousia-akousia*, although these terms, employed by Aristotle, are more comprehensive than their English counterparts] A voluntary action is done by an agent who has the initiative in himself and involves neither compulsion nor reluctance. The agent knows the important circum-

志活动的基础,那我们就可以问:“意志是由意志控制的还是不由意志控制的?”如果它是由意志控制的,那么意志活动本身又须后继于一个意志活动,而这样就会包含一个无限后推;如果它是不受意志控制的,那就会得出这样的荒谬结果:不受意志控制的活动是意志活动的基础。有各种不同的尝试来解决这一两难,但没有哪一个得到普遍的认可。后期维特根斯坦也声称,如果我们将意志看做意愿活动,那么我们就面对这样的问题:一个人可以意愿意愿,很难说关于心与心的状态的新的理论研究能否复兴对意志和意愿的兴趣。

“意志被假定为‘在心中’的特殊的活动和操作,通过意志,一个心将观念转变为事实。”——赖尔:《心的概念》,1949年,第62页。

意志论

[源自拉丁语 *voluntas*, “意志”] 指把意志概念作为核心解释原则的哲学立场。意志是一切本质秩序和道德规则的根源。有意义的都是被意欲的。相反,理智从属于意志,甚至被当做无用的东西而被否定。意志是比理智更高的一种能力。在西方哲学中,意志论传统和非理性主义传统紧密相连。它是14至15世纪的中世纪思想中的主导方面,在近现代和当代哲学中,也是一种倾向。在不同领域,它有不同的表现形式,例如,宣扬相信就是意志的“信念意志论”;提出意志是道德价值最终来源的“伦理意志论”;主张意志是实在的终极本原,并否定决定论和理智论的“形而上学意志论”;认为宗教信念不由理智决定,并断言上帝的意志是道德律令的“神学意志论”或“有神论意志论”。

“[意志论]这个词虽然古典,但需要澄清,它既适用于人,也适用于上帝。我们知道它适用于人的方面——即依据至福问题,人祈求通过理智或意志的什么力量,灵魂进入绝对善的拥有状态,进入神圣的三位一体的快乐。”——韦格劳克斯:《中世纪哲学》,1959年,第204页。

自愿与非自愿

[希腊文 *hekousia-akousia*, 虽然亚里士多德对这些术语的运用远比它们的英语对应词的含义来得复杂] 一个自愿行为是一个行为者自己主动做的,既不是强迫也不是不情愿,行为者知道将影响他的行为结果的重要环境。非自愿

stances which will affect the result of his action. An involuntary action is done under threat of force or owing to ignorance. Sometimes Aristotle ascribes voluntary actions also to animals and children, although generally he confines them to those agents he believes to be capable of rational desire. The voluntary-involuntary distinction is used to determine the conditions for ascribing responsibility. A man is responsible only for what he has done voluntarily.

"These receive praise or blame when they are voluntary, but pardon, sometimes even pity, when they are involuntary." — Aristotle, *Nicomachean Ethics*, 1109b30-1.

Vorstellung

[German; literally, putting forward; normally translated as representation] In addition to being a term for representation, *Vorstellung* is employed as a counterpart of the British empiricist terms "idea" or "sense-datum" and is used in a variety of ways by different philosophers. For these reasons, many authors prefer not to translate it into English. For Kant, representations include sensations, intuition, concepts and ideas and thus appear in sensibility, understanding and reason. Representations provide the elements which are combined in judgement. The categories are representations, and the "I think" which must be able to accompany all my representations is a representation. Representations can be as ephemeral and subjective as sensations and as robust and objective as spatiotemporal objects, that is Kantian appearances. Ideas, which for Kant differ radically from empiricist ideas, are representations which go beyond the possibility of experience. Hegel contrasted *Vorstellung* with "concept". Schopenhauer claimed that "the world is my *Vorstellung* (representation)".

"Kant in effect makes his philosophical starting-point a notion of *Vorstellung* or an 'idea'. This 'idea' or experience can be thought of as the interface between the experiencing mind, the subject, and something in the world, an object." — Podro, *The Manifold in Perception*, 1972, p. 9.

Voting paradox

A paradox relating to social choice discovered by Condorcet in 1785. It is a special case of "Arrow's paradox". Suppose that three voters, John, Smith and David, vote to choose one among three candidates A, B, C. John's sequential ordering of preference is $A \succ B \succ C$; Smith's ordering is $B \succ C \succ A$; and David's ordering is $C \succ A \succ B$. The consequence of voting according to these preferences will be that a majority prefers A to B, a majority prefers B to C, and a majority prefers C to A. Hence although each individual has an ordering of choice, no ranking in society which is consistent with this will emerge. This indicates the difficulty of transmitting the aggregation of individual preferences into a social choice. It also shows that the majority rule principle, which

行为是在强力威逼下或无知的情况下做的。有时亚里士多德把自愿行为归于动物和儿童,虽然一般他把自愿行为限定在那些他认为有理性欲望能力的行为者上。自愿与非自愿的区分亦被用作确认责任归属的条件。一个人只对他自愿地做的事负责。

"当他们是自愿时,就要受到赞扬或责备;而当他们是非自愿时,就要受到宽恕,有时甚至怜悯。"——亚里士多德:《尼各马可伦理学》,1109b30-31。

表象

[德语词,字面意思是“提出”,通常英译为 representation] 除了表象这个词的意义外, *vorstellung* 也用作英国经验论的“观念”或“感觉材料”的对等词,并且被不同的哲学家以各种方式使用。为此,许多作者宁可不把它翻译为英语。对于康德来说,表象包括感觉、直观、概念和理念,因此存在于感性、知性和理性中。表象提供了在判断中被结合的要素。范畴是表象,那必须可伴随我的一切表象的“我思”也是一个表象。表象可以像感觉一样是短暂的和主观的,像时空中的对象一样是坚实的和客观的,那就是康德的所谓现象。理念,对康德来说与经验主义的观念截然不同,是超越经验可能性的表象。黑格尔以“概念”来与表象相对比。叔本华主张:“世界是我的表象。”

“康德实际上使表象或‘观念’的概念成为他的哲学起点,这个‘观念’或经验可被思维为经验着的心灵即主体和世界中的事物即对象之间的相互作用。”——波卓:《杂多的知觉》,1972年,第9页。

选举悖论

由孔多塞于1785年发现的与社会选择有关的一个悖论。它是“飞矢悖论”的特殊情况。假设有三个选民,约翰、斯密斯和戴维,他们要从三个候选人A, B, C中选择一个。约翰喜欢的排列顺序是 $A \succ B \succ C$;斯密斯的顺序是 $B \succ C \succ A$;戴维的顺序是 $C \succ A \succ B$ 。根据这种排列得出的选举结果就会是,一部分赞同A而不太赞同B,而一部分则赞同B而不赞同C,剩下的一部分是赞同C而不赞同A。这样,虽然每个人都有自己的选择顺序,但却没有出现整个社会一致的排列。这表明要把所有的个人偏好转变为一种社会的选择非常困难。这还表明,被看做是民主本质的大多数人准则的原则并没有人们

is supposed to be the essence of democracy, is less clear than is supposed to be the case. For if election is sequential, the majority preferences would be cyclic.

“The best known example of a voting procedure’s producing an irrational result is given in the so-called ‘paradox of voting’ which had already been fully characterised in the nineteenth century.” — Philip Pettit, *Judging Justice*, 1980, p. 146.

所想像的那样清楚。因为，一旦选举是连续不断的，那么大多数人的偏好就会是循环的。

“选举过程产生非理性结果的著名例证是所谓的‘选举悖论’，这在19世纪就已经得到了充分的描述。”——彼替特：《评判正义》，1980年，第146页。

W

Warranted assertibility

A term introduced by John Dewey as a substitute for knowledge or truth in order to indicate that knowledge is gained as result of an ongoing, self-correcting process of inquiry, rather than as a result of internal mental activity. An assertion is a judgement arrived at after determining the significance of the related data. If this assertion does the work which it is supposed to do, it is warranted. Any warranted assertion must be refined and justified by being subjected to continuous testing through public experience. From the viewpoint of warranted assertibility, there is no absolute truth known by rational insight with certainty and knowledge is not a system of truths.

"If inquiry begins in doubt, it terminates in the institution of conditions which remove need for doubt. The latter state of affairs may be designated by the words belief and knowledge. For reasons that I shall state later I prefer the words 'warranted assertibility'." —Dewey, *Logic*, 1938, p. 7.

Wayward causal chain

Also called a deviant causal chain or causal deviance. In normal causation, if a person performs an action because he intends to do it, then his intention is the cause of his doing it. But sometimes causation can go astray and deviate from the normal route in intentional action, perception, meaning or memory. For example, because Smith is angry with Jones, Smith decides to go to Jones' home to injure him. On the way, he drives recklessly and hurts somebody. The injured person happens to be Jones. In such a case, Smith realises his intention to hurt Jones, but that occurs only as an accidental consequence. Does this mean that Smith does the hurting intentionally in this case? The existence of wayward causal chains creates problems for the analysis of normal causal chains.

"Since there may be wayward causal chains, we cannot say that if attitudes that would rationalise x cause an agent to do x, then he does x intentionally." —Davidson, *Essays on Actions and Events*, 1980, p. 79.

Weakness of will, see will

得证的可断言性

由 J. 杜威用来取代知识或真理的术语, 以表明知识的获得是一种不断发展和自我校正的探索过程的结果, 而不是内心心理活动的结果。断言是在确定了相关资料的意义后达到的判断。如果这种断言做到了假设它能做的, 它就是得到证明的。任何得证的断言必须经受持续的公众经验的检验以修改和辩护。从得证的可断言性的观点看, 不存在理性洞察力可以确切知晓的绝对真理, 知识并非一个真理系统。

“如果探究起始于疑问, 则它终止于对不再需要疑问的条件之制定。后一种事态可用信念和知识等词来标明。出于后面将要陈述的理由, 我喜欢用‘得证的可断言性’来表示。”——杜威: 《逻辑》, 1938 年, 第 7 页。

无常因果链

又称“变异因果链”或“因果异常”。在正常的因果关系中, 如果一个人做出一个活动是因为他有此意向, 则他的意向是其活动的原因。但有时在意向活动、知觉、意义、记忆中, 因果关系会偏离正常的路线。例如, 司密斯因为某事而生琼斯的气, 他决定到他的家里去打他。在路上, 他开车不小心撞伤了某人, 而这个被撞伤的人恰好就是琼斯。在这样一个个案中, 司密斯实现了他伤害琼斯的意向, 但这个伤害的发生却只是一个偶然的结果。司密斯在这个个案中故意进行了伤害吗? 无常因果链的存在对正常的因果分析提出了问题。

“因为可能有无常因果链, 我们就不能说, 如果将 x 理性化的态度导致一个行为者做 x, 那么他就是意向性地做 x。”——戴维森: 《关于行动与事件的论文集》, 1980 年, 第 79 页。

意志薄弱

见“意愿”条。

Wedge argument

A species of the slippery slope argument, elaborated by Bishop Sullivan against legalising active euthanasia. Once a single instance of direct killing is approved of by society, we have admitted the thin edge of a wedge. We will then inevitably concede more cases by pressing the wedge forward and eventually put all life at risk. To avoid this terrible consequence, we should outlaw from the very beginning any mercy killing. But many philosophers reject this argument on the grounds that we are reasonable enough to distinguish between justifiable killing and unjustifiable killing.

"...to permit in a single instance the direct killing of an innocent person would be to admit a most dangerous wedge that might eventually put all life in a precarious condition."—Sullivan, in Kohl (ed.), *Beneficent Euthanasia*, p. 14.

Welfare

Welfare and its relations to rights, needs and equality are familiar topics in contemporary political philosophy. Welfare can be discussed regarding individuals and regarding society. Individual welfare concerns good for the individual, but there is debate concerning whether individual good should be understood in terms of the satisfaction of actual preferences, of needs or of well-informed, long term interests. Social welfare concerns the overall good for society. Some believe that all social goods can be reduced to individual goods and that every aspect of social goods can be derived from individual goods. It follows from this view, which is called welfarism, that a state should focus on individual goods. Others argue that some types of social goods are irreducible. This debate leads to a further difference. Unlike traditional political thinking for which the primary goal of a state is the security of its citizens, contemporary political philosophy considers that the main function of a modern state is to promote welfare and justice. According to some, however, the state should promote individual goods, while others believe that the state should maximise social welfare. A welfare state takes a basic minimum of material welfare for its citizens to be a primary concern of policy-making.

"'Welfare' is a vague term. It may refer only to means to physical well being, such as food, housing, and medical care. Or it may include also some means to mental or spiritual well being, such as education, art galleries, museum, and theatres."—Raphael, *Problems of Political Philosophy*, second edition, 1990, p. 49.

Welfarism

If the overall good of society is a function of the individual welfare of its members, the state can promote its welfare by promoting the welfare of its citizens. According to welfarism, all social goods can be reduced to individual goods.

楔子论证

沙利文主教为反对把主动安乐死合法化而提出的一种“滑坡论证”。一旦一个社会允许直接杀人的某个个案，我们就已经容纳了楔子的锋利边沿，而我们将不可避免地推进这个楔子，在更多的例子上让步，最终把所有的生命推到危险的处境。为了避免这个可怕的后果，我们应在一开始就应该宣布安乐死为非法。但许多哲学家认为，我们有足够的理由区分正当杀人和不正当杀人，故拒斥这一论证。

“……允许在某个例案中直接杀死一个无辜的人，将允许一个最危险的楔子，它将最终把所有生命推到一个危险的处境。”——沙利文，见科尔编：《仁慈安乐死》，第14页。

福利

福利以及它与权利、需要和平等的关系是当代政治哲学的热门话题。对福利的讨论可以联系到个人也可联系到社会。个人福利涉及的是个人的利益，但在个人的利益是否应理解为对实际偏好的满足，理解为对全面、长远利益的需要这一问题上存在争议。社会福利涉及的是全面的社会利益。一些人认为，全部社会利益可以分解为个人利益，社会利益的每一方面都可由个人利益导出。这种观点被人们称为福利主义，由这种观点又可进而得出一个国家应关注个人利益的结论。另一些人则争论说，某些类型的社会福利是不能分解的。对这一问题的争论又导致了进一步的分歧。与一个国家的首要目的是保护其公民的安全这一传统的政治思想不同，当代政治哲学认为现代国家的主要功能是促进福利和正义。可是，在一些人看来，国家应当促进个人的利益，而另一些人则认为国家应最大限度地增加社会的福利。一个福利国家把其公民的基本的和最低的物质福利作为制定政策的首要问题。

“‘福利’是一个含义模糊的概念。它可仅指物质福利的条件，如食品、住房及医疗。或许它还包括一些智力或精神福利的设施，如教育、艺术画廊、博物馆及剧院。”——拉菲尔：《政治哲学问题》，第二版，1990年，第49页。

福利主义

如果全部社会利益是其成员个人利益的一个功能，那国家就能通过促进其公民的福利来促进它的福利。福利主义认为，全部社会利益可以分解为个人的利益，社会利益的每一方面都

and every aspect of social goods can be derived from individual goods. Hence, a state should focus on individual goods, through means such as health insurance, free education, unemployment benefits and children allowance, to promote the good of society. This account of the role of the state contrasts with the eighteenth and nineteenth century view that the main function of the state is to protect the security of its citizens from both outward invasion and internal instability. The idea of welfarism, which is considered by some to be state paternalism, has been adopted more in Western European than in the United States. In recent years, with a shortage of funding and misgivings about the alleged negative effects of welfare on its recipients, the positive picture of welfare has come under pressure.

"Welfarism, requiring that the goodness of a state of affairs be a function only of the utility information regarding that state." — Sen, *On Ethics and Economics*, 1987, p. 39.

Well-being

[Greek: *eudaimonia*, usually translated as happiness] Some philosophers prefer the translation "well-being" to "happiness" to catch the peculiarity of what Plato and Aristotle called *eudaimonia* in contrast to the modern notion of happiness. *Eudaimonia* as a state of satisfaction is not for one moment or one day, but a matter for one's whole life. As an important independent notion in modern ethics, well-being roughly means what it is for a single life to go well.

"I shall use the expression well-being for such a state." — B. Williams, *Ethics and the Limits of Philosophy*, 1985, p. 34.

Well-formed formula

An expression or a string of symbols in a logical system which conforms to the formation rules of that system. It is equivalent to a grammatical sentence in natural languages. A simple well-formed formula is formed out the basic vocabulary of the formal system and its deductive rules, while a complicated well-formed formula is constructed out of simple well-formed formulae. All well-formed formulae can be explained within that system. If the formula contains a variable not bound by a quantifier (a free variable), it is an open well-formed formula; otherwise, it is a closed one. Well-formed formula is generally abbreviated as wff. Since there is no interest in ill-formed formulae, well-formed formulae are often simply called formulae. Axioms and theorems of a system are among its well-formed formulae.

"Consider the class of all permutations of some set of elements of a language we shall use 'L'. The formation rules of L divide the class of all possible permutations into two mutually exclusive subclasses, one of which will comprise all of the grammatically permissible or well-formed formulations (for short, 'wffs') of L; the other subclass will comprise the

可由个人利益导出。因此,一个国家应关注个人的利益,通过诸如健康保险、免费教育、失业救济和儿童津贴等方式促进社会利益。对国家作用的这一说法与18世纪、19世纪的观点形成对照,那时的观点认为,国家的主要功能是保护其公民不受外来侵略和内部动乱的危害。福利主义的思想在一些人看来是国家的家长式统治,它在西欧比在美国得到更多的接受。近些年来,随着福利基金的短缺及对所谓的福利对其享受者的负面作用的担忧,福利的积极的前景已受到压力。

"福利主义,要求事态的良好只是关于这一事态的有效信息的功能。"——森:《论伦理学和经济学》,1987年,第39页。

好生活

[希腊词 *eudaimonia*, 一般被译成“幸福”]某些哲学家为了抓住柏拉图和亚里士多德称之为 *eudaimonia* 的特征,而宁可用“好生活”而不用“幸福”,因为它不同于我们现在所说的“幸福”。*Eudaimonia* 作为一种满意的状态,不是某一时某一天,而是一个人一生的事情。在现代伦理学中,好生活成了一个重要的独立的概念,它的大致意思是一个人的生活过得好。

"对这样一种状态,我将用‘好生活’这个词。"——威廉姆斯:《伦理学与哲学的限度》,1985年,第34页。

合式公式

在一种逻辑体系中的一种表达式或一串符号,它与这一体系的构成规则相符合。它相当于自然语言中一个语法句子。一个简单的合式公式由那种形式系统的基本词汇及它的推论规则构造出来,而一个复杂的合式公式由简单的合式公式构造出来。所有的合格公式都可在那个体系中得到解释。如果这一公式包含一个变项而不被一个量词(自由变元)限制,它就是一个开放的合式公式,否则,它就是一个封闭的合式公式。合式公式通常缩写为“wff”。由于没有人对不合式公式感兴趣,合式公式常常被简称为公式。一个体系的公理和定理都属于合式公式。

"我们将使用‘L’来考虑一种语言的某组因素全部排列的集合。L的构成规则将全部可能的排列集合分为两个相互排斥的子集。其中一个将包含所有L在语法上所允许的或合式的公式(简称‘wffs’),另一个子集将包括由L的因素构成的表达式,然而却不是L的语法上正确的表达式。"——朗德:《社会科学哲学》,1966年,第13页。

expressions which, made up of elements of L, are nevertheless not grammatically correct expressions of L." — Rudner, *Philosophy of Social Science*, 1966, p. 13.

Well founded phenomena

Also called true phenomena or real phenomena. Leibniz's term for material bodies. In his later metaphysics, only monads exist in nature, and all other things are not true substances but only phenomena. Their unity cannot be explained merely in terms of the modification of extension. Thus, material bodies do not form a part of the Leibniz's fundamental ontology. Instead they are composed of monads and their individual modifications. Their existence is to be explained in terms of the existence of monads and their properties, which are the foundations of the phenomenal derivative force exerted by material things in motion. Material bodies are aggregates of true substances (or monads). On this basis, Leibniz called material bodies well-founded phenomena or the result of monads.

"I showed that bodies are only aggregates that constitute a unity accidentally, or by extrinsic denomination and, to that extent, are all well-founded phenomena." — Leibniz, *Philosophical Essays* (eds. and trans. Ariew and Garber), 1989, p. 319.

Wff, abbreviation of well-formed formula

What-it-is

[Greek: *ti esti*, the essential nature of a thing or the object of a definition, from the question *ti esti*, what is this thing? what is it? as used to seek the general and essential nature of a thing] The philosophy of Socrates consists in seeking the what-it-is of such things as justice and courage. Finding out what-it is depends on is. Only when a thing is, can one ask what it is.

Aristotle classified ten kinds of being or categories. In the broad sense, each kind of being has its what-it-is. For example Socrates is a man or white is a kind of colour. In a narrow sense, what-it-is is only used for the category of substance because in Aristotle's theory of being, the existence of all secondary categories depends on substance. Just as he distinguished being in its primary sense from being in secondary senses, he also distinguished what-it-is in its primary sense from what-it-is in its subordinate senses. The primary sense belongs to substance, and the subsidiary senses belong to the other categories. On this basis Aristotle usually used what-it-is as a synonym of substance.

"For in one sense the being meant is what it is or a this." — Aristotle, *Metaphysics*, 1028a12.

有可靠根据的现象

莱布尼茨的用语,亦称“真的现象”或“实在的现象”,指物质体。在他晚期的形而上学中,自然中只有单子存在,其他一切东西都不是真正实体,而只是现象。它们的统一性不可能仅仅用广延的变形来说明。因而物质体并不构成莱布尼茨的基本本体论的一部分,它们反倒是由单子和单子的个别变形构成的。它们的存在是用单子的存在和单子的性质来说明的,这些单子和性质是活动的物质东西所运用的现象派生力的基础。物质体是真实体(或单子)的聚集。根据于此,莱布尼茨称物质体是“有可靠根据的现象”,或单子的“结果”。

“我曾表明,物体只是聚集物,这些聚集物偶然地或根据外在的类别而构成统一体,在此范围内,物体全都是有可靠根据的现象。”——莱布尼茨:《哲学文集》(阿瑞和加伯编译),1989年,第319页。

合式公式

“合式公式”的缩写。

是什么

[源自希腊语 *ti esti* (事物的本性或定义的对象), 来自问题 *ti esti* (“这事是什么?”“它是什么?”), 被用来寻求一物的一般性质和本质] 苏格拉底的哲学在于寻求诸如正义、勇敢等事物的“是什么”。寻找“是什么”依赖于“是”。只有当一个事物“是”,人们才能问它是什么。

亚里士多德划分了十类“是”或范畴。在其广义上,每一类“是”都有其“是什么”。例如,“苏格拉底是人”,“白是一类颜色”,但在狭义上,“是什么”只是用来指本体的范畴。因为在亚里士多德的“是”〔存在〕论中,所有第二范畴的存在依赖于本体。正如亚里士多德区分了第一义的“是”和第二义的“是”一样,他也区分了第一义的“是什么”和第二义的“是什么”。前者属于本体,后者属于其他范畴。在这一基础上,亚里士多德常常把“是什么”用作是本体的同义词。

“在一种意义上,‘是’〔存在〕意为‘是什么’或‘这一个’。”——亚里士多德:《形而上学》,1028a12。

Wide states, see narrow states

Will

The human ability to desire something, to choose and decide courses of action and to initiate actions according to one's choice or decision. The will is a wish which we believe we are capable of realising through effort. The act of will, or volition, contains both cognitive and conative elements. Will has been a puzzling topic for philosophers. Plato first characterises it as a part of the soul, along with reason and appetite (or bodily desire), although philosophers disagree whether Greek philosophy had a fully developed conception of the will. Descartes also considered the will to be a faculty of mind. This traditional faculty view was rejected by Ryle, who provided a behaviourist account instead. Consistency between will and reason is often seen to be a virtue. If will fails to follow reason, it is called weakness of will [Greek: *akrasia*]. Weakness of will, free will and determinism and free will and moral responsibility have been major issues in ethics. Hume claimed that will rather than reason mainly determines one's behaviour. On his view, reason alone could never be a motive to any action of the will. For Kant, a good will, which is reason in its practical employment, is the basis for rational ethics. Schopenhauer sets will as the first principle in his *The World as Will and Idea*. Will remains a subject of intense interest and controversy in contemporary philosophy.

"Willing, then, can be defined as wishing, involving a decision, that has as its object something that is to be realized by ourselves and that we confidently expect to take place as a result of our desiring it." —Brentano, *The Foundation and Construction of Ethics*, 1952, p. 201.

Will (Kant)

Kant distinguished between *Wille* and *Willkür*, although both are translated as will in English. As the power of self-determination, *Wille* is the source of ought and obligation. It is not a product or discovery of the understanding, but is a faculty of acting according to a conception of law. It is generally associated with freedom, autonomy and spontaneity, and as practical reason itself it is home of the moral law. *Willkür* is the capacity for decision or choice, which is both determined by *Wille* and affected by sensuous impulses. It is thus heteronomous. It chooses between the imperatives stemming from *Wille* and the desires. By this distinction, Kant set aside the traditional problem about the relation between free will and determinism. His separation between the will as practical reason and the capacity for choice was

广状态

见“狭状态”条。

意愿（或译“意志”）

指人类欲望某物、选择并决定行为过程、按照自己的选择或决定来采取行动的能力。这意愿是我们相信自己能够通过努力来实现的愿望。意愿或意志的行为既包含认知的也包含意动的因素。意愿是个让哲学家们迷惑的话题。柏拉图首先将它说成是灵魂的一部分，另外的部分是理性与欲望（或身体的欲望）；不过，哲学家们关于古希腊中是否有了充分发展的意愿概念，还有各自的不同意见。笛卡尔也将意愿视为心灵的一种能力。赖尔拒绝这种传统的能力观，并对意愿提出行为主义的解释。意愿与理性的一致常被看做是一种美德。如果意愿没有能跟从理性，就被称之为“意志薄弱”（希腊文是 *akrasia*）。意志薄弱、自由意愿（意志）与决定论、自由意愿与道德责任是伦理学中讨论的主要问题。休谟认为，意愿而非理性首要地决定一个人的行为。在他看来，理性独自绝不能成为任何意愿行为的动机。对于康德说来，善的意愿做为在实践运用中的理性是理性伦理学的基础。叔本华在他的《作为意志和表象的世界》一书中将意愿当做是第一原则。在现代哲学里，意愿仍然是个引起强烈兴趣和争论的话题。

“因此，意愿可以被定义为涉及某个决定的愿望；这愿望将那要被我们自身实现的某物当做自己的对象，我们信心十足地期待着它的出现，而且就是作为我们渴望它的那种结果而出现。”——布伦塔诺：《伦理学的基础和构造》，1952年，第201页。

意志（康德）

康德区分了 *(Die) Wille* 和 *(Die) Willkür*，尽管这两个词在英文中都被译作“Will”。 *(Die) Wille* 是指自我决定的能力，是应当和义务的源泉。它不是知性的产物或发现物，而是按照法则概念而活动的官能。它一般相联于自由、自律和自发性，并且与实践理性自身同一。它是道德法则的发源地。 *(Die) Willkür*（任意，决意）则是决定或选择的能力，它既被 *(Die) Wille*（意志）所决定，又受感性冲动的影响。因此它是他律的。它在出于意志的绝对命令与欲望之间做出选择。通过这种区别，康德撇开了自由意志和决定论之间关系的传统问题。然而他把作为实践理性的意志和选择的能力分离开来，使尼采认为他使意志只是作为实体化的东西。

claimed by Nietzsche to make the will only a hypostatisation.

"Insofar as it is combined with the consciousness of the capacity of its action to produce its object, it is called will, or choice [Willkür], if not so combined, its act is called a wish. The faculty of desire whose internal ground of determination and consequently, even whose likings are found in the reason of the subject is called the Will [der Wille]." —Kant, *The Metaphysics of Morals*, introduction.

Will of all

Rousseau's term for the aggregate of the private and individual wills of members of a society. The will of all is the total of what all persons individually want. A particular will involves what one wants for oneself alone and does not take into consideration the interests of others. Since each private will conflicts with other private wills, a civil society needs a general will which is directed to the common interest. A general will is not the will of all, but Rousseau claims that it can be determined from the will of all by finding what is common to all once the conflicting elements in the will of all are cancelled. It is not clear that we can determine the general will in this way or that the general will is a good basis for deciding the policy of a state. Possibly a state should allow a certain amount of conflict. Critics of Rousseau argue that his emphasis on the general would allow intolerance through a form of totalitarian democracy.

"There is often a great deal of difference between the will of all and the general will; the latter considers only the common interest, while the former takes private interest into account, and is no more than a sum of particulars." —Rousseau, *The Social Contract*, II, 3.

Will to believe

A term introduced by William James in 1897 as the title for one of his most influential essays. He argued that on many occasions we are forced to choose one of two alternatives, and that there is no intellectual ground for choosing one rather than the other. Then we must let emotion or passion determine our decision in terms of the effect that each choice would have upon our states of mind or subsequent life. Accordingly, we have no rational basis for deciding the question whether God exists, but we tend to believe in God's existence because this would provide us with a ground for optimism. The same applies to the choice between believing in free will and believing in determinism. Critics argue that the lack of a rational basis for choice does not legitimate a non-rational basis and that the burden of proof is not satisfied by emotional consequences.

"I have brought with me tonight ... an essay in justification of faith, a defence of our right to develop a believing attitude in religious matter, in spite of the fact that our merely logical intellect may not have been coerced. 'The will

"就它与其产生其对象的活动能力的意识相结合而言,它被称为意志,或选择[Willkür],如果不是这样结合的,它的活动被称为意愿。欲望官能可以在主体理性中找到它做出决定的内部根据,甚至爱好,这种官能被称为意志[der Wille]。"——康德:《道德形而上学》,导言。

众意

卢梭用来表示社会成员私人和个人意志的总和的术语。众意是所有人的个人要求的东西的总和。个别意志包含的是一个人为自身所要求的东西,它不考虑其他人的利益。由于每一私人意志都与其他私人意志相冲突,因而一个市民社会需要一种由共同利益指引的公意。公意不是众意,但卢梭认为,一旦众意中相互冲突的因素被取消,就可通过发现对所有的人是共同的东西而根据众意来确定它。我们能否以这种方式确定公意,或者说公意是否是决定一个国家政策的良好基础,这些都还不清楚。一个国家也许应当允许一定数量的冲突的存在。卢梭的批评者认为,他对公意的强调会导致以极权主义的民主形式出现的偏执。

"众意与公意之间经常总有很大的差别;后者只考虑公共的利益,而前者考虑私人的利益,众意不过是个别意志的总和。"——卢梭:《社会契约论》,II, 3。

相信意愿

W. 詹姆斯于1897年作为其最有影响的论文之一的题目而引进的术语。他论辩说,在许多情况下,我们被迫在两者之间作出选择,而又没有理智的基础来决定选择这个而不是那个。那么我们就让情绪或冲动根据每一选择对我们的心的状态或以后的生活的影响来决定我们的选择。据此,我们没有理性的根据决定上帝是否存在,但我们倾向于相信上帝的存在,因为这给我们的乐观精神提供依据。这同样也适用于在相信自由意志与相信决定论之间所作的选择。而批评者们认为缺乏一种选择的理性基础并没有使一种非理性的基础合法化;证明的任务不能由情绪后果来完成。

"我今晚带来了一篇关于信仰辩护的论文,辩护我们在宗教事物中发展一个相信态度的权利。尽管我们的纯粹的逻辑智力并未被强制这样做。因此,‘相信意愿’是本文的题目。"——詹姆斯:《相信意愿及其他》,1897年,第2页。

to believe', accordingly, is the title of my paper." — James, *The Will to Believe and Other Essays*, 1897, p. 2.

Will to power

Nietzsche's term for the most basic human drive to attain a higher and more perfect state, an insatiable desire to manifest power and a drive to employ and exercise power. For him, life itself is the will to power. This drive is characterised by self-overcoming and sublimation. It is a disposition to get power in self-control, art and philosophy. It is life-affirming rather than a desire to dominate others. For Nietzsche, philosophy is the most spiritual expression of the will to power. Nietzsche's book *The Will to Power* was edited by his sister from a series of fragments, headings and reflections. It was once regarded as a source of fascist ideology, but this view is untenable upon serious scholarly examination.

The will to power as an hypothesis to explain the world and the nature of reality is also a metaphysical doctrine. Nietzsche claimed that the world is the will to power. The world is viewed as a monster of energy, eternally self-creating and eternally self-destroying. The will of power is meant to be the basis for explaining all changes. It is neither being nor becoming, but is a tendency of all forces to extend their influence in relation to all other forces in determining the intelligible character of the world. The will to power is also called "efficient force", "quanta of force", or "driving force". Despite Nietzsche's attack on metaphysics, Heidegger held that the will to power is Nietzsche's answer to the metaphysical question about the essence of what is.

"Indeed life itself has been defined as an increasingly efficient inner adaptation to external circumstances (Herbert Spencer). But this is to misunderstand the essence of life, its will to power. We overlook the prime importance which the spontaneous, aggressive, expansive, re-interpreting, re-directing and formative powers have, which 'adaptation' follows only when they have had their effect." — Nietzsche, *On the Genealogy of Morals*, Sect. 12.

Wisdom

[Greek: *sophia*] In a popular sense, skilfulness in some craft. A wise person is the master of any skill, in contrast to an unskilled labourer, and this is a practical aspect to its meaning. However, Aristotle offered a technical account of wisdom as knowledge of general principles and absolutely first causes. This wisdom is concerned with permanent truths, including both demonstrative knowledge and knowledge of undemonstrable premises. In this use, wisdom is contrasted with craft and practical reason. In the *Metaphysics*, Aristotle claimed that he was seeking wisdom in this sense. Hence, *sophia* is equivalent to first philosophy. In the

对力量的意愿〔或译“权力意志”〕

尼采使用的一个词，表示最基本的人类冲动，即要进入更高的和更完美的状态的冲动；又表示一种永不会被满足的去表现力量的欲望和一种去使用和行使力量的冲动。在他看来，生命或生活本身就是对力量的意愿。这种冲动的特点是战胜自身和升华。它是要在自身控制、艺术和哲学中得到力量的那种倾向。它是对生命的肯定，而不是要控制他人的欲望。在尼采看来，哲学是对于这种力量意愿的最富精神性的表达。尼采的书《对力量的意愿》〔一般译作《权力意志》〕是他妹妹依据他留下的散篇、摘记和反思记录编辑而成。它曾被认为是德国法西斯意识形态的一个来源，但这种看法经不住严肃的学术检验。

对力量的意愿既是解释世界和现实的本质的一种假设，也是一种形而上学的学说。尼采认为世界就是对于力量的意愿。这世界被视为一个充满能量的魔鬼，在永恒地创造自身和毁灭自身。对力量的意愿的说法旨在成为解释一切变化的基础。这种意愿既非存在，亦非生成，而是一切要扩张其影响的力量所具有的倾向；这些力量在决定这个世界的可理解性时与所有其他的力量相关联。对力量的意愿也被称为“有效力”、“力的总量”或“冲力”。尽管尼采攻击形而上学，海德格尔还是认为对力量的意愿是尼采对于存在者本质这样一个形而上学问题的回答。

“的确，生命本身已被定义为对于外部环境不断增加的有效内适应(H. 斯宾塞)。但这种说法误解了生命的本质，也就是其对于力量的意愿。我们忽视了自发的、进取的、扩张的、重新解释的、重新定向的和构造性的力量所具有的重要性；只有当这些力量产生出了效果，‘适应’才跟着出现。”——尼采：《论道德的谱系》，第12节。

智慧

〔源自希腊词 *sophia*〕在一般用法上，意为娴熟于某种技艺。与一个无技艺的劳工相比，任何技艺的掌握者都是有智慧的人。这是其意义的实践性方面。不过，亚里士多德将智慧用作一个专门术语，指对一般原则和绝对第一原因的知识。这一意义上的智慧关注永恒真理，包括证明知识和对不可证明的前提的知识。在这一用法上，智慧与技艺和实践理性相对。在《形而上学》中，亚里士多德声称他是在寻求这种意义上的智慧。因而，智慧等同于第一哲学。在《尼各马可伦理学》中，亚里士多德认为智慧是高于实

Nicomachean Ethics. Aristotle considered wisdom to be a higher kind of intellectual virtue than practical reason.

"Wisdom is the most exact form of knowledge." —Aristotle, *Nicomachean Ethics*, 1141a16.

World 1, see world 3

World 2, see world 3

World 3

According to Popper, traditional philosophy has recognise two worlds. The first is material and the second is conscious and mental. Popper developed a new conceptual schema of a three-fold world. World 1 is the material world, which includes all physical objects and states. World 2 is the mental world, which includes immediate perceptual experiences, other mental states and behavioural dispositions. World 3 includes objective contents of thought, including problems, theories, criticisms and their unintended consequences. World 3 is essentially a world of storage, including the records of human intellectual efforts that are preserved in libraries and museums. The content of thought is the product of individual human minds, but once thoughts are produced, they transcend their producers, and are independent of anybody who thinks or expresses them. They bring with themselves all sorts of consequences and problems which are unintended and unforeseen by us, their makers, and are beyond our control. They causally affect us and become objects of our knowledge and even the main object of World 2. In this sense the contents of thought are autonomous and have their own logic of development which can be reduced to neither World 1 nor World 2. Although World 3 is human-made, its autonomy makes it similar to Plato's world of forms or ideas. This world is timeless and results in the evolution of human language. Through his account of World 3, Popper developed not only a new ontological classification, but also a new justification for the objectivity of knowledge. World 3 provides an argument against sociological relativism and psychologism. The account of the nature and existence of such a separate world has provoked critical discussion, with some concerning the relation between World 3 and World 2.

"We can call the physical world 'World 1', the world of our conscious experience 'World 2', and the world of the logical contents of books, libraries, computer memories, and suchlike 'World 3'." —Popper, *Objective Knowledge*, 1972, p. 74.

World-soul

[Latin: *anima mundi*] Some philosophers argue that if

实践性的理智德性。

"智慧是知识的最精确的形式。"——亚里士多德：《尼各马可伦理学》，1141a16。

世界 1

世界 2

见“世界 3”条。

世界 3

根据波普的观点，传统哲学一直承认两个世界：一个是物质的，另一个是意识的和精神的。波普提出了一种新的三重世界的概念框架。他称物质世界为“世界 1”，包括所有的物理对象和状态，称精神世界为“世界 2”，包含当下的感知经验，其他心理状态和行为意向。此外还有一个第三世界，或世界 3，由思想的客观内容所组成，包括问题，理论，批评，以及它们的未曾想到的结论。世界 3 本质上是一个贮藏的世界，记录着保存在图书馆和博物馆中的人类智力成果。思想的内容是单个人心灵的产物，但一旦思想产生出来，就超越其生产者，独立于表达或思考它们的任何人。它们给自己带来各种为我们、它们的生产者所未曾意想和预料到的后果和问题，超脱出我们的控制。它们反过来因果地影响着我们，成为我们知识的对象，甚至是世界 2 的主要对象。在这种意义上，思想的内容是自主的，有着它们自身的发展逻辑，既不能还原为世界 1，也不能还原为世界 2。尽管世界 3 是人造的，但它的自主性使它类似于柏拉图的形式世界或理念世界。这个世界是永恒的，导致了人类语言的进化。通过确立起世界 3，波普不仅提出了一种新的本体论分类，也为知识的客观性提供了一种新的辩护。世界 3 是他用以反对社会学相对主义和心理主义的有力工具。然而，围绕着是否存在这种分离的世界，尤其是它与世界 2 的关系，存在着种种讨论和批评。

"我们称物理世界为‘世界 1’，称我们意识经验的世界为‘世界 2’，而称书本、图书馆、计算机记忆以及这类东西的逻辑‘内容’的世界为‘世界 3’。"——波普：《客观知识》，1972 年，第 74 页。

世界灵魂

〔拉丁语为 *anima mundi*〕有些哲学家认

the universe is in harmonious celestial motion, there must an animating principle or soul to control it, just as the human soul controls the human body. Accordingly, the world should be viewed as an animated living organism, the soul of which is the world-soul. The idea of a world soul was popular in Pre-Socratic philosophy and was well elaborated in Plato's *Timaeus* in which the world is endowed with a soul by a creator or *Demiurge*. The human soul should be modelled on the world-soul to achieve harmony among its different parts. This doctrine of the world soul was developed in Stoicism and Neoplatonism and through them in medieval philosophy. It was revived by Schelling and plays role in contemporary environmental philosophy.

"Already in the most ancient times it was believed that the world was pervaded by an animating principle, called the world-soul." —Schelling, *Ideas for a Philosophy of Nature*, introduction.

为,如果宇宙处于和谐的天体运动中,就必定存在一个有生命的本原或灵魂在支配它,犹如人的灵魂支配人的肉体一样。因此,世界应被看成一个活的生命有机体,它的灵魂就是世界灵魂。世界灵魂的观念在前苏格拉底哲学中很流行,柏拉图在其著作《蒂迈欧篇》里又作了精心阐述,按该书的说法,创造者或“造物主”(Demiurge)给世界赋予了灵魂。人的灵魂应摹仿世界灵魂,以实现其各个不同部分的和谐。这种世界灵魂学说在斯多亚学派和新柏拉图主义那里,并通过它们,在中世纪哲学中得到了发展。它被谢林在近代复活,并在当代环境哲学中起作用。

“在久远的古代,人们就已经相信,世界由一种有生命的原则,即所谓的世界灵魂所充满。”——谢林:《自然哲学观念》,“导言”。

Z

Zeno's paradoxes

Zeno of Elca established a series of arguments against plurality and motion; these arguments are mutually related, with the aim of defending the thesis of his teacher Parmenides that what is is one and unchanging. These arguments are preserved by Aristotle in the *Physics* and by the Greek commentators on this book. Most of these discussions, however, are very compressed and this has given rise to very diverse interpretations. As a result there are various versions of each argument.

The two main arguments against plurality are as follows: (1) If there is a plurality of things, they are both (a) so small as to have no magnitude, and (b) so large as to be infinite. The proof of (a) is: the plurality must be composed of a number of indivisible units; but if the unit has magnitude, it must be divisible; if it is indivisible, it has no magnitude; and the composite of a number of non-magnitude units has no magnitude. The proof of (b) is: if there are many things, each must have magnitude; otherwise neither their addition nor their subtraction will make any difference to another thing, and will be nothing at all; if then, it must have at least two separate magnitudes, and each of them has magnitude and can be further divisible; since this process can go on forever, a thing will be unlimitedly large. (2) If there is a plurality of things, they must be both (a) limited and (b) unlimited. The proof of (a) goes: if there are many things, there must be just as many of them as they are, and neither more nor less; but if there are just as many as they are, they are limited. The proof of (2) goes: if there are many things, there are always other things between things that are there; and between these in turn other things; thus the things that are are unlimited.

The paradoxes against motion are four: the Dichotomy, Achilles and the Tortoise, the Flying Arrow and the Moving Rows; the so-called Stadium paradox is ambiguous in that some think it is a reworking of the Dichotomy, and others that it is a reworking of the Moving Rows. Sometimes just these four paradoxes are called Zeno's Paradoxes.

The general implication of Zeno's paradoxes is that they expose the intrinsic difficulties in the instinctive assumptions of ordinary human experience about plurality, motion, space and time, though some argue that he has a particular target which is the confusion between the geometrical point, arithmetical unit and physical magnitude in the Pythagoreans.

芝诺悖论

古希腊埃利亚学派的哲学家芝诺提出了一系列反对多与动的论点; 这些论点是彼此相关的, 旨在为其老师巴门尼德建立的万物为一旦永不变化的学说辩护。在亚里士多德的《物理学》中, 以及在对此书的古希腊注释家那里, 都保存了芝诺的这些论点。然而, 其中大部分论述都被大幅度压缩了, 这便引发了五花八门的解释。结果, 原来的每个论点到现在都有不同的说法。

反对多的两大论点如下: (1) 假如有许多事物, 那么它们都是 (a) 小得不能再小或者 (b) 大得不能再大 (即无限之小或无限之大)。前者 (a) 的证据是: 多必须是由一些不可分割的单元构成的; 但是, 如果每个单元具有量值或大小, 那肯定是可分割的; 如果它是不可分割的, 那它就没有量值或大小; 一些无量值的单元的组合是没有量值的。后者 (b) 的证据是: 如果有许多事物, 各个必须有量值或大小; 否则, 它们的增减与另一事物将会没有什么差异, 也就是说不会成为任何东西; 然而, 如果它肯定有至少两个可分的量值, 那么各个都有量值, 并且可以进而分割; 由于这一过程可以永远继续下去, 所以一物将是无限之大。 (2) 倘若有许多事物, 那么它们必须都是 (a) 有限的或者 (b) 无限的。前者 (a) 的证据在于: 假如有许多事物, 那么它们必然像现有事物一样多, 既不多也不少; 然而, 如果有像事物本身一样多的事物, 那么它们就是有限的。后者 (b) 的证据在于: 假如有许多事物, 那么在这些事物之间总有其他事物; 在这些其他事物中又有其他事物; 因此事物是无限的。

反对动的悖论有如下四个: 二分法悖论, 阿基里斯与乌龟悖论, 飞矢悖论与运动列悖论; 所谓竞技场悖论是歧义性的, 因为有人认为那是二分法悖论的重复, 也有人认为那是飞矢悖论的重复。有时所谓的“芝诺悖论”只是指这四个悖论。

芝诺悖论的基本含义是它们揭示了一些内在的难题, 这些难题存在于有关多、动和时空的普通人类经验之本能性假设之中; 当然, 也有一些人认为芝诺的特定目标是针对毕达哥拉斯学派所提出的几何点、算术单位与物理量值之间所存在的混乱现象的。这些悖论包括时空是否

These paradoxes involve the problem of whether space and time are infinitely divisible, and whether they are composed of indivisibles. These are basic philosophical conceptions and are also the fundamental mathematical conceptions, so Zeno's paradoxes attract endless interest from both philosophers and mathematicians; and there is still dispute as to whether Zeno's arguments are valid, and how to refute them. The method used by Zeno in these paradoxes is *reductio ad absurdum* which had great influence on the development of dialectic and philosophical reasoning.

"At some time in the first half of the fifth century BC, Zeno invented the set of paradoxes on which his successors have sharpened their wits."—G. E. L. Owen, *Logic, Science and Dialectic*, 1986, p. 45.

Zero Method

A method manifesting the underlying form of language by constructing a tautology through a combination of signs. Because of their tautologous form, these signs completely cancel out the significance of their material content. The zero method is a logical method of constructing a model on the assumption of complete rationality. Someone who is imperfectly rational might consider that the propositions have content even though they are tautologies.

"The proposition of logic demonstrate the logical properties of propositions by combining them so as to form propositions that say nothing. This method could also be called Zero-method."—Wittgenstein, *Tractatus*, 6.121.

Zoroastrianism

A Persian religion that started in the sixth century BC and whose dominance in that area was not replaced until the rise of Islam in the seventh century AD. Its scriptures are called the *Avesta*, and its founder was the prophet Zarathustra (Greek: *Zoroaster*). Its characteristic feature is its dualism. The force of darkness and evil (*Angra Mainyu*) is equally matched with the force of light and goodness (*Ahura Mazda*), and they are locked in a struggle from the beginning of the world to its end. Hence Zoroastrianism is not troubled by the paradox which arises from attempting to reconcile God's omnipotence and evil in the world. Parts of its teachings were assimilated by Mithraism and Manicheanism. There are still Zoroastrian believers around Bombay, India. The term is familiar in the contemporary philosophical world largely because Nietzsche employed Zarathustra as his spokesman in *Thus Spake Zarathustra*.

"The religion of struggle is dualistic. Zoroastrianism is the classic example, and in this type man participates in the cosmic conflict."—J. Macquarrie, *Twentieth-Century Religious Thought*, 1971, p. 221.

可以无限分割、时空是否由不可分割之物构成等等问题。这些均是基本的哲学概念，也是基本的数学概念，所以芝诺悖论引起了哲学家和数学家们的无穷兴趣；关于芝诺悖论是否有效以及如何对其进行驳斥等方面依然存在争议。在这些悖论中，芝诺使用的方法是归谬法，此方法对发展辩证的和哲学的理性思维产生了巨大的影响。

“公元前5世纪上半叶的某个时期，芝诺发明了一套悖论，在此基础上他的思想继承者们使各自的机智变得更加敏锐了。”——欧文：《逻辑、科学和辩证法》，1986年，第45页。

置零法

一种显明语言深层结构的方法，它通过符号的结合构成一重言式。这些符号因为其重言式的形式而完全消除了其实质内容的意义。置零法是基于完全合理性假设来构造一模型的逻辑方法。一个不完全理性的人可能会认为，命题尽管是重言式也有内容。

“逻辑命题通过把命题结合成无所言说的命题而表明其逻辑性质。这种方法也可以称为置零法。”——维特根斯坦：《逻辑哲学论》，6.121。

祆教

波斯宗教，始于公元前6世纪，直到公元7世纪伊斯兰教兴起并取而代之时止，它在该地区居统治地位。它的圣经被称为“阿维斯塔”(*Avesta*)，它的创立者是先知查拉图斯特拉(希腊语 *Zoroaster*)。它的根本特征是二元论。黑暗和恶(*Angra Mainyu*)的力量与光明和善(*Ahura Mazda*)的力量势均力敌，从世界的开始到结束，它们都交织在一起，进行着斗争。因此，祆教没有被源于企图协调上帝的全能和世界的邪恶之间关系的那个悖论所困扰。它的部分教义被同化进米特拉教和摩尼教。在印度的孟买一带，现今仍有祆教信徒。祆教这个词之所以为当代哲学界所熟悉，很大程度上是因为尼采在《查拉图斯特拉如是说》中把查拉图斯特拉作为他的代言人。

“斗争的宗教是二元论的。祆教就是古典例证，按这个范例，人参与了宇宙冲突。”——马库阿里：《20世纪的宗教思想》，1971年，第221页。

附录

西方主要哲学家及其代表作

A

- Abelard, Peter (1079-1142) P. 阿布拉**
French medieval logician. *Dialectica; Concerning Genera and Species*.
法国中世纪逻辑学家。《辩证法》;《关于种和属》。
- Adorno, Theodor W. (1903-69) T. W. 阿多尔诺**
German philosopher of the Frankfurt School. *Dialectic of the Enlightenment* (with Horkheimer, 1947); *Negative Dialectics* (1966).
德国法兰克福学派哲学家。《启蒙辩证法》(与霍克海默合著, 1947);《否定辩证法》(1966)。
- Ajdukiewicz, Kazimierz (1890-1963) K. 阿吉图库威茨**
Polish analytical philosopher. *Language and Knowledge*, 2 vols (1960-5).
波兰分析哲学家。《语言与知识》(2卷本, 1960-1965)。
- Albert the Great (c. 1206-80) 大阿尔伯特**
Medieval Aristotelian, teacher of Aquinas. *Opera Omnia*.
中世纪亚里士多德主义者, 阿奎那的老师。《小著作》。
- Albo, Joseph (c. 1360-1444) J. 阿波**
Jewish philosopher. *The Book of Principle* (1425).
犹太哲学家。《原理书》(1425)。
- Alexander, Samuel (1859-1938) S. 亚历山大**
Australian-British philosopher of science and of religion. *Space, Time and Deity* (1920).
澳裔英国科学哲学与宗教哲学家。《空间、时间与神性》(1920)。
- Alston, William (1921-) W. 阿尔斯通**
American epistemologist and philosopher of religion. *Divine Nature and Human Language* (1989), *Epistemic Justification* (1989), *Perceiving*

God (1991).

美国知识论与宗教哲学家。《神性与人类语言》(1980);《认知辨明》(1989);《知觉神》(1991)。

Althusser, Louis (1918-90) L. 阿尔杜塞

French structural Marxist. *For Marx* (1965).

法国结构马克思主义者。《保卫马克思》(1965)。

Anaxagoras (500-428 BC) 阿那克萨戈拉

Pre-Socratic natural Philosopher.

前苏格拉底自然哲学家。

Anaximandros of Miletus (flourished. c. 550 BC) 阿那克西曼德

Pre-Socratic natural philosopher, member of the Ionian School.

前苏格拉底自然哲学家, 伊奥尼亚学派成员。

Anaximenes of Miletus (fl. c. 550 BC) 阿那克西美尼

Pre-Socratic natural philosopher, member of the Ionian School.

前苏格拉底自然哲学家, 伊奥尼亚学派成员。

Anderson, John (1893-1962) J. 安德森

Scottish-Australian philosopher. *Studies in Empirical Philosophy* (1962).

苏格兰裔澳大利亚哲学家。《经验哲学研究》(1962)。

Anscombe, G (ertrude) E (lizabeth) M (argaret) (1919-) G. E. M. 安斯康

British analytical philosopher. *Intention* (1957); *An Introduction to Wittgenstein's Tractatus* (1959); *Collected Philosophical Papers* (3 vols, 1981).

英国分析哲学家。《意向》(1957);《维特根斯坦〈逻辑哲学论〉导论》(1959);《哲学论文集》(3卷本, 1981)。

Anselm of Canterbury, St (1033-1109) 安瑟尔谟

Medieval philosopher, father of Scholasticism and author of the ontological argument. *Monologion*; *Proslogion*.

中世纪哲学家, 经院哲学之父, 本体论证明的发明者。《独白》;《宣讲》。

Antichus of Ascalon (c. 130 BC-68 BC) 安提贡

Hellenistic philosopher, leader of Middle Platonism.

希腊化时代哲学家,中期柏拉图主义领袖。

Antisthenes (c. 444BC-c. 366 BC) 安提斯泰尼

Greek philosopher, a prototype of the Cynics.

希腊哲学家,犬儒学派奠基人之一。

Aquinas, St Thomas (1224/5-74) T. 阿奎那

Medieval philosopher. *Summa Contra Gentiles*; *Summa Theologiae*

中世纪哲学家。《反异端大全》;《神学大全》。

Arceilaus of Pitane (c. 315-240 BC) 阿西塞劳

Hellenistic philosopher, Platonist and Sceptic.

希腊化时代哲学家,柏拉图主义者,怀疑论者。

Arendt, Hannah (1906-75) H. 阿伦特

German-American political philosopher, a pupil of Heidegger. *The Origins of Totalitarianism* (1951); *The Human Condition* (1958), *The Life of the Mind*, 2 vols (1978).

德裔美国政治哲学家,海德格尔的学生。《极权主义的起源》(1951);《人类条件》(1958);《心灵生活》(2卷本,1978)。

Aristippus (c. 435-356 BC) 亚里斯提卜

Greek philosopher, the traditional founder of the Cyrenaic school of hedonism.

希腊哲学家,居勒尼快乐主义学派的奠基人。

Aristotle (384-322 BC) 亚里士多德

Greek philosopher. *Metaphysics*; *Nicomachean Ethics*; *Eudemian Ethics*; *Magna Moralia*; *Politics*; *Categories*; *De Interpretatione*; *Prior and Posterior Analytics*; *Topics*; *De Sophisticis Elenchis*; *Physics*; *De Anima*; *De Partibus Animalium*; *De Motu Animalium*; *De Generatione Animalium*; *Rhetoric*; *Art of Poetry*.

希腊哲学家。《形而上学》;《尼各马可伦理学》;《欧德谟伦理学》;《大伦理学》;《政治学》;《范畴》;《解释》;《前分析》;《后分析》;《正位篇》;《驳诡辩》;《物理学》;《论灵魂》;《动物的部分》;《动物的运动》;《动物的生成》;《修辞学》;《诗学》。

Armstrong, David (1926-) D. 阿姆斯特朗

Australian philosopher of mind and metaphysician. *A Materialist Theory of Mind* (1968); *Universals and Scientific Realism* (1978).

澳大利亚心智哲学家和形而上学家。《唯物主义的心的理论》(1968);《共相和科学实在论》(1978)。

Arnauld, Antoine (1612-94) A. 阿尔诺

French theologian and philosopher, a leading figure among the Port-Royal Jansenists. *Port-Royal Logic* (with Pierre Nicole, 1662).

法国神学家和哲学家,波尔-罗亚尔学派的主要代表。

《波尔-罗亚尔逻辑》(与P. 尼柯尔合著,1662)。

Arrow, Kenneth (1921-) K. 阿罗

American economist and theorist of social choice. *Social Choice and Individual Values* (1951).

美国经济学家和社会选择理论家。《社会选择与个体价值》(1951)。

Augustine of Hippo, St (354-430) 奥古斯丁

Medieval theologian and philosopher. *Confessions* (397-400); *City of God* (413-26).

中世纪神学家和哲学家。《忏悔录》(397-400);《上帝之城》(413-426)。

Austin, John (1790-1859) J. 奥斯汀

English moral and legal philosopher, legal positivist. *The Province of Jurisprudence Determined* (1832).

英国道德与法哲学家,法律实证主义者。《法理学的既定范围》(1832)。

Austin, John Langshaw (1911-60) J.L. 奥斯汀

British ordinary language philosopher. *Philosophical Papers* (1961); *How to Do Things with Words* (1961); *Sense and Sensibilia* (1962).

英国日常语言哲学家。《哲学论文集》(1961);《如何以言行事》(1961);《感觉与可感觉的》(1962)。

Avenarius, Richard (1843-96) R. 阿芬那留斯

German positivist, leading exponent of empirio-criticism. *Critique of Pure Experience* (1888-90).

德国实证主义者,经验批判主义的主要阐述者。《纯粹经验批判》(1888-1890)。

Averroës (c. 1126-98) 阿维罗伊

Ibn Rushd, medieval Islamic philosopher and Aristotelian commentator. *The Incoherence of the Incoherence*.

伊本·路西德,中世纪伊斯兰哲学家和亚里士多德注释家。《矛盾的矛盾》。

Avicenna (980-1037) 阿维森纳

Ibn Sina, medieval Islamic philosopher. *Healing: The Directives and Remarks; Deliverance*.

伊本·西那,中世纪伊斯兰哲学家。《治疗:指引与语录》;《宣讲》。

Ayer, Sir Alfred Jules (1910-89) A.J. 艾耶尔

British logical positivist. *Language, Truth and Logic* (1936); *Foundations of Empirical Knowledge* (1940); *The Problem of Knowledge* (1954); *The Central Questions of Philosophy* (1973).

英国逻辑实证主义者。《语言、真理和逻辑》(1936);《经验知识的基础》(1940);《知识问题》(1954);《哲学的中心问题》(1973)。

B**Bachelard, Gaston (1884-1962) G. 巴什拉**

French philosopher of science and critic. *The New*

- Scientific Spirit* (1934); *The Psychoanalysis of Fire* (1938).
法国科学哲学家与评论家。《新科学精神》(1934);《火的心理分析》(1938)。
- Bacon, Francis** (1561-1626) **F. 培根**
English empiricist philosopher. *The Advancement of Learning* (1605); *Novum Organum* (1620).
英国经验主义哲学家。《学问的进步》(1605);《新工具》(1620)。
- Bacon, Roger** (c. 1215-c. 1292) **R. 培根**
English medieval philosopher, scientist and theologian. *Opus Maius*.
英国中世纪哲学家、科学家与神学家。《大著作》。
- Baier, Annette** (1929-) **A. 培尔**
American moral philosopher. *Postures of the Mind: Essays on Mind and Morals* (1985).
美国道德哲学家。《心灵情形：心灵与道德论集》(1985)。
- Baier, Kurt** (1917-) **K. 培尔**
American moral philosopher. *From a Moral Point of View* (1955).
美国道德哲学家。《从道德观点看》(1955)。
- Bain, Alexander** (1818-1903) **A. 培恩**
Scottish philosopher of psychology. *The Senses and the Intellect* (1855); *The Emotions and the Will* (1859).
苏格兰心理哲学家。《感知与理智》(1855);《情绪与意志》(1859)。
- Bakunin, Michael** (1814-76) **M. 巴枯宁**
Russian political thinker, exponent of anarchism. *Revolutionary Catechism* (1865); *Federalism, Socialism and Anti-Theologism*.
俄国政治思想家,无政府主义的倡导者。《革命问答》(1865);《联邦主义,社会主义与反神道论》。
- Barth, Karl** (1886-1968) **K. 巴特**
Swiss dialectical theologian. *The Epistles to the Romans* (1919); *Church Dogmatics* (1932).
瑞士辩证神学家。《罗马书简》(1919);《教会教条》(1932)。
- Bataille, George** (1897-1962) **G. 帕塔莱**
French Nietzschean thinker. *Theory of Religion* (1948); *Literature and Evil* (1957); *Eroticism* (1957).
法国尼采主义思想家。《宗教理论》(1948);《文学与恶》(1957);《爱欲主义》(1957)。
- Bauer, Bruno** (1809-82) **B. 鲍威尔**
German theologian and historian. *The Good Cause of Freedom* (1842).
德国神学家与史学家。《自由的善因》(1842)。
- Baumgarten, Alexander** (1714-62) **A. 鲍姆加登**
German aesthetician. *Aesthetica*, 2 vols (1750-8).
德国美学家。《美学》(2卷本,1750-1758)。
- Bayes, Thomas** (1702-61) **T. 贝叶斯**
English clergyman and theorist of probability. *An Essay towards Solving a Problem in the Doctrine of Chances* (1763).
英国牧师和或然性理论家。《试论对机遇学说中一个问题的解决》(1763)。
- Bayle, Pierre** (1647-1706) **P. 贝尔**
French sceptic. *Historical and Critical Dictionary* (1697).
法国怀疑论者。《历史的与批判的词典》(1697)。
- Beauvoir, Simone de** (1908-86) **西蒙·波伏娃**
French existentialist and feminist. *The Second Sex* (1949).
法国存在主义者与女性主义者。《第二性》(1949)。
- Benjamin, Walter** (1892-1940) **W. 本杰明**

Thales of Miletus (6th century BC) 泰勒斯

First Western philosopher, founder of the Ionian school.
第一个西方哲学家, 伊奥尼亚学派的创始人。

Theophrastus (c. 372-c. 287 BC) 泰奥弗拉斯多

Greek philosopher, colleague of Aristotle. *Characters*.
希腊哲学家, 亚里士多德的同事。《特性》。

Thoreau, Henry David (1817-62) H. D. 西奥鲁

American New England transcendentalist. *Walden or Life in the Woods* (1854).
美国新英格兰超验主义者。《华尔腾或林中生涯》(1854)。

Tillich, Paul (1886-1965) P. 蒂利希

German-American existentialist theologian and philosopher of religion. *Systematic Theology*, 3 vols (1951-63); *Morality and Beyond* (1963).
德裔美国存在主义神学家及宗教哲学家。《系统神学》(3卷, 1951-1963);《道德及其超越》(1963)。

Toulmin, Stephen E. (1922-) S. E. 图尔敏

American philosopher of ethics and science and historian of ideas. *An Examination of the Place of Reason in Ethics* (1950); *Foresight and Understanding* (1961); *Human Understanding* (1972).
美国伦理与科学哲学家、思想史家。《理性在伦理学

中的位置》(1950);《先见与理解》(1961);《人类理智》(1972)。

Tugendhat, Ernst (1930-) E. 图根哈特

German analytic philosopher. *Tradition and Analytical Philosophy* (1976); *Self-Consciousness and Self-Determination* (1979).
德国分析哲学家。《传统与分析哲学》(1976);《自我意识与自我决定》(1979)。

Turing, Alan (1912-54) A. 图灵

British mathematician, co-inventor of the computer. "Computing Machinery and Intelligence" (1950); *Collected Works of A. M. Turing* (1990).
英国数学家, 计算机发明者之一。《计算机与智力》(1950);《A. M. 图灵全集》(1990)。

Twardowski, Kazimierz (1866-1938) K. 特瓦多夫斯基

Austrian-born Polish analytic philosopher; *On the Content and Object of Presentations* (1894).
奥地利生的波兰分析哲学家。《论表象的内容与对象》(1894)。

U

Unamuno y Jugo, Miguel de (1865-1936) M. de 乌那母诺

Spanish existentialist philosopher and writer. *The Tragic Sense of Life* (1913).
西班牙存在主义哲学家与作家。《生命的悲剧意义》(1913)。

Urmson, James Opie (1915-) J. O. 乌姆森

English philosopher of language, ethics, aesthetics, history of philosophy. *Philosophical Analysis Between the Wars* (1956); *The Emotive Theory of Ethics* (1968).
英国语言、伦理学、美学哲学家及哲学史家。《二次世界大战中的哲学分析》(1956);《伦理学的情感理论》(1968)。

V

Van Fraassen, Bastiaan (1911-) B. 范弗拉森

Dutch-born American constructive empiricist philosopher of science, logic and semantics. *An Introduction to the Philosophy of Time and Space* (1969); *The Scientific Image* (1980); *Laws and Symmetry* (1989); *Quantum Mechanics, An Empiricism View* (1991).
生于荷兰的美国建构经验主义科学哲学家、逻辑学家及语义哲学家。《时空哲学导论》(1969);《科学想像》(1980);《法则与对称》(1989);《量子力学: 一种经验主义的观点》(1991)。

Venn, John (1834-1923) J. 文恩

English logician and frequency theorist of probability. *The Logic of Chance* (1866).

英国逻辑学家与概率惯常论家。《机遇的逻辑》(1866)。

Vico, Giambattista (1668-1744) **G. 维柯**

Italian philosopher of history and aesthetics. *The New Science* (1725).

意大利历史哲学家与美学家。《新科学》(1725)。

Vlastos, Gregory (1907-91) **G. 弗拉斯托斯**

American scholar of ancient Greek philosophy. *Platonic Studies* (1973); *Socrates: Ironist and Moral Philosopher* (1991).

美国古希腊哲学专家。《柏拉图研究》(1973);《苏格拉底: 讥讽者与道德哲学家》(1991)。

Voltaire, Francois-Marie (1694-1778) **F.-M. 伏尔泰**

French Enlightenment philosopher and writer. *Philosophical Letters* (1733); *Candide* (1759); *Philosophical Dictionary* (1764).

法国启蒙哲学家与作家。《哲学通信》(1733);《老实人》(1759);《哲学辞典》(1764)。

von Mises, Richard (1883-1953) **R. 冯·密斯**

German philosopher of probability, member of the Vienna Circle. *Probability Statistics and Truth* (1928).

德国概率哲学家, 维也纳学派成员。《概率统计学与真理》(1928)。

von Wright, Georg Henrik (1916-) **G.H. 冯·赖特**

Description, attributive use of	摹状词的归属性用法	247	Distinct	明晰的	269
Description, referential use of	摹状词的指称性用法	247	Distributed	周延的	269
Descriptions, theory of	摹状词理论	247	Distributive law	分配律	269
Descriptive ethics	描述的伦理学	248	Divided reference	分类指称	270
Descriptive fallacy	描述谬误	248	Divine attributes	神性	270
Descriptive meaning	描述意义	249	Divine command theory	神命论	270
Descriptive metaphysics	描述形而上学	249	Divine illumination	神之光照	271
Descriptive psychology	描述心理学	250	Division	划分	272
Descriptivism	描述主义	250	Division of linguistic labour	语言分工	272
Desert	赏罚	250	Division principle	分解原则	272
Desire	欲望	251	Dogma	教条	272
Despair	绝望	252	Dogmatism	独断论	273
Determinables and determinates	可确定物和确定物	252	Domain	域	273
Determinant judgement	规定的判断力	253	Dominion thesis	主宰论	273
Determinates	确定物	253	Double aspect theory	双面理论	274
Determination	限定性	253	Double contingency	双重偶然性	274
Determinism	决定论	253	Double effect, doctrine of	双重效果论	274
Determinism, hard	强硬的决定论	254	Double language model	双语模型	274
Determinism, principle of	决定论原理	254	Double negation	双重否定	275
Determinism, soft and hard	温和的和强硬的决定论	254	Double truth theory	二重真理论	275
Deterrence	威慑	255	Doubt	怀疑	275
<i>Deus sive natura</i>	神或自然	255	<i>Doxa</i>	意见	276
Developmentalism	发生论	256	Doxastic theory	信念论	276
Deviant causal chain	变异因果链	256	Doxastic virtue	信念德性	276
Deviant logic	变异逻辑	256	Dread	恐惧	276
Dialectic (Hegel)	辩证法(黑格尔)	257	Dreaming, argument from	梦的证明	276
Dialectic (Kant)	辩证论(康德)	257	Dual-aspect theory	两面理论	277
Dialectical materialism	辩证唯物主义	257	Dualism	二元论	277
<i>Dianoia</i>	理智	258	Duck-rabbit	鸭兔	278
Dichotomy, paradox of	二分法悖论	258	Duhem-Quine thesis	杜恒-奎因论题	278
<i>Dictum de omni et nullo</i>	遍有遍无公理	259	Duration	绵延	279
Difference	趋别	259	Dutch book	荷兰赌	279
Difference principle	差别原则	260	Duty	职责	280
Differentia	属差	260	Dyadic	二元的	281
Dignity	尊严	261			
Dilemma	二难困境	261			
Dilemma of attention	注意两难	262			
Diminished responsibility	部分责任	262			

E			Enlightenment			启蒙运动			301		
			Enlightenment project			启蒙运动工程			302		
<i>Ecart</i>	自离	282	<i>Ens a se</i>			由己之是			303		
Ecocentrism	生态中心主义	282	<i>Ens ab alio</i>			由他之是			303		
Economic base	经济基础	283	<i>Ens ex se</i>			无己之是			304		
Economic determinism	经济决定论	283	<i>Ens irreale</i>			非实在者			304		
Economic structure	经济结构	283	<i>Ens necessarius</i>			必然之是			304		
Ecstasy	逸出态	283	<i>Ens rationis</i>			理智存在者			304		
Effective historical consciousness	效果历史意识	283	<i>Ens reale</i>			实在者			304		
Effective history	效果历史	283	<i>Ens successivam</i>			接续之是			305		
Effective procedure	有效程序	284	Entailment			衍推			305		
Efficiency	效率	284	Entelechy			隐德来希			306		
Egalitarianism	平等主义	285	Enthusiasm			狂热			306		
Ego(Freud)	自我(弗洛伊德)	285	Enthymeme			省略三段论			306		
Egocentric particulars	自我中心特称词	286	<i>Entia per alio</i>			依存物			306		
Egocentric perceptual statements	自我中心知觉陈述	286	<i>Entia per se</i>			自存物			307		
Egocentric predicament	自我中心困境	287	<i>Entia rationis</i>			理性存在者			307		
Egoism, ethical	伦理利己主义	287	Entity			存在体			307		
Eidetic imagery	逼真映象	288	Entity of reason			理性存在者			307		
Eidetic intuition	本质直观	288	Entrenchment			牢靠性			308		
Eidetic reduction	本质还原	288	Entropy			熵			308		
Eidetic variation	本质变更	289	Enumerative induction			枚举式归纳			308		
<i>Elan vital</i>	生命冲动	289	Environmental ethics			环境伦理学			308		
Elementary proposition	基本命题	289	Environmental fascism			环境法西斯主义			309		
Elenchus	问答法	290	Envy			嫉妒			310		
Elimination of meta-physics	清除形而上学	290	Epicureanism			伊壁鸠鲁主义			310		
Eliminative induction	淘汰式归纳	291	Epiphenomenalism			附随现象论			311		
Eliminative materialism	取消唯物论	291	<i>Episteme</i>			知识			311		
Eliminativism	取消论	291	Epistemic holism			认知的整体论			312		
Elite	精英	291	Epistemic justification			认知辩明			312		
Elitism	杰出人物统治论	292	Epistemic modality			认知模态			312		
Emanation	流溢	293	Epistemic value			认知值			313		
Embodiment	有壳	293	Epistemic virtue			认知德性			313		
Embraced desire	情愿欲求	293	Epistemics			认知学			313		
Emergence	突现	294	Epistemological atomism			认识论上的原子主义			313		
Emergent property	突现性质	294	Epistemological dualism			认识论上的二元论			314		
Emergentism	突现进化论	295	Epistemological necessity			认识论上的必然性			314		
Emotion	情感	295	Epistemology			认识论			314		
Emotive meaning	情感意义	296	<i>Epithumia</i>			欲念			315		
Emotivism	情感主义	297	<i>Epoche</i>			悬置			315		
Empathy	移情作用	297	E proposition			E 命题			315		
Emphatic particulars	强调性特称词	298	Equalitarianism			平均主义			315		
Empiricism	经验主义	298	Equality			平等			315		
Empirio-criticism	经验批判主义	299	Equity			公平			316		
Empty class	空类	299	Equivalence			等值			316		
Empty name	空名	299	Equivalence relation			等价关系			317		
Enantionorms	对映结构体	299	<i>Ergon</i>			功能			317		
Encompassing	大全	300	Eristic			争辩术			318		
End of art	艺术的终结	300	<i>Eros</i>			情爱			318		
End + means	目的/手段	300	<i>Eros</i> (Freud)			厄罗斯(弗洛伊德)			319		
End-in-view	考虑中的目的	300	Error theory			谬误论			319		
<i>Endora</i>	共同意见	301	Ersatzism			仿形论			320		
Enforcement of morals	道德强制	301	Eschatology			末世论			320		
Enlightened self-interest	开明的自我利益	301	Esoteric			秘传的			320		
			<i>Esse est percipi</i>			存在就是被感知			320		
			Essence			本质			321		
			Essential occurrence			实现			322		
			Essential property			本质性质			322		

Essentialism	本质主义	322	Existential proposition	存在命题	346
Estrangement	疏远	323	Existential quantifier	存在量词	346
Eternal recurrence	永恒轮回	323	Existential statement	存在陈述	346
Eternal sentence	永恒句子	323	Existentialism	生存主义	347
Eternal Thou	永恒的你	324	Existentiell-existential	生存者的与生存论的	348
Eternity	永恒	324	distinction	区别	
Ethical individualism	伦理个人主义	324	<i>Existenz</i>	生存	348
Ethical knowledge	伦理知识	325	Exoteric	明传的	348
Ethical life	伦理生活	325	Expected utility	期望效用	349
Ethical naturalism	伦理自然主义	326	Experience	经验	349
Ethical objectivism	伦理客观主义	326	Experiential proposition	经验命题	349
Ethical rationalism	伦理理性主义	327	Experimentalism	实验主义	350
Ethical relativism	伦理相对主义	327	<i>Explanandum</i>	被说明项	350
Ethical subjectivism	伦理主观主义	328	<i>Explanans</i>	说明项	350
Ethical theory	伦理理论	328	Explanation	说明	350
Ethical virtue	伦理德性	329	Explanation sketch	说明框架	351
Ethics, axiological	价值论伦理学	329	Explanation/unders-	解释和理解	352
Ethics, emotive theory of	伦理学的情感理论	329	tanding		
Ethics, intuitionistic	直觉主义伦理学	329	Explication	精释	352
Ethics, normative	规范伦理学	330	Explicit definition	显定义	352
Ethics and morality	伦理学和道德	331	Exportation	输出	352
Ethics of belief	信念伦理学	332	Expression theory	表现说	353
Ethics of care	关怀伦理学	332	Extended logic	扩充逻辑	353
Ethics of justice	正义伦理学	333	Extended substance	广延实体	353
Ethnocentrism	种族中心主义	333	Extension	外延	353
Ethnology	品格学	333	Extension (metaphysics)	广延(形而上学)	354
Ethnomethodology	人种学方法	334	Extensional logic	外延逻辑	354
<i>Ethos</i>	习惯	334	Extensionalism	外延主义	354
<i>Êthos</i>	品格	334	Extensionality, axiom of	外延性公理	355
Etiquette	礼节	335	Extensionality, thesis of	外延性论题	355
Eudæmonism	幸福论	335	Extensive magnitude	外延量	356
<i>Eudaimonia</i>	幸福	335	External perception	外知觉	356
Euthanasia	安乐死	336	External point of view	外在观点	356
Eurhythmic dilemma	尤息弗罗难题	337	External property	外在所有权	356
Evaluative meaning	评价意义	337	External questions	外部问题	356
Event	事件	338	External relation	外在关系	356
Everlasting	永久	338	External world	外在世界	357
Everydayness	日常性	338	Externalism	外在论	357
Evidence	证据	339	Externalism (ethics)	外在论(伦理)	358
Evidentialism	证据主义	339	Extra human fertilization	人体外受精	358
Evil	恶	339	Extrinsic value	外在价值	358
Evolution	进化	340			
Evolutionary epistemology	进化认识论	340			
Evolutionary ethics	进化论伦理学	341			
<i>Ex nihilo nihil fit</i>	无中不能生有	342	Fact	事实	359
Examination paradox	考试悖论	342	Fact / value gap	事实/价值之分	359
Excellence	卓越	342	Facticity	实际性	359
Excellence of character	优秀品格	342	Factual phenomenalism	事实现象主义	360
Excuse	藉口	342	Faculty	官能	360
Exegesis	解释	343	Fairness	公平	361
Existence	存在	343	Faith	信仰	361
Existence (Heidegger)	生存(海德格尔)	344	Fallacy	谬误	362
Existence proposition	存在命题	345	Fallacy of accent	重音错误	362
Existential generalisation	存在概括	345	Fallacy of accident	偶性谬误	362
Existential import	存在内含	345	Fallacy of ambiguity	歧义谬误	363
Existential instantiation	存在个例化	345	Fallacy of clearness	清晰谬误	363
Existential presupposition	存在假定	346			

Fallacy of complex question	复杂问语谬误	363	Flying arrow, paradox of the	飞矢悖论	381
Fallacy of composition	合举谬误	363	Focal meaning	中心意义	382
Fallacy of converse accident	逆偶性谬误	364	Folk psychology	常识心理学	382
Fallacy of division	分举谬误	364	Footnotes to Plato	对柏拉图脚注	383
Fallacy of emphasis	重点错误	364	For itself	自为	383
Fallacy of equivocation	一语多义的谬误	364	Force / sense	力量/意义	383
Fallacy of false cause	错为因果的谬误	364	Foreknowledge	预知	383
Fallacy of hasty generalization	轻率概括的谬误	364	Forgery	赝品	384
Fallacy of many questions	叠题谬误	364	Forgiveness	宽恕	384
Fallacy of scope	范围错误	365	Form	形式	385
Fallacy of <i>secundum quid</i>	无视限制的谬误	365	Form of life	生活形式	385
Fallacy of the undistributed middle	中项不周延谬误	365	Form of proposition	命题形式	386
Fallibilism	可错论	365	Form of representation	表现的形式	386
Fallingness	沉沦	366	Formal	形式的	386
Falsifiability	可否证性	366	Formal analysis	形式分析	387
Falsification	否认	366	Formal concept	形式概念	387
Falsificationism	否认主义	367	Formal distinction	形式差别	387
Family resemblance	家族相似	367	Formal fallacy	形式谬误	387
Fascism	法西斯主义	367	Formal language	形式语言	388
Fatalism	宿命论	368	Formal logic	形式逻辑	388
Fate	天命	368	Formal mode of speech	形式的说话方式	389
Fear	害怕	369	Formal semantics	形式语义学	389
Feeling	情感	369	Formal universal	形式共相	389
Felicity calculus	幸福演算	369	Formalism(aesthetic)	形式主义(美学上的)	389
Feminism	女性主义	369	Formalism(ethics)	形式主义(伦理学的)	390
Feminist epistemology	女性主义认识论	370	Formalism(law)	形式主义(法律上的)	390
Feminist ethics	女性主义伦理学	371	Formalism(mathematics)	形式主义(数学中的)	391
Fictional names	虚名	372	Formalization	形式化	391
Fideism	信仰主义	372	Formally correct condition	形式正确性条件	392
Fidelity	忠诚	373	Formula	公式	392
"Fido-fido" theory of meaning	"菲多-菲多"的意义理论	373	Foundationalism	基础主义	392
Fifth element	第五元素	374	Four elements	四元素	392
Final cause	目的因	374	Four freedoms	四重自由	393
Final end	终极目的	374	Four term fallacy	四词项谬误	393
Final good	终极善	375	Frankfurt school	法兰克福学派	393
Finite-state grammar	限定状态语法	375	Fraternity	博爱	393
Finite-state language	限定状态语言	376	Free logic	自由逻辑	394
First cause argument for the existence of God	上帝存在的第一因论证	376	Free variable	自由变元	394
First entelechy	原始的隐德来希	376	Free will, problem of	自由意志问题	394
First philosophy	第一哲学	376	Freedom	自由	395
First principle	第一原理	377	Freedom of speech	言论自由	396
First-level concept	一阶概念	377	Freedom of the will	意志自由	396
First-level predicate	一阶谓词	378	Free-rider	逃票乘客	396
First-order language	一阶语言	378	Fregean principle	弗雷格原则	397
First-order logic	一阶逻辑	378	Friendship	友谊	397
First-order predicate	一阶谓词逻辑	378	Full theory of the good	善的强理论	397
First-person perspective	第一人观点	379	Fully generalised proposition	充分普遍化命题	397
Firstness	第一性	379	Function	函项	398
Fittingness	适当	380	Function and argument	函项和主目	398
Five ways	五法	380	Function stroke	竖函项	399
Flaccid designator	松散指示词	381	Functionalism	功能主义	399
Flux	流变	381	Fundamental ontology	基础存在论	400
			Fundamental project	基本谋划	400
			Fusion of horizons	视域的融合	400
			Future contingents	未来偶然性	401
			Future generations	后代	401

Future-referring term	指称将来的用语	402
G		
Gaia hypothesis	该亚假设	403
Gambler's fallacy	赌徒谬误	403
Game theory	游戏理论	404
<i>Geisteswissenschaften</i>	人文科学	404
Gender	性别	405
Genealogy	谱系学	405
General proposition	全称命题	406
General propositional form	普遍的命题形式	406
General term	普遍词	407
General will	公意	407
Generalisation	概括	408
Generalised other	一般化的他人	408
Generalization argument	普遍化的论证	408
Generalization principle	普遍化原则	408
Generative grammar	生成语法	409
Generosity	高尚	409
Genetic epistemology	发生认识论	410
Genetic fallacy	生成错误	410
Genetic method	发生法	410
Genidentity	生成同一性	411
Genus	种	411
<i>Genus summum</i>	最高的种	411
Gestalt psychology	完形心理学	411
Gettier problem	盖梯尔问题	412
Ghost in the machine	机器中的幽灵	413
Given, the	所予	413
Gratseology	生成论	413
Gnosticism	诺斯替教	413
God	神	414
God is dead	上帝死了	415
Gödel's theorems	哥德尔定理	415
Golden rule	金规	416
Good	善	416
Good will	善良意志	417
Goodman's paradox	古德曼悖论	418
Grace	恩典	418
Grammar	语法	418
Grammatical predicate	语法谓词	419
Grammatical proposition	语法命题	419
Grammatology	书写学	419
Gratitude	感激	420
Great chain of being	存在之大链	420
Great year	大年	420
Great-soulness	伟大的心灵	421
Greatest happiness principle	最大幸福原则	421
Grelling's paradox	格里林悖论	422
Group mind	团体意识	422
Group responsibility	群体责任	423
Grue paradox	绿蓝悖论	423
Guardians	护卫者	423

Guilt	负罪	423
Gyge's Ring	盖奇的戒指	424
H		
Haecceitism	此性主义	425
Haecceity	此性	425
Hallucination	幻觉	425
Hard cases	疑难案件	426
Hard data	硬予料	426
Harm	伤害	426
Harm principle	伤害原则	427
Harmony	和谐	427
Health care ethics	保健伦理学	427
Heaven	天	428
Hedonism, ethical	伦理快乐主义	428
Hedonism, paradox of	快乐主义的悖论	429
Hedonism, psychological	心理学的快乐主义	429
Hedonistic calculus	快乐主义的演算	429
Hegelianism	黑格尔主义	430
Hegelians, young	青年黑格尔学派	431
Hegemony	强权	431
Hell	地狱	432
Hellenistic philosophy	希腊化哲学	432
Heloise complex	埃罗伊兹情结	433
Hempel's paradox	亨佩尔悖论	433
Henological argument	合一论论证	434
Henotheism	大神论	434
Heresy	异端	434
Hermeneutic circle	解释学循环	435
Hermeneutic phenomenology	解释学的现象学	436
Hermeneutics	解释学	436
Heterological paradox	非自谓悖论	437
Heteronomy	他律	437
Heuristic	助发现	437
Highest good	至善	438
Historical determinism	历史决定论	438
Historical explanation	历史解释	438
Historical knowledge	历史知识	439
Historical materialism	历史唯物主义	440
Historical objectivism	历史客观主义	441
Historical relativism	历史相对主义	441
Historical scepticism	历史怀疑论	441
Historical sentence	历史句子	441
Historicity	历史性	442
Historicism	历史主义	442
Historicity	历史性	443
Historism	历史论	443
Holism	整体论	443
Holistic property	整体特性	444
Holy	神圣	444
Holy will	神圣意志	444
Homonym	同名异义词	445

Homosexuality, problem of	同性恋问题	445	Ideation	观念直观	465
Homunctionalism	小人论	445	Ideational theory of meaning	意义的观念理论	465
Homuncular functionalism	小人功能主义	446	<i>Ideatum</i>	对象	466
Homunculus	小人	446	Identity	同一性	466
Homunculus fallacy	小人谬误	446	Identity, law of	同一律	467
Honour	荣誉	446	Identity, numerical	数目的同一性	467
Horizon	视域	447	Identity, the paradox of	同一性悖论	467
Horizontal stroke	水平线	447	Identity criteria	同一性标准	468
Horseshoe	马蹄号	447	Identity of indiscernibles	不可分辨者的同一性	468
<i>Hyle</i>	质料	447	Identity statement	同一性陈述	468
Human being	人	447	Identity theory	同一论	469
Human chauvinism	人类沙文主义	448	Ideology	意识形态	469
Human nature	人性	448	Idiolect	特殊语	470
Human sciences	人文科学	449	Idol	偶像	470
Humanism	人文主义	449	Idolatry	偶像崇拜	471
Humanity	人性	450	If	当且仅当	471
Hume's fork	休谟的叉子	450	<i>Ignoratio elenchi</i>	混淆论题	471
Hume's law	休谟定律	451	I-It	我与它	471
Humility	谦卑	451	Illicit major	大项不当周延	472
Humour	幽默	451	Illicit minor	小项不当周延	472
Hylomorphism	形质论	452	Illocutionary act	以言行事的行为	472
Hylozoism	物活论	452	Illusion, argument from	幻觉论证	473
Hypocrisy	伪善	453	Image	影像	473
<i>Hypokeimenon</i>	基质	453	Image theory of meaning	意义的影像论	474
<i>Hypostasis</i>	本在	453	Imagination	想像	474
Hypostatization	实体化	453	Imitation	模仿	475
Hypothesis	假说	454	Imitation game	模拟游戏	475
Hypothetical fact	假想事实	454	Imitation theory	模仿说	475
Hypothetical imperative	假言命令	454	Immaterialism	非物质论	476
Hypothetical induction	假说演绎	455	Immediate inference	直接推理	476
Hypothetico-deductive method	假说-演绎法	455	Immediate perception	直接知觉	476
			Immortality	不朽	477
			Impartial spectator	公正的旁观者	478
			Impartialism	公正主义	478
			Impartiality	公正	478
I think	我想	456	Imperative	命令	478
I think, therefore I am	我思想, 所以我存在	456	Imperfect duty	不完全职责	479
Icon	映象	456	Imperialism	帝国主义	479
Iconoclasm	打破偶像	457	Impersonal verb	无人称动词	480
Id	伊底	457	Implication	蕴涵	480
Idea (Hegel)	理念(黑格尔)	457	Implicit definition	隐定义	481
Idea (Hume)	观念(休谟)	457	Importation	输入	481
Idea (Kant)	观念(康德)	458	Impredicative definition	非直谓定义	482
Idea (Locke)	观念(洛克)	459	Impression (Hume)	印象(休谟)	482
Idea (Plato)	形相(柏拉图)	459	In and for itself	自在自为	482
Ideal (Kant)	理想(康德)	460	In itself	自在	482
Ideal language	理想语言	460	<i>In obliquo</i>	间接地	483
Ideal observer theory	理想的观察者理论	460	<i>In recto</i>	直接地	483
Ideal type	理想型	461	<i>In vitro</i> fertilisation	试管受精	483
Idealism	唯心主义	461	Inauthenticity	不真正切己状态	484
Idealism, absolute	绝对唯心主义	462	Incentive	刺激	484
Idealism, objective	客观唯心主义	463	Inclination	爱好	484
Idealism, subjective	主观唯心主义	463	Incommensurability	不可通约性	484
Idealism, transcendental	先验唯心论	464	Incompatibilism	不相容论	485
Ideas of ideas	观念的观念	465	Incomplete symbol	不完全符号	485
			Incompleteness	不完全性	486
			Incompleteness theorem	不完全定理	486

Incongruent counterpart	不一致的对等物	485	Integrity	正直	508
Inconsistent triad	不相容三元组	486	Intellectual love	理智的爱	508
Incontinence	意志薄弱	486	Intellectual synthesis	理智的综合	509
Incorrigible	不可矫正的	487	Intellectual virtue	理智德性	509
Independence, logical	逻辑独立性	487	<i>Intellectus</i>	智能	509
Indeterminacy in law	法律中的不确定问题	487	Intelligible object	理智对象	510
Indeterminacy of translation	翻译的不确定性	488	Intelligible world	理智世界	510
Indeterminism	非决定论	489	Intension	内涵	510
Indicative word	指示语词	489	Intensional logic	内涵逻辑	511
Indicator terms	指示词	489	Intensionalism	内涵论	511
Indifference/spontaneity	无差别和自发性	489	Intensive magnitude	内涵量	512
Indirect perception	间接知觉	489	Intention	意向	512
Indirect realism	间接实在论	490	Intentional fallacy	意向谬误	513
Indiscernability of identicals	等同物的不可分辨性	490	Intentional inexistence	意向性的内存在	513
Individual	个别	491	Intentional stance	意向姿态	513
Individual essence	个体实质	491	Intentional system	意向系统	514
Individual property	个别属性	492	Intentionality	意向性	514
Individual term	个体词	492	Interactionism	交互作用论	515
Individualism	个人主义	492	Internal point of view	内在观点	515
Individuality	个体性	493	Internal property	内在所有权	516
Individuative term	个体化的词	493	Internal questions	内部问题	516
Indoctrination	灌输	493	Internal relation	内在关系	516
Induction	归纳	494	Internalism	内在论	517
Induction, the problem of	归纳问题	495	Internalism (ethics)	内在论 (伦理学的)	517
Induction by elimination	淘汰归纳法	496	Interpretation (Heidegger)	阐释 (海德格尔)	518
Induction by enumeration	枚举归纳法	496	Intersubjectivity	主体间性	518
Induction by intuition	直观归纳法	497	Intrinsic description	内在描述	519
Inductive definition	归纳定义	497	Introspection	内省	519
Inductivism	归纳主义	497	Introspective awareness	内省意识	520
Ineffability	不可名状	497	Intuition	直觉	520
Inegalitarianism	不平等主义	498	Intuitionism, ethical	伦理学的直觉主义	521
Inequality	不平等	498	Intuitionism, mathematical	数学的直觉主义	521
Inertia	惯性	498	Intuitionist logic	直觉主义逻辑	521
Infallibility	不可错性	499	Intuitive induction	直观式归纳	522
Inference	推理	499	Inversion	颠倒	522
Inference to the best explanation	最佳说明推理	500	I-proposition	I 命题	522
Inferred entity	推论出的实体	500	Irony, Socratic	苏格拉底的讥讽	522
<i>Infima species</i>	最低层的种	500	Irrationalism	非理性主义	523
Infinite and finite	无限和有限	500	Irrationality	非理性	523
Infinite regress argument	无穷后退证明	501	Irrealism	非实在论	524
Infinite-valued logic	无穷值逻辑	502	Irreflexive	反自返的	524
Informal fallacy	非形式谬误	502	Is	是	524
Informal logic	非形式逻辑	503	Is/ought gap	“是”和“应该”之分	525
Informed consent	知情同意	503	Isomorphism	同构性	525
Innate ideas	天赋观念	504	<i>Isoteneia</i>	同位	526
Inner observation	内在观察	504	I Thou	我与你	526
Inner perception	内知觉	504			
Inner process	内在过程	505			
Inner sense	内感	505			
Innocence	无辜	506			
Inscrutability of reference	指称的不可理解性	506	James Lange view	詹姆斯—朗格观点	527
<i>Insolubilia</i>	不可解问题	506	Jansenism	詹森主义	527
Institutional theory	机构说	506	Joint method of agreement and difference	契合差异并用法	528
Institutional violence	制度性暴力	507	Judgeable content	可判断内容	528
Instrumentalism	工具主义	507	Judgement	判断	528
			Judgement of obligation	义务判断	529

J

Judgement of taste	鉴赏力判断	529	Laws of thought	思维规律	545
Judgement of value	价值判断	529	Legal gap	法律空缺	546
Judgement stroke	判断号	529	Legal philosophy	法哲学	546
Jurisprudence	法理学	529	Legal positivism	法律实证主义	546
<i>Jus talionis</i>	报复权利	529	Legal realism	法律现实主义	547
Just war	正义战争	530	Legal reasoning	法律推理	547
Justice	正义	530	Legitimacy	合法性	548
Justification	辩明	532	Leibniz's law	莱布尼茨定律	548
Justificationism	证明主义	532	Lemma	引理	548
K			Lesbian ethics	(女性) 同性恋伦理学	549
<i>Kalon</i>	美	533	<i>Leviathan</i>	利维坦	549
Kantian ethics	康德主义伦理学	533	<i>Lex talionis</i>	同态复仇法	550
Kantianism	康德主义	533	Lexeme	词根	550
<i>Katalepsis</i>	理解	534	Lexical ambiguity	词根的模糊性	550
Killing	杀害	534	Lexical order	词典式次序	550
<i>Kinesis</i>	运动	535	Liar paradox	说谎者悖论	550
Kingdom of darkness	黑暗之国	535	Liberalism	自由主义	551
Kingdom of ends	目的王国	535	Libertarianism	自治论自由主义	552
Kingdom of God	上帝之国	536	Libertinism	自由思想	552
KK thesis	KK 论题	536	Liberty	自由	553
Knower paradox	知者悖论	536	Libido	里比多	553
Knowing how	知道如何	537	Life instinct	生命本能	553
Knowing that	知道如此	537	Lifeboat case	救生艇案例	553
Knowledge	知识	537	Life-world	生活世界	554
Knowledge argument	知识论证	538	Light of reason	理性之光	554
Knowledge by acquaint- tance	亲知的知识	538	Like to like	同类相吸	554
Knowledge by description	摹状的知识	539	Limited variety, principle of	有限多样性原理	555
Knowledge <i>de dicto</i>	关于命题的知识	539	Line, simile of the	线段之喻	555
Knowledge <i>de re</i>	关于对象的知识	539	Linguistic act	语言行为	556
Knowledge <i>de se</i>	关于自身的知识	539	Linguistic analysis	语言分析	556
Knowledge of matters of fact	有关事实问题的知识	539	Linguistic determinism	语言决定论	556
Knowledge of relations of ideas	有关观念关系的知识	539	Linguistic framework	语言框架	556
Kosmos	宇宙	540	Linguistic meaning	语言意义	557
L			Linguistic phenomenalism	语言现象主义	557
<i>Laissez-faire</i>	自由放任主义	541	Linguistic phenomenology	语言现象学	557
Land ethic	土地伦理学	541	Linguistic philosophy	语言哲学	558
Language of thought	思维语言	542	Linguistic rule	语言规则	558
Language / speech	语言/言语	542	Linguistic turn	语言的转向	559
Language-games	语言游戏	542	Linguistic universals	语言共相	559
<i>Langue / parole</i>	语言/言语	543	Lived experience	活生生的体验	560
Laughter	发笑	544	Locutionary act	以言表意的行为	560
Law of contradiction	矛盾律	544	Logic	逻辑	561
Law of identity	同一律	544	Logic (Hegel)	逻辑 (黑格尔)	561
Law of nature	自然法	544	Logic of change	变化逻辑	562
Law of non-contradiction	不矛盾律	545	Logic of scientific discov- ery	科学发现的逻辑	562
Law of the excluded mi- ddle	排中律	545	Logic of terms	词项逻辑	562
			<i>Logica docens</i>	形式论证	562
			<i>Logica modernorum</i>	当代逻辑	562
			<i>Logica nova</i>	新逻辑	562
			<i>Logica utens</i>	非形式论证	562
			<i>Logica vetus</i>	旧逻辑	563
			Logical analysis	逻辑分析	563
			Logical atomism	逻辑原子主义	564
			Logical calculus	逻辑演算	564
			Logical consequence	逻辑后承	565
			Logical constant	逻辑常项	565

Logical construction	逻辑构造	566	Manifold	杂多	584
Logical construction theory	逻辑建构理论	566	Many-valued logic	多值逻辑	584
Logical determinism	逻辑决定论	566	Marxism	马克思主义	584
Logical empiricism	逻辑经验主义	567	Masculinism	男权主义	586
Logical equivalence	逻辑等价	567	Masked man fallacy	戴面具者谬误	586
Logical falsity	逻辑假	567	Masochism	受虐狂	586
Logical fiction	逻辑虚构	568	Mass term	总量词	587
Logical form	逻辑形式	568	Master argument	主论证	587
Logical formula	逻辑公式	569	Master morality	主人的道德	587
Logical grammar	逻辑语法	569	Master/slave	主人/奴隶	588
Logical implication	逻辑蕴涵	569	Material adequacy	实质充分性	589
Logical modality	逻辑模态	569	Material analysis	实质分析	589
Logical necessity	逻辑必然性	569	Material conditional	实质条件句	589
Logical oddness	逻辑奇异	570	Material equivalence	实质等价	589
Logical paradox	逻辑悖论	570	Material implication	实质蕴涵	589
Logical picture	逻辑图像	570	Material implication, paradoxes of	实质蕴涵悖论	590
Logical positivism	逻辑实证主义	570	Material mode of speech	实质的说话方式	590
Logical product	逻辑积	571	Material objects	物质对象	590
Logical proposition	逻辑命题	571	Materialism	唯物论	591
Logical / real opposition	逻辑的/实在的对立	571	Materialist theory of mind	唯物主义的心的理论	591
Logical sentence	逻辑句子	572	Mathematical cyclist	数学家骑车人	592
Logical space	逻辑空间	572	Mathematical logic	数理逻辑	592
Logical sum	逻辑和	572	Matrix method	矩阵方法	593
Logical syntax	逻辑句法	572	Matter	质料	593
Logical truth	逻辑真	573	Matter of fact	事实问题	594
Logical type	逻辑类型	573	Maxim	准则	594
Logical words	逻辑词	574	Maximin rule	最大最小值规则	594
Logically impossible	逻辑上不可能	574	Mean	适度	595
Logically perfect language	逻辑上完善的语言	574	Meaning	意义	595
Logically possible	逻辑上可能	575	Meaning of a sentence	句子的意义	596
Logically proper name	逻辑专名	575	Meaning of life	生活的意义	596
Logicism	逻辑主义	576	Meaning postulate	意义公设	596
Logistic	逻辑斯蒂	577	Meaningless	无意义的	597
Logistic method	逻辑斯蒂方法	577	Means/end	手段/目的	597
Logistic system	逻辑斯蒂系统	577	Means of production	生产资料	598
Logocentrism	逻各斯中心论	577	Mechanism	机械论	598
Logos	逻各斯	578	Mechanistic materialism	机械唯物论	598
Lottery paradox	抽彩悖论	578	Mediate inference	间接推理	599
Love	爱	578	Mediate perception	间接知觉	599
Löwenheim-Skolem theorem	勒文海姆—司寇伦定理	579	Medical ethics	医学伦理学	599
Loyalty	忠诚	579	Medieval philosophy	中世纪哲学	599
Lying	说谎	579	Meditation	沉思	600
M			Memory	记忆	600
Machine functionalism	机器功能主义	581	Mens rea	犯罪心态	600
Macrocosm	宏观世界	581	Mental act	心的活动	601
Magnanimity	大度	581	Mental causation	心的因果性	601
Maieutic method	助产术	581	Mental event	心的事件	602
Major premise	大前提	581	Mental indispensability	心的不可替代性	602
Make-believe	虚拟情景	582	Mental phenomenon	心的现象	602
Malicious demon	恶意的神灵	582	Mental representation	心的表征	603
Manichaeism	摩尼教	583	Mental state	心的状态	603
Manifest image	明显的影像	583	Mentalese	心的语言	604
			Mentalism	心灵主义	604
			Mentalistic linguistics	心灵主义语言学	604
			Mentality	心性	605

Mercy	怜悯	605	Modal epistemic logic	模态认知逻辑	627
Mercy killing	慈杀	606	Modal logic	模态逻辑	627
Mereological essentialism	部分学的本质主义	606	Modal realism	模态实在论	627
Mereology	部分论	606	Modality	模态	628
Merit	才能	607	Modality <i>de dicto</i>	从言模态	628
Meritocracy	能人统治	607	Modality <i>de re</i>	从物模态	629
Meshing problem	协调上的问题	608	Mode	样式	629
Meta-epistemology	元认识论	608	Mode (Locke)	样式 (洛克)	629
Meta-ethics	元伦理学	609	Mode of production	生产方式	629
Metalinguage	元语言	609	Modern logic	现代逻辑	630
Metalogic	元逻辑	610	Modernity	现代性	630
Metaphilosophy	元哲学	610	Modes of scepticism	怀疑派论式	630
Metaphor	隐喻	611	Modularity	组合性	631
<i>Metaphysica generalis</i>	一般形而上学	611	<i>Modus ponens</i>	肯定前件式	631
<i>Metaphysica specialis</i>	特殊形而上学	612	<i>Modus tollens</i>	否定后件式	632
Metaphysical deduction	形而上学演绎	612	Molecular facts	分子事实	632
Metaphysical entities	形而上学实体	613	Molecular propositions	分子命题	632
Metaphysical exposition	形而上学阐明	613	Molyneux's problem	莫利纽克斯问题	633
Metaphysical subject	形而上学主体	613	Monadic relation	一元关系	633
Metaphysics	形而上学	614	Monadology	单子论	633
Metaphysics (Kant)	形而上学 (康德)	615	Monads	单子	633
Metaphysics of morals	道德形而上学	616	Monarchy	君主政体	634
Metaphysics of nature	自然形而上学	616	Mongrel categorical state-	混杂范畴陈述	634
Metaphysics of presence	在场的形而上学	617	ments		
Metempsychosis	灵魂转生	617	Monism	一元论	635
<i>Methexis</i>	分有	617	Mood	论式, 情绪, 语气	635
Method	方法	617	Moral	道德的	636
Method of agreement	契合法	617	Moral absolutism	道德绝对主义	636
Method of concomitant	共变法	618	Moral agent	道德行为者	636
variations			Moral argument for the	上帝存在的道德论证	637
Method of difference	差异法	618	existence of God		
Method of elimination	淘汰法	618	Moral atomism	道德原子主义	637
Method of residues	剩余法	618	Moral certainty	道德确然性	638
Methodological collec-	方法论的集体主义	619	Moral community	道德群体	638
tivism			Moral compromise	道德妥协	639
Methodological holism	方法论的整体主义	619	Moral conservatism	道德保守主义	639
Methodological individu-	方法论的个人主义	619	Moral dilemma	道德困境	639
alism			Moral epistemology	道德知识论	640
Methodological solipsism	方法论的唯我论	620	Moral expert	道德专家	640
Middle knowledge	中间知识	621	Moral holism	道德整体主义	641
Midwifery	助产术	621	Moral judgement	道德判断	641
Mill's Canons	密尔规则	622	Moral knowledge	道德知识	641
Mill's methods	密尔方法	622	Moral law	道德法则	641
<i>Mimesis</i>	模仿	622	Moral luck	道德运气	642
Mimetic theory	模仿说	622	Moral patient	道德被动者	643
Mind	心	622	Moral philosophy	道德哲学	643
Mind-body problem	心身问题	623	Moral point of view	道德观点	643
Minimal theory of truth	真理最小理论	624	Moral principle	道德原则	644
Minimax rule	最小最大值规则	624	Moral psychology	道德心理学	644
Minimum sensible	最小可感体	624	Moral realism	道德实在论	644
Minimum vocabulary	最低量词汇	625	Moral reason	道德理性	645
Miracle	奇迹	625	Moral rule	道德规范	645
Mitigating circumstance	减责环境	625	Moral sense	道德感	646
Mitigation	减刑	625	Moral sense theory	道德感理论	646
Mixed hypothetical syllo-	混合的假言三段论	626	Moral theory	道德理论	646
gism			Moral virtue	道德德性	646
Mixed modes	混合样式	626	Morality	道德	646
Mnemonic causation	记忆因果关系	626	Morals	道德	646

Morals proper	严格意义的道德	646	Necessary truth	必然真理	664
Motion	运动	646	Necessitarianism	必然论	665
Motive	动机	647	Necessity	必然性	665
Motive utilitarianism	动机功利主义	647	Necessity, absolute	绝对的必然性	666
Motive-consequentialism	动机—效果论	647	Necessity, hypothetical	假说的必然性	666
Moving rows, paradox of	运动列悖论	647	Necessity, natural	自然的必然性	666
M predicate	物—谓词	647	Necessity, physical	物理的必然性	667
<i>Mundus intelligibilis</i>	理智世界	648	Necessity, psychological	心理的必然性	667
<i>Mundus sensibilis</i>	感性世界	648	Necessity, relative	相对的必然性	667
Mysticism	神秘主义	648	Needs	需要	667
Myth of passage	迁移神话	648	Negation	否定	668
Myth of the given	所予的神话	649	Negation of the negation	否定之否定	668
N			Negative facts	否定事实	669
			Negative liberty	消极自由	669
Naïve realism	素朴实在论	650	Negative responsibility	消极责任	670
Name	名称	650	Negative theology	否定神学	670
Narcissism	自恋	651	Neo-Darwinism	新达尔文主义	671
Narrative	叙述	651	Neo-Hegelianism	新黑格尔主义	671
Narrative sentence	叙述句子	652	Neo-Kantianism	新康德主义	671
Narrow content	狭内容	652	Neo-platonism	新柏拉图主义	672
Narrow state	狭状态	652	Neo-Pragmatism	新实用主义	673
Nash equilibrium	纳西均衡	653	Neo-Pythagoreanism	新毕达哥拉斯主义	673
National character	民族特性	653	Neo-realism	新实在论	673
Nationalism	民族主义	653	Neo-Scholasticism	新经院学派	674
<i>Natura naturans</i>	产生自然的自然	654	Network theory of meaning	意义的网络理论	675
<i>Natura naturata</i>	被自然产生的自然	654	Neural network modelling	神经网络模拟	675
<i>Natura non facit saltum</i>	自然从不飞跃	654	Neurath's ship	纽拉特之船	676
Natural deduction	自然演绎	654	Neuro-philosophy	神经哲学	676
Natural kinds	自然种类	655	Neustic/phrastic	语调/内含	676
Natural language	自然语言	655	Neutral monism	中立一元论	676
Natural law	自然法	656	New criticism	新批评	677
Natural law theory	自然法理论	656	New England transcendentalism	新英国先验论	677
Natural light	自然之光	656	New organon	新工具	677
Natural philosophers	自然哲学家	657	New realism	新的实在论	678
Natural philosophy	自然的哲学	657	New riddle of induction	新归纳之谜	678
Natural religion	自然宗教	657	Newcomb's problem	纽康问题	678
Natural rights	自然权利	657	Nicod's criterion	尼柯德标准	679
Natural selection	自然选择	658	Nihilism	虚无主义	679
Natural theology	自然神学	658	No ownership theory	无所属论	680
Natural virtue	自然的德	659	Noble lie	高贵的谎言	680
Naturalism	自然主义	659	Noble savage	高尚的野蛮人	680
Naturalistic epistemology	自然主义认识论	660	<i>Noema</i>	意向对象	681
Naturalistic ethics	自然主义伦理学	661	<i>Noesis</i>	理解	681
Naturalistic fallacy	自然主义谬误	661	<i>Noesis</i>	意向作用	682
Nature	自然	662	Nomic necessity	规则必然性	682
<i>Naturphilosophie</i>	自然的哲学	662	Nominal definition	名义定义	682
Nausea	厌恶	663	Nominal essence	名义的本质	682
Necessarily false	必然假	663	Nominalism	唯名论	683
Necessarily true	必然真	663	Nomological dangler	法则学关联	684
Necessary condition	必要条件	663	<i>Nomos</i>	规范	684
Necessary/contingent	必然/偶然	664	Noncognitivism	非认知主义	684
			Non-consequentialism	非效果论	685
			Non-descriptivism	非规定主义	685
			Non-doxastic theory	非信念论	685

Non-Euclidean geometry	非欧几何	685	One	—	704
Non-monotonic logics	非单调的逻辑	685	One over many	多上之一	704
Non-natural property	非自然的特性	686	One-many problem	一—多问题	705
Nonnaturalism (ethical)	非自然主义 (伦理学的)	686	Ontico-ontological distinction	存在者的与存在论的区别	705
Non-reflexive	非自返	687	Ontological argument	本体论论证	705
Nonsense	无意义	687	Ontological commitment	本体论的承诺	707
Non-teleological ethics	非目的论的伦理学	687	Ontological guilt	存在论之罪感	707
Non-tuism	非亲密性	687	Ontological relativity	本体论的相对性	707
Normative	规范的	688	Ontology	本体论	708
Normative egoism	规范利己主义	688	Open concept	开放概念	708
Notation	标志法	688	Open sentence	开语句	708
Notational scheme	标志图式	689	Open society	开放社会	709
Not-being	不是	689	Open-question argument	未决问题论证	709
Nothingness	无	689	Open-texture	开放性	710
Noumenon	本体	690	Operational definition	操作定义	710
Nous	努斯	691	Operationalism	操作主义	711
Nuclear deterrence	核威慑	691	Operationism	操作主义	711
Null class	零类	691	Operator	算子	711
Nulla poena sine lege	非根据法律不得惩罚	692	O-proposition	O 命题	711
Nullum crimen sine lege	非根据法律不得判罪	692	Optimism	乐观主义	711
Number	数	692	Ordinary language	日常语言	712
Numinous	圣秘	693	Ordinary language philosophy	日常语言哲学	712
O			Organon	《工具论》	713
Obiter dictum	附带意见	694	Original apperception	本源的统觉	713
Object	对象	694	Original choice	原初的选择	713
Object language	对象语言	694	Original position	原初状态	713
Object sentence	对象语句	695	Original sin	原罪	714
Object words	对象词	695	Ostensive definition	实指定义	715
Objective knowledge	客观知识	695	Ostensive proposition	实指命题	715
Objective particulars	客观殊相	695	Other, the	他人	715
Objectivism	客观主义	696	Other minds	他心	716
Objectivity	客观性	696	Other-regarding	他人相关	716
Objectual quantifier	对象量词	697	Ought	应当	716
Obligation	义务	698	Ought implies can	应该隐含能够	717
Obligationes	尽责	698	Ousia	本是	717
Oblique intention	间接意图	698	Ousiology	本是论	718
Observation language	观察语言	698	Outer sense	外感	718
Observation proposition	观察命题	699	Overman	超人	718
Observation sentence	观察句子	699	Owl of Minerva	密纳发的猫头鹰	718
Observation term	观察术语	699	Ownership	所有权	719
Obversion	换质	700	Oxford philosophy	牛津哲学	720
Occasion sentence	场合句子	700	P		
Occasionalism	偶因论	701	Pacifism	和平主义	721
Ockham's razor	奥康剃刀	701	Paideia	教育	721
Oedipus complex	俄狄浦斯情结	702	Pain	疼痛	721
Offence	冒犯	702	Panentheism	万物在神论	722
Oligarchy	寡头政制	702	Panosomatism	泛体论	722
Omnipotence	全能	703	Panpsychism	泛心论	722
Omniscience	全知	703	Pantheism	泛神论	723
On	是	704	Paradigm	范式	723
			Paradigm case argument	范例论证	724

Paradigm shift	范式转换	724	Personality	人格	741
Paradox	悖论	725	Perspective	视域	741
Paradox of confirmation	确证悖论	725	Persuasive definition	劝说定义	741
Paradox of God's omniscience	上帝全知悖论	726	Pessimism	悲观主义	742
Paradox of self-deception	自欺悖论	726	<i>Petitio principii</i>	窃取论题	742
Paradox of size	规模悖论	726	Phantom limb	幻肢	742
Paradox of the heap	堆的悖论	726	Phenomenal property	现象特性	742
Parallel distributed processing	并行分布加工	726	Phenomenalism	现象主义	743
Parallelism	平行论	726	Phenomenological <i>epoche</i>	现象学的悬置	744
Paralogism	谬误推理	726	Phenomenological reduction	现象学的还原	744
Paraphrasis	释义	727	Phenomenology	现象学	744
Pareto improvement	帕累托改良	727	Phenomenon	现象	746
Pareto optimality	帕累托最佳度	727	Philanthropy	慈善	746
Parsimony, the principle of	最经济原则	727	<i>Philia</i>	友情	747
Partial concept	部分的概念	727	<i>Philosophe</i>	启蒙哲学家	747
Participation	分有	728	Philosopher-king	哲学王	747
Particular	殊相	728	<i>Philosophia perennis</i>	永恒哲学	748
Particular proposition	特称命题	729	Philosophical anthropology	哲学人类学	748
Particularised quality	特殊化的质	729	Philosophical behaviourism	哲学行为主义	749
Partition	划分	729	Philosophical hermeneutics	哲学解释学	749
Partitive term	部分词	730	Philosophical logic	哲学逻辑	749
Pascal's wager	帕斯卡尔的赌博	730	Philosophical psychology	哲学心理学	749
Passion	激情	730	Philosophical radicals	哲学激进主义者	749
Passive intellect	被动理智	730	Philosophical theology	哲学神学	750
Past	过去	730	Philosophy (Kant)	哲学(康德)	750
Past-referring term	指称过去的用语	731	Philosophy (Logical Positivism)	哲学(逻辑实证主义)	751
Paternalism	家长主义	731	Philosophy (Ryle)	哲学(赖尔)	751
Pathetic fallacy	感情误置	732	Philosophy (Wittgenstein)	哲学(维特根斯坦)	752
<i>Pathos</i>	感受	732	Philosophy of art	艺术哲学	752
Patriarchy	父权制	732	Philosophy of biology	生物学哲学	752
Peirce's thesis	皮尔士论题	733	Philosophy of education	教育哲学	753
<i>Per accidens</i>	偶性地	733	Philosophy of history	历史哲学	754
<i>Per se</i>	由自身	733	Philosophy of language	语言哲学	755
Percepta	实际知觉特性	733	Philosophy of law	法哲学	756
Perception	知觉	734	Philosophy of logic	逻辑哲学	757
Percepts	知觉对象	734	Philosophy of mathematics	数学哲学	757
Perceptual consciousness	知觉意识	734	Philosophy of mind	心的哲学	758
Perceptual knowledge	知觉知识	735	Philosophy of nature	自然哲学	759
Percipienda	应当知觉特性	735	Philosophy of organism	有机体哲学	759
Perennial philosophy	永恒哲学	735	Philosophy of physics	物理学哲学	760
Perfect duty	完全职责	735	Philosophy of psychology	心理学哲学	760
Perfection, the principle of	最完善世界原则	735	Philosophy of pure reason	纯粹理性哲学	761
Perfectionism	完美主义	735	Philosophy of religion	宗教哲学	761
Performance and competence	运用和能力	736	Philosophy of science	科学哲学	761
Performative	完成行为式	736	Philosophy of social science	社会科学哲学	762
Performative theory of truth	真理履行论	736	Philosophy of thought	思想哲学	763
Peripatetics	散步学派	737	Phonologism	语音主义	764
Perlocutionary act	以言取效的行为	737	Phrase-marker	短语记号	764
Perseity	自主	737	Phrase-structure grammar	短语结构语法	765
Person	人	738	Phrase-structure language	短语结构语言	765
Person-affecting restriction	人的影响的限定	738	Phrastic	内含	765
Personal identity	人格的同一性	739	<i>Phronesis</i>	实践智慧	766
Personalism	人格主义	740			

Physical determinism	物理决定论	765	Practical syllogism	实践三段论	786
Physical objects	物理对象	766	Practical wisdom	实践智慧	787
Physical phenomenon	物理现象	766	Practicalism	实践主义	787
Physicalism	物理主义	766	Pragmatic maxim	实用主义公式	787
Physico-theological argument	自然神论证明	766	Pragmatic theory of truth	真理实用论	787
Pictorial form	图像的形式	767	Pragmaticism	实效主义	788
Picture theory	图像论	767	Pragmatics	语用学	789
Piecemeal engineering	渐进工程	768	Pragmatism	实用主义	789
Pietism	虔敬主义	768	<i>Praxis</i>	实践	790
Pineal gland	松果腺	769	Preconceived opinions	先人之见	790
Plagiarism	抄袭	769	Preconception	预先概念	790
Platonism	柏拉图主义	769	Preconscious	前意识的	790
Plato's beard	柏拉图的胡子	770	Predestination	宿命论	791
Plausibility	似真性	770	Predetermination	先定论	792
Pleasure	快感	770	Predicables	述语	792
Pluralism	多元论	771	Predicament	范畴	792
<i>Pneuma</i>	普纽玛	771	Predicate	谓词	792
Pneumatology	圣灵论	771	Predicate logic	谓词逻辑	793
<i>Poesis</i>	创制	772	Predicate nominalism	谓词唯名论	793
Polar-related concept pair	极性相关的概念对	772	Predicate term	谓词词项	793
Polish notation	波兰记法	772	Predication	主谓关系	794
Political liberty	政治自由	773	Predication, metaphysical	形而上学的主谓关系	794
Political obligation	政治义务	773	Predicative adjective	谓词形容词	794
Political philosophy	政治哲学	774	Predicative calculus	谓词演算	794
Political theory	政治理论	774	Prediction	预测	795
Polyadic	多元的	775	Prediction paradox	预告悖论	795
Polysyllogism	复合三段论	775	Pre-established harmony	前定和谐	795
Polytheism	多神论	775	Preface paradox	序言悖论	796
<i>Pons asinorum</i>	驴桥	775	Prejudice	偏见	796
Popular art	通俗艺术	776	Pre-reflective cogito	前反思的思想	797
Pornography	色情艺术	776	Prescriptivism	规定主义	797
Porphyrian tree	波菲利之树	777	Presence	在场	798
<i>Port-Royal Logic</i>	波尔—罗亚尔逻辑	778	Presence-at-hand	现成在手状态	799
Posit	假定	778	Pre-Socratics	前苏格拉底	799
Positive fact	肯定事实	778	Presumption	假定	799
Positive freedom	积极自由	778	Presupposition	预设	800
Positive law	实在法	779	<i>Prima facie</i> duties	当下职责	800
Positive liberty	积极的自由	779	<i>Prima facie</i> justification	最初辩明	801
Positivism	实证主义	779	Primary and secondary qualities	第一性的质和第二性的质	801
Possibilism	可能主义	780	Primary goods	基本的善	802
Possible world	可能世界	780	Primary language	初阶语言	802
<i>Post hoc ergo propter hoc</i>	以先后为因果	781	Primary matter	初级的物质	802
<i>Post res universals</i>	出于事物的共相	781	Primary reason	第一理由	802
Post-historical art	后历史艺术	781	Primary rules	主要规则	803
Postmodernism	后现代主义	781	Prime matter	原初质料	803
Post-structuralism	后结构主义	782	Prime mover	第一推动者	803
Postulates of empirical knowledge	经验知识之公准	783	Primitive belief	基本信念	803
Potentiality	潜能	783	Primitive force	原始的力	803
Potentiality / actuality	潜能/现实	784	Primitive ideas	初始概念	804
<i>Pour soi en-soi</i>	为自身的/在自身中的	784	Primitive knowledge	基本知识	804
Power	权力	784	Principle	原则	804
P-predicate	人—谓词	785	Principle of charity	宽容原则	805
Practical ethics	实践伦理学	785	Principle of fractional prudence	分段谨慎原则	805
Practical law	实践的法则	785	Principle of humanity	人性原则	806
Practical reason (Kant)	实践理性(康德)	785	Principle of indeterminacy	测不准原理	806
Practical reasoning	实践推论	786	Principle of indifference	无差别原则	806

Principle of individuation	个体化原则	807	Property instance	特性个例	823
Principle of induction	归纳原理	808	Proposition	命题	823
Principle of non-sufficient reason	不充足理由原则	808	Proposition / sentence	命题和语句	823
Principle of parsimony	节俭原则	808	Propositional attitude	命题态度	824
Principle of perfection	完美原则	808	Propositional belief	命题信念	825
Principle of plenitude	完满原则	808	Propositional calculus	命题演算	825
Principle of substitutivity	置换原则	809	Propositional content	命题内容	825
Principle of the best	最好世界原理	809	Propositional form	命题的形式	825
Principle of tolerance	宽容原则	809	Propositional function	命题函项	826
Principle of uncertainty	不确定性原理	810	Propositional knowledge	命题知识	826
Principle of utility	功利原则	810	Propositional logic	命题逻辑	826
Prisoner's dilemma	囚犯困境	810	Propositional object	命题对象	827
Privacy	私人性	811	Propositional sign	命题符号	827
Private good	私人的善	811	Propositional verb	命题动词	827
Private language	私人语言	811	Prosentential theory of truth	真理的代语句论	827
Private morality	私人道德	812	Protocol sentences	记录语句	827
Private ostensive definition	私人实指定义	812	Providence	神意	828
Private particular	私人殊相	813	Prudence	谨慎	829
Private / public dichotomy	私人和公共的两分法	813	Pseudo-concepts	伪概念	829
Private world	私人世界	813	Pseudo-object	假对象	830
Privation	缺失	813	Pseudo-object sentence	伪对象语句	830
Privileged access	优先获知	813	Pseudo-paradox	虚假悖论	830
Pro attitude	赞成态度	814	Pseudo-predicate	虚假谓词	830
Probabilism	或然论	814	Pseudo-problem	虚假问题	831
Probability	概率	815	Pseudo-proposition	假命题	831
Probability, <i>a priori</i> theory of	先验概率理论	815	Pseudo-science	伪科学	832
Probability, classical theory of	古典概率理论	815	Pseudo-statement	伪陈述	832
Probability, logical relation theory of	逻辑关系概率理论	816	<i>Psyche</i>	灵魂	832
Probability, propensity theory of	倾向性概率理论	816	Psychoanalysis	心理分析	833
Probability, relative frequency theory of	相对频率概率理论	817	Psycholinguistics	心理语言学	834
Probability, subjective theory of	主观主义概率理论	817	Psychological determinism	心理决定论	834
Probability calculus	概率演算	818	Psychological egoism	心理利己主义	835
Problem of evil	恶的问题	818	Psychologism	心理主义	835
Problem of other minds	他心问题	818	Psychologist's fallacy	心理学者谬误	835
Problem of the self	自我问题	818	Psycho-physical parallelism	心—物平行论	836
Problem of the speckled hen	花斑母鸡问题	819	Public choice	公众选择	836
Process theology	过程神学	819	Public goods	公共利益	836
Process-product ambiguity	过程与结果的模糊性	819	Public morality	公共道德	837
Productive force	生产力	819	Public particulars	公共殊相	837
<i>Prohairesis</i>	决定	820	Public / private dichotomy	公共和私人的两分法	837
Projectibility	可投射性	820	Punctuate property	精细特性	838
Proof theory	证明理论	821	Punishment	刑罚	838
Propensity	倾向性	821	Pure	纯粹	839
Proper name	专名	821	Pure apperception	纯粹统觉	839
Proper name theory	专名理论	822	Pure concepts of reason	理性纯粹概念	839
Property	特性	822	Pure ego theory	纯自我理论	839
Property dualism	性质二元论	823	Pure hypothetical syllogism	纯假言三段论	840
			Pure reason	纯粹理性	840
			Pure theory of law	纯粹法学	840
			Purely referential	纯指称	841
			Pyrrhonism	皮浪主义	841
			Pythagoreanism	毕达戈拉斯主义	841

Q			Reason and understanding	理性和知性	858
			Reason / cause	理由/原因	859
			Reasoning	推理	859
<i>Quadrivium</i>	四艺	842	Recognition statement	认识陈述	860
Quale	感受性	842	Recollection	回忆	860
Qualia	感受性	842	Rectificatory justice	矫正的正义	861
Qualified good	有条件的善	843	Recursive definition	递归定义	861
Quality of life	生活质量	843	Red herring fallacy	熏青鱼谬误	862
Quantifier	量词	844	<i>Reductio ad absurdum</i>	归谬法	862
Quantum theory	量子理论	844	<i>Reductio ad impossibile</i>	不可能论证	862
Quasi-syntactical sentence	准句法语句	845	Reductionism	还原论	862
<i>Quaternio terminorum</i>	四词项谬误	845	Reductivism	还原主义	863
<i>Quid facti</i>	事实问题	845	Redundancy theory of truth	真理冗余论	863
<i>Quid juris</i>	权利问题	845	Re-embodiment	再入壳	864
<i>Quidditas</i>	本是	845	Reference	指称	864
Quine-Duhem thesis	奎因-杜恒论题	845	Referent	所指物	865
R			Referential contradiction	指称矛盾式	865
			Referential tautology	指称重言式	865
			Referential theory of meaning	意义的指称论	865
Racism	种族主义	846	Referentially opaque	指称上的隐晦	866
Radical empiricism	彻底的经验主义	846	Referentially transparent	指称上的清晰	866
Radical feminism	激进的女性主义	847	Referring expression	指称表达式	866
Radical interpretation	彻底的解释	848	Reflect (Hegel)	反思(黑格尔)	866
Radical philosophy	激进哲学	848	Reflection (Locke)	反省(洛克)	867
Radical translation	彻底的翻译	849	Reflective equilibrium	反思的平衡	867
Ramsey sentence	拉姆塞语句	849	Reflective judgement	反思的判断力	868
Range	值域	850	Reflexive	自返的	868
Ratio	理智	850	Reformer's paradox	改革者的悖论	868
<i>Ratio decidendi</i>	判决理由	851	Refutation	反驳	868
Rational cosmology	理性宇宙论	851	Regularity theory of causation	因果规则论	868
Rational egoism	理性利己主义	851	Regulative principles	规范性原理	869
Rational explanation	合理的说明	851	Reification	具体化	869
Rational number	有理数	852	Reincarnation	再生	869
Rational psychology	理性心理学	852	Reism	实有论	869
Rational reconstruction	合理的重建	852	Relation	关系	870
Rational self-interest	合理的私利	852	Relation of ideas	观念的联系	870
Rational theology	理性神学	852	Relations of production	生产关系	871
Rationalism	理性主义	852	Relative identity	相对同一性	871
Rationality	理性能力	853	Relative product	关系积	872
<i>Rationes seminales</i>	种源理性	854	Relativity theory	相对论	872
Ravens paradox	渡鸦悖论	855	Relevance logic	相关逻辑	873
Ready-to-hand	用得称手	855	Relevant implication	相关蕴涵	873
Real definition	真实定义	855	Reliabilism	可靠论	873
Real distinction	实在的区别	856	Religious experience	宗教体验	874
Real essence	实在的本质	856	Religiousness A	第一种宗教状态	874
Real / logical opposition	实在的/逻辑的对立	857	Religiousness B	第二种宗教状态	875
Real number	实数	857	Reluctant desire	不情愿欲求	875
Real variable	真实变元	857	Renaissance	文艺复兴	875
Realism	实在论	857	Representation	表象	876
Reality	实在	858	Representational form	表现形式	876
Reason	理性	858	Representational theory	再现说	876
			Representationalism	表征主义	876

Representative theory of mind	心的表征理论	877	Satisficing	满意解决	897
Representative theory of perception	知觉的表征理论	878	Saturated	饱和的	897
Repression	压抑	878	Saving the phenomena	拯救现象	897
<i>Republic</i>	《国家篇》	878	Saying and showing	说与显示	898
Republicanism	共和主义	879	Scepticism	怀疑主义	898
<i>Res cogitans</i>	思维的东西	879	Schema (Kant)	图型 (康德)	899
<i>Res extensa</i>	广延的东西	880	Schematism	图型论	899
Research programme	研究纲领	880	Scholastic philosophy	经院哲学	900
Resemblance, theory of	相似理论	880	Scholasticism	经院学派	900
Resemblance nominalism	相似唯名论	880	Schrödinger's cat	薛定谔猫	900
Resentment	愤恨	881	<i>Scientia media</i>	中间知识	901
Resolution	分解	881	Scientific determinism	科学决定论	901
Responsibility	责任	881	Scientific experience	科学的经验	902
Retributive justice	惩罚的正义	882	Scientific image	科学的影像	902
Retrodution	再入	882	Scientific method	科学方法	902
Retrospection	反省	882	Scientific realism	科学实在论	902
Revealed theology	启示神学	882	Scientism	科学主义	903
Revelation	启示	883	Scope	范围	903
Revenge	报复	883	Scotism	司各脱主义	904
Reverse discrimination	反向歧视	883	Scottish philosophy	苏格兰哲学	904
Revisionary metaphysics	修正形而上学	884	Sea-battle	海战	905
Revisionism	修正主义	884	Secession	脱离	905
Rhetoric	修辞术	884	Secondary matter	次级的物质	906
Right	正当	884	Secondary qualities	第二性的质	906
Right (Kant)	权利 (康德)	885	Secondary rules	次要规定	906
Rights	权利	885	Second-level concept	二阶概念	906
Rights, absolute	绝对权利	886	Second-level predicate	二阶谓词	906
Rights, animal	动物的权利	887	Secondness	第二性	906
Rights, human	人权	887	Second-order logic	二阶逻辑	906
Rights, inalienable	不可让渡的权利	888	Second-order predicate	二阶谓词	906
Rights, legal	法权	888	Seeing in	从中观出	906
Rights, moral	道德权利	889	Self	自我	907
Rights thesis	权利论	889	Self-alienation	自我异化	907
Rigid designator	固定指示词	890	Self-awareness	自我意识	907
Role	角色	890	Self-consciousness	自我意识	908
Role-reversal test	角色逆反试验	891	Self-contradiction	自相矛盾	908
Rule of generalisation	概括规则	891	Self-control	自我控制	908
Rule of law	法治	891	Self-deception	自欺	909
Rule of quality	质的规则	892	Self-determination	自决	909
Rule of recognition	承认规则	892	Self-evident	自明的	910
Rule utilitarianism	规则功利主义	893	Self-fulfilment	自我实现	910
Rule-consequentialism	规则效果论	893	Self-identity	自我等同	910
Rule-following	遵守规则	893	Self-interest	自我利益	911
Rule-scepticism	规则怀疑论	894	Self-intimation	自我告知	911
Russell's paradox	罗素悖论	894	Self-love	自爱	911
S			Self-ownership	自我所有	912
Sacred	至圣	895	Self-predication	自我主谓	912
<i>Salva veritate</i>	保留真值	895	Self-presenting	自我呈现	912
Salvation	拯救	895	Self-realisation	自我完成	913
Sanctity of human life	人类生命的神圣性	895	Self-reference	自我指称	913
Sapir-Whorf hypothesis	萨丕尔—沃尔夫假说	896	Self-regarding	自我相关	913
Satisfaction	满足	896			

Semantic ambiguity	语义的模糊性	914	Situational semantics	情景语义学	932
Semantic anti realism	语义学的反实在论	914	Skolem-Löwenheim theo- rem	司寇伦-勒文海姆定 理	932
Semantic ascent	语义上行	914	Skolem's paradox	司寇伦悖论	933
Semantic holism	语义整体论	914	Slave/master	奴隶/主人	933
Semantic meaning	语义学意义	915	Slave morality	奴隶的道德	933
Semantic paradox	语义悖论	915	Slave of the passions	情感的奴隶	933
Semantic theory of truth	真理语义论	915	Slippery slope argument	滑坡论证	933
Semantically closed lan- guage	语义封闭的语言	916	Social action	社会行为	934
Semantics	语义学	916	Social choice	社会选择	934
Seminal reason	种源理性	917	Social contract	社会契约	934
Semiology	记号学	917	Social Darwinism	社会达尔文主义	935
Semiotics	符号学	917	Social democracy	社会民主主义	936
Sensa	感觉材料	917	Social fact	社会事实	936
Sensation	感觉	918	Social philosophy	社会哲学	937
Sensationalism	感觉主义	918	Sociobiology	社会生物学	937
Sense and reference	含义和指称	919	Sociology of knowledge	知识社会学	938
Sense field	感觉域	920	Socrates' question	苏格拉底的问题	938
Sense/force	意义/力量	920	Socratic <i>elenchus</i>	苏格拉底问答法	939
Sense qualia	感觉性质	920	Socratic method	苏格拉底方法	940
Sense-contents	感觉内容	921	Soft data	软乎料	940
Sense-impression	感觉印象	921	Solipsism	唯我论	940
Senseless	无意义的	921	Somatism	实物论	940
Sensibilia	可感物	921	<i>Sophia</i>	智慧	940
Sensibilism	感觉主义	922	Sophism	诡辩	940
Sensibility	感性	922	Sophist	智者	940
Sensory illusion	感觉错觉	922	Sorites paradox	累积悖论	941
Sentence	语句	922	Sortal	类	942
Sentence-token	殊型句子	923	Sortal predicate	类谓词	942
Sentence type	类型句子	923	Soul	灵魂	942
Sentential calculus	语句演算	923	Sovereign	统治者	943
Sentential function	语句函项	923	Sovereignty	主权	944
Sentience	感受性	924	Space	空间	944
Sentiment	情感	924	Space, absolute	绝对空间	945
Sentimentalism	情感主义	925	Space-time	空一时	945
Separation	分离	925	Species	属	946
Serial theory of the mind	心的序列理论	925	Species chauvinism	物种沙文主义	946
Set	集合	926	Speciesism	物种主义	946
Set theory	集合论	926	Specious present	似现在	946
Set-theoretical paradox	集合论悖论	926	Speculative philosophy	思辨哲学	947
Seven deadly sins	七恶	926	Speculative philosophy of history	思辨的历史哲学	947
Sex	性	926	Speech act	言语行为	947
Sexism	性别主义	926	Speech act fallacy	言语行为错误	948
Shame	羞愧	927	Sphere of existence	生存境界	948
Shared name	共名	927	Spirit	精神	949
Sheffer function	谢弗函项	927	Spirit of seriousness	严肃的精神	949
Sign and symbol	记号和符号	927	Spiritualism	唯灵论	949
Significant form	有意味的形式	928	Spontaneity	自发性	949
Simple nature	简单性质	928	Spontaneity / indifference	自发性和无差别性	949
Simplicity, principle of	简单性原则	929	Square of opposition	对当方阵	950
Simulation theory	模拟论	929	St. Petersburg paradox	圣彼得堡悖论	950
Sin	罪恶	930	Stage of existence	生存阶段	951
Sincerity	真诚	930	Standing sentence	标准句子	952
<i>Sine qua non</i>	绝对必需	930	State	国家	952
Singular term	单称词	931	State of affairs	事态	952
<i>Sittlichkeit</i>	伦理性	931	State of nature	自然状态	952
Situation ethics	情境伦理学	931	Statement / proposition	陈述/命题	953

Stimulus meaning	刺激意义	954	Surprise examination	意外考试悖论	974
Stipulative definition	规定定义	954	paradox		
Strategic action	策略行为	954	Survival, problem of	续存问题	974
Straw man fallacy	稻草人谬误	955	Survival of the fittest	适者生存	975
Stream of consciousness	意识流	955	Suspension of judgement	中止判断	976
Strict conditional	严格条件句	955	Syllogism	三段论	976
Strict identity	严格同一性	955	Symbol	符号	976
Strict implication	严格蕴涵	956	Symbolic logic	符号逻辑	977
Strife and love	恨与爱	956	Symmetric relation	对称关系	977
Structural ambiguity	结构模糊性	956	Sympathy	同情	977
Structural linguistics	结构语言学	957	Synecategorematic	助范畴词	977
Structural property	结构特性	957	Syndicalism	工联主义	978
Structural violence	结构性暴力	958	Synonym	同义词	978
Structuralism	结构主义	958	Syntactical ambiguity	句法上的模糊性	979
Structured violence	有组织的暴力	959	Syntactical sentence	句法语句	979
Style	风格	959	Syntax	句法	979
Subaltern	下位命题	960	Syntax words	句法词	979
Subcontraries	下反对	960	Synthesis	综合	979
Subjective knowledge	主观知识	960	Synthesis (Kant)	综合 (康德)	980
Subjective-objective distinction	主客区分	960	Synthetic a priori judgement	先天综合判断	980
Subjectivism	主观主义	961	Systematic ambiguity	系统模糊性	981
Subjectivity	主观性	961			
Subject-of-a-life	生命主体	961			
Sublation	扬弃	962			
Sublimation	升华	962			
Sublime	崇高	963			
Substance (Aristotle)	本体 (亚里士多德)	963	<i>Tabula rasa</i>	白板	982
Substance (Descartes)	实体 (笛卡尔)	964	Tacit belief	静默信念	982
Substance (Hegel)	实体 (黑格尔)	965	Tacit knowledge	静默知识	982
Substance (Leibniz)	实体 (莱布尼茨)	965	Taste	鉴赏力	983
Substance (Locke)	实体 (洛克)	965	Tautology	重言式	983
Substance (Spinoza)	实体 (斯宾诺莎)	966	<i>Techné</i>	技艺	984
Substantial chain	实体链	967	Teleological argument for the existence of God	上帝存在的目的论论证	984
Substantial form	实体形式	967	Teleological ethics	目的论的伦理学	985
Substantive universal	实质共相	967	Teleological explanation	目的论解释	985
Substitutional quantifier	替换量词	968	Teleological functionalism	目的论功能主义	985
Substratum (Aristotle)	基质 (亚里士多德)	968	Teleology	目的论	985
Subsumption theory of explanation	说明的归类理论	968	Telishment	滥罚	986
Success verbs	成功动词	968	<i>Telos</i>	目的	986
Such	这一类	968	Temperance	节制	987
Sufficient and necessary condition	充分必要条件	968	Temporal logic	时间逻辑	987
Sufficient condition	充分条件	968	Temporality	时间性	987
Sufficient reason, the principle of	充足理由律	969	Temporally neutral term	时间中立的用语	988
Suicide	自杀	969	Tender-mindedness	喜爱空想	988
<i>Summum bonum</i>	至善	970	Tense logic	时态逻辑	988
Sun, simile of the	太阳之喻	970	Term	词项	988
Superego	超我	971	Tertiary quality	第三特性	989
Supererogation	分外之事	971	<i>Tertium non datur</i>	无第三	989
Superman	超人	971	<i>Tertium quid</i>	有第三	989
Supernatural theology	超自然神论	971	Tertullian's paradox	德尔图良悖论	989
Superstructure	上层建筑	972	<i>Thanatos</i>	死亡	989
Supervenience	伴随性	972	Theism	有神论	989
Supposition	指代	973	Theodicy	神正论	989
Surface structure	表层结构	973	Theological determinism	神学决定论	990
			Theological virtues	神学德性	990

T

Theology	神学	990	Transcendental	先验的	1010
Theoretical construct	理论构造	991	Transcendental aesthetic	先验感性论	1010
Theoretical entity	理论实体	991	Transcendental analytic	先验分析论	1011
Theoretical language	理论语言	991	Transcendental appercep- tion	先验统觉	1011
Theoretical pluralism	理论多元论	991	Transcendental argument	先验论证	1012
Theoretical sentence	理论句子	991	Transcendental deduction	先验演绎	1012
Theoretical term	理论术语	992	Transcendental dialectic	先验辩证论	1013
Theoretician's dilemma	理论家困境	992	Transcendental ego	先验自我	1014
<i>Theoria</i>	思辨	993	Transcendental exposition	先验阐明	1014
Theory of knowledge	知识论	993	Transcendental ideal	先验的理想	1015
Theory of sentiments	情感论	993	Transcendental ideas	先验观念	1015
Theory of value	价值理论	994	Transcendental illusion	先验幻象	1015
Theory-laden	载有理论的	994	Transcendental logic	先验逻辑	1015
Theory-theory	理论论	994	Transcendental object	先验对象	1016
Theosophy	神智学	994	Transcendental paralogism	先验谬误推理	1016
Theseus' ship	忒修斯之船	995	Transcendental philoso- phy	先验哲学	1016
Thin theory of the good	薄的弱理论	995	Transcendental place	先验的位置	1016
Thing	物	995	Transcendental reflection	先验的反思	1016
Thing-in-itself	物自体	996	Transcendental synthesis	先验的综合	1017
Thing language	事物语言	997	Transcendental topic	先验正位	1017
Thinking	思维	997	Transcendental unity of apperception	统觉的先验统一	1017
Thinking substance	思维实体	998	Transcendentalism	超验主义	1017
Thinking thing	思维的东西	998	Transformational grammar	转换语法	1018
Third man argument	第三人论证	998	Translation holism	翻译的整体论	1018
Third realm	第三领域	999	Transmigration of the soul	灵魂轮回	1019
Thirdness	第三性	999	Transworld identity	跨世界的同一性	1019
Third-person perspective	第三人观点	999	Trial and error	试错法	1020
Thisness	这一个	999	Trinity	三位一体	1020
Thomism	托马斯主义	999	Tripartite definition of knowledge	知识的三分法定义	1021
Thought	思想	1000	<i>Trivium</i>	三艺	1021
Thought experiment	思想实验	1000	Trolley problem	查道车问题	1021
Three-valued logic	三值逻辑	1001	Truth	真理	1022
<i>Ti esti</i>	是什么	1001	Truth (Heidegger)	真理 (海德格尔)	1023
Time	时间	1002	Truth conditions	真值条件	1023
Time, absolute	绝对时间	1002	Truth of fact	事实的真理	1023
Time travel	时间旅行	1002	Truth of reason	理性的真理	1023
Time-gap argument	时间沟论证	1003	Truth-function	真值函项	1024
Time-lag argument	时间滞后论证	1003	Truth-functional connec- tive	真值函项联结词	1024
Time-preference	时间偏好	1004	Truth-functional constant	真值函项常项	1025
Timocracy	荣誉政体	1004	Truth-functional operator	真值函项算子	1025
To be	是	1004	Truth-table	真值表	1025
To be is to be perceived	存在就是被感知	1004	Truth-table method	真值表方法	1025
<i>To ti en enai</i>	本质	1004	Truth-value	真值	1025
<i>Tode ti</i>	这一个	1004	Truth-value gap	真值空缺	1026
<i>Toionde</i>	这一类	1004	T-sentence	T 语句	1026
Token	殊型	1004	<i>Tu quoque</i> fallacy	你也一样的错误	1027
Token-reflexive	反身殊型	1005	Turing machine	图灵机	1027
Token-token identity the- ory	殊型—殊型同一论	1005	Turing Test	图灵测验	1027
Toleration	宽容	1006	Twin earth	孪生地球	1028
Topic-neutral	话题中性的	1006	Two principles of justice	正义的两条原则	1028
<i>Topos</i>	正位	1007	Two space myth	两种空间神话	1029
Totalitarianism	极权主义	1007	Two-factor theory	二因素理论	1030
Tough-mindedness	讲究实际	1007			
Tradition	传统	1008			
Traditional logic	传统逻辑	1008			
Tranquillity	宁静	1009			
Transcendent	超验的	1009			

Two-place predicate	二位谓词	1030	Value	价值	1050
Two-valued logic	二值逻辑	1030	Value, instrumental	工具价值	1051
Two-world theory	两个世界理论	1030	Value, intrinsic	内在价值	1051
Type and token	类型和殊型	1030	Value, theory of	价值理论	1051
Type-type identity theory	类型—类型同一论	1031	Value of a variable	变元的值	1051
Types, theory of	类型论	1031	Value words	价值词汇	1052
U			Variable	变元	1052
<i>Übermensch</i>	超人	1033	Veganism	严格素食论	1052
Ugliness	丑	1033	Vegetarianism	素食主义	1052
Unconscious	无意识的	1034	Veil of appearance	外观之幕	1053
Understanding (Heidegger)	领会(海德格尔)	1034	Veil of ignorance	无知之幕	1053
Understanding (Kant)	知性(康德)	1035	Veil of perception	知觉之幕	1054
Understanding (Locke)	理智(洛克)	1035	Verification theory of meaning	意义的证实论	1054
Understanding / explanation	理解/解释	1036	Verificationism	证实主义	1054
Undistributed middle	中项不周延	1036	Verisimilitude	逼真性	1055
Unexpected examination paradox	意外的考试悖论	1037	<i>Verstehen</i>	理解	1055
Unhappy consciousness	苦恼的意识	1037	<i>Via antiqua</i>	古路	1056
Unified science	统一科学	1037	<i>Via moderna</i>	新路	1056
Uniformity of Nature	自然的齐一性	1038	<i>Via negativa</i>	否定方法	1056
Unity of consciousness	意识的统一	1038	<i>Via positiva</i>	肯定方法	1057
Universal	共相	1038	Vicious circle	恶性循环	1057
Universal characteristic	普遍语言	1039	Vicious circle principle	恶性循环原理	1057
Universal grammar	普遍语法	1039	Vienna Circle	维也纳小组	1058
Universal proposition	全称命题	1040	<i>Vinculum substantiale</i>	实体链	1058
Universal quantifier	全称量词	1040	Virtue	德性	1059
Universal symbolistic	普遍符号语言	1041	Virtue (Kant)	德性(康德)	1060
<i>Universalia, ante rem</i>	在物之先的共相	1041	Virtue ethics	德性伦理学	1060
<i>Universalia, in rebus</i>	在物之中的共相	1041	Virtuous circle	良性循环	1061
<i>Universalia, post rem</i>	在物之后的共相	1042	Visual field	视域	1061
Universalizability	可普遍化	1042	Vitalism	活力论	1062
Universals of language	语言的共相	1042	Void	虚空	1062
Unknown entities	未知实体	1042	Volition	意志	1062
Unmoved mover	不动的推动者	1042	Voluntarism	意志论	1063
Unqualified good	无条件的善	1043	Voluntary-involuntary	自愿与非自愿	1063
Unsaturated	不饱和的	1043	<i>Vorstellung</i>	表象	1064
Unwritten doctrines	未著文字的学说	1043	Voting paradox	选举悖论	1064
Use theory of meaning	意义的用法理论	1044	W		
Utilitarianism	功利主义	1044	Warranted assertibility	得证的可断言性	1066
Utilitarianism, act	行为功利主义	1045	Wayward causal chain	无常因果链	1066
Utilitarianism, ideal	理想的功利主义	1046	Weakness of will	意志薄弱	1066
Utility	功利	1046	Wedge argument	楔子论证	1067
Utility calculus	功利演算	1047	Welfare	福利	1067
Utopia	乌托邦	1047	Welfarism	福利主义	1067
Utopian engineering	乌托邦工程	1047	Well-being	好生活	1068
V			Well-formed formula	合式公式	1068
Vacuous occurrence	空现	1049	Well-founded phenomena	有可靠根据的现象	1069
Vagueness	含糊性	1049	Wff	合式公式	1069
Validity	有效性	1050	What-it-is	是什么	1069
			Wide content	宽内容	1070
			Wide states	广状态	1070
			Will	意愿	1070

Will (Kant)	意志 (康德)	1070
Will of all	众意	1071
Will to believe	相信意愿	1071
Will to power	对力量的意愿	1072
Wisdom	智慧	1072
World 1	世界 1	1073
World 2	世界 2	1073
World 3	世界 3	1073
World-soul	世界灵魂	1073

Z

Zeno's paradoxes	芝诺悖论	1075
Zero Method	置零法	1076
Zorostrianism	祆教	1076

Aesthetics

美学

<i>A fortiori</i>	更有理由	1	Imitation	模仿	475
Abandonment	放达	3	Imitation theory	模仿说	475
Absurdity	荒诞	10	Institutional theory	机构说	506
Aesthetic attitude	审美态度	25	Intentional fallacy	意向谬误	513
Aesthetic autonomy	审美自律性	25	Intersubjectivity	主体间性	518
Aesthetic detachment	审美超脱	26	Judgement of taste	鉴赏力判断	529
Aesthetic distance	审美距离	26	<i>Kalon</i>	美	533
Aesthetic education	审美教育	26	Kosmos	宇宙	540
Aesthetic imagination	审美想像	26	Laughter	发笑	544
Aesthetic judgement	审美判断	26	Like to like	同类相吸	554
Aesthetic pleasure	审美愉悦	27	Macrocosm	宏观世界	581
Aesthetic property	审美特性	28	Make-believe	虚拟情景	582
Aesthetic value	审美价值	28	Mean	适度	595
Aestheticism	唯美主义	28	Metaphor	隐喻	611
Aesthetics	美学	29	Mimetic theory	模仿说	622
Art	艺术	79	Narrative	叙述	651
Art for art's sake	为艺术而艺术	79	Natural philosophers	自然哲学家	657
Artworld	艺术世界	80	Nature	自然	662
Beauty	美	109	New criticism	新批评	677
Catharsis	净化	144	<i>Nomos</i>	规范	684
Creativity	创造性	214	Notation	标志法	688
Culture	文化	222	Notational scheme	标志图式	689
Death of art	艺术的消亡	231	Paradigm	范式	723
Determination	限定性	253	Participation	分有	728
Disinterest	无利害	267	<i>Philia</i>	友情	747
Duration	绵延	279	Philosophy of art	艺术哲学	752
End of art	艺术的终结	300	Plagiarism	抄袭	769
Expression theory	表现说	353	Pleasure	快感	770
Forgery	赝品	384	Popular art	通俗艺术	776
Form	形式	385	Pornography	色情艺术	776
Formalism(aesthetic)	形式主义(美学上的)	389	Post-historical art	后历史艺术	781
Grammar	语法	418	Representational theory	再现说	876
Harmony	和谐	427	Seeing in	从中观出	906
Humour	幽默	451	Significant form	有意味的形式	928
Iconoclasm	打破偶像	457	Style	风格	959
Idolatry	偶像崇拜	471	Sublime	崇高	963
			Taste	鉴赏力	983
			Thing	物	995
			Ugliness	丑	1033
			Zeno's paradoxes	芝诺悖论	1075

Modern European philosophy 现代欧洲哲学

<i>Angst</i>	畏惧	50	Eidetic intuition	本质直观	288
Anguish	焦虑	50	Eidetic reduction	本质还原	288
<i>Animal symbolicum</i>	符号化的动物	52	Eidetic variation	本质变更	289
Anticipation	先行	54	<i>Élan vital</i>	生命冲动	289
Anxiety	畏惧	59	Encompassing	大全	300
Apollonian	阿波罗的	61	Enlightenment	启蒙运动	301
Application	应用	64	<i>Ens irreale</i>	非实在者	304
Archaeology of knowledge	知识考古学	67	<i>Ens rationis</i>	理智存在者	304
Archive	档案	70	<i>Ens reale</i>	实在者	304
Authenticity	真正切己状态	92	<i>Eros</i> (Freud)	厄罗斯(弗洛伊德)	319
Averageness	平均状态	97	Eternal recurrence	永恒轮回	323
Bad faith	自欺	102	Eternal Thou	永恒的你	324
Being (Heidegger)	存在(海德格尔)	115	Everydayness	日常性	338
Being-for-itself	为自身的存在	116	Existence (Heidegger)	生存(海德格尔)	344
Being-in-itself	在自身中的存在	117	Existentialism	生存主义	347
Being-in-the-world	在此世界中存在	117	Existentiell-existential	生存者的与生存论的	348
Being-with	共同存在	117	distinctio	区别	
Best of all possible worlds	可能世界中的最佳者	121	<i>Existenz</i>	生存	348
Body	物体	125	External perception	外知觉	356
Bracketing, method of	加括弧法	128	Facticity	实际性	359
Care	牵挂	137	Fallingness	沉沦	366
Communicative action	交往行为	170	Fear	害怕	369
Communicative ethics	交往伦理学	171	First philosophy	第一哲学	376
Communicative rationalisation	交往理性化	171	Fundamental ontology	基础存在论	400
Communicative rationality	交往理性	171	Fundamental project	基本谋划	400
Concrete essence	具体本质	181	Fusion of horizons	视域的融合	400
Contemporaneity	当代性	193	<i>Geisteswissenschaften</i>	人文科学	404
Critical realism	批判的实在论	217	Genealogy	谱系学	405
<i>Dasein</i>	缘在	227	Genetic epistemology	发生认识论	410
Death	死亡	229	Grammatology	书写学	419
Death instinct	死亡本能	230	Hermeneutic circle	解释学循环	435
Deconstruction	解构	233	Hermeneutics	解释学	436
Despair	绝望	252	Hermeneutic phenomenology	解释学的现象学	436
Difference	趋别	259	Historicality	历史性	442
Dionysian/Apollonian	狄俄尼索斯的/ 阿波罗的	263	Historicity	历史性	443
Discourse	言谈	264	Horizon	视域	447
Discourse ethics	言谈伦理学	265	Human nature	人性	448
Dread	恐惧	276	Human sciences	人文科学	449
<i>Écart</i>	自离	282	Humanity	人性	450
Ecstasy	逸出态	283	Id	伊底	457
Effective historical consciousness	效果历史意识	283	Ideation	观念直观	465
Effective history	效果历史	283	I-it	我与它	471
Ego (Freud)	自我(弗洛伊德)	285	<i>In obliquo</i>	间接地	483
			<i>In recto</i>	直接地	483
			Inauthenticity	不真正切己状态	484
			Inner observation	内在观察	504
			Inner perception	内知觉	504
			Intentional inexistence	意向性的内存在	513
			Intentionality	意向性	514
			Interpretation (Heidegger)	阐释(海德格尔)	518
			I-Thou	我与你	526
			<i>Langue/parole</i>	语言/言语	543
			Libido	里比多	553
			Life instinct	生命本能	553
			Life-world	生活世界	554
			Lived experience	活生生的体验	560
			Logocentrism	逻各斯中心论	577

Masochism	受虐狂	586	<i>Übermensch</i>	超人	1033
Master morality	主人的道德	587	Unconscious	无意识的	1034
Mental phenomenon	心的现象	602	Understanding (Heidegger)	领会(海德格尔)	1034
Metaphysics of presence	在场的形而上学	617	Will	意愿	1070
Modernity	现代性	630	Will to power	对力量的意愿	1072
Narcissism	自恋	651			
Nausea	厌恶	663			
Neo-Pragmatism	新实用主义	673			
Nihilism	虚无主义	679			
<i>Noema</i>	意向对象	681			
<i>Noesis</i>	意向作用	682			
Nothingness	无	689			
Oedipus complex	俄狄浦斯情结	702			
Ontico-ontological distinction	存在者的与存在论的区别	705			
Ontological guilt	存在论之罪感	707	Abstract ideas	抽象观念	8
Original choice	原初的选择	713	<i>Abstracta</i>	抽象物	10
Overman	超人	718	Analogy	类比	41
Pathetic fallacy	感情误置	732	Analysis, paradox of	分析的悖论	42
Phenomenological epoche	现象学的悬置	744	Archetype	原型	69
Phenomenological reduction	现象学的还原	744	<i>Argument a posteriori</i>	后天的证明	70
Phenomenology	现象学	744	<i>Argument a priori</i>	先天的证明	71
Philosophical hermeneutics	哲学解释学	749	Artificial virtue	人为的德	80
Philosophy of psychology	心理学哲学	760	Association of ideas	观念的联结	85
Phonologism	语音主义	764	Astrology	星占学	86
Physical phenomenon	物理现象	766	Begging the question	窃取论题	110
Postmodernism	后现代主义	781	Burden of proof	举证责任	131
Post structuralism	后结构主义	782	Causality	因果性	149
<i>Pour-soi/en-soi</i>	为自身的/在自身中的	784	Causation	因果关系	149
Preconscious	前意识的	790	Cause	原因	150
Prejudice	偏见	796	Cement of the universe	宇宙的粘合剂	152
Pre-reflective cogito	前反思的思想	797	Circular definition	循环定义	158
Presence	在场	798	Circular reasoning	循环推理	158
Presence-at-hand	现成在手状态	799	<i>Civitas</i>	全体国民	160
Psychoanalysis	心理分析	833	Commonwealth	共同国家	169
Ready-to hand	用得称手	855	Complex ideas	复杂观念	174
Reason/cause	理由/原因	859	Consent	同意	188
Religiousness A	第一种宗教状态	874	Constant conjunction	恒常会合	191
Religiousness B	第二种宗教状态	875	Content	内容	194
Repression	压抑	878	Contiguity	接近性	197
Scientific experience	科学的经验	902	Criterion, problem of the	标准问题	215
Slave morality	奴隶的道德	933	Crucial experiment	判决性实验	221
Sphere of existence	生存境界	948	Dogma	教条	272
Spirit of seriousness	严肃的精神	949	Empiricism	经验主义	298
Stage of existence	生存阶段	951	<i>Esse est percipi</i>	存在就是被感知	320
Strategic action	策略行为	954	Experience	经验	349
Stream of consciousness	意识流	955	Greatest happiness principle	最大幸福原则	421
Structural linguistics	结构语言学	957	Heresy	异端	434
Structuralism	结构主义	958	Idea (Hume)	观念(休谟)	457
Sublimation	升华	962	Idea (Locke)	观念(洛克)	459
Superego	超我	971	Identity	同一性	466
Superman	超人	971	Identity, law of	同一律	467
Temporality	时间性	987	Identity, numerical	数目的同一性	467
<i>Thanatos</i>	死亡	989	Idol	偶像	470
Topic-neutral	话题中性的	1006	Illicit major	大项不当周延	472
Transcendental ego	先验自我	1014			
Truth (Heidegger)	真理(海德格尔)	1023			
Truth-value gap	真值空缺	1026			

Empiricism 经验主义

Illicit minor	小项不当周延	472
Immaterialism	非物质论	476
Impression(Hume)	印象(休谟)	482
Indifference/spontaneity	无差别和自发性	489
Infinite regress argument	无穷后退证明	501
Is/ought gap	“是”和“应该”之分	525
Joint method of agreement and difference	契合差异并用法	528
Kingdom of darkness	黑暗之国	533
Kingdom of God	上帝之国	536
Leviathan	利维坦	549
Method of agreement	契合法	617
Method of concomitant variations	共变法	618
Method of difference	差异法	618
Method of residues	剩余法	618
Minimum sensible	最小可感体	624
Mixed modes	混合样式	626
Mode(Locke)	样式(洛克)	629
Molyneux's problem	莫利纽克斯问题	633
Natura non facit saltum	自然从不飞跃	654
Natural virtue	自然的德	659
New organon	新工具	677
Nominalism	唯名论	683
Panentheism	万物在神论	722
Person	人	738
Personal identity	人格的同一性	739
Petito principii	窃取论题	742
Philosophy of thought	思想哲学	763
Port-Royal Logic	波尔-罗亚尔逻辑	778
Primary and secondary qualities	第一性的质和第二性的质	801
Principle of individuation	个体化原则	807
Rationality	理性能力	853
Real essence	实在的本质	856
Red herring fallacy	熏青鱼谬误	862
Reflection (Locke)	反省(洛克)	867
Rule of quality	质的规则	892
Secondary qualities	第二性的质	906
Sentiment	情感	924
Sentimentalism	情感主义	925
Slave of the passions	情感的奴隶	933
Spontaneity/indifference	自发性和无差别性	949
Substance(Locke)	实体(洛克)	965
Tabula rasa	白板	982
Theory of sentiments	情感论	993
Thought	思想	1000
To be is to be perceived	存在就是被感知	1004
Toleration	宽容	1006
Understanding(Locke)	理智(洛克)	1035
Undistributed middle	中项不周延	1036
Vagueness	含糊性	1049
Vicious circle	恶性循环	1057
Vicious circle principle	恶性循环原理	1057
Virtuous circle	良性循环	1061

Epistemology 认识论

<i>A priori/a posteriori</i>	先天/后天	1
<i>A priori</i> knowledge	先天知识	2
<i>A priori</i> proposition	先天命题	2
AI	AI	35
Analytic-synthetic	分析—综合	45
<i>Aporia</i>	迷阵	62
A-proposition	A 命题	67
Causal theory of knowledge	知识因果论	147
Coherentism	融合主义	165
Conceptual relativism	概念相对论	179
Conceptual scheme	概念图式	180
Consequential characteristics	结果特性	189
Contingentism	偶然论	198
Convention	约定	202
Correspondence rules	对应规则	207
Critical cognitivism	批判认知主义	216
<i>De dicto</i> belief	关于命题的信念	228
Definist fallacy	定义错误	237
<i>Denominatio extrinseca</i>	外在指称	243
<i>Denominatio intrinseca</i>	内在指称	244
Deontic modality	道义模态	245
Descriptions, theory of	摹状词理论	247
<i>Dictum de omni et nullo</i>	遍有遍无公理	259
Double language model	双语模型	274
Doxastic theory	信念论	276
Doxastic virtue	信念德性	276
Duck-rabbit	鸭兔	278
Epistemic justification	认知辩明	312
Epistemic modality	认知模态	312
Epistemic virtue	认知德性	313
Epistemics	认知学	313
Epistemological necessity	认识论上的必然性	314
Epistemology	认识论	314
E-proposition	E 命题	315
Ethics of belief	信念伦理学	332
Evidentialism	证据主义	339
Examination paradox	考试悖论	342
Expected utility	期望效用	349
External world	外在世界	357
Externalism	外在论	357
Fallacy of accent	重音错误	362
Fallacy of emphasis	重点错误	364
Feminist epistemology	女性主义认识论	370
Formal	形式的	386
Foundationalism	基础主义	392
Free logic	自由逻辑	394
Genetic fallacy	生成错误	410

Gettier problem	盖梯尔问题	412
Gnoseology	生成论	413
Goodman's paradox	古德曼悖论	418
Grue paradox	绿蓝悖论	423
Historicism	历史主义	442
Historism	历史论	443
Hypothetical induction	假说演绎	455
Internalism	内在论	517
<i>Isoteneia</i>	同位	526
Justification	辩明	532
KK-thesis	K K 论题	536
Knower paradox	知者悖论	536
Knowledge	知识	537
Knowledge <i>de dicto</i>	关于命题的知识	539
Knowledge <i>de re</i>	关于对象的知识	539
Knowledge <i>de se</i>	关于自身的知识	539
Meta-epistemology	元认识论	608
Modal epistemic logic	模态认知逻辑	627
Moral epistemology	道德知识论	640
Nominal definition	名义定义	682
Non-doxastic theory	非信念论	685
Observation language	观察语言	698
O-proposition	O 命题	711
Oxford philosophy	牛津哲学	720
Perceptual knowledge	知觉知识	735
Preface paradox	序言悖论	796
<i>Prima facie</i> justification	最初辩明	801
Principle of charity	宽容原则	805
Principle of humanity	人性原则	806
Principle of parsimony	节俭原则	808
Propositional belief	命题信念	825
Propositional knowledge	命题知识	826
Real definition	真实定义	855
Reliabilism	可靠论	873
Retroduction	再入	882
Self-awareness	自我意识	907
Semiotics	符号学	917
Sense/force	意义/力量	920
Sentence-token	殊型句子	923
Sentence type	类型句子	923
Simplicity, principle of	简单性原则	926
Sociology of knowledge	知识社会学	938
Structural ambiguity	结构模糊性	956
Subjective-objective distinction	主客区分	960
Systematic ambiguity	系统模糊性	981
Tertiary quality	第三特性	989
Theoretical language	理论语言	991
Theory of knowledge	知识论	993
Tripartite definition of knowledge	知识的三分法定义	1021
<i>Tu quoque</i> fallacy	你也一样的错误	1027
Unexpected examination paradox	意外的考试悖论	1037
Voting paradox	选举悖论	1064

Ethics 伦理学

Abortion	堕胎	4
Absolute conception	绝对概念	5
Academic freedom	学术自由	11
Academy	学园	11
Act and omission	行为与忽略	16
Act-consequentialism	行为效果论	17
<i>Ad hoc</i> hypothesis	当下假设	22
Additive fallacy	累加谬误	22
Additivity assumption	累加假定	22
Agent-centred morality	行为者中心道德论	32
Agent-neutral reason	行为者中立的理由	33
Agent-related ethics	行为者相关伦理学	33
Agent-relative reason	行为者相关理由	33
Altruism	利他主义	36
Amoralism	非道德主义	38
Analytic ethics	分析伦理学	43
Androcentrism	男性中心主义	50
Animal-centred ethics	动物中心伦理学	51
Animal liberation	动物解放	51
Anti-theory	反理论	58
Applied ethics	应用伦理学	65
Aretaic judgement	价值判断	70
<i>Arete</i>	德性	70
Attitude	态度	89
Attributive adjective	归属性形容词	91
Autonomy of morals	道德自主性	96
Axiological ethics	价值伦理学	98
Axiology	价值论	98
Belief/desire thesis	信—欲论	119
Beneficence	慈善	120
Benevolence	仁慈	120
Bioethics	生命伦理学	122
Biomedical ethics	生物医学伦理学	124
Boo-hurrah theory	呸—呜啦理论	126
Business ethics	商业伦理学	132
Cambridge Platonists	剑桥柏拉图主义者	134
Capital punishment	死刑	136
Caring	关怀	138
Casuistry	决疑法	140
Categorical imperative	绝对命令	141
Censorship	审查制度	152
Character	品格	156
Charity	慈爱	156
Civil duty	公民责任	159
Civil liberties	公民自由	159
Civil rights	公民权利	159
Cognitivism	认知主义	164

Collective responsibility	集体责任	165	Ethics and morality	伦理学和道德	331
Common good	共同善	168	Ethics of care	关怀伦理学	332
Common sense morality	常识道德	169	Ethics of justice	正义伦理学	333
Communitarianism	共同体主义	171	Ethnology	品格学	333
Community	共同体	172	<i>Ethos</i>	习惯	334
Compromise	妥协	176	<i>Éthos</i>	品格	334
Conceptual analysis	概念分析	178	Etiquette	礼节	335
Conditional duty	有条件职责	184	Euthanasia	安乐死	336
Consequentialism	效果论	189	Evaluative meaning	评价意义	337
Consistency	一致	191	Evil	恶	339
Contextual implications	语境蕴含	195	Excellence	卓越	342
Contractarianism	契约主义	199	Excuse	藉口	342
Contractualism	契约论	200	Externalism(ethics)	外在论(伦理)	358
Contraposition	换位法	201	Fairness	公平	361
Contributor's dilemma	贡献者的两难困境	202	Felicity calculus	幸福演算	369
Conventionalism	约定论	203	Feminist ethics	女性主义伦理学	371
Conversion	换位	204	Fidelity	忠诚	373
Courage	勇敢	212	Final end	终极目的	374
Critical ethics	批判伦理学	217	Final good	终极善	375
Cruelty	残忍	221	Fittingness	适当	380
Cynics	犬儒	224	Forgiveness	宽恕	384
<i>Cyrenaics</i>	居勒尼学派	225	Formalism(ethics)	形式主义(伦理学的)	390
Death penalty	死刑	231	Four freedoms	四重自由	393
Decision theory	决策理论	233	Free-rider	逃票乘客	396
Deontic judgement	道义判断	245	Friendship	友谊	397
Deontology	道义论	246	Future generations	后代	401
Descriptive fallacy	描述谬误	248	Gambler's fallacy	赌徒谬误	403
Descriptive meaning	描述意义	249	Game theory	游戏理论	404
Descriptivism	描述主义	250	Generalization argument	普遍化的论证	408
Desire	欲望	251	Golden rule	金规	416
Deterrence	威慑	255	Gratitude	感激	420
Dignity	尊严	261	Great-soulness	伟大的心灵	421
Direct realism	直接实在论	263	Group responsibility	群体责任	423
Discrimination	歧视	266	Guilt	负罪	423
Dominion thesis	主宰论	273	Harm	伤害	426
Double effect doctrine of	双重效果论	274	Health care ethics	保健伦理学	427
Ecocentrism	生态中心主义	282	Hedonism,ethical	伦理快乐主义	428
Egoism,ethical	伦理利己主义	287	Hedonism,paradox of	快乐主义的悖论	429
Elite	精英	291	Hedonism,psychological	心理学的快乐主义	429
Emotion	情感	295	Hedonistic calculus	快乐主义的演算	429
Emotive meaning	情感意义	296	Homosexuality,problem	同性恋问题	445
Emotivism	情感主义	297	of		
Empathy	移情作用	297	Honour	荣誉	446
Enlightenment project	启蒙运动工程	302	Human chauvinism	人类沙文主义	448
Environmental ethics	环境伦理学	308	Humility	谦卑	451
Environmental fascism	环境法西斯主义	309	Hypocrisy	伪善	453
Envy	嫉妒	310	Ideal observer theory	理想的观察者理论	460
Epicureanism	伊壁鸠鲁主义	310	Impartial spectator	公正的旁观者	478
Ethical individualism	伦理个人主义	324	Impartiality	公正	478
Ethical knowledge	伦理知识	325	Indirect realism	间接实在论	490
Ethical objectivism	伦理客观主义	326	Individualism	个人主义	492
Ethical relativism	伦理相对主义	327	Informed consent	知情同意	503
Ethical subjectivism	伦理主观主义	328	Innocence	无辜	506
Ethical theory	伦理理论	328	Integrity	正直	508
Ethics,axiological	价值论伦理学	329	Internalism(ethics)	内在论(伦理学的)	517
Ethics,emotive theory of	伦理学的情感论	329	Intuitionism,ethical	伦理学的直觉主义	521
Ethics,intuitionistic	直觉主义伦理学	329	James-Lange view	詹姆斯-朗格观点	527
Ethics,normative	规范伦理学	330	Judgement of obligation	义务判断	529

<i>Apeirion</i>	无定	60	Motion	运动	646
Apprehensive impression	领悟性印象	66	Moving rows, paradox of	运动列悖论	647
Appropriate act	适当行为	66	<i>Nous</i>	努斯	691
<i>Arche</i>	本原	68	One over many	多上之一	704
Atom	原子	87	<i>Organon</i>	《工具论》	713
Being qua being	作为是的是	116	<i>Ousia</i>	本是	717
Causes, four	四因	131	Ousiology	本是论	718
<i>Cave, simile of the</i>	洞穴之喻	151	<i>Paideia</i>	教育	721
Choice	选择	157	Passion	激情	730
Cosmogony	宇宙生成论	208	Passive intellect	被动理智	730
<i>Daimon</i>	神灵	226	<i>Pathos</i>	感受	732
Decision	决定	232	Peripatetics	散步学派	737
<i>Definiendum</i>	被定义项	237	Phenomenon	现象	746
<i>Definiens</i>	定义项	237	Philosopher-king	哲学王	747
Deliberation	考虑	241	<i>Phronesis</i>	实践智慧	766
Demurge	造物主	241	<i>Pneuma</i>	普纽玛	771
Developmentalism	发生论	256	<i>Poiesis</i>	创制	772
<i>Dianoia</i>	理智	258	Potentiality	潜能	783
Dichotomy, paradox of	二分法悖论	258	Potentiality/actuality	潜能·现实	784
<i>Doxa</i>	意见	276	Practical syllogism	实践三段论	786
Elenchus	问答法	290	Practical wisdom	实践智慧	787
End/means	目的/手段	300	<i>Praxis</i>	实践	790
<i>Endoxa</i>	共同意见	301	Preconception	预先概念	790
Entelechy	隐德来希	305	Predication, metaphysical	形而上学的主谓关系	794
<i>Episteme</i>	知识	311	Pre-Socratics	前苏格拉底	799
<i>Epoch</i>	悬置	315	Prime matter	原初质料	803
<i>Ergon</i>	功能	317	Prime mover	第一推动者	803
Eristic	争辩术	318	Privation	缺失	813
Esoteric	秘传的	320	<i>Prohairesis</i>	决定	829
Essence	本质	321	<i>Psyche</i>	灵魂	832
Ethical virtue	伦理德性	329	Pyrrhonism	皮浪主义	841
<i>Eudaimonia</i>	幸福	335	Pythagoreanism	毕达戈拉斯主义	841
Euthyphro dilemma	尤息弗罗难题	337	Recollection	回忆	860
Excellence of character	优秀品格	342	Separation	分离	926
Fifth element	第五元素	374	Socrates' question	苏格拉底的问题	938
Flux	流变	381	Socratic <i>elenchus</i>	苏格拉底问答法	939
Flying arrow, paradox of the	飞矢悖论	381	Socratic method	苏格拉底方法	940
Focal meaning	中心意义	382	<i>Sophia</i>	智慧	940
Four elements	四元素	392	Sophist	智者	940
Genetic method	发生法	410	Spirit	精神	949
Great year	大年	420	Strife and love	恨与爱	956
Gyge's Ring	盖奇的戒指	424	Substratum (Aristotle)	基质(亚里士多德)	968
<i>Hypokeimenon</i>	基质	453	Such	这一类	968
Idea (Plato)	形相(柏拉图)	459	Sun, simile of the	太阳之喻	970
Incontinence	意志薄弱	486	Suspension of judgement	中止判断	976
Intellectual virtue	理智德性	509	<i>Techne</i>	技艺	984
Irony, Socratic	苏格拉底的讥讽	522	<i>Telos</i>	目的	986
<i>Kinesis</i>	运动	535	Temperance	节制	987
Line, simile of the	线段之喻	555	<i>Theoria</i>	思辨	993
<i>Maieutic method</i>	助产术	581	Third man argument	第三人论证	998
<i>Metaphysica generalis</i>	一般形而上学	611	Thisness	这一个	999
<i>Metaphysica specialis</i>	特殊形而上学	612	<i>Ti esti</i>	是什么	1001
Metempsychosis	灵魂转生	617	<i>To ti en einai</i>	本质	1004
<i>Methexis</i>	分有	617	<i>Tode ti</i>	这一个	1004
Midwifery	助产术	621	<i>Toionde</i>	这一类	1004
<i>Mimesis</i>	模仿	622	<i>Topos</i>	正位	1007
Moral virtue	道德德性	646	Tranquillity	宁静	1009
			Unmoved mover	不动的推动者	1042

Unwritten doctrines	未著文字的学说	1043
Void	虚空	1082
Weakness of will	意志薄弱	1086
What it is	是什么	1069
Wisdom	智慧	1072

Hegel and Marx 黑格尔和马克思

Absolute idea	绝对理念	6
Absolute spirit	绝对精神	6
Abstract/concrete	抽象/具体	7
Acosmism	无世界论	15
Actuality(Hegel)	现实(黑格尔)	21
Adventitious ideas	外来的观念	23
Agnosticism	不可知论	34
Alienation	异化	35
<i>Aufheben</i>	扬弃	91
Axiom	公理	98
Axiom schema	公理式	100
Bad infinity	坏无限	103
Being(Hegel)	存在(黑格尔)	114
Civil society	市民社会	169
Classical Aristotelian conception of truth	亚里士多德的经典真理概念	161
Computer functionalism	计算机功能主义	176
Concrete/abstract	具体/抽象	181
Concrete concept	具体概念	181
Concrete universal	具体共相	182
Cunning of reason	理性的机巧	223
Deflationary theory of truth	真理紧缩论	239
Deontic concept	道义概念	245
Dialectic(Hegel)	辩证法(黑格尔)	257
Dialectical materialism	辩证唯物主义	257
Disquotational theory of truth	真理的消除引号论	269
Double negation	双重否定	275
Economic base	经济基础	283
Economic determinism	经济决定论	283
Economic structure	经济结构	283
Estangement	疏远	323
Ethical life	伦理生活	325
First-order predicate	一阶谓词逻辑	378
For itself	自为	383
Formula	公式	392
Function	函项	398
Hegelianism	黑格尔主义	430
Hegelians, young	青年黑格尔学派	431
Hegemony	强权	431
Historical materialism	历史唯物主义	440
Idea(Hegel)	理念(黑格尔)	457
In and for itself	自在自为	482

In itself	自在	482
Induction	归纳	494
Infinite and finite	无限和有限	500
Informal logic	非形式逻辑	503
Intensionalism	内涵论	511
I-proposition	I命题	522
Irrationalism	非理性主义	523
Kantianism	康德主义	533
Logic(Hegel)	逻辑(黑格尔)	561
Master/slave	主人/奴隶	588
Means of production	生产资料	598
Mechanism	机械论	598
Mechanistic materialism	机械唯物论	598
Mode of production	生产方式	629
Moral knowledge	道德知识	641
Natural philosophy	自然的哲学	657
<i>Naturphilosophie</i>	自然的哲学	662
Negation	否定	668
Negation of the negation	否定之否定	668
Neo-Hegelianism	新黑格尔主义	671
New England transcendentalism	新英国先验论	677
Non-monotonic logics	非单调的逻辑	685
One-many problem	一多问题	705
Optimism	乐观主义	711
Other, the	他人	715
Owl of Minerva	密纳发的猫头鹰	718
Paradox of self-deception	自欺悖论	726
Particular proposition	特称命题	729
Personality	人格	741
Philosophical logic	哲学逻辑	749
Philosophy of logic	逻辑哲学	757
Philosophy of nature	自然哲学	759
Philosophy of Physics	物理学哲学	760
Prediction paradox	预告悖论	795
Principle of indeterminacy	测不准原理	806
Principle of uncertainty	不确定性原理	810
Productive force	生产力	819
Proposition	命题	823
Prosentential theory of truth	真理的代语句论	827
Pseudo-paradox	虚假悖论	830
Quantum theory	量子理论	844
Rational number	有理数	852
Real number	实数	857
Reason and understanding	理性和知性	858
Reflect(Hegel)	反思(黑格尔)	866
Relations of production	生产关系	871
Relative product	关系积	872
Relativity theory	相对论	872
Self-alienation	自我异化	907
Self-deception	自欺	909
Self-predication	自我主谓	912
Semantic paradox	语义悖论	915
<i>Sittlichkeit</i>	伦理性	931
Slave/master	奴隶/主人	933
Sophism	诡辩	940
Speculative philosophy	思辨哲学	947

Sublation	扬弃	962
Substance(Hegel)	实体(黑格尔)	965
Superstructure	上层建筑	972
Synonym	同义词	978
Time-preference	时间偏好	1004
T-sentence	T 语句	1026
Utopia	乌托邦	1047
<i>Vorstellung</i>	表象	1064

Kant 康德

Acroama	论理	16
Agreeable	适意	34
Analogies of experience	经验之类推	40
Analytic(Kant)	分析论(康德)	42
Anticipations of perception	知觉之预想	55
Antinomy	二律背反	57
Apodeictic	必然的	61
Apodeictic practical principle	必然的实践原理	61
Apodictic	必然的	61
Appearance(Kant)	现象(康德)	63
Architectonic	建筑术	69
As if	仿佛	81
Assertoric	实然的	84
Axioms of intuition	直观公理	101
Brute fact	天然事实	129
Canon	法规	135
Category	范畴	142
Command	律令	167
Complete notion	完满性观念	173
Concepts of reflection	反思概念	178
Concepts of the understanding, pure	纯粹知性概念	178
Constitutive principles	构成性原理	192
Copernican revolution	哥白尼革命	204
Cosmology	宇宙论	209
Critical idealism	批判唯心主义	217
<i>Critique of Judgement</i>	《判断力批判》	218
<i>Critique of Practical Reason</i>	《实践理性批判》	219
<i>Critique of Pure Reason</i>	《纯粹理性批判》	219
Deduction(Kant)	演绎(康德)	234
Determinant judgement	规定的判断力	253
Dialectic(Kant)	辩证论(康德)	257
Differentia	属差	260
<i>Ding-an-sich</i>	物自体	263
Duty	职责	280
Enantiomorphs	对映结构体	299
Entity	存在体	307
Extensive magnitude	外延量	356
External property	外在所有权	356
Faculty	官能	360

Faith	信仰	361
First principle	第一原理	377
Freedom	自由	395
Genus	种	411
<i>Genus summun</i>	最高的种	411
Good will	善良意志	417
Grace	恩典	418
Heteronomy	他律	437
Highest good	至善	438
Holy will	神圣意志	444
Hypothetical imperative	假言命令	454
I think	我思	456
Idea(Kant)	观念(康德)	458
Ideal(Kant)	理想(康德)	460
Imperative	命令	478
Imperfect duty	不完全职责	479
Incentive	刺激	484
Inclination	爱好	484
Incongruent counterpart	不一致的对等物	485
Inner sense	内感	505
Intellectual synthesis	理智的综合	509
Intelligible object	理智对象	510
Intelligible world	理智世界	510
Internal property	内在所有权	516
Kingdom of ends	目的王国	535
Liberty	自由	553
Logical/real opposition	逻辑的/实在的对立	571
Manifold	杂多	584
Maxim	准则	594
Metaphysical deduction	形而上学演绎	612
Metaphysical exposition	形而上学阐明	613
Metaphysics(Kant)	形而上学(康德)	615
Metaphysics of morals	道德形而上学	616
Metaphysics of nature	自然形而上学	616
Moral law	道德法则	641
Morals proper	严格意义的道德	646
<i>Mundus intelligibilis</i>	理智世界	648
<i>Mundus sensibilis</i>	感性世界	648
Negative liberty	消极自由	669
Neo-Kantianism	新康德主义	671
<i>Noumenon</i>	本体	690
Obligation	义务	698
Original apperception	本源的统觉	713
Outer sense	外感	718
Paralogism	谬误推理	726
Partial concept	部分的概念	727
Perfect duty	完全责任	735
Philosophy(Kant)	哲学(康德)	750
Philosophy of pure reason	纯粹理性哲学	761
Physico-theological argument	自然神论证明	766
Postulates of empirical knowledge	经验知识之公准	783
Practical law	实践的法则	785
Practical reason(Kant)	实践理性(康德)	785
Predicament	范畴	792
Pure	纯粹	839
Pure apperception	纯粹统觉	839

Pure concepts of reason	理性纯粹概念	839	Accidental property	偶然性质	14
Pure reason	纯粹理性	840	Act-object theory	行动—对象理论	17
Qualified good	有条件的善	843	Adverbial theory	状语理论	24
<i>Quid facti</i>	事实问题	845	Basic proposition	基本命题	107
<i>Quid juris</i>	权利问题	845	Basic sentence	基本语句	107
Rational cosmology	理性宇宙论	851	Causality, principle of	因果性原理	149
Real/logical opposition	实在的/逻辑的对立	857	Common sense	常识	168
Reflective judgement	反思的判断力	868	Confirmation	确认	184
Regulative principles	规范性原理	869	Determinables and deter-	可确定物和确定物	252
Representation	表象	876	minates		
Right (Kant)	权利(康德)	885	Determinates	确定物	253
Schema (Kant)	图型(康德)	899	Determinism	决定论	253
Schematism	图型论	899	Determinism, hard	强硬的决定论	254
Sensibility	感性	922	Determinism, principle of	决定论原理	254
Species	属	946	Determinism, soft and	温和的和强硬的决定	254
Spontaneity	自发性	949	hard	论	
<i>Summun bonum</i>	至善	970	Elimination of meta-	清除形而上学	290
Synthesis (Kant)	综合(康德)	980	physics		
Synthetic <i>a priori</i> judg-	先天综合判断	980	<i>Entia per alio</i>	依存物	306
ment			<i>Entia per se</i>	自存物	307
Thing-in-itself	物自体	996	Epistemological dualism	认识论上的二元论	314
Transcendent	超验的	1009	Essential property	本质性质	322
Transcendental	先验的	1010	Experiential proposition	经验命题	349
Transcendental aesthetic	先验感性论	1010	Explicit definition	显定义	352
Transcendental analytic	先验分析论	1011	External questions	外部问题	356
Transcendental appercep-	先验统觉	1011	Fatalism	宿命论	368
tion			Fate	天命	368
Transcendental deduction	先验演绎	1012	Formal mode of speech	形式的说话方式	389
Transcendental dialectic	先验辩证论	1013	Freedom of the will	意志自由	396
Transcendental exposition	先验阐明	1014	Gestalt psychology	完形心理学	411
Transcendental ideal	先验的理想	1015	Given, the	所予	413
Transcendental ideas	先验观念	1015	Illusion, argument from	幻觉论证	473
Transcendental illusion	先验幻象	1015	Implicit definition	隐定义	481
Transcendental logic	先验逻辑	1015	Incorrigible	不可矫正的	487
Transcendental object	先验对象	1016	Indeterminism	非决定论	489
Transcendental paralogism	先验谬误推理	1016	Intension	内涵	510
Transcendental philosophy	先验哲学	1016	Internal questions	内部问题	516
Transcendental place	先验的位置	1016	Intrinsic description	内在描述	519
Transcendental reflection	先验的反思	1016	Logical empiricism	逻辑经验主义	567
Transcendental synthesis	先验的综合	1017	Logical equivalence	逻辑等价	567
Transcendental topic	先验正位	1017	Logical positivism	逻辑实证主义	570
Transcendental unity of	统觉的先验统一	1017	Logical type	逻辑类型	573
apperception			Logically impossible	逻辑上不可能	574
Understanding (Kant)	知性(康德)	1035	Logically possible	逻辑上可能	575
Unity of consciousness	意识的统一	1038	Material equivalence	实质等价	589
Unqualified good	无条件的善	1043	Material objects	物质对象	590
Virtue (Kant)	德性(康德)	1060	Meaningless	无意义的	597
Will (Kant)	意志(康德)	1070	Myth of the given	所予的神话	649
			Object sentence	对象语句	695
			Observation proposition	观察命题	699
			Ostensive proposition	实指命题	715
			Ought	应当	716
			Perceptual consciousness	知觉意识	734
			Physical objects	物理对象	766
			Positivism	实证主义	779
			Predestination	宿命论	791
			Predetermination	先定论	792

Logical Positivism

逻辑实证主义

Abstract entities	抽象实体	8
Abstract terms	抽象词项	9

Proposition/sentence	命题和语句	823	Existence	存在	343
Protocol sentences	记录语句	827	Exportation	输出	352
Pseudo-concepts	伪概念	829	Idealism	唯心主义	461
Pseudo-object sentence	伪对象语句	830	Idealism, absolute	绝对唯心主义	462
Pseudo-statement	伪陈述	832	Idealism, objective	客观唯心主义	463
Quasi-syntactical sentence	准句法语句	845	Idealism, subjective	主观唯心主义	463
			Idealism, transcendental	先验唯心论	464
Self-determination	自决	909	Importation	输入	481
Sensa	感觉材料	917	Individual	个别	491
Sensationalism	感觉主义	918	Individual property	个别属性	492
Sense qualia	感觉性质	920	Intensive magnitude	内涵量	512
Sense-contents	感觉内容	921	Is	是	524
Statement/proposition	陈述/命题	953	Logical modality	逻辑模态	569
Syntactical sentence	句法语句	979	Logical sentence	逻辑句子	572
Syntax	句法	979	Material analysis	实质分析	589
Thing-language	事物语言	997	Metaphysics	形而上学	614
Unified science	统一科学	1037	M-predicate	物—谓词	647
Universal quantifier	全称量词	1040	Not-being	不是	689
Vienna Circle	维也纳小组	1058	Number	数	692
			Objective particulars	客观殊相	695
			On	是	704
			Ontology	本体论	708
			Paradox of God's omniscience	上帝全知悖论	726
			Paradox of the heap	堆的悖论	726
			Paraphrasis	释义	727
			Particular	殊相	728
			Particularised quality	特殊化的质	729
			Plato's beard	柏拉图的胡子	770
			Possibilism	可能主义	780
			Post res universals	出于事物的共相	781
			P predicate	人—谓词	785
			Predicate nominalism	谓词唯名论	793
			Private particular	私人殊相	813
			Problem of the self	自我问题	818
			Property	特性	822
			Property instance	特性个例	823
			Propositional content	命题内容	825
			Pseudo-predicate	虚假谓词	830
			Pseudo problem	虚假问题	831
			Public particulars	公共殊相	837
			Purely referential	纯指称	841
			Realism	实在论	857
			Reductivism	还原主义	863
			Resemblance, theory of	相似理论	880
			Resemblance nominalism	相似唯名论	880
			Revisionary metaphysics	修正形而上学	884
			Second-level concept	二阶概念	906
			Second level predicate	二阶谓词	906
			Second order logic	二阶逻辑	906
			Self-identity	自我等同	910
			Semantic anti-realism	语义学的反实在论	914
			Tertullian's paradox	德尔图良悖论	980
			Theseus' ship	忒修斯之船	995
			To be	是	1004
			Universal	共相	1038
			Universalia, ante rem	在物之先的共相	1041
			Universalia, in rebus	在物之中的共相	1041

Metaphysics

形而上学

Absolute, the	绝对	4
Absolutism	绝对主义	7
Abstract particular	抽象殊相	9
Act	行为	16
Actual idealism	现实唯心主义	21
Actualism	现实主义	21
Agent	行动者	32
Analysandum	被分析项	41
Analysans	分析项	41
Analysis	分析	41
Anima mundi	世界灵魂	51
Animism	泛灵论	53
Appearance	现象	63
Ascriptivism	归属主义	82
Atomism	原子主义	88
Bald man paradox	秃顶人悖论	103
Bare fact	赤裸事实	104
Bare particular	赤裸特殊	104
Basic particulars	基本特殊	106
Being	是	112
Broad content	宽内容	129
B-series of time	时间的B序列	130
Common consent argument	常识论证	167
Common sense psychology	常识心理学	169
Conceptualism	概念论	180
Concreta	具体物	181
Conventional implicature	约定含义	203
C series of time	时间的C序列	222
Definition in use	使用定义	239
Descriptive metaphysics	描述形而上学	249

Universals, post rem 在物之后的共相 1042
 Wide content 宽内容 1070

Philosophical Logic 哲学逻辑

Adequacy conditions on definitions of truth 真理定义的充分性条件 23
 Affirming mode 肯定式 31
 Affirming the consequent 肯定后件式 31
 Alternation 择取式 36
 Antilogism 前后矛盾 56
 Apparent variable 表面变元 62
 Appeal to authority 诉诸权威 62
 Argument 论证 70
Argumentum ad baculum 诉诸强力的论证 74
Argumentum ad hominem 攻击人身的论证 74
Argumentum ad ignorantiam 诉诸无知的论证 74
Argumentum ad misericordiam 诉诸怜悯的论证 75
Argumentum ad populum 诉诸公众的论证 75
Argumentum ad verecundiam 诉诸权威的论证 75
 Aristotelian logic 亚里士多德逻辑 76
 Asymmetric relation 反对称关系 86
 Barber paradox 理发师悖论 103
 Barcan formula 巴肯公式 104
 Behavioural theory of meaning 意义的行为论 111
 Berry's paradox 贝里悖论 121
 Bertrand's paradox 伯特兰悖论 121
 Biconditional 双条件句 122
 Bivalence 二值原则 124
 Bound variable 约束变元 128
 Burial Forti's paradox 布拉里·福蒂悖论 131
 Calculus 演算 133
Calculus ratiocinator 理性演算 133
 Cantor's paradox 康托尔悖论 136
 Categorical term 范畴词 141
 Categorical proposition 直言命题 141
 Categorical syllogism 直言三段论 142
 Categoricity 范畴性 142
 Causal theory of meaning 意义的因果理论 148
 Causal theory of reference 指称的因果理论 148
 Chronological logic 时序逻辑 157
 Closed sentence 闭语句 162
 Coherence theory of truth 真理融贯论 164
 Completeness 完全性 174
 Concept and object 概念和对象 177
 Conditional 条件句 183
 Conjunction 合取式 185
 Conjunction elimination 合取消除 185
 Conjunction introduction 合取引入 185

Consilience of inductions 归纳的一致 190
 Constant 常项 191
 Contextual definition 语境定义 195
 Contradiction 矛盾 200
 Contradictories 矛盾命题 200
 Contrafactuals 反事实语句 200
 Contraries 反对命题 202
 Contrary 反对的 202
 Contrary-to-fact conditionals 反事实条件句 202
 Correspondence theory of truth 真理符合论 207
 Count noun 可数名词 210
 Counterfactuals 反事实语句 211
 Counterpart theory 对应体理论 211
 Criterion of verifiability 可证实性标准 215
 Critical thinking 批判性思维 218
De dicto 从言的 228
De re 从物的 229
 Deduction 演绎 234
 Deductive logic 演绎逻辑 235
 Demonstration 证明 243
 Denying mode 否定式 244
 Denying the antecedent 否定前件式 244
 Deontic logic 道义逻辑 245
 Description, attributive use of 摹状词的归属性用法 247
 Description, referential use of 摹状词的指称性用法 247
 Deviant logic 变异逻辑 256
 Dilemma 二难困境 261
 Disjunction 析取式 267
 Distributed 周延的 269
 Distributive law 分配律 269
 Dyadic 二元的 281
 Entailment 衍推 305
 Equivalence 等值 316
 Equivalence relation 等价关系 317
 Ersatzism 仿形论 320
 Essentialism 本质主义 322
 Explication 精释 352
 Extended logic 扩充逻辑 353
 Extension 处延 353
 Extensional logic 外延逻辑 354
 Extensionality, axiom of 外延性公理 355
 Extensionality, thesis of 外延性论题 355
 Fallacy 谬误 362
 Fallacy of accident 偶性谬误 362
 Fallacy of ambiguity 歧义谬误 363
 Fallacy of clearness 清晰谬误 363
 Fallacy of complex question 复杂问语谬误 363
 Fallacy of composition 合举谬误 363
 Fallacy of converse accident 逆偶性谬误 364
 Fallacy of division 分举谬误 364
 Fallacy of equivocation 一语多义的谬误 364
 Fallacy of false cause 错为因果的谬误 364

Fallacy of hasty genera- tion	轻率概括的谬误	364	Leibniz's law	莱布尼茨定律	548
Fallacy of many questions	叠题谬误	364	Lemma	引理	548
Fallacy of <i>secundum quid</i>	无视限制的谬误	365	Liar paradox	说谎者悖论	550
Formal analysis	形式分析	387	Linguistic act	语言行为	556
Formal concept	形式概念	387	Logic	逻辑	561
Formal fallacy	形式谬误	387	Logic of change	变化逻辑	562
Formal language	形式语言	388	Logic of terms	词项逻辑	562
Formal logic	形式逻辑	388	<i>Logica docens</i>	形式论证	562
Formalization	形式化	391	<i>Logica modernorum</i>	当代逻辑	562
Formally correct condi- tion	形式正确性条件	392	<i>Logica nova</i>	新逻辑	562
Free variable	自由变元	394	<i>Logica utens</i>	非形式论证	562
Function and argument	函项和主目	398	Logical calculus	逻辑演算	564
Function stroke	竖函项	399	Logical consequence	逻辑后承	565
Future contingents	未来偶然性	401	Logical constant	逻辑常项	565
Generalisation	概括	408	Logical falsity	逻辑假	567
Grammatical predicate	语法谓词	419	Logical formula	逻辑公式	569
Grelling's paradox	格里林悖论	422	Logical implication	逻辑蕴涵	569
Heterological paradox	非自谓悖论	437	Logical truth	逻辑真	573
Horseshoe	马蹄号	447	Logistic method	逻辑斯蒂方法	577
Identity, the paradox of	同一性悖论	467	Logistic system	逻辑斯蒂系统	577
Identity of indiscernibles	不可分辨者的同一性	468	Lottery paradox	抽彩悖论	578
If	当且仅当	471	Many-valued logic	多值逻辑	584
<i>Ignoratio elenchi</i>	混淆论题	471	Master argument	主论证	587
Image theory of meaning	意义的影像论	474	Material adequacy	实质充分性	589
Immediate inference	直接推理	476	Material conditional	实质条件句	589
Implication	蕴涵	480	Material implication	实质蕴涵	589
Impredicative definition	非直谓定义	482	Material implication, pa- radoxes of	实质蕴涵悖论	590
Incomplete symbol	不完全符号	486	Mathematical logic	数理逻辑	592
Incompleteness	不完全性	485	Matrix method	矩阵方法	593
Incompleteness theorem	不完全定理	485	Matter of fact	事实问题	594
Inconsistent triad	不相容三元组	486	Meaning	意义	595
Independence, logical	逻辑独立性	487	Mediate inference	间接推理	599
Inference	推理	499	Mereological essentialism	部分学的本质主义	606
Infinite-valued logic	无穷值逻辑	502	Metalinguage	元语言	609
Informal fallacy	非形式谬误	502	Metalogic	元逻辑	610
<i>Insolubilia</i>	不可解问题	506	Minimal theory of truth	真理最小理论	624
Intensional logic	内涵逻辑	511	Mixed hypothetical syllo- gism	混合的假言三段论	626
Intuitionism, mathemati- cal	数学的直觉主义	521	Modal logic	模态逻辑	627
Intuitionist logic	直觉主义逻辑	521	Modal realism	模态实在论	627
Inversion	庚换	522	Modality	模态	628
Irreflexive	反自返的	524	Modality <i>de dicto</i>	从言模态	628
Judgement	判断	528	Modality <i>de re</i>	从物模态	629
<i>Katalepsis</i>	理解	534	Modern logic	现代逻辑	630
Knowledge argument	知识论证	538	<i>Modus ponens</i>	肯定前件式	631
Knowledge by acquaint- ance	亲知的知识	538	<i>Modus tollens</i>	否定后件式	632
Knowledge by description	摹状的知识	539	Natural deduction	自然演绎	634
Knowledge of matter of fact	有关事实问题的知识	539	Natural kinds	自然种类	655
Law of contradiction	矛盾律	544	Necessarily false	必然假	663
Law of identity	同一律	544	Necessarily true	必然真	663
Law of non contradiction	不矛盾律	545	Necessary condition	必要条件	663
Law of the excluded mid- dle	排中律	545	Non-reflexive	非自返	687
Laws of thought	思维规律	545	Object language	对象语言	694
			Objectual quantifier	对象量词	697
			Obversion	换质	700
			Ockham's razor	奥康剃刀	701
			Open sentence	开语句	708

Historical objectivism	历史客观主义	441	Constative	记述式	192
Historical relativism	历史相对主义	441	Content holism	内容整体论	194
Historical scepticism	历史怀疑论	441	Content stroke	内容线	195
Historical sentence	历史句子	441	Context principle	语境原则	195
Narrative sentence	叙述句子	652	Conventionality of lan- guage forms	语言形式的约定性	204
Objectivism	客观主义	696	Copula	系动词	205
Objectivity	客观性	696	Cultural relativism	文化相对主义	222
Observation term	观察术语	699	De Morgan rule	德摩根规则	228
Past	过去	730	Deep structure	深层结构	236
Past-referring term	指称过去的用语	731	Definite description	限定的摹状词	237
<i>Philosophe</i>	启蒙哲学家	747	Definition by genus and difference	种加属差定义	239
Philosophical radicals	哲学激进主义者	749	Dependence thesis	从属论题	247
Philosophy of history	历史哲学	754	Dispositional property	倾向性特征	268
Rational explanation	合理的说明	851	Divided reference	分类指称	270
Rational reconstruction	合理的重建	852	Duhem-Quine thesis	杜恒—奎因论题	278
Scientific determinism	科学决定论	901	Empty name	空名	299
Speculative philosophy of history	思辨的历史哲学	947	Epistemic holism	认知的整体论	312
Subjectivism	主观主义	961	Epistemic value	认知值	313
Subjectivity	主观性	961	Epistemological atomism	认识论上的原子主义	313
Temporally neutral term	时间中立的用语	988	Eternal sentence	永恒句子	323
Theoretical entity	理论实体	991	Fallacy of scope	范围错误	365
Theoretical term	理论术语	992	"Fido-fido" theory of meaning	"非多—非多"的意义 理论	373
Unhappy consciousness	苦恼的意识	1037	Finite-state grammar	限定状态语法	375

Philosophy of Language 语言哲学

Ambiguity	模糊性	37	Finite-state language	限定状态语言	376
Amphiboly	模棱两可	39	First-level concept	一阶概念	377
Analytic philosophy	分析哲学	44	First-level predicate	一阶谓词	378
Analytical definition	分析定义	47	Force/sense	力量/意义	383
Analytical priority	分析的在先性	47	Formal semantics	形式语义学	389
Anatomic property	结构特性	49	Formal universal	形式共相	389
Anglo-American philoso- phy	英美哲学	50	General term	普遍词	407
Anthropological holism	人类学的整体论	53	Generative grammar	生成语法	409
Anti-realism	反实在论	58	Holistic property	整体特性	444
Assertion	断定	83	Horizontal stroke	水平线	447
Assertion-sign	断定记号	84	Hypostatization	实体化	453
Assertoric force	断定力	85	Idiolect	特殊语	470
Atomistic property	原子特性	89	Illocutionary act	以言行事的行为	472
Augustinian picture of language	奥古斯丁的语言图像	91	Impersonal verb	无人称动词	480
Bulk term	堆词	130	Indeterminacy of transla- tion	翻译的不确定性	488
Canonical notation	规范记法	135	Individual term	个体词	492
Characterising term	描述词	156	Individuative term	个体化的词	493
Cognitive value	认识值	164	Inscrutability of reference	指称的不可理解性	506
Collective predicate	集合谓词	165	Judgeable content	可判断内容	528
Competence and perfor- mance	能力和运用	173	Judgement stroke	判断号	529
Compound thought	复合思想	175	Language/speech	语言/言语	542
Conceptual content	概念内容	178	Lexeme	词根	550
Concretism	具相论	182	Lexical ambiguity	词根的模糊性	550
			Linguistic analysis	语言分析	556
			Linguistic framework	语言框架	556
			Linguistic meaning	语言意义	557
			Linguistic phenomenology	语言现象学	557
			Linguistic philosophy	语言哲学	558
			Linguistic turn	语言的转向	559
			Linguistic universals	语言共相	559
			Locutionary act	以言表意的行为	560

Libertarianism	自治论自由主义	532	Avowal	声明	97
Libertinism	自由思想	552	Awareness, direct and in-	直接的和间接的觉知	97
<i>Mens rea</i>	犯罪心态	600	direct		
Mitigation	减刑	625	Basic action	基本活动	105
Natural law	自然法	656	<i>Bedeutung</i>	指称	110
Natural law theory	自然法理论	656	Beetle in a box	盒子里的甲虫	110
Negative responsibility	消极责任	670	Behaviour	行为	111
<i>Nulla poena sine lege</i>	非根据法律不得惩罚	692	Belief	信念	118
<i>Nullum crimen sine lege</i>	非根据法律不得判罪	692	Belief <i>de dicto</i>	命题信念	118
<i>Obiter dictum</i>	附带意见	694	Belief <i>de re</i>	客体信念	119
Open concept	开放概念	708	Belief in	信以为真	119
Open-texture	开放性	710	Belief that	相信某事	120
Philosophy of law	法哲学	756	Biological naturalism	生物自然主义	123
Positive law	实在法	779	Black box	黑箱	125
Primary rules	主要规则	803	Blindsight	盲视	125
Punishment	刑罚	838	Brain writing	大脑文字	128
Pure theory of law	纯粹法学	840	Brains in a vat	瓮中之脑	128
<i>Ratio decidendi</i>	判决理由	851	Brentano's thesis	布伦塔诺论纲	129
Rights thesis	权利论	889	Bundle dualism	捆束二元论	130
Rule of law	法治	891	Bundle theory of mind	心的捆束理论	130
Rule of recognition	承认规则	892	Buridan's ass	布里丹之驴	131
Rule-scepticism	规则怀疑论	894	Calculus of classes	类演算	133
Secondary rules	次要规则	906	Calculus of individuals	个体演算	133
<i>Sine qua non</i>	绝对必需	930	Cartesian dualism	笛卡尔的二元论	139
Social democracy	社会民主主义	936	Cartesianism	笛卡尔主义	139
Sovereign	统治者	943	Category mistake	范畴错误	144
Telishment	滥罚	986	Causal analysis of mental	心的概念的因果分析	145
			concepts		
			Causal deviance	因果异常	146
			Causal theory of action	活动的因果理论	146
			Causal theory of percep-	知觉的因果理论	148
			tion		
			Central-state materialism	中心状态唯物论	153
			Central-state theory of	心的中心状态理论	154
			mind		
			Chinese room argument	中国屋论证	157
			Cognitive science	认知科学	163
			Compositionality	构成性	175
			Computational model of	心的计算模型	176
			mind		
			Conceptual role theory	概念作用理论	179
			Connectionism	联结主义	185
			Conscience	良知	186
			Consciousness	意识	187
			Contingent identity	偶然同一性	197
			Conversational implica-	对话含有关系	204
			ture		
			Counterexample	反例	211
			Cybernetics	控制论	224
			<i>De re</i> belief	客体信念	229
			<i>De se</i> belief	关于自我的信念	229
			Descriptive psychology	描述心理学	250
			Deviant causal chain	变异因果链	256
			Dilemma of attention	注意两难	262
			Disappearance theory of	心的消失理论	264
			mind		
			Disembodiment	无壳	266
Absolute identity	绝对同一性	6			
Achievement verbs	成就动词	14			
Act token	行为单例	16			
Act type	行为类型	17			
Action	活动	18			
Adverbial materialism	副词唯物论	24			
Afterlife	来世	31			
Analytical behaviourism	分析行为主义	46			
Analytical phenomenism	分析现象主义	47			
Anomalous monism	变异一元论	53			
Argument by analogy	类比论证	71			
Argument from differen-	不同确定性论证	72			
tial certainty					
Argument from the rela-	知觉相对性论证	73			
tivity of perception					
Artificial intelligence	人工智能	79			
Associationism	联想主义	85			
Attribute theory of mind	心的属性理论	91			

Philosophy of mind

心的哲学

Disguised description theory	伪装的事状词理论	267	Mentality	心性	605
Dispositions	倾向	268	Mereology	部分论	606
Egocentric perceptual statements	自我中心知觉陈述	286	Methodological solipsism	方法论的唯我论	620
Ekidetic imagery	逼真映象	288	Mind	心	622
Eliminative materialism	取消唯物论	291	Mind-body problem	心身问题	623
Eliminativism	取消论	291	Modularity	组合性	631
Embodiment	有壳	293	Mongrel categorical statements	混杂范畴陈述	634
Embraced desire	情愿欲求	293	Motive	动机	647
Factual phenomenalism	事实现象主义	360	Narrow content	狭内容	652
First-person perspective	第一人观点	379	Narrow state	狭状态	652
Folk psychology	常识心理学	382	Network theory of meaning	意义的网络理论	675
Fregean principle	弗雷格原则	397	Neural network modelling	神经网络模拟	675
Functionalism	功能主义	399	Neurath's ship	纽拉特之船	675
Genidentity	生成同一性	411	Neuro-philosophy	神经哲学	676
Ghost in the machine	机器中的幽灵	413	No ownership theory	无所属论	680
Hallucination	幻觉	423	Other minds	他心	716
Holism	整体论	443	Other-regarding	他人相关	716
Homunctionalism	小人论	445	Pain	疼痛	721
Homuncular functionalism	小人功能主义	446	Paradigm case argument	范例论证	724
Homunculus	小人	446	Parallel distributed processing	并行分布加工	726
Homunculus fallacy	小人谬误	446	Percepta	实际知觉特性	733
Hypothetical fact	假想事实	454	Percepts	知觉对象	734
Identity statement	同一性陈述	468	Percipienda	应当知觉特性	735
Identity theory	同一论	469	Phantom limb	幻肢	742
Image	影像	473	Phenomenal property	现象特性	742
Imagination	想像	474	Phenomenalism	现象主义	743
Imitation game	模拟游戏	475	Philosophy(Ryle)	哲学(赖尔)	751
Immediate perception	直接知觉	476	Philosophy of mind	心的哲学	758
Indirect perception	间接知觉	489	Physicalism	物理主义	766
Individual essence	个体实质	491	Primary reason	第一理由	802
Intention	意向	512	Privileged access	优先获知	813
Intentional stance	意向姿态	513	Pro-attitude	赞成态度	814
Intentional system	意向系统	514	Problem of other minds	他心问题	818
Interactionism	交互作用论	515	Problem of the speckled hen	花斑母鸡问题	819
Introspection	内省	519	Propensity	倾向性	821
Introspective awareness	内省意识	520	Proper name theory	专名理论	822
Knowing how	知道如何	537	Pure ego theory	纯自我理论	839
Knowing that	知道如此	537	Quale	感受性	842
Language of thought	思维语言	542	Qualia	感受性	842
Linguistic phenomenalism	语言现象主义	557	Reductio ad absurdum	归谬法	862
Logical construction theory	逻辑建构理论	566	Reductio ad impossible	不可能论证	862
Machine functionalism	机器功能主义	581	Reductionism	还原论	862
Materialism	唯物论	591	Re-embodiment	再入壳	864
Materialist theory of mind	唯物主义的心的理论	591	Regularity theory of causation	因果规则论	868
Mediate perception	间接知觉	599	Relative identity	相对同一性	871
Memory	记忆	600	Reluctant desire	不情愿欲求	875
Mental act	心的活动	601	Representationalism	表征主义	876
Mental causation	心的因果性	601	Representative theory of mind	心的表征理论	877
Mental event	心的事件	602	Representative theory of perception	知觉的表征理论	878
Mental indispensability	心的不可替代性	602	Retrospection	反省	882
Mental representation	心的表征	603	Self	自我	907
Mental state	心的状态	603			
Mentalese	心的语言	604			
Mentalism	心灵主义	604			

Self-consciousness	自我意识	908	Action	活动	18
Self-control	自我控制	908	<i>Aeterni Patris</i>	永恒之父	30
Self-deception	自欺	909	Affirmative method	肯定方法	30
Self-fulfilment	自我实现	910	<i>Agape</i>	爱	31
Self-intimation	自我告知	911	Age of adventure	冒险时代	32
Self-presenting	自我呈现	912	Age of reason	理性时代	32
Self-realisation	自我完成	913	Analytical Thomism	分析的托马斯主义	48
Self-reference	自我指称	913	Anthropomorphism	拟人说	54
Self-regarding	自我相关	913	Apathy	不动情	60
Sense field	感觉域	920	Apologetics	护教论	61
Sense-impression	感觉印象	921	Apophatic theology	阿波发神学	62
Sensibilism	感觉主义	922	Apophaticism	阿波发主义	62
Sensory illusion	感觉错觉	922	Apprehension	领悟	66
Serial theory of the mind	心的序列理论	925	Argument from design	设计论证	71
Simulation theory	模拟论	929	Argument from religious experience	宗教体验说论证	72
Specious present	似现在	946	<i>Argumentum ex consensu gentium</i>	普遍同意说论证	75
Strict identity	严格同一性	955	Aristotelianism	亚里士多德主义	76
Success verbs	成功动词	968	Aseity	自足性	82
Supervenience	伴随性	972	Atheism	无神论	86
Survival, problem of	续存问题	974	Atonement	赎罪	89
Tacit belief	静默信念	982	Augustinianism	奥古斯丁主义	92
Tacit knowledge	静默知识	982	Axiarchism	价值决定论	97
Teleological functionalism	目的论功能主义	986	Beatific vision	至福直观	108
Theory-laden	载有理论的	994	Becoming	变成	109
Theory theory	理论论	994	Being (Aquinas)	存在(阿奎那)	114
Thinking	思维	997	Calvinism	加尔文主义	133
Third-person perspective	第三人观点	999	Cambridge change	剑桥变化	134
Thought experiment	思想实验	1000	Causal explanation	因果解释	146
Time-gap argument	时间沟论证	1003	Chance	机遇	155
Time-lag argument	时间滞后论证	1003	Change	变化	155
Token-token identity theory	殊型-殊型同一论	1005	Concupiscence	情欲	182
Turing machine	图灵机	1027	<i>Consensus gentium</i> argument	普遍同意论证	187
Turing Test	图灵测验	1027	Contingent/necessary	偶然/必然	198
Twin earth	孪生地球	1028	Cosmological argument	宇宙论论证	209
Two-factor theory	二因素理论	1030	Counterfactuals of freedom	反事实自由	211
Two-world theory	两个世界理论	1030	Creation <i>ex nihilo</i>	无中创造	213
Type-type identity theory	类型-类型同一论	1031	<i>Credo quia absurdum est</i>	荒谬,故我信	214
Use theory of meaning	意义的用法理论	1044	<i>Credo ut intelligam</i>	为知,故我信	214
Veil of appearance	外观之幕	1053	Definition	定义	238
Veil of perception	知觉之幕	1054	Deism	自然神论	240
Visual field	视域	1061	<i>Deus sive natura</i>	神或自然	255
Volition	意志	1062	Divine attributes	神性	270
Wayward causal chain	无常因果链	1066	Divine command theory	神命论	270
Wide states	广状态	1070	Divine illumination	神之光照	271
Will to believe	相信意愿	1071	Division	划分	272
			Dogmatism	独断论	273
			Double truth theory	二重真理论	275
			Emanation	流溢	293
			<i>Ens a se</i>	由己之是	304
			<i>Ens ab alio</i>	由他之是	303
			<i>Ens ex se</i>	无己之是	304
			<i>Ens necessarius</i>	必然之是	304
			<i>Ens successivum</i>	接续之是	305
			Enthusiasm	狂热	306
Medieval Philosophy and Philosophy of Religion					
中世纪哲学和宗教哲学					
<i>Acquiesce</i>	冷漠	12			
Accident	偶性	13			

Enthymeme	省略三段论	306	Necessary/contingent	必然/偶然	664
<i>Epithumia</i>	欲念	315	Necessity	必然性	665
<i>Eros</i>	情爱	318	Negative theology	否定神学	670
Eschatology	末世论	320	Neo-platonism	新柏拉图主义	672
Eternity	永恒	324	Neo-Pythagoreanism	新毕达戈拉斯主义	673
Ethnocentrism	种族中心主义	333	Neo-Scholasticism	新经院学派	674
Everlasting	永久	338	<i>Noesis</i>	理解	681
<i>Ex nihilo nihil fit</i>	无中不能生有	342	Numinous	圣秘	693
Exegesis	解释	343	<i>Obligationes</i>	尽责	698
Exoteric	明传的	348	Omnipotence	全能	703
Extrinsic value	外在价值	358	Omniscience	全知	703
Feeling	情感	369	One	-	704
Fictional names	虚名	372	Ontological argument	本体论论证	705
Fideism	信仰主义	372	Original sin	原罪	714
First cause argument for the existence of God	上帝存在的第一因论 证	376	Panentheism	万物在神论	722
Five ways	五法	380	Panpsychism	泛心论	722
Footnotes to Plato	对柏拉图脚注	383	Pantheism	泛神论	723
Foreknowledge	预知	383	Pascal's wager	帕斯卡尔的赌博	730
Formal distinction	形式差别	387	<i>Per accidens</i>	偶性地	733
Gnosticism	诺斯替教	413	<i>Per se</i>	由自身	733
God	神	414	Perennial philosophy	永恒哲学	735
God is dead	上帝死了	415	Perseity	自主	737
Good	善	416	Personalism	人格主义	740
Great chain of being	存在之大链	420	<i>Philosophia perennis</i>	永恒哲学	748
Haecceitism	此性主义	425	Philosophical theology	哲学神学	750
Haecceity	此性	425	Philosophy of religion	宗教哲学	761
Heaven	天	428	Pietism	虔敬主义	768
Hell	地狱	432	Platonism	柏拉图主义	769
Hellenistic philosophy	希腊化哲学	432	Pneumatology	圣灵论	771
Henological argument	合一论论证	434	Polytheism	多神论	775
Henotheism	大神论	434	<i>Pons asinorum</i>	驴桥	775
Holy	神圣	444	Porphyrian tree	波菲利之树	777
Homonym	同名异义词	445	Predicables	述语	792
<i>Hyle</i>	质料	447	Principle of fractional prudence	分段谨慎原则	805
Humanism	人文主义	449	Process theology	过程神学	819
Hylomorphism	形质论	452	Providence	神意	828
Hylozoism	物活论	452	Pseudo-science	伪科学	832
<i>Hypostasis</i>	本在	453	<i>Quadrivium</i>	四艺	842
Immortality	不朽	477	<i>Quidditas</i>	本是	845
Ineffability	不可名状	497	<i>Ratio</i>	理智	850
<i>Infima species</i>	最低层的种	500	Rational psychology	理性心理学	852
<i>Intellectus</i>	智能	509	Rational theology	理性神学	852
Irrationality	非理性	523	<i>Rationes seminales</i>	种源理性	854
Jansenism	詹森主义	527	Reality	实在	858
<i>Logica cetus</i>	旧逻辑	563	Reincarnation	再生	869
<i>Logos</i>	逻各斯	578	Religious experience	宗教体验	874
Manichaeism	摩尼教	583	Renaissance	文艺复兴	875
Matter	质料	593	Revealed theology	启示神学	882
Medieval philosophy	中世纪哲学	599	Revelation	启示	883
Middle knowledge	中间知识	621	Sacred	至圣	895
Miracle	奇迹	625	Salvation	拯救	895
Modes of scepticism	怀疑派论式	630	Scepticism	怀疑主义	898
Moral argument for the existence of God	上帝存在的道德论证	637	Scholasticism	经院学派	900
Mysticism	神秘主义	648	<i>Scientia media</i>	中间知识	901
Natural religion	自然宗教	655	Scotism	司各脱主义	904
Natural theology	自然神学	658	Seminal reason	种源理性	917
			Seven deadly sins	七恶	926

Sin	罪恶	930	Axiomatic system	公理系统	100
Situation ethics	情境伦理学	931	Backward causation	逆因果	102
Soul	灵魂	942	Bayes' theorem	贝叶斯定理	107
St. Petersburg paradox	圣彼得堡悖论	950	Bayesian epistemology	贝叶斯认识论	108
Supernatural theology	超自然神学	971	Bayesianism	贝叶斯主义	108
Supposition	指代	973	Bernoulli's theorem	伯努利定理	120
Surprise examination paradox	意外考试悖论	974	Bifurcation of nature	自然两分	122
Syllogism	三段论	976	Boolean algebra	布尔代数	127
Synonym	同义词	978	Borderline case	两可情形	127
Teleological argument for the existence of God	上帝存在的目的论论证	984	Cash-value	兑现价值	146
Teleological explanation	目的论解释	985	Causal determinism	因果决定论	145
Teleology	目的论	985	Causalism	因果论	149
<i>Tertium non datur</i>	无第三	989	Church's theorem	丘奇定理	157
<i>Tertium quid</i>	有第三	989	Church's thesis	丘奇论题	158
Theism	有神论	989	Class	类	160
Theodicy	神正论	989	Class-inclusion	类包括	161
Theology	神学	990	Class-membership	类成员	161
Theosophy	神智学	994	Commensurability	可通约性	167
Thomism	托马斯主义	999	Compatibilism	相容论	172
Transcendentalism	超验主义	1017	Conceptual polarity	概念的两极性	179
Transmigration of the soul	灵魂轮回	1019	Conditional probability	条件概率	184
Trinity	三位一体	1020	Conjecture	猜想	184
<i>Trivium</i>	三艺	1021	Continuum	连续统	198
<i>Via antiqua</i>	古路	1056	Continuum hypothesis	连续统假设	198
<i>Via moderna</i>	新路	1056	Corpuscularianism	微粒论	206
<i>Via negativa</i>	否定方法	1056	Corroboration	确认	208
<i>Via positiva</i>	肯定方法	1057	Covering law model	覆盖律模型	212
Voluntarism	意志论	1063	Craig's theorem	克雷格定理	213
World-soul	世界灵魂	1073	Curve-fitting problem	曲线求律问题	223
Zoroastrianism	祆教	1076	Darwinism	达尔文主义	226
Philosophy of Science 科学哲学			Decidability	可判定性	231
			Decision procedure	判定程序	232
			Deductive-nomological model	演绎—规律模型	235
			Defeasibility	可废弃性	236
			Degree of belief	置信度	239
			Degree of confirmation	确证度	240
			Demarcation, criterion of	分界标准	241
			Division of linguistic labour	语言分工	272
			Domain	域	273
			Dutch book	荷兰赌	279
			Eliminative induction	淘汰式归纳	291
			End-in-view	考虑中的目的	300
			Entrenchment	牢靠性	308
			Entropy	熵	308
			Enumerative induction	枚举式归纳	308
			Evidence	证据	339
			Evolution	进化	340
			Evolutionary epistemology	进化认识论	340
			Existential generalisation	存在概括	345
			Existential import	存在内含	345
			Existential instantiation	存在个例化	345
			Existential presupposition	存在假定	346
Abduction	假说推理	3	Existential quantifier	存在量词	346
Acceptability	可接受性	12	Experimentalism	实验主义	350
Algorithm	算法	35	<i>Explanandum</i>	被说明项	350
Ampliative induction	扩充性归纳	40			
Ampliative judgement	扩充性判断	40			
Ampliative reasoning	扩充性推理	40			
Anarchism (scientific)	无政府主义(科学的)	49			
Appropriation	占有	67			
Arrow of time	时间箭头	78			
Arrow's impossibility theorem	阿罗不可能性定理	78			
Arrow's paradox	阿罗悖论	79			
A-series of time	时间的 A 序列	83			
Autonomy	自主性	95			
Axiom of choice	选择公理	99			
Axiomatic method	公理化方法	100			

<i>Explanans</i>	说明项	350	Myth of passage	迁移神话	648
Explanation	说明	350	Natural selection	自然选择	658
Extensionalism	外延主义	354	Naturalistic epistemology	自然主义认识论	660
External relation	外在关系	356	Necessitarianism	心然论	665
Fact/value gap	事实/价值之分	359	Neo-Darwinism	新达尔文主义	671
Fallibilism	可错论	365	New riddle of induction	新归纳之谜	678
Falsifiability	可否证性	366	Newcomb's problem	纽康问题	678
Falsification	否证	366	Nicod's criterion	尼柯德标准	679
Falsificationism	否证主义	367	Nomic necessity	规则必然性	682
Final cause	目的因	374	Nomological dangler	法则学关联	684
First-order language	一阶语言	378	Non-Euclidean geometry	非欧几何	685
First-order logic	一阶逻辑	378	Objective knowledge	客观知识	695
Firstness	第一性	379	Operational definition	操作定义	710
Flaccid designator	松散指示词	381	Operationalism	操作主义	711
Gödel's theorems	哥德尔定理	415	Operationism	操作主义	711
Hempel's paradox	亨佩尔悖论	433	Paradigm shift	范式转换	724
Heuristic	助发现	437	Paradox of confirmation	确证悖论	725
Hume's law	休谟定律	451	Philosophy of biology	生物学哲学	752
Hypothesis	假说	454	Philosophy of mathematics	数学哲学	757
Hypothetico-deductive method	假说—演绎法	455	Philosophy of organism	有机体哲学	759
Icon	映象	456	Philosophy of science	科学哲学	761
Identity criteria	同一性标准	468	Plausibility	似真性	770
Incommensurability	不可通约性	484	Polar-related concept pair	极性相关的概念对	772
Incompatibilism	不相容论	485	Practicalism	实践主义	787
Individuality	个体性	493	Pragmatic maxim	实用主义公式	787
Induction, the problem of	归纳问题	495	Pragmaticism	实效主义	788
Induction by elimination	淘汰归纳法	496	Pragmatism	实用主义	789
Induction by enumeration	枚举归纳法	496	Presumption	假定	799
Induction by intuition	直观归纳法	497	Primitive ideas	初始概念	804
Inductivism	归纳主义	497	Principle of induction	归纳原理	808
Inertia	惯性	498	Probabilism	或然论	814
Infallibility	不可错性	499	Probability	概率	815
Inference to the best explanation	最佳说明推理	500	Probability, <i>a priori</i> theory of	先验概率理论	815
Instrumentalism	工具主义	507	Probability, classical theory of	古典概率理论	815
Intuitive induction	直观式归纳	522	Probability, logical relation theory of	逻辑关系概率理论	816
Justificationism	证明主义	532	Probability, propensity theory of	倾向性概率理论	816
Limited variety, principle of	有限多样性原理	555	Probability, relative frequency theory of	相对频率概率理论	817
Linguistic rule	语言规则	558	Probability, subjective theory of	主观主义概率理论	817
Logic of scientific discovery	科学发现的逻辑	562	Probability calculus	概率演算	818
Logical determinism	逻辑决定论	566	Projectibility	可投射性	820
Logical necessity	逻辑必然性	569	Proof theory	证明理论	821
Logical paradox	逻辑悖论	570	Psychologist's fallacy	心理学者谬误	835
Löwenheim-Skolem theorem	勒文海姆—司寇伦定理	579	Quantifier	量词	844
Major premise	大前提	581	Radical empiricism	彻底的经验主义	846
Manifest image	明显的影像	583	Ramsey sentence	拉姆塞语句	849
Masked man fallacy	戴面具者谬误	586	Range	值域	850
Mathematical cyclist	数学家骑车人	592	Ravens paradox	渡鸦悖论	855
Meaning postulate	意义公设	596	Reason	理性	858
Method	方法	617	Recursive definition	递归定义	861
Method of elimination	淘汰法	618	Refutation	反驳	868
Mill's Canons	密尔规则	622	Research programme	研究纲领	880
Mill's methods	密尔方法	622			
Mnemonic causation	记忆因果关系	626			

Saving the phenomena	拯救现象	897	Collectivism	集体主义	166
Schrödinger's cat	薛定谔猫	900	Concrete other	具体的他人	181
Scientific image	科学的影像	902	Contextual relativism	语境相对主义	196
Scientific method	科学方法	902	Contextualism	语境主义	196
Scientific realism	科学实在论	902	Critical theory	批判理论	217
Scientism	科学主义	903	Direct intention	直接意图	263
Secondness	第二性	906	Double contingency	双重偶然性	274
Self-contradiction	自相矛盾	908	Effective procedure	有效程序	284
Semantics	语义学	916	Emergence	突现	294
Set	集合	925	Emergent property	突现性质	294
Set theory	集合论	926	Emergentism	突现进化论	295
Skolem Löwenheimtheorem	司寇伦—勒文海姆定理	932	Empirio-criticism	经验批判主义	299
Skolem's paradox	司寇伦悖论	933	Enlightened self-interest	开明的自我利益	301
Sorites paradox	累积悖论	941	Ethnomethodology	人种学方法	334
Sortal	类	942	Eudaimonism	幸福论	335
Sortal predicate	类谓词	942	Explanation/understanding	解释和理解	352
Space	空间	944	Frankfurt school	法兰克福学派	393
Space, absolute	绝对空间	945	Fraternity	博爱	393
Space-time	空一时	945	Free will, problem of	自由意志问题	394
Subjective knowledge	主观知识	960	Gaia hypothesis	该亚假设	403
Subsumption theory of explanation	说明的归类理论	968	Gender	性别	405
Tender-mindedness	喜爱空想	988	Generalised other	一般化的他人	408
Theoretical construct	理论构造	991	Group mind	团体意识	422
Theoretical pluralism	理论多元论	991	Guardians	护卫者	423
Theoretician's dilemma	理论家困境	992	Hume's fork	休谟的叉子	450
Thirdness	第三性	999	Ideal type	理想型	461
Time	时间	1002	Impartialism	公正主义	478
Time, absolute	绝对时间	1002	Imperialism	帝国主义	479
Time travel	时间旅行	1002	Indoctrination	灌输	493
Tough-mindedness	讲究实际	1007	Institutional violence	制度性暴力	507
Transworld identity	跨世界的同一性	1019	Just war	正义战争	530
Trial and error	试错法	1020	<i>Laissez-faire</i>	自由放任主义	541
Two space myth	两种空间神话	1029	Lifeboat case	救生艇案例	553
Uniformity of Nature	自然的齐一性	1038	Linguistic determinism	语言决定论	556
Verificationism	证实主义	1054	Means/end	手段/目的	597
Verisimilitude	逼真性	1055	Mercy	怜悯	605
Warranted assertibility	得证的可断言性	1066	Meritocracy	能人统治	607
World 1	世界 1	1073	Methodological collectivism	方法论的集体主义	619
World 2	世界 2	1073	Methodological holism	方法论的整体主义	619
World 3	世界 3	1073	Monarchy	君主政体	634
Philosophy of social science 社会科学哲学			Mood	论式, 情绪, 语气	635

Extra human fertilization	人体外受精	358
Fascism	法西斯主义	367
Feminism	女性主义	369
Freedom of speech	言论自由	396
Full theory of the good	善的强理论	397
General will	公意	407
Generalization principle	普遍化原则	408
Heloise complex	埃罗伊兹情结	433
Ideology	意识形态	469
<i>In vitro</i> fertilisation	试管婴儿	483
Inegalitarianism	不平等主义	498

Inequality	不平等	498
Justice	正义	530
Killing	杀害	534
Legitimacy	合法性	548
Lexical order	词典式次序	550
Love	爱	578
Loyalty	忠诚	579
Lying	说谎	579
Marxism	马克思主义	584
Masculinism	男权主义	586
Maximin rule	最大最小值规则	594
Meaning of life	生活的意义	596
Merit	才能	607
Meshing problem	协调上的问题	608
Minimax rule	最小最大值规则	624
Moral compromise	道德妥协	639
Moral judgement	道德判断	641
Moral principle	道德原则	644
Moral rule	道德规范	645
National character	民族特性	653
Nationalism	民族主义	653
Natural rights	自然权利	657
Naturalism	自然主义	659
Needs	需要	667
Negative liberty	消极自由	669
Neustic/phrastic	语调/内含	676
Noble lie	高贵的谎言	680
Open society	开放社会	709
Original position	原初状态	713
Pacifism	和平主义	721
Patriarchy	父权制	732
Person-affecting restriction	人的影响的限定	738
Phrastic	内含	765
Piecemeal engineering	渐进工程	768
Political liberty	政治自由	773
Political obligation	政治义务	773
Political philosophy	政治哲学	774
Positive freedom	积极自由	778
Positive liberty	积极的自由	779
Power	权力	784
Primary goods	基本的善	802
Principle of utility	功利原则	810
Private morality	私人道德	812
Private/public dichotomy	私人和公共的两分法	813
Prudence	谨慎	829
Public/private dichotomy	公共和私人的两分法	837
Radical feminism	激进的女性主义	847
Rectificatory justice	矫正的正义	861
Reflective equilibrium	反思的平衡	867
Resentment	愤恨	881
Responsibility	责任	881
Retributive justice	惩罚的正义	882

Revenge	报复	883
Revisionism	修正主义	884
Secession	脱离	905
Sovereignty	主权	944
State	国家	952
State of nature	自然状态	952
Suicide	自杀	969
Supererogation	分外之事	971
Sympathy	同情	977
Thin theory of the good	善的弱理论	995
Totalitarianism	极权主义	1007
Trolley problem	查道车问题	1021
Two principles of justice	正义的两条原则	1028
Utility	功利	1046
Utopian engineering	乌托邦工程	1047
Veil of ignorance	无知之幕	1053
Welfare	福利	1067
Welfarism	福利主义	1067
Will of all	众意	1071

Rationalism

理性主义

Adequate ideas	恰当的观念	23
Animal	动物	51
Animal spirits	精气	52
Apperception	统觉	64
Attribute	属性	90
Automaton	自动机	94
Body	物体	125
Cartesian circle	笛卡尔的循环	138
Causa sui	自因	145
Clear and distinct	清楚明晰的	161
Cogito ergo sum	我思故我在	162
Cognition	认知	163
Common notion	共同概念	168
Concurrence of God	上帝的同意	182
Concursus dei	上帝的同意	183
Distinct	明晰的	269
Double aspect theory	双面理论	274
Doubt	怀疑	275
Dreaming, argument from	梦的证明	276
Dual-aspect theory	两面理论	277
Entia rationis	理性存在者	307
Entity of reason	理性存在者	307
Extended substance	广延实体	353
Extension (metaphysics)	广延(形而上学)	354
First entelechy	原始的隐德来希	376
Generosity	高尚	409
Human being	人	447
I think, therefore I am	我思想,所以我存在	456

Ideas of ideas	观念的观念	465	Thinking thing	思维的东西	998
Ideational theory of meaning	意义的观念理论	465	Truth of fact	事实的真理	1023
<i>Ideatum</i>	对象	466	Truth of reason	理性的真理	1023
Indiscernability of identicals	等同物的不可分辨性	490	Universal characteristic	普遍语言	1039
Inductive definition	归纳定义	497	Universal symbolistic	普遍符号语言	1041
Innate ideas	天赋观念	504	<i>Vinculum substantiale</i>	实体链	1058
Intellectual love	理智的爱	508	Well-founded phenomena	有可靠根据的现象	1069
Intuition	直觉	520	Russell and Wittgenstein 罗素和维特根斯坦		
Irrealism	非实在论	524			
Knowledge of relation of ideas	有关观念关系的知识	539	Abstraction	抽象	10
Light of reason	理性之光	554	Acquaintance	亲知	15
Malicious demon	恶意的神灵	582	Action at a distance	间距作用	19
Meditation	沉思	600	Ambiguous middle, fallacy of	中项歧义谬误	38
Mode	样式	629	Arbitrariness of grammar	语法的任意性	67
Monadology	单子论	633	Asceticism	禁欲主义	81
Monads	单子	633	Atomic facts	原子事实	87
<i>Natura naturans</i>	产生自然的自然	654	Atomic proposition	原子命题	88
<i>Natura naturata</i>	被自然产生的自然	654	Autonomy of grammar	语法的自主性	95
Natural light	自然之光	656	Autonomy of language	语言自主性	95
Necessary truth	必然真理	654	Axiom of infinity	无穷性公理	99
Necessity, absolute	绝对的必然性	666	Axiom of reducibility	还原性公理	99
Necessity, hypothetical	假说的必然性	666	Behaviourism	行为主义	112
Necessity, natural	自然的必然性	666	Biography	传记	123
Necessity, physical	物理的必然性	667	Bipolarity	二极性	124
Necessity, psychological	心理的必然性	667	Causal dualism	因果二元论	146
Necessity, relative	相对的必然性	667	Certainty	确定性	154
Nominal essence	名义的本质	682	Connotation	内涵	186
Occasionalism	偶因论	701	Constructivism	构造论	193
Parallelism	平行论	726	Data	予料	227
Perfection, the principle of	最完善世界原则	735	Denotation	外延	244
Pineal gland	松果腺	769	Denoting phrases	指示短语	244
Preconceived opinions	先入之见	790	Derivative belief	派生信念	247
Pre-established harmony	前定和谐	795	Derivative knowledge	派生知识	247
Primary matter	初级的物质	802	Dualism	二元论	277
Primitive force	原始的力	803	Egocentric particulars	自我中心特称词	286
Principle of the best	最好世界原理	809	Egocentric predicament	自我中心困境	287
Psycho-physical parallelism	心-物平行论	836	Elementary proposition	基本命题	289
Rationalism	理性主义	852	Emphatic particulars	强调性特称词	298
Real distinction	实在的区别	856	Empty class	空类	299
Reasoning	推理	859	Epiphenomenalism	附随现象论	311
<i>Res cogitans</i>	思维的东西	879	Essential occurrence	实现	322
<i>Res extensa</i>	广延的东西	880	Ethical naturalism	伦理自然主义	326
Scholastic philosophy	经院哲学	900	Event	事件	338
Secondary matter	次级的物质	906	Existence proposition	存在命题	345
Simple nature	简单性质	928	Existential proposition	存在命题	346
Substance (Aristotle)	本体(亚里士多德)	963	Existential statement	存在陈述	346
Substance (Descartes)	实体(笛卡尔)	964	Fact	事实	359
Substance (Leibniz)	实体(莱布尼茨)	965	Fallacy of the undistributed middle	中项不周延谬误	365
Substance (Spinoza)	实体(斯宾诺莎)	966	Family resemblance	家族相似	367
Substantial chain	实体链	967	Form of life	生活形式	385
Substantial form	实体形式	967			
Sufficient reason, the principle of	充足理由律	969			
Thinking substance	思维实体	998			

Form of proposition	命题形式	386	Pictorial form	图像的形式	767
Form of representation	表现的形式	386	Picture theory	图像论	767
Formalism(mathematics)	形式主义(数学中的)	391	Pluralism	多元论	771
Four-term fallacy	四词项谬误	393	Positive fact	肯定事实	778
Fully generalised proposition	充分普遍化命题	397	Primitive belief	基本信念	803
			Primitive knowledge	基本知识	804
General proposition	全称命题	406	Privacy	私人性	811
General propositional form	普遍的命题形式	406	Private language	私人语言	811
Grammatical proposition	语法命题	419	Private ostensive definition	私人实指定义	812
Hard data	硬手料	426	Private world	私人世界	813
Ideal language	理想语言	460	Proper name	专名	821
Indicative word	指示语词	489	Property dualism	性质二元论	823
Indicator terms	指示词	489	Propositional form	命题的形式	825
Inferred entity	推论出的实体	500	Propositional function	命题函项	826
Inner process	内在过程	506	Propositional sign	命题符号	827
Internal relation	内在关系	516	Pseudo-object	假对象	830
Isomorphism	同构性	525	Pseudo-proposition	假命题	831
Language-games	语言游戏	542	<i>Quaterno terminorum</i>	四词项谬误	845
Logical analysis	逻辑分析	563	Relation	关系	870
Logical atomism	逻辑原子主义	564	Representational form	表现形式	876
Logical construction	逻辑构造	566	Rule-following	遵守规则	893
Logical fiction	逻辑虚构	568	Saying and showing	说与显示	898
Logical form	逻辑形式	568	Sensation	感觉	918
Logical grammar	逻辑语法	569	Senseless	无意义的	921
Logical picture	逻辑图像	570	Sensibilia	可感物	921
Logical product	逻辑积	571	Sign and symbol	记号和符号	927
Logical proposition	逻辑命题	571	Soft data	软手料	940
Logical space	逻辑空间	572	Solipsism	唯我论	940
Logical sum	逻辑和	572	State of affairs	事态	952
Logical syntax	逻辑句法	572	Symbol	符号	976
Logical words	逻辑词	574	Syntax words	句法词	979
Logically perfect language	逻辑上完善的语言	574	Synthesis	综合	979
Logically proper name	逻辑专名	575	Tautology	重言式	983
Logicism	逻辑主义	576	Term	词项	988
Logistic	逻辑斯蒂	577	Types, theory of	类型论	1031
Metaphilosophy	元哲学	610	Unknown entities	未知实体	1042
Metaphysical entities	形而上学实体	613	Vacuous occurrence	空现	1049
Metaphysical subject	形而上学主体	613	Vitalism	活力论	1062
Minimum vocabulary	最低量词汇	626	Zero method	置零法	1076
Molecular facts	分子事实	632			
Molecular propositions	分子命题	632			
Monadic relation	一元关系	633			
Monism	一元论	635			
Naive realism	素朴实在论	650			
Naturalistic ethics	自然主义伦理学	661			
Naturalistic fallacy	自然主义谬误	661			
Negative facts	否定事实	669			
Neutral monism	中立一元论	676			
Nonsense	无意义	687			
Null class	零类	691			
Object	对象	694			
Object words	对象词	695			
Ostensive definition	实指定义	715			
Perspective	视域	741			
Philosophical behaviourism	哲学行为主义	743			
Philosophical psychology	哲学心理学	749			
Philosophy(Wittgenstein)	哲学(维特根斯坦)	752
